Similar situations can be seen in various realms of our social life: When a scientific experiment ends in failure, some would think that the failure of the experiment proves that the original conceptualization and program were faulty, whereas some would think that even though the experiment temporarily ends in failure, it does not necessarily prove that the original conceptualization and program were faulty. When forests are destroyed for land-reclaiming purposes and crop production increases as a result, some would think that since crop production has increased, it shows that it was correct to destroy the forests and reclaim the land, whereas some would think that dependence on the destruction of forests for the reclaiming of land and crop production increase, like carving flesh to mend a scar, is bound to have endless ill consequences. Countless facts tell us that, in respect to the result of the same practice, people may reflect it correctly to have the objectivity of the result of the practice that was originally objective kept intact so as to achieve a unity of the two, but people may also reflect it with some distortion to have subjective discretion added to the result of the practice that was originally objective and thereby create a split between the two. Among the many reflections of this result of the same practice, there may be only one which is correct and all the rest may be incorrect, correct and incorrect ones may be mixed, or they may all be incorrect. Relatively speaking, there are more situations of this kind in the realms of scientific research than realms of our daily life, more in the realms of social struggle than in the realms of struggle for production.

When we point out, under the premise of a firm acknowledgment that people's minds should and can indeed correctly reflect the results of practice, the possibility on the part of people's minds, as a matter of fact, to reflect the results of practice with some distortion, this is obviously different from agnosticism; this is, instead, an adherence to the dialectical point of view that thinking and existence are both opposites and in unity.

The fact that, in respect to the result of the same practice, people can derive several different or even sharply contradictory perceptions is not strange, because the concrete process through which people perceive the results of practice contains itself such a possibility.

First of all, we know that the result of a practice often comes from the contradictory movements of many factors. In order to achieve an objective reflection of the result of such a practice, we must take possession of all factual data on the result of the practice, study and master all its aspects and "interferences." But, because of subjective reasons, it is often not easy for people to do so.

Secondly, the result of a practice is often a complex and complicated entity which externally reflects colorful and variegated phenomena and internally contains many false appearances. It is possible for phenomena to conceal substance, and it is very easy for false appearances to confuse people's senses. All this brings difficulties to people's attempt to uncover the substance of the result of a practice and the nature of its internal laws, and is likewise liable to lead to a distortion of the result of that practice.

Furthermore, in order to achieve an objective reflection of the result of a practice, we must also use the dialectical-materialistic method of analysis. If our approach to factual data is not to master them from the sumtotal of all facts and from their interconnections but to take our own wishes and tastes as the criteria for inclusion or exclusion, then it would also be impossible for our reflection of the result of a practice to be objective and correct.

When people make a distorted reflection of the result of a practice, there are, apart from causes pertaining to the theory of cognition, often social causes involved; and, in a society where classes still exist, there are usually profound root causes pertaining to classes. These are reflected especially saliently in social struggle and in the realms of philosophy and social sciences are reflected in this concept. Because it is in these realms that people derive two sharply contradictory conclusions from the result of the same practice, and many situations cannot be simply explained by causes in respect to perception. When conclusions turn out to be sharply contradictory to each other, only if we step beyond the realm of perception and search from the profound contradiction between people's relations based on interests in the economic realm can we find the rational explanation.

Perception is always concrete, and the result of a practice is also always concrete; the truthful nature of a certain concrete perception can only be tested by a corresponding concrete result of practice. Since people's reflection of a certain concrete result of practice may be correct and may also be distorted, then how can this concrete result of practice undertake to be the only objective criterion for testing the truthful nature of the corresponding concrete perception?

We are of the opinion that the correct answer to this question can only be: it must objectively reflect the authenticity of the result of practice. If people's reflection of the result of a certain perception is objective, then, along with this their judgment of the truthful nature of that certain perception will also be correct, and only thus can it be said that they have insisted on the criterion of practice. Contrariwise, if people's reflection of the result of a certain practice is distorted, then, along with this their judgment of the truthful nature of certain perception is bound to be erroneous, and in this case they have actually deviated from the criterion of practice. Therefore, objective, correct reflection of the result of practice is an indispensable link in the process through which truth is tested by practice. Without this link, it would be sheer empty words for someone to say that he actually insisted on the criterion of practice.

If we place this question in the total process of people's perceiving the world and changing the world and examine it in that context, its significant meaning can be seen even more clearly. The total process of people's perceiving the world and changing the world is reflected in practice -- perception -- repeated practice and their repetition in that order. In such an order, every practice plays a dual role, i. e., it is both the criterion for testing the truthful nature of the preceding perception and the source and foundation of the following perception. Every perception also plays a dual role, i. e., it is both a generalization and summation of the preceding practice and also provides a guiding ideology for the following practice and make the following practice, that is, repeated practice, a more effective practice on a higher level.

In every cycle of such practice -- perception -- repeated practice, if we succeed in objectively reflecting the result of the preceding practice, we would be in a position to correctly insist on, or correctly modify, the perception guiding that preceding practice, to guide the repeated practice with correct perception or more correct perception, and hence have this repeated practice elevated to a higher, new level. Under contrary conditions, if we happen to reflect the result of the preceding practice with some distortion, we would find ourselves incorrectly insisting on, or incorrectly modifying, the perception guiding that preceding practice, guiding this repeated practice with an incorrect perception or even more incorrect perception, and hence making it possible for this repeated practice to fall victim to past mistakes. Under the latter conditions, the greater the degree of distortion in people's reflection of the result of the preceding practice, the more severe would be their punishment by objective laws in their repeated practice.

The above significant meaning can be seen in both of the following two kinds of situations. One kind of situations is that, because a certain perception is more complex, its truthful nature cannot be clearly attested by a single practice but only by a repetition of many practices. Even so, if we succeed in reflecting the result of each practice as objectively as possible, then we would be able to reduce the blindness as much as possible in the activities of our practice and to accelerate the realization of a certain preconceived aim. Another kind of situation is that the result of practice has already proved that a certain perception was erroneous; if the practising person or the person guiding practice reflects the result of practice with distortion and time and again persists in such erroneous perception, then such person would bring increasingly heavier losses to his work. Therefore, we are of the opinion that putting forward and paying attention to, the question of correct reflection of the result of practice in our discussion of the criterion for testing truth is of great realistic significance to the magnificent cause of socialist modernization in which the people of our country are engaged.

Difference of Criterion between Marxism, Pragmatism

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 6, 25 Jun 80 pp 56-58, 51

[Article by Wang Jianwei [3769 1696 0251]: "The Difference in Principle between the Criterion of Practice in Marxism and the 'Criterion of Practice' According to Pragmatism"]

[Text] In our discussion of the criterion for testing truth, some comrades have put forward this question: Marxism speaks of practice, pragmatism also speaks of practice; Marxism thinks that practice is the only criterion for testing truth, pragmatism also thinks that "practice is the only criterion": then, what is the difference, after all, between them?

First of all, the practice Marxism speaks of is all the activity relating to people's attempt at changing the objective world; it is social practice; but the "practice" pragmatism speaks of is the isolated, blind action by which an individual instinctively "copes with the environment."

Concerning the social nature of practice, Comrade Mao Zedong pointed out: "In a classless society every person, as a member of society, joins in common effort with the other members, enters into definite relations of production with them and engages in production.... In all class societies, the members of the different social classes also enter, in different ways, into definite relations of production and engage in production to meet their material needs." In the activities of their practice to change nature and change society, the masses of the people, especially the toiling masses, have created the material wealth and spiritual civilization in society and have been propelling the history of society to develop forward. For this reason, Marxism holds that practice mainly means the practice by which millions upon millions of the masses of the people actively change the world. But pragmatism holds that theirs cannot be regarded as practice, and it calls instead the life of isolated individuals in "coping with the environment" as practice. It also says that this is "the way I treat things, and things treat me." Principal representative of pragmatism Dewey said without mincing any words: "Man discovers that he exists in a lucky world; his existence, to put it nastily, is a gamble" (cited from "Selected Discourses on Modern Bourgeois Philosophy of the West," p 194). James also said: "How can I win if I don't gamble? I am willing to gamble, so I simply gamble and do so without fear, just as if I never lost anything" (cited indirectly from "Works of Hu Shi [5170 6684]," Second Collection, vol 2, p 255). From this, it can be seen that what pragmatism calls "practice," symbolically speaking, is no other than an individual's activity in "trying his luck" and "gambling." Very obviously, such activity in "trying one's luck" and "gambling" has nothing in common with the practice of millions upon millions of the masses of the people actively changing the objective world as spoken of by Marxism.

Secondly, the way Marxism speaks of practice as the only criterion for testing truth means a recognition of that which is proved to be in accord with the nature of the laws pertaining to the outside world through the test of people's social practice as truth; but the way pragmatism speaks of "practice as the only criterion" means the recognition of that experience as truth which an individual considers to be satisfactory or capable of providing him with the most effective guidance and suited to various aspects of his life through the practice in his individual life.

Lenin pointed out: "Pragmatism comes from the Greek word pragma -- activity, action; it is namely a philosophy of action.... It propagates experience, and propagates experience alone; it regards practice as the only criterion; it follows a general trend of pragmatism;...it relies on the saying that science is not "an absolute duplication of reality"; and...smoothly infers God from all this. This is for the sake of practice, and only for the sake of practice..."

("Selected Works of Lenin," vol 2, note on p 349). This criterion of practice in pragmatism absolutely is not the criterion of practice Marxism speaks of. The master of pragmatism James clearly said in "Pragmatism" that pragmatism's "only criterion for testing a probable truth is to see which can give us most effective guidance, which is suited to various aspects of our life, so that nothing is amiss when it is all united with various demands of our experience. If a theological concept can achieve this and, especially, if the concept of God can really achieve this, then how can pragmatism deny the existence of God? If some take a concept with such great success in pragmatic use as 'untrue,' then pragmatism can very well say that such a view is totally meaningless" (in "Selected Discourses on Modern Bourgeois Philosophy of the West," p 154). This is to say that to judge whether or not a perception is truth need only to start from my desire and see if things in the outside world can satisfy my own desire. That which can satisfy such an individual desire and demand is truth; otherwise, falsehood. What else can this be if not a naked subjective, idealistic criterion? In contrast to this, Marxism holds that "To judge whether or not a perception or theory is truth does not depend on how one feels subjectively but on what the objective result of social practice is. The criterion of truth can only be social practice." In thus objectively taking the perception that accords with the nature of laws pertaining to objective things as truth, Marxism's criterion is strictly different from the subjective, idealistic "criterion of practice" of pragmatism.

Thirdly, what Marxism means in maintaining that truth must be tested by the effects of social practice is the effects of objective practice, whereas the effects pragmatism speaks of mean the degrees to which an individual's subjective needs can be satisfied.

Concerning the criterion of truth having to be tested by the effects of social practice, Comrade Mao Zedong already discussed this question in his "On Practice." Comrade Mao Zedong said: "What actually happens is that man's knowledge is verified only when he achieves the anticipated results in the process of social practice (material production, class struggle or scientific experiment). If a man wants to succeed in his work, that is, to achieve the anticipated results, he must bring his ideas into correspondence with the laws of the objective external world; if they do not correspond, he will fail in his practice." This is to say, we must let the effects of practice test whether or not people's ideas correctly reflect objective realities. And pragmatism also holds that whether a concept is true or not depends entirely on effects. Hu Shi said: "All meaningful ideas are liable to have practical effects; such effects constitute the meaning of those ideas. If we ask whether a given idea has any meaning or what meaning does it have, we need only to ascertain what practical effects that idea may have; we need only to ask what effects it will have if it is recognized, and what effects it will have if it is not recognized" ("Works of Hu Shi," Second Collection, vol 2, p 247). What are these "effects" pragmatism speaks of? Hu Shi explained this point with a colloquial analogy. He said: "A concept (an idea) is like a check on which the amount that can be cashed is indicated; if this bank of nature immediately cashes this check upon receiving it, than the check is genuine -- that concept is true" ("Works of Hu Shi," Second Collection, vol 2, p 260). Here the key lies in how the check is written. The "check" of pragmatism is written not according to the correct reflection of objective realities but according to "my" subjective needs. Whatever and how much "I" need are then written on the "check." The so-called "practice" here is to have this "check" cashed by whatever means. Once it is cashed, it becomes truth; as to whether or not it accords with objective laws, that would be entirely unrelated, different matter. Obviously, this is a purely subjective theory of truth. When Lenin criticized Machism, he said: "From the materialist point of view, the 'success' of man's practice proves that our symbol and the objective essence of the thing sensed by us accord with each other. From the egotist point of view, "success" is all I need in practice, and practice can also be examined seperately from the theory of cognition" ("Selected Works of Lenin," vol 2, p 139). Testing truth by the satisfaction of individual subjective needs is thus the idealistic essence of pragmatism in speaking of testing truth by "effects," and is also where the fundamental difference of the Marxist criterion of testing truth by the objective effects of social practice lies.

Fourthly, the way Marxism speaks of a truth tested by practice as being useful means that a truth tested by practice which correctly reflects objective things and the law of their development is useful to people attempting to change the world; it points to the disposition and function of truth; whereas the way pragmatism speaks of "that which is useful is truth" means that subjective needs are truth; it points to the basis and criterion of truth.

Marxism holds that truth is useful. A truth in natural science is a great force for people to change nature; it is capable of speeding up our four modernizations. A Marxist truth can guide the proletariat and the toiling people to win victories in their revolutionary struggles. But the reason why these truths are useful is because they correctly reflect objective things and the law of their development. But pragmatism speaks of "that which is useful is truth," as James said: "we can both say that 'because it is true, therefore it is useful' and also say that 'because it is useful, therefore it is true'" (cited from "Selected Discourses on Modern Bourgeois Philosophy of the West," p 158). Here "being useful" and "being true" are equated to each other. Whatever is useful is truth. When it is useful to us today, it is truth today; when it becomes no longer useful tomorrow, it will no longer be truth tomorrow; what does this have in common with the Marxist criterion of practice? and where is it consistent with the Marxist dictum that a truth tested by practice is useful? There is a strict difference between truth being useful and "that which is useful is truth"; we can absolutely not turn truth being useful upside down and into "that which is useful is truth" at random.

Fifthly, the way Marxism speaks of truth as a process means that along with the development of practice truth follows the process of developing from the relative to the absolute, and that the testing of truth by practice is also a process; whereas the way pragmatism speaks of truth as a process means that "when the environment changes, truth also changes along," thus it recognizes only the relative nature of perception but not the absolute nature of perception, and thereby negates objective truth.

Marxism acknowledges that people's perception of the concrete process in each given stage of development possesses only truth of a relative nature; it therefore requires people's perception to shift forward along with the shifting of the objective process and does not allow them to turn their perception of the concrete process into absolute: this is something we must insist upon. Because if the relative nature of perception is denied, the development of perception is also denied; this would turn theory into dogma and lead to the petrification of people's thinking. But Marxism will definitely not negate absolute truth because of this, but regards truth merely as a process of developing from the relative to the absolute. The testing of truth by practice, too, is not all completed at once, but constitutes a process of repeated testing. Practice in a given stage of history can only prove part of the truthful nature of man's perception; indefinitely developing practice proves the whole of the truthful nature of man's perception. Here, dialectical materialism acknowledges both the relative nature of truth and the absolute nature of truth. The premise in both cases is that truth develops along with the development of practice, and moves from the relative to the absolute continuously through its continued testing by practice. But when pragmatism speaks of truth as a process, it means that "when the environment changes, truth also changes along." Hu Shi said: people "need only to ask, when we encounter this situation at this time, how should we cope with it: such method of coping with this situation is no other than 'this truth'" ("Works of Hu Shi," vol 2, p 416). If this is the case, how can anyone speak of objective truth? Also, according to the theory of "environment," all truths are relative, "those absolute truths are overhung, abstract, vague, baseless, and unprovable" ("Works of Hu Shi," vol 2, p 415). Obviously, such a "theory of the process of truth" which hinges on "environment," which is truth today when convenient to me and which turns into non-truth tomorrow when inconvenient to me, is entirely different from the dialectical-materialistic theory of the process of truth.

SICHUAN INTELLECTUALS PROMOTED TO LEADING POSTS

Chengdu SICHUAN RIBAO Chinese 6 Aug 80 p 3

[News report by Tian Shuchang [3944 2885 2490]: "Change the Composition of the Cadre Ranks; Meet the Needs of the Work of the Four Modernizations"]

[Text] The Nanping County Party Committee has adopted effective measures to select and appoint a great number of professional and intellectual cadres of political integrity to leading posts.

Nanping is a mountainous county inhabitated by people of the Tibetan and Han nationalities. In the past, it was noted for having too many worker and peasant cadres and too few professional and intellectual cadres. In an effort to change the composition of its cadre contingent and to raise its scientific and cultural level, the Nanping County Party Committee has selected cadres of minority nationalities to pursue advanced studies in politics, economics, science, and culture at central, provincial, and prefectural nationality colleges which will enable them to sharpen their professional skills. On the other hand, it has taken bold steps to appoint professional and intellectural cadres of political integrity to leading posts so that they can bring their wisdom and talent into full play.

Wen Chengzhi [2429 2052 1807] was a graduate of the Botany Department at Southwest Agricultural College. Since his assignment to Nanping County, he has lived frugally and worked enthusiastically. After joining the agricultural workteam and spending time acquiring some basic crop-growing skills, he has been promoted by the County Party Committee to the positions of deputy secretary and secretary of the party committee of Baihe and Tazang communes and deputy secretary of the Baihe District Party Committee. While holding these leading positions, he has organized agricultural production with professional skills that he acquired from college. He has been warmly praised by commune members for his outstanding achievements in agricultural production. Since his assignment to Nanping, Zong Bazhi [1350 0735 1807], graduate of the Agricultural Machinery Department of Sichuan Agricultural College, was first hired by an agricultural machinery plant as a technician. Four years later, he joined the party. So that he can fully demonstrate his professional skills, he accepted a promotion to the position of director of the county agricultural machinery plant and secretary of its party branch, with the approval of the County Party Committee. From that position, he has formulated a series of effective and feasible production plans, has kept his plant in good shape, and has transformed it into one of the advanced industrial units in the Aba Tibetan Autonomous Prefecture. Leng Dengya [0397 4098 0068] studied agronomy at the Sichuan Provincial Agricultural School before liberation. Since his assignment to Nanping County in 1957, he has worked diligently. Because he was born of a family of the exploiting classes, he was never promoted despite his achievements. Not until the downfall of the "gang of four" did he receive a promotion from agricultural technician to the position of director of an agrotechnical station. Since that promotion, he has worked harder than ever, and has cooperated with other agricultural technicians in promoting hybrid corns and in presenting agrotechnical lectures to cadres at the county, district, commune, and brigade levels. He has also compiled and printed technical materials on crop growth and field management for distribution to leading groups at all levels for reference. In this way he has helped increase agricultural production for several years in a row. At present, some 24 percent of college-graduate cadres have joined the leading groups at county, district, and commune levels, and many of them have become their No 1 or No 2 leaders.

RELATIONSHIP OF ECONOMIC LAW, MORAL STANDARDS DISCUSSED

Present-day Contradiction Denied

Shanghai WEN HUI BAO in Chinese 26 Aug 80 p 3

[Article by Zhou Tingnan [0719 2185 0589]: "Are There Contradictions Between Moral Standards and Current Economic Policy?"]

[Text] Some comrades believe that a part of the people in present-day society haggle over every ounce for their own individual benefit, paying attention only to immediate profit and not the future, creating an unhealthy moral climate, the principal reason for which is that the present economic policy is off-balance, and that such policies as distribution according to work, the system of awards, and making economics active tend to encourage people's individualism and an ideology of selfishness. For this reason they feel that there is a contradiction between present economic policies and moral standards. It is worth studying whether this viewpoint is correct or not.

If we are to clarify this question, we must first be explicit about what kind of moral standards we need during the present period. The socialist society we live in today is the lowest stage of communism, and therefore, the morals appropriate to the present stage are the lowest stage of communist morals, which are also socialist morals, and we can only proceed from today's social conditions and use socialist moral standards to place requirements on and appraise today's things. Thus, moral standards and present economic policies can be mutually appropriate and generally not generate contraditions or clashes. For example, an advanced producer who studies science and technology intensely has great innovative creativity in production, and in accordance with policy receives an award. He has made a contribution to the country and has himself received some profit, and this is, in a way, in accordance with the principle of to each according to his work, as well as being conduct in accordance with socialist moral standards. We cannot believe that he is seeking personal profit because he received an award and thus lower our appraisal of his conduct. On the contrary, we should see the award as a special incentive given by the country to a laborer, and in a certain sense, you could say that whoever should receive the greatest award must also have the highest honor. Also, there are unemployed youths in some towns who can, within the limits of what is permitted by national policy, work for themselves, arrange for their own capital, and individually operate small stands or shops for the service of the people. Under the country's present relatively difficult economic conditions, to depend on the labor of your own two hands and develop your own way of making a living, while at the same time providing some convenience for the lives of the masses, is also a contribution to socialism. To do this is not only appropriate to present economic policy but also does not go beyond the bounds of socialist moral standards. Therefore, not only are present economic policies and socialist moral standards not in opposition to one another, they are even coordinated and consistent, and promote the development of social productive force.

However, why is it that some comrades have felt that there are contradictions between present economic policy and moral standards? My feeling is that this is principally because comrades maintaining this viewpoint have been unable to proceed from facts in considering the men and affairs of a socialist society in the light of socialist moral standards, but have used unrealistically high communist moral criteria, such as that labor should not consider remuneration, not consider its own benefit in the slightest, but should work especially for others, etc., and have universally placed these demands on the people of a socialist society, using them as a rule to measure present policies. The result is that they feel present economic policies are askew, and that there are contradictions between moral standards and present economic policies. For example, as they see it, distribution to each according to his work is haggling; concern for the material welfare of the masses causes the growth of individualism; adopting a system of awards causes money to take the lead. One can remember that a few years ago, when the "gang of four" was opposing the so-called "bourgeois right," there were people at some coal mines who, under the control of the ultra-leftist trend of thought, mouthed the high-sounding idea that labor should not consider remuneration and advocated calceling the underground differential that had been in effect for many years, viewing the underground differential that the party and government had set up to protect the health of the mine workers as a poison that corrupted the spirit of the miners, assuming that people should only be allowed unselfish thoughts, and that in the understanding that labor is the first requirement of life, productive activism would arise spontaneously. This ultra-leftist viewpoint, in representing the relationship between moral standards and present economic policy, places the two in direct opposition, and to break away from moral standards that are too high for actual social conditions in the present stage, denies present economic policies that proceed from reality to the extent that artificial confusions are created, obstructing to the extent that development of productive force is disrupted.

Of course, simultaneously with the implementation of the present economic policy, we must also strengthen political and ideological work and moral education. We cannot assume that for the present we should handle things according to economic laws and economic policies alone, and that it makes no difference whether we discuss moral standards or not; nor should we assume that we need only carry out the policy and raise production, and then people's moral level will automatically be raised. After the victory in the October revolution, Lenin spoke of the mission of the younger generation and pointed out solemnly, we must "carry out anti-exploitation education" and "education against the habit and psychology of 'I will make my profit, and nothing else matters'." In implementing the present economic policies, we must persist in carrying out political and ideological education, making moral education an important part of its content, continuously raise the level of people's socialist moral ideology, and struggle against all such illegal and undisciplined behavior and remnant ideology of the exploiting classes as is represented by opportunism, enriching oneself at the expense of others, and fattening oneself at the public trough, to guarantee implementation of party and national policies.

A 'Lofty Tone'

Shanghai WEN HUI BAO in Chinese 26 Aug 80 p 3

[Article by Yu Yueming, Shanghai First Textile Machinery Plant: "Haven't We Suffered Enough From High-sounding Slogans?"]

[Text] Didn't we learn a lesson in 1958? Expecting to erect a skyscraper when you have no substantial material foundation is an empty dream contrary to reality. Its result mercilessly proved that we today are unable to complete this great and formidable task--to make all the people have a firm communist moral outlook. In the important historical stage of socialism, we must on the one hand advocate and propagandize a communist moral outlook, the better to solve those unavoidable contradictions in social development, and on the other hand we should steadfastly and realistically manage affairs in accordance with socialist economic laws, mobilize all positive factors, invest great effort in economic development, implement the "four modernizations" as early as possible, and accelerate the pace of economic development. The moral concepts advocated should suit the economic foundation. In the past, we vainly adopted a "lofty tone" but did not manage affairs in accordance with economic laws, and didn't we suffer greatly for it? Could it be that this was not enough to be used as a mirror?

Moral Propaganda

Shanghai WEN HUI BAO in Chinese 26 Aug 80 p 3

[Article by Zheng Chuangren, Shanghai Electrical Equipment Wholesale Department: "Moral Propaganda Is a Lubricant, Not a Cure-all Oil"]

[Text] When the "gang of four" was rampaging about, they promoted an ultraleftist line and chattered away at their so-called moral propaganda, departing from objective reality, causing people to distrust and dislike moral propaganda, with the result that it led to many sham examples and encouraged an opportunist psychology in some people. Therefore, the ultra-leftist pernicious influence must be cleaned out of moral propaganda, and it must give careful attention to science.

I feel that moral propaganda can only be used to supplement economic law, and can certainly not be substituted for it. The content of the propaganda should be appropriate to the times and appropriate with regard to quantity, not excessive or overdone. Moral propaganda is not a "cure-all," but it should be regarded as a "lubricating oil." "Lubricating oil" is used only to lubricate the machinery, and cannot solve problems concerning the nature of the "machinery." These problems can only be fundamentally solved by proceeding from the social "machinery" itself, or by proceeding from a grasp of economic law.

PARTY AND STATE

STATE COUNCIL'S ACTION ON CAPSIZE OF OIL DRILLING PLATFORM APPLAUDED

Tianjin TIANJIN RIBAO in Chinese 27 Aug 80 p 1

[Editorial: "A Serious Warning"]

[Text] Workers on the economic front and the people in Tianjin municipality have expressed warm support for the State Council's decision on handling the incident that caused the "Bohai No 2" oil drilling platform to capsize and sink. In addition to distinguishing those who deserve commendation from others who should be punished, this decision reflects a serious and conscientious attitude toward this incident as well as a high sense of responsibility to the people. In other words, this incident has been handled by the state council in accord with our national interests. The State Council's decision is also of high educational value to us, because it has further increased our confidence in our country's ability to realize the four modernizations.

Since it was publicly reported, the "Bohai No 2" incident has jolted the nation into a shock, and has aroused nationwide indignation. This tragic incident, unprecedented in the history of oceanographic exploration, took a toll of lives of 72 class brothers and caused a direct economic loss of 37 million yuan to the state. The State Council's decision pointed out: this incident was a serious warning not only to the Ministry of Petroleum Industry but also to other industries, enterprises and units throughout the country.

The incident was also a serious warning to Tianjin, where it occurred. The harsh facts remind our comrades, especially leading and responsible comrades, that they should study and observe laws governing economic construction, and should strictly act according to the objective laws, and that any method based on subjective imagination instead of scientific laws will never work, and therefore should no longer be used as a guide to the economic construction. Yet, in the couse of directing economic construction, many leading comrades on the economic front still mess everything up by issuing subjective orders. Thus far, no genuine efforts have ever been made by them to study the aforementioned laws as a guide to their future action. The "Bohai No 2" platform was a large-scale equipment imported from abroad. There were strict rules and regulations governing its management and operation. But it was strange to note that even 6 years after its delivery to us, the translation of some foreign language data on this oil drilling platform had not been done by the Oceanic Petroleum Prospecting Bureau; the "temporary regulations governing its operation and management" drawn up by our authorities concerned were not conscientiously implemented. It was precisely this factor that led it to make that ill-fated decision to shift its position from one well to another on short notice without taking into account the objective conditions and imminent bad weather. Under such circumstances, only a miracle could save it from its doom!

For years, we have drawn what we have consistently called "our successful experiences" in economic construction from the mass movements, and the people's war carried out by the task force, and shock teams. Scientific management has long been beyond our reach. Over 20 years of practice have proven that any unscientific method not based on the principles of seeking truth from facts, and planning work on a solid basis, and any workstyle of emphasizing only the mobilization of equipment and human resources without checking the possibility of whether the planning works or is economically feasible cannot be relied upon to fulfill our economic construction. The old workstyle of sidestepping the party's policies, and trampling under foot useful rules and regulations that once brought our national economy to a standstill or set it back by years should be discarded forever. These are painful lessons, too painful to forget! Shortly after the "Bohai No 2" incident occurred, some of the Oceanic Petroleum Prospecting Bureau's leading comrades shamelessly said: "We have to pay some tuition for learning this lesson." It must be said that this kind of "tuition" is really too high to be paid by anyone.

Some other shortcomings that still exist among some leading comrades today include blind obedience, excessive regimentation of life, gross disregard of the need to display democracy, and tendencies to issue coercive orders to mess everything up. Economic undertakings are a very complicated scientific process that cannot be hastily handled and accomplished by a few persons. In planning major projects, we must carefully conduct investigations and study and humbly listen to different opinions. Surely, we must race against time in order to accelerate the tempo of economic construction. But in doing so, we must also pay attention to its economic results. We cannot risk the loss of lives and property in order to speed up our economic construction. Is it true that only a fool wants to do that? We have learned that before it was decided to move the "Bohai No 2" oil drilling platform from one well to another, some comrades provided the leading members of the Ministry of Petroleum and the Oceanic Petroleum Prospecting Bureau who were in charge of its operation with important objective suggestions. Unfortunately, these suggestions were ignored, thus causing a tragedy that otherwise could have been avoided. Can we take this as a painful lesson to be remembered?

The incident that caused the "Bohai No 2" platform to sink to the bottom of the sea tells us that whatever we do, we must take into consideration the safety of workers. The State Council's decision pointed out: "All economic departments and manufacturing enterprises throughout the country must consider safety in production a matter of prime importance. Leading comrades of various enterprises, related government organizations and trade unions who are in charge of administrative affairs should adopt every conceivable measure to insure the safety of workers; they should no longer take any reckless and thoughtless attitude toward them." Clearly, that incident, or unnecessary sacrifice, was caused by those leading comrades who commanded the platform in violation of regulations. Responding to this charge, some leading members of the Oceanic Petroleum Prospecting Bureau contended that "sacrifices cannot be avoided through struggle; we should fear neither hardships nor death." Our present socialist economic construction and production are promoted with the aim of satisfying the growing demands of the people for improving their material and spiritual well-being. How can we sacrifice the precious lives of workers as a price for success in economic construction? This being the case, where is the oft-repeated superiority of the socialist system? Practical experiences accumulated by many units have proven that many unnecessary deaths in the course of economic construction can be avoided as long as we value the lives of workers as the most precious assets of our country, take effective measures to insure their safety in production, act according to the economic laws and do everything carefully. The incident that caused the "Bohai No 2" platform to capsize and sink is a serious warning to us all. It reflected that many major problems still exist on our economic front. Every unit and every leading comrade involved in this incident should reexamine their ways of thinking and acting and should do everything possible to eliminate the pernicious influence of the ultraleft line of Lin Biao and the "gang of four" over the economic front. Only in this way can they accomplish the heavy and difficult task of the four modernizations with better results.

MILITARY INSTRUCTOR UPDATES TRAINING IN TACTICS

Nanjing XINHUA RIBAO in Chinese 1 Aug 80 p 3

[Article by Wen Zichun [3306 1311 2504] and Zhu Zhengping [2612 3630 1627]: "Spreading His Wings--Outstanding Instructor Guo Xingfu [6751 5281 4395] Takes New Strides"]

[Text] When Guo Xingfu is mentioned, people naturally think of the "Guo Xingfu teaching method" that he created in the decade of the sixties. However, during the unheard-of calamity of the Great Cultural Revolution, the "Guo Xingfu teaching method" met the same fate as Guo Xingfu himself--being cruelly trampled upon. In March 1979, the verdict on Guo Xingfu was completely reversed, and the reputation of his method was restored. But Guo Xingfu, deputy director of the Teaching and Research Section of the Nanjing Units Infantry School, was definitely not content to rest on his former laurels. In 1964, well-remembered and esteemed Marshal Yeh had exhorted him: With the development of the situation, we need to study ways of attacking tanks. He was determined to emancipate his mind, boldly make reforms, and come up with a new teaching method suited to the peculiarities of modern warfare.

In April of this year, after the school had received the task from the party committee of the Nanjing units to be the instructor of the Divisional Second-Class Rotation Training Unit, it decided to put Guo Xingfu in charge of the teaching group. After receiving his assignment, he moved his bedroll to the rotational training unit, and during the day he attended lectures and did the assigned schoolwork together with the students, running up against all sorts of difficult problems; in the evening, like one famished and thirsty, he read all kinds of military treatises, ancient and modern, Chinese and foreign. His desk was piled high with over 50 military treatises, including "Sunzi's Art of War" and "Teaching and Studying the Yugoslav Method of Attacking Tanks at Close Range." Opening any of these books at random, one would see that it was covered with red and blue pencil marks. Guo Xingfu paid special attention to the study of the experiences gained in the war of self-defensive counterattack against Vietnam and of the tactics teaching plans of the infantry schools of the fraternal units. He learned by heart some incisive, original training methods from the tactics teaching plans of the infantry schools of the Beijing, Shenyang, Guangzhou, and Fuzhou units. The key of modern military science and knowledge opened up a new world in the realm of military tactics teaching and research. Slowly, Guo Xingfu, on the foundation of his former teaching plan, formed many new ideas.

When reforming his teaching method, Guo Xingfu not only studied intensively and throught with deep concentration, but also sought advice from everybody and was not ashamed to ask questions. The form and method of an infantry assault in the past did not depart from the method of pressing on to the finish without letup. Guo Xingfu thought to himself: In modern warfare, the defenseive obstacles set up by enemy tanks will be deep, of many kinds, and with close firepower control. If the assault method is still one of pressing on to the finish without letup, then there are bound to be unnecessary casualties. In order to find a way to improve this tactical movement, Guo Xingfu and several other instructors one after another went to six companies [zhongdui 0022 7130] and studied with 23 instructors who had taken part in the war of self-defense counterattack against Vietnam, seeking to learn with an open mind. At the same time, he consulted a large amount of data and calculated the firing safety limits of various sizes of cannon. He also asked comrades at military training and research units to brief him in detail on the ability of cannons of various kinds to fire in coordiuation with an infantry assault. He then proposed that the method of all-out assault be changed to the method of artillery fire accompanying our side's assault. This proposal was unanimously endorsed by the instructors and students.

In order to meet his responsiblities in a future war, Guo Xingfu restudied, meticulously and conscientiously, every tiny tactical movement in his original teaching plan, doing his best to meet the requirements of actual battle. In the past, when an individual solider was moving to come in close contact with the enemy, he would drop to ground and fire his weapon when he first saw the enemy. Nobody had ever before carefully considered whether this small movement was reasonable. But Guo Xingfu did not let this problem slip by without studying it. He thought to himself: When soldiers dropped to the ground and fired their weapons as they came in close contact with the enemy, it was assumed that the fire control zone of the enemy's forward position was only 200 to 300 meters, but in modern warfare the enemy's fire control zone is 600 to over 700 meters, exceeding the effective range of hand-carried weapons; thus, to fire at the enemy at this range is meaningless, and also increases the unnecessary drain on physical strength. For this reason, Guo Xingfu revised this tactical movement in his original teaching plan so that it became a tactical movement determined by the specific conditions on the battlefield--i.e., if the distance is outside the effective range of handheld weapons, then the essential movement should be to defend against artillery or chemical attack and if the distance is within the effective range of handheld weapons, then, the essential movement should be to fire the weapons.

In close coordination with the instructors and students, Guo Xingfu, after more than 2 months of hard work produced six tactical lesson plans for squad level and below, including "Infantry Squad Reconnaissance" and "Strengthening the Infantry Squad's Night Defense." Everybody said: "Guo Xingfu's reform of the methods of teaching tactics at squad level and below has broken through old conventions. This kind of training will make soldiers flexible in tactics."

The great eagle-roc certainly does not curl up because of wounds, and as long as it has strength it spreads its wings and struggles to fly. Isn't Guo Xingfu precisely this kind of eagle-roc?!

MILITIA POLITICAL WORK VITAL IN NEW SITUATION

Nanjing XINHUA RIBAO in Chinese 16 Jul 80 p 1

[Article by Han Qilin [7281 0202 586D], Han Qilin [7281 0796 2651], and Kong Dehong [1313 1795 1347]: "In the New Situation Militia Political Work Can Only Be Strengthened and Cannot Be Weakened"]

[Text] From 9 to 15 July, the Jiangsu Provincial Military District held a militia political work forum in Suzhou. The forum studied the question of how, in the new situation, to further strengthen militia political work.

Attending this forum were leading comrades and political work cadres from all military subdistricts, the Political Department of Nanjing Garrison District, and all people's armed forces departments in the province.

Guo Jinlin [6751 3855 2651], advisor of the Nanjing Military Region, and Bu Hanxiang [1580 3466 5980], deputy political commissar of the provincial military district, attended and spoke at the forum. The first stage of the forum was a meeting held in Wu County, Suzhou Prefecture, to exchange experience in militia political work, and the meeting was briefed on the experiences of 15 units.

The meeting fully affirmed that, ever since the shift in emphasis of the party work, militia political work throughout the province has obtained basic successes. The meeting focused on the problem of some comrades having insufficient understanding of the important position and role of militia political work, pointing out that, in the new situation, militia political work can only be strengthened and cannot be weakened. The main task in militia political work now and for a period of time in the future is to conscientiously implement the party's ideological and political lines and all its general and specific policies among the broad masses of militia soliders and cadres, mobilizing them to make new contributions to the construction and defense of the four modernizations.

The meeting raised demands for militia political work in the future. One demand is, based on the requirements, of the situation and the task, to emphasize widespread and profound education among the armed militiamen on "how to be a good militiaman," further increasing the militiamen's understanding of the strategic position and role of the militia so that they will consciously overcome the idea of lowering their guard during peacetime and of fearing the hardships and losses involved in being militiamen, and will increase their sense of honor and their sense of responsibility. People's armed forces departments at all levels, under the unified leadership of the local party committees, should take the initiative to coordinate with local propaganda and cultural departments and with the CYL and other mass organizations to fully utilize in concert all kinds of propaganda fronts and instruments in this education. At the same time, they should pay attention to training and building up a strong backbone contingent for this education. The second demand is to continue to grasp firmly and well the important content in militia political work of developing and creating advanced units in the "three implementations." This activity should principally be developed among armed militia organizations. They must uphold the principle of seeking truth from facts and of strictly holding to the [truth] criterion. They must maintain the quarterly appraisals and checkups, thereby guarding against the idea of "winning eternal ease by one supreme effort." They must, in particular, arouse the enthusiasm of the basic-level party committees and people's armed forces departments in communes, towns, factories, and mines, developing this activity in a profound, protracted, and sound manner. The third demand is that the spirit of the provincial congress of full-time armed cadres be implemented conscientiously. The ideological education of full-time armed cadres must be strengthened, their work must be strongly supported, and warm solicitude must be shown for their life, thereby making them keep their minds on their jobs and do good work. Activities must be launched among full-time cadres to strive to be advanced workers.

The meeting pointed out that militia political work at present faces many new situations and new problems. People's armed forces departments at all levels must earnestly improve their work style, go deep into the basic levels to investigate and study, and bring out new ways of solving new problems, consciously being a good staff officer for the local party committees in strengthening the leadership of militia political work. They must pay attention to getting a good grip on typical cases, using the new experience gained at key points to guide the work in all areas.

The meeting demanded that party committees at all levels strengthen their leadership over militia political work, putting things in their proper places. Political commissars and political work departments must do their duty to the best of their ability by doing good work. The cadres of military departments must combine their militia work with good political and ideological work. At the same time, the roles of basic-level part-time militia political work cadres and of full-time people's armed cadres must be brought into play, thereby implementing militia political work at the basic levels.

PARTY LEADERS IN REGIMENT SET GOOD EXAMPLE

Nanjing XINHUA RIBAO in Chinese 15 Aug 80 p 1

[Article by Lu Liguo [0712 4539 0948], Wu Yunlian [0702 0336 5114], and Su Yuehu [1327 1878 5170]: "Leading Members of the Party Committee of a Certain Regiment in the Provincial Military District Accept the Supervision of the Masses and Persist in the Practice of Taking Part in Organizational Life With the Status of Ordinary Party Members"]

[Text] The leading members of the party committee of a certain regiment in Jiangsu Provincial Military District have studied the implementation of "Some Guidelines for Inner-Party Political Life," have persisted in the practice of taking part in organizational life with the status of ordinary party members, and have further developed the democratic work style within the party.

Based on the fact that the administrative work of the leading members is different, the party committee of this regiment put them in three party branches, further divided into three party groups, to lead organizational life. The party committee demanded that the departments concerned inspect, once each quarter, participation by the leading members of the committee in organizational life, that they not only inspect the frequency and content of this participation but also ascertain the reasons for their not taking part in organizational life, and that they commend those comrades who abide by the system of organizational life, while helping with criticism those who do not. Since the beginning of this year, 10 leading members of the regimental party committee, except when they were studying, holding meetings, or going down to stay in companies, did not miss taking part in organizational life because of private affairs. From January to July, each leading member of the party committee, on average, took part in organizational life on 19.5 occasions.

All leading comrades of the party committee of this regiment, when taking part in organizational life, appeared with the status of ordinary party members, and consciously accepted the administration of the party organization and the supervision of the masses of party members. Deputy regimental commander Liu Fugen [0491 0479 2704] once felt that his cultural level was low, that his age was advanced, and that he did not spend much time with his unit--all of which adversely affected his work and study. At a meeting of a group under a party branch, he set forth all of his thoughts and asked everybody to help him. The masses of party members gave him sincere criticism, which he accepted with an open mind. From that time on, he has kept his mind on his work and has striven hard to do well in building up the unit. In March of this year some party members, at a party organizational life meeting, sharply criticized some leading members of the party committee and some office workers for having excessive living quarters and furniture, and suggested that they make a readjustment. The leading members of the party committee accepted the party members' criticism, adopted the masses' suggestion, and took the lead in giving up excess living quarters and furniture. Their action spurred on the office workers, and everybody in succession then gave up their excess living quarters and furniture, thereby providing in a fairly short time a fairly good solution for this "old, big and difficult" problem that had long eluded solution.

HARDSHIPS OF MILITIAMEN OUTWEIGHED BY NATIONAL INTERESTS

Jinan DAZHONG RIBAO in Chinese 11 Sep 80 p 4

[Article by Bin Wuping [3453 2976 6097]: "On 'Balancing the Books'"]

[Text] Not long ago I ran into a militiaman who told me of the misery of being a militiaman: In training, one crawls, climbs, rolls, and fights, wearing out one or two more sets of clothing a year than other people do. By taking part in all the militia activities, much time is wasted that could be spent in household sideline occupations, and so in a year one earns several tens of yuan less than other people. When on sentry duty guarding the harvest, one offends many people. And difficult tasks are piled up and given to us militiamen. The crackling and sputtering of his "small multiplications" produced the following sum total: being a militiaman is a "losing" proposition.

Taking up this problem, I made a point of interviewing more militiamen. The majority of these comrades said: To be a militiaman, shouldering the heavy burden of building up the motherland and defending the four modernizations, is the unshirkable responsibility and honorable duty of a youth. During the revolutionary war period, militiamen jumped at the chance to support the front and take part in battle and to shed their blood in sacrificial actions, without carying in the slightest for their "losses." During the war of self-defensive counterattack against Vietnam, large contingents of militiamen left their parents and fellow villagers, crossed mountains, and forded rivers, bravely going into battle to coordinate with the troops in battering the Vietnamese bandits, without calculating in the slightest their "losses." Now the militiamen are engated in military and political training. They spend a little time, wear out a few clothes, and take in a little less income, and so it looks like the individual is suffering losses, but the purpose of all this is to strive for victory in a future war against aggression. It concerns the life and death, the rise and fall of the motherland. Compared to the interests of the nation and of the revolution, what do a few losses to the individual count? Look! The abacus of these militamen produces this striking calculation: It is worthwhile to be a militaman!

Having written to this point, I thought of the words of the "Battle Song of the Chinese People's Volunteers": "By defending peace and by defending the motherland, we are defending our hometowns." This brings out the following principle: defense of the country, defense of the hometown, defense of the home--these three cannot be separated. If one wants to defend one's home, one must first defend one's country. If everybody was to calculate his immediate losses and be unwilling to be a militiaman, be unwilling to take part in military and political training, and not make good preparations for war, then just think, if a foreign enemy one day trampled with iron heels on the territory of our country, what individual peace and happiness would we have to speak about! In our country's recent history, this kind of humiliating tragedy has occurred several times, and we should draw from this a bitter lesson. Taking the long-term view, there is no reason to calculate that being a militiaman today is a losing proposition.

Naturally, this is not to say that we should not be concerned about the militamen's vital interests and should not solve the problems involved in renumerating them for their militia activities and training. These problems directly concern and affect the militiamen's life and morale, and should cause the leadership to pay serious attention to them and conscientiously and satisfactorily provide solutions for them. But in being a militiaman, one certainly cannot manipulate an abacus and only do "small multiplications." This kind of bookkeeping will make a person forget his ideals, lose his ambition, and dispel his enthusiasm. We must balance the big books of defending and constructing the four modernizations, correctly handle the relationship between the interests of the state and the collective and the interests of the individual, cherish the motherland and strive hard to do well in building up the militia.

VALUE, FUNCTION OF TANK TRACKS DESCRIBED

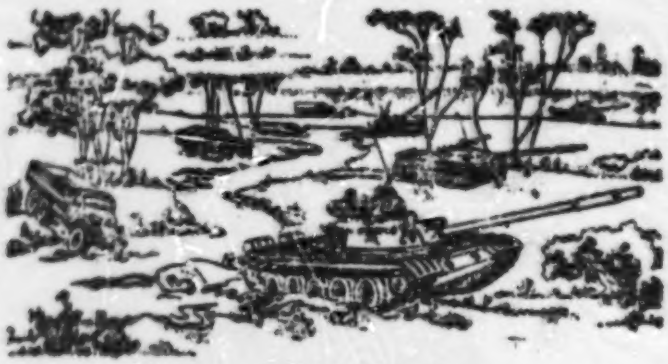
Beijing BINGQI ZHISHI [ORDNANCE KNOWLEDGE] in Chinese No 3 1980 pp 6-8

[Article by Yu Defu [0205 1795 1318]: "On Tank Tracks"]

[Text] Everybody knows that, although both trucks and tanks are equipped with wheels, the truck's wheels run directly on the road, while the tank's wheels must run on tracks. Obviously, on an asphalt road, a truck will go faster than a tank. A truck turns as its steering wheel turns, but turning is fairly difficult for a tank, and sometimes it must turn a little and then stop, slowly repeating this process in a seemingly clumsy fashion.

But if trucks and tanks compete in a cross-country race--as in Diagram 1--along a route that includes marshes, fields, and all sorts of obstacles, then the tank is the winner!

Why can the tanks forge ahead? The reason is that tanks can travel either on roads or off roads, and the worse the surface is, the faster they are as compared with trucks. This ability is derived from their mode of locomotion—the special feature of their driving parts. Naturally, there are many causes of this special feature, but here we will only discuss the tank's tracks.



[illegible]1 [illegible]

Figure 1. Tanks and trucks on a cross-country race.

The Track Is an Endless Belt for the Tank

Everybody would like to know how a tank is driven along its tracks. To explain this, we will first look at the driving parts. In Figure 2, we see five wheels attached to the tank's chassis (a total of 10 wheels attached on both sides of the tank). They are called road wheels. Some tanks have track wheels. The road wheels run on the track that is laid on the ground (the ground track), and the entire track forms a closed belt which we call the track belt. At the upper rear of the track belt is a cogwheel (there is also a cogwheel at the upper front of the truck belt), and the axle of this wheel is turned by the power from the engine through the transmission gears. On the outside of the tank, the wheel's cogs mesh with the track so as to roll it up. This wheel is called the drive sprocket (or power sprocket). 'Opposite the drive sprocket on the same side of the tank is a cofwheel that guides and adjusts the track, and it is called the guide sprocket.

When the engine's power is transmitted to the drive sprocket—as in Figure 2--the drive sprocket rotates the track clockwise, and the ground track and the ground exert a force upon each other. By the principle of action and reaction of force, the track as it moves in a horizontal direction applies a force to the surface of the earth, which in turn imparts a reactive force to the track; this force is transmitted to the tank's body, becoming the propulsive force that makes the tank go forward. We call this the tank's traction power.

The motive power of the engine is transmitted continuously through the drive sprocket, which continuously rolls up the track. Therefore, while the tank is being pushed forward, on the one hand the track, rolled up by the guide sprocket, is spread on the ground and also is pressed forward under the road wheels; on the other hand, the track by the rear road wheel is then rolled up by the drive sprocket. In this way the track goes round and round, becoming an "endless belt" spread for the tank as it moves.

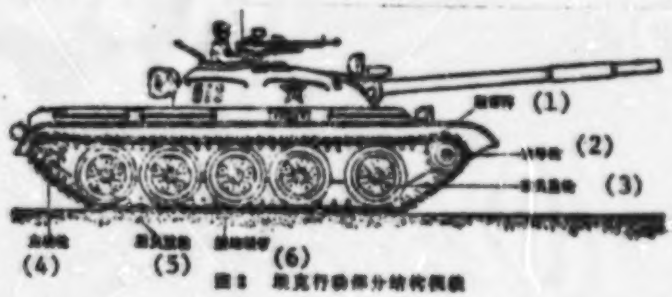


Figure 2. Structure of a Tank's Driving Parts.

KEY:

(1) Track Belt
(2) Guide Sprocket
(3) Front Road Wheel
(4) Drive Sprocket
(5) Rear Road Wheel
(6) Ground Track

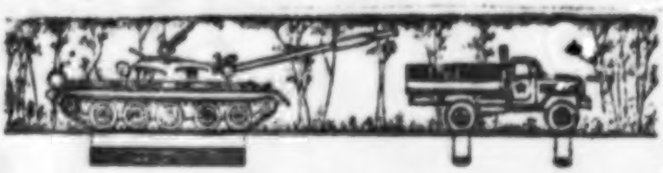
Tracks Improve the Tank's Ability To Move Over Terrain

As we know, a truck will sink deep into marshes, fields, and soft, muddy ground, and then its wheels will spin on the slipper surface and it gets stuck, whereas a tank can move over the same terrain with relative ease. Why is it that a tank, weighing several tens of tons, can move over such terrain, while a truck, weighing only several tons, cannot?

Although a tank weighs much more than a truck, its tracks cover a much larger area than do the wheels of a truck (Figure 3). A vehicle's weight exerts what is known as ground pressure (the pressure exerted on a given unit area). A tank's ground pressure is much smaller than that of a truck, which, when carrying a normal load, has a ground pressure of about 1.5 to 2 kilograms per square centimeter. The maximum ground pressure of a tank is not more than 1 kilogram per square centimeter, about half that of a truck.

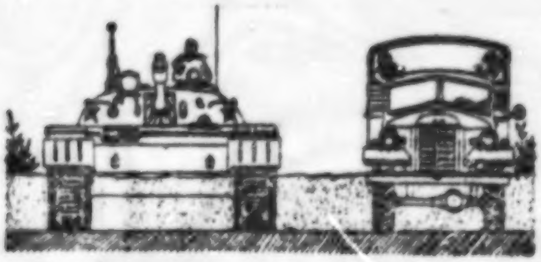
On soft ground, if the ground pressure is too great, on the one hand a vehicle will sink too much and scrape bottom (Figure 4), causing the wheels or tracks to slip; on the other hand, owing to the heavy ground pressure, the soil will be cut up and damaged severely, and the ground, under these conditions, will not provide enough traction. Because the area covered by a tank's tracks is large, the amount the tank will sink is reduced and the damage to the ground is lessened, greatly improving the tank's ability to move over such terrain. And the special pattern of the track's outside surface (its tread) allows the ground track to grip the ground firmly. Compared with the tires of a truck, the tracks of a tank do not slip easily and thus help to give a tank fairly large traction power.

Therefore, the tracks greatly improve a tank's ability to move over soft ground, and this without a doubt is extremely important for a tank's mobility.



[illegible]

Figure 3: The area of ground covered by a tank and a truck.



[illegible]

Figure 4. A tank and a truck scraping bottom on soft, muddy ground.

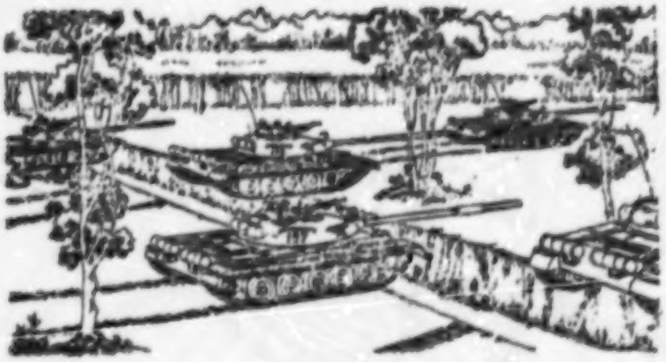
Tracks Improve a Tank's Ability To Cross Over Obstacles

By a tank's ability to cross over obstacles, we generally mean its ability to cross over natural or manmade obstacles such as steep slopes, ditches, walls, and shell craters.

A tank is a battle vehicle, and its ability to pass over these kinds of obstacles is naturally extremely important. In this respect, the tracks play an important role.

We will first consider a tank crossing a ditch (Figure 5).

If a tank tries to cross a ditch at very low speed, to be successful it obviously must maintain a stable support on the ground during the whole process. That is to say, when crossing the ditch the tank cannot pitch forward or fall back into the ditch. In this way, the tracks build a "temporary bridge" for the tank across the ditch. Before the front of the tank contacts the opposite bank of the ditch, the tank's center of gravity is still on the near bank; when the tank's center of gravity is on the opposite bank, the rear of the tank leaves the near bank and thus does not tumble into the ditch. In a word, with the stable support provided by the "temporary bridge" across both banks, the tank can, without danger of overturning, cross the ditch safely. We know from approximate engineering calculations that a tank can cross a ditch that is half as wide as the distance from the drive sprocket axle to the guide sprocket axle. The maximum width of a ditch that a tank can cross is over 3 meters, while the width of a ditch that can be crossed by a two-wheel drive truck is only about 80 percent of its wheel track. Obviously, a tank's ability to cross ditches is much greater.



[illegible]

Figure 5. Tanks crossing a ditch.

How does a tank overcome the barrier of a vertical wall?

Looking at Diagram 6, we see that when the front of the tank presses against a vertical wall, the tread by the guide sprocket against the wall produces a mutually applied force (in the same way as does the ground track along the road wheels against the ground), the tread applying a downward force and the wall an upward counterforce. The raising of the front of the tank caused by this counterforce impels the tank to climb the wall. In addition, while the tank is in contact with the wall the driver quickly opens the engine throttle and the tank suddenly accelerates like a truck. Just as the passengers in a car are thrust backward from the force of inertia when the car suddenly accelerates, the force of inertia helps the tank to raise its front end. With the effect of the momentum to raise its front end, the tank's treads lay down a track by which it can climb the wall. When the tank's center of gravity is over the edge of the wall, the tank begins to tip toward the ground. The driver then applies the brakes to the tracks and the tank falls smoothly to the level part of the ground. A tank can climb a wall close to 1 meter high; a two-wheel drive truck can only cross a wall whose height is 30 percent of its wheel tracks, and before a vertical surface 1 meter high it sees only a "wall"!

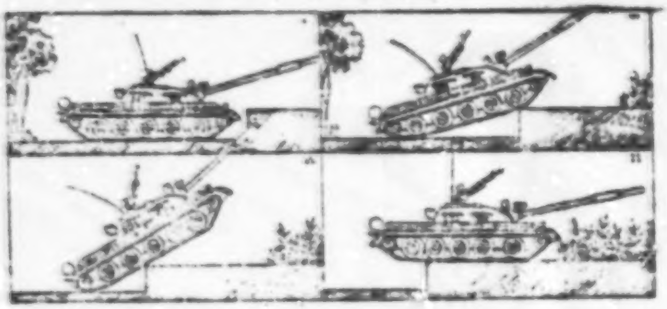


图6 [illegible]

Figure 6. The process by which a tank overcomes the barrier of a vertical wall.

The Era of Tracks

After the above discussion, it is not hard for us to understand that, on the one hand, owing to a tank's protective armor and the heavy weapons with which it is fitted, the weight of a tank far exceeds that of a truck, while on the other hand, under wartime conditions, a tank's movement across country is both difficult and complicated. Therefore, the "endless belt" provided by its tracks is truly important. Moreover, owing to the fact that the tank has an engine with a lot of horsepower, and its driving parts are fairly elaborate, its ability to move across country on its tracks is brought into play even more fully.

Therefore, even if one tank track is heavier than several truck wheels and its cost is much higher [illegible] so even if that makes the tank's suspension system complex, it is sti[illegible]e main tracked battle vehicle of every country in the world today.

When the first vehicle track in the world appeared at the end of the 18th century, it was made of wood. Tracks have been used on battle vehicles for less than 100 years, but the tracks today have already been developed into an "endless belt" for battle vehicles that have been tested in war. Experience in structural form, materials, working processes, and use of tracks has continuously enriched the treasure house of battle vehicles.

MILITARY AND PUBLIC SECURITY

PUBLIC SECURITY OFFICIAL ON INCIDENCE OF ROBBERIES IN CAPITAL

Bejing BEIJING RIBAO in Chinese 31 Aug 80 p 2

[Article: "Cracking Down Sternly on Robbers, Protecting the People's Life and Property"]

[Text] Recently, Liu Hanchen [0491 3352 5256], deputy head of the Municipal Public Security Bureau, discussed with a reporter of this newspaper the question of cracking down on robbers.

Comrade Liu Hanchen first of all briefed the reporter on the current situation regarding public order in the capital. He said that since the smashing of the "gang of four," under the kind care of the Party Central Committee and the direct leadership of the Municipal Party Committee, all party members, government workers, militarymen, civilians, and students have mobilized to energetically rectify public order, and that we have already begun to see results. The situation with regard to public order has taken a turn for the better, and the number of criminal cases has fallen year after year: 11.4 percent lower in 1978 than in 1977, and 23.1 percent lower in 1979 than in 1978. In the first half of this year, the public order situation in the capital took a further turn for the better, with the number of criminal cases being 19 percent lower than in the second half of last year, but the current situation is still fairly far from that called for by the directives of the central authorities and by the demands of the masses. There are still fairly many criminal cases, especially the critically harmful cases of robbery that still occur. Although the number of robberies is not very big when compared to the total number of crimes, their harm is serious and their effect is very bad. Often, when one person is robbed, everybody is uneasy; when one household is robbed, its near neighbors are affected. This is an outstanding problem that affects public order in the capital.

When analyzing the reasons why robberies are still committed in recent times, he said that, looking at them in general, they are direct evil consequence upon certain teenagers of the pernicious influence and effect of the slogan "Beating, smashing, and looting are justified" during the period when Lin Biao and the "gang of four" were running wild. During the 10 years of calamity, not only were beating, smashing, and looting not criminal acts but, on the contrary, they were lauded by Lin Biao and the "gang of four" as "revolutionary actions." Since the smashing of the "gang of four," although a great amount of work has been done, their pernicious influence and effect are still far from being elminated. This is the main reason why robberies are still being committed. Next, our crackdown on robbers has not been sufficiently timely and powerful, and there has been insufficient propaganda focused on the legal system. This is another reason for the robberies committed at present.

Continuing, he concretely explained what a robbery is and why robbers are severely dealt with by the law. He said that, according to the provisions of our country's penal code, robbery is defined as the act of possessing or taking charge of property by force, coercion, or other methods in which public or private property is stolen and kept in the perpetrator's possession. Force is defined as a violent act such as beating, tying up, wounding, or killing the victim, compelling the victim to immediately hand over property, or stealing the victim's property and running away. Coercion is defined as using the threat of force to compel the victim to hand over his property. The other methods are to use liquor or drugs to dope the victim and then steal his property and flee.

Robbery not only directly harms public or private property but it frequently endangers the victim's life or health, very easily having the serious consequence of injuring or killing the victim, and it is one of the several major crimes stipulated in our country's penal code which should be sternly cracked down on. Article 150 of our country's "Criminal Code" stipulates: "Robbing public or private property by force, coercion, or other methods is punishable by not less than 3 or more than 10 years' imprisonment....In Serious circumstance, or if somebody is badly injured or killed, the punishment is 10 or more years' imprisonment, life imprisonment, or death, and in addition the perpetrator's property can be confiscated."

In conclusion, Comrade Liu Hanchen pointed out that, in the most recent period, following the gradual strengthening of the socialist legal system, there has been a daily increase in the number of fine people and fine deeds in which the masses and the victims of robberies have cooperated with the public security organs in apprehending robbers. We have warned all criminals that they must rein in at the brink of the precipice and stop doing evil. We have strong political and legal organizations, and the masses of people have a high degree of awareness, so that no criminal can escape the net of the people's justice. If a criminal dares to defy the law, he will certainly fall into the masses' dragnet and be severely punished by the legal system.

A DISCUSSION ON PLANNING POPULATION GROWTH

Changchun JILIN SHIDA XUEBAO (ZHEXUE SHEHUI KEXUE BAN) [JOURNAL OF JILIN NORMAL UNIVERSITY (PHILOSOPHY AND SOCIAL SCIENCES ISSUE)] in Chinese No 2, 1980 pp 17-22

[Article by Han Mingxi [7281 2494 1585] and Wang Shuxin [3769 3219 7451]]

[Text] In his "government work report" at the 2d conference of the 5th People's Congress, Premier Hua listed further effort on planned parenthood and earnest control of population growth as 1 of the 10 tasks of China's development of the national economy today. Population growth planning is an extremely important issue in the socialist construction. With the shift of the emphasis of the party's work to the socialist modernization construction, the conscientious solution of this issue in theory and in practice has become even more important. In this article, a superficial exposition on the objective necessity of population growth planning and its relationship with the four modernizations is attempted.

I

As we must act according to the objective economic laws when developing the socialist economy, we must do the same when developing the socialist population, for otherwise we will be punished by the objective laws. Therefore, in the course of our four modernization construction, we must observe not only all the socialist economic laws, but also the law of the development of the socialist population. Population growth planning is the objective requirement of the socialist population law.

According to Marxism, the law of population is a law determined by the social production pattern, not by abstract biological or natural laws. In "Das Kapital," Marx pointed out clearly: "In fact, each special historical production pattern has its special historical and operational population law. Abstract population law only exists in the animal and plant world which has not encountered historical interferences."[1] Lenin also told us unequivocally: "We should not study population 'abstractly' in disregard of the different kinds of social structural forms in history."[2] Therefore, we must not study the socialist population law apart from the socialist production pattern and economic system. Nor must we lump together socialist and capitalist population laws.

Marx gave us a shining model in his study of the population law of the capitalist society. Under the capitalist condition founded on the production means private ownership system, the demand for labor force is not determined by the total capital, but by the ratio of the variable capital in the total capital. Therefore, with the rise in the organic composition of capital, an ever greater portion of capital is converted into production means, while the portion converted into labor force relatively decreases, thereby relatively reducing the demand for labor force. Therefore, the large increase in labor force accompanying the development of capitalism cannot be absorbed by capital. When the supply exceeds the demand, the inevitable result is large unemployment, or relative surplus population. For this reason, Marx declared resolutely: "While producing capital accumulation, the worker population also creates its own relative surplus population by means of the ever expanding scale of production. This is the population law unique with the capitalist production pattern."[3]

The socialist revolution and the creation of the socialist production relationship forced the capitalist population law to withdraw from the arena of history, and the socialist population law began to produce an effect. On the population development of a socialist society, Engels predicted that, in a communist society (including both the rudimentary and the advanced stages), people would be able to adjust the production of man in a planned way similar to the planned adjustment of production. In his article entitled "to Karl Kautsky," he pointed out: "If it is said that the communist society, at a certain time in the future, will have to adjust the production of man similar to the production of things, then, precisely such a society, and only such a society, can accomplish it without the least difficulty."[4] In his intensive analysis of China's socialist economic relationship and the population situation, Comrade Mao Zedong pointed out even more clearly that, in the past, "mankind was in a completely anarchist state on parenthood, unable to control itself," and that the socialist society must "gradually attain universal planned parenthood."[5] These important expositions profoundly revealed the inevitability and necessity of the planned development of population in a socialist society, thereby pointing out that population growth planning is the objective demand of socialist population development.

The creation of the socialist economic system has made population growth planning necessary and feasible. The socialist economic system is built on the foundation of the production means public ownership system, which makes it possible to organize and direct the planned and proportionate development of the entire national economy. Meanwhile, the planned development of the national economy includes the planned production of man himself as well as the material means.

First, let us look at the issue in terms of man as the producer. Man as the producer refers to that part of the people with labor capacity which can take part in social production, viz., the social labor force. They are the direct participants in the production of material means and constitute the indispensable factor in social production. Therefore, to guarantee the planned development of the production of material means in the entire society, we must provide, in a planned way, laborers with socialist awareness and culture to the various units of the national economy, in order to assure a balance in the demand and supply of labor force. This calls for the planned development of population. We know that, for man to grow from birth into a social labor force, a very long time is required. The new labor force today is determined by the number of births more than a decade ago, while the number of births today will determine the scale of the new labor force more than a decade hence. Therefore, to adapt the development of the labor force with that of the national economy, we must regulate the scale and speed of population growth in a planned way, so that the development of the national economy will not be affected by labor shortage, and nor will we encounter difficulties in disposition due to sudden increases in labor force. Therefore, the planned development of the production of material means calls for the planned development of the production of man himself, and a necessary proportion must be maintained between the two, before we can guarantee the planned and proportionate development of the national economy.

Next, let us look at the issue in terms of man as the consumer. Man as the consumer refers to the fact that the entire population needs living means, including those without labor capacity as well as those with labor capacity. Under the socialist condition, the goal of production is to satisfy the people's growing material and cultural needs. Meanwhile, the content and the amount of such needs of the people are not only determined by the total population, but also by its age and sex compositions. Therefore, the size of the population, population growth and the sex and age compositions will directly influence the production planning of consumer means. To satisfy the continuously growing material and cultural needs of the people, while developing the production of material means in a planned way, the production of man himself must also develop in a planned way.

In short, under the socialist condition founded on the production means public ownership system, whether man as the producer or man as the consumer, population growth must be adapted to the planned development of the production of material means. We can thus see that population planning has become the objective law for the development of the socialist population.

In terms of its concrete content, the socialist population law requires the proper handling of the following proportionate relationships:

1. Population and Labor Force. The planned and proportionate development of the national economy requires a definite amount of labor force adapted to such development. Under a given level of production force, insufficient labor force will fail to satisfy the need of expanded reproduction. On the other

hand, excess labor force will be detrimental to the planned and proportionate development of the national economy. Yet labor force is a part of the total population. Maturing from infancy, it again turns into non-labor force when it finally loses its labor capacity. Therefore, it is always a definite proportion of the population. To increase labor force, the population must increase; to reduce labor force, the population must decrease. Therefore, to adjust the labor force and the national economy, the total population and labor force must maintain a certain proportionate relationship.

2. Population and Production Means. Social production requires both production means and labor force, yet labor force only becomes real when the laborer and production means are combined, because only such combination will produce material assets and truly realize the function of man as the producer. To realize the planned and proportionate development of the national economy, while developing and improving the scale and quality of production means in a planned way, we must provide, also according to plan, a certain amount of labor force existing in the population. Therefore, a certain proportionate relationship must be maintained among labor force, the population and the production means. However, this does not mean that the speed of their development must be the same. The development of socialist production mainly relies on using advanced modern technological equipment and raising the scientific and cultural levels of the laborers, enlarging the range and scale of the technological equipment of each and every laborer so as to improve labor productivity continuously. The more advanced the modernization of production, the more will be the technological equipment required by each labor force and the higher will be the quality standard, thereby relatively reducing the number of laborers. Under ordinary conditions, the growth of the labor population should be slower than the increase of production means, manifested in the continuous improvement of the technological composition. This is the inevitable tendency of the development of modern production.

3. Population and Consumer Means. Whether laborers or non-laborers, all require a certain amount of consumer means to survive and develop. Meanwhile, the amount, quality and scope of consumption are not only mainly determined by the amount, quality and scope of consumer means furnished by the production of material means, but also closely linked with the size, composition and rate of growth of the population. Where the consumer means is fixed, the larger the population and the faster its growth, the lower will be the average consumption standard; vice versa, the higher will be the average consumption standard. Therefore, we must raise the people's living standard on the foundation of the continuous development of the production of material means and maintain an appropriate ratio between the size of the population and the living means.

4. Population and Reserve. The expansion of socialist production requires the continuous growth of the socialist reserve, while the only source of reserve is the new value created annually by the various material production units, i.e., the national income. The annual national income must not be entirely placed in reserve, and a consideration portion must be used directly for living needs. Therefore, the planned and proportionate development of socialist production

requires the correct handling of the relationship between consumption and reserve, while population planning is the prerequisite for such correct handling. Where the national income is fixed, for the population development to conform to the demand of the planned and proportionate development of the national economy, a slower population growth, generally speaking, will, on the foundation of maintaining a relatively high reserve level, assure the gradual improvement of the people's living standard; vice versa, not only a relatively high reserve level cannot be maintained, but the general improvement of the people's living standard cannot be assured. Therefore, to increase the reserve continuously while assuring the gradual improvement of the people's living standard, a certain proportion must be maintained between population and reserve.

In short, these proportionate relationships constitute the concrete content of the socialist population law. They reflect the demand of the fundamental socialist economic law and the planned and proportionate development of the national economy and embody the substance and characteristics of the socialist population development. Only the conscientious and proper handling of such relationships will make population growth and the planned and proportionate development of the national economy adapted to each other, thereby promoting the rapid development of the socialist production.

II

The socialist system creates the condition for the emergence and operation of the socialist population law. In other word, the socialist condition provides us with the possibility to regulate by planning the production of man himself and make population growth and the increase in material production adapted to each other. Due to Lin Biao and the "gang of four's" interference and disruption, the population of our country, for a considerable period of time, grew without restraint. The 540 plus million (excluding Hong Kong, Macao and Taiwan and the overseas Chinese; the same for below) population of our country in 1949 has now reached more than 970 million, and approximately 600 million, or 63 percent, were born after liberation. The natural population growth rate averages 2 percent annually. The net gain for the 30 years is 420 plus million, or 78 percent. While the annual average growth rate is 2 percent, it was around 2.5 percent for many years. Between 1966 and 1971, the rate was 2.6 percent, or an annual gain of 20 million.

Marxism opposes the population determinism of the bourgeoisie, viz., that population growth is the decisive factor for social development, but it does not negate the promotive and retardant effects of population growth on social development. Under the concrete condition of our country, we must admit that the excessive population growth has affected the development of socialist construction, especially today when the people of the whole country are marching toward the four modernizations. It has become a sharp contradiction with the four modernizations, which is glaringly manifested in the following aspects:

1. Excessive Population Growth and Accelerating Accumulation. The large amount of money needed for our socialist construction must mainly depend on our own accumulation, and the major way to accomplish this is to develop production at a high speed and increase the national income. Under the fixed growth rate of industrial and agricultural production and national income, the scale and speed of reserve accumulation, to a large extent, are conditioned by the scale and speed of population growth. China's average national income per capita is among the lowest in the world. When the production force is low, it is impossible for the reserve level to be high, because the national income, after satisfying the basic living needs of the population, leaves very little surplus. Computed at the minimum living standard, raising the population born after liberation until age 16 required 1,330 plus billion yuan, or 31 percent of the cumulative total of the national income since liberation. Approximately 30 percent of such expenses was paid by the state and the collectives and a little over 70 percent by the families. Thus computed, the state and the collectives paid out 400 billion yuan to raise the 600 million population. This figure is equivalent to one-third of the cumulative reserve since liberation. When the consumption of the existing population is taken into account, the part of the national income which can be used as reserve can be figured out.

Today, China's population is greater than before. If population growth is not strictly controlled, the number of births per annum hereafter will be larger than before. The overwhelming majority of those born between now and the end of this century will require funds for their upbringing and consume large quantities of social assets, which will doubtlessly seriously affect the accumulation of construction funds.

2. Excessive Population Growth and Improving [illegible] Scientific and Cultural Levels of the Entire Nation. Improving the scientific and cultural levels of the entire nation is the objective demand of the four modernizations. The key to the four modernizations is the modernization of science and technology, which requires the training, within this century, of a large group of workers, and peasants and intellectuals equipped with modern scientific and technical knowledge, able to employ advanced technology and manage modern industry and agriculture, including a large group of scientists, engineers, technicians and management cadres of the world advanced level. For this reason, we must vigorously develop education. However, China's foundation is weak and the annual education appropriations are very limited, while the number of scientific and cultural talents to be trained is considerably large. Thus emerges a great contradiction. According to statistics, currently in our country, 6 percent of the school age children cannot attend school, 12 percent of the elementary school graduates cannot enter junior middle school, over 50 percent of the junior middle school graduates cannot enter senior middle school, and 95 percent of the senior middle school graduates cannot go to college. One important reason for the backwardness of education is excessive population growth. If population growth is not vigorously controlled today, the task of universal education will be even more arduous and the work of training advanced personnel will encounter grave obstacles.

3. Excessive Population Growth and Employment. To develop his role as a producer, man must be combined with production means. If we have only labor force, but not adequate tools and objects of labor for its use, the development of production will be retarded. After liberation, our country basically eliminated the unemployed population left down by the old China. However, due to excessive population growth, the burden of placing the new labor force is becoming ever heavier.

In urban areas, to employ 1 million people, computed according to a very low technical equipment level per industrial worker in our country today, i.e., 10,000 yuan, will require correspondingly 10 billion yuan of new fixed assets. From 1952 to 1977, the annual new fixed assets averaged around 15 billion yuan, and those since 1973 was only a little over 20 billion yuan. Take 1973 for instance: Besides a part of the funds spent on improving the technical equipment of the existing laborers, very little was left for placing the new labor force. Currently in our country, the number of people in cities and towns awaiting employment is considerable, thus creating the contradiction between the urban labor force and its employment capacity. In rural employment, close to 90 percent of the annual new labor force is placed in rural areas. Even though agricultural production is still basically by manual labor, the current labor force is already in a state of saturation. China's population constitutes approximately 1/4 of the world total, while its cultivated area is only 7 percent. The average cultivated area per capita has reduced from 3 mu at the beginning of liberation to 1.5 mu. Computed according to the agricultural labor force, the average per capita is only 5 mu, which ranks among the lowest in the world. Even in Japan, where the average cultivated area per capita is only 0.7 mu, that per agricultural labor force is 13 mu. In America, each agricultural labor force averages 1,000 mu of cultivated area, which is 200 times that of our country. China's excessive population growth, large labor force and small cultivated area inevitably form a contradiction. In short, whether in terms of urban or rural areas, if population growth is not controlled, the pressure and difficulties of employment will aggravate.

4. Excessive Population Growth and Improving the People's Living Standard. The goal of socialist production is to continuously satisfy the people's growing material and cultural needs, while the extent of such satisfaction is determined, on the foundation of production development, by the proportion between the rate of increase of consumer fund and that of population growth. According to statistics, in the 25 years between 1953 and 1977, our consumer fund increased 2.8 times while the population grew 66.7 percent, resulting in an increase of only 1.3 times in the average consumption per capita. Due to the excessive population growth, 58 percent of the annual new consumer fund is spent on the need of the new population, and only 42 percent is left for improving the consumption level of the existing population. After liberation, our grain output increase, compared with before liberation, has not been small. According to statistics, our 1977 output was 565.5 billion jin, an increase of 97 percent over the 287.4 billion jin of 1952. However, due to the excessive population growth, the average per capita rose from 510 to only 598 jin, an increase of only 80 plus jin. The increase in the absolute amount of our light industrial products after liberation has been considerable but, due

to excessive population growth, the average per capita is very little. As for housing, communication, medical care, service and cultural and recreational facilities, due to excessive population growth, they are far behind the need.

In view of the above, we can clearly see that extremely sharp contradictions exist between China's excessive population growth and the four modernizations. One may say that if we do not control population growth by planning, we will not be able to promote the realization of the four modernizations. To realize the four modernizations as soon as possible, we must, while vigorously developing the socialist production, control population growth by planning, i.e., tackling both kinds of production together. It is a task with a momentous strategic significance confronting the people of the entire country.

III

To start from the practical conditions of our country and control population growth consciously, on a long term basis and in a planned way, the central government proposed the goal of zero for the natural growth rate by the end of the century, viz., no growth. To attain this goal, the first step is to strive to reduce the natural growth rate from 2 percent to around 0.5 percent by 1985; the second step is to reduce it to zero by the year 2000, the end of the century. This is a goal which is concretely feasible as well as positively progressive in conjunction with China's reality and the current and long range interests of the people of the entire country.

The difficulties in realizing this goal proposed by the central government are great. Besides the fact that China's birth rate has dropped from 4 percent in the past to 1.834 percent and it will be difficult to accomplish large scale sustained reduction on this foundation, and the fact that our rural population constitutes more than 80 percent of the total and population control in rural areas is generally more difficult than in the cities, there are 2 even more difficult problems:

1. China's population base is too large. Even if the birth rate in the future drops rapidly, the annual births will still come to a considerable figure. When the natural growth rate is 1 percent, for instance, the annual net gain will be close to 10 million and the number of births will be 16 to 17 million.

2. In the remaining 20 years of this century, there may possibly be another peak in births. In the 30 years since the founding of the nation, there were several peaks in births, creating the age groups of 1954 to 1957 and 1962 to 1971 which, according to statistics, were several million to 10 million more a year than other periods. Before the end of the century, they will successively reach the age of marriage and childbearing, thus the possibility of a new peak in births.

These two problems have a great impact on China's population growth tendency. Recently, several natural science and social science workers jointly made many projections to forecast China's population growth in the 100 years hereafter (figures for Taiwan temporarily unavailable; same for below). To explain the issue, I cite three of the projections:

(1) If the average birth rate (average number of births per woman of childbearing age) from this year on is 3, which is to maintain the 1975 birth level, by the year 2000, the end of the century, the national population will rise to 1.414 billion. By the year 2080, i.e., 100 years hence, the figure will rise to 4.260 billion, almost equivalent to the world total of 1979. (2) If the average birth rate from this year on is 2, i.e., universal practice of "2 births," by the end of the century, the national population will rise to 1.217 billion. When the peak is reached in 2052, the total population will be 1.539 billion, and will drop to 1.472 billion 100 years later. (3) If the average birth rate drops noticeably beginning with this year and reduces to 1 by 1985, and if "1 birth" is universally practiced from 1985 on, by the time of the peak in 2004, the national population will be 1.054 billion. It will only begin to drop after 2005, and will reduce to 370 million 100 years later.

The first and second projections indicate that, if we do not adopt effective measures starting from now, China's population growth, whether by the end of the century or 100 years hence, will be quite startling. The third projection indicates that, if we adopt firm measures and realize "1 birth" as soon as possible, the natural growth rate of China's population will drop to zero by the end of the century, viz., no growth, and the total population will not exceed 1.1 billion. Thereafter, with the development of population inertia, the tendency of population reduction will follow, and we will thereby gain the initiative in population growth control.

SOCIOLOGICAL, EDUCATION AND CULTURE

POLITICS, INFLUENCE OF LITERATURE AND ART, DISCUSSED

Baotou BAOTOU WENYI [BAOTOU LITERATURE AND ART] in Chinese No 4, Jul 80 pp 32-35

[Article by Ai Yin [5337 5593] and Du Zhong [2629 0112]: "Study Notes on the Relationship Between Politics and Literature and Art"]

[Text] In recent times, literature and art circles and academic circles throughout the country have developed extremely enthusiastic discussions on the question of the relationship between politics and literature and art. Although this is an important theoretical question, it is also an urgent question of creative practice, and has a bearing on the prospering or failure, and even the survival, of our literature and art.

(1) Literature and Art Are Not Subordinate to Politics.

The fact is that Marx, Engels, Lenin, and Mao Zedong all provided very clear expositions on the question of the relationship between politics and economics and between politics and literature and art, etc.

In the "Communist Manifesto," Marx and Engels pointed out: "The principal forms of economic production and forms of exchange in any given historical period, as well as the social structures that must be produced by these, are the foundation upon which that period's political and spiritual history depends upon, and it is only by starting from this foundation that this history can be explained."[1]

From Marx's and Engels' joint establishment and affirmation, and Engels' later reaffirmation of this principle, we get a glimpse that the politics and literature and art (the history of spiritual images) of a given age are determined by the economic foundation of that age and are mutually related through it. Moreover, the economic foundations of a given period are the foundation upon which that period's literature and art (particularly the social content of the literature and art) are established, and a scientific explanation of them can only be arrived at by starting from this foundation. This is a truth that Marx and Engels tested and verified in social practice again and again. However, what does the literature and art produced by that period (the history of spiritual images) have to do with the economic foundations that produced it?

First, when the principal forms of economic production and forms of exchange of a given period, as well as the social structures that must be produced by them die out, the politics that represent this economic foundation die out along with them, but the literature and art that have been established on the basis of them are not lost with them, and especially that literature and art that represents that period's historical spirit and historical style and features can have great vitality. The countless chapters of the "Book of Songs," "Li Sao," "Annals of History," the Han ballads, the Tang poetry, the Song odes, and the Ming and Qing novels, because of their portrayal of a deathless democratic spirit, have become a part of the wealth in the proletarian cultural treasure house, and have a fresh vitality. It is just in this manner that reading "Li Sao" today gives the reader a spirit of breaking with the old and exploring the new. As Lenin put it, "Within the culture of every race, even though undeveloped, there are components of democracy and socialism, because there are laboring masses and exploited masses in every race, and their living conditions necessarily produce democratic and socialistic thought systems,"[2] as well as "The proletarian culture ought to be produced according to specifications by the whole knowledge created by mankind's being oppressed by the capitalist society, the landlord society, and the bureaucratic society. All of these large and small avenues, whether past, present, or future, open into proletarian culture."[3] This thesis is the scientific thesis that explains the undying vitality of this phenomenon of literature and art.

Second, new factors have already been produced in the principal forms of economic production and forms of exchange of that period, and before the social structure (including politics) necessarily produced by these new economic factors appears, the new period of these new factors is represented by literature and art that has already germinated. This is the "seed of a future superstructure" that men have spoken of. "Dream of the Red Chamber" is an example of this phenomenon that people often enjoy. During the Kangxi, Yongzheng, and Qianlong periods, it is true that the silk industry was quite well-established in the Suzhou and Hangzhou areas, and there were already the seeds of new capitalist production relations in China, but the principal forms of economic production and forms of exchange in that period, as well as the social structure produced by them, had still not changed much, so there was still no capitalist politics nor capitalist social structure, but in "Dream of the Red Chamber," there was already the progressive ideology of advocacy of equality and brotherhood, and opposition to the establishment of an autocracy. Further, "Li Sao," produced in the period of the warring kingdoms, had already predicted that China's system of slavery would surely disintegrate, and that historical trends would produce feudalism, and at that time the entire area of the superstructure had produced no feudal politics, laws, etc. Because of this, the world significance of Zhu Yuan lies in the fact that he was the last poet of China's slavery period and the first poet of China's feudal period.

Obviously, in the whole realm of the superstructure, literature and art, and politics, are alike subordinate to ideological categories, and each has its own independence and characteristic functions that are not mutually interchangeable. Not only is the relationship between them not one of politics leading literature and art, and of literature and art being subordinate to politics in a kind of extremely vulgar cancellation of the independence of literature and art, reducing it to a distorted relationship as the servant of politics, but on the contrary, literature and art are the most sensitive, the keenest, and the most novel in that it is not only ahead of philosophy and religion, but is also ahead of politics in representing new changes in the economic foundations.

Third, based on the basic characteristic of literature and art, is to "use the forms of literature and art to make an image"[4] of the writer's experience through thinking in terms of images, and because of this, when representing the economic foundations on which it relies, it has an extremely vivid, rich, and moving quality. Because of this richness, the pictures it provides of life and society describe a much broader world than do its sister components of the superstructure such as politics, philosophy, and religion. In expounding on the writings of Balzac, Engels said, "In 'Comedie Humaine,' he has given us a slice of French society, particularly the 'polite society' of Paris, in a remarkably realistic history, he has used the chronicle form to describe, almost year by year, the increasing assaults by the rising bourgeoisie on the aristocratic society of that time,...he has gathered the whole history of French society into the confines of this picture, and the things I learn from this, even the particulars of economics (such as the redistribution of personal property and real property after the revolution) is far more than what I am able to learn from all the professional historians, economists, and statisticians of that time."[5] It was also because of this that Lenin regarded Tolstoy's writings on peasant life under the patriarchal system on the eve of the Russian revolution as a "one-sided mirror" of the Russian revolution.

From this we see that that view that literature and art can only have an effect on the economic foundation through politics is contrary to objective reality. Literature and art and politics are all subordinate to the economic foundation, and they all are able to serve, independently and dynamically, in the establishment of the economic foundation. Therefore, the ruling class in any age regards literature and art and politics as the two strongest measures for stabilizing the economic foundation upon which they depend for survival, and the terms "culture worship" (meaning not only literature and art, but also the transformation of cultural education), "declaration of arms" (arms being the highest and strongest manifestation of politics), "attention to civil affairs," "attention to military affairs," "the way of civil and military is one of tension alternating with relaxation," etc. are proof of the historical occurrence of this administering the country and maintaining class rule.

(2) Literature and Art Have a Great Influence on Politics.

From ancient times to the present, all the artistic practice of literary craftsmen both in China and abroad proves that those works that stir men's souls and are passed down without losing their freshness are those that are in sympathy with the people and are deeply concerned with the age, and which intensely affect politics—these are the ones that have a great influence on politics.

The Zuozhuan commentaries on the Spring and Autumn Annals record, in the period of the decadence of the slave system, the unusual political circumstances of the country, the peculiar family customs, the assassination of 36 princes, the conquest of 52 states and the accompanying confusion, and having the enormous social effect that is described in the literature as "Confucius, in writing the Spring and Autumn Annals, threw officials into panic and caused thieves to feel dread," this became the earliest example of literature and art (historical literature) having an effect on politics and the political situation. Confucius said, "The Odes serve to stimulate the mind. They may be used for purposes of self-contemplation. They teach the art of sociability. They show how to regulate feelings of resentment. From them you learn the more immediate duty of serving one's father, and the remoter one of serving one's prince."[6] Obviously, through poetry (literature and art), we can stir up morale (stimulate), know the society (self-contemplation), unite the masses (sociability), criticize the court administration (resentment), and achieve the objective of "serving one's father" and "serving one's prince." It seems that even Confucius and Laozi, more than 2,000 years ago, understood the tremendous influence and effect of literature and art on politics.

This enormous social function of literature and art was understood as high up as the emperor and as low down as the common people and is used as a matter of course without being established: "Through style, the superiors transform the subordinates, and through style, the subordinates satirize the superiors."[7] This is the evidence. Moreover, the ruling classes of all dynasties adopted advanced measures through literature and art and a recognition of political gains and losses to stabilize their own rule. This is what the "Book of Odes" spoke of as "At news of peace and prosperity, we take pleasure in tranquility, and that is proper administration; at news of turmoil, we are resentful to the point of anger, and that is perverse administration; at news that the state has been destroyed, we think of our grief, and that is misery for the people." During the reign of King Zhou, "The emperor went on one tour of inspection in 5 years, and ordered the great master to contemplate the people's customs in a poem,"[8] and this is another example. "In ancient times there were officials who collected poetry, and because of this the king was able to contemplate the customs of the people, know of the gains and losses, and examine the evidence for himself."[9] It can be seen that there is almost nothing that is impossible, from participating in government affairs to managing foreign affairs; from morals and ethics to natural science; from distinguishing between the true and the false in the sentiments of the people and the gains and losses to the national government to handling husbands and wives, governing the state, establishing universal education, and enriching human relations. This is what Liu Xie meant when he wrote, "How great a virtue is the practice of literature!"[10] It really is a "great undertaking in management of the nation, a great event that will not fade."[11]

In his whole life, Bai Juyi, the great realistic poet of the middle Tang period, wrote more than 170 allegorical poems to expose the politics and society of that time, from the Emperor Xianzong at the top, to the influential officials in the middle, to the corruption and reactionary rule of the impoverished officials at the bottom, especially concentrated in the series of 50 poems titled "The New Joyful Prefecture," written in the fourth year of the Yuanhe reign, and in which his trenchant brush could cause the influential officials to "become angry at the sight of him,"[12] and it certainly could not be denied that this was a great and astonishing political gift. Literature has the utilitarian objective of transforming society. When Bai Juyi advocated "The power to punish evil and urge goodness is exercised in the writer's appraisal, and the reason for re-examining gains and losses lies between the pleasing jabs of the poet,"[13] he meant that the poet must "simultaneously serve the whole world," explaining that the lofty ambition he had undertaken encompassed the whole world.

Naturally, when we talk of the great influence of literature and art on politics, we should also say that politics has a similar great influence on literature and art. Moreover, since politics is the most concentrated expression of economics, it is also the location of the core of the superstructure, and because of this,

this influence that politics exercises over literature and art is made more strongly and profoundly apparent:

First, it can help to bring about the flowering of literature and art in a given age. The existence of the "Book of Songs," the "Songs of Chu," the Han ballads, the Han prose poems, the Fujian-Anhui literature, the Han and Tang murals, the Wei and Tang stone carvings, the Tang poetry, the Song odes, the Yuan songs, and the Ming and Qing novels, is of course the inevitable outcome of trends in the internal development of literature and art, but at the same time, they were largely determined by the vivid and vigorous political situation of the age they occurred in, or took strength from the encouragement of the rulers, or thrived and generated a democratic vitality under oppressive politics, all of which are important factors in forming the literature and art of an age. Liu Xie said: "The unity and coherence of folk songs is in that they evolve with the era, moved by the winds above and shaken by the waves below." "Literary changes color the circumstances of an era; their rise and decline mark the chronology."[14]

Second, it bestows literature and art with an internal spirit. Works of literature and art that are produced in a given era and are outstanding enough to be passed down to later ages are always considered on the basis of their ideological and artistic accomplishments, and do not depart from this spirit. Of course, this includes works that oppose as well as those that support.

If we judge on the basis of what has been done in the modern proletarian struggles of the literary and artistic revolution, there is a mutual effect between literature and art and politics, a relationship of mutual influence that is expounded even more distinctly. Not only did Marx and Engels learn a great deal from the great realistic writers Balzac and Shakespeare, which helped them to dissect the process of capitalist development clearly and accurately, but Lenin also took Tolstoy's incomparable picture of Russian life as a mirror image of the proletarian revolution in Russia, and from it saw the direction the Russian revolution must take to obtain victory. In the brief 3 years from 1908-1911, he wrote seven critical essays on Tolstoy. From this number alone, it is sufficient to show what a great assistance Tolstoy's literary works were to Russian proletarian politics. It is just for this reason that everyone, from Marx and Engels to Lenin and Comrade Mao Zedong, has a great regard for the importance of literature and art to the proletarian political struggle, and advocates "establish the party's literature," and "propose principles for the party's literature." At the same time, the leaders of the proletarian revolution have a great regard for the enormous effect of politics on literature, demanding that "Literary affairs should be made a part of the total affairs of the proletariat, should be made a part of the nuts and bolts of the unified, great, social democratic machine that is operated by the vanguard with all the consciousness of the whole laboring class."[15] This is the most obvious intervention of politics in literature. The aspiration of such intervention, insofar as it concerns a political party leading an intense revolutionary struggle, is correct, and is also necessary. However, it must be noticed that this expresses an intense aspiration and requirement on literature that functions outstandingly, causing it to have an even greater influence on politics, and absolutely does not reduce literature and art to a status of something subordinate to politics, neither is it what some metaphysicists understand it to be, politics ordering literature and art around like a slave, making literature and art "degenerate into a graph of political slogans."[16] When literature and art are forced to serve politics one-sidedly and too strongly, and especially serve certain specific policies of the moment, the result is that the works of literature and art do not proceed from life, but from a concept, the principal reasons for formalism and conceptualization of such works are things like "the main part should come first," and "write the central task, act the central task, sing the central task." It creates a situation where only political criteria are considered in literary and artistic criticism, neglecting the particular rules of literature and art themselves, neglecting the comparative independence of literature and art, and in analyzing a work, speaking only of the content and not of the art; requirements for political content also do not proceed from reality, but are required for the sake of politics and do not even hesitate to distort life, distort history, and other irregularities.

(3) Literature and Art Are Literature and Art

Conduct and politics are both subordinate to the literature and art of the superstructure's ideological realm, having their own irreplaceable characteristics and functions with regard to politics as well as other components.

The basic characteristic of literature and art is that they construct a diagram of social life with man as the center. For example, the "Comedie Humaine" of the world-famous Balzac modeled Pere Goriot and other characters full of flesh and blood and having distinct dispositions, and moreover represented the social life of France in the first half of the 19th century both broadly and deeply, and forcefully exposed the despicable incompetent changes in the upstart bourgeoisie, their repulsive features and mean spirits, representing the naked gold thread relationships between people in the bourgeois society.

The characteristic form of literature and art is that the artist, by thinking in terms of images, "concentrates these ordinary phenomena and typifies their internal struggles and contradictions."[17] For example, when Lu Xun wrote "Ah Q," he focused on the characteristics of poor and miserable peasantry that suffers profound oppression under a semi-colonial, semi-feudal society and so demands revolution, and epitomized them in a vagrant farm laborer, an unaware peasant, making a profound representation of the weakness and tendency to compromise of China's bourgeoisie, and from this gave a true to life representation of the Chinese bourgeoisie's inability to lead the peasants in completing the democratic revolution.

Literature does not use reason to persuade people, it uses images to influence people. It relies on a calm spirit, the transformation of fish and dragons in the depths of the ocean, to mould people's sentiments.

Literature and art also have their own rules of development. Advocating "Shakespeare-ization" and being dissatisfied with "Schiller style,"[18] that is, requiring that novels have some socialistic tendencies, is like this. Things must just be described truly through actual relationships, and even if "one's own standpoint is not made clear," nevertheless, it can still "completely fulfill one's own mission."[19] What is advocated here is individualization of images, the description of liveliness of plot and colorful customs, political developments always through "sudden change" and "violent" activity, and relatively speaking, literature and art are slow, proceeding deliberately, "warm, good, respectful, thrifty, and generous." Therefore, Marx, Engels, Lenin, and Comrade Mao Zedong, in their brilliant essays on art, repeatedly warn us that we definitely cannot deny the characteristics of literature and art. Sometimes something like this happens, within one historical period of an era, the politics are corrupt, production does not develop, and literature and art flourish nevertheless, producing brilliant works, and this is determined by literature and art's own laws and rules.

In short, literature and art have an effect that politics cannot substitute for. The creative practice of outstanding masters of literature and art also makes this point clear. For example, in the Franco-Prussian war, France was defeated both politically and militarily and placed in a helpless situation, but Daudet was able, in writing "The Last Class," to generate such indignation at the devastation by the Prussian reactionary power that it raised a kind of unbending heroism among the French people, making us feel that a people like this could never be overcome by bayonets, cannons, or fascist politics, and this is a strong proof of this characteristic power of literature and art.

Also, because the effect of literature and art is different from political and military effects, the content of what it describes is much broader than the boundaries of what can be reached politically or militarily. This is what Engels was talking about when he said in 1859, with regard to the drama "Report on Monetary Relief," that writers ought to use their writing to "introduce the varied and splendored society of the ordinary people of the time," write of the lives of the most ordinary masses, and that only in this way "could they provide a thoroughly valuable backdrop for actions of those nobles acting on the front of the stage, and only under these circumstances can the original aspect of these actions be made clear."20

There are countless works of literature and art that serve to prove this outstanding thesis of Engels. China's "Dream of the Red Chamber," amidst its scribblings about the rise and fall of the Jia, Wang, Xue, and Shi families of nobles, also made a "flourishing age" of the Kangxi, Yongzheng, and Qianlong dynasties, and made people see the trends that would make China's feudal society of several thousand years collapse; in the depiction of the spirits of the sons and daughters, Jia Baoyu, Lin Daiyu, and Xue Baochai, etc., it teaches us to see, in the constrained tragedy, a kind of rebellious disposition with a new significance. Lu Xun's "Kong Yiji," "Benediction," and "Medicine" are all most vivid descriptions of the nature of those times, providing a vivid and valuable backdrop to Mr Sun Yat-sen's leadership of the old democratic revolution and allowing us to see, in Kong Yiji's actions, in what happened to Sister Xianglin, and in Old Chuan's failure to awaken, the original aspect of that failed revolutionary movement.

To sum up, we feel that the relationship between literature and art and politics is a thoroughly important and thoroughly complex problem. While emphasizing a heavy social effect for literature and art, we cannot overlook the intimate relationship between politics and literature and art and the great effect and influence of politics on literature and art. On the other hand, while stressing the importance of politics, we cannot ignore the unique effect and influence of literature and art on politics. Politics and literature and art are all subordinate to the ideological form of the superstructure, and there is no question between them of which is subordinate to which, nor is there any question of which can be substituted for which. The clarification of this dialectical relationship in which they are opposed and are also unified has a crucial significance for the development and prospering of socialist literature and art. Therefore, we will not hide our own poor ideas, we will bring out those superficial viewpoints, we will cast a brick to attract jade, to encourage everyone to discuss this, and to solve as rapidly as possible this problem that has been tangled for a long time and urgently awaits clarification.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

SOVIET BUILDUP FORCED U.S. TO ADOPT NEW NUCLEAR STRATEGY

Beijing GONGREN RIBAO in Chinese 30 Sep 80 p 3

[Article by Deng Yin [6772 7299]: "On the New U.S. Nuclear Strategy Toward the Soviet Union"]

[Text] Question: What is the new nuclear strategy recently put forward by the Carter government?

Answer: President Carter recently, in "Presidential Directive 59," formally approved a revised nuclear strategy toward the Soviet Union. Its basic content is: In case nuclear war breaks out between the Soviet Union and the United States, the focus of American nuclear attack will be on the Soviet Union's military forces and command centers, and not on urban targets as in the past. Defense Secretary Brown has called this a "countervailing strategy."

Compared with the nuclear policy of the Carter government since it took power, this is a change in several aspects:

First, in the initial period after it took power, the Carter government denied the possibility of a "limited nuclear war" between the United States and the Soviet Union, thinking that if a nuclear war broke out it would inevitably be a "total nuclear war" in which neither side could win.

Second, the Carter government once stressed in the past that if only the United States possessed, after a sudden Soviet nuclear attack, the ability to mount a counterattack on one-third of the Soviet Union's industry and one-fourth of its population, then the Soviet Union would not dare to launch a nuclear war. Now, the new nuclear strategy is to shift the focus from attacking Soviet cities to attacking military targets such as command centers, strategic weapons, and the defense industry, in order to weaken the Soviet Union's actual combat strength, and at the same time not exclude as a last measure an attack on its major cities.

Third, in the initial period after the Carter government took power, it was anxious to conduct "Strategic Arms Limitation Talks" with the Soviet Union, and with unilateral restraining actions get in return a slowing of the pace at which the Soviet Union is developing nuclear weapons. Now, in order to offset the rapid expansion of Soviet strategic nuclear forces, the Carter government is advocating a rapid development and improvement of America's strategic nuclear weapons. The Carter government's main consideration is that America must have sufficient military force, to be able to respond adequately to the form and scale of a Soviet nuclear attack, and thus convince the Soviet Union that "if they plan to take actions that could lead to war, not only will they not attain their goal but also will suffer enormous damage, and thereby contain the opponent (the Soviet Union) so that they will not dare to launch an attack on America or its vital interests."

Question: What was the reason that impelled the Carter government to put forward a new nuclear strategy toward the Soviet Union?

Answer: Some foreign public opinion thinks that, earlier or later as it so happened, at the most crucial moment in the U.S. presidential election, Carter's putting forward of a new nuclear strategy toward the Soviet Union was with election considerations in mind. Carter's main opponent in the election, Republican Party candidate Ronald Reagan, as early as June of this year threatened that if he were elected he would again adopt Schlesinger's nuclear strategy that advocated "a nuclear strategy of attacking military targets." Therefore, Carter, taking advantage of his office as president, anticipated Reagan by approving a new nuclear strategy based upon that advocated by Schlesinger, and his objective was to prevail over Reagan.

From the competition between Carter and Reagan on this question, we can see that, confronted with the rapid expansion of the Soviet Union's nuclear strength, the United States, in order to vie for hegemony, had to change its nuclear strategy. Circumstances made it imperative that whoever got a firm grip on this problem would hold the "banner."

The "nuclear deterrence" theory pursued by America in the past not only did not restrain the Soviet Union from rapidly expanding its nuclear strength, but, on the contrary, allowed it to seek nuclear superiority over America and also to make preparations for all kinds of nuclear war. This not only threatened America's immediate interests but also its future existence. Facts have taught a lesson to the U.S. Government, especially after the Soviet aggression in Afghanistan, when the Carter government received a big jolt. Therefore, it could not but reexamine the American nuclear strategy and decide to adopt an uncompromising stand toward the Soviet Union with regard to this important question.

PARTY AND STATE

NECESSITY OF REHABILITATING LIU SHAOQI'S WORK REAFFIRMED

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 3, 25 Mar 80
pp 3-11

[Article by Wu Liping [0702 7812 1627], with Li Minsheng's [2621 2404 3932] assistance: "Great Spirit, Profound Righteousness--Rereading 'How to Be a Good Communist'"]

[Text] Forty years have passed since the publication of Comrade Liu Shaoqi's book entitled "How to Be a Good Communist." During the Great Cultural Revolution, it was this book that drew more acrimonious attacks than any other literary works from Lin Biao, the "gang of four" and that "adviser." As one of the witnesses to its publication, I have the responsibility to give readers an honest account of the factors that induced Comrade Liu Shaoqi to present it to the public. Since its publication, it has played an important role in the building of our party. I believe that in the future, it will continue to make similar contributions to the party as it has done in the past.

I

A reading of this book reminds me of the War of Resistance against Japan which broke out at the Marco Polo Bridge on 7 July 1937. At that time, in the eyes of the Chinese people, Yanan--home of the CCP Central Committee and Comrade Mao Zedong--was a beacon guiding the War of Resistance against Japan and attracting many youths from all over the motherland to journey to Yanan to study and play a role in the great struggle for national liberation. Later, many of them joined the party. Among them were youths of different family and class origin influenced by different ideologies. They arrived in Yanan and other anti-Japanese base areas behind the enemy line in great numbers. After undergoing a specific period of training, a group of advanced elements demanded to join the party one after another. In processing these applications for party membership, the party Central Committee and Comrade Mao Zedong took a positive but cautious attitude toward them. A large number of activists were admitted to the party after their applications were screened by party organizations at all levels. With the petty bourgeoisie dominating the Chinese society at that time, our party was also susceptible to the influence of petty bourgeois ideology. Although the admission of a large number of new party members swelled our party membership to a new level, they also introduced their non-proletarian ideas to the party. Against this historical background, one of the most debated issues was the problem of how to give new party members political education in Marxism-Leninism, and how to expose them to the proletarian ideology and help them overcome the erroneous bourgeois and petty bourgeois ideas and their influence so as to strengthen the party leadership over the anti-Japanese war. In 1937, Comrade Mao Zedong delivered two brilliant speeches--"On Practice" and "On Contradiction"--summing up our party's historical experiences in strengthening the ideological building of the party. At that time, the party was also required to improve the ideological education of its members, who would in turn help the proletariat strengthen its leading role in the national united front in the War of Resistance against Japan. When Comrade Liu Shaoqi headed the North China Bureau and worked in the anti-Japanese base areas behind the enemy line from 1936 to 1939, he attached great importance to the task of strengthening party character among the communists. He was transferred to Yanan from the North China Bureau in 1939. Comrade Liu Shaoqi lived next door to the home of Comrade Zhang Wentian. My home was also very close to theirs. Comrades Liu Shaoqi and Zhang Wentian often paid great attention to the ideological education of party members. At that time, Comrade Zhang Wentian was general secretary of the party. Under the general leadership of Comrade Mao Zedong, he presided over the daily routine work of the party Central Committee. He was also concurrent director of the Propaganda Department of the party Central Committee and dean of the Yanan Marxist-Leninist College. On 8 July 1939, Comrade Zhang Wentian invited Comrade Liu Shaoqi to his college to speak in the presence of a large audience, including all students there, on the subject of how to be a good communist. Comrade Liu Shaoqi presented his speech in such a vivid and inspirational way that he received a standing ovation at the end of the speech. Days after that speech, many people from inside and outside the college suggested that the speech he published for the benefit of the general public. Comrade Liu Shaoqi accepted this suggestion. Although he was busy, he squeezed time out of his tight schedule to turn his speech into a well-organized article and handed it to Comrade Zhang Wentian, who was also chief editor of JIEFANG ZAZHI [LIBERATION JOURNAL]. Because I was managing editor of that journal, Comrade Zhang Wentian later turned it over to me. As soon as I received it, I submitted it to Comrade Mao Zedong for approval (in compliance with the party Central Committee regulations which stipulate that all important contributions to JIEFANG ZAZHI should be read and approved by Comrade Mao Zedong). After a careful reading of the article, Comrade Mao Zedong returned it to me along with a letter stating: This article was well written by Comrade Liu Shaoqi, and also very important, and therefore, should be published as soon as possible because "it promotes righteousness and opposes baleful influence." Shortly after receiving this instruction, I published the article in three installments in JIEFANG ZAZHI (see its issues 81 and 82, and combined issue 83-84, published on 20 and 30 August and 20 September 1939, respectively). Shortly after it was published, JIEFANG ZAZHI printed it in book form in response to the requests from readers. Other newspapers and journals located in the anti-Japanese base areas behind the enemy line also followed suit by publishing this article and reprinting it in book form. This article was subsequently hailed by all our party members as an effective weapon to strengthen party character and the organizational building of the party.

During the winter of 1941, the party Central Committee and Comrade Mao Zedong decided to launch a rectification campaign or Marxist-Leninist education movement within the party. Through discussion, the Central Committee decided to circulate nearly 20 documents as internal reading materials for the rectification campaign. Excerpts of "How to Be a Good Communist" was among the documents which must be read by cadres. Its role in rectifying the party's workstyle and in overcoming the erroneous ideas was also recognized by the party. "How to Be a Good Communist" was reprinted several times both before and after nationwide liberation. In 1962, its author published it in the combined issue 15-16 of RED FLAG after reediting and revising its content. During the socialist revolution and construction, this book continued to play a very positive role in strengthening the building of the party.

During the Great Cultural Revolution, that "adviser" instructed someone in the senior party school to write an article entitled "Expose the Conspiracy to Reprint the Book 'How to Be a Good Communist' for the Third Time," alleging that the "big poisonous weed" published by Liu Shaoqi in July 1939 was an "open declaration of opposition to the anti-Japanese movement for national salvation and of capitulation to the Kuomintang" and a "capitulationist document betraying the party and the country." This was a malicious slur on the author of the book. As everyone knows, "How to Be a Good Communist" is a work full of revolutionary spirit and determination displayed by communists to serve the nation, the people, the party, and the communist cause. It also urges communists to sacrifice their private interests and even their lives for the benefit of the party, and the struggle for national liberation, and for the future of humanity. Is this book a document really betraying the party and the country? If it was not a malicious slur, I don't know what it was. That "adviser" and company even charged that the reprinting of "How to Be a Good Communist" in August 1949 was an attempt to "lay a theoretical groundwork for developing capitalism in China." This was really nonsense. After winning the war for national liberation in August 1949, Comrade Mao Zedong said: "With victory, certain moods may grow within the party--arrogance, the airs of a self-styled hero, inertia and unwillingness to make progress, love of pleasure and distaste for continued hard living. With victory, the people will be grateful to us and the bourgeoisie will come forward to flatter us. It has been proved that the enemy cannot conquer us by force of arms. However, the flattery of the bourgeoisie may conquer the weak-willed in our ranks. There may be some communists who were not conquered by enemies with guns and were worthy of the name of heroes for standing up to these enemies, but who cannot withstand sugar-coated bullets; they will be defeated by sugarcoated bullets. We must guard against such a situation." For this reason, the reprinting of the book "How to Be a Good Communist" at a time when the entire country was about to be liberated was significant in that it could help our party members and cadres steel their determination to resist the erosion and influence of the bourgeoisie and to consolidate and develop the fruits of the revolution. But that "adviser" viewed the theoretical propaganda effort to overcome and eradicate the bourgeois ideological influence of the exploiting classes as "an attempt to lay an ideological and theoretical groundwork for developing capitalism in China." How absurd it was! He even acrimoniously attacked the book as "a counterrevolutionary manifesto of capitalist restoration" when it was reprinted for the third time in 1962. But mud-slinging of this kind could in no way tarnish the brilliance of that Marxist-Leninist document "How to Be a Good Communist." I am glad that eventually the party and the people throughout the country have given the book a fair judgment in line with objective reality.

II

"How to Be a Good Communist" is a book which correctly and systematically spells out the basic Marxist-Leninist principles guiding the building of the party, thus dealing a fatal blow to the tender spot of Lin Biao and the "gang of four" and other anti-Marxist-Leninist conspirators and careerists, and their plot to usurp the supreme party and state power. This was why the book by Comrade Liu Shaoqi was bitterly hated by them. "How to Be a Good Communist" is also a work evaluating Marxism-Leninism and proletarian leaders in a scientific way, an approach opposed by Lin Biao and the "gang of four," who did everything possible to adulterate Marxism-Leninism-Mao Zedong Thought with the aim of creating a modern cult of worship; it is a document upholding the principle of subordinating the individual party members' private interests to the interests of the party and the people, a principle which had nothing in common with the principle of feudal dictatorship and decadent lifestyle cherished by Lin Biao and the "gang of four." "How to Be a Good Communist" also urges communists to adopt a correct attitude and method in dealing with the inner-party struggles, and opposes the cruel struggle, merciless persecution and other forms of fascist violence promoted by Lin Biao and the "gang of four."

One of the themes contained in the book "How to Be a Good Communist" is a call for taking a scientific attitude toward Marxism-Leninism and proletarian leaders. Commenting on standards to be met by good communists, Comrade Liu Shaoqi said: "We must adopt a correct method in emulating the fine qualities of the founders of Marxism-Leninism and in studying Marxism-Leninism. Otherwise, we cannot do a good job in this field, nor can be have a good grasp of Marxism-Leninism." He also sharply criticized those party members who were satisfied with "learning only some Marxist-Leninist phrases but failed to apply the Marxist-Leninist principles and conclusions as a guide to solve practical problems." Commenting on those speculators who had sneaked into the party, he said: "Worse than the aforementioned elements are representatives of dogmatism who know nothing about Marxism-Leninism, but only a few Marxist-Leninist phrases. Ironically, they act as if they were 'China's Marx and Lenin,' and shamelessly want our party to respect them as China's Marx and Lenin and support them as 'leaders' in recognition of what they called their loyalty and dedication to the party. Without waiting for others to recommend them, they could go ahead to proclaim themselves 'leaders' by taking up the leading posts so that they could dictate orders to others just as patriarchs did under the feudal system, scold our party and everything it stands for, and freely deal blows to our party members and punish and push them around as they wish." Comrade Liu

Shaoqi called these elements speculators who had sneaked into the party or persons dangerous to the communist movement. Did Lin Biao and the "gang of four" resemble these elements? Could the aforementioned quotation from Comrade Liu Shaoqi sufficiently portray Lin Biao and the "gang of four" as conspirators and careerists?

Comrade Liu Shaoqi pointed out: A faithful student of the founders of Marxism-Leninism was one "who can take the Marxist-Leninist stand and apply the Marxist-Lenninist viewpoint and method tc solve problems that emerged from the revolutionary movement led by the proletariat. In addition, he should not mind too much about his personal gains or losses, should not style himself as China's Marx or Lenin, and should not expect or wish anyone to respect him as China's Marx or Lenin because he has no right to do that. However, the broad masses of party members will sooner or later spontaneously come forward to respect and support him if he can consistently demonstrate his integrity and loyalty to the party, heroism and outstanding leadership qualities through the revolutionary struggles." He called on ordinary party members as well as revolutionary leaders to follow the example of Marx and Lennin in testing and training themselves. But during the Great Cultural Revolution, Lin Biao and the "gang of four" repeatedly criticized the aforementioned quotation from Comrade Liu Shaoqi as "irrefutable evidence of opposition to Chairman Mao," thus fully exposing their own wolfish ambition. Comrade Liu Shaoqi further pointed out: "Nobody can become a real leader or hero of the communist cause without the support of the broad masses. Nor can anyone recommend himself to that position. Anyone who wants to style himself as a leader or attempts to be one without a large following can never become the leader of our party. The communist cause is a long-term collective undertaking created by millions upon millions of people, and therefore cannot possibly be monopolized by any individual. Even great figures like Marx, Engels, Lenin and Stalin could have contributed only a small share to the communist cause." We must take a scientific attitude toward evaluating the proletarian leaders. This is a basic Marxist principle we must uphold. During the Great Cultural Revolution, Lin Biao and the "gang of four" acted against this principle by vigorously promoting the modern cult of worship and by wildly adulterating Marxism and undermining the socialist revolution and construction. We must remember this painful historical lesson by comprehensively and accurately applying Marxism-Leninism-Mao Zedong Thought and adopting a correct attitude toward the proletarian leaders. Only by doing so can be become the most faithful and best students of the founders of Marxism-Leninism. Can we call the aforementioned remark by Comrade Liu Shaoqi a proven truth capable of withstanding any tests?

The second theme contained in the book "How to Be a Good Communist" is a teaching that exhorts communists to "serve the party and the people and to win victory for the revolution rather than single-mindedly strive to elevate their own positions, to flaunt their privileges before the people and to make themselves famous." Comrade Liu Shaoqi also sharply criticized some party members for giving in to the heavy influence of individualism and caring too much about their private interests. In this connection, he said: "This form of individualism often manifests itself in the following way: In dealing with specific problems, they often place their private interests above the interests of the party or care too much about personal gains and losses. They also want to do everything possible to attain their personal aim under the pretext of serving the party, and launch vengeful attacks against comrades they dislike under the pretext of upholding the principle and the party's interests." Ours is a great political party known for its tradition of serving the people wholeheartedly. This is why it can win the heartfelt support of the broad masses. Our party members are wholeheartedly dedicated to the liberation of the people and to enhancing their interests. The interests of the people and the party are indivisible. The people's interests are the only matter that our party cares about in the world. Our purpose is to serve the interests of the overwhelming majority of the people. We should regard this as the truth of the highest value. In this connection, Comrade Liu Shaoqi profoundly pointed out: Communists are proletarian vanguard fighters who oppose the granting of any privileges to anyone, or to themselves. They feel that it is unthinkable and a shame to place themselves above the people." For this reason, the relationship between the interests of the people and that of the party and its members should be rectified. He severely criticized those party members who had "never stopped fighting for higher pay and greater privileges than what other comrades could get" and who always wanted "more house servants, and more luxurious homes, and who are deeply interested in seeking the limelight, and fame affiliated with the party." Comrade Liu Shaoqi described them as "people imbued with the ideology of the exploiting classes." "How to Be a Good Communist" is a work which makes the evil influence of the exploiting classes a subject of criticism while warmly extolling genuine communists. Among the genuine communists as described in the book were "those who are the first to concern themselves with the affairs of the state and the last to enjoy life; who are the first to bear the brunt of hardships and the last to seek comfort; who never want to compare their pay with others but are willing to compete with others for achievements in the revolution and for stamina in enduring hardships; who can bravely step forward to make their services available to the nation in times of adversity, and can do their level best in overcoming difficulties." The book says: Theirs is a revolutionary character and spirit which "can neither be corrupted by money or honors nor bent by force of threats. They will never swerve from principle in the face of poverty or other unfavorable conditions." From beginning to end, the book warmly extols this lofty proletarian righteousness. This is why our party can win the support of the people and overcome difficulties. We must treasure and continue to carry forward this glorious tradition. Only those selfless and dedicated communists can demonstrate such noblest and most decent spirit and firmly take the stand of the party and the proletariat and strengthen party character and class character. By asking the communists to "endure hardships ahead of others and enjoy life later, and to show concern for the affairs of the state before others and enjoy comfort later," we do not mean depriving our party members of their legitimate interests. Commenting on this, Comrade Liu Shaoqi pointed out: Within our party, every individual should subordinate his personal interests to the interests of the party. "But this does not mean that every individual within the party should give up his personal interests and identity as party member. Surely, every party member will have private problems that need to be handled by himself; he should develop himself on the basis of his individual character and special skills. In other words, he is permitted to build his family life, and to develop his individual character and professional skills in line with the interests of the party." But Lin Biao and the "gang of four" who pushed an ultraleft line called this a theory of "merging public with private interests." Facts show that Lin Biao and the "gang of four" were a bunch of blood suckers who used the power they usurped to embezzle and squander public funds so that they could indulge in feasting and other luxuries and lead a decadent bourgeois life. They were actually typical representatives of extreme individualism! In a sense, the book "How to Be a Good Communist" is a magic mirror which shows up their dirty and ugly souls as swindlers.

The third theme contained in the book "How to Be a Good Communist" is a call for adopting a correct attitude and method in the struggle against various erroneous ideas within the party. Comrade Liu Shaoqi urged communists to adopt the following correct steps toward the inner-party struggle: First, "we must first survey various opinions, ideas and views and clearly distinguish those correct ones that enhance the interests of the revolution from other incorrect and harmful ones before taking a firm and clear stand to endorse what is correct. We should not blindly follow anyone or drift along with the current." Second, "we must learn from all good examples within the party and promote and bring them into full play and actively endorse and support all correct ideas and opinions. We must denounce all bad examples and guard against the influence of incorrect ideologies." Third, "we should not take a laissez-faire attitude toward the inner-party struggle, nor should we retreat from such struggle." Fourth, "ideological struggle over various issues of principle our party inherits from history should be systematically and properly carried out. This form of struggle is not an attempt to disrupt the normal life of the party or spread panic." Fifth, "the inner-party struggle is aimed at unifying the party members and strengthening its discipline and raising its prestige. Party members should consider it their inescapable responsibility to preserve the unity of the party, purify the ideology of the party, and consolidate the organization of the party." "How to Be a Good Communist" describes the inner-party struggle as indispensable to the entire process of the revolutionary struggle, calling on party members to expose themselves to the inner-party struggle so that they can grow in strength.

Lin Biao and the "gang of four" vilified "How to Be a Good Communist" as a work aimed at "promoting slavish ideology." This is not true because it teaches party members to think independently in the course of the inner-party struggle so that they will not blindly follow others, drift along with the current or give in to the influence of slavish ideology. Comrade Liu Shaoqi sharply criticized the "left" opportunists within the party for adopting a wrong attitude and method in dealing with the inner-party struggle, for carrying out many unnecessary inner-party struggles, for lifting minor issues to the level of principle and for slapping the label of opportunists on people at will during the struggles. In this connection, Comrade Liu Shaoqi pointed out: "To those seemingly mad people, any inner-party peace, even that which is entirely in conformity with the party's line and principles, is not acceptable." This opinion was later vilified by Lin Biao and the "gang of four" as a "revisionist fallacy aimed at promoting inner-party peace." As Comrade Mao Zedong said long ago, we must be cruel to the enemy and kind to the people. Based on this view, Comrade Liu Shaoqi's advocation of "inner-party peace" was not a denial of the necessity of inner-party struggle, but a call for upholding principle and strengthening unity. Was there anything wrong with that? During the past 20 years, and especially during the Great Cultural Revolution, the policy and method applied by our party in the inner-party struggle were all wrong. We should draw a lesson from this painful experience. It was this extreme form of struggle that once provided Lin Biao and the "gang of four" with an opportunity to concoct an ultraleft line to serve their counterrevolutionary aim. Just as Comrade Liu Shaoqi predicted, they subjected countless good cadres to cruel and savage criticism, and accused them of being political "opportunists" or "revisionists." Their aim was to "overthrow everything and embroil the country in a full-scale civil war," to cripple our party, to fill the jails with people who were wrongly, falsely and unjustly charged and sentenced, and to place the entire nation under the rule of terror. Since "How to Be a Good Communist" is a work aimed at making justice prevail and opposing evil influence, it is no wonder that the book drew fire from Lin Biao and the "gang of four."

III

In May 1967, Lin Biao and the "gang of four" authorized someone to publish a sinister article entitled "The Essence of 'How to Be a Good Communist' Is a Betrayal of the Dictatorship of the Proletariat," viciously attacking it as a betrayal of the dictatorship of the proletariat, and criticizing it as a "big poisonous weed" promoting idealism and opposing Mao Zedong Thought. No sooner was this article published than a nationwide campaign was mounted to condemn and discredit "How to Be a Good Communist."

What was the theoretical basis used by Lin Biao, the "gang of four" and company to attack "How to Be a Good Communist" as a betrayal of the dictatorship of the proletariat? Their only theoretical basis was the contention that "the dictatorship of the proletariat was entirely ignored by its writer." This logic was really absurd. As everyone knows, that book was published during the War of Resistance against Japan, or at a time when all articles carried by our party journals dealt mainly with the anti-Japanese movement for national salvation and the need to strengthen the party leadership over this movement. It seemed quite unlikely to directly emphasize the dictatorship of the proletariat in any book written at that time. Was it ridiculous to accuse the book of opposing the dictatorship of the proletariat because it did not mention it? Although the term "dictatorship of the proletariat" was not there, the essence of the book was an appeal inspiring the communists to display the revolutionary spirit to serve the dictatorship of the proletariat. "How to Be a Good Communist" is a work inspiring the communists--the vanguard fighters of the proletariat--to struggle not only for national liberation, but also for the ultimate realization of the great communist ideals. The theme of the book focuses on the problems of how communists should temper themselves through the struggle and how the proletariat should fulfill the historical mission to remold the old society and build a new one after it came to power. In this connection, Comrade Liu Shaoqi pointed out: "The bourgeois revolution usually ended by the time the political power changed hands. Nevertheless, the proletariat regards its political liberation of the nation and victory as just the beginning of the revolution, on the assumption that there is a lot of work to be done after winning the victory for the revolution and after capturing the political power." This remark reminds the communists that their future depends on how successful they will be in solving the fundamental problem of the proletarian revolution--the problem of how to capture and consolidate the political power and how to remold the entire society. It can be said that the theme of "How to Be a Good Communist" is entirely consistent with the spirit and essence of the Marxist theory of the dictatorship of the proletariat. It was no wonder that it could not be accepted by Lin Biao, the "gang of four" and other sham Marxists. The aforementioned article concocted according to their instruction said: "During those turbulent war years, and during the years devoted to capturing the political power, Liu Shaoqi taught communists to forget their fundamental obligations to the armed struggle to capture the political power. Instead, he taught them to turn inward for 'self-cultivation.' If this teaching were heeded by them, was it possible that they might become philistines unconcerned with the revolutionary war and the struggle to seize the political power?" Wasn't this allegation ridiculous?

Lin Biao, the "gang of four" and that "adviser" even confused black with white by criticizing it as an attempt to foster idealism and bourgeois individualism and to promote a feudal philosophy of life among the people. Essentially, "How to Be a Good Communist" is a work which opposes the idealist method adopted by the bourgeoisie and the feudal landlords to train the people, and which supports the method of integrating the training of our party members with the revolutionary practice. In this connection, Comrade Liu Shaoqi pointed out: "In ancient times, the people followed an idealistic, ritualistic, and abstract approach in cultivating their personalities and mannerisms in isolation from social practice. They overly emphasized their subjective efforts in all fields of work, assuming that as long as they adopt a 'benevolent attitude' toward the people, they would be able to change reality, society and themselves. Certainly this is a daydream. We cannot cultivate ourselves in this manner. As revolutionary materialists, we cannot cultivate ourselves in a way that estranges us from the popular revolutionary practice." The book clearly indicates that as far as the cultivation of personality is concerned, the Marxist-Leninist method is at variance with the idealist approach.

Fundamentally, before anyone becomes a good communist, he must undergo training in the Marxist theory, and proletarian ideology and code of ethics. Particularly important is the training in Marxism, which is a sharp ideological weapon for the proletariat to know and change the world. If we cannot truly master the Marxist theory, we will have difficulty in correctly assessing various problems in the revolutionary struggle and handling them properly, and we may even go astray, fall victim to mechanicalism and become its mouthpiece. Being a good communist means being good at learning and mastering theory and integrating it with proletarian revolutionary practice. Comrade Liu Shaoqi pointed out: being a good communist means perseverance in integrating the universal truth of Marxism-Leninism with the concrete revolutionary practice. As a true communist, he must tally his speeches with actions, and must be true to his word, and he must be worthy of emulation by the masses, as distinguished from the representatives of the exploiting classes, who were in effect out and out scoundrels although they wrote and spoke abundantly of justice and morality. Commenting on some of our party members who inherited from the old society the erroneous tendency of estranging theory from practice, Comrade Liu Shaoqi said: "We must resolutely oppose and thoroughly eliminate the educational method and study style characterized by separating theory from practice left over from the old society." Emphasizing the basic Marxist principle that practice is the sole criterion for testing truth, the book also urges the communists to "seek truth from facts and test and verify all theories and distinguish right from wrong through the revolutionary practice." The dialectical materialist theory of knowledge upheld by the book "How to Be a Good Communist" also falls in line with the dialectical materialist concept of unity between knowing and doing expounded by Comrade Mao Zedong in his work "On Practice."

Emphasizing that great ideals and great goals to be achieved must be based on practical work and on the principle of seeking truth from facts, the book "How to Be a Good Communist" resolutely opposes utopian concepts and all kinds of idle chatter. In this connection, it points out: "The communist cause consists of the great task of changing the world. Every communist party member must start this task from where he lives and work in coordination with his supporters. We must criticize some young comrades for always wanting to run away from or disregard reality. They always keep looking for an ideal job and place so that they can smoothly move ahead with the task of 'remolding' the world. But this utopian way of thinking will never come true." This materialist spirit of seeking truth from facts contained in the book has nothing in common with any idealistic way of thinking and training the people.

True, included in the book "How to Be a Good Communist" were some quotations from feudal thinkers Confucius and Mencius, which were used to emphasize difficulties our ancients encountered in scaling the peaks of achievements rather than to "promote the doctrines of Confucius and Mencius and propagate the feudal philosophical outlook of the world."

Accusing its author of opposing Mao Zedong Thought, Lin Biao and the "gang of four" said: "When it was reprinted, the book 'How to Be a Good Communist' never lent space to Mao Zedong Thought or the theme that we should be Chairman Mao's good pupils. This fact proves its author to be sham Marxist and genuine revisionist." This was indeed nonsense. It must be pointed out that the book was strung with a revolutionary ideological line because it persists in upholding the principle of integrating the basic theory of Marxism-Leninism with the revolutionary practice in China, a principle which is in accord with Mao Zedong Thought, and because it specifically applied many important principles proposed by Comrade Mao Zedong to explain the problems concerning the building of the party. It must be noted that Mao Zedong Thought was formally mentioned in Comrade Liu Shaoqi's "Report on the Revision of the Constitution of the Party" to the "Seventh National Party Congress" held 6 years after the publication of "How to Be a Good Communist." Since "How to Be a Good Communist" is a historical document, its originality should not be tampered with. Is there anything wrong with this decision?

In 1943, Comrade Mao Zedong wrote a letter to the then-director of the Propaganda Department of the party Central Committee, saying: "My thought (Marxist-Leninist) remains in a fledgling stage. It is still a time for me to study. The time is not yet ripe for anyone to publicize my thought. Some articles written by me (such as documents on the rectification campaign) may be publicized on a piecemeal basis, but should not be treated as an integral part of my ideological system, which is still in a precocious stage." In August 1938, Comrade Mao Zedong further pointed out: "There is no such thing as the Mao Zedong doctrine. We must call on students to study the theory of Marx, Engels, Lenin, and Stalin and the Chinese people's experience in revolution instead of 'the Mao Zedong doctrine.'" The Chinese people's experience in revolution has been dealt with in some pamphlets written by the Chinese communists (including Mao Zedong) on the basis of the Marxist-Leninist theory and documents on the party Central Committee's line and policies. ("Introduce Some Manuscripts by Comrade Mao Zedong on Theoretical Studies," RENMIN RIBAO, 25 December 1979.) The scientific attitude adopted by the author of "How to Be a Good Communist" toward our party's leader, Comrade Mao Zedong, was correct and consistent with the principle consistently upheld by Comrade Mao Zedong himself. The false accusation that the book "How to Be a Good Communist" reflected a "stand against Mao Zedong Thought" was purely a scheme and conspiracy used by Lin Biao and the "gang of four" to serve their selfish purposes.

During the 10 years in which Lin Biao and the "gang of four" were in their heyday of power, they used such unscientific terms as "superb," "most creative," "the noblest," and "every word a truth, one sentence is worth a thousand sentences" to describe Mao Zedong Thought. In this way, they trampled under foot the scientific nature of Marxism, and willfully adulterated Marxism-Leninism-Mao Zedong Thought, causing unprecedented damage to our party, country and people. In actuality, "How to Be a Good Communist" is an important document used to combat the baleful influence antagonistic to Marxism in order to make the righteous spirit of Marxism prevail.

IV

The question of how to be a good communist is vital to the building of the proletarian political party. The proletarian revolutionary teachers have consistently attached importance to the training of the communist party members, and have regarded this as a basic step in preserving the qualities of the party as the vanguard of the working class, and in fulfilling the great historical mission to realize communism. In October 1938, Comrade Mao Zedong delivered a report to the Sixth Plenary Session of the Sixth Party Central Committee, exphasizing the training of the communist party members. After summing up our party's historical experience in this field, he said: "Our party's mastery of Marxism-Leninism is now rather better than it used to be, but is still far from being extensive or deep. Ours is the task of leading a great nation of several hundred million in a great and unprecedented struggle. For us, therefore, the spreading and deepening of the study of Marxism-Leninism present a big problem demanding an early solution which is possible only through concentrated effort." In addition to explicitly emphasizing the training of the communist party members, he called on the entire party to extensively and widely strengthen the training of its members in the Marxist-Leninist theory. Emphasizing that communists should play an exemplary role in the national war, he pointed out: "Communists in the Eighth Route and New Fourth armies should set an example in fighting bravely, carrying out orders, observing discipline, doing political work, and fostering internal unity and solidarity. Every communist engaged in government work should set an example of absolute integrity, of freedom fro favoritism in making appointments, and of hard work for little remuneration." Exhorting party members to observe discipline, he pointed out: "It is necessary to educate them in party discipline so that the rank and file will not only observe discipline themselves, but will exercise supervision over the leaders so that they too observe it." This important report by Comrade Mao Zedong is entitled "The Role of the Chinese Communist Party in the National War." It was later included in the "Selected Works of Mao Zedong." Although no such language as the dictatorship of the proletariat was used in that report, it remains an important document concerning the building of our party. The book "How to Be a Good Communist" published by Comrade Liu Shaoqi a year later was entirely consistent with the aforementioned report by Comrade Mao Zedong in terms of their ways of thinking. During the Great Cultural Revolution, Lin Biao and the "gang of four" alleged that the more the communists were taught to cultivate their personalities, the more they would become "revisionist," thus exposing themselves as the archenemy of Marxism-Leninism-Mao Zedong Thought. During the 10 years in which Lin Biao and the "gang of four" were in their heyday of power, they did untold damage to our party by encouraging communists to ignore the necessity of disciplining themselves. Their pernicious influence in this field remains very serious. During those 10 years or more, party organizations were discouraged from talking about the need to discipline their members. Consequently, an unhealthy workstyle prevailed over the party, party discipline was not strictly observed, there was ideological confusion among the party members, and righteous spirit was suppressed and baleful influence made itself widely felt among the people. Today, our party claims nearly 38 million members, most of whom joined the party during or after the Great Cultural Revolution. These new party members were heavily influenced by Lin Biao and the "gang of four" along with some relatively senior party members. Although they deserve to be called qualified party members in the past, it is now doubtful whether they are still qualified. The 1980's is an important decade in history. Upon entering this new historical period, in addition to struggling against hegemonism abroad, our party is confronted with the great historical task of realizing the four modernizations and returning Taiwan to the motherland and reunifying the country. The key to success in this field lies in the party leadership. We must uphold and improve the party leadership. To this end, we must effectively strengthen and deepen the education of 38 million party members. Today, we must renew the pledge to strengthen the training of our party members, which is now more significant than ever to the victory of our party's revolutionary cause.

At present, all our party members, both new and old, must make effective efforts to strengthen their party spirit. Since party spirit is a concentrated expression of the proletarian character, we must strengthen party spirit and overcome factionalism. Communists must truly play an exemplary vanguard role in the great struggle to accomplish the "four modernizations." During the revolutionary war, our party members were always the first to bear the brunt of hardships and the last to enjoy themselves, and were eager to fight on the front line and served as the rear guards for the retreating troops. Today, after winning the revolutionary war, our party is confronted with a very difficult task of leading a great nation. To be blunt, a few party members and cadres have acted against our party's glorious tradition by treating themselves as a privileged group divorced from the masses. Some other party members have practiced extreme individualism and anarchism, and have given up their far-reaching communist ideals, thus disqualifying themselves as communist party members. After losing their confidence in our present great national undertaking, they even have begun to spread pessimism among the people. While caring only about matters of interest to themselves and their families, they have paid no attention to the plight of the masses. Also gone is their sense of organization and discipline. In short, a baleful influence is now prevailing over some party members. During this important historical period, our party must do everything possible to make righteous proletarian spirit prevail over the evil non-proletarian influence. We must strengthen the ideological training of party members and apply the proletarian and Marxist-Leninist ideology and the communist world outlook to overcome and eliminate all incorrect non-proletarian ideas. Just as it was pointed out in the book "How to Be a Good Communist," "The communist party represents the force of justice for all mankind. We must carry forward and uphold this proletarian righteous spirit and overcome all forms of evil influence."

In order to further consolidate stability and unity, we must step up study, revive and carry forward the party's fine tradition, commend the outstanding models of party members, and struggle against all forms of erroneous ideas and misdeeds within the party. We must conscientiously and sincerely carry out criticism and self-criticism with the aim of unifying party members behind their common cause. While trying to prevent the struggle from moving too far toward the extreme left, we must resolutely struggle against erroneous ideas and evil trends of thought and prevent them from flooding the country.

Today, our party members must step up the study not only of Marxism-Leninism, just as they did during the revolutionary war, but also science and culture in order to help the party carry out the great four modernizations program. Urging communists engaged in socialist construction to "study science," Lenin said: "Management needs professional skills in production, modern advanced technology, and scientific knowledge." ("Collection of Lenin's Works," Vol 30, p 394.) At present, our party must train a large number of cadres proficient in professional knowledge and capable of following the socialist road. These party members and cadres must have a good command of the Marxist-Leninist theory, commit themselves to uphold the four basic principles, strictly observe party discipline and state laws, and truly know the business of building China into a modern power. If our cadres want to plan a role in the four modernizations, they must become both red and expert. During this new historical period, our party members are required to study harder than ever in order to make themselves good communists.

A review of our party's history reveals that whenever the training of party members was emphasized, our party would develop and prosper; whenever discussions on disciplining communists were banned, our party's cause would suffer serious setbacks. For example, when "How to Be a Good Communist" was criticized and banned, baleful influence prevailed over the righteous spirit. Practice is the sole criterion for testing the truth. The history of our party teaches us that the book "How to Be a Good Communist" by Comrade Liu Shaoqi is an important Marxist-Leninist document and a contribution to the building of the party. We must rehabilitate this book and restore it to its original glory so that it can continue to educate and guide vast numbers of party members, cadres and youths through the struggle for the realization of the great communist cause, a cause unprecedented in human history.

PARTY AND STATE

ORIGINS OF THIRD THOUGHT LIBERATION MOVEMENT DISCUSSED

Shanghai SHEHUI KEXUE [SOCIAL SCIENCE] in Chinese No 3, 20 Jun 80 pp 60-66

[Article by Li Guoquan[[2621 0948 2938] and He Kerang [0149 0344 6245] of the Chinese Department of the Hubei Province Jingzhou Teacher's College: "The Rise of the Third Thought Liberation Movement"]

[Text] A broad-ranging survey of the history of mankind's social developments shows that each movement in or transformation of society demands an accompanying momement or development of social consciousness. This always requires that the progressive class and persons overcome great difficulties and bravely smash the bonds of traditional thought to cry out and struggle for the new age.

During this century the Chinese people have experienced three thought liberation movements. History demonstrates that these three thought liberation movements gave great impetus to the new democratic revolution and socialist revolution and construction, all of which were under party leadership.

Comrade Zhou Yang [0719 2254] made a speech titled SANCI WEIDADE SIXIANG JIEFANG YUNDONG [THREE GREAT THOUGHT LIBERATION MOVEMENTS] regarding the birth, development and great historical significance of these three movements in modern Chinese history. This speech made a profound statement which people found very enlightening and educational. However, all thought liberation movements in human history follow a process of fermentation, birth and development and are filled with complex, roundabout and even tortuous struggles. To search out the truth we propose to present our superficial views on the beginning and emergence of the third thought liberation movement.

The Beginning of the Third Thought Liberation Movement

Chapter Eight of the SHIGANG PINGYAO [CRITICAL OUTLINE OF HISTORY] records the following story from the Han dynasty: Huo Guang gained power and abused his authority. Xu Fu of Maoling sent in petitions relating Huo's excesses and recommending that he be quickly repressed. The petitions were ignored. Finally, Huo Guang's ambition turned toward usurping the throne. He was captured and killed. All those who uncovered Huo Guang's criminal plotting were enfeoffed, while Xu Fu who had repeatedly petitioned that Huo would rebel and should be stopped was forgotten. Some people protested that Xu Fu had been wronged and memorialized the throne relating this story of "taking precautions to prevent possible danger" in order to testify about Xu Fu's prophetic skills. Xu was first given ten bolts of silk and later was made an official.[1]

Although this is 2,000 year-old history, it seems to have happened only yesterday. In the 1960s and 1970s China went through ten years of great chaos, and wasn't this because the socialism of that period did not listen to the views of Xu Fu? During the Han dynasty Sima Xiangru said it well: "The enlightened person sees it rising afar, the wise person avoids the danger by making himself scarce. National disasters are concealed in minor things and develop because people overlook them."[2] What a profound lesson this is for us to learn! The problem is more that this though, because in the Han dynasty Xu Fu "saw the problem from afar" and although he was ignored he did not suffer for it, while the Xu's of this period were condemned as criminals and branded as the "five black elements." Although the Han dynasty Xu Fu was the one person to go unrewarded there were some who memorialized for his just reward, the Xu Fu's of today seldom hear of their everlasting merits and pains. This gives one pause for thought. It appears that if the twists and turns of the historical progression are not straightened out any point in history might conceal an unknowable number of social truths and cover up cases of penetrating judgement.

We are profoundly aware that China's problems are complex and that there is a struggle regarding the question over recognition of the origins of the thought liberation movement in the middle 1950s. However, we firmly believe that even though the path of history may be twisted the light of the truth cannot remain covered! Practice is the only authority and our socialist history has already proven that the beginnings of the third thought liberation movement were in the middle 1950s.

It is certainly true that in terms of the scope and significance of thought liberation movements the one now in progress is far greater than that of its initial period, much like the sprout of a flowering bush. However, one cannot be fond of the "flower" and discard the "sprouts," and one absolutely cannot acknowledge the great significance of the intellectual revolution to destroy the modern superstitions created by Lin Biao and the "gang of four" and cast off their doctrine of obscurantism which proclaimed that "each and every word is the truth," and not acknowledge the far reaching significance of the strenuous efforts of a group of firm Marxists and progressive intellectuals to seek out the truth according to the lessons taught by the experiences of the international communist movement and those problems which have already appeared or were about to appear in the developmental process of our society. In a word, we believe that one cannot discuss this thought liberation movement apart from the continuity of ideological developments. It is just as Hegel said: "Philosophical discourse in the realm of ideology describes it in terms of its internal activities or its requisite developments." This is not only a problem in the logic of a theory but, more importantly, is a problem of attitudes toward history. Our responsibility to history is to seek truth from facts in order to restore its original countenance. Only in this way will there be any benefit to our people, and only after understanding history can we truly absorb its lessons and consciously shake the dust of history from our bodies and stir ourselves to fly toward a beautiful tomorrow.

Everyone knows that in the historical development of society, the fermentation and occurance of great political and economic changes are always led by a simultaneous ideological revolution.

In the mid-1950s, after reaching a basic conclusion in the socialist transformation of the ownership system of the means of production, and when the great storms of mass class struggle during the revolutionary period were also already basically ended, our people simultaneously faced toward the great task of carrying out a strategic transformation by completing the first five year plan in order to lay a foundation for socialist industrialization. At this time, April of 1956, Comrade Mao Zedong make his report LUN SHI DA GUANXI [ON THE TEN GREAT RELATIONSHIPS]. In this report the first five great relationships stated that affairs should be managed according to objective economic laws and the second five great relationships stated that we should maintain peaceful unity in our socio-political situation. Comrade Mao Zedong clearly pointed out, "All of these ten problems center on a basic policy, which is that all positive national and international factors must be mobilized in the service of socialist endeavors." "We must mobilize all direct and indirect forces in the struggle to build our country into a powerful socialist state."3 This report by Comrade Mao Zedong correctly reflected the great strategic transformation of party work, and the historical development of Chinese society entered into a period of great changes in the course of events.

Just when the Chinese people were facing the glorious difficult task of creating a satisfying, bountiful life, and building a prosperous and powerful great socialist state, the national and international fronts developed new conditions and new problems of extreme importance which the people had to sincerely consider and find solutions for.

On the international front, the Soviet Union Communist Party (CPSU) convened the 20th congress in February of 1956. What most attracted attention in this congress was criticism of the cult of the individual which caused such severe consequences within the party. In June of 1956, four months after the start of the CPSU 20th congress the Polish Poznan riots broke out. In October of 1956, eight months after the start of the CPSU 20th congress, the world-shattering Hungarian riots broke out. In general these conditions were related to the problem of the cult of the individual, the problems of the relationship between the party and the masses in a socialist society, the problem of relationships between socialist nations, the problems of concern for the suffering of the masses and how to plan for the people's benefits, and the problems of the people's democracy and the people's rights. "History very clearly shows us that if any progressive movement neglects moral issues it thus plants the seeds of disruption." (Cheernixuefusiji [transliteration]) This series of problems in the international communist movement could not but influence the Chinese people who were then facing a great turn in the course of historical events, could not but cause the Chinese people to give considerable thought to those matters, and could not but remind the Chinese people to accurately evaluate their own work and observe problems which had already emerged or were about to.

As for national concerns after Liberation, in order to solidify the new political authority a series of political movements and economic reform were carried out with emphasis on attacks against "rightist" forces. People gradually lost the practical and realistic work style of the Yanan rectification movements to eliminate leftist dogmatism, and"leftist" thought again appeared under the new conditions as subjectivism. Because of changes in the nature of the revolution (this refers to the change of the new democratic revolution into the socialist democratic revolution) there was a trend toward one political movement after the other, which resulted in habitually taking orders from the leading cadres and upperlevel leadership. Of course the masses did not completely understand the complexities of the political struggles and were unclear about the violence of social forces, all of which aided the bureaucratism of some worker personnel in the party and state organs. Because the party is the core leadership force in our affairs and also plays a leading role in the revolution and in construction, such behavior by a portion of the party's leading comrades and worker personnel caused a separation from mass ideology and discrimination in work and deed against non-party people, and this gave rise to organization factionalism (The factionalism referred to here is not all-encompassing but rather that between the party and the masses). Because China had a history of several thousand years of feudal dictatorship, the concept of the "sage emperor" found a place in the everyday ideology of retribution held by the Chinese people; furthermore, the propaganda was not suitable (it always was used by individuals and did not become a policy of propagandizing mass leadership) and there was excessive centralization of power which placed the individual over the collective. In this way the shadow of the cult of the individual and the superstitious belief in the individual loomed ever larger. The existence of the "three great isms" (subjectivism, bureaucratism and factionalism) and the cult of the individual, which are empty, negative things and the very death of morality were already manifested in the unease felt by people in a number of areas. Under conditions such as these the people could not but express concern over changes in our great strategy and people could not but worry about the logic of the existence of the "three big isms."

In the latter part of his life Lenin repeatedly warned the people to pay attention to the three great dangers that socialism might encounter: 1. The "extreme danger" to the party brought by those "self-proclaimed communists" and those careerists, adventurers and frauds who insinuate themselves into our ranks. 2. The "bad bureaucrats" who "poison the soviet political authority." 3. The only thing that can cause a loss of power once the proletariat has won it -- our own mistakes. The series of problems in the international communist movement and the disheartening losses in Europe proved the validity of Lenin's prophecy. How can the Chinese people bear to witness the neglect and ruin of our forebears' search for national salvation and the blood of countless revolutionary martyrs on the road to socialism by "self-proclaimed communists," "bad bureaucrats" and "our own mistakes"?

The theories of Marx, Engels and Lenin created for us only the general laws concerning mankind and nature. They did not and could not lay down a blueprint which we could follow in building socialist society. The new conditions and new problems in the international communist movement and in our country have reminded us that if people believe there is no further need for objective socialist laws after the victory of the revolution and after the people have come into power, if they believe that socialism will continue to develop without obstacles and are unwilling to be practical and realistic, and stand as though drunk or insane upon a flowerbed built of falsehoods then the goal of a strong nation and prosperous people will be destroyed. Our socialist affairs demand that we praise highly the bright side of things but we also should be skilled in criticizing the dark side. Therefore, there developed on our Chinese soil the roots and explosive flowering of a thought liberation movement under the leadership of the fundamental principles of Marx-Leninism which discussed and researched Chinese socialism and destroyed the "three big isms" and smashed the shackles of the cult of the individual.

Just at this important point in time when a thought liberation movement to make great changes in response to these conditions was about to take place, the party then convened the Eighth Congress, one which was to have far-reaching significance. History is the fairest of judges and practice is the only standard for examining the truth. After over 20 years of roundabout paths and painful lessons there is incontestable proof that the path of the Eighth Congress was correct.

At the Eighth Party Congress Comrade Deng Xiaoping made a report on revisions to the party constitution. In his report Comrade Deng Xiaoping gave an incisive explanation of the reason for the rise of and the dangers of subjectivism, bureaucratism and factionalism, gave five ways to promote a mass line and fight bureaucratism, emphasized that during the struggle against the "three big isms" there must be development of democratic life in the party and in the nation and development of the party work style and that there must be "close cooperation of non-party persons in this struggle." In his report Comrade Deng Xiaoping correctly evaluated the merit of the CPSU 20th congress' opposition to the cult of the individual, pointed out the fault of "unsuitable overemphasis of centralized authority" then existing in China, reminded the whole party of the "severity of the evil consequences created by worship of the individual," and again promoted the policy of "continuing to firmly carry out party central opposition to giving prominence to the individual and opposing the singing of the praises of the individual."

At the Eighth Party Congress Comrade Liu Shaoqi made a political report which explained the theoretical basis and actual foundation for the shifts in strategy and pointed out that in the future the major tasks of the entire party were to completely give vent to the people and to carry out the struggle in opposition to bureaucratism. The resolution concerning the political report pointed out that in order to guarantee the flourishing of science and the arts there must be firm grasp of the policy "let a hundred flowers bloom, let a hundred schools contend." It is an error to use administrative methods to carry out forceful, arbitrary decisions on science and the arts. There must be continued criticism of feudal and capitalist thought. However, as far as the beneficial cultural knowledge from China's past and from abroad are concerned, they must be maintained and absorbed and, moreover, there must be utilization of modern science to bring order to China's superior cultural heritage and an effort to create a socialist, national new culture.

The conclusion to be drawn from Comrade Deng Xiaoping's report on party constitution revisions is: The victorious Eighth Congress not only mobilized the core party workers ideologically and organizationally but also pointed out suitable changes in the direction of the thought liberation movement. The Eighth Congress was a great historical turning point which provided the slogans for the third thought liberation movement!

Under the influence of dramatic changes in the international communist movement under the stimulus of objective demands by national social history, and under the guidance of the Eighth Congress there arose a great thought liberation movement that was like the confluence of a hundred rivers!

The Goals and Scope at the Beginning of The Third Thought Liberation Movement

The success or failure of socialist endeavors is related to the fate of the Chinese people. They of course must investigate those problems which have already been revealed and discover what is the true communism. The series of problems in the international communist movement have reminded the Chinese people of the fact that to imitate the experiences of others is to commit the mistake of following the path of an overturned vehicle. We must discover a Chinese path to socialism. The investigation of and search for the Chinese path to socialism then became the major topic of this thought liberation movement, and opposition to subjectivism, bureaucratism and factionalism and the cult of the investigation were the first battles in this struggle. This is the glorious and sacred historical mission entrusted to the Chinese people and the Chinese communist party.

The fate of an age is in the hands of the progressive class and those persons who represent the people's interests and the objective demands of social development, and only those seekers who are willing to pay any price even that of one's life will achieve understanding of what is to come. In the latter half of 1956 the future of the nation, the genuine interests of the Chinese people and protection of party prestige prompted a number of party members and progressive intellectuals who were concerned about the nation and the people, thoroughly open and honest, undaunted by evil suspicions and completely fearless undertook to continue the revolutionary traditions of the May Fourth Movement and the Yanan rectifications movements, discard the trappings of scholasticism, lift high the torches of democracy and science and embark on a search for the true way.

Art, the most sensitive nerve of the process of social development, became a leader of the vanguard in this thought liberation movement. A number of influential works surfaced in this period. A representative work of that period was CHONGFANGDE XIANHUA [FRESH FLOWERS BLOOM AGAIN] published by the Shanghai WENYI CHUBANSHE [WENYI PUBLISHING HOUSE]. These works not only sought to answer the questions of how art and literature reveal contradictions among the people and the multitude of creative subjects and styles, more importantly they were of great significance in the ideological revolution. Writers and artists portrayed literary images, bravely became involved with life, revealed the danger of the "three big isms," lashed those vile and filthy arts which sullied our party's glories, corrupted the physical existence of the party, destroyed our socialism and trod upon the people's pure spirit and elevated morals. At the same time they praised with high spirits the new generation's brave advance, fearlessness of power and authority, willingness to assume responsibility, and its continual struggle for victory in party endeavors and for the victory of socialism in the homeland. The morals of the older generation of proletarian revolutionaries continued to shine forth in their new brilliance.

The most prominent of these works are Comrade Liu Binyan's [0491 6333 7159] ZAI QIAOLIANG GONGDISHANG [AT THE BRIDGE WORK SITE] and BENBAO NEIBU XIAOXI [OUR NEWSPAPER'S OWN NEWS] and Comrade Wang Meng's [3769 5536] ZUZHIBU XIN LAIDE NIANQINGREN [NEW YOUTHS COME TO THE ORGANIZATIONAL DEPARTMENT]. The main reasons why these works elicited people's attention and were widely welcomed by readers were because they revealed the then extant contradictions involved in people's lives, gave prominence to taboos and exposed the"dark side of things" that were impeding our progress. These works have weathered 20 years of storm to realistically prove that their contributions to the search for the truth could not be obliterated! Even today don't such bureaucrats as Luo Lizheng [5012 4539 2973], Chen Lidong [7115 4539 2767] and Liu Shiwu [0491 0013 0710] still thump their chests and praise themselves as loyal followers of "Marxism"? They, however, give no thought to such questions as what has happened among the people, what sort of social processes have occured, what new social forces have developed, which social forces are in decline, which contradictions have occured what is the form of these contradictions, which areas demonstrated tendencies toward change and what areas of socialist development determine the loss of old things. Asking these questions could make their own work policies more suitable to the changing situation, rather than the monotonous statement "Policies are uniform: If a person does not operate according to newspaper editorials there will be not punishment for this and it is not considered to be an error. To operate through administrative fiat is to be in opposition to party policy and the responsibility for this will not fall upon anyone. This is the logic of the matter...." Just imagine, if this logic and "official ways" continue to exist, our four modernizations will never be implemented and the party reputation will suffer great damage!

However, good works such as these which represented new ideas of hope were distorted and trod upon by people, saying that they "overturned right and wrong, confused the enemy and ourselves and plotted to lead literature and art onto a path opposing the people." According to countless similar explanations of that time the so-called "overturning of right and wrong" was to "constantly take the correct, positive matters in life as bad and conversely take negative things as good," "thought reform was bad but a firm grasp of bourgeois ideology was good while subordinating the individual to the collective was bad but developing individualism was good," "people who positively and loyally worked for the party were 'backwards' or 'mediocre and unambitious' while egotistical people who lacked organizational discipline were 'fresh' and talented.'" How can it be said that Huang Jiayang [7806 0163 5391] could be just like Zhang Ye [1728 6851] in "getting into the party yet not supporting party interests and getting into the party by concealing her own opinions" yet not be an "individualist"? Is it right to ask people to praise the individualist Zhang Ye for not being an "individualist" and blame the individualist Huang Jiaying for not being an "individualist"? We say that this is really overturning right and wrong!

It is precisely because right and wrong and men and devils are overturned that the true critics are criticized while the criticizers make a clean escape during the great historical changes. Real life originally has both its light and dark sides and the acccomplishments of socialism are dependent upon the existence of those same faults. The true dialectical materialist must accept these contradictions of real life, analyse the complex, profound historical and actual factors that gave rise to them, expose their contradictions in a realistic and appropriate manner,and, moreover, lead the people in correctly resolving these contradictions. If the existence of these two aspects of life are not recognized, then no matter how well you utter Marxist phrases and no matter how skillful you are at using the conclusions of Marxism like a magical weapon to startle people, you basically are still an idealist.

Following the appearance of some works which smashed traditional forces and were "involved with life" there were developments in research on literary theory as well as studies of creative techniques. Around this time Comrade Qin Zhaoyang [4440 0340 7122] wrote XIANSHI ZHUYI-- GUANGKUODE DAOLU [REALISM -- THE BROAD PATH] and Zhong Dianfei wrote DIANYINGDE LUOGU [SIGNALS FROM THE CINEMA] which offered the people a problem awaiting solution, that is, how art and literature are to reflect the true problems of society.

Even today there still are differences over the right and wrong of Comrade Qin Zhaoyang's article, but it in no way is true as some comrades have claimed that he hated and loathed the "spirit of socialism." The fundamental meaning of Qin's article is perfectly clear. What he opposes is starting from "socialist realism" in singing empty praises of socialism and starting from a theory and reduce the abundance and complexity of real life to a simple line drawing. And are not the things which Qin Zhaoyang opposes exactly the so-called "three paramount" creative principles advocated by the "standard bearer" Jiang Qing? Was not the decline of Chinese literature and arts in the 1970s the consequence of a few comrades' advocacy of the very things opposed by Comrade Qin Zhaoyang? The dialectical method informs people that any tendency toward hasty appraisals will only lead toward a tendency to change.

The questions that Comrade Zhong Dianfei posed in his article DIANYINGDE LOUGU are that there can be no apposition between a "movie's social and artistic value" and the "box-office value," the problems found in "cinematic traditions" and "slanted materials," and the problem of the "approval system." These are important questions for the correct operation of socialist cinematic ventures. There must be consideration of the movie's social impact and consideration of box office value. It must be asked if a movie lacks box office value but consumes capital and uses the labors of the people to make restitution then all fields and industries will follow this bad example then how will the nation ever make any progress? Even today it appears that the question regarding "respect for cinematic artistic traditions" and "slanted materials" is still in apposition, as this is a question of artistic creation which must be solved. The process of getting approval of a movie is exceedingly complex as there are too many offices involved. This is still one of the greatest problems in making a movie. The article DIANYINGDE LUOGU is right to the point. If these questions had been resolved at that time our cinematic ventures would not be in their present state.

Starting in the latter half of 1956 when Comrade Wang Zhong [3769 0022] was teaching classes on the throry of journalism at Fudan University and reporting for some news units, he made a valuable study of the major questions in journalism based on the actual problems of journalism and newspaper work. For example, his conclusion that "journalism is a social product and not a product of class struggle" is very scientific. In a socialist society the class nature of journalism is not the same as journalism as a product of class struggle. Furthermore, one cannot apply the "status quo" as it is presented in the newspapers as a weapon of class struggle to explain the historical laws of the totality of journalistic ventures. Therefore, Comrade Wang Zhong did not approve of the simplistic explanation of journalism as a product of class struggle. However, he has never opposed the scientific conclusion that newspapers function as a device in the class struggles. For another example, the basic ideas he expressed about the "dual nature of newspapers" are also correct. This is because newspapers are propaganda and public opinion tools of class struggle and also are a commodity. The party newspapers belong to the party but also belong to the people, so they have both a party nature and a popular nature. Therefore there is a contradiction between "making newspapers to sell" and "buying newspapers to read." Newspapers are printed for people to read and people use money to buy newspapers so if the pages are filled with slogans and directives such as "vigorously develop," "firmly implement," and "respond positively" and are devoid of news concerning the masses, their livelihood, needs and views and if heated struggles and the vigorous new life are treated with dry figures and percentages then who will want to read the papers? This brings up the "theory of readership needs" in opposition to managing the paper through "bureaucratic fiat" as well as opposition to dogmatic and subjective thought and work styles. This is beneficial in strengthening party leadership of the newspapers. It is true that some of Comrade Wang Zhong's views on journalism need to be made more scientific while others are not yet developed and are not expressed with sufficient skill and detail. Nonetheless, these views are fundamentally accurate and made a positive effort in the establishment of a Marxist system of journalism in China. How could people avoid feeling sorrow at seeing it smothered?

The real or predicted appearance of problems in the process of the development of socialism elicits the worries of all people of patriotic mind and they wish to tell the party and the people of the conditions they have discovered or foresee. This is what Mr Ma Yinchu [7456 1377 0443] did. In 1955 he made the first speech regarding the problem of population control to the Zhejiang group of the People's Congress, but it did not pass. He did not give up but instead at the February 1956 meeting of the State Council made a speech on population control in which he attacked the mystique of the slogan "the more people the greater our strength" and made a more detailed exposition of the matter. Later, at the first session of the Fourth Congress, he wrote up his speech on population control as a proposal (this was published in that year's July 5th issue of the RENMIN RIBAO under the title XIN RENKOU LUN [A NEW POPULATION THEORY]. Ma Yinchu's views were based on research materials and on scientific Marxist analysis. He was opposed to the claim that continual rapid population increase was a doctrine of socialist population laws. He vigorously campaigned for late marriages, the benefits of planned parenthood and criticized feudal thought and feudal concepts of human relationships such as, "a succession of heirs," "early birth of a son," and "five generations living in prosperity." He pointed out that an excessively large population would be a great and difficult burden for socialist construction. However, Ma Yinchu's farsighted, sagacious theory to help the state and the people came under vicious attack from many sides. Consequently, "erroneous criticism of one person mistakenly produced another 300 million persons" and over 20 years of practice have proven that the truth favors Ma Yinchu.

With the first stirrings of spring the seeds begin to sprout and when one sprout shows a myriad follow it. Under the influence of new breakthroughs in philosophy, economics, history, literary creation and literary theory and journalism a great many communist party members, intellectuals and young students broke the bonds of traditional thought and like a hundred barges fighting the current bravely undertook a thought liberation movement. Their goals were to continue to spread and develop Marx-Leninism in China, to maintain the purity of the party ranks and ideology, to complete socialist democracy and build a legal system, to cause the homeland's economics, culture, science, education, journalism and health endeavors to flourish. Their methods were to operate under the great party slogans and use the weapon of criticism at conferences and viewpoint meetings and to put articles, essays, anecdotes, poetry, fiction and cartoons in the various publications. They made studies of a number of major problems and moreover carried out a fierce attack on all the poisons such as careerism, bureaucratism and factionalism which are not concerned about the well-being of the people and which destroy socialist construction. They made sympathetic and reasonable though unavoidably harsh criticisms of the errors which occured in the process of carrying out party policies. They made constructive criticisms of many work projects. Truly: Freely express one's views in seeking the truth, fully speak one's mind in recompensing the people.

Just when the thought liberation movement was most flourishing an event of everlasting shame occured and the new sprouts were destroyed by a "violent freezing wind." Many views of true wisdom were labeled as "rightist disputations," and some brave seekers of truth were attacked as "rightist elements" and suffered abuse.

The lessons of history tell us that when the flood waters arrive mud walls collapse and fish and dragons mingle together. In the springtime hundreds of young sprouts emerge but there certainly are poisonous weeds among them. It is by no means strange that in the sprouting stage and in its progress this great thought liberation movement should be muddied by other things. Furthermore, all thought liberation movements in human history existed side-by-side with other viewpoints. These other viewpoints can be contended with, studied or criticized, but how could the fragrant flowers be uprooted along with the poisonous weeds? As for the great problems of the people's interests and the success or failure of socialism the people were forthright and spoke their minds with the result that they received severe beatings and could not seek redress. As sick people fear the cure so the avenues of expression were blocked and they sank ever deeper into the bottomless pit of errors. During the 1950s, these sprouts of the third thought liberation revolution in China were smothered and thus reached their historical conclusion.

Although the effect of this historical deteoriation on the sprouts of the third thought liberation movement was just like the pinning of Prometheus to the mountaintop for giving mankind fire, nonetheless the search for the truth was like a concealed gemstone the gleam of which still shone in men's minds.

The Resurgence of the Third Thought Liberation Movement

Mankind's consciousness is neither a collection of fragments nor is it an unbroken flow. The broad "anti-rightist" campaign of 1957 did not frighten the people and none of the true and revolutionary-minded members of the communist party turned a blind eye toward the strange happenings around them. In 1957 Comrade Peng Dehuai painfully recognized the evil consequences caused by the neglect of objective laws and out of concern for the fate of the broad people and out of worry over the future of the socialist homeland he wrote a poem, GUXIANG HANG [MY NATIVE PLACE], which expressed the people's suffering. After this, according to first hand materials, he openly circulated a "ten thousand word letter" to Chairman Mao listing all of his faults. In the early 60s the abnormal political and economic conditions made literature and art into the vehicles of "the will of the superior officials" and embellished real life with "decadent music." In 1961 Comrade Zhou Enlai made an effort to rescue proletarian endeavors in art and literature by personally attending the "Art and Literature Work Conference and the Feature Film Creation Conference." In his speech he said, "Artists must face toward the people not toward the leadership," and called upon the artists and writers to liberate their thoughts, practice democracy, dare to speak for the people and not fear beatings or being labeled. After that, in March of 1962, Comrade Chen Yi attended the "All-China Drama, Musical, and Children's Drama Writers' Conference" and in his remarks said, "If you do not constantly open people's eyes and sharpen their vision to see our shortcomings and faults then what benefits are there"? He exhorted the writers to be responsible and braver. Although the speech and views of comrades Zhou Enlai, Chen Yi and Peng Dehuai were obstructed and attacked, the truth cannot be locked up and their revolutionary spirit of searching for the truth stimulated and inspired all those who fererently love socialism and the homeland to search and climb upwards neither proud nor disheartened, bravely marching straight ahead.

During the ten years of the cultural revolution Lin Biao and the "gang of four" were a flock of devils who brought chaos to our world and turned China into a fearful living hell. The best intentions and the most superior moral traditions were trampled upon and overrun, wisdom was betrayed and loyalty was destroyed. No matter how evil the conditions or how strict the confinement there was no way to obstruct the broad people's progress toward a good future or their search for the truth. On the contrary, this only stimulated their relentless spirits to search for the true meanings of the socialist path and they toiled bitterly without rest from beginning to end to follow the path toward a "powerful socialist nation." "People in cowsheds study Marx and Lenin, through wronged they do not forget the wealth and power of the nation." When Comrade Zhang Wentian [1728 5113 1131] was in jail and near death he continued to write proletarian political and economic works. Comrade Zhang Zhixin [1728 1807 2450] was selfless and brave, and even with his life on the line he would not compromise with superstitions and prejudice but rather pursued truth with brilliant arguments, firmly held to the truth and sacrificed his life for it. All of the executioners' bloody deeds to frighten the people actually taught them an opposite lesson. They were awakened to their suffering. A fully enlightened people angrily took up the battle flags against the "gang of four" thus announcing the third thought liberation movement. After those sprouts had been smothered 20 years of repeated struggles passed before the new era began.

"Blood flows on the central plains fertilizing the sturdy grasses; across the frozen lands spring flowers burst forth." Since the smashing of the "gang of four" modern Chinese history has entered a new era of great developments. In this new era the party will implement the central tasks of the third strategic transformation of the mid-1950s that for various reasons was "aborted." Although the new era has a number of new features, from the viewpoint of the content and nature of the corresponding thought liberation movement it is a continuation and developement of those "sprouts" and so we therefore call it a "resurgence." This is in accord with the laws of the development of ideological revolution in modern Chinese society.

Right now, the thought liberation movement in China is of large scale and great scope. It not only touches upon the political system and economic structure but also touches upon all realms of social consciousness. The ranks of the thought liberation movement are growing ever larger. The older generation of proletarian revolutionaries is leading the forefront; a shock brigade which was trained through the bitter struggles now occupies the middle positions of strength; and a large group of youths highly concerned about the nation and the people has joined the ranks of this struggle. However, the obstinate maladies of the ultra-leftist line have already penetrated all aspects of society and formed a huge obstructive force. Therefore the thought liberation movement will have to pay a great price for every step forward. Spring is now returning to the land and the solid ice has already been broken. Let us raise our arms in welcome to the springtime of the third thought liberation movement!

PARTY AND STATE

PROGRESSIVE ROLE OF REFORM IN HISTORY EMPHASIZED

Shanghai WEN HUI BAO in Chinese 1 Sep 80 p 3

[Article by Xu Peihua [1776 1014 5478]: "The Reform Movement of 1898 Was a Reformist Movement"]

[Text] On 18 July, WEN HUI BAO carried in its "symposium" column an article by Comrade Jin Dexiang [6855 1795 4392] entitled "The Reform Movement of 1898 Was Not a Reformist Movement." In addition to emphasizing its positive effect on contemporary Chinese history and endorsing it as a progressive step in Chinese history, the article says: "The reform movement of 1898 is significant and its role in history cannot be ignored." I agree with this evaluation, but disagree with the following remark contained in the article: "It is appropriate to call the reform movement of 1898 a bourgeois political reform movement, but inappropriate to describe it as a reformist movement."

Emphasizing this point, the article says: By naming the movement of 1898 a reform movement, it symbolizes progress; by calling it a "reformist" movement, it means turning back the clock. Its writer also used a quotation from Lenin to prove his point. In order to explain this point, I want to recite that quotation from Lenin: "Unlike the anarchists, the Marxists endorse the struggle for reforms or for improvements in workers' living conditions when the political power is still under the control of the ruling class. At the same time, the Marxists resolutely repudiate the reformists for trying, directly or indirectly, to persurade the working class to pin its hopes on the existing authorities for reforms alone. Reformism has been used by the bourgeoisie to lull the workers into sleep so that they will be satisfied with individual reforms under the capitalist system which will never change their social stature as hired slaves." From this statement by Lenin, the article draws this conclusion: "Generally speaking, reform in various stages of history was a frequent and progressive measure. But any attempt to use political nostrums to head off any impending revolution in the name of reform or reformism will have the reactionary lullaby effect on the masses." True, there is semantic difference between reform and reformism. I feel that since they are different terms, their meanings are certainly not the same. This semantic difference will not be affected by any changes in historical conditions. The argument that reform will evolve into reformism when the condition is ripe for the revolution is untenable. According to Lenin, the Marxists also welcome the struggle for reforms; reformism means "an attempt to directly or indirectly persuade the working class to pin its hopes on the existing authorities for reforms alone." Clearly, whether the condition is ripe or not for the revolution will not affect the original meaning of the aforementioned two terms. Does anyone believe that the Marxists will consider it unnecessary to struggle for reforms as soon as the condition is ripe for the revolution? On an occasion of defining reformism, Lenin said: "Generally speaking, reformism means agreement with some changes conceived by those who consider it unnecessary to overthrow the political power of the existing ruling class, or changes that can be tolerated by those in power." ("Selected Works of Lenin," Vol 2, p 479, 1972) Lenin also said: "Reformism does not mean effecting any changes that will undermine the power base of the ruling class but only some concessions it is willing to make on the condition that its existence will not be threatened." ("Selected Works of Lenin," Vol 2, p 865, 1972) This definition of reformism is also applicable to the reform movement of 1898. A review of that movement revealed that among its participants were representatives of China's national bourgeoisie who urged their country to learn from the West. They pinned their hopes entirely on the emperor for carrying out their suggestions and programs for reforms in the social, political, economic, military and cultural fields. In other words, they had to rely on the Manchu government in implementing their reform measures and, therefore, had no intention of overthrowing the feudal rule or completely changing its power base. Bearing this in mind, we can call the reform movement of 1898 a reformist political movement. Now let us study whether reformism is a reactionary attempt to turn back the clock. True, Lenin denounced reformism as a reactionary attempt to "deceive the workers, to prevent, weaken or snuff out the revolutionary struggles, and to split and mislead the revolutionary classes." ("Selected Works of Lenin," Vol 12, p 222) This remark was directed at reformism that once prevailed over the major European capitalist countries where capitalist free competition was giving way to monopoly, the proletarian revolutionary forces were gaining strength, and the Marxist revolutionary theory and the fundamental proletarian interests called for replacing capitalism with socialism, while reformists, who still wanted to preserve the decadent capitalist system, urged the working class to give up its struggle to overthrow the bourgeoise rule in an attempt to disintegrate the worker movement. Naturally, reformism under such historical circumstances was reactionary.

But the situation in China at that time differed in many ways from that in Europe. In 1898, the national bourgeoisie in China just began to enter the stage of history and conditions were not yet ripe for any bourgeois revolution. Under such historical circumstances, reformism could not be called a reactionary movement because it came before any revolution was deemed possible. We could not observe and evaluate China's reformism at that time in a way adopted by Lenin to evaluate reformism in Europe. Nor should anyone be discouraged from calling the reform movement of 1898 a reformist movement in China because reformism was once denounced by Lenin as being reactionary.

Another reason for Comrade Jin Dexiang to deny the reform movement of 1898 as a reformist movement is that "because the reform movement of 1898 was not tolerated by the feudal autocracy, it clearly did not belong to any category of reformism whose aim was to defend the old system." I also consider this inference untenable, because it was accepted by the feudal rulers represented by Emperor Guang Shu although it was not tolerated by the feudal force led by Empress-Dowager Ci Xi. I also believe that the reform movement of 1898 had an intention of defending the old system, because it did not direct its spearhead at the entire feudal system despite the fact that it was aimed at developing capitalism in China. If it had no intention of defending the old system, how could it expect to win the support of Emperor Guang Shu and other senior officials in the Manchu government?

When we called the reform movement of 1898 also a tool for defending the old system, we have no intention of denying its progressive role in history. In a sense, the reform movement of 1898 was an indispensable link in Chinese history, which provided its participants with an opportunity to sum up the past experiences and blaze a path to the future, a link which fell in line with the laws governing historical developments. Everything must undergo a process of first quantitative and then qualitative changes. Reformism is normally promoted before the outbreak of the revolution. Under such circumstances, the reformist movement presages a revolution to come. The reform movement of 1898 was a political crusade which covered a wide range of reforms based on the bourgeois theory of political economy and bourgeois philosophical viewpoints. Its ultimate aim was to emancipate the people's minds, enlighten them to a better economic future, and broaden their horizons of knowledge. In short, it had a significant effect on the generations to come. In the wake of the failure of the reform movement of 1898 came the bourgeois revolutionary movement led by Sun Yat-sen which gained momentum after national capitalism developed in China at the beginning of the 20th century. At that time, the focus of attention in society was being shifted to the choice between revolution and reform, and between preserving the Manchu government and using violence to overthrow it. Under such circumstances, anyone who still insisted on promoting reformism as a device to head off the revolution would be denounced as a reactionary element. Changes in the objective historical conditions will give rise to a change in the nature of reformism from the progressive to reactionary movement. Facts have led me to conclude that under specific conditions, reformism can play a progressive role in history; the reform movement of 1898 was a reformist movement.

PRAGMATISM, OTHER BOURGEOIS THEORIES OF PRACTICE REPUDIATED

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 5, 25 May 80 pp 3-6

[Commentator's article: "Improve the Theoretical Study of Practice as Criterion for Testing Truth"]

[Text] I

Two years have passed since the launching of the nationwide discussion on practice being the sole criterion for testing truth. This discussion is also known as a polemic between two ideological lines and a large-scale movement to educate the people in Marxism-Leninism-Mao Zedong Thought, a discussion highly valued by the Third Plenary Session of the 11th Party Central Committee as a step of far-reaching historical significance in helping the comrades of the entire party and the people throughout the country emancipate their minds and rectify their ideological line. During the 2-year discussion, our main task has been to smash the "modern cult of worship" created by Lin Biao and the "gang of four" which has long shackled the people's minds, to criticize those trends of thought which deny practice as the sole criterion for testing truth, and to straighten out the dialectical-materialist ideological line in accordance with the principles of seeking truth from facts, taking actual conditions into account, and integrating theory with practice. Although much has been done in explaining and propagating the basic Marxist principle of regarding practice as the sole criterion for testing truth, our efforts to systematically study many related theoretical problems remain far from enough, and therefore, need to be further strengthened.

The reasons for deepening the study of practice as criterion for testing truth follow:

First, as social practice continues, the Marxist theory of practice as criterion for testing truth needs to be constantly enriched and developed. Otherwise, it will wither and lose its fighting spirit in competition with other theories. This theory, first invented by Marx and Engels and then inherited and developed by Lenin and Comrade Mao Zedong, contains many meaningful and profound classical principles which need accurate connotations and expansion as well as new practical experiences to enrich and develop it.

Second, the theory of practice as criterion for testing truth is the theoretical foundation of the dialectical-materialist ideological line. If we want to further clarify this ideological line, we must define and verify it from the theoretical point of view. Furthermore, the in-depth theoretical study of practice as criterion for testing truth is also essential to the consolidation and development of this correct ideological line.

Third, with the world ushering in an era of great revolutionary changes in modern science and technology and China entering a new historical period of struggle for the realization of the four modernizations, we are urgently required to apply the theory of practice as criterion for testing truth to study the new situation, and new problems resulting from the wide-ranging development of social practice and modern science and technology. Only in this way can we come up with conclusions on many new scientific achievements.

Fourth, there are many theories of practice as criterion for testing truth, created by modern bourgeois philosophers, that need to be studied and criticized. This being the case, we must study harder than ever the Marxist theory of practice as criterion for testing truth in order to rebuff its bourgeois counterparts.

Fifth, during the 2-year debate on practice as criterion for testing truth, many theorists and practical workers have brought up for discussion many theoretical problems and new ideas that need to be thoroughly and carefully studied. In short, as philosophers, we now face an important problem of how to deepen our understanding of the theory of practice as criterion for testing truth.

II

A deep understandiing of practice as the sole criterion for testing truth calls for a study of practice as an important aspect of philosophy. Marxism tells us that as a purposeful activity, practice reflects not only a special relationship between man and the material world, but also a way of his existence in the objective world. It is a systematic activity consisting of a goal and ways to reach that goal or given targets, a procedure designed to achieve intended results and other related steps. Without taking these steps, man cannot accomplish his practical activities. Marx said: "As a natural element, man always has to struggle against other natural elements. In order to take possession of the natural property useful to him, he may have to use the power endowed by nature and set in motion his arms, legs, brain and hands. When he moves to change his environment, he may also end up changing his intrinsic nature. While doing so, he reshapes the objective world to meet his demands in accordance with the laws governing his activities." ("Collection of Works of Marx and Engels," Vol 23, p 202) This means that man can take measures or use tools to change the objective world, to convert what he conceives into objective reality with the intended results. In other words, his knowledge is verified only when he achieves the intended results in the process of social practice. Although Marx's "Das Kapital" and Lenin's "Manuscript on Philosophy" and many other classical works contain passages about various forms of practice, efforts remain to be made to study them. For example, what role do these forms of practice play in human productive activities? What are their relations? How can the truth of human knowledge be verified through practice? It must be noted that some comrades have come to regard practice as only a device or tool rather than a criterion for testing truth. I feel that this viewpoint stems from their inadequate understanding of practice as a comprehensive system of human activity.

The theory of practice as the sole criterion for testing truth contains many points. Our study must focus on the question of why only social practice can be the criterion of truth. Lenin pointed out: the process of verifying knowledge through practice is the "only road toward knowing truth," adding that Marx held that theory that corresponds with reality is the sole criterion for testing other theories. ("Selected Works of Lenin,"Vol 1, p 30) We must thoroughly study and clearly interpret why practice is the "sole criterion for testing truth." Today, at issue are two related problems that need to be studied: the problem of the relationship between practice as criterion for testing truth and logical verification of human knowledge, and the problem of whether the objective matter can be used as a criterion for testing truth.

Some people contend that although there is no doubt in their minds that practice is criterion for testing truth, is it the sole criterion for testing truth? Can the logical verification of human knowledge be considered an appendant and secondary, if not an independent and principal, criterion for testing truth under specific conditions? We know that logical verification of human knowledge is a theoretical measure to prove truth by means of correct judgments and inference and a process of philosophical thinking which plays an important and indispensable role in measuring the truht of an idea. For example, logical verification of scientific theorems can contribute to the search for the truth; logical positivism can also play a significant role in systematizing a proven truth. Can the logical process of verifying knowledge take the place of practice as criterion for testing truth? Can we confuse the process of verifying the truth with criterion for testing it out? In short, further efforts must be made to study and explain the role of logics in verifying knowledge and the relationship between the logical process of verifying knowledge and practice as criterion for testing truth.

Some people who believe in practice as only a device or tool to test truth hold that since truth is a correct reflection of objective reality and the laws governing its development, whether it is correct or not should be verified by using objective reality itself as criterion. This viewpoint identifying the truth of knowledge with objective reality seems correct. But in the final analysis, using the objective reality as criterion for testing truth means using intuitive perceptions as criterion. Using objective reality as criterion actually means using sense organs to determine whether subjective feelings correspond with objective reality. This is in effect an intuitive materialist viewpoint criticized by Marx long ago. Furthermore, truth also means an accurate understanding of the objective world and laws governing its development. This process of improving rational knowledge is highly abstract in nature. Although man can translate what he sensible perceives into an abstract impression, how can he interpret abstract knowledge in specific material terms? For example, the Marxist theory of value is undoubtedly a truth except for the fact that "it cannot be perceived." ("Collection of Works of Lenin," Vol 38, p 183) How can man use his sense organs to perceive it? How can he directly apply objective examples to verify it? Its correctness can be verified by the practical process of commodity production and commodity exchange. All other theories can also be verified by similar processes. Dialectical-materialism also holds that truth is not just a negative mirror of objective realities, but a form of scientific knowledge that can be used as a guide to purposefully and systematically change the objective world. Whether this knowledge is correct or not cannot be proved by the existing objective realities. Nor can it be verified until it materializes through practice and its objective is realized. Is this logic correct? Are there any other logics in this respect? These are questions that need to be further studied.

Another problem that deserves our attention during the in-depth study of the theory of practice as criterion for testing truth is formulas for verifying truth through practice. Truth can be explained in concrete terms, and therefore the forms of practice as criterion for testing it should be diversified. For example, theories and theorems of astronomy, and medicine are verified by active observations and experimentation. Theories of archaeology and paleontology can be proved by comparing newly unearthed relics (such as long buried artifacts, fossils, official documents and records of different stages of history). Social scientific theories can be verified by the masses of people through their struggle for production and class struggle from which they can draw conclusions which correspond with the laws governing the development of history. There are many forms of practice which guide the people to deal with and control the objective bodies. As the productive forces and science develop, so does man's ability to control the objective bodies. As a result of the large-scale revolutionization of modern science and technology, the dimensions and forms of practice have expanded and diversified along with the ways of verifying truth. The modern scientific researchers have adopted methods for conducting large-scale scientific experiments. Among them are simulation, quality-control, quantity-determining, and factor-analytical experiments, using a variety of scientific techniques and highly sophisticated equipment. It must also be noted that more and more scientific experimental methods have been adopted by researchers in the branch of social sciences, thus giving philosophers new subjects of study. For example, are there any specific characteristics that are unique to specific forms of scientific practice? What is their relations? How can truth be verified by each branch of science? We must conscientiously analyze and study these questions in order to enrich the theory of practice as criterion for testing truth as a guide to all practical productive activities.

An in-depth study of the Marxist theory of practice as criterion for testing truth must be accompanied by an analysis, study and criticism of its modern bourgeois counterparts. In this connection, views voiced by two bourgeois groups of philosophers deserve our special attention: First, pragmatists who have developed "a doctrine of practice" emphasizing "practice as the sole criterion for testing the truth of an idea." Because they generally use the same terms and phrases as the Marxists, the people can hardly distinguish one from the other. Even bourgeois philosophers as smart as Bertrand Arthur William Russell could not distinguish between the two, saying that "pragmatism bears a striking resemblance to the doctrine of Karl Marx." Today, the influence of this deceptive fallacy that "what works is true" is so deep internationally that it still holds sway over some people in our country who thus far remain unable to draw a distinction between pragmatism and Marxism. This being the case, our present militant task should focus on helping the people draw a clear distinction between the Marxist and prgmatist principles of practice as criterion for testing truth and thoroughly criticizing pragmatism and its subjective idealist concepts of truth. Another group of philosophers that deserves our special attention is represented by a western scientist-philosopher named Pope, who proposed that all theorems can be verified by observations and facts based on experiments; theories that are proved true should be retained and others that are judged false should be discarded; proven truth some day may be disproved by new discoveries and replaced by new ones. His philosophy can boil down to this point: Established theories sooner or later can be disproved and replaced by other systems of knowledge. Such laws theorizing progress in science deserve our careful analysis and study, and their errors in judgment should be scrutinized and criticized. Thus far, much remains to be done in this field. In short, we must comprehend, study and analyze all bourgeois theories of practice as criterion for testing truth so that we can teach the people to distinguish between Marxism and pragmatism and defend and develop the Marxist theory.

III

In order to deepen the study of the Marxist theory of practice as criterion for testing truth, we must resolutely implement the policy of "letting a hundred schools of thought contend," and encourage the people to express their different views and discuss them in a creative way. But some people who regard the discussion on the criterion of truth as a political issue said: "We prefer to hold our different opinions on this complicated issue for ourselves and shut our mouths." We feel that since the Party Central Committee has issued a call for emancipating the mind along with a warning against any related restrictions, the worry that the discussion on the criterion of truth may get its participants into trouble is not justified; although some theoretical problems are closely related to politics, they are not political problems in any sense; dissenting voices triggered by the discussion on how to develop and study theories are absolutely normal, and otherwise, our nation will be in trouble. Based on this reason, we must encourage the free expression of different opinions on all occasions of academic discussions. We must distinguish our party's traditional workstyle from the cultural autocracy promoted by Lin Biao and the "gang of four" with the aim of humiliating, punishing and even sentencing dissenters to death. During the press discussion on the criterion of truth in the 1960's, many comrades at that time viewed materialist-dialectics as "an indirect measure for testing truth." Many different opinions have been expressed on this matter during the current discussion. For example, some comrades consider the objective bodies as criterion for testing truth rather than practice, which in their opinion, is only a tool or method for that purpose. Another opinion holds that both the logical verification of human knowledge and accurate theory can also play a role as criteria for testing truth. In the final analysis, they do not, in any slightest sense, deny practice as criterion for testing truth. We feel that these opinions deserve our further discussion. In discussing different opinions, we must place facts on the table, reason them out, enlighten ourselves to different ideas, and help one another think them over carefully, in order to deepen our understanding of some theoretical problems. Only in this way can we finally achieve a consensus on the basis of the basic Marxist principle of seeking truth from facts.

Marx said: "Only convincing theory can win the hearts of the masses; only thorough theory can we convince the people. The so-called thoroughness means firmly grasping the fundamentals." ("Selected Works of Marx and Engels," Vol 1, p 9) We must redouble our efforts to thoroughly study the theory of practice as criterion for testing truth. The more thoroughly we study it, the more powerful and more convincing it will become to the masses, and the more effective it will grow as a guide to our practical activities. Consequently, it will be unlikely that it will be distorted, adulterated and vulgarized. Our task in this field is difficult but meaningful. We firmly believe that as long as we work hard to explore new ideas with courage under the guidance of Marxism-Leninism-Mao Zedong Thought, we can certainly raise our study of the theory of practice as criterion for testing truth to a new level where we can play a role in accomplishing the four modernizations with faster results.

STRUGGLE AGAINST 'LONGING FOR EMPEROR' MENTALITY

Beijing BEIJING WANBAO in Chinese 7 Aug 80 p 3

[Article by Shao Yanxiang [6730 3601 4382]: "One Should Never Look Forward to a 'Good Emperor'"]

[Text] Some people recently have asked: Can't we expect to have a modern monarch similar to Emperor Taizong of the Tang Dynasty, who made his kingdom strong and prosperous and his subjects feel happy and secure?

The answer is repeatedly no.

History shows that Tang Dynasty Emperor Taizong, named Li Shimin, was known for his policy of "promoting able officials of political integrity and welcoming their frank and sincere criticism." Typical of the officials associated with Emperor Taizong was his senior official, Wei Zheng, who had a reputation for his straightforward attitude in admonishing His Majesty. Recorded history tells us that Wei Zheng admonished His Majesty on several hundred occasions in a spirit of fearing neither reprisals nor death. Nevertheless, it is also true that after listening to his admonitions, His Majesty often flew into a rage behind Wei Zheng's back or confided to those near and dear to him his pent-up dissatisfaction with Wei Zheng. On many occasions, he even thought of getting rid of Wei Zheng. As early as the first year of Zhenguan reign, or the year of his coronation, Taizong received a report from someone accusing Wei Zheng of practicing "favoritism and nepotism." But this case was shelved following a fruitless investigation. Wei Zheng died in the 17th year of Zhenguan reign. Shortly after his death, another relevant incident occurred, leading Emperor Taizong to suspect that Wei Zheng might have been behind a conspiracy to form a clique to serve his private interests. Later, Emperor Taizong posthumously criticized Wei Zheng for compiling records of "his imperial admonitions" for distribution to historiographers before his death without His Majesty's knowledge. Emperor Taizong was so mad at Wei Zheng that he retaliated by canceling the marriage between Princess Heng Shan and Wei Zheng's oldest son and overturning Wei Zheng's tombstone, which had an inscription in Emperor Taizong's handwriting. If Wei Zheng had not died in the 17th year of Zhenguan reign but a year later, what would have happened to him? Nobody could venture a guess.

It seemed that relations between Wei Zheng and His Majesty were not too sweet, because they were virtually at odds. It can be said that under the feudal system, "living with an emperor is very much like living with a tiger." Facts show that Emperor Taizong was literally not so lovely or kind as he was supposed to be. One must understand that "democracy" practiced by an emperor under the feudal system was hopeless.

Nevertheless, in Chinese history, Emperor Taizong still deserves to be called "a good monarch." But the question remains: Do we still need a modern monarch similar to Emperor Taizong of the Tang Dynasty? I am afraid that if a monarch completely resembling Emperor Taizong of the Tang Dynasty really comes to power, a system completely resembling feudalism will come into being; the de facto system of cadres serving for life, the hereditary system, privileges for officials at various levels, slavery, the division of the country into various autonomous states, groups of private interests, patriarchism, and nepotism will all be legalized.

For that reason, we don't need emperors, or even good emperors. During the past several years, the trouble we were in did not stem from a lack of emperors or good emperors like "Emperor Taizong of the Tang Dynasty," but from our failure to eliminate the remnant influence of feudalism, to improve the socialist political system, and to protect the people's democracy and inner-party democracy from being undermined by feudal fascist elements. I must say that ours is a choice between genuine socialism and feudalism, between democracy and autocracy, and between rule by law and rule by man, rather than a choice between good and bad emperors.

This mentality of longing for a "good monarch to emerge" similar to "Emperor Taizong of the Tang Dynasty" reminds us of the feudal society in which slaves who had not found masters of their choice always envied slaves who had. This mentality can be anticipated at a time when the people aspire to return order to society in the wake of that catastrophe that lasted 10 years. But if no efforts are made to overcome it, it may induce us to lower our guard against the remnant influence of feudalism and to forget the grave dangers ahead.

Does this sound too sensational? When we live in peace, we must guard against dangers. Only in this way can we look to the future with confidence.

PARTY AND STATE

LI HONGZHANG'S ROLE IN SINO-JAPANESE WAR RECALLED

Beijing BEIJING WANBAO in Chinese 14 Aug 80 p 3

[Article by Ye Zuxing [5509 4371 5281]: "The Tragedy of Li Hongzhang"]

[Text] For years, Li Hongzhang [2621 7703 4545] has been portrayed in Chinese history, dramas, and movies as a traitor.

True, during his lifetime Li Hongzhang performed many disservices and made many mistakes. Nonetheless, as a noted leader in charge of foreign affairs, he still deserves to be called a relatively far-sighted figure in the ruling circles of the Qing Dynasty.

The decades from the 1870's to the 1890's were a period of transition from capitalism to imperialism in many major Western countries. During this period, Africa and Latin America were carved up into spheres of influence, while in Asia, India, Indochina, Burma, and Thailand were reduced to colonies. China was also in danger of being chopped up by Western powers after it was forced to open its doors to foreign influence under the threat of guns, to yield territorial concessions, and to pay indemnities. In this way, it was totally humiliated. In this situation, two diametrically opposed groups emerged in the Manchu government--namely, a diehard conservative group, and a group that welcomed foreign contacts.

The first was a purely feudal political faction which was irreconcilably antagonistic to foreign influence, dreaming of "a country in total isolation from the rest of the world." It rejected all new ideas and indulged in talk about how to "protect a kingdom from the intrusion of foreign influence." It adopted a belligerent attitude toward foreign countries, thus risking war and knuckling under to foreign pressure.

The other was a political faction associated with the feudal warlords. It strongly supported a program to import Western technology in order to make China economically and militarily strong. Li Hongzhang belonged to this group. He said that importing Western technology could help build China into a strong and independent country. On one occasion, in which he criticized the diehard conservative group for chanting empty slogans, he said: "Foreigners respect only military power instead of plausible speeches. We cannot talk them into withdrawing their troops if they want to threaten us with the use of military force." ("Proposal for Strengthening Coastal Defense") He told his colleagues: "The time has come for us to talk about things foreign. I know you all hate to talk about that. If I shut my mouth as you do, will it place our kingdom in danger of subjugation? With China growing weaker and weaker with each passing day, the foreigners are becoming more arrogant than ever. Who should be blamed for this? It is still not too late to do something to turn the tide by building the kingdom into a strong and independent power respected by others. If we refuse to do so, we will face an uncertain future."

From 1862 to 1894, Li Hongzhang frequently drew fire for doing just that, as a man at the helm of China's foreign affairs. When Empress Dowager Ci Xi, who did not trust Li Hongzhang much, tried to pit the diehard conservative group against his group, he angrily said: "You are all shortsighted, because you discuss affairs of state without perspective. Just to go on talking glibly without any action will only do our country harm. Your behavior reminds me of the downfall of the previous Ming Dynasty. Who would really pay attention to your ineffectual talk?"

After becoming disenchanted with the Dowager, Li Hongzhang hoped that Emperor Guang Shu, as soon as he became old enough to take control of the throne, would be able to support his proposal to increase contact with foreign countries. Unexpectedly, the emperor's Chinese-language teacher, Weng Tonghe [5040 0681 0735], was an ossified scholar interested only in keeping foreign influence out of China and therefore was unwilling to support Li Hongzhang's movement for improving foreign relations. The dispute between Weng Tonghe and Li Hongzhang surfaced in 1890 when the former urged the Manchu government to cancel the contract for the purchase of weapons from abroad for the North China Fleet and South China Fleet.

In the face of Japan's military provocations in 1894, the Manchu government was divided into the hawk and dove groups. The hawk group, led by Emperor Guang Shu, was not basked by any of the armed forces, and therefore it pinned its hopes solely on Li Hongzhang for support. Believing that he could use his crafty skills to turn the contradictions among the imperialist countries to China's advantage, he eventually shifted his position over to the side of the Dowager, trying to induce foreign powers to intervene in the dispute between China and Japan so as to avoid an armed confrontation in the Asian continent. Finally, Li Hongzhang was sent to sign the Shimonoseki Treaty by the then corrupt and divided Manchu government after China was defeated in the war with Japan. During that war, Japan, with the connivance of other imperialist countries, sank all the warships under the command of the North China Fleet. Li Hongzhang began as the founder of the modernization movement for national salvation, but he ended up being accused of being a traitor to his country.

As far as Li Hongzhang was concerned, this was a tragedy. The signing of the aforementioned treaty, a disgrace and humiliation to China, put an end to the modernization movement. This was another tragedy in the history of the feudal system under the threat of foreign powers to carve China up into colonies. This fact proves that the modernization movement was bound to collapse under the strong pressure of the influential feudal forces under the control of the Manchu government.

RIGHT TO 'DISCUSS EMPEROR' SHOULD BE RESPECTED

Beijing BEIJING WANBAO in Chinese 23 Aug 80 p 3

[Article by Liao Mosha [1675 3106 3097]: "It Is Good To Talk About the Emperor"]

[Text] I regard BEIJING WANBAO's decision 2 months ago to open its "Hundred Schools of Thought" column to a discussion on the "emperor" as a big event that deserves our great attention. Were this openly discussed by anyone some years ago, everyone could imagine what misfortune he could expect.

Opening the "emperor" to public discussion signals real changes in our country and good days ahead. It can be said that we are now ushering in a splendid new era marked by stability and unity. Should and can we subject the emperor to discussion?

Is the emperor worthy of discussion long after he was overthrown by us? Does anything that has ceased to exist in our country still merit discussion?

As a matter of fact, the monarchy as a system was abolished 69 years ago. Despite this fact, its specter in the form of "patriarchy," "system of grades," "rule by the voice of one man alone," "feudal privileges," "arbitrary dictation," and "bureaucracy" still haunt us today. Although they are not necessarily visible, nor can they be touched by us, their influence among the people remains evident. Since the specter of the "emperor" still haunts us, it really merits our thorough discussion.

Yet, whether or not we can subject the emperor to discussion is another matter.

When I was born, the country was still under the control of the Manchu emperor. As far as I know, during the long period from the Qing Dynasty to the "Nationalist government," no one dared to openly discuss the emperor (although the people might talk about him in private). If anyone dared to do so, he might risk being executed or jailed. It goes without saying that people were prohibited from discussing the emperor during the Qing Dynasty. Although the title of emperor no longer existed during the days of the Nationalist government, the ban against discussing him was not lifted. Anyone who wanted to discuss him often ended in disgrace. I can still remember a case of literary persecution that occurred in the 1930's, on the eve of the outbreak of the war of resistance against Japan. This case arose from the publication of an article entitled "A Talk About the Emperor" in the XINSHENG weekly whose chief editor was Du Zhongyuan [2629 6850 6678]. After this article was published, Du Zhongyuan was sentenced to prison and his weekly was forced to close down. What was funny was that that article dealt with only foreign instead of domestic emperors. In other words, even a discussion of foreign monarchs was taboo these days. Have the people subjected the emperor to public discussion since nationwide liberation and the completion of the land reform which spells an end to the feudal system?

Since liberation, criticism of emperors seems justified. During the 1950's, this ancient proverb: "He who is not afraid of death by a thousand cuts dares to unhorse the emperor" suddenly became widespread in our country, thus emboldening the people not only to criticize but also to unhorse the emperor. In other words, the ban against discussing the emperor was lifted. But what was the consequence of lifting this ban?

During the 1960's, an article by Comrade Wu Han [0702 2498] entitled "Hai Rui Admonishes the Emperor" cost him not only his job but also his life. This memory remains fresh to us today.

In the 1970's there were also storms caused by the debate over the emperor. During the days of evaluating the Legalists and criticizing Confusius, Qin Shihuang, founding emperor of the Qin Dynasty, who lived only 2,000 years ago, was praised as the "representative of the Legalists." An old historian was severely repudiated for criticizing Qin Shihuang several decades ago. He also received a warning against criticizing that emperor again in the future. In the 1970's, the self-styled "heavenly sacred empress" Wu Zetian, who was the concubine of two successive emperors of the Tang Dynasty before usurping the throne, was venerated as "a great Legalist" in Chinese history. At that time, no one dared to touch her story. If anyone did, he would be condemned.

This fact has led me to conclude that in the past, any debate over the merits of the emperor was a taboo that might cost its participants their lives. Emperors, no matter whether living or dead, ancient or modern, could not be freely discussed. If anyone insisted on doing so, he might risk angering heaven.

Now gone are the days in which the emperor could not be a subject for discussion. Although some time ago there was a polemic caused by an article entitled "'Chant the Virtue' and 'Lack the Virtue,'" that was only "a wave in a small lake" (from Lu Xun's poem). Gone forever is the emperor's original awesome prestige in the people's minds.

Now the following two remaining questions should be answered: How should we evaluate the emperor? Can we subject emperors to discussion, no matter whether they are living or dead, good or bad, ancient or modern, and domestic or foreign? In my opinion, everyone should feel free to discuss them, no matter whether they are living or dead, good or bad, ancient or modern, domestic or foreign, and great or small. No restrictions are necessary in this field. Those who participate in such discussions are urged not to act like emperors and not to prevent others from discussing their merits and demerits. Everyone should have the right to freedom of speech in this field. Democracy should be regarded as a free-for-all practice.

OFFICIALS CAUTIONED NOT TO OPPOSE CRITICISM

Beijing RENMIN RIBAO in Chinese 22 Sep 80 p 8

[Article by Jie Si [6043 1835]: "Do Not Use Only One of Your Two Ears"]

[Text] There were such incidents: In any office, if somebody made complaints or suggestions to the leadership by pointing out the shortcomings of the leadership, it would be taken as a serious case of disrepsect, bringing shame on the leadership. Then some people would become indignant on behalf of the leadership and would ask the leadership "to teach him a lesson."

However, there was another regular pattern of events: When the staff members of an office had the courage to make suggestions and complaints, and the leadership accepted them and paid serious attention to them, unquestionably all the comrades of this office were easy in their minds and full of vitality, worked with one heart, and achieved outstanding results.

Fundamentally this is elementary commonsense; however, after the 10 years of turmoil, it becomes vague and confused. It goes without saying that when somebody in an office makes complaints and suggestions, it should be an honor for the leadership of this office, and a very good thing which the leadership could wish for. There is no need "to teach him a lesson." On the contrary, such a thing should be encouraged.

In history, all capable statemen understood the importance of "pooling the wisdom of the masses" and collecting a "brain trust," and they understood the truth that "it is more difficult to silence people's voices than to dam a river." In the past, those feudal emperors and kings who tried to make some achievements for their cause and consolidate their rule, and who also actually played a progressive role, always received outspoken persons as the honorable guests. They not only never taught these persons "a lesson," but instead gave them due respect and favors. For instance, the founder and first Emperor Gao Zu and emperors Wen and Guangwu of the Han Dynasty and Emperor Tai Zong of the Tang Dynasty all knew very well the truth that "when the monarch is just and virtuous, his ministers will be honest." They truly listened to others' opinions, adapted themselves to historical trends, and achieved "peace and order over long periods."

Of course, a simple analogy will always unavoidably have its shortcomings. However, whatever one may say, some of our comrades who hold leading posts are members of the Communist Party and cannot be compared with the feudal emperors and kings. Nevertheless, some of them will imediately knit their brows on hearing complaints and will immediately flare up when people lodge complaints against them with their superiors. True, it is more than "bringing shame" on themselves. The emperors and kings stood for the landlords, naturally sucked the blood of the peasants, and held the people completely in their power. It was of no concern to them whether or not they would like to be "virtuous monarchs." We are the public servants of the working people. Is there anything more normal than listening to the voices of the masters? It is said repeatedly that the people are the masters of the nation; however, when the masters have made some comments and complaints, the public servants have tried to teach them a lesson. I am afraid that people cannot help but think that these public servants have the old ideas of feudal officials and try to make themselves the "parents of the people."

While writing my article, I recalled a story in this connection: In 1942, when a rectificcation campaign was launched in Yan'an, the so-called "theorist" Kang Sheng, a member of the Central Study Committee, ran counter to the spirit of rectification launched by the central authorities, carried out a "rescue movement," labeled young people who came to Yan'an from areas under the control of the Nationalists and areas occupied by the Japanese as "spies" and "members of the Red Flag Party" and attacked them and put them in prison. In spite of the fact that the Party Central Committee and Chairman Mao very quickly found out and corrected this mistake, many comrades still suffered mentally. During the Spring Festival in 1945, comrades of the Third Bureau of the Central Military Commission came to Zaoyuan to wish Chairman Mao a Happy New Year. Chairman Mao told them: "Comrades, we are here to greet those comrades who have been wronged and to offer them our apoligies." This incident touched all of them deeply. However, our comrades in some officies have always considered themselves the "head" of their office, anyhow. When somebody would point out their mistakes, which might be of little significance, they were very pleased with the suggestion "to teach him a lesson," and intended to take some action. By doing this, they have truly brought shame on themselves and have done harm to our cause. Some people criticized those comrades who could not accept criticism and had no courage to admit their mistakes, saying they were using "only one of their two ears." In my opinion, it is better to use "both of one's ears."

JEALOUSY AMONG CADRES CALLED DESPICABLE TRAIT

Beijing RENMIN RIBAO in Chinese 19 Sep 80 p 8

[Article by Mi Bohua [4717 0590 5478]: "A Word of Advice to the 'Hatchetmen'"]

[Text] Recently, Hua Junwu [5478 0689 2976] drew a cartoon, "Cut Down the Pick of the Bunch," which was pregnant with meaning. You can see how detestable is the image of that guy holding a sharp sword in his hand in search of victims, and how many new sprouts just emerging out of the ground have been cut down by such hatchetmen. In ZHONGGUO QINGNIAN BAO [CHINA YOUTH NEWS], a report "Why the Two Nice Girls Took the Road to Ruin" probably also deals with such a case. There might be many reasons for the two girls to have committed suicide; however, in the final analysis, the most important reason was that they were chosen as exemplary persons, rising head and shoulders above others, and standing out among their fellows. Therefore, they became victims of nitpicks and pressure from those surrounding them.

In our country, it has been always the habit to worship the "golden mean" and to hope to find the "state of no difference." Causing no offense to anybody is, of course, not entirely a bad thing. Unfortunately, it is exceedingly sad that this kind of mentality has become a rigid way of thinking. If somebody is keen in innovation and begins to show ability or talent, immediately he will incur the meticulous scrutiny of acrimonious critics. One question after another, countless nitpicks, and more countless accusations will force you to willingly withdraw and live in seclusion, feeling crestfallen, before they finally give up. Picking holes in one's pocket may be a very satisfying and relaxing job. Without mentioning the common people, even for such a "sage" as Confucius, his pupil Yan Hui could still find a few faults with him! Let alone the "small persons," indeed it is difficult for them to survive this "operation." I think that in the present world, the fewer critics to cut down sprouts the better. What worries me is that there can't be thousands of top talents like sprouts breaking through the soil.

In all fairness, though these superficial critics are lamentable, they still do not belong to the vicious kind. The vicious ones are those hatchetmen who are addicted to cutting down the pick of the bunch. By "being addicted" I mean a kind of low and mean feeling--jealousy. One shows a kind and pleasant countenance toward people below but cannot help feeling aching in the head and knitting one's brows toward people above. There is nothing for it but to brandish and axe and chop right and left. In Tianjin, a worker who is a sparetime writer wrote a few stories and won praise from his readers. Then, some people began to raise objections. They tried to trace the background of his stories and made unwarranted accusations, as if they could not wait to vent their hatred until this new talent was destroyed. As regards qualifications, these sprout-killers truly have no talent nor any ability. Because they have no ability and watch others frequently achieve success, they somehow are enraged. At this point of my explanation, I must call to mind the historical figure Cao Mengde. According to history, he cherished talent and yearned for able and virtuous persons. However, when he found that Yang Xiu was more talented than he was, he could not help thinking about killing this man. In this respect, Kong Ming was of a higher caliber. Together with Pang Tong, they were like "a sleeping dragon and a young phoenix" with equal virtues. Kong Ming received Pang Tong with great respect and worked together for the same cuase. Such magnanimity was truly rare and precious. Therefore, I truly wish to give a word of advice to the hatchetmen who, out of their jealous nature, are addicted to cutting down sprouts: it is better to widen your field of vision and, for the sake of the four modernizations, do as much good work as possible; otherwise: "When you have frequently done injustice to others, you'll end up killing yourself!" If you don't believe me, you just try it and see!

At present, the work of the four modernizations has just begun. How eagerly the fronts of culture, education, and science need a large number of top talents! "It takes 10 years to grow trees, but 100 years to train people." It's easy to destroy the forests, but difficult to build them! For the same reason, top talented persons are all the more precious, and hatchetmen are all the more despicable.

NPC'S CALL FOR REFORMS ENTHUSIASTICALLY RECEIVED

Jinan DAZHONG RIBAO in Chinese 25 Sep 80 p 1

[Article by Commentator: "Implemert the Guidelines of the NPC and Be Promoters of Reform"]

[Text] The Third Session of the Fifth National People's Congress, victoriously closed recently, was an important meeting of decisive nature in our history. At the meeting, some reforms were carried out, some major decisions were made, several important laws were promulgated, and major tasks were proposed to governments at all levels and to the people of the whole nation. The guidelines of this meeting will have a tremendous impact on political and economic life in our nation for quite a while.

Reviewed and approved by the meeting, Comrade Hua Kuofeng's important speech proposed a series of tasks and requirements for reform of national systems and economic management organizations, in which, he profoundly pointed out, there are serious shortcomings and irregularities. These include rigidly controlling the workers' enthusiasm, initiative, and creativity, affecting the development of the superiority of the socialist system, accelerating the growth of bureaucratism, and obstructing the progress of construction of the four modernizations. This reminds us that for a certain period of time, the reform tasks we are confronted with are relatively heavy and very urgent. In order to implement the guidelines of the National People's Congress, it is necessary to carry out thoroughly the party's political line and to execute smoothly the construction of the four modernizations, so as to recognize the necessity for reform, to establish a sense of urgency about reform, and to act self-consciously as promoters of reform.

In discussing cultural reform, [the famous writer] Lu Xun said: It "is the same as the flow of the Changjiang and other big rivers that cannot be stopped. If it is stopped, it will become dead water. It will deteriorate and may even dry up." The reform of our nation's management systems and economic management organizations is also a matter of general trends and of public attitude. In going with the trends, this National People's Congress has moved a joyful step forward in reform. The leading members of the Standing Committee of the National People's Congress and of the State Council have made some readjustments, thus taking the lead and setting personal examples in washing away the cadres' life [service] system, which has the quality of feudalism. Also, there were a series of reforms in the style of the congress. This showed that the nation's leading institutions are determined to stand on solid ground to make reforms so as to lead the people of the whole nation to attain a new situation in which there is a booming growth in socialist modernization construction. The people of our province [Shandong] enthusiastically support this strategic decision.

At previous times, reforms in our province's economic management organizations made progress at first, and the work of various levels of government also was improved and strengthened. As seen from the actual conditions at various levels and various fronts in our province, however, it has to be pointed out that the shortcomings and irregularities in our economic management organizations and national management system and the necessity for reform are not recognized by all cadres. We should say that there are many comrades who are accustomed to certain shortcomings and irregularities in the economic and political sectors, and that many of those are still sticklers for ancient ways and things and are not interested in reform. For instance, some bureaucratic phenomena still seriously exist among leading personnel at all levels. Some people still consider themselves to be higher-ups, abuse their authority, are divorced from reality, are separated from the masses, are rigid in their thinking, and follow stereotyped routines. In many institutions, it is readily found that the organizations are swollen, that there are too many people with little to do, that people pull and drag in doing their work, and that there is no efficiency at all. In our economic sector, it is more readily found that there is too much command or too rigid command, there is exclusive dealership, people draw boundaries to separate themselves from others, people undertake to boycott one another, etc. Certainly, the formation of these troubles is mainly because of the system, but there are also complicated historical and social causes. There is no covering up the fact that either in the nation's leading system or in economic management organizations, there still exist to varying degrees the residual effects of Lin Biao, the "gang of four," and the feudalism of the past several thousand years. In our economic management, for instance, we have the problems of self-sufficiency, self-made organizations, large and complete and small and complete, and also the remnants of the Soviet economic model of the 1950's. We have both the evil effects of Lin Biao and the "gang of four," who pushed to the extreme left, and the influence of such distribution relationships as the "ration system," "eating out of the big common pot," etc., of the military communism during the war years. No correct reform suitable to actual needs has been made in certain systems and measures formed from these two aspects, with the result that many systems and measures with obvious shortcomings and irregularities are considered by some comrades to be legal or even to be maxims that cannot be touched. Therefore, whenever reform is suggested, these comrades will try to hamper things by trotting out old traditions and rules. Even certain reforms which are permitted by the guiding principles and policies of the central government and are within their own authority have not been carried out enthusiastically. Certain policies and stipulations which might be modified have also been kept within the utmost limit one can go according to the old traditions. In case something happens whenever a reform is made, they will be readily astonished and apply the brakes quickly. Just as Lu Xian pointed out: "They will have nothing to do with what has already been proven a mistake; they have no intention of reforming, but take steps only to prevent trouble from happening. 'New mistakes' are not allowed, but 'old mistakes' are protected. How ridiculous it is!" Such comrades might go along with this type of rigid thinking, but we hope that they will readily understand dialectical materialism. All things in the world are growing and changing, and there is nothing at all that does not change a bit. In order that our recognition can correctly reflect objective matters, it is necessary to change with changing conditions. Now that history has developed, now that objective things have been improving, and now that we are going in for the four modernizations, how could the old organizations, systems, and measures inherited from the 1950's not be reformed?

In his speech at the Third Session of the National People's Congress, Comrade Hua Kuofeng requested: "Working personnel of governments at all levels, and especially leadership personnel, must further liberate their thinking, earnestly work together with the majority of the masses of people, and both be ever ready for innovation and be discreet in doing things on the basis of investigation and study and of mutual fruitful discussion, thus continuing to advance the reform of economic organizations and attaining a new situation in which there is a booming growth in socialist modernization construction." He also pointed out that the shortcoming of bureaucratism is not an incurable sickness. Only if we uphold the basic theory of Marxism and rely on the vast majority of the masses will it be possible for us to overcome bureaucratic shortcomings and make socialism really a system full of vitality. Our immediate concern at present is to study the documents of the National People's Congress in earnest and not in form, to understand intensively the spirit of reform realized by the documents and by the congress itself, not to be afraid of difficulties, to be ever ready for innovations, to stand on solid ground, and to be discreet in doing things, thereby striving for the new victory of readjustment, restructuring, consolidation, and improvement.

SHEYANG COMMUNE MAKES PROPER ARRANGEMENTS FOR LIVELIHOOD OF VETERAN CADRES

Hangzhou ZHEJIANG RIBAO in Chinese 11 Sep 80 p 4

["Party Life" page article by Jin Xikui [6855 1585 1145]: "Sheyang Commune Makes Proper Arrangements for Livelihood of Basic Level Veteran Cadres"]

[Text] The Sheyang Commune in Jinhua County has taken some weak and elderly veteran cadres who are still fit for leadership work and arranged for them either to work in different commune-run enterprises or to be paid supplemental living expenses. This has brought about a guaranteed basic livelihood for these basic level veteran cadres, and created conditions for realization of a younger age group among basic level leadership teams.

Sheyang Commune, located in the mountainous region, originally had production brigade first-class leading backbone cadres whose ages were fairly advanced. Some were weak and elderly and were no longer up to doing construction work in the mountains. But if these veteran backbone cadres were allowed to step down from their leadership posts, they would lose the subsidiary work points that they once had, and would have trouble at home with regard to their livelihood. The commune party committee found that when four basic level veteran cadres were assigned to commune-run enterprises, they gave their all in their labors. Another three who were over age 60 were given 10 yuan in living allowance each month by the production brigade commander; these expenses were paid from welfare funds extracted from profits made by commune-run enterprises for handing over to higher authorities. After these measures were put into effect, the veteran cadres willingly "gave up their posts," thus creating a condition for young and middle-aged cadres to give full play to their talents.

THOUGHTS EXPRESSED ON 'CLEAN-WATER RULING OFFICE'

Hangzhou ZHEJIANG RIBAO in Chinese 11 Sep 80 p 4

["Party Life" page article by Zhi Fang [1807 5364]: "Thoughts on a Clean-water Executive Office"]

[Text] Recently, a friend brought up this matter: not long ago, he was transferred to work at the party's discipline inspection department. This subsequently elicited comments from several comrades who said that that (department)'s just a "clean-water executive office"--there are no "profits" there. They only grow "thorns" and don't cultivate any "flowers." Furthermore, even his wife said that this is singing the role of "redface," and people will be easily offended [in Beijing opera, redface denotes heroism and honesty; here it is extended to mean "holier-than-thou" or "goody-goody"]. Hearing this, I became quite uneasy and decided that there was a necessity for me to join in this ongoing discussion.

The party's discipline inspection committees at all levels were re-formed as a result of a decision made by the party's Third Plenary Session subsequent to the smashing of the "gang of four." It is a major department in the building of the party; it will rectify the party style, and was eagerly awaited by everyone. Obviously, to work in this type of department one has to keep oneself upright within the law, be strictly disciplined, not be in pursuit of any personal gain whatever, and there are no "profits" to be had. If the comrades who take care of discipline inspection affairs are not personally honest and law-abiding, how can they go educate other party members and cadres in improving the party style? If discipline committees at all levels rectify their own style of work and furthermore actively help the party committees in rectifying the party style, I ask you: what harm can there be in such a "clean-water executive office"? Isn't this precisely what the party and the people ardently desired? If our party and government organs at all levels would be turned into "clean-water executive offices" which are honest in performance of official duties, then the prestige of our party would without a doubt be heightened, and there would be great hope for the four modernizations.

Do the discipline inspection departments "only grow thorns and not cultivate flowers"? Not necessarily. The party's Central Committee ruled that the mission of the discipline committees at all levels is: to protect party regulations and laws, to protect the rights of party members, to bring into play the revolutionary enthusiasm and work initiative of the party membership, to struggle against all adverse tendencies which violate party discipline or damage the fine traditions of the party, to help party committees at all levels to improve the party style in earnest, and to guarantee the implementation and carrying out of the party's political and ideological lines. How can protecting the rights of the party membership and bringing into play the zeal of the party membership be "growing thorns"? How can improving the party style, and curing the wounds inflicted by Lin Biao and the "gang of four" on the body of the party be "growing thorns"? To be sure, the discipline inspection departments wish to investigate and make disposition of violations of party rules and laws and a small number of party members and cadres who damage the interests of the people, however, to make disposition is to be exact, to educate and to save those comrades who make mistakes. It is just like doctors and nurses treating their patients. Who could say that the work of a doctor or nurse was "growing thorns"? Isn't it "cultivating flowers"? If discipline committees at all levels didn't intervene in the case of violations of laws and discipline and unhealthy tendencies, and didn't straighten up and "exorcise the demons," but adopt an excessively lenient attitude, then inevitably many who commit offenses against law and discipline would be indulged, evil winds and noxious influences would be encouraged, and the building of the party and projects for the four modernizations would be damaged. If the phrase "growing thorns" is to be uttered, then, as they pertain to the cause of socialism, these are truly cases of "growing thorns."

As for "singing the redface role, it is easy to offend people": this depends on your particular understanding. The discipline inspection program defined by the central discipline committee puts prevention first, with emphasis on education. Only if a party member or cadre violates party rules or laws, fails to reform after education, and conceals his faults for fear of criticism, is party discipline enforced. However, discipline inspection work is that which persuades people to be better and teaches people to observe discipline and abide by the law. At the same time, specific analysis should be made of "singing the redface role." With regard to behavior which violates law and discipline and harms the interests of the party and the people, we must not practice favoritism, must be upright and never stoop to flattery, and must dare to "unmask their faces" and energetically launch the struggle. If because of fear of offending people one doesn't "sing the redface role," even if the "faces" of a small number of people are temporarily saved, the interests of the great majority of the people could nevertheless be harmed; moreover, as a result of this, evil winds and noxious influences could prevail unhampered, become widespread and adversely affect the cause of our party. As regards the discipline inspection departments, this without a doubt would be dereliction of duty, and would be a crime against the party and the people.

YOUNG PEOPLE NEED UNDERSTANDING, GUIDANCE

Beijing GUANGMING RIBAO in Chinese 28 Aug 80 p 2

[Article by Tan Taotao [6223 3325 3325]: "Let's Take the Survey of the Thinking of Young Workers in a Factory as a Talking Point"]

[Text] How should we treat and evaluate the younger generation of today? How should we go about educating them? These are pressing and acute problems with which we have to deal in a scientific manner in our work of shaping their political thought. A report carried today by GUANGMING RIBAO about a survey on the thinking of the young workers in a factory in Beijing furnishes a valuable reference point. It is most enlightening, insofar as our work in shaping the political thought of the young in the present-day situation is concerned.

At the mention of young people, some comrades tend to develop a headache and to throw up their hands in despair. Although some comrades pay lipservice to the mainstream of members of the younger generation, the subject conjures up in their minds pictures of unruliness, grotesquerie, bravado, and rowdyism. Others come right out and equate the younger generation with "the lost generation" or "the disappointing generation." In our opinion, that point of view is a gross distortion of the true picture of the younger generation of today. The survey conducted in a factory in Beijing offers irrefutable proof that the majority of young people are deeply concerned about the future of the nation. They are impatient for progress, dedicated to the study of science and culture, and filled with confidence in and hope for the implementation of the four modernizations. In the yearend competitive evaluation of workers last year, young progressive workers constituted almost half of the entire number of progressive workers in the factory! It is safe to assume that this also holds true for the entire nation. In the past few years, the majority of young people throughout the nation took an active role in the rectification campaign against Lin Biao and "the gang of four" and enlisted in the construction projects of the four modernizations. More and more young people have been named progressive workers, commandos in the new long march, and "8 March" Red Flag carriers. They have exerted an increasing influence in the various campaigns. If, instead of closing our eyes and indulging in generalizations, we would only make a serious study of the overall situation, we could not help coming to the conclusion that the mainstream of the young is headed in the right direction, that it is positive and progressive, and that instead of being a "lost generation" or a "disappointing generation," it is a thinking generation and a most promising generation!

It cannot be denied that there are those among the young who are dispirited and whose behavior leaves a lot to be desired. Their crime rate is a cause for alarm. However, we should ask what makes these young people take the wrong turn. Our opinion is that, aside from their own immaturity and the effects of the class struggle that still continues in society, the 10-year period of unrest caused them to take the wrong turn by pointing the wrong way and destroyed the beautiful vision in their minds. It would help us to better understand this younger generation if we would look back on what they went through physically and emotionally. Without giving the matter much thought, they answered the call from above to participate in the "Great Cultural Revolution," in the mistaken belief that they could create a brave new world colored in red with one stroke. What resulted, instead, was one havoc after another. The national economy was pushed to the brink of disaster, and spiritual life was left in a state of acute starvation! Harking to orders from the authorities, they put on their backpacks and marched forward at full speed to take on "the whole wide world," fully determined to bring about a miracle here on Earth. What they learned instead was the harsh fact that, in order to survive, they had to ask their parents in the city to send them money to buy food and clothes! It had originally been their belief that whatever the designated heir-apparent had put into the Party Constitution would be a foolproof guarantee that it would assuredly usher in a new era of happiness. How were they to know that, with the outbreak of the "13 September" incident, the "ever-hale deputy commander in chief" would expose himself as a traitor for whom death was too good a retribution? It had been their hope that with the heralded passage of the "jurisdiction limiting the privileges of the bourgeoisie," there would be unprecedented equality and harmony among the people. The stark reality was that, in order to get anything done, one had to latch onto a sponsor and pull strings. During the 10-year period, when the air was filled with "big talk" never previously heard, one would see, whichever direction one turned, intrigue, chiseling, degradation, affliction, and indiscriminate slaughter. Because of that, many innocent young people, who had so little knowledge of the ways of the world, were so shaken by the assault on their ideals, and the future looked so grim, that, spiritually depleted, they became cynical and took the wrong path. Except for the incorrigible habitual criminal elements (adults not excepted), young people who lost their footing were all victims of that historical period, and we would be wrong to judge them too harshly. If even veteran cadres are permitted to make amends for their errors, how can we withhold pardon from those young people who have inadvertently taken the wrong turn? They knew they had gone wrong before they had gone very far, and they know now what they had not known before. There is ample evidence that they are ready to atone for their wrongdoings, that they are full of promise, and that they are members of an endearing generation.

Needless to say, the mental attitude of the present-day younger generation is, generally speaking, very much different from that of the young people in the early period of the establishment of the republic. That is because of the great differences in their environment, in their upbringing, and in the problems with which they have to deal. For example, unlike the younger generation today, the young people at the time of the establishment of the republic were keenly aware of the contrast between the new and the old social order. What the young people at the time of the establishment of the republic saw was unprecedented social stability and prosperity, whereas all that members of the present-day younger generation have seen since their early years were unrest and devastation. Members of the younger generation at the time of the establishment of the republic had an easier adulthood. They derived greater satisfaction from their jobs and their lives, whereas most members of the younger generation today have been through one ordeal after another. Even today, they are faced with many problems in getting into a school, finding a job, starting a family, and making ends meet. At the same time, with the development of science and technology and an end to the period of isolation, their eyes are open wide and their spiritual and material needs have escalated. That being the case, members of the younger generation today have to occupy their minds with problems that did not enter into the minds of young people in the 1950's. Unless we bear in mind the actual existing circumstances in analyzing the thinking process of young people today, and desist from telling them "that's the way we went about doing things in the good old days," we cannot hope to become their mentors and friends.

The discussion on "What is the meaning of life?" sponsored by ZHONGGUO QINGNIEN created a big stir because, from a certain standpoint, it was able to touch upon a number of common searching problems in the minds of the young and because it dealt with facts and straight talk. What best characterizes the younger generation today is their continual mulling over of problems and ceaseless searching for answers with an admixture of agony and elation and composure and heatedness. That, in short, is their fortune and misfortune, their trial and their special glory, the result of the wounds they sustained and the prelude to their emergence in a new era. If we cannot understand this, then we cannot understand the younger generation of today and their way of thinking, and there can be no common language between us.

On the basis of the above analysis, it is not difficult to see that, to greatly heighten the will of the young people to engage in the struggle for the socialist cause of the nation, it is no longer sufficient to resort to leftist methods in shaping their political thought (that would only have the opposite effect). It is, likewise, inadvisable to revert to practices that prevailed in the initial period following the establishment of the republic. The new situation calls for new measures and creative efforts. Otherwise, we will be out of tune with the objective circumstances and we will have no claim to being scientific.

First of all, in shaping the political thought of the young, we should no longer resort to the method of launching campaigns and "philosophical struggles." Rather, we should correctly grasp the main trend of young people and use every means to inspire in them a sense of self-respect and a desire for self-betterment so as to boost their capacity for positive action and to release their latent potential. We must put ourselves in their place and show concern over their personal interests and ideals. We should act as one in helping to solve their problems in production, in their work, in their education, and in their personal lives. We should, with patience and with an eye to the smallest details, offer them inspiration and guidance, widen their outlook in the area of thought, and heighten their confidence in the future.

We should offer young people today education in the history of social development, the inevitable global victory of socialism and communism, the basic theories of Marxism, and the line, principles, and policies of the party. We would be remiss in our duties if we failed to take on this task in a courageous manner. However, the temper of the present-day younger generation is such that, in shaping their political thought, we cannot simply foist upon them abstract, readymade, cut-and-dried dictums. On certain major issues, including that involving the four basic principles, it does not serve any useful purpose to cite what has been written in books or to quote from lecture notes. Rather, we must keep close touch with reality and offer new proofs and explanations on the basis of new practices. For example, in making young people understand the basic nature of capitalism and socialism, it carries little conviction if we merely cite materials produced in the 19th century and the early part of the 20th century without analyzing the present state of the capitalist world. In extolling the virtues of socialism, if we confine ourselves to mouthing the words "socialism is good, socialism is good" instead of analyzing correctly and in depth the many new problems that have arisen, we are not likely to be listened to with interest. We should encourage the young people to show initiative in posing questions and in studying new problems. We should help them to arrive at the truth through their own thinking and personal experience. We must not panic and try to head them off the moment they raise a new problem. (Reison), the well-known German drama critic of the 19th century, said it well when he said that if God presented him truth as a gift, he would not accept it, as he would rather rely on his own efforts to find it. It is only when we arrive at the truth through our own efforts that we can stand firm in our conviction and summon forth the desire and determination to struggle for the truth.

In view of the kind of adulthood that members of the younger generation passed through, and the afflictions visited upon them during the 10-year period of unrest, we must temper our instructions with a degree of tolerance when we go about shaping their political thought, especially when we are dealing with young people who have gone astray or who have made a slip. It makes a great deal of difference in our efforts to shape their political thought whether we show them love or repugnance and whether we think of them as a heartache or a headache. Our efforts will come to nought if we discriminate against them and take on the role of a schoolmaster in censuring them. That will only serve to deprive them of their self-respect and to goad them to further wrongdoing. It is only when we emulate Wang Shengchuan [3769 0524 1557], principal of the school for worker-students in the western district of Beijing, who tried to make the younger generation see the light and to motivate them with understanding by showering upon them profound love and affection, that we can help them summon up the courage to make a fresh start, shore up their confidence in the future, and turn their melancholy into hopeful expectancy and their negative attitude into a feeling of pride.

How one copes in society depends on the way one looks at society. That is especially true insofar as the younger generation is concerned. There is a close interrelationship between pattern of thought and realities of life in society. A mental edifice must be shored up by something tangible. In other words, in order to remove their doubts completely and to set their minds at ease, and thus to greatly bolster their determination to engage in the struggle for the socialist cause of the nation, we must hunker down and proceed with the actual work that needs to be done on the various battlefronts and achieve better and better results in the many socialist projects. For this reason, it is not sufficient that we seek to eradicate speedily the poisonous vestiges left behind by Lin Biao and "the gang of four" and to correct the ills of the aftermath of the rampage by the ultraleftists. We must also eradicate all feudalistic ways of thinking and their lingering effects, continue to rectify all capitalistic thought, upgrade the party style and social practices, and make a quantum jump in the rate of efficiency in whatever we do, so as to provide an impetus to the younger generation in all their everyday endeavors and make them aware of the powerful life force of the socialist system and its immense superiority. We must not issue rubber checks or make blanket promises. Rather, we must honor our words and put our plans into action in order to shore up the confidence of the young in the advent of a bright tomorrow. From this standpoint, the best we can do in shaping the political thought of the young is to do a good job of the four modernizations.

If we firmly adhere to the ideological, political, and organizational lines set by the party, dispense rewards and punishments impartially, pursue the task of the nation with determination and dedication, fearlessly remove all impediments and obstacles just the way the State Council sternly dealt with the "Bohai 2" incident, and lend impetus to the progress of the four modernizations, there is not the slightest doubt that we can effectively motivate the younger generation to forge ahead and raise their positive attitude to unprecedented heights in the struggle for the future of socialism in China.

SOFTNESS TOWARD VIOLATORS OF LAW, DISCIPLINE DEPLORED

Hangzhou ZHEJIANG RIBAO in Chinese 11 Sep 80 p 4

["Party Life" page article by Mao Bangzi [3029 6721 2737], Mao Shaoqin [3029 4801 2953] and Chai Changcang [2693 2490 0221]: "Elements Violating Law and Discipline Cannot Be Shown Softheartedness"]

[Text] With regard to us comrades who carry out discipline inspection work, if the "norms" are to be implemented and carried through successfully, a very important item is the adherence to the principles of party spirit while enforcing party discipline and handling cases impartially. When a person or act in violation of the "norms" is encountered, we definitely must "dare to struggle" and absolutely must not dodge conflict or be ambiguous. Otherwise, if their is ambiguity above, there will be carelessness below, and not only will a person who violates party discipline not receive timely education and disposition, but a case of "rotten sweet potatoes stinking up the kiln" could occur and foul the whole general mood. We have profound knowledge of this point. It is remembered that in July of last year, when our committee had not been established very long, a letter was received from the masses which exposed a commune party committee member who had infringed on human rights, violated law and discipline, wantonly conducted searches of commune members' residences, and through abominable means had injured a female commune member of the village. At that time, our committee paid utmost attention to this case, immediately dispatching a person to investigate and verify the facts and to convene a succession of various kinds of meetings on the spot to acquire conclusive proof pertinent to any errors committed by this party committee member. However, just as we were about to deliberate disposition of the case, we received in succession several so-called "letters from the people" speaking in defense of this party committee member. Several people also came forth from among the cadres to speak in his behalf, and this all caused us some difficulty.

The barriers against adhering to principle in meting out disposition were fairly great, and several people would be offended; if disposition was not made, party discipline would not allow it and the masses would not stand for it.

We deliberated it from every angle, and withheld a decision over a period of time which stretched out to a year. When this party committee member noted that people were speaking on his behalf, and that the attitude up above was ambiguous, his nerve grew stronger and stronger, and not only did he fail to perform a serious investigation into all of the mistakes he had committed, but he also threatened those who knew the facts of the case, and prevented them from reporting on the situation, to the extent that he incited the masses, who were ignorant of the facts, to besiege the investigative personnel. The masses had many opinions regarding this matter, and said that we were "hard in our talk and soft in the heart."

Along with our going deep into the study of the "norms" movement, we seriously reviewed our previous work and summarized experiences and lessons learned, and became aware of the fact that our discipline inspection departments perform health care work for the body of the party, and speak out in support of party members and the masses. Our responsibility is to protect the interests of the party and the masses from incurring any damage and protect the body of the party from erosion. If we are softhearted in the face of behavior which violates discipline, and ambiguous about right and wrong, how can we enforce party discipline and assist the party committees in correcting the party style? Once we came to a unified understanding within the discipline committee, our work also grew greatly in boldness and decisiveness.

In July of this year, solemn disposition of this case was made as follows: this commune party committee member was dismissed from all posts held both in and out of the party and was retained in the party under close observation for 2 years. At the same time, we undertook strict inspection of all individuals and acts which constituted violations of various types against party regulations or party discipline, while seeking approval from the committee and making disposition of cases in a timely manner.

For example, not long ago we received a letter from the masses bringing a matter to light; it reported that a cadre in the county public security bureau had constructed a house for himself and, using the powers of his office, had affixed the official seal of the public security bureau's advance inspection section. He went into the hills to purchase more than 5 cubic meters of lumber and moreover used improper methods, occupying a good deal of collective property, infringing on the rights of the masses and arousing public indignation at that location. Based on this report made by the masses, we immediately handled the affair jointly with the public security bureau, visiting their office to conduct an investigation to confirm that facts of the problem as reported by the masses were completely accurate. During the course of the investigation, even though we encountered censure and resistance, we nevertheless avoided using the method of merely smoothing things out and casually letting the affair melt away. A timely report was made to the county committee leaders, whereupon, together with the public security bureau we quickly prepared an appropriate disposition based on the errors committed by this good comrade. Because we acted in this way, the masses were pleased, the leaders satisfied, and this became an instance of very beneficial education for the good cadre himself.

We have not been carrying out discipline inspection work for very long, and our experience is lacking, but we are resolved to conscientiously discharge our responsibilities in doing our work as discipline inspection cadres, so as to improve and strengthen the leadership of the party, and strive to guarantee that the building of the four modernizations will go forward smoothly.

WORKERS' CONGRESS HAILED AS KEY INSTITUTION IN ECONOMIC REFORM

Beijing RENMIN RIBAO in Chinese 14 Oct 80 p 1

[Report: "To Whom Should the Increased Power of Autonomy for Enterprises Be Entrusted? The Answer Given by Xinhua Paper Mill in Hangzhou Is: Power Should Be Held by Workers' 'Congresses' So That Workers Will Exercise Control as Masters of Their Enterprises."]

[Text] According to a report in ZHEJIANG RIBAO with the reform of economic management, the autonomy of enterprises will be increasing. To whom should this power be entrusted? The practice at the Xinhua Paper Mill in Hangzhou gives a very good answer: Only when the power is given to workers' congresses can the increased autonomy for enterprises be used to promote economic reform, to strengthen democratic managment, and to improve socialist enterprises.

Worker's congresses must be held. The worker's congress for this mill was reestablished in July 1978 and has been held on 10 occasions up to now. In the past 2 years, the workers' congress did a number of important things. It passed a resolution to elect supervisors for the machine shop; thus, to the satisfaction of leaders, masses, and candidates themselves, eight supervisors and deputy supervisors for the machine shop were elected. It conducted a serious review of the production plans for the mill, and thus ensured the fulfillment of the plan for increased production and saving, a well as the profit goal. It exercised its power in allocating part of the enterprise fund to the construction of housing for staff and workers. The implementation of these important decisions brought new life to the Xinhua Paper Mill, and the function of workers' congress as a powerful organ was brought into full play. Therefore, in the minds of the leading cadres at the mill, the workers; congress is not something optional but something indispensable.

The workers' congress is an organ of authority. There is a clear guiding thought for the workers' congress. Only important problems for the enterprises will be discussed in the congress; especially those [matters] which in the past were rarely put on the "table" must now be presented to, discussed at, and decided upon by the congress. For example, the guidelines for staff replacement used to be "internally controlled" by several leading cadres at the mill. Because some retiring workers had no descendants to replace them, these vacancies were handled by leaders at the mill. Therefore, this practice made some cadres prone to favoritism and created many loopholes in the arrangement. The masses had strong opinions against it. In August of this year, leaders at the mill, following the suggestion of the workers' congress, turned the power to make decisions on replacement guidelines over to the workers' congress. Thereafter, following a resolution of the workers' congress, representatives from various departments held a discussion on the directives of fulfilling the five vacancies resulting from retirement in the first half of this year. Through serious discussion, the representatives decided to take in four indirect descendants of the workers in order to solve their problems. Workers said, "When this kind of power is given to us by leaders of the mill, they indeed are treating us like owners of the enterprise."

Leading cadres at the mill consider that delegating those "real powers" to the workers' congress not only demonstrates full confidence in the workers' congress but also serves as a good way of supervising and caring for leading cadres. Therefore, a brandnew democratic atmosphere prevails in this mill. Last year the allocation of new housing was decided on by the workers' congress. This year a six-story building covering more than 2,000 square meters will be finished and the workers' congress has decided that a committee consisting of delegates elected by the masses is to make a rational allocation.

A decision is made on every motion of the workers' congress. The congress held by this mill has brought forth a number of motions. Handling those motions seriously, leaders of the mill have made decisions on each one of them. In the 10 congresses held since 1978, over 96 percent of the motions, or 434 out of 450, have been decided upon.

Handling those motions, the mill adopts the following method:

1. Whatever can be done is done immediately.

2. For those things that are in need of ratification and are time-consuming, a plan is drafted and a deadline is set. The material-cutting room of this mill was delapidated, with a low ceiling, bad illumination and ventiliation, and a great deal of dust. For years the workers had made a case out of it, but of no avail. The seventh congress decided to rebuild it. A plan was promptly drafted by the departments concerned. The party secretary, mill head, cadres in different departments, and workers, all participated in the rebuilding effort. In only 25 days, a 5-meter-high structure with windows on three sides was erected, and working conditions vastly improved.

3. For problems which cannot be solved immediately, careful ideological work helps to clarify the situation.

4. A meeting of workers and staff representatives is held every month by the union of the mill. It gives them an opportunity to voice their opinions and enables them to supervise and assist the administration in reform and improvement.

Leaders at the mill handle seriously the motions made by the representatives of workers and staff, and make the broad staff and workers feel that they indeed exercise control as masters of their enterprises.

BRIEFS

LETTER TO THE EDITOR--Comrade Editor: On 1 July, the Wuxing County Committee Standing Committee's Comrade Zhao Wanqing used a public vehicle to go to Shanghai and take care of private business. On his return, he didn't even pay for the gasoline he had used. After the county committee's leading comrades learned of this matter, they failed to deal with it strictly in accordance with concerned regulations. The masses have many opinions about this affair. To see this type of activity when people are being mobilized to study the "norms," to have someone say one thing but do another is truly unbelievable. So that the solemnity of party regulations and laws might be protected, we believe that Zhao Wanqing should make a self-criticism and provide reimbursement for mileage expense. FIRE HITS COMMUNICATIONS STATION OF 7TH MINISTRY OF MACHINE BUILDING

Beijing BEIJING RIBAO in Chinese 18 Oct 80 p 1

[Article: "Raging Fire Strikes Communications Station of the 7th Ministry of Machine Building"]

[Text] At approximately 0905 hours on 15 October a raging fire broke out in a communications station's office of the 7th Ministry of Machine Building. Four staff members and workers were killed in the fire and two suffered third degree burns on 95 percent of their bodies. One of them died the following day and the other remains in critical condition. Economic loss as a direct result of the fire has reached over 140,000 yuan.

According to preliminary investigation, 6 comrades of the office arrived at work on the 15th at 0800 hours. To polish the floor, they first placed two cans of approximately 10 kilograms of gasoline in the room and then used it as cleaning agent to scrub the floor. Having spread the gasoline on the floorboards, they proceeded to do the cleaning with a polisher. At that time, the room became filled with combustible fumes. Moreover, there had been no precautionary measures taken to seal the four newly installed sockets on a wiring panel used for the office machinery and equipment to prevent them from exploding. Preliminary findings show that sparks from a broken circuit caused the fire. At present, the 7th Ministry of Machine Building and the Municipal Public Security Department have formed a joint investigation team to investigate and examine the fire accident.

SOCIOLOGICAL, EDUCATION AND CULTURE

VARIOUS ASPECTS OF NATIONALITY QUESTION, SITUATION DISCUSSED

Beijing MINZU YANJIU [NATIONALITY RESEARCH] in Chinese No 3, 20 May 80
pp 1-6, 11

[Article by Ma Weiliang [7456 4850 5328]: "The Relationship Between the Nationality Problem and Class Struggle"]

[Text] The nationality problem is a part of the whole problem of revolution. In different stages of the development of revolution, the nationality problem also has different content. During the new period of socialist construction, the task of national work is, in the course of building our country into a modern socialist power, to vigorously help the minority nationalities achieve quick advancement in economy and culture, vigorously train cadres and various vocational technical personnel of minority nationalities with communist consciousness, and eliminate gradually actual inequalities left over by history, so that various minority nationalities can catch up with or approach the level of advancement of the Han nationality. To fulfill this honorable and arduous task, our present urgent task in national work is to conduct further education on the policy towards the minority nationalities among all people in the country, and to combine this education with the propagation of the basic theory of Marxism-Leninism-Mao Zedong Thought on the nationality problem. Lin Biao and the "gang of four" deliberately distorted Chairman Mao's related instructions, did their best to exaggerate the aspect of class struggle on the nationality problem, described the nationality problem as a class problem, and substituted national work with "class struggle." We must set to right things which have been thrown into disorder, wipe out their evil influence, understand correctly the relationship between the nationality problem and class struggle [illegible] ndle properly the nationality problem in the period of socialism.

(1) Nationality and Class

Both nationality and class are categories of social history which did not come into being right from the beginning of human society, nor are they the perpetual phenomena of history, but they are subject to the laws of society and go through the course of birth, growth and death. Nationality and class are two different historical categories, and are different in conception and in the form of expression. Nationality has taken shape historically, has its common region, common economic life and common language, and expresses itself in a stable community of people with common psychological diathesis in a common culture. However, the most basic indication of class distinction is the demarcation between the exploiters and the exploited and between the rulers and the ruled according to the ownership of the means of production among various social groups.

In a society within which there is exploitation, the nationality consists of different classes. Just as Chairman Mao said, a nation includes two sectors of people--one is the upper level, the exploiting class and the minority; more than 90 percent of the people are workers, peasants and the petty bourgeoisie, and there will be no nation without these people. Class antagonism and struggle within a nation is the source of national oppression and antagonism between nations. Within each nation, there are also unity and common language and customs and habits of life so that people of different classes and different social groups can also maintain certain common cultural characteristics and common national feelings to a certain extent. When they suffer national oppression and aggression from outside, such national feelings and national consciousness will be manifested all the more strongly. In a society of class antagonism, nationality and class are not only differentiated one from the other, but also linked with each other. The national common traits are expressions distinguishing one nationality from another; class antagonism within a nation is the inherent substance of the nation. A nation takes class as its foundation, classes exist in a nation. Neither are there classes isolated from a nation, nor is there any nation transcending classes. Every person belongs to a certain nationality, and at the same time also belongs to a certain class. When we see a person, we first see that he belongs to a certain nationality of different costume and language; then we go further to find out to which class be belongs. Within a nation, not only is there acute and antagonistic class struggle, but also they maintain common national traits. The common traits of a nationality will not change because of acute class struggles, and class struggles also will not relax because of the common traits of a nationality. Summing up, the militancy and unity between two classes in a nation constitute the distinction and link between the nationality problem and the class problem.

The class antagonism and struggle in a nation constitute the direct motive force which gives impetus to national development. It is the concrete expression of contradictions between production relations and productive forces, and between the superstructure and the economic base, and is also the direct function of the law of development of human society in the society of class antagonism. Therefore, class and class struggle exercise decisive influences on the development of all nationalities. Lenin said: "Class relationship--this is a basic main thing, without which there will be no Marxism." ("Complete Works of Lenin," Vol 32, p 240.) Revolutionary teachers Marx and Engels proceeded from the viewpoint of class and class struggle, anatomized nationality and the nationality problem which are most complex in this world and have been mystified by the bourgeoisie, gave a true scientific explanation to dialectical materialism and historical materialism, and thus founded the Marxist theory of nationality. Authors of classical works of Marxism proceeded from this theory of class and class struggle, and expounded fully on the theme that among various nationalities, due to the difference in class status and the basic antagonism of class interests, there are different national views representing different class interests on the observation and handling of the nationality problem. The national view of all exploiting classes and the bourgeoisie is nationalism, which naturally brings about its reactionary national policy of national oppression, exploitation and enslavement. The national view of the proletariat and working people is proletarian internationalism, which naturally brings about a national policy of national equality, solidarity and common development and prosperity. Marxism also expounded on the role played by the rising classes in the formation of nationalities of different nature, and the fact that during the period of the rising of capitalism, national movements are always represented by certain classes and always have certain class substances, and class struggles are always inspired and carried out by certain classes. Lenin said: In a society of class antagonism, "when any really serious and important political movement takes place, all groups are divided according to classes, not according to nationalities." ("Complete Works of Lenin," Vol 20, p 19.) With this significance, we say that the viewpoint of class and class struggle and the method of class analysis are our key to understanding correctly and unfolding the nationality and nationality problem of the class society. The division of opposing classes in each nationality is a more profound and basic division than the division of people into different nationalities.

(2) The Nationality Problem and Class Struggle

Since the emergence of nationalities and classes in human society, and with the formation of nationalities and the development of class antagonism within nationalities, there have been national problems and class struggles.

The nationality problem means a series of problems arising among the nationalities after the emergence of nationalities. From the emergence of nationalities, and before they wither away, there is always the nationality problem. However, in different periods the nature and substance of the nationality problem are not entirely the same. Stalin said: "Everything is changing....social life is changing, the 'nationality problem' is also changing accordingly. In each different period, there is each different class appearing on the stage of struggle; moreover, each class understands the 'nationality problem' according to its own viewpoint. Therefore, in each different period, the 'nationality problem' serves various different interests, and shows various different colors, depending upon by which class and at what time it is put forward." ("Complete Works of Stalin," Vol 1, p 27.) In a society of class antagonism, the nationality problem is always closely linked with the problem of class struggle, and is always restricted by the law of class struggle. Marx pointed out: "The existing relations of ownership are the cause of the exploitation of some nationalities by some other nationalities." ("Selected Works of Marx and Engels," Vol 1, p 287). In a society ruled by the exploiting class, all exploiting classes are, by their economic status and the nature of an exploiting class, always bent solely on profit and insatiably avaricious. They not only oppress and exploit the working people of their own nationalities but also, if possible, will always oppress and exploit the working people of other nationalities. When the people of different nationalities can no longer endure their oppression and exploitation, they will rise in opposition, and then the nationality problem and national struggle will emerge. This struggle is waged by the people of various nationalities to strive for national liberation, and to achieve national equality and national development and prosperity. The nationality problem of slave society and feudal society is mainly the problem of opposing national oppression and national exploitation carried out by the slave owners, feudal lords and the landlord class. The nationality problem in the period of the rise of capitalism is mainly a problem of a multi-nationality country, in which the newly emerging bourgeoisie of the ruled nationalities tries to free itself from the rule of the ruling nationality in order to cope with the development of capitalism. In the period of imperialism, the nationality problem and the colonial problem are combined into a national-colonial problem which is the problem of the proletariat and working people among oppressed nationalities, who join forces with the national bourgeoisie to strive for national liberation and social emancipation, and to advance towards socialism.

From the above we can make our conclusion that in a society of exploitation, the nationality problem is essentially a class problem, and national struggle is essentially class struggle. While studying the general law of development of human society, Marx and Engels discovered the law of the birth and growth of nationalities. Moreover, they also studied the special law of the capitalist society, and discovered the roots of the occurrence of the nationality problem and the law of development of the nationality problem. Thus, they pointed out: "Once the exploitation of men by men is eliminated, the exploitation of nationalities by nationalities will be eliminated accordingly." "Once the internal class antagonism of the nationalities is eliminated, the antagonistic relationship among the nationalities will be eliminated accordingly." ("Selected Works of Marx and Engels," Vol 1, p 270.) These statements brought to light the class substance of national oppression, national exploitation and national struggle, revealed the unity between national liberation and class emancipation, and explained the fact that the solution of the nationality problem is always closely linked with the emancipation of classes. Therefore, the authors of Marxist classics always linked the nationality problem with overthrowing capitalist political power and eradicating capitalism, imperialism and all systems of exploitation. Our party followed this principle precisely, and laid down the program and talk of solving the nationality problem in the new democratic period of our country, that is, externally to overthrow the rule of imperialism in China so that the entire Chinese nation would gain liberation, and internally to abolish national oppression and treat all nationalities as equal. After the liberation, to eradicate thoroughly the roots of national oppressions exploitation and private ownership in every nationality, we carried out democratic reform and socialist transformation. In 1963, Chairman Mao declared that "national struggle is, in the final analysis, a problem of class struggle," in support of the black people of the United States. He made his statement by aiming at the capitalist exploitation and national oppression in the United States. National oppression will certainly stir up antagonistic national struggle, the essence of which is class struggle. Only by relying on the highest form of class struggle--armed struggle--to completely overthrow capitalist exploitation and national oppression can we help the oppressed nationalities gain their liberation. This argument of Chairman Mao's is still of practical guiding significance to countries and nationalities which today remain under exploitation and practice national oppression.

When we say that the essence of the nationality problem is a class problem, we mean societies of exploitation. Moreover, "essence" means the most basic, most crucial and most important aspect of the nationality problem, which decides the innate character. This is to say that "essence" is not equal to the whole nationality problem, which is not entirely equal to the problems of class and class struggle. The nationality problem is far wider in scope and more complex than the class problem, and also lasts much longer.

First, among various nationalities, both spoken and written languages, ways of life (such as housing, costumes, hair styles, material life habits, etc.), and literary and artistic expressions are different, and even certain moral and aesthetic standards are also different. These differences also belong to the nationality problem; however, they themselves do not constitute problems of class and class struggle. Stalin pointed out: "Language was not created by a certain class, but by the efforts of hundreds of generations of the whole society and all classes of the society. Language was created not for the satisfaction of the needs of a certain class, but for the satisfaction of the needs of the whole society, and for the satisfaction of the needs of all classes of the society." (Stalin, "Marxism and the Language Problem," pp 3-4.) "Marxists say that the lingual identity is one of the most important symbols of a nationality, and at the same time it is clearly known that there are class contradictions within a nationality." (Stalin, "Marxism and the Language Problem," p 13.) The spoken and written languages of a nationality, the ways of material life and the national forms of literature and art are far broader than the class problem, which cannot embrace them.

Secondly, the working people in an oppressed nationality suffer twofold oppression; national oppression is broader in scope than class oppression. Stalin said: "In every oppressed nationality, 9 out of 10 are peasants and small urban workers. However, this does not explain entirely the conception of 'oppressed nationalities.' Oppressed nationalities generally not only constitute peasants and urban workers under oppression, but also constitute nationalities, that is, workers under oppression belonging to certain nationalities and with certain languages, cultures, ways of life and customs and habits. The pressure of twofold oppression cannot but make the working masses of oppressed nationalities revolutionary, and cannot but motivate them to wage struggle against the basic force of oppression, to wage struggle against capital." ("Complete Works of Stalin," Vol 5, p 281.) When there is national oppression, not only are the workers in oppressed nationalities under oppression, but the exploiting classes in oppressed nationalities are also under the oppression of rulers of other nationalities. This explains why national oppression is broader in scope than class oppression.

Thirdly, the national problem is more complex than the class problem. The ruling classes of national oppression, either from their class nature or, at the time class contradiction becomes acute in their own nationalities, to mitigate class contradiction and shift the direction of struggle, will not hesitate to create national contradictions, sow discord among the nationalities and stir up national hatred. When they commit aggression against and enslave other nationalities, they always wave the banner of "nationality," cover up their nature of exploitation with "national interests," deceive the working people of their own nationalities, and make the working people act as their tools in pulling their chestnuts out of the fire. As the working people have long been under the influence of nationalism and national traditions, they are always taken in and take part in the war of aggression. At that time, a struggle in the form of "whole nationality" will appear. The essence of this struggle still remains a class struggle. It is class struggle of a special form, ingenious and undercover. It shows the disunity between its national appearance and class substance. Such a kind of struggle, which carries a national signboard and appears in the form of a "nationality," but in essence represents the interests of exploiting classes, is a trick employed consistently by the ruling classes of past generations. Just as Stalin said: "Among all present forms of oppression, national oppression is a most ingenious and most dangerous form. It is ingenious because it is easy to cover up the gangster features of the bourgeoisie. It is dangerous because it incites national conflict to ingeniously help the bourgeoisie escape attacks." ("Complete Works of Stalin," Vol 4, p 84.) This is the reason why the national problem and national struggle are more complex than the class problem and class struggle under ordinary circumstances. This is also the reason why only "nationality" but not "class" is visible, and why the people have always been hoodwinked.

Fourthly, the nationality problem is of a more protracted nature than the class problem. Having studied the nationality problem and class problem, Chairman Mao made his scientific conclusion. He said: "First the classes, then the nations and finally the nationalities will wither away. It is so throughout the world." His conclusion enriches and expands the Marxist-Leninist theory of nationality. Stalin also pointed out: "When the world socialist economic system has been fully consolidated, socialism has penetrated into the daily life of people of all nationalities, and all nationalities are deeply convinced in practice that the common language is superior to national languages, national differences and national languages will then begin to wither away and give way to the world language which is common to all people." ("Complete Works of Stalin," Vol 11, p 300.) This explains fully why nationality and the nationality problem are of a more protracted nature than class and class struggle.

In fine, in a society of class antagonism, the nationality problem and the class problem are closely linked. The essence of the nationality problem is class problem. In essence, national struggle is class struggle, and national oppression is class oppression. If we ignore the class nature of nationality and the nationality problem, and cover up class contradiction with national contradiction, we shall fall into the quagmire of bourgeois nationalism, betray proletarian internationalism and commit the mistake of Right deviation. If we exaggerate the class aspect of the nationality problem, stress only the class nature of nationality and the nationality problem, and even equate the nationality problem with the class problem, then we shall head for national nihilism, and deny the existence of the nationality problem and the importance of the party's policy towards the minority nationalities. Likewise, we shall depart from proletarian internationalism and commit the mistake of "left" deviation.

(3) The Nationality Problem and Class Struggle in the Socialist Period

After the liberation, we abolished entirely the system of national oppression and established the dictatorship of the proletariat throughout the country (except Taiwan Province). In regions where minority nationalities live in compact communities, we have established regional autonomy of minority nationalities, trained a large number of cadres of minority nationalities, and realized equality in politics among all the nationalities. Economically, through democratic reform and socialist transformation, such exploitation systems among all minority nationalities as the remnants of primitive communes, slave ownership, feudal lordship and landlordship have been eliminated, productive forces have been liberated, and all minority nationalities have successively taken the socialist road of common prosperity and development. Among the minority nationalities, the great majority of exploiters, including former slave owners, serf owners, feudal lords, mountain officials, headmen and princes have, through a long period of self-reform, become self-supporting workers. Therefore, there is no more exploiting class in its complete sense. The class structure, the situation of class struggle, the national character and national relations within all nationalities have also undergone basic changes. After socialist revolution and construction through 30 years, all nationalities have firmly established their socialist political and economic systems, and started to change themselves into socialist nationalities. The relationship among all nationalities has become basically the relationship among the working people of socialist nationalities. The antagonism among the nationalities and the old national relations are basically nonexisting. Just as Comrade Ye Jianying said in his speech at the meeting in celebration of the 30th anniversary of the National Day: "The more than 50 fraternal nationalities in our country have formed a new, socialist relationship based on the identity of their fundamental interests and characterized by unity, fraternity, equality and mutual assistance. They are working for the gradual elimination of the inequalities that still exist as survivals from history."

As both class relationship and national relationship have undergone basic changes, the nationality problem has also basically changed its nature and substance accordingly. The crux of the nationality problem means the actual inequalities which have survived from history. This is also a basic problem still existing in relations among the nationalities. Stalin pointed out: "In the Russian Soviet Federated Socialist Republic, the crux of the nationality problem is to eliminate the actual backwardness (economic, political and cultural) of some nationalities left over by history, so that it will be possible for all backward nationalities to catch up with the central part of Russia in politics, culture and economy." ("Complete Works of Stalin," Vol 5, p 31.) Early in 1953, when our party's Central Committee laid down the general line of the transitional period, it also laid down the following task in the work among minority nationalities during the transitional period: For the common cause of the reconstruction of our motherland, we must promote gradually political, economic and cultural affairs among all minority nationalities, eliminate gradually actual inequalities left over by history among these nationalities, and help the backward nationalities stride into the ranks of advanced nationalities and gradually go through the transition to socialism. In 1963, in his six instructions on the work in Xinjiang, Chairman Mao said with special emphasis: "First of all, we must do well in economic work, make more progress year by year in agriculture, animal husbandry and industry, gain more prosperity in economy year by year, and achieve greater improvement in people's living year by year." Chairman Mao placed the economic construction of minority nationality regions in the forefront in solving the nationality problem. However, due to the interference of the "left," the nationality problem was aggravated in the aspect of class struggle, and was ignored in the aspect of economic and cultural construction. After the completion of democratic reform and socialist transformation, we failed to see that the situation of class struggle in minority nationality regions, and the nature and substance of national relationship and the nationality problem, had undergone new changes, failed to see that contradictions of inequalities left over by history had already come forward, failed to grasp firmly the principal contradiction and fundamental task of promoting quickly the economic and cultural construction of minority nationality regions and eliminating the actually existing backwardness in various respects and, while dealing with the nationality problem in revolution and construction, exaggerated the class essence of the nationality problem and confused the two categories of contradictions of different nature. For instance, in our struggle against local nationalism in 1957, we magnified class struggle, accused some minority national cadres of attacking the party because they explained the true conditions in their regions and expressed the complaints and wishes of their people, and labeled them as local nationalists. We criticized proper national feelings, national desires and demands as bourgeois nationalism. In 1958, we again departed from the reality of minority nationality regions, ran counter to objective laws, advocated the so-called "reaching the sky in a single bound," stirred up the "five winds," such as the "wind of communism" and the "wind of exaggeration," undermined the economy of the minority nationality regions, and created tension among the minority nationality regions. In 1962, the national conference on the work among the minority nationalities correctly summed up our experience and lessons drawn, and pointed out profoundly that one of our important experiences in these years was that we must pay serious attention to and handle properly the nationality problem in the course of socialist revolution and socialist construction; understand fully many inherent features of minority nationalities in the socialist period and the protracted nature of the existing national differences, and the fact that the key to implementing the party's policy towards the minority nationalities and making a success of the work among the minority nationalities was to proceed from the reality of the minority nationality regions; and fully arouse and bring into play the enthusiasm of all minority national people, and concentrate forces to promote production in agriculture, animal husbandry and forestry in the minority nationality regions, and improve the people's livelihood. Our work in all fields must revolve around this general goal. But later in 1964, under the domination of "left" deviation, we again vigorously criticized the so-called "Right capitulationism" and "revisionism" in the national united front work, and refuted many of our good experiences. In praticular, some comrades arbitrarily emphasized the viewpoint that national struggle was class struggle in essence, either in foreign countries or in China, either before or after the liberation, and either in the democratic revolutionary period or in the socialist period, and that it was a universal principle of Marxism for observing and handling the nationality problem. They denied the fact that after the completion of socialist transformation, a large number of cases concerning the minority nationalities were brought about by national differences, different national features and inequalities left over by history, asserted categorically that the basic reason for the occurrence of the nationality problem in the socialist period was the fact that among the minority nationalities there were still classes, class contradictions and class struggles, and there was still the struggle between the two roads of socialism and capitalism, and ignored and relaxed the economic and cultural reconstruction in the minority nationality regions. During the Great Cultural Revolution, Lin Biao and the "gang of four" even confused national struggles in foreign countries with our domestic problem of minority nationalities, equated the nationality problem with the class problem, exaggerated the aspect of class struggle, artifically created large numbers of horrible, unjust, false and wrong cases, and used the big stick of class struggle to attack and persecute many minority national cadres and the masses. They slandered minority national customs and habits and spoken and written languages as "four old things," replaced our work among the minority nationalities with class struggle, undermined very seriously the party's policy towards the minority nationalities and the economic and cultural reconstruction in their regions, and caused serious calamities. This is an extremely bitter experience from which we learned a lesson.

After the shattering of the "gang of four," the Party Central Committee brought order out of chaos and, according to the wishes of people of all nationalities of our country, took the realization of the four modernizations as the general line and general task in the new period of socialism. In the field of the work among minority nationalities, it was laid down that best efforts should be made to help all minority nationalities to develop quickly their economic and cultural enterprises, eliminate gradually inequalities left over by history, and enable themselves to catch up with or approach the level of development of the Han nationality. This is the basic substance of the nationality problem as well as the basic task of our work among the minority nationalities in this new period. The realization of the four modernizations and the elimination of inequalities left over by history are urgent desires of the people of minority nationalities, are in their fundamental interests, and also are the material foundation for strengthening national unity, eliminating estrangement among our nationalities, and consolidating the unification of our motherland. Just as some comrades summarized incisively: "Modernization needs minority nationalities very badly, and the minority nationalities need modernization very badly."

When we say that after the completion of socialist transformation, the crux of the nationality problem as well as the basic task of our work among the minority nationalities is to carry out the four modernizations and eliminate gradually inequalities left over by history, we do not deny that there are still class struggles among various nationalities. In China there are still all kinds of class enemies, and outside our country there still exist imperialism and social-imperialism, which will still sow dissension among the various nationalities and sabotage national solidarity. Class struggle will inevitably find expression in the nationality problem so that some nationality issues will still carry the nature of class struggle. However, class struggle is no longer the principal contradiction among the minority nationalities and in minority national regions. The principal contradiction is actual inequalities left over by history. At the present stage, and in practical life, the nationality issues which had arisen constantly and in large numbers were some problems touched off among the working people of various nationalities, and between the state organs and enterprises on one side and the working people of minority nationalities on the other. Basically speaking, these problems were not fundamental antagonism of class interests, but temporary contradictions in economic interests among the working people, or contradictions among the people brought about by our inadequate care and improper handling of these cases in policies and measures taken. Fundamentally, they did not carry the nature of class struggle. Therefore, we cannot say that the crux of the nationality problem is still a class problem. As regards the mentality of Han chauvinism and local nationalism, as well as the evil influence of the ultraleft line of Lin Biao and the "gang of four" on the nationality problem, they are still aspects of the nationality problem and national relations not to be ignored, and belong to the realm of class struggle. However, this is a problem of the ideological influence of the exploiting class, which is a contradiction among the people, to be solved only by education, study, criticism and self-criticism, and continuously enhancing one's consciousness.

Does national struggle exist in the period of socialism? Generally speaking, there is no national struggle in a country, because it means the struggle between the oppressing nationality and the oppressed nationality. In essence, it is the struggle between the exploiting class minority in the oppressing nationality and the working people as the majority of the oppressed nationality, two antagonistic classes of oppression and against oppression, of exploitation and against exploitation. In our country, exploitation and exploiting classes have been eliminated, and under the situation in which the proletariat and the working people are holding political power, it is impossible for this kind of struggle to occur. It will be possible only when foreign imperialism or social-imperialism invades our country. Will national oppression arise in the socialist period? Under the circumstance of the proletariat and the working people holding power, it is generally not possible. Even when national oppression arises, it will be only a local and transient phenomenon which can be corrected easily. Under unusual conditions, if reactionaries like Lin Biao and the "gang of four" emerge on the political stage to promote bourgeois nationalism and carry out reactionary policies toward the minority nationalities, it will be possible for national oppression to arise; however, this will be opposed resolutely by people of all nationalities.

In one word, during the period of socialism, it is shown in real life that only a very few nationality issues of local nature were geared to contradictions between ourselves and the enemy and bearing the character of class struggle, and a large number of nationality issues were contradictions among the people. The main roots of these issues were national characteristics, national differences and actual inequalities left over by history, which led to their occurrences. Just as Stalin said: "Inequalities in reality are still the source of all dissatisfaction and friction." ("Complete Works of Stalin," Vol 5, p 201.) The fundamental way to solve the nationality problem in the socialist period can only be to fully mobilize all positive factors, give play fully to the enthusiasm of the masses and cadres of all minority nationalities, go all out, be of one heart and one mind, carry out the four modernizations quickly, and eliminate the inequalities left over by history, so that all nationalities join forces to achieve prosperity and advancement, and the minority nationalities can catch up with and approach the standards of the Han nationality, and stride into the ranks of advanced nationalities. Speaking in this sense, the crux of the nationality problem is, in essence, to achieve the four modernizations, and to eliminate the actual inequalities left over by history. At present, in many minority national regions, we are carrying out reeducation on the policies toward the minority nationalities. Our experience in the implementation of these policies shows that to carry out the party's policy towards the minority nationalities, we must first make an effort to carry out our economic policy in these regions. With the enforcement of the economic policy, we will have a reliable material guarantee for the implementation of other policies toward the minority nationalities. Along with the progress of the work of the four modernizations in minority national regions, the class enemies in and outside China will undoubtedly use existing inequalities in these regions to make a big issue of them, and carry out sabotage activities. Against such activities, we will rely mainly upon our weapon of proletarian dictatorship and the socialist legal system to launch a counter-attack. There will be no need to wage a large-scale class struggle like a hurricane. In fine, we cannot either exaggerate or minimize class struggles which may emerge from the nationality problem. We should solve them by revolving closely around this general goal of carrying out the four modernizations and eliminating the actual inequalities left over by history.

PROBLEM OF NATIONALITIES IN CHINA EXAMINED

Beijing MINZU YANJIU [NATIONALITY RESEARCH] in Chinese No 3, 20 May 80 pp 7-10

[Article by Mao Aohai [5399 2407 3189]: "On the True Nature of Nationality Problems in the Period of Socialism"]

[Text] Today we are faced with the urgent need to examine and study certain theoretical issues concerning the nationalities. If we can understand better and see eye to eye on these issues, we can do more for the four modernizations. The nature of the problem regarding nationalities is one of the issues that we should look into and find a solution for.

The nationality problem is part and parcel of the social problem and part and parcel of the overall problem of the proletarian revolution. Its character evolves and changes with the social development and the change in revolutionary goals. Therefore, we cannot tackle this problem from a purely theoretical approach, but must do so from a practical approach. In other words, we cannot analyze it from a fixed metaphysical perspective.

This nationality problem has already gone through three stages in its evolution--namely, the early capitalist stage, the imperialist stage, and the socialist stage. It had one common feature in the first two stages: many ethnic groups suffered oppression and racial struggle was raging. In the third stage, all nationalities achieved the equal right to grow. In practice, however, some inequalities have remained. These are the inequities in political, economic, and cultural developments inherited from the past. Stalin once said: "The nationality problem of the Russian Soviet Federated Socialist Republic boils down to the need to wipe out certain nationalities' actual backwardness (political, economic, and cultural) inherited from the past and to help them catch up with the rest of Russia politically, economically, and culturally." ("Complete Works of Stalin," Vol 5, p 31) This statement interprets correctly,,and in a nutshell, not only the nationality problem that existed in Russia in Stalin's days but also the same problem as it exists in China today. Though racial oppression disappeared after the completion of socialist reform of the ownership of the means of production in China, certain inequalities have persisted among ethnic groups. The Chinese population consists of the Han nationality and more than 50 national minorities. By an accident of history, the Han have reached a higher level of political, economic, and cultural development, and this contributes to certain inequalities among the nationalities. These inequalities will not disappear in a short period of time. They will do so only if the minorities are helped over a long period of time to develop their productivity and to improve their economic, cultural, and political standards. As early as 1954, our party proposed an interim program of "one change and three reforms," stating that "in the course of our national construction, we must help the minority nationalities to develop politically, economically, and culturally. We must gradually do away with the inequalities that do exist among them and help the backward nationalities catch up with advanced nationalities and then slowly graduate to a socialist society." (PEOPLE'S DAILY editorial of 17 April 1954, entitled: "How To Publicize our Party's Objectives With Regard to the Nationality Problem During the Transitional Period.") In 1957, as socialist reform was more or less accomplished in our country, Comrade Mao Zedong pointed out: "Our basic task has now changed from the liberation of productive forces to the safeguarding and development of productive forces under the newly established relations of production." After that, Comrade Mao Zedong repeatedly stressed the need for wholehearted assistance to the minorities for the development of their economy and culture. In his Report on the Government's Work, delivered before the Second Session of the Fifth National People's Congress, Comrade Hua Guofeng reiterated: "We must do everything possible to quickly revive and develop the economy and culture in areas inhabited by minority nationalities." All this is proof that our party's major task concerning the nationality problem is to help the minorities, through the all-out development of the productive forces, to develop their respective economy and culture as a means of eliminating inequalities among the nationalities. This is also where the heart of the nationality problem lies during the period of socialism. A correct understanding on our part of our party's nationality program and of the nature of the nationality problem is very important.

There are people who hold to the belief that "the nationality problem is actually a class problem," even during the period of socialism. The theory received wide publicity in the press during the 1960's and became a household word. In my personal opinion, this theory was and still is debatable. Then Lin Biao and the "gang of four" gave this theory a twist and a blowup and equated the nationality problem with racial struggle and the racial problem with class struggle. They went all out to promote their pet theory that once we get a firm grip on class struggle, the nationality problem will work itself out automatically. They refused to recognize the nationality problem and abolished our party's established policies toward the nationalities. If you had mentioned the nationality problem and said that it did exist, they would accuse you of neglecting class struggle, working for feudalism, capitalism and revisionism, and being a "nationalist"--if they decided to let you go lightly. If they decided to give you more trouble, they would accuse you of "nationalist splittism." For instance, Mongolians like to put milk in their tea and eat fried rice. They have developed this eating habit, in the course of their history, as becoming their nomadic lifestyle. But Lin Biao, the "gang of four," and their ilk described it as a "bourgeois lifestyle" and a "nationalist eating habit." For another example, Moslems do not eat pork. It is their custom, different from that of other nationalities. Our party's ethnic policies clearly stipulated that hogs are not to be raised in areas inhabited by ethnic groups believing in Islam. Lin Biao and the "gang of four," however, claimed that this custom belonged in the "four olds" and indicated a "new stirring in class struggle." Granting autonomy to ethnic areas was one of the basic policies designed to resolve the nationality problem under socialism, as provided in Marxism-Leninism-Mao Zedong Thought. The autonomous regions of minority nationalities are provincial-level governments under the direct leadership of the CCP Central Committee and form an integral part of China. However, Lin Biao and the "gang of four" called such autonomy "artificial divisiveness," willfully abolished some, and redivided others. In short, they regarded the party's principles and policies of granting equality and autonomy to the ethnic minorities to be inexcusable crimes. Under the false pretense of pursuing class struggle, they made up false evidence, laid traps, and set up frameups as a means of persecuting minority cadres and masses, subjecting them to ruthless struggle and cruelty.

The smashing of the "gang of four" brought an end to their feudal fascist policy of oppression of minority peoples. Thereupon, the CCP Central Committee reiterated its long-cherished principle of equality and autonomy for the minorities. This principle won warm support from the people of all nationalities. In this sense, the 50 million minority people were liberated a second time.

Nevertheless, we still must not underestimate the pernicious influence left by the "gang of four" and their ilk on the nationality issue. Neither must we underestimate the extensiveness and durability of the impact of the theory that "the nationality problem is in essence a class problem" during the period of socialism. On this point, it is not enough for us just to bring to public attention and then criticize the fallacies of Lin Biao, the "gang of four," and their ilk. We must discuss the matter thoroughly and reach a consensus on what is right and what is wrong. On 8 August 1963, Comrade Mao Zedong declared, in his "Declaration in Support of the Just Struggle of Black Americans Against the Racial Discrimination of U.S. Imperialism:" "In the final analysis, racial struggle is a form of class struggle." Comrade Mao Zedong said racial struggle, not racial problem. Some comrades used these words to support the claim that "the racial problem is in essence a class problem during the period of socialism." They were wrong. No doubt racial struggle is a racial problem. However, racial struggle and racial problem are two different things. This is because racial struggle is but one racial problem and not the sum of all racial problems. How could we lift a few words out of context, interpret them to suit our purposes, and then conclude that the racial problem is in essence a class problem? If such a conclusion did not mean an intentional misinterpretation of Comrade Mao Zedong's words, it meant at least a lack of understanding. Comrade Mao Zedong was talking about the racial discrimination of the U.S. imperialists. The blacks are a minority in America. The struggle of the blacks against the whites because of racial injustice amounted to a racial struggle. In the United States, the reactionary rule of the exploiting class gave rise to racial oppression, and racial struggle emerged as the major contradiction in racial relations. That was why, in summing up the nature of racial struggle in the United States, Comrade Mao Zedong pointed out: "In the final analysis, racial struggle is a form of class struggle." These words hold true for the capitalist world. However, it is wrong to use these words to support the claim that the racial problem is a class problem during the period of socialism.

Lenin said: "When we refer to a certain country (such as referring to the racial policies of that country), we must consider the qualities that set it apart from other countries during the same period in history." ("Selected Works of Lenin," Vol 2, p 512) These words remind us that we must make a realistic assessment of the conditions as they exist. Our country is a socialist country under the dictatorship of the proletariat. The class divisions and racial relations in modern China differ from those in capitalist countries such as the United States. They are also different from those that existed in old China. Marx and Engels pointed out in the "Communist Manifesto" that "as soon as man's exploitation of man ceases to exist,

exist, the exploitation of one race by another disappears." They added: "As soon as the class antagonism within a race ceases to exist, the antagonism between races disappears." ("Selected Works of Marx and Engels," Vol 1, p 270) When we completed the socialist reform of the system of ownership of the means of production, we put and end to man's exploitation of man as well as the exploitation and oppression of one race by another. This is because the exploiting class was toppled once the private ownership of the means of production was replaced by public ownership. Also removed at the same time were the state of antagonism and opposition between members of the exploiting class and the working people of the proletarian class, as well as all racial antagonisms in our country. Thereupon our country evolved into a socialist big family, in which all peoples are united by the bond of friendship and love and by the security of socialist racial relationships. If we say that in the period when the system of ownership of the means of production was undergoing socialist reform, the struggle between the two classes, namely the proletariat and the bourgeoisie, and between the two roads, namely socialism and capitalism, was the major contradiction in society, we can say that the completion of such reform made secure the triumph of the proletariat over the bourgeoisie and the triumph of socialism over capitalism. If the struggle between the two classes and between the two roads still had run its course by then, it would have spent its fury as the major contradiction of society and been downgraded as a residual problem. In its spent state, it could no longer set off major racial strife. Granted that in the period of socialism there are still counterrevolutionaries, enemy agents, and other class enemies in our midst; though few in number, they can still stir up trouble from time to time and set off and stir up racial struggle to the detriment of existing racial relationships. For example, a few separationist traitors among the minorities have plotted counterrevolutionary activities in an attempt to break away from the motherland. Lin Biao and the "gang of four" imposed a feudal fascist policy of racial oppression. These are indeed cases of racial struggle that fall under the category of class struggle. However, they are also isolated events spawned by certain historical conditions. They by no means reflect the common character of racial problems during the period of socialism.

The most common problems of race that have brewed for years and will affect the racial relationships in China during the period of socialism are the following:

1. Different nationalities have different spoken and written languages, customs and religious beliefs;

2. Different historical conditions have brought different nationalities to different levels of economic, cultural and political achievement and have created certain inequalities between races;

3. Racial misunderstandings inherited from the past, chauvinistic nationalism, and local racism still have not given up their ghosts.

Although some of these problems are class-oriented, they amount to nothing more than a problem of attitudes and a contradiction between advanced and backward nationalities. They boil down to a contradiction among the people that can be entirely resolved under the socialist system in China. One problem, the opposition to Han chauvinism and local nationality chauvinism, may be considered a kind of class struggle on the ideological level; yet it is still not a contradiction between the enemy and us. Comrade Mao Zedong said: "Both Han chauvinism and local nationality chauvinism are harmful to the unity of the nationalities. They represent one kind of contradiction among the people which should be resolved." ("Selected Works of Mao Zedong," Vol 5, p 386) It is clear that under socialism, the animosity toward the Han or toward minorities can be resolved through education and through the formula of unity-criticism-unity, but not by means of class struggle and similar political campaigns. Facts have proved that educational and unity-criticism-unity tactics are more effective than class struggle. For example, Han chauvinism was getting out of hand in the early 1950's. The above tactics were used, instead of political campaigns and class struggle methods. They proved very effective in bringing the situation under control. Then in the late 1950's, local racism loomed as a problem. The above tactics were cast aside. Instead, an antirightist political campaign was mounted and class struggle methods were employed as means of resolving this problem, but to little avail. In fact, the excesses of the campaign even made racial mistrust and racial schisms worse than ever in some localities. We must not forget this lesson. Nor must we forget that the theory that "the nationality problem is actually a class problem during the period of socialism" was directly responsible for this mistake.

In addition, the advocates of the theory that "the nationality problem is actually a class problem" also maintain that problems associated with differences of heritage and culture do not even count as nationality problems or contradictions. They will count as nationality problems and contradictions only if they grow into class struggle proportions or evolve into contradictions between the enemy and us. To say the least, this is an ill-defined concept. It does not make sense in theory or in practice. In his work "On Contradictions," Comrade Mao Zedong pointed out: "There is contradiction in everything. If it were not for contradictions, our world would not exist." He added: "They do not realize that each and every difference already contains contradictions. A difference is itself a contradiction." These words make it clear that racial differences constitute racial contradictions. When these differences affect racial relationships, they become racial problems. Let us stop and think. The Chinese Constitution sanctions the native languages, customs, and beliefs of ethnic minorities, safeguards equal rights and the right to autonomy of minorities, and encourages their economic and cultural development. All these constitutional considerations address themselves to differences in heritage and culture. In my opinion, it was the differences in heritage and culture that created nationality problems, and these problems, in turn, dictated constitutional recognition of the differences in heritage and culture. Lenin said: "The objective of socialism is not only to do away with the division of humanity into small nations, not only to end racial isolation, not only to bring the races of the world closer together, but also to forge all the races into one big race." ("Selected Works of Lenin," Vol 3, p 719) It is clear that the long-term goal of our party during the period of socialism is to do everything possible to strengthen racial unity, to do away with racial inequalities, to gradually remove racial misunderstandings, to eventually iron out all racial differences, and to forge all races into one big race. The problem of racial differences is, and will be, the major nationality problem during the period of socialism and for a long time to come. In this context, if anyone should say that the problem of nationalities is not a problem until it reaches the gravity of class struggle, and that a racial contradiction is not a contradiction until it assumes the proportions of a contradiction between the enemy and us, or if anyone should say that the racial contradiction stemming from differences of heritage and culture is not a nationality problem, he would be out of touch with reality and contradicting with the Marxist-Leninist concepts of nationality problems.

Besides, some people say that the overthrown exploiting classes are always playing down class struggle in order to stir up racial strife, thus seeking to complicate matters. What these people leave unsaid is that they also believe nationality problems are in essence class problems. In my opinion, these people are not hitting the nail on the head either. The fact of the matter is that the exploiting classes are not playing down class struggle in order to stir up racial strife. On the contrary, they pay greater lipservice to class struggle than anybody else in order to intensify class struggle, fan up racial strife, and destroy racial unity. Lin Biao and the "gang of four" did just that. The complexity of the nationality problem is determined by its very nature. It has nothing to do with the attempt of the exploiting classes to stir up racial strife and to complicate matters. It is true that the exploiting classes occasionally use the complexity of nationality problems to their advantage in stirring up racial strife, thereby further complicating nationality problems. This only goes to prove that there are certain class elements in nationality problems. It does not mean that all nationality problems during the period of socialism are in essence class problems.

To sum up, the argument that nationality problems are in essence class problems during the period of socialism does not have a leg to stand on, either in theory or in practice.

On the other hand, there are comrades who recognize the fact that nationality problems during the period of socialism amount, in essence, to a matter of how to resolve the inequalities that exist between races. However, they firmly refuse to accept the fact that nationality problems contain certain class elements. Their viewpoint is again questionable.

Nationality problems are related to class problems. As class problems are expected to crop up from time to time during the period of socialism, nationality problems cannot help having a certain association with class problems. If someone should accept the fact that nationality problems during the period of socialism amount, in essence, to an effort to end the inequalities that exist between the races, but still would not accept the fact that nationality problems are class oriented, his viewpoint would be onesided. Here we must have a clear picture of what is the class essence of nationality problems. Stalin once said: "What is the class essence of the national question? Under the Soviet conditions of present development, it lies in the formation of a proper alliance between the proletariat in the former ruling nationality and the peasants among the formerly oppressed nationalities." ("Selected Works of Stalin," Vol 5, p 195) This conclusion is still applicable to our country in its present conditions. Working people account for more than 90 percent of the ethnic population. With the successful completion of the democratic transformation and socialist reform, the landlord class, the rich peasant class, and the capitalist class have ceased to exist. Under these circumstances, so-called racial relationships are the ties that exist among the working people of fraternal nationalities. Such being the case, class struggle cannot become an issue in racial relationships. Nevertheless, it must be conceded that there are certain class factors in racial relationships. For example, there is a very small industrial proletariat in the Chinese minority groups. Working people engaged in agriculture and husbandry make up the bulk of the minority population. In this context, the class essence of minority problems is a peasant problem. The class essence in the relationship between the Han and the tribal peoples is an alliance between workers and peasants. Thus the essence of nationality problems during the period of socialism also involves the effort to narrow the gap between workers and peasants as two classes. If we fail to see this, we are not getting the whole picture. There is no fundamental conflict of interest between industrial working people and agricultural working people. Why then are there problems in racial relationships? In my opinion, the problems are caused by the differences between workers and peasants, the differences between races, and racial mistrust and schisms inherited from the past.

If we hope to end the inequalities that exist between the nationalities, to foster greater similarity between the nationalities, to wipe out racial schisms inherited from the past, and to overcome various erroneous nationalistic ideas, we must work hard to achieve the four modernizations and greatly expand productivity. If we hope to close the gaps between workers and peasants and between the nationalities, we must do away with all inequalities between the nationalities. Marxism tells us that the forces of production dictate the relations of production and, eventually, all relations in society. This is an undeniable law of society. If we can develop the forces of production, help the minorities to improve their economic, cultural, and political levels, and break down all inequalities that exist between the nationalities, the racial schisms and racist ideas that are affecting the racial relationships as part and parcel of our social relationships will shrink and then die out. Things work out like this. If the forces of production are developed, material wealth will grow and, on that basis, economic equality between the nationalities can be achieved. If the economy is booming, cultural and educational level will improve and, on that basis, cultural equality between the nationalities can be achieved. When all nationalities enjoy a richness in their cultural life, they will appreciate socialist democracy and, on that basis, can achieve true political equality. This is, of course, a lofty and glorious goal. To achieve this goal is no easy task. We Chinese peoples are great peoples. We are equal to all challenges. Let us work under the leadership of our party, give free rein to our imagination, forge ahead at full throttle, have a pragmatic approach to problems, have perseverance and endurance, and work hand in hand to achieve the four modernizations. We can certainly achieve this goal. We can certainly disolve all the inequalities that exist between the nationalities.

EDUCATORS SOUND CLARION CALL FOR REFORMS

Shanghai WEN HUI BAO in Chinese 15 Sep 80 p 3

[XINHUA Report: "Education Circles Urge More Funds, Better Salaries for Teachers and 12-Year School System"]

[Text] "Understand fully the important strategic role which education plays in the four modernizations. Increase teachers' salaries. Reform the existing middle and primary school education system. Appropriate more funds for education. Strengthen education legislation. Direct efforts toward putting education on a sound basis." These were the views and demands of over 70 representatives of the People's National Congress and members of the Political Consultative Conference in the field of education who were invited by the Ministry of Education to participate in a recently held meeting to discuss matters relating to primary and higher education.

At the meeting, they pointed out that while teachers are entrusted with the glorious and heavy responsibility of developing talent for the four modernizations, and that their work is both hectic and laborious, the political and material treatment accorded them is far from adequate. Stating that that is especially true for teachers of privately operated schools, they expressed the hope that the government will take a serious view of the situation and seek to improve the treatment of teachers so that large numbers of teachers may find it possible to fully devote themselves to the education projects of their mother country.

At the discussion meeting, the representatives and members drew attention to the fact that the present 5-year primary school and 5-year middle school educational system places an unduly heavy load on the students, with the result that there has been a general decline in their physical well-being. They proposed that a 12-year educational system--6 years for middle schools and 6 years for primary schools--be instituted as soon as possible to replace the present system, in order to promote the healthy growth and general development of the young and to ease the conflict created by the need of the students to find employment. Some representatives and members further pointed out that the present educational system is too restrictive and inclusive, and that it is inimical to the development of talent and to the elevation of educational standards qualitatively and quantitatively. They proposed that measures be taken to eliminate the state of isolation presently existing between the scientific research institutions and the insitituions of higher learning and among institutions of higher learning themselves, that greater emphasis be placed on strengthening the work of shaping political thought in the schools, that classroom teachers of middle and primary schools as well as counselors of youth brigades be properly treated and evaluated, that their important role in the development of talented persons for the four modernizations be affirmed and recognized, and that a certain degree of autonomy be accorded to institutions of higher learning.

Si Xia [2448 7209], representative of the People's National Congress and special class teacher at the primary school affiliated with the Nanking Normal College, Yan Huizhen [0917 1920 3791], teacher at the First Middle School in Chongqing, Wang Li [3769 0500], member of the Political Consultative Conference and noted professor at Beijing University, and Yang Haibo [2799 3189 3134], secretary of the party committee at the China Scientific and Technological University, pointed out that the biggest problem confronting our work in education is the shortage of funds, that the funds allocated to education this year amounts to only 11.27 percent of the national budget, and that although the budget for education for this year and the next has shown a slight increase, it is still far from being adequate, in view of the large deficits accumulated over a period of years. They expressed the view that unless there is an increase of funds for education, it will be impossible to do what needs to be done. At the present time there is an acute shortage of university premises, and this precludes the admission of a larger number of new students. The wornout equipment and substandard instruments have had an adverse effect on the quality and quantity of teaching. Many of the middle and primary schools are in a dilapidated state. There is no money even to buy chalk, basketballs, or stationery supplies. Not a few of the teachers and students have to sit on the dirt floor in ill-lit and unsafe buildings. The lack of basic requirements for the operation of schools has had a dire effect on the physical and mental health of the students. Sounding a clarion call for the government to heed the needs of education and to increase allocations for education, the representatives and members pointed out that there is a frightful amount of waste in certain departments, and that the basic needs of education could be met if part of the funds conserved by such departments were diverted to education. Emphasizing in strong terms the need for education legislation, they proposed that a ratio be set for educational projects in the overall investment by the government in the various projects of economic reconstruction, and that measures be promptly taken to correct the present anomaly of the lack of a ratio or a lopsided ratio between allocations for education and allocations for other projects of national economic reconstruction. They expressed the hope that, under the present circumstances, the government will accept their well-considered proposal that, starting next year, 15 percent of the national budget be allocated to education and that 6 percent of the total investment funds for basic reconstruction be allocated to educational reconstruction. They added that this is a low ratio and that it should be raised by stages with the development of the national economy.

Minister of Education Jiang Nanxiang, who presided at the meeting, stated that education needs legislation no less than the economy, and that educational reforms should follow reforms in the economic system now in progress. He said that after educational reforms have been put into effect, the main emphasis of the Ministry of Education will be on the implementation of the principles and policies of the central government, the institution of a system of basic rules and regulations, the formulation of plans for development, the conducting of in-depth surveys and research, and the exchange of typical common experiences, etc. He further emphasized that the localities and the institutions of higher learning should be given a larger measure of autonomy so that they may capitalize on their strongpoints, that teachers should be allowed to exercise a larger measures of initiative so that their special skills may be brought into full play, and that students should be made to learn to take the initiative in meeting certain situations so that they may grow and develop healthily and vigorously.

Vice Ministers of Education Zhang Chengxian [1728 2110 0341], Gao Yi [7559 3065], Huang Xinhai [7806 6580 4101], and Zhou Lin (0719 2651] were also presented at the discussion meeting to hear the exchange of views.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

USSR CONDEMNED FOR AFGHAN INVASION

OW180710 Beijing XINHUA in English 0701 GMT 18 Nov 80

[Text] United Nations, November 17 (XINHUA)--Pakistan, Paraguay and Oman today condemned the Soviet Union for its invasion of Afghanistan and demanded an immediate, unconditional and total withdrawal of its troops from that country.

Addressing the General Assembly, Pakistani Foreign Minister Agha Shahi said, the Afghanistan question "concerns the fundamental principles of non-use of force, non-intervention and non-interference, all of which have been violated in the case of the non-aligned Islamic State of Afghanistan."

Shahi pointed out that "the situation in Afghanistan has been further aggravated" as the number of Soviet troops there was heavily augmented, repressive measures against the Afghan population continued unabated and tens of thousands of refugees were forced to seek shelter in Pakistan every month.

He said, "The crux of the political solution is the immediate withdrawal of the foreign troops from the territory of Afghanistan."

He emphasized the necessity of the participation of the Afghan resistance organization in political negotiations, and reaffirmed his country's non-recognition of the present regime in Kabul.

Representatives of Paraguay and Oman charged in their addresses that the Soviet invasion of Afghanistan had violated international law and the United Nations Charter. They demanded an immediate cessation of the Soviet aggression and occupation of Afghanistan.

USSR INTENSIFIES SUPPRESSION OF AFGHAN REBELS

OW161222 Beijing XINHUA in English 1214 GMT 16 Nov 80

[Text] Beijing, November 16 (XINHUA)--The Afghan Government army and air force began to hold military exercises today in what guerrilla fighters believe would signalize "wider offensives" against them in the four provinces of Parwan, Gyazni, Nangarhar and Kabul.

According to New Delhi reports quoting Afghan information, the manoeuvres were preceded by fierce Soviet bombardments of Afghanistan's second and third largest cities, Kandahar and Herat, in recent days. Thousands of people were killed and hundreds of homes destroyed.

The Soviet attack on Herat, in west central Afghanistan about 96 kms from the border with Iran, began on November 3. Many homes in the old part of the city of 150,000 people and in the suburbs were demolished and dozens of small villages near the city were completely destroyed as a result, said an AP report from New Delhi.

The Soviet occupation forces began bombing and shelling the city of Kandahar with a population of over 200,000 and its suburbs on November 8.

According to a REUTER report, Soviet troops have moved into a strategic corridor in northeast Afghanistan, Wakhan. "The Soviet troops have occupied the largely-unhabitated 300 square km (115 square miles) Wakhan corridor astride the Pamir Mountains, one of the world's most rugged and inaccessible regions, effectively sealing it off from all access except from the Soviet central Asian republic of Tadzhikistan to the north."

"The Wakhan corridor lies 80 km west of Khunjurab Pass between Pakistan and China through which the Karakoram Highway, the only all weather road linking the two countries, runs," added the report.

U.S. STATE DEPARTMENT REPORTS ON FIGHTING IN AFGHANISTAN

OW180308 Beijing XINHUA in English 0252 GMT 18 Nov 80

[Text] Washington, November 17 (XINHUA)--Fighting in Afghanistan, now nearly a year old, continues widespread throughout the country despite the approaching winter and there is no indication that the level of fighting in Afghanistan has slowed, the State Department said today.

A situation report issued by the department today said that in the past few weeks the nationalists have been particularly effective in ambushes against Soviet convoys and there is currently heavy fighting in Kandahar.

The resistance fighters continue to deny the Kabul regime control over most of the countryside; the Soviet and Babrak forces hold only the major towns. The Afghan army continues to disintegrate, and the Soviet military does almost all the fighting now, the report said.

"The current aggressive posture of the resistance movement reflects self-confidence, vitality, and high morale," it noted.

Kabul currently suffers from shortages of medicines, some staple food items, heating oil, charcoal, firewood and electricity. These shortages are undoubtedly worse outside the capital, the report said. There may be food shortages in Afghanistan this winter, partially because of the destruction brought about by the Soviets and the war, and partially because in many cases farmers have concentrated on fighting rather than farming this year. However, the nationalists "have been preparing for the winter for some time and undoubtedly have stored food supplies," the report said.

An article by Drew Middleton carried in the NEW YORK TIMES today said that in suppressing the resistance forces in Afghanistan, the Soviet military objective at present is to hold the cities, and deny the insurgents safe haven in villages by bombing any village where there is evidence of their presence.

Thousands of acres of crops have been destroyed in the fighting, particularly in the fertile Koh-i-daman area north of Kabul, the article said, "Soviet tactics are leading to a further reduction in the food supply as winter approaches. The Russians are hitting heavily at areas close to major towns, customarily the most heavily cultivated. The Russian objective seems to be to create 'safe zones' around the towns."

INTERNATIONAL AFFAIRS

NATO ADMIRAL VIEWS SOVIET NAVAL BUILDUP

OW130728 Beijing XINHUA in English 0716 GMT 13 Nov 80

[Text] Brussels, November 12 (XINHUA)--Admiral Harry D. Train, supreme allied commander Atlantic of NATO said here today that the Soviet build-up of an impressive force of submarine, surface, and air units presents a formidable challenge to NATO's maritime capability and demands an increase in NATO's maritime responsibility.

Giving a lecture at a meeting under the auspices of the Royal Institute of International Relations here this evening, he said that "in the past fifteen years, the Soviet surface navy has steadily grown from a coastal defense force into a blue water navy, powerful enough to challenge the U.S. and NATO navies in most major ocean areas of the world. It has continually evolved toward broader missions, with a growing ability to exercise effective command and control on a worldwide basis, and as we have seen recently in the Indian Ocean, the capability to shift forces rapidly from one ocean to another and operate them effectively." Today the Soviet political leadership is sensitive to the use of naval presence to influence events in their favor and to further the political and diplomatic aims of the Soviet Union, he added.

"But most important, perhaps," he pointed out, "is the recent projection of Soviet naval power far from Soviet home waters. It is this capability, the projection of naval power far from one's geographic boundaries, which perhaps more than any other, necessitates NATO to look beyond their national and Atlantic interests and embrace a fundamental philosophy of worldwide maritime commitment." He called on West European allies to strive not only for higher priority in the North Atlantic area, but to deter the Soviets from initiating military action elsewhere.

"At the moment, NATO has maritime superiority but that superiority is diminishing. NATO needs to invest more money in her maritime forces," he concluded.

CSO: 4020

'XINHUA' ON OPENING OF EUROPEAN SECURITY CONFERENCE

OW121946 Beijing XINHUA in English 1830 GMT 12 Nov 80

[Text] Madrid, November 11 (XINHUA)--The formal meeting of the followup conference on European security and cooperation managed to open here at 11:50 late this evening inspite of the failure of a nine-week preparatory session to reach an agreement on an agenda.

Today's opening session lasted only two minutes. After the welcoming address was delivered by Spanish Foreign Minister Perez-Llorca, the delegates took leave one after another. Then at mid-night the working group meeting of the conference convened.

The Madrid conference is a European security conference called in accordance with the final documents signed by heads of governments attending the Helsinki Conference in 1975. One other followup conference was held in Belgrade in 1977. Delegates hailing from 35 countries including all European nations with the exception of Albania, the United States and Canada attended the conference. Its purpose is to review the progress on signatories' implementation of the Helsinki accords over the past five years, and the past three years in particular, and present new proposals on European security and cooperation.

The opposing east and west blocs have been deadlocked on the agenda and time table for the conference since the beginning of its preparatory session on September 9. The focus of the controversy hinges on how much time to devote to the review of the implementation of the final documents of the Helsinki accords dealing with human rights. The United States and its Western allies have been pressing for an extensive review of implementation of the accords so as to condemn the Soviet Union for its armed invasion of Afghanistan and its repression of human rights at home. The Soviet Union and some East European countries tried by every means to curtail the review in a bid to extricate the Soviet Union from denunciation. The two sides, therefore, failed to achieve any sort of unanimity of views on the scheduled conference.

Early this morning, Foreign Minister Perez-Llorca of Spain, the host country, met with the delegates from the U.S., the U.S.S.R. and other countries in order to bring about a mediation. But the Soviet Union, adhering to its original stand, wanted to continue to keep the preparatory session open and threatened to turn down the agreement already reached on the continuity of the security conference. As a result, the conference scheduled to open at 11 a.m. this morning was postponed time and again. The U.S. and some of its allies strongly demanded that the conference should either be officially opened as scheduled or called off. After going through hard bargaining, the Soviet Union and the United States finally decided to convene the conference without an agenda for both were reluctant to take responsibility for the abortion of the conference.

INTERNATIONAL AFFAIRS

ITALIAN, YUGOSLAV LEADERS ON BOUNDARY TREATY ANNIVERSARY

OW111658 Beijing XINHUA in English 1634 GMT 11 Nov 80

[Text] Rome, November 10 (XINHUA)--Foreign ministers of Italy and Yugoslavia have stressed the importance of solving problems through peaceful means, the Italian news agency ANSA reported today. They were interviewed by television newsmen on the occasion of the fifth anniversary of the Osimo boundary treaty signed between the two countries.

During the interview, which was broadcast this evening in Capodistria, a small city on Yugoslavia's border with Italy, the Italian Foreign Minister Emilio Colombo said that "the relations between Italy and Yugoslavia is essential not only to the common interests of the two countries but also to the rest of the world."

He continued to say that "after the (Second World) War, Italy and Yugoslavia have chosen their political systems based on different doctrines, but this did not prevent them from solving their delicate and difficult problems peacefully."

He also said that "as two big countries, Italy and Yugoslavia cannot refuse responsibility towards peaceful co-existence in the Mediterranean region. I think this responsibility should urge us to strengthen the good relations we have maintained so well to this day."

In the interview, Yugoslav Foreign Minister Josip Vrhovec said that "the Osimo (boundary) treaty represents one of the most significant and durable treaties signed in Europe after the war. Its importance lies not only in the fact that it has solved thoroughly the contradictions which had existed between the two countries for many years, but has also opened up effectively new prospects for cooperation. It also testified that there are no insolvable contradictions."

Italy and Yugoslavia signed the boundary treaty on November 10, 1975 after holding negotiations and consultations, resolving whereby all the border problems left over by history in the Trieste region.

INTERNATIONAL AFFAIRS

EUROPEAN TRADE ASSOCIATION CONCLUDES MEETING

OW111948 Beijing XINHUA in English 1935 GMT 11 Nov 80

[Text] Geneva, November 11 (XINHUA)--The rate of economic growth and the level of employment had been relatively satisfactory in most countries of the European Free Trade Association (EFTA), but the international economic prospects, with continuing inflation and rising unemployment, gave the cause of serious concern, noted the ministers of the EFTA countries.

The EFTA countries met at ministerial level here on November 10 and 11 under the chairmanship of Rue de Almida Mendes, Portuguese secretary of state for European integration.

The meeting estimated a 3.5 percent average growth of gross national product in the EFTA countries this year, more than two percentage points higher than the average expected for other countries in the Organization of Economic Cooperation and Development (OECD).

However, the meeting conceded, the present economic downturn in major OECD countries was already leading to stagnation or an outright decline in the volume of exports from EFTA countries.

The ministers were concerned that the EFTA countries with their comparatively small economies might have to carry a relatively high share of current account deficit. Accordingly, and with the aim of improving the general economic situation, they stressed that, as inflation is brought under control in the OECD area, monetary and fiscal policies should, where necessary, be re-assessed.

They reaffirmed their commitment to liberal trade policies and the preservation of an open world trading system and urged all trading partners to use fully the existing multilateral framework to solve trade problems.

They emphasized the importance of further developing economic cooperation between the EFTA countries and the European community and discussed the temporary measures being taken with the community to cope with the present difficult situation in the steel sector.

CSO: 4020

FRENCH, WEST GERMAN LEADERS HOLD TALKS

OW111606 Beijing XINHUA in English 1514 GMT 11 Nov 80

[Text] Paris, November 10 (XINHUA)--French President Valery Giscard d'Estaing and West German Chancellor Helmut Schmidt told pressmen this evening that they shared an identical view on current international issues.

Schmidt came here this evening for a regular informal summit meeting with Giscard d'Estaing--their first meeting since Schmidt's re-election. Immediately after his arrival, the two had a four-hour private talk.

It was reported that the two leaders had an exchange of viewpoints on the current international situation, especially the result of the U.S. presidential election, the policies of the Soviet Union and the United States, the relations between East and West, European politics and economy as well as the situation in Southeast Asia and the Gulf area.

At the end of their talks, Giscard d'Estaing told journalists that "our analysis is similar and we shall make joint efforts for security and peace."

"France will continue to contribute to the organization of Europe and to tighten political cooperation with all its partners, and obviously with West Germany, which is and will remain our first partner," the French president added.

Giscard d'Estaing said that France could only be pleased "to see a strong America fully determined to take up its international responsibilities." "Between a strong America and a Europe assured of its strength and its role, there can develop the friendly dialogue which is natural between them, and a cooperation which will help keep the peace and defend freedom in the world," he said.

Speaking to pressmen, Schmidt emphasized the importance of cooperation between France and West Germany, within Europe and between Europe and the United States. "Conscious of the fact that at this end of 1980 and in the beginning of 1981, the world faces numerous threats." He added that "these past years have shown that, united, we can surmount great difficulties. We think that we will succeed in 1981."

CSO: 4020

USSR, ITALIAN FOREIGN MINISTERS MEET IN MOSCOW

OW110904 Beijing XINHUA in English 0852 GMT 11 Nov 80

[Text] Moscow, November 10 (XINHUA)--Visiting Italian Foreign Minister Emilio Colombo and his Soviet counterpart Andrey Gromyko held talks here today on bilateral relations and pressing international issues.

At a banquet in Colombo's honour, the two foreign ministers discussed the Madrid conference scheduled to open tomorrow.

A TASS report quoted Gromyko as saying, "Will it become a businesslike exercise based on the Helsinki final act or will it be reduced to a confrontation and futile polemics?

"To listen to some of the participants, one would get the impression they are going to Madrid only to organize there a kind of a verbal corrida."

He reaffirmed the Soviet stand, hoping that an agreement would be reached at Madrid to hold a conference on "military detente and disarmament in Europe."

Gromyko made the remarks evidently having in mind the fact that many delegates to the Madrid meeting had made clear their intention to discuss the Soviet invasion of Afghanistan in the light of the Helsinki final act.

Colombo said in his toast, "The cause of European peace and security is closely connected with that of world peace and security." He pointed out that for the statesmen of various countries, their very understanding of the gravity of the current international situation should once more drive them to analyse the present difficulties with a keen sense of responsibility and devote their efforts to the elimination of the hot-beds of conflicts.

The Italian foreign minister arrived here yesterday for an official visit to the country. A TASS dispatch from Rome on the eve of his visit said that "the bilateral relations between the two countries have been cold recently in the political as well as economic fields."

Informed sources said that the two ministers' talks were mainly related to economic and trade relations between the two countries. Their volume of trade is expected to reach three billion rubles this year.

ISLAMIC-ARAB PEOPLES' LEAGUE ASSEMBLY MEETS IN CAIRO

OW101901 Beijing XINHUA in English 1851 GMT 10 Nov 80

[Text] Cairo, November 10 (XINHUA)--Egyptian President Anwar al-Sadat opened here today the first session of the constituent assembly of the League of Islamic and Arab Peoples. The assembly undertakes the preparatory work for the league which was proclaimed to be established next December.

In his address to the assembly, Al-Sadat said that the aim of the League of Islamic and Arab Peoples is "to end rows in the Arab and Islamic world" and "to establish Islamic and Arab solidarity, particularly in the economic and social fields." "Popular cooperation does not exclude official cooperation," he added.

Al-Sadat said that Egypt was extending military, material and political assistance to Afghan fighters resisting the Soviet invasion of their country. He asserted Egypt's readiness to help any Arab or Islamic country subject to aggression.

It was announced that the league will inaugurate an office for the affairs of Afghanistan. It will also establish an office for Arab and Moslem expatriates in Egypt.

After Camp David accords, the Arab countries excluding Egypt decided to transfer the headquarters of the Arab league from Cairo to Tunis. But since then Egypt has maintained the organs of the Arab league here. Egyptian Deputy Premier and Foreign Minister Kamal Hasan 'Ali has proclaimed that the Arab league here will continue to function and that Sayed Nofal will supervise the league as secretary general in addition to his work as secretary general of the constituent assembly of the League of Islamic and Arab Peoples.

The president of the constituent assembly of the League of Islamic and Arab Peoples is Egyptian President Al-Sadat, as it was announced here earlier.

INTERNATIONAL AFFAIRS

DEMOCRATIC KAMPUCHEA URGES SRV TO WITHDRAW TROOPS

OW110848 Beijing XINHUA in English 0836 GMT 11 Nov 80

[Text] Beijing, November 11 (XINHUA)--"The key to a solution of the Kampuchean problem is for Hanoi to withdraw all its troops from Kampuchea," said a statement issued by the Foreign Ministry of Democratic Kampuchea on November 8, Radio Democratic Kampuchea broadcast today.

The statement says that Vietnam must withdraw all its troops from Kampuchea in the interest of the survival of the Kampuchean nation, the independence of Kampuchea, the preservation of peace, stability and tranquility in Southeast Asia and the founding of a zone of peace, freedom and neutrality in the region.

It says that the 35th U.N. General Assembly adopted by an overwhelming majority, a resolution drafted by ASEAN and other states, urging Vietnam to implement the resolution of the 34th U.N. General Assembly to withdraw all its troops from Kampuchea and proposing an international conference to discuss a solution to the Kampuchean problem. This is the common aspiration of countries in the world who love peace and uphold justice.

However, the statement adds, the Hanoi authorities have obdurately refused to carry out the U.N. resolution in defiance of the strong demand of the international community. Militarily, Vietnam has continued sending troops to Kampuchea. And the Soviet Union has been supplying weapons and equipment to it to continue the war of aggression against Kampuchea, posing a threat to Thailand and other ASEAN countries. Politically, Vietnam is attempting to hold an "election" under the bayonets of 250,000 Vietnamese troops so as to legalize its rule in Phnom Penh. Diplomatically, Vietnam has been manoeuvring to have the international community recognize its occupation of Kampuchea, as an accomplished fact.

The statement says the Government of Democratic Kampuchea and the patriotic and democratic front of the Great National Union of Kampuchea are convinced that the peace loving and justice upholding countries and people of the world will continue to give political, diplomatic, moral and material support for the Kampuchean people's just cause. The Kampuchean people will surmount difficulties at any cost and continue to fight for the salvation of the motherland and for thwarting the Vietnamese-Soviet aggression and expansion in the region.

POLAND'S POLITBURO WELCOMES SUPREME COURT RULING

OW120818 Beijing XINHUA in English 0806 GMT 12 Nov 80

[Text] Warsaw, November 11 (XINHUA)--The ruling of the supreme court on an appeal by the "Solidarity" Trade Union against the amendment of its charter imposed by a lower court is "a victory of common sense, a victory of the spirit of agreement." This was declared by Andrzej Werblan, politburo member and secretary of the Central Committee of the Polish United Workers' Party, when he briefed newsmen about today's politburo meeting which was devoted to a discussion of the domestic situation.

Verblan added that "this (the ruling) shows that the government is willing to put into effect all the social agreements it has signed."

The meeting noted, he said, that the ruling has ended the dispute over the role and status of the new trade unions in a socialist state. Thereafter the independent "Solidarity" Trade Unions will "smoothly join in seeking a constructive solution to the difficult problems facing the country."

The politburo also stressed, he said, "The need to cooperate with the new unions, and asks the party organs and branches as well as government organs to help the new trade unions in their activities."

On the same day, Vice-Premier Aleksander Kopec said at a press conference that what was most needed today was for every one to do his duty. "We can no longer allow further decline in production, or any extra wage increases," he said.

He hoped that the final solution of the "Solidarity" problem should have some effect on the relaxation of social tension and the creation of a peaceful working atmosphere.

After talking about the country's economic difficulties, he said that at present the government should focus its attention on three points: one, negotiate with the workers at places where tension and conflicts still exist; two, readjust the present economic tasks; three, draw up principles guiding the functioning of the economy in the future. He said that the government deems it important to improve market supply by cutting down investments by 100 billion zlotys.

POLAND'S KANIA AFFIRMS PARTY ROLE IN TRADE UNIONS

OW081634 Beijing XINHUA in English 1611 GMT 8 Nov 80

[Text] Warsaw, November 8 (XINHUA)--"Today one has to say--there are borders which no one can cross. Everybody who hits at socialism hits at the independent existence of the nation," said Stanislaw Kania, first secretary of the Central Committee of Polish United Workers' Party, in his speech to local party secretaries of plants and workshops in Krakow on November 5.

In his speech telecast nation-wide on November 6, Kania said there are some elements who seek permanent political tension and even destruction of the national economic system. "The whole world could see that we have acted peacefully and that only political methods were used, but one should say loudly today that nowadays there are boundaries that cannot be crossed," he stressed.

"Everyone who strikes at socialism strikes at the independent existence of the nation," Kania said. "That is why we shall defend socialism in the same way as it is necessary to defend the independence of the country."

Affirming the leading role of the party, Kania said neither the workers nor the government wanted to create an organization "which would have ambiguous relations toward the system in our country."

Kania said the Polish United Workers' Party and government agreed to allow creation of Solidarnosc (Solidarity), an independent trade union coalition, because a "major part of the working class wanted it and secondly because already when the demand was put forward the socialist character of the organization was unambiguously determined." "These are two inseparable prerequisites and one cannot function without the other," he added.

He said to "outdistance" itself from the socialist character of the union would be harmful to Solidarnosc.

The independent trade union "Solidarity" will launch a new, phased nation-wide strike next week, if their demand that the key phrase reaffirming the role of the party in the trade union is not removed from their charter.

BRIEFS

PHNOM PENH RELIEF--Bangkok, Nov 6 (XINHUA)--Air and sea transport of supplies to Vietnam-occupied Phnom Penh and Kompong Som via Bangkok by international relief organizations will be placed under stricter control of the Thai authorities, according to today's "BANGKOK POST" quoting Prasong Sunsiri, secretary-general of the National Security Council of Thailand, yesterday. He said the new measures were announced to the representatives of the UNICEF, the International Committee of Red Cross, World Food Programme, UNHCR and the Food and Agriculture Organization at a special meeting at Government House. The secretary general said any international agency which henceforth wants to carry out an air or sea lift from Bangkok to Phnom Penh or Kompong Som must notify the Thai authorities two weeks in advance of the transport date. Often in the past, Thai officials were informed only a day or two in advance and the relief supplies transported to Kampuchea were not properly checked due to the time limit. Outsiders who are not staff members of the relief agencies would not be allowed on trips to Kampuchea. All aid materials must be clearly declared, Prasong added. [Text] [OW060748 Beijing XINHUA in English 0732 GMT 6 Nov 80]

THAI TALKS COMMENTS--Bangkok, Nov 7 (XINHUA)--"The next step of ASEAN after its victory in the United Nations is, I think, to carry into practice the guidelines we have achieved in the U.N. resolution. We must abide by them," Malaysian Foreign Minister Tengku Rithauddeen told XINHUA at the airport here this afternoon before his departure for home. The Malaysian foreign minister arrived here yesterday afternoon. He held talks with Thai Prime Minister Prem Tinsulanon and Foreign Minister Sitthi Sawetsila on the results of Prem's visit to China and some international problems, the Kampuchean problem in particular. In reply to a question, he said at the press conference this afternoon: "The presence of a Soviet aircraft-carrier and other warships in the Gulf of Thailand has caused some concern to the countries in the region. As for the cruising of the Soviet fleet through the Straits of Malacca, as you know, we are always concerned about this." He briefed the conference: "My discussions with the Thai prime minister and foreign minister are very good and fruitful. Their perceptions of the international situation, especially the situation in the region and the Kampuchean problem, are very important." "The Thai prime minister has renewed his invitation to my prime minister to visit Thailand. My prime minister has accepted his invitation. We hoped that the two prime ministers will meet here next month," Rithauddeen stated. [Text] [OW071310 Beijing XINHUA in English 1230 GMT 7 Nov 80]

REFUGEES FLEE VIETNAM, LAOS--Beijing, Nov 7 (XINHUA)--The number of Vietnamese refugees who have arrived in other Asian nations has been tripled from 2,557 in

September to 8,180 in October, according to an AFP report today. A spokesman for the United Nations High Commissioner for Refugees in Bangkok was quoted as saying that the influx last month affected many countries and regions in Asia with Indonesia holding 2,088 new arrivals, followed by Malaysia with 2,046. A total of 1,583 boat refugees have arrived in Thailand, 978 in Singapore and 963 in the Philippines. Meanwhile, according to the reports, the number of Lao refugees crossing over Thailand's northern border also increased from 1,708 in September to 3,178 last month. The upsurge in Laotians fleeing their country followed in the wake of a wave of arrests early last month involving some 500 officials and students suspected of being opposed to the pro-Vietnamese regime in Vientiane. [Text] [OW071734 Beijing XINHUA in English 1505 GMT 7 Nov 80]

NEW STRATEGY SUGGESTED--Ottawa, Nov 7 (XINHUA)--The chairman of NATO's military committee suggested in Toronto yesterday that the existing strategy of flexible response to an enemy attack be substituted by a new strategy of "equivalent response." Speaking at the Empire Club of Canada, Admiral Robert Falls pointed out that NATO's defense strategy was oriented towards a flexible response to an attack. It requires the use of conventional forces before the use of nuclear weapons. He said he thought that this might be abandoned in favor of a new "equivalent response" strategy. "I believe it would be criminal, indeed, to put the heritage of generations of Europeans and North Americans in danger of destruction because we don't like the thought of war or because nuclear weapons, quite naturally, frighten us, or purely and simply because we want to gamble the pleasures of current consumption against the risk of war," he emphasized. He voiced his concern at the continued Soviet military buildup. "The Soviet leadership," he said, "seems to be ready to spend as much as they think necessary to improve every facet of their ability to wage a war. As a result, we can no longer rely upon our historic, almost taken-for-granted ability to remain qualitatively ahead of a numerically superior opponent." He told his audience, "We have something worth defending and we have the means to do it. It seems to me that it would be criminally short-sighted to risk the survival of the Western world for the relatively marginal cost of the defense insurance premium." [Text] [OW080114 Beijing XINHUA in English 0102 GMT 8 Nov 80]

SECURITY DANGER--Bangkok, Nov 7 (XINHUA)--Soem An Nakhon, deputy prime minister and supreme commander of the armed forces of Thailand, warned the nation today that the situation along the eastern border endangered the security and stability of the country. Speaking at a ceremony of issuing insignia to the full colonels of the three services here this afternoon, he urged the armed force to follow the developments of this situation closely and close their ranks, increase the unity among themselves and their cooperation with government departments and the entire people. Answering a question put to him by newsmen after the ceremony, he said that the Kampuchean problem can be solved properly "only when all foreign troops have been withdrawn from that country." [Text] [OW080117 Beijing XINHUA in English 0107 GMT 8 Nov 80]

YUGOSLAVIA VISIT ENDED--Belgrade, Nov 7 (XINHUA)--Resort to force in international relations and interference in various forms in the internal affairs of other countries are threatening the process of detente, peace and security throughout the world, states a joint communique made public at the end of Greek President Konstandinos Karamanlis' three-day official visit to this country here today. The two sides expressed their hope that the Madrid Conference would be held in a constructive spirit and achieve positive results, so as to help strengthen detente in Europe, it says. Referring to the situation in the Balkan region and the promotion of cooperation among the Balkan states, they believed that good-neighbourly relations, mutual understanding and friendly relations were in the interest of the people in this region and helpful to the establishment of security and cooperation in Europe according to the spirit of the Helsinki Final Act, the communique notes. The presidents of the two countries also expressed their apprehension over the Iraq-Iran armed conflict. They urged the two countries to end and settle the conflict in keeping with the U.N. charter and through peaceful means. They held that the non-aligned movement has played an important role in international relations and made contribution in solving international problems, it points out. The two presidents reiterated their readiness to strive for cooperation in all fields, the communique declares. [Text] [OW080715 Beijing XINHUA in English 0703 GMT 8 Nov 80]

GUERRILLAS SEIZE VIETNAMESE STRONGHOLD--Beijing, Nov 8 (XINHUA)--A Vietnamese stronghold in Ta Sanh, east of Samlot District, Batdambang Province, was captured on November 3 by the Kampuchean national army and guerrillas, according to a broadcast of Radio Democratic Kampuchea monitored here today. Since October 21, it said, the national army and guerrillas had invested the stronghold which was guarded by a Vietnamese battalion and seized it after bombarding the enemy with rockets and mortars. They killed 42 Vietnamese troops, wounded many others, destroyed a number of guns and other military materials. The remainders fled to the town of Samlot. Vietnamese troops in Samlot were panic-stricken, after the fall of the Ta Sanh stronghold. Earlier, the radio reported that the Kampucheans attacked a Vietnamese camp site south of Highway Number Five in Sisophon District of Batdambang Province on the morning of October 25, killing or wounding about 100 enemy men and destroying five military installations and a barracks. The following day they ambushed a Vietnamese transport company near Chathnaol River, north of Kirivongs Village in Kaoh Kong Province, killing 45 Vietnamese troops, including a company officer. On October 24, the Kampucheans assaulted an enemy stronghold in Choam Khsant District of Preah Vihear Province, killing or wounding 34 enemy men and destroying an ammunition depot. [Text] [OW080800 Beijing XINHUA in English 0723 GMT 8 Nov 80]

WARNING OF SRV INTENTIONS--Bangkok, Nov 8 (XINHUA)--Vietnamese troops in Kampuchea have been sending reinforcements to the Kampuchean-Thai border area from Ubon to Trat Province and moving their heavy artillery pieces to positions nearer to Thai territory, said Lt. General Som Kataphan, director of the information office of the supreme command of the Thai armed forces yesterday. Briefing a reporter of the THAI FRONTLINE DAILY on the situation in the Thai-Kampuchean border area, Som Kataphan said the Thai military quarters learnt that the Heng Samrin Regime had posted a notice calling upon the Kampuchean residents in Siemreap, Sisophon and Nimit areas to dig shelters against the so-called Khmer Rouge air raids. This is incredible because the armed forces of Democratic Kampuchea have no aircraft. It is a Vietnamese pretext for launching new military operations, he pointed out. "I think," he said, "it is most likely that the Vietnamese troops will renew their invasion of Thailand." "The Thai armed forces cannot afford to be off their guard and must be ready at all times to repulse the invaders." [Text] [OW081226 Beijing XINHUA in English 1213 GMT 8 Nov 80]

MALARIA CONTROL CONFERENCE--Manila, Nov 8 (XINHUA)--The number of malaria cases has sharply declined from 7.296 million in 1976 to 3.192 million last year in Asia

(China excluded). This was emphasized in the 7th Asian Malaria Control Conference which closed here today. 85 people from 27 countries in the West Pacific, Southeast Asia and the East Mediterranean region attended the conference. According to data released by the conference, anti-malaria activities in India and Sri Lanka were remarkable. In India, 6.4 million malaria incidents were recorded in 1976, but 2.8 million cases reportedly took place last year after the Indian government set up drug distribution centers and fever treatment depots nationwide. In Sri Lanka, 400,000 cases of confirmed malaria were reported in 1975, but the intensified anti-malaria campaign reduced the figure to 48,000 last year. Professor Huang Senqi from China presented a report to the conference on the present status of malaria control in China. Outlining the future work in malaria control, the conference recommended the malaria-affected states to consider malaria-control activities as an important aspect in primary health care, continue to train professionals and community workers, and strengthen study and research work. [Text] [OW081726 Beijing XINHUA in English 1515 GMT 8 Nov 80]

FOREIGN INTERVENTION--Dakar, Nov 7 (XINHUA)--Chadian Finance Minister Ahmat Mahamat Saleh appeals to all factions of Chad to settle their conflict by political means and prevent direct or indirect foreign intervention in Chad's affairs so as to realize unity and reconciliation among all patriotic forces for a united and prosperous Chad. Ahmat, who is on a visit to Senegal, made the appeal in an interview with the Senegalese newspaper "LE SOLEIL." The interview was published by the paper today. Ahmat, who is also commissioner of foreign relations of the Commandant Council of the Armed Forces of the North, also told a press conference here today that "3,000 Libyan regular troops have invaded Chad to occupy the country and install a puppet government there obedient to them in order to realise al-Qadhdhafi's dream of setting up a 'United States of Saheli'." He said that the Libyan invasion started on October 19. "We are fighting the Libyan occupation troops for the liberation and total independence of Chad and our struggle will continue until total victory," Ahmat stressed. Ahmat showed the press conference photos of Soviet-made surface-to-surface missiles and other weapons used by the Libyan forces and captured by the armed forces of the north on the Ndjamena battlefield on October 19, 20 and 21. [Text] [OW081720 Beijing XINHUA in English 1617 GMT 8 Nov 80]

NATIONAL CONSULTATIVE COUNCIL DISSOLVED--Kampala, Nov 8 (XINHUA)--The ruling military commission of Uganda announced unexpectedly in a statement today that as general elections had been set for December 10 this year, it decided to dissolve the National Consultative Council which served as the legislative body of the country. The council was formed in Moshi, Tanzania on the eve of the overthrow of Idi Amin's regime in March 1979. After the liberation of the country in the following month, it was expanded and officially started to function as the country's legislative body. But it broke down last September when its members from the Democratic Party and the Uganda Patriotic Movement, two of the four political parties in the country, walked out of its sessions in protest of the arbitrary takeover of the council's chairmanship by another political party, the Uganda People's Congress led by former President Obote. As the elections drew near and a number of important questions remained unsolved, the council was urged to resume its sessions as soon as possible. Two days ago, it was officially announced that the council would do so next week. Today's announcement of the dissolution of the council came as a surprise. Observers here believe that the military commission itself may take on the responsibilities of the council before the general elections. [Text] [OW081912 Beijing XINHUA in English 1900 GMT 8 Nov 80]

CALL TO OVERCOME PROBLEMS--Warsaw, Nov 8 (XINHUA)--Poland's Council of State passed a resolution Friday calling on the entire Polish people to make joint efforts, work in earnest and avoid new strikes so as to overcome the present difficulties. The Polist news agency PAP reported that the Council of State made the appeal after studying the uneasy social and economic situation in the country. The resolution says that "effective work should be accomplished again in every place and every post" and "every one should fulfill his task conscientiously." It says, "The Council of State is of the opinion that any disruption or stoppage of work would lead to growing tension and undermine the economy." The resolution calls on the government to listen to "the voice of criticism from the society" and to "get rid of waste and anarchism and to take urgent measures" in the fields of production and supply. The resolution also instructs the people's councils at various levels and its executive organs to "immediately take effective actions to normalize the social and economic life" and oppose "the undermining of order, authoritarianism and ignorance of the laws" and "bureaucracy." It was also reported that the National Consultative Committee of the Polish independent and self-governing "Solidarity" trade union had decided to meet in a plenary session in Warsaw Sunday to discuss Poland's domestic situation and tasks facing the independent trade union movement. [Text] [OW091214 Beijing XINHUA in English 1205 GMT 9 Nov 80]

NORTH-SOUTH DIALOGUE MEETING--Mexico City, Nov 8 (XINHUA)--The "North-South Dialogue," an international meeting on cooperation and development at head-of-state or chief-of-government level, is scheduled to be held here in early June next year. A decision to this effect, according to a communique issued by Mexico's foreign ministry today, was made at a meeting held in Vienna from November 7 to 8 attended by foreign ministers from 11 Asian, African, European and American countries. The communique says the foreign ministers held that "the question of cooperation and development cries out for urgent attention from the highest political level. The meeting will therefore be one of a political nature." According to the communique, the meeting will also be an unofficial one aiming to achieve "greater understanding" and deeper appreciation of such questions as "interdependence among nations." Mexican Foreign Secretary Jorge Castaneda and Austrian Chancellor Bruno Kreisky were quoted as telling the Spanish news agency EFE in Vienna that since the "North-South Dialogue" first started in Paris in 1977, there has been no satisfactory progress made. They said that their two countries hoped that the dialogue will be held in a creative and informal atmosphere and gain fresh impetus. The Mexican foreign secretary said that the transfer of capital and technology and issues concerning a new international economic order will figure at the scheduled "North-South Dialogue." [Text] [OW091252 Beijing XINHUA in English 1243 GMT 9 Nov 80]

UNHCR OFFICIAL INTERVIEWED--Lubumbashi, Nov 8 (XINHUA)--About 160,000 to 170,000 Zairians who lived in exile in Angola and Zambia since the two shaba wars have returned home since October 1978, said acting chief of the Office of the U.N. High Commissioner for Refugees (UNHCR) Thierno Mumarh Bah here today. In an interview with XINHUA, Mumarh Bah pointed out that with the help of the Zairian Government, UNHCR had set up reception centres in five places of Shaba Province to provide material and medical aid for the Zairians who wished to return home. The centres also provided them with farm implements and seeds. Mumarh Bah said that the settlement work has cost UNHCR between 16 million and 17 million U.S. dollars. [Text] [OW091716 Beijing XINHUA in English 1651 GMT 9 Nov 80]

REGIME AID SHOULD BE STOPPED--Bangkok, Nov 10 (XINHUA)--"No U.N. agency should give aid provided by U.N. members to the Heng Samrin regime," said the BANGKOK POST in an editorial today. The paper urged the international aid agencies concerned to stop any aid to the Heng Samrin regime in Phnom Penh. Explaining the reasons for its appeal, the paper added that "international aid agencies should first and foremost be reminded of the fact that the funds donated by United Nations members in response to ASEAN requests are meant to provide relief for Kampucheans refugees" and that "it is only those Kampucheans who have come to the Thai border that can be described as refugees requiring aid." "Any assistance turned over to a regime set up by foreign forces and maintained in power by them is not assistance to refugees but political support for the regime. The Heng Samrin regime has been installed by Vietnam and kept in authority in Phnom Penh by Vietnamese forces. As such, it has not been recognized by the United Nations which continues to regard Democratic Kampuchea as the legal representative of the Kampuchean people," the paper stressed. The paper added that however, certain officials of aid agencies have been doing all they can to get aid distributed only by the Heng Samrin regime and giving all sorts of reasons for doing so. [Text] [OW101212 Beijing XINHUA in English 1200 GMT 10 Nov 80]

UNITY OF SERVICEMEN--Bangkok, Nov 10 (XINHUA)--Thai Prime Minister Prem Tisulanon yesterday called on all servicemen to unite and resolutely defend the stability and security of the country, according to press reports here today. Speaking to reserves on his inspection tour of an infantry centre in Prachuab Province, south of Bangkok, where 5,000 reserves are reportedly on military training, Prem said: "A large number of foreign troops are now massed near our border line. They are superior to us in both number and equipment. In order to deal with them (their invasion), we must be prepared in both weapons and forces and never slacken our vigilance." Our servicemen and weapons are not enough, he said. From now on, we should further expand our forces, increase their equipment and intensify military training so as to raise the battle capability of the armed forces. [Text] [OW101553 Beijing XINHUA in English 1515 GMT 10 Nov 80]

TURKISH DOMESTIC SITUATION--Ankara, November 10 (XINHUA)--"Those who want to divide our nation will have to contend with the armed forces," said Turkish Prime Minister Bulent Ulusu in the city of Hakkari in eastern Turkey on November 8. He said this on the occasion of the inauguration of a TV transmitter in the city, which will enable the region to receive TV programs from Ankara. He also announced that economic plans are in preparation which will direct state investments to the underdeveloped regions of Turkey, namely the eastern region. "It is the target of the Government of Turkey to render the people in this area a happier and more prosperous society," he said. Stressing the national unity, the prime minister said in the neighbouring province of Van on the previous day: "We are the children of a nation that has fought together against the enemies of its integrity and has lived together through good and bad days." Hakkari and Van Provinces border Iran and Iraq. The Soviet Union has been a strong supporter of Kurdish separatist movements in the region. [Text] [OW101637 Beijing XINHUA in English 1619 GMT 10 Nov 80]

GUERRILLA FORCES CLASH--Salisbury, Nov 10 (XINHUA)--Clashes between ZANU armed forces of Prime Minister Robert Mugabe and ZAPU armed forces of Joshua Nkomo broke out again in Bulawayo, Zimbabwe's second biggest city, this morning, the Zimbabwe Broadcasting Corporation reported. The clashes between the guerrillas of ZANU and

ZAPU resumed at daybreak after a four-hour gun battle last night in the Bulawayo suburb of Entumbane where more than 3,000 of the former guerrillas are being accommodated on a housing estate. The clashes were stopped when guerrilla leaders and police arrived there. One man was killed and more than 30 were wounded. It is reported that as campaigning for local government elections later this month gathers momentum, a number of government ministers yesterday went to Bulawayo to attend a rally of ZANU supporters, during which clashes occured between the two factions. [Text] [OW101847 Beijing XINHUA in English 1841 GMT 10 Nov 80]

BANGLADESH PAPER COMMENT--Dacca, Nov 10 (XINHUA)--"Today, of the two imperialist superpowers, the Soviet Union is more ferocious, more reckless, and more treacherous. It is the most dangerous source of world war," pointed out the Bangladesh weekly "HOLIDAY" in an article yesterday. The article said that the growing expansionist and hegemonic power, social-imperialism, is sparing no effort to carry out its expansion and infiltration everywhere. She has already spread its poisonous tentacles far and wide into Kampuchea, Afghanistan and some African states, it added. The article continued: "Hanoi wants to fulfill its cause of creating an Indochina federation and domination of the Southeast Asia. Moscow for its part, plans to take advantage of Hanoi's ambitions in order to complete its own strategic deployment for hegemony over the Southeast Asia and Pacific. This is why Viet Nam has become a willing pawn of the Soviet social-imperialism and a second Cuba." It added: "The Soviet occupation of Afghanistan is a major move by Moscow to reach warm waters and bring its armed forces nearer to the oil producing Gulf area. It has therefore been widely predicted that after the occupation of Afghanistan, the next objective of the Soviet Union is to expand into Pakistan and Iran as a springboard to advance on the Middle East and the Persian Gulf." The article called on the countries upholding international justice to give political, moral and material support to the peoples of Afghanistan and Kampuchea so as to frustrate the evil schemes of the Soviet Union and Viet Nam. [Text] [OW101854 Beijing XINHUA in English 1846 GMT 10 Nov 80]

LABOR PARTY SELECTS LEADER--London, Nov 10 (XINHUA)--Michael Foot became the new leader of the British Labour Party today after winning 139 votes from the party's 268 members of Parliament in the second round of a tussle for the top post of the party. His rival Denis Healey, former chancellor of the exchequer, got 129 votes. The voting brought to an end, at least for the time being, to the Labour Party's leadership crisis which erupted following the resignation of former Prime Minister James Callaghan last month. But doubts remain whether the victory of Michael Foot will help pull together the different factions of the party which have been fiercely wrangling over a number of major issues after the party lost the general election in May last year. Denis Healey was regarded as the favourite of the moderates in the party, who dislike Michael Foot's opposition to the European Economic Community and his support for unilateral nuclear disarmament. Michael Foot's election as party leader will have to be confirmed by the electoral college after the party's special conference next January finalizes its composition. But even if the left wing of the party is satisfied with this result, it is not yet clear whether the moderates will be reconciled to their defeat. Some of them have threatened to break away and form a new party if they see the change of leadership marks an end to their control on party policies. Therefore the most difficult task which lies ahead for Michael Foot is how to alleviate the increasingly sharp contradictions within the party and bring about peace and unity. THATCHER WARNS USSR--London, Nov 10 (XINHUA)--British Prime Minister Margaret Thatcher tonight accused the Soviet Union of exploiting instability in the world to "gain influence," and warned it against "playing with fire." Speaking at the annual banquet of the lord mayor of the city of London, she said, "Day by day we are witnessing the direct use of Soviet arms to impose the puppet regime on the brave Afghan people." Referring to the international situation, Mrs. Thatcher noted: "We are now in a much more uncertain era." "There are a number of things that we can do together with our partners in the European community, in NATO and with our friends elsewhere. Together we must make a great effort to cooperate closely in dealing with the present problems. If we simply wait until things happen we shall be too late. With our allies we must be able to assist our friends when they are threatened. We must be seen as reliable partners when help is needed," she stressed. Mrs. Thatcher took the opportunity to "welcome what Governor Reagan has said about a need for a confident and powerful alliance." She said she looked forward to working with the American president-elect. On domestic issues, Mrs. Thatcher restated her determination to pursue the government's present economic policies. [Text] [OW110710 Beijing XINHUA in English 0700 GMT 11 Nov 80]

UNCA URGES IMPROVEMENT--United Nations, Nov 10 (XINHUA)--The United Nations General Assembly today decided to proclaim the period 1981-1990 as the International Drinking Water Supply and Sanitation Decade, during which member states will assume a commitment to bring about a substantial improvement in the standards and levels of services in drinking water supply and sanitation by the year 1990. The resolution adopted by the assembly tonight "calls upon governments, organs, organizations and bodies of the United Nations system and other intergovernmental and nongovernmental organizations concerned to continue and, if possible, to increase their technical and financial cooperation to developing countries in order to enable them to attain the targets they have set, and to continue also their efforts to coordinate their activities so as to maximize the impact of their assistance to developing countries." According to a survey by the World Health Organization (WHO), three out of five people in the developing countries currently do not have access to safe drinking water and three out of four people have inadequate sanitation. The situation in the rural areas is even worse. Only 29 percent of the population in the rural area of the developing countries have some forms of safe drinking water services and only 13 percent of rural population receive adequate sanitation services. No less than 80 percent of all diseases in the developing world is related to poor water supply and inadequate sanitation. A report of the U.N. secretary general estimates that some 2.5 billion people must receive water and/or sanitation services during the next decade. DEMOCRATIC KAMPUCHEAN FORCES VICTORIES--Beijing, Nov 11 (XINHUA)--The Kampuchean national army and guerrillas won victories when they attacked Vietnamese aggressors in Battambang and Koh Kong Province early this month, according to Radio Democratic Kampuchea. The patriotic Kampuchean forces captured some Vietnamese strongholds in Samlot District of Battambang Province from late October to early this month. They wiped out more than 300 Vietnamese troops. On November 3 and 4 the Kampuchean national army and guerrillas launched attacks on Vietnamese invaders in Koh Po, Kot Russei, Ta Man Leu, Ta Man Kram and Prolean areas in Koh Kong Province. They wiped out 100 Vietnamese troops and seized a quantity of weapons. [Text] [OW111210 Beijing XINHUA in English 1202 GMT 11 Nov 80]

TROUPE CONCLUDES TOUR--Zurich, Nov 12 (XINHUA)--The "Tea House" performing troupe of the Beijing People's Art Theater left here for home this morning after giving two performances in Zurich. During their 50-day performance tour in 15 cities of West Germany, France and Switzerland, the Chinese dramatic artists presented a total of 24 performances of the play, "Tea House," a master-piece of the late famous Chinese writer Lao Shi. A spokesman of the Beijing People's Art Theater estimated that approximately 20,000 West European spectators watched the performances with keen interest. With their excellent performance, the Chinese artists introduced the modern Chinese dramatic art to the West European public for the first time since the founding of the People's China in 1949. The play "Tea House" unfolded before the West European audiences a vivid picture of the decadent semi-feudal and semi-colonial China before the birth of the People's Republic. Before his departure from Zurich for home, the director of the play "Tea House" and head of the performing troupe, Xia Chun, told XINHUA, "We have achieved unexpected successes in this performance tour of Western Europe." A famous West German actor commented that "Tea House" is a realist play rich in Chinese characters. The director of a West German theater praised the performances as of 'the first rate level in the world'." "Our performance tour to the three West European countries," Xia Chun said, "has played the way for further introduction of the Chinese dramatic art to foreign countries." ZIMBABWE SITUATION NORMAL--Salisbury, Nov 12 (XINHUA)--The situation in Bulawayo's Township of Entumbane has returned to normal after warring ex-guerrillas loyal to Prime Minister Robert Mugabe and those loyal to Home Affairs Minister Joshua Nkomo agreed to stop their two-day gunbattles. According to the paper "HERALD" today, the fighting which started last Sunday finally ended yesterday when scores of heavily armed guerrillas went back to their bases and the township residents returned to their homes in response to the call by the authorities. Sources said that on Monday night, guerrilla camps were visited by Brigadier Mike Shute, commander of the first brigade, Dumiso Debangwa, head of the ZIPRA (Zimbabwe People's Revolutionary Army) and Rex Chongo, chief of the ZANLA (Zimbabwe African National Liberation Army). As a result, ex-guerrillas agreed to hand over their heavy weapons. Yesterday afternoon, hundreds of police and national army men in armoured troop-carrying vehicles moved into the encampments to collect mortars, machineguns and rocket launchers handed over by former guerrillas, who are now armed with their personal arms only, the sources added. Gunbattles and rioting in Bulawayo, the second largest city in the country, have left 43 dead and around 400 injured. Most of them were civilians. FRANCE'S ARMISTICE DAY--Paris, Nov 11 (XINHUA)--The Armistice day which brought to an end the First World War of 1914-18 was marked in France today. Celebrations in this capital were held this morning at the Arc de Triomphe and the Champs Elysees with President Giscard d'Estaing reviewing contingents of the three armed forces and from military schools. Later, the president laid a sheaf of flowers at the Tomb of the Unknown Heroes under the Arc de Triomphe. In the afternoon, the president hosted a lunch at the Hotel des Invalides for 1,500 veteran soldiers. In a speech after the lunch, he appealed for "unity of the republic and solidarity of the French" to overcome and prevail over the present economic crisis. He said, "As in our past fight, we know that we have to depend on ourselves, and ourselves only, to resolve our problems. We cannot look to others, friends or foes who are confronted with the same difficulties, for miraculous solutions." French Prime Minister Raymond Barre attended a mass at the l'Eglise de Saint-Louis des Invalides this morning in memory of those who fell in past wars. In the afternoon, the prime minister attended a celebration held at Compiegne where the 1918 Armistice Agreement was signed in a railway carriage. CARRINGTON STAYS IN EEC--London, Nov 12 (XINHUA)--The British Government remains "entirely steadfast" to its policy of making a success of the country's membership in the European Economic Community and staying in the EEC is the only option for Britain, Foreign Secretary Lord Carrington declared today. Speaking at a dinner of the Scotland in Europe Organization in Edinburgh tonight, Lord Carrington said that the government was mounting a "hearts and minds" campaign to convince the British people that membership in the EEC was good for them. Referring to a resolution of the Labour Party Conference last month that Britain would withdraw from the EEC when labour returned to power, Lord Carrington noted that the strength of response to the possibility of Britain's withdrawal demonstrated that Britain's place in Europe was seen "by the majority of responsible opinion in this country as a fact of life to which there exists no real alternative." It would be quite wrong to suppose that the clamour raised by the dissent reflects any wavering of purpose in the government's own policy which remains entirely steadfast, he stressed. [Text] [OW130716 Beijing XINHUA in English 0705 GMT 13 Nov 80]

MINISTER ON KAMPUCHEAN SITUATION--Beijing, Nov 13 (XINHUA)--Australia had no intention of recognizing the Vietnamese-backed Heng Samrin government in Phnom Penh, Australian Foreign Minister Anthony Street said in Kuala Lumpur yesterday, according to reports received here. Street made the remark at a press conference after concluding a three-day visit to Malaysia. He said Australia would act in consort with her friends and co-sponsors of the United Nations resolution on Kampuchea to help speed up a political solution to the Indochina conflict. Those countries that support the U.N. resolution on Kampuchea must continue their cooperation, he added. Australia, he said, like the ASEAN countries, wished to see the early implementation of the two essential elements in the resolution--withdrawal of Vietnamese troops and self-determination for the people of Kampuchea to decide their future. During his stay in Malaysia, the Australian foreign minister met Malaysian Prime Minister Datuk Hussein Onn and Foreign Minister Ahmad Rithauddeen. They discussed bilateral relations, ASEAN-Australia relations, the Kampuchea problem and other matters. Street went to Jakarta last night after a brief stopover in Singapore to continue his ASEAN tour. [Text] [OW130736 Beijing XINHUA in English 0724 GMT 13 Nov 80]

U.S. MIDDLE EAST ROLE--Cairo, November 5 (XINHUA)--Egyptian President Anwar al-Sadat said today that the peace issue in the Middle East will always need a major U.S. role to yield fruitful results. He was commenting on the results of the U.S. presidential election at a ceremony here marking the agronomists' day. President Al-Sadat pointed out that his call for a tripartite Egyptian-Israeli-American summit on the Palestinian autonomy talks still stands after Ronald Reagan won the U.S. presidency. He will ask his foreign minister to contact the U.S. to ensure that the summit will be held as scheduled, he added. [Text] [OW060230 Beijing XINHUA in English 0225 GMT 6 Nov 80]

UN ACTION URGED--Islamabad, November 16 (XINHUA)--Zabihullah Mujahid, chairman of the Islamic Freedom Front of Afghanistan yesterday urged that the U.N. General Assembly take decisive and practical steps against the Soviet Union and the Soviet-installed Kabul regime. He said in a letter addressed to U.N. Secretary-General Kurt Waldheim that the representatives of Afghanistan should be expelled from the world body because the Karmal regime has no right to represent the people of that country. "The brutalities of the Russian troops in Afghanistan have exceeded all limits of international law and morality," he noted, adding that the Soviet Union has ignored the world-wide condemnation of its military intervention in Afghanistan. Although the freedom fighters have been divided into several groups, he pointed out, "we have only one cause and that is the independence of Afghanistan. We intend to rally the forces of freedom under one flag and intensify our struggle in the coming days." [Text] [OW161520 Beijing XINHUA in English 1510 GMT 16 Nov 80]

IRAQI OFFICIAL VISITS MOSCOW--Moscow, November 11 (XINHUA)--Nikolayevich Ponomarev, secretary of the Central Committee of the Communist Party of the Soviet Union, and Fedorovich Maltsev, first vice-minister of foreign affairs, today received the visiting Iraqi deputy prime minister, Tariq 'Aziz. According to TASS, the Iraqi deputy prime minister, who was paying a working visit to the Soviet Union, discussed with the Soviet leaders bilateral relations and the situation in the Middle East. This is Tariq 'Aziz' second trip to the Soviet Union since the war between Iraq and Iran broke out. His first visit was on September 22. [Text] [OW111924 Beijing XINHUA in English 1911 GMT 11 Nov 80]

KABUL PROVOCATIONS--United Nations, November 7 (XINHUA)--The Government of Pakistan today urged United Nations Secretary-General Kurt Waldheim to pay attention to "the serious escalation of provocative actions from the Afghanistan side along the Pakistan-Afghanistan border." In a letter addressed to the secretary-general this morning, Niaz A. Naik, permanent Pakistani representative to the U.N., said that his government, "which has maintained a policy of restraint towards a large number of the violations of Pakistan's airspace by aircraft with Afghan markings, is constrained to take grave view" of the recent armed attacks. Citing the details of the three recent armed raids, the letter says that these unprovoked raids "constitute a serious violation of Pakistan's territory." The Government of Pakistan sincerely hopes that these aggressive acts "would cease forthwith," the letter adds. The letter is circulated here as a document of the Security Council and of the General Assembly under agenda Item 116--"the situation in Afghanistan and its implications for international peace and security," which will be debated at the plenary meetings of the assembly in the middle of this month. [Text] [OW080130 Beijing XINHUA in English 0113 GMT 8 Nov 80]

HUSAYN VIEWS IRANIAN WAR--Baghdad, November 10 (XINHUA)--Iraqi President Saddam Husayn said here this evening that his country will continue to triumph over Iran if the war between the two countries drags on. Speaking at a press conference attended by foreign journalists, the president said that Iraqi forces will carry on the fighting against Iranian troops and make every effort to improve its military situation until Iraq's aims are realized. Although his country hopes to end the hostilities, he added, it has made preparations for a possible protracted war. He pointed out that his country wishes to see stability in the sensitive Gulf area. He said that Iraq is economically strong. Although it is engaged in war with Iran, its economic development plans are being implemented as usual. In answer to a question about Iraq's oil export, the president said that his country will restart oil export soon after technical improvement is made. Asked whether the Soviet Union has fulfilled the Iraqi-Soviet treaty of friendship and cooperation, he said that Iraqi-Soviet official cooperation affects not only military, but also political, economic and cultural fields. [Text] [OW111304 Beijing XINHUA in English 1250 GMT 11 Nov 80]

IRANIAN ON U.S. RELATIONS--Tehran, November 8 (XINHUA)--"It is up to Mr. Reagan to ponder what kind of relations he will establish with us," said Iranian Prime Minister Mohammad 'Ali Raja'i, according to KEYHAN today. Raja'i, on an inspection tour in Khorramabad, told local reporters yesterday that "the hostages issue is an easy matter, the Majlis has made a decision, the government is obliged to carry out this decision." "The arrival of Reagan and the departure of Carter are the same to us," he said, "but I must repeat it is Reagan who must ponder in what manner the U.S. would treat Iran." [Text] [OW090306 Beijing XINHUA in English 0256 GMT 9 Nov 80]

BANI-SADR SUPPORTS FREE SPEECH--Tehran, November 8 (XINHUA)--"I cannot fight on two fronts, the military front against Iraqi aggressors and the psychological-political front opened by somebody in Tehran," said Iranian President Abolhasan Bani-Sadr in an interview with the newspaper "ISLAMIC REVOLUTION today. The president's statement followed the arrest yesterday of former Foreign Minister Sadeq Qotbzadeh, who criticized the lack of freedom of expression in Iranian press media. Bani-Sadr said that the Iranian revolution, even when at war, should not allow the "prohibition of freedom of speech." "I don't know what is the speech of Qotbzadeh, but what I know is that the revolutionary prosecutor of Tehran did not have the authority to judge," he said. "He must receive the complaints and examine them afterwards," he added, "otherwise, there will be just one authority, that of the revolutionary prosecutor of Tehran who will exercise judicial and executive power at the same time." "On TV and radio, there are other persons who produce broadcasts against the president, why not arrest them," he queried. [Text] [OW090731 Beijing XINHUA in English 0721 GMT 9 Nov 80]

U.S. MIDEAST ROLE--Cairo, November 8 (XINHUA)--Egyptian President Anwar al-Sadat and the visiting Israeli Labour Party leader Shimon Peres have agreed that the Camp David accords are the cornerstone of a comprehensive settlement in the Middle East, but they differed in some other points. President Al-Sadat told the press to this effect shortly after his meeting today with the Israeli Labour Party delegation which arrived here on November 6. Al-Sadat said, "We have had very constructive discussions of issues all over the area and in the whole world, especially after the change in the American Government." He went on to stress that "it will be difficult for us to reach a comprehensive settlement without the United States as a full partner." Vice-President of the Egyptian National Democratic Party Mustafa Khalil and Minister of State for Foreign Affairs Butrus Ghali yesterday had talks with the Israeli delegation which included former Israeli Foreign Minister Aba Eban and former chief of staff Hayim Barlev on the future of the Middle East and the question of Palestine. The Labour Party, which had long been in power in Israel, differed with the present Israeli Government in certain respects.

It holds that the issue of the West Bank of the Jordan River could be settled with Jordan while Israel should maintain some strongholds and settlements there. Like the Israeli Government, it stands opposed to the founding of an independent Palestinian state and for the annexation of the East Jerusalem. [Text] [OW090124 Beijing XINHUA in English 0101 GMT 9 Nov 80]

IRAN ACCEPTS UN REPRESENTATIVE--Tehran, November 11 (XINHUA)--Iran's Supreme Defence Council agreed at a meeting held in Khuzestan Province yesterday to a visit by a United Nations representative, the PARS News Agency reported today. Hojatoleslam 'Ali Khamene'i, representative of Iranian leader Khomeyni on the council, told PARS after the meeting that if the U.N. representative was sent to gather information on the position of Iran and the aggression of Iraq, there would be no objection to the visit. The council also decided to seek clarifications on a five-point proposal made by Cuban Foreign Minister Isidoro Malmierca to send a six-nation mission from the non-aligned countries to visit Tehran and Baghdad, PARS reported. "The proposal was somewhat unclear," Khamene'i noted, adding that it would have to be clarified before the Iranian Government could respond. [Text] [OW121230 Beijing XINHUA in English 1216 GMT 12 Nov 80]

IRANIAN TALKS WITH IRAQ--Tehran, November 11 (XINHUA)--Iranian President Abolhasan Bani-Sadr told journalists yesterday that "until we drive out the enemy from the borders, negotiation is meaningless and in fact the entertainment of negotiation under pressure and military invasion is, in my opinion, an anti-revolutionary act and a total negation of our revolution." He made the remarks at a press conference attended by local and foreign journalists in Dezful, Khuzistan Province. On Iraqi President Saddam Husayn's offer that if Iran honored the 1975 Algerian accord, Iraq will pull back its troops, President Bani-Sadr said: Let the Supreme Defence Council meet today and we shall announce our position regardint this suggestion." The TEHRAN TIMES today quoted Iranian Prime Minister Mohammed 'Ali Raja'i as saying: "Iran is willing for talks if Iraq pulls out fully." Questioned about the Iranian stand and chances of a two-way negotiation of the war, he said: "Yes, if Saddam returned to those previous territories and all Iraqi aggressive forces went out from the Iranian soil, we are also prepared to negotiate the aspects with a legitimate representative of the Iraqi people." [Text] [OW111905 Beijing XINHUA in English 1847 GMT 11 Nov 80]

IRANIAN ON U.S. HOSTAGES--Tehran, November 10 (XINHUA)--Iranian Majlis speaker Hashemi Rafsanjani reaffirmed today that "it is now up to the United States to prove to the world that it has been working for the release of the hostages," according to the PARS News Agency. In an interview with local and foreign reporters here today, he also declared that "I don't see any new developments" and that "the United States should not expect any new move from our side." Asked whether President Carter would be able to settle the issue of the hostages before leaving office, he replied, "I doubt if President Carter would be able to do anything significant in this regard without first winning the approval of the Republican Party in the United States. But if he wants, he can accept our terms very soon." Referring to the conditions for the release of the hostages, he said: "We have certain rights and as long as those rights have not been attained the hostages shall remain here. If it is proved to us that the United States is not willing to give us our rights, the hostages will be tried here." [Text] [OW110714 Beijing XINHUA in English 0705 GMT 11 Nov 80]

INDIAN OFFICIAL MEETS 'ARAFAT--Beirut, November 10 (XINHUA)--Chairman of the Executive Committee of the Palestine Liberation Organization (PLO) Yasir 'Arafat had discussions on the Iraq-Iran war with visiting Indian Foreign Minister Narasimha Rao here this morning. The Palestinian news agency, WAFA, reported they discussed the role of the non-aligned movement in working out a solution to the war and stressed the importance of the endeavours of the non-aligned bloc to end the bloodshed. They also discussed escalation of Israeli military provocation in southern Lebanon, the situation inside the occupied Palestinian territories and a number of other issues in the Middle East, WAFA added. The Indian foreign minister, who arrived here yesterday on a one-day visit, left for Kuwait in the afternoon after meeting Lebanese Foreign Minister Fu'ad Butrus. [Text] [OW110206 Beijing XINHUA in English 0130 GMT 11 Nov 80]

AFGHANI DIPLOMAT SEEKS ASYLUM--Islamabad, November 10 (XINHUA)--An Afghan diplomat in Pakistan has requested political asylum in Pakistan, according to a report in DAILY NEWS published in Karachi last night. The report said, Mohammad Rasul Khushi, a secretary in the Afghan consulate in Quetta, the capital of Baluchistan Province bordering Afghanistan, has sought permission to stay in Pakistan. Earlier a senior Afghan official of public work service came to Pakistan and also asked for political asylum. The report added that a number of employees of the Afghan consulate in Quetta have resigned their jobs. [Text] [OW101850 Beijing XINHUA in English 1844 GMT 10 Nov 80]

AFGHAN OFFICIALS LEAVING--Beijing, November 10 (XINHUA)--The United Nations High Commission for Refugees said in Islamabad yesterday that more high-ranking Afghan officials are leaving their country with their families in the hope of reaching the West, according to an AFP report. The Afghan officials told U.N. officials that they had hoped to wait for the Soviet troops to withdraw but they lost hope. Observers said that their sudden, clandestine departure has probably affected the operation of Kabul Government agencies. Afghan foreign trade director Mohammed Abdel, and national television director Saliuki Nurzai have left their country in secret. Others were the head of the water supply department, and the director of projects and coordination in the Planning Ministry. Three mathematics professors at the University of Kabul as well as the chief doctor and chief accountant at the Afghan Ariana Airline also left. [Text] [OW100826 Beijing XINHUA in English 0816 GMT 10 Nov 80]

INDIAN OFFICIAL ON USSR--Beijing, November 8 (XINHUA)--Indian opposition leader Subramaniam Swamy said Friday that the Soviet Union wants to provoke a new Indo-Pakistan War to base its problems in Afghanistan, according to an AP report from New Delhi. Swamy told a news conference that the Soviet Union has been pressing India to "open a front" on Pakistan's eastern border to "tie down Pakistan, and divide its attention so that the U.S.S.R. can, with ease, handle the Afghan Mujahideens (Moslem insurgents) operating from the Afghanistan-Pakistan border" on the west. Moscow wants such a diversion, he said, because "it is known that the U.S.S.R. is finding it difficult to retain its control and occupation of Afghanistan," Swamy said. He said that on his last visit to Pakistan he found that the people there want friendship with India and India should try to avoid a confrontation. [Text] [OW081306 Beijing XINHUA in English 1256 GMT 8 Nov 80]

USSR AFGHAN ANNEXATION PLAN--Islamabad, November 6 (XINHUA)--Russia was strongly warned today by editorials in Pakistani newspapers that any attempts to annex the Afghanistan Wakhan salient bordering Pakistan and China "would create grave regional and international problems for it." An editorial in the Urdu paper JANG says that Russia intends to annex this portion of Afghan territory into its own as a part of its expansionist drive. It warns that any attempt to alter recognised international boundaries by force is against the UN Charter and subject to challenge. The editorial emphasizes that the Wakhan Panhandle in Badakhshan Province northeast Afghanistan borders both Pakistan and China and is of strategic significance for Pakistan. An editorial in another Urdu paper NAWA-I-WAQT also emphasized the strategic importance of the area as it would give Russia direct access to the salients on Pakistan's northern border. [Text] [OW061820 Beijing XINHUA in English 1634 GMT 6 Nov 80]

QOTBZADEH RELEASED--Tehran, November 11 (XINHUA)--Former Iranian Foreign Minister Sadeq Qotbzadeh was released last night on the orders of Iranian leader Khomeyni, TEHRAN TIMES reports today. He was freed by the Islamic Revolutionary Court following appeals and protests from Majlis members and prominent political and religious figures. Qotbzadeh was arrested last Friday. [Text] [OW111204 Beijing XINHUA in English 1200 GMT 11 Nov 80]

PARTY AND STATE

PRC'S SLOGANS OF PAST 30 YEARS REVIEWED

Hong Kong QISHI NIANDAI [THE SEVENTIES] in Chinese No 9, 1 Sep 80 pp 46-47

[Article by Hong Shi [1738 1102]: "On 'Promoting What Is Proletarian and Liquidating What Is Bourgeois'"]

[Text] With civilization dating 5,000 years back, China is not only known for its civil and polite conversations and literary works full of unfathomable wisdom, but also renowned for its popular political slogans in the form of well-orchestrated verses and poems that can be easily remembered but hardly comprehended by the people. Although books were burned and scholars presecuted during the Great Cultural Revolution, stereotyped political phrases and terms were abundant in the form of eulogy, criticism, instructions from the highest authority and confessions from demons and monsters which seemed lending new lustre to the Chinese culture.

The most unpopular of all was a four-Chinese character slogan entitled "Attack by reasoning, defend by force," which cost countless people's lives and countless others disabled. The most soul-stirring of all was another four-character slogan: "Combat self-interest, criticize revisionism," which carried an uncontested power to criticize and condemn almost anyone and everyone, including the then chief of state. The most plausible of all was "Seek truth from facts" despite the fact that it was not even heeded by the Party Central Committee, which still wanted to conceal something from the people when Liu Shaoqi was rehabilitated. The most amazing of all was "Hold the key link in bringing everything else into line." What was the key link and what was everything else? The answer to this question varies from person to person. Since the people did not know what the key link means, how could they be expected to bring about the order across the land? These slogans have just disappeared as fast as they came. The current slogan "Look ahead" is still being promoted. But I do not want to talk about it. The most endurable of all was "Promote what is proletarian and liquidate what is bourgeois." This slogan appeared almost 30 years ago when Lin Biao called for giving prominence to politics. This slogan is still being promoted by the Chinese communist leadership, whose newspapers and journals recently denounced Lin Biao and the "gang of four" for distorting this "positive" slogan. Since they say so, I consider it absolutely necessary to discuss it at some length.

Early in 1966, the first full name chosen for the cultural revolution was the Great Socialist Cultural Revolution, and was later officially renamed the "Great Proletarian Cultural Revolution" by the 11th Plenary Session of the Eighth Party

Central Committee in a "16-point resolution." It was so named in order to give prominence to the spirit of "promoting what is proletarian, liquidating what is bourgeois." That cultural revolution that lasted 10 years was indeed a disaster or great tragedy which was unfolded in the name of "promote what is proletarian and liquidate what is bourgeois." Consequently, the proletariat was so vigorously promoted that it eventually entered the state organs, schools and scientific research departments until it could put everything under its command and exercise dictatorship over the superstructure and the ideological field in an all-round way. The liquidation of the bourgeoisie was even more thorough and effective. In the end, not only were the national capitalists badly beaten, arrested and murdered and their homes sacked, but also all small handicraft industrialists persecuted. Even worse was the fact that almost all old revolutionaries were accused of being capitalist roaders and unanimously thrown out of office; ordinary citizens were charged with being revisionists for trying to eke out a decent living; anyone who wanted to raise a few chickens or grow some onions and pepper in his private plot was subsequently condemned as a person with an intent to become a capitalist; animal excrement was confiscated for fear that someone might use it to grow something and turn himself capitalist; all educated people were condemned as bourgeois intellectuals and were thoroughly criticized and transformed into new persons; even those primary school pupils were accused of being obsessed with the bouregois world outlook and were forced to undergo reeducation. Eventually, capitalism gave way to feudalism, which converted the originally graceful People's Republic of China into a feudal-socialist state in which only one man ruled supreme. As a political bureau member, Jiang Qing was so shameless that she even dared to openly talk about empress at the Communist Party meetings. Do you think that she was the only one who was crazy at that time? Draw your own conclusion.

There are many lessons we can draw from that disastrous Cultural Revolution. A historical experience that first merits our attention is that in a country like ours where vestiges of feudalism remain evident, any attempt to overly criticize the so-called capitalism which has never had a chance to run its full course, or just repeat the feudalists' attacks on its bad effect on society will do our nation only harm, and will provide bad people with opportunities to concoct false charges against good ctiizens, bringing our country back to feudal days. In this connection, we must take this proverb from north China at face value: "Don't try to find bone in eggs." During the Cultural Revolution, many people in Communist China were falsely charged and unjustly sentenced to prison terms. This injustice not only angered the heaven but also was bitterly resented and hated by the people and countless victimized families. Is there any doubt that this was caused by that absolutely unnecessary campaign to "eliminate the bourgeoisie"? During the campaign to promote the proletariat, everyone knew that the workers propaganda team was nothing more than puppets of the PLA propaganda teams, although the Cultural Revolution professed to put the working class in command of everything. This is why even today the PLA propaganda teams are still stationed in various organizations under the pretext of supporting the left long after the workers propaganda teams were out of existence. As everyone knows, PLA soldiers mostly come from the countryside. In the years when they were put in command of everything under the pretext of promoting the proletariat, what they really promoted were only peasant mentality and privileges of feudal society. We must not forget that the malpractice in the form of back-door deals that still exist in our society originated from the PLA propaganda teams upon their entering various organizations in the name of supporting the left. In the language of Chinese communist writers and artists, promoting the proletariat is a synonym for promoting privileges. For example, the leading members of the so-called "proletarian headquarters" could enjoy unlimited privileges which were beyond the reach of the law; all other officials under its command were also granted privileges on the basis of their ranks; the citizens were also divided into various categories, with those of poor family origin enjoying more privileges than others, including a privilege to obtain pardons from the court once they were found guilty of crimes. This is why over 90 percent of juvenile delinquents in Chinese society today come from families listed under the "fifth red category."

Last year, RENMIN RIBAO carried an article profoundly convincing the people that the slogan "Promote what is proletarian, liquidate what is bourgeois" is a mistake. But a few months later, this slogan reappeared in that newspaper in order to curry favor with the high authorities. It was really a shame.

Theoretically, the proletariat and the bouregoisie are opposed and complimentary to each other. This means that neither can exist without the other. Recently, we have heard the Chinese communists proclaim that classes have ceased to exist in China, and capitalists and landlords have been transformed into self-reliant laborers. From this proclamation we can infer that in China today gone are not only class difference and divergencies between worker and peasants but also the proletariat itself as well, although the people there from all walks of life still feel free to pursue different trades. From this fact, we can also conclude that sending a large number of youths from cities to participate in agricultural production does not mean lowering their stature as members of the ruling class, since workers and peasants are now on an equal footing; although young workers now constitute a majority of the work force, their ideas should not be considered more advanced than others. This inference tells us that "Promote what is proletarian and liquidate what is bourgeois" is only an empty slogan which is out of fashion with reality.

From another theoretical point of view, we can also say that capitalist factors in China today still keep on playing a positive and negative role in its four modernizations. This is evident by the fact that the Chinese government has repeatedly reaffirmed its intention of maintaining the status quo of Hong Kong and Macao, along with a pledge not to change the social system of Taiwan, and a policy to import capitals from abroad, and encourage revolutionaries and patriotic bourgeois elements of Chinese origin living abroad to trace their roots to their motherland. How can China expect to "liquidate what is bourgeois" at a time when it strives to mobilize all positive capitalist factors to promote its four modernizations program?

Some people have mechanically identified capitalism as a system of the exploitation of man by man, and have used this as a criterion for distinguishing it from socialism. I consider this viewpoint untenable, because exploiters exist not only in capitalist communities but also in socialist societies as well. In the past, exploitation took the form of fixed interests that capitalists drew from their investments, while today, it takes the form of legal profits that foreign businessmen earn from their investments in China. Lin Biao's and the "gang of four's" squandering of public funds for their own comfortable life, the Party Central Committee member Wang Dongxing's construction of his own home at government expense, the abuse of privileges by ranking cadres to seek excess material comforts in violation of the principle of "To each according to his work" were actually acts of exploitation in different forms. During his lifetime, Marx could only predict a system of the means of production of public ownership. It was beyond his expectation that it was to be exploited by today's social imperialism. When the "gang of four" was toppled, one of its members Wang Hongwen was identified as a new-born bourgeois element, which was actually a misnomer because he was in fact a new-born feudal exploiter. In that capacity, he still could not compared favorably with the world's big capitalists although he wielded greater power than they did. Today, when we discuss the slogan "Promote what is proletarian and liquidate what is bourgeois," we must first make sure of what it really means, what deserves promotion and what merits liquidation. It is a shame to note that the people in China still do not know how to distinguish socialism from revisionism after spending 20 years combating the latter and 30 years building the former.

Marxism holds that man's social being determines his thinking. Why do the capitalist ideas merit elimination at a time when positive capitalist factors still have to be mobilized to serve the objective of the four modernizations? Many intellectuals were labeled the "stinking ninth category" when the "gang of four" were in power. Aware that they were as disgraced as ever in the wake of the downfall of the "gang of four," these intellectuals had no alternative but to leave the country for good. Since then they have become successful businessmen and capitalists. Today, when they return to China, they are respectfully treated as VIP's by the Chinese leaders and have ever since joined the united front. They have also been welcomed to invest their wealth in developing their motherland and to act as advisers for foreign trade. In other words, the more they invest, the higher the respect they can command. But their old colleagues at home still continue to criticize capitalism after receiving two disappointing recorded reports entitled "A visit to relatives in Hong Kong." During this period of reform, the slogan "Promote what is proletarian and liquidate what is bourgeois" is clearly out of touch with reality. By continuing to promote it, the Chinese communists may bring another epic ideological confusion to their country. I am also afraid that it may be distorted and used by the "leftists" as a weapon to stir up troubles again. During this trial period of reform, it is likely to find theory out of touch with reality. As China's leaders, they should foresee what bad effect their specific adminstrative and economic measures may have on thei country so that they can take action to forestall it. They must understand that ideological education alone cannot cure all social ills, although it may help; it is not in their national interests if they change policies from time to time. If they are not aware of this point, they certainly do not deserve to be called materialists. True, some propaganda slogans were very useful and effective during the war of resistance against Japan and liberation war. Nevertheless, they are no longer applicable to today's complicated political and economic life. A review of slogans that have appeared over the past 30 years reminds us that they are so numerous that they can be compiled into a huge dictionary as it was recently printed overseas. Most of them have produced no good results. This teaches us that ambiguous slogans should no longer be manufactured in the future: politics using empty slogans as a weapon should be discarded and replaced by firm and specific policies which will lead the people to increase their confidence in the government.

PARTY AND STATE

HUA GUOFENG'S ACCOMPLISHMENTS AS PREMIER APPRAISED

Hong Kong DONGXIANG [THE TREND] in Chinese No 24, 16 Sep 80 pp 12-13

[Article by Guan Ping [4619 1627]: "Hua Guofeng in the Past Four and a Half Years"]

[Text] Hua Guofeng began to serve as Premier of the State Council of China in April 1976; four and a half years later, he resigned from office at the recent Third Session of the Fifth National People's Congress and was succeeded by Zhao Ziyang.

It may be said that Hua Guofeng was given the appointment at a time of crisis. He stepped in the office of Premier when the gang of four was engaged in its fiercest activities to seize power. But as he resigns today, the political situation in China has become largely stabilized. From a certain angle, therefore, Hua Guofeng has been a transitional Premier.

When Hua Guofeng acceded to office, the people's initial impression was that he could not be readily trusted. Because he had had no conspicuous administrative achievements, his image, compared to that of his predecessor Zhou Enlai, was really rather dim. At the time, some even said that Hua Guofeng acceded to office merely because of Mao Zedong's statement of a few words, "With you in charge, I am at ease," so that he lacked any real talent or authentic learning.

Later, Deng Xiaoping was resurrected; people's opinions about Hua Guofeng further multiplied, saying that he enjoyed no real power. Did Hua Guofeng play any real role at all? From the political achievements of the past four and a half years, we can see that he has presided over sessions of the National People's Congress, plenary sessions of the Chinese Communist Party Congress and Central Committee, agricultural conferences, industrial conferences, and scientific conferences. He has visited West Europe and Japan and received countless foreign guests. In this series of activities, he basically demonstrated he was "neither exceptionally meritorious, nor much of a failure." This was not very easy, in view of the fact that China had undergone a 10-year catastrophe.

Foreigners' impressions and appraisal of Hua Guofeng are not too bad. Some appraisals suggested Hua Guofeng was a man of "sharp mind and high caliber"; the delegation of Japan's International Trade Promotion Association was of the impression that he "was steady and practical, and would achieve results even if he should serve as president of a large enterprise in a capitalist country." A leader of Japan's financial and economic circles, Doko, said: "Hua Guofeng is a man who speaks of no falsehood and is simple and forthright. One gets the impression that the two personalities of Mr Mao and Mr Zhou are combined in him...."

According to the impression of the delegation of the League of Diet Members for Sino-Japanese Friendship, Hua Guofeng was not very easy to deal with as its counterpart in the negotiations. He was rather slow when he first started to talk, but "when it came to the key points, he would sit erect and even raise his tone." At the meeting of Sino-Japanese chiefs of government last year, Huo Guofeng had no statistics at hand; nevertheless, during nearly an hour of discussion, he continued to cite specific production figures. This indicated that he was diligent in his study, serious, and prudent.

As a man, Hua Guofeng is humble and affable and very easy to get along with; he is very deferential toward the older generation. At meetings of the Chinese Communist Party, his attitude toward elders such as Chen Yun and Ye Jianying, and at meetings of the National People's Congress his attitude toward such elders as Guo Moruo, has always been one of utmost concern and care. This is a great characteristic of his personality. The fact that, as a 1938 cadre, he was able after the death of Mao Zedong to intervene between not a few pioneering elders and numerous generals and to continue to maintain his lofty status as party chairman apparently has a great deal to do with this personality.

Hua Guofeng's fortitude in discharging his duties can be seen from the process of his decisive smashing of the gang of four. The gang of four had boasted that they could instantly mobilize 300,000 armed militia from Shanghai. But when the problem of the gang of four was solved, there was no need to fire one single shot, and the gang of four was smashed forthwith. In this were exhibited Hua Guofeng's calm and decisiveness.

Hua Guofeng has a good grasp of his own character, and he also has a strong, principled personality. At the Third Plenum of the 11th Central Committee, he suggested that people not call him wise leader or propagandize on his personal behalf; they should instead propagandize on behalf of the older generation of revolutionaries and the masses of people. Later, when a farm in the vicinity of the capital put on exhibit the tea set he used during an inspection tour there, a student at the Central Party School wrote a letter criticizing him. He humbly accepted the criticism and designated Lin Hujia [2651 0039 0502] to send someone to take it away.

He has regularly maintained contact with the masses by making inspection visits to factories, mines, and the countryside. When he went to a people's commune for a visit during the lunar New Year period this year, he ate dumplings with the peasants.

Hua Guofeng absorbed a lesson from Mao Zedong, as he seldom appeared in public together with his wife. When reporters asked about his wife, he always simply replied: "This is a private matter...." This also won good feelings on the part of people across the country.

But, undeniably, Hua Guofeng seems to lack a certain sharpness and creative view. Some say that Hua Guofeng has seldom initiated any reforms but has mostly "followed the precedents of his predecessors." Of course, the background against which he acceded to office was not such a blessing to him. There were those within and outside the party who would simply not trust him. Under such circumstances, initiation of any reforms is bound to face encumberance, and everything would best depend on prudence. On the other hand, what cannot be overlooked is that, from the mid-1950's up to the Cultural Revolution period, Hua had been rising steadily under the influence of Mao Zedong's left line; this leftist tendency had taken up quite a proportion of his mentality, and hence it was not very easy for him to break away from this force of habit. Therefore, Hua Guofeng once had a "two whatevers" tendency. In his speeches there appeared language similar to that of the "whateverist faction." Fortunately, Hua seeks truth from facts; once he discovers mistakes, he is able to cope with them seriously. His "whatevers" tendency therefore is not fixed but is subject to continued change from higher to lower degrees.

Not long ago, when Hua Guofeng answered the questions of a correspondent of the Yugoslav newspaper VJESNIK, he pointed out Mao Zedong's mistakes. But it should be also noted that, compared with Deng Xiaoping's poignance, the degree of his criticism of Mao falls considerably short. This difference between them probably lies in the fact that the period of his contact with Mao Zedong was far shorter than that of Deng Xiaoping and, especially around the time of the Cultural Revolution, Hua Guofeng was not necessarily with Mao. The reservation Hua Guofeng has demonstrated before he was in control of sufficient facts is understandable.

Hua Guofeng has departed from office.

Some say that the impact of Hua Guofeng as a transitional Premier during the past four and a half years has been rather small; nor has the astonishment about his resignation been very great. True, the takeover from Hua by Zhao has not really produced much astonishment, but whether or not the impact of the Hua regime has been great is probably something that cannot be seen until a longer period of time has elapsed. In the meantime, as party chairman, Hua Guofeng will, I believe, continue to develop his influence. People might as well wait and see.

PURGE FEUDAL INFLUENCE TO RECTIFY THE IDEOLOGICAL LINE

Shanghai JIEFANG RIBAO in Chinese 31 Aug 80 p 4

[Article by Feng Qishun [7458 0366 5293] and Qiu Shaoquan [6726 1421 0356]: "Rectify the Ideological Line and Eliminate the Pernicious Influence of Feudalism"]

[Text] The discussion on the criterion of truth smashed Lin Biao and the "gang of four's" idealist metaphysical ideological line, emancipated people's mind and laid a firm theoretical foundation for the dialectic materialist line reaffirmed by the party's Third Plenary Session. Today, the situation of implementing the party's ideological line is naturally much better than before.

However, the issue of ideological lines is not only a theoretical one, and the emergence of erroneous lines is not only due to theoretical reasons. What is even more important are the ideological and social roots. The party's improper ideological line after 1965, especially the long rampage of Lin Biao and the "gang of four's" ideological line in the 10 years of disaster, was not limited to theoretical reasons. Starting from reality in everything, linking theory with practice, seeking the truth from the facts , and testing and developing truth through practice, our party's ideological line is the fundamental principle of dialectic materialist epistemology. Ours is a political party with a high degree of Marxist theoretical training. To say that the basic knowledge of dialectic materialist epistemology was confused due to only theoretical reasons does not make sense. Similarly, since the Third Plenary Session, after bringing order out of chaos in the theoretical aspect, the many difficulties encountered in the introduction of the criterion of truth and the implementation of the party's matter-of-fact ideological line in many areas are not merely, or mainly, due to reasons of theoretical understanding.

The serious problems in the ideological line encountered by our party are mainly due to the corrosion of the party organism by the pernicious influence of feudalism. Exercising an evil influence in the party, the feudal ideology has befuddled our understanding of the basic knowledge of Marxist epistemology, destroyed our party's spirit of seeking the truth from the facts, ruined its ideological line and brought calamities to the party and the state. To implement thoroughly the party's ideological line, we must, while bringing order out of chaos in the theoretical aspect, conscientiously purge the pernicious influence of feudalism.

How does the feudal ideology endanger the party's ideological line?

The widespread modern superstition resulting from the intrusion of the idea of imperial power was the principal ideological source for the disruption of the party's ideological line. "Mandated by Heaven" and reigning over everything, the feudal emperor was the "absolute authority." As the representative of the "will of Heaven," the "embodiment" of truth and the "savior" of his subjects, his every word and every phrase were "golden rules and precious precepts," only to be followed, never disobeyed. During our party's long revolutionary struggle, such corrupt feudal concept was once criticized. However, the traditional influence of feudalism was deeply entrenched in our country. Under the agitation of Lin Biao, Jiang Qing and Kang Sheng [1660 3932], amidst the clamor of "supreme criterion," "peak," "loyalty" and "close adherence," it again spread far and wide. Such pernicious feudal influence as imperial power attacked the party organism and affected people's thinking, resulting in widespread modern superstition,and the destruction of the party's ideological line became inevitable. Because, under the cult of the individual, the "supreme directive" determined all and became the "supreme criterion" of all, and people must treat it as an "imperial edict" and transmit it and act accordingly, without the slightest neglect or dissent. Thus, how could there be seeking the truth from the facts and starting from reality in everything? How could the criterion of practice be carried out? Because, under the cult of the individual, the pernicious feudal idea that "I am the state" was manifested as "the leader is the party." Loyalty to the leader replaced loyalty to the people, and people, in fear and trepidation, prostrated at the leader's feet, speaking according to his decree and acting according to the expression on his face. Hundreds of millions followed the "command" of one man. How could the party's ideological line not be abandoned?

The feudal prerogative mentality in the party severed our party from the people and the mass line and divorced it from its ideological line. With the rigid hierarchy and the numerous prerogatives in the feudal society, there was no equality even among the rulers, while "the elite and the lowly" and the "honorable and the humble" were clear-cut between the feudal bureaucrats and the common people. After our party came into power, such feudal mentality produced an influence on a part of the cadres. With the defects of many concrete systems on top thereof and the abandonment of party discipline and state law during the calamity of 10 years, intra-party life became extremely abnormal, thus providing the opportunity for the unchecked spread of the feudal prerogative mentality. Certain cadres regarded themselves as special, considered themselves "princes," placed themselves beyond party discipline and state law, and demanded "privileges" for their children and relatives. Others, arrogant and bureaucratic, took their own promotions as favors granted by the superior, and openly declared that they would "obey whomever superior," while ignoring the opinions of the people and treating them with indifference. The relationship of harmony became one of antagonism, hierarchy suffocated wisdom and coercion replaced the mass line. When the appeals of the masses were not heard or heeded, when the objective laws and the test of practice were scorned, how could the party's ideological line not be trampled underfoot?

The influence of feudal patriarchy wrecked democratic centralism, strangled intra-party democracy and the socialist democracy and blocked the implementation of the party's ideological line. The feudal society was founded on the estates of the landowners and the small peasant economy of individual householders, while imperial power was built on clan power, relying on clan power for its existence. In society, the emperor was supreme; in the family, the patriarch determined all. The influence of patriarchy was always an obstacle to intra-party democracy. Take the important principle of collective leadership for instance: For many years, the relationship between the secretary and the committee members was said to be "the minority obeying the majority," but actually the first secretary made the decisions, and the relationship was one between the leader and the followers, or even between the monarch and his subjects. The "one-chief system" of the high administrative officials was criticized, but what emerged was the "one-chief system" of the party committee secretaries. "Letting everyone have his say" was often replaced by "one man's say," and "centralism" became "one man's leadership." As such patriarchal despotism made it impossible for the party organization to pool the wisdom of the collective or for the full discussion of different views, how could problems be promptly discovered and solved? As patriarchy severely corroded the party organism, it was impossible to uncover or solve the problems of a unit, a region, no matter how serious, if the first in command was not replaced. Was not the issue of Shanxi's Xiyang county a case in point? It calls for our attention.

Currently, the further rectification of the ideological line has encountered a stumbling block, viz., the "power criterion." There is such a saying: Follow the criterion of practice when studying; employ the criterion of power when working. There is such an idea: Practice is a soft criterion; power is a hard criterion. These are not cynical remarks or groundless ideas, but quite realistic. They reflect an objectively existing fact: If the obstacle of the "power criterion" is not removed, the party's ideological line cannot be implemented. How can the "power criterion" be removed? We feel that primarily we must purge the pernicious feudal influence and solve the ideological issue.

In the sphere of epistemology, the word "power" does not exist. Lumping "power" and the criterion of truth together and creating the "power criterion" are obviously fallacious. However, fallacies do exist. In the class society, the exploiting class occupying the ruling position always suppressed and assessed reason with power, and what it followed was the "power criterion." It often turned the black and white upside down and mixed up the right and wrong, making the development of truth follow an extremely painful path. In the feudal society particularly, prerogatives were widespread and the superior officials dominated their subordinates. Those in power arbitrarily decided on the right and wrong, "calling a stag a horse." The very powerful were always right, and truth became the slave of feudal prerogatives. It was the ugly manifestation of feudalism and obscurantism and an important factor for the long stagnation of China's feudal society. Such feudal "power criterion" rampaged in China for 2,000 or 3,000 years, and we have tasted enough of its bitter fruit in real life. Practice has indicated that the powerful and the powerless, and the very powerful and the not so powerful are all equal before truth. Following the correct ideological line, they all can understand truth. Power and truth do not equate each other, nor do they form a direct ratio. To study the new conditions, solve the new problems and make contributions to the four modernizations, one must face reality, give attention to investigation, respect the opinions of the masses, heed the call of practice, uphold the criterion of practice and reject the "criterion of power." One must not suppress reason with power and stick to the old ways. Nor must one turn one's eyes upward, fix one's attention on the superior and obey the words of the powerful, while ignoring the views of one's colleagues and subordinates, let alone the opinions of the masses and the practical situation. Only by purging the pernicious feudal influence and eliminating the "power criterion" will the criterion of practice truly become the guiding thought of people's work, instead of just something theoretical.

Naturally, the feudal ideology is not the only thing blocking the party's ideological line. There are also the bourgeois and petit bourgeois ideologies. While purging the feudal influence, we must also criticize extreme egoism, anarchism, liberalism, etc. However, they are beyond the range of this article.

LABELS 'PROLETARIAN DICTATORSHIP,' 'PEOPLE'S DEMOCRACY' DISCUSSED

Editorial Defended

Hong Kong ZHENGMING [CONTEND] in Chinese No 35, 1980 pp 18-20

[Article by Niu Meng [3662 5724]: "'A Suggestion' Was Good!"]

[Text] "A Suggestion," the editorial in the August issue of ZHENGMING [CONTEND], brought up a completely new and bold suggestion for the third session of the Fifth National People's Congress: the form of government "dictatorship of the proletariat" should be changed to a "people's democracy." The crux of this suggestion lies not in changing "proletariat" into "people's democracy," but in eliminating the word "dictatorship." Though this suggestion will not necessarily be accepted at present by the Chinese communist leadership, nevertheless it has important strategic significance for China's future.

The Class Target of Dictatorship Has Already Disappeared

The Chinese Communist Party, during the entire course of history from the new democratic revolution to the socialist revolution, has at times emphasized a people's democratic dictatorship and at times a dictatorship of the proletariat. However, regardless of which kind of "dictatorship" was put into effect, no fundamental change in guiding principles, policies or measures was produced because what people in the government were concerned with was merely "dictatorship," in other words, consolidating their position in government. As to what label the government used, that was not at all important. Of course, "a people's democratic dictatorship" seems much more attractive on the surface, but democracy and dictatorship are, after all, opposites. Even if one were to make a "unity of opposites" out of them, from the point of view of the people, one ought to be speaking mainly about democracy and not about dictatorship. For this reason, getting rid of the word "dictatorship" and leaving only "democracy," as far as realizing a true people's democracy is concerned, is really a perfectly justifiable move. As for the question of whether it would be proper to eliminate "dictatorship" at present, by investigating the matter further from a theoretical standpoint and testing it further with our experience, we can definitely arrive at an objectively fair conclusion. However, if we want to reach this point, there is one premise that we must include in our thinking, which is that the principles of Marxism-Leninism are not doctrines that, once formed, can admit of no change. Only when principles are based on the objective reality of continuously changing development and are continuously revised and corrected can they have vitality and be of leading significance for the communist movement. The viewpoint that one can only correct isolated words and phrases of Marxist-Leninist theory but not its basic principles is itself a manifestation of a rigidity in thinking that violates Marxism-Leninism.

We consider that since 1956, the people's democratic dictatorship or the dictatorship of the proletariat that was later emphasized, has lost its target. This target naturally refers to a class and not to certain individuals. In order to elucidate this question, we may as well investigate certain points made by Mao Zedong in his article "On the People's Democratic Dictatorship." Mao said, "The Chinese people, through several decades of accumulated experience, all call on us to put into effect a people's democratic dictatorship, or an autocracy of the people's democracy, which is the same thing. This will strip the reactionary cliques of their rights of speech, and allows only the people to have the right of speech." "The democratic aspect, directed within, towards the people, and the dictatorial aspect directed towards the reactionary clique, combined constitute the people's democratic dictatorship." In that case, who are the "people"? Mao pointed out that the people at that time consisted of workers, peasants, petty bourgeoisie and national bourgeoisie. And whom would these "people" dictate to? The landlord class, the bureaucrat capitalist class and the Kuomintang reactionaries. And through what means would they dictate? Through the tools used by one class to oppress another--the army, the police and the law courts. Mao continued, "If someone from among the people breaks the law, he must also go to jail. This is different in principle from dictatorship over the reactionary class considered as a class." It is obvious from these points that Mao definitely did not consider punishment and suppression directed against the people as dictatorship; only suppression directed against the entire reactionary class was dictatorship. Fine, but in that case we cannot help asking: When were the landlord class, and the bureaucrat capitalist class, in so far as they constituted a class, eliminated? If we accept that these two classes have already been eliminated (mind, this does not mean every single individual making up the class), then has not "dictatorship" lost its target? And if dictatorship one day loses its target, then unavoidably either in essence it loses the meaning of its existence or it continues to be dictatorial without any object. In truth, is not this exactly what happened?

The National Bourgeoisie Constituted a "Living Target"

Mao Zedong perhaps had some opinion on this, so in his later writings he gradually eliminated the national bourgeoisie from the category of "the people." Mao said, "The people have the powerful machinery of the state in their hands and so do not fear rebellion from the national bourgeoisie." "The system of people's rights is possessed by all the common people together, and not privately by the bourgeoisie. Add to this the leadership of the workers class, and you have a state system of a people's democratic dictatorship." "The basis of the people's democratic dictatorship is the alliance between the worker class, the peasant class, and the urban petty bourgeoisie, mainly the alliance between the workers and peasants." "The people's democratic dictatorship requires the leadership of the worker class." "To sum up all our experience and concentrate it on one point, it is a people's democratic dictatorship based on an alliance of the workers and peasants and led (through the Communist Party) by the worker class." The above points show that the position of the national bourgeoisie has gone through a fundamental change from having been a part of "the people" to being outside of "the people." Facts have proved that the national bourgeoisie, in so far as it constituted a class, in the years and months following actually became the object of the people's democratic dictatorship, became a "living target" to attack. Over and over again political movements have placed emphasis on attacking targets, in reality, when has it not been the so-called bourgeoisie and its intellectuals? Only wasn't the national bourgeoisie "class" eliminated long ago? From Mao's exposition above one can see that the people's democratic dictatorship is a dictatorship of the worker class, and also a dictatorship of the Communist Party. Although the terminology is somewhat different, in essence there is no distinction at all. Therefore, the viewpoint that "the people's democratic dictatorship" is a bit more elegant, or more moderate, than "dictatorship of the proletariat" is superficial and not consistent with reality.

Calling in Question the [article] "Dictatorship" of Wu Jiang

Of course, the slogan "dictatorship of the proletariat" made many people speak of a tiger changing its stripes. During the time of the cultural revolution this slogan resounded from the heavens and now it is also one of the "four steadfasts." Nevertheless, Mao Zedong never especially addressed it. Only in November of 1957 did the theoretician Wu Jiang, to commemorate the 40th anniversary of the socialist October Revolution, and perhaps also to celebrate the great victory of the anti-rightist struggle, publish a specialized exposition of "dictatorship of the proletariat," a long political essay entitled "Forty Years of the Dictatorship of the Proletariat." On 1 July 1958, the People's Publishing House issued it separately, changing the title to "On the Dictatorship of the Proletariat" (abbreviated below to "Dictatorship"). Twenty years later, in October 1979, it was again reprinted twice. It seems that the CCP's theoretical and propaganda structure attached great importance to this article from the beginning.

Here we cannot possibly, nor is it necessary to, make a complete analysis of "Dictatorship," but there are several things one must point out because they are useful in explaining whether or not it would be proper to eliminate "dictatorship."

First of all, from the point of view of today's concepts and realities, one feels that the article "Dictatorship" in the course of its exposition has a strongly doctrinal flavor and is full of allegations and labels. Whoever doesn't agree with the phrase "dictatorship of the proletariat" is considered a counterrevolutionary, a false Marxist. Since that particular expression at the time had universality and authority, ever since the time of the "anti-right" movement no one has dared even in the slightest to call a "dictatorship of the proletariat" into question. However, has practice proved that the "erroneous theories" of that time had some truth to them? Among the erroneous theories bitterly attacked by "Dictatorship" were that "the dictatorship of the proletariat has ruined socialism," "the dictatorship of the proletariat has destroyed democratic freedoms," "the dictatorship of the proletariat will create some kind of totalitarianism, or autocracy of the bureaucratic structure," etc. If the author at that time was really filled with indignation over these erroneous theories, then after 20 years, particularly after passing through the catastrophe of the Cultural Revolution, can it be that there are no new feelings at all? What is interesting is that these right-wing views of 1957 seem to have been forcefully supported by certain facts.

Secondly, "Dictatorship" emphasized that "the dictatorship of the proletariat has already existed in the world for all of 40 years. It is not only in existence, but has already taken on a broader, global scope. The opposition between the newly-born and mighty system of the dictatorship of the proletariat and the capitalist dictatorial system, which is weakening day by day, has become a particular characteristic of the modern world." However, what is the present situation of the international communist movement? Have there not been very great changes? Modern revisionist Yugoslavia, at first ostracized for not maintaining the dictatorship of the proletariat, has now been accepted as a true socialist country. This change was not due to the Yugoslav system itself, but to people's ideological understanding. To repeat, the newly-born and mighty dictatorship of the proletariat in Soviet Russia is not only on a day-by-day decline, but has simply changed into a dictatorship of the capitalist class. These two classical examples enlighten us, if thinking becomes ossified and affairs are dictated by emotions, then one cannot recognize the original aspect of things. If one does not frequently correct his understanding of things and get it to keep pace with objective changes and developments, then he can easily reach a mistaken or biased conclusion. Speaking truly, from 1957 on, which kind of dictatorship has been put into practice in China? Who was being dictated to during the 10 years of the Cultural Revolution? Now is the time to arrive at a just conclusion on that.

In addition, "Dictatorship," in elucidating the general concept of a "dictatorship of the proletariat," consider that "dictatorship over the enemy and democracy for the people are two mutually connected aspects contained within the dictatorship of the proletariat.... From the point of view of the people themselves, dictatorship of the proletariat is socialist democracy." The author considered that this way of speaking was extremely unscientific and rather low-brow. It was simply allowing concepts to explain away facts and arguments to prove themselves. Who doesn't know that "dictatorship" and "democracy" are two opposing concepts? How can one speak of them as the same thing? How can they be equated? To say that a dictatorship of the proletariat from the point of view of the people is socialist democracy simply makes one not know whether to laugh or cry. It simply makes a joke of people's democracy. And that is not to say, since the time of the anti-right movement, how many of the political targets who have been labeled class enemies are really enemies, not to mention how many unjust, false and mistaken charges were created by "democracy." Can just speaking of persecution suffered by the "people" during the Cultural Revolution be the expression of a socialist democracy for the people? No wonder some people [even] spoke of the absolutely lawless, dictatorial actions inflicted on the people during the Cultural Revolution as "developing a great socialist democracy!" At this point, let us develop our ideas further. Orthodox theory has always considered that socialism is far superior to capitalism, yet the great majority of capitalist societies disdain to raise the banner of "dictatorship." Over and over again they advocate democratic freedoms. Why does far-superior socialism cling so stubbornly to "dictatorship" and not dare to publicly declare democracy and put it into practice? Can it be that the great masses of the people love "dictatorship" more than democracy? The time for conscientiously considering changing China's form of government has arrived, and the time for using false theories that sound like the truth to dupe the people should pass, never to return.

Finally, "Dictatorship" considered that "dictatorship of the proletariat is a universal truth of Marxism-Leninism applicable in any part of the world." If a dictatorship of the proletariat is not established, then the national economy cannot be developed in a planned way, socialism and communism cannot be built, and the living standard of the workers cannot be raised.... However, our way of looking at it is precisely the opposite. The history of the founding of Soviet Russia, Communist China, communist Vietnam and communist Cambodia shows that it has been precisely because of placing too much blind faith in dictatorship and blindly making use of it that their national economies have developed so very slowly, and even sometimes regressed. That is why socialism has been so slow to be established or has not been established. The workers' standard of living has been so slow in being raised and the people have suffered disaster. Where does the real fault lie? We cannot always go on repeating "because of the damage caused by Lin Biao and the 'gang of four',..." Is there anything wrong with the country's system of government? One hopes that in the near future the question of changing the form of government can be put on the CCP's agenda.

The Lesson of the "Dictatorship of the Masses"

In sum, we consider that at present the antagonistic class within the country has long since been eliminated and that dictatorship has lost its class target. The masses of people do not need dictatorship, but they thirst for democracy. For this reason, bluntly suggesting a "people's democracy" both reflects the realities and answers to the feelings of the people. If we persist in emphasizing "dictatorship," then afterwards it will be hard to avoid having it create a "theoretical" basis for certain ambitious persons which will enable them at every turn to use this to intimidate and punish people and at every turn to use it to expel those whose opinions differ from theirs. During the 10 years of the Cultural Revolution, they persisted in the dictatorship of the proletariat to the absolute limit. The result was that they "dictated" out a historically unprecedented large number of unjust, mistaken and false charges. They even "dictated" the end to a large number of Communist Party members and founding members of the revolution. This kind of dictatorship has long since violated the principles of Marxism-Leninism and is not in accord with Mao Zedong Thought. It has long since gone beyond the scope of being aimed at a particular class and has been a dictatorship of individual against individual, bad people against good people, this faction against that faction. In order to explain this strange phenomenon, the theoreticians then brought out a new general concept, changing the name to "dictatorship of the masses." Consequently, there was the obtaining of confessions by compulsion and then giving them credence, beating, smashing and looting, setting up kangaroo courts, and resorting to force on a large scale. All these had a perfectly justifiable basis. One can see how great the danger is of dictatorship without any object and how deep such a painful lesson was!

Without doubt, CONTEND's viewpoint is novel and bold, its suggestion is reasonable and well-founded. I believe it is going to be supported by more and more people. As for people who fly into a rage when they hear this suggestion, undoubtedly they exist. However, may I offer some advice to these gentlemen. First, calm down; second, liberate your thinking; third, make allowances for the feelings of the people; fourth, consider the nation as the important thing. In this way, they may gradually come around to seeing our point. Even if they don't, it's not important. One, they can refute it; two, they can criticize it. Even who is right and who is wrong at present has not been established theoretically, I believe that after 20 or 30 years the facts will generally provide a solution for us.

Contention With Editorial

Hong Kong ZHENGMING [CONTEND] in Chinese No 35, 1980 pp 21-22

[Article by Shi Huizhi [0670 1920 0037]: "The Form of Government of a Dictatorship of the Proletariat Cannot Be Changed--A Contention With CONTEND's Editorial 'A Suggestion'"]

[Text] Lu Xun said that if you use a knife incorrectly, you can hurt yourself. How well said! But is Lu Xun's meaning that if one has cut oneself with a knife one should then throw it away? As I see it, it is not. According to reason it cannot possibly be that way!

My intention in bringing this up is to provide the following simile. It is like the Chinese Communist Party which has not done a good job of the dictatorship of the proletariat. Do we then want to throw away the dictatorship of the proletariat and change China's form of government? In view of this kind of understanding, I cannot agree with "A Suggestion," the editorial appearing in issue No 34 of CONTEND, that the form of government of the "dictatorship of the proletariat" should be changed to a "people's democracy."

In order to elucidate my meaning it is necessary to talk a little about Marxism-Leninism. The question of the dictatorship of the proletariat is the quintessence of Marxism. Lenin said that only a person who has accepted the idea of class struggle and the dictatorship of the proletariat may be called a Marxist. The latter is essentially the touchstone for distinguishing true from false Marxists because class struggle may also be accepted by the capitalist class and its thinkers.

The aim of the proletariat engaging in revolution is to seize political power, found a state having the dictatorship of the proletariat as its form of government and make the transition to communism. The Marxist theory of the state emphatically points out that there is a long and slow transitional period between capitalist society and communist society. The state existing during this transitional period can only be a dictatorship of the proletariat.

That is to say, the dictatorship of the proletariat is not an expedient measure and is not, as the editorial in CONTEND said, "When... a state is entering the first stage of communism (socialism), at a time when the class struggle has fundamentally died out, a dictatorship of the proletariat should not necessarily be emphasized." "After 'capitalist resistance' has been effectively suppressed and broken, the necessity for a dictatorship of the proletariat become less and less."

Let us look at it again from the point of view of the relative difficulty of seizing political power and consolidating it. The proverb says, "Starting an enterprise is difficult, but maintaining an enterprise is even more difficult." This is an extremely true expression. If we say, "After a revolution, any temporary state structure must be dictatorial" (quoted from CONTEND), then in order to enable this "state structure" to proceed from being "temporary" to being permanent and not to change its color, it is all the more necessary for it to be "dictatorial." According to the lessons of the historical experience of the dictatorship of the proletariat internationally, for state systems of the dictatorship of the proletariat, the danger of "obtaining (power) and then losing it" [definitely] exists.

The evolution of the Soviet Union, the world's first socialist country, into a socialist-imperialist nation was due to its departing from a dictatorship of the proletariat and allowing the newly-born capitalist class to assume power, which changed the dictatorship of the proletariat into a dictatorship of the capitalist class.

Let's look at it from the point of view of the concrete situation in China. During the initial period after the state was established, its political power was on the way to being consolidated, the economy was rapidly being restored and developed and the people's lives were rapidly being improved. All this was precisely because a state system of a dictatorship of the proletariat had correctly been brought into full play which clearly demonstrated the might of the dictatorship of the proletariat. Five or seven years later, particularly during the period of the cultural revolution when the Party and state were made almost unrecognizable as such, the economy was harmed and the people were made destitute. All this was precisely because they had abandoned the normal path of the dictatorship of the proletariat. At that time, the principal people wielding power were deified, and so was the dictatorship of the proletariat. In addition, Lin Biao and the "gang of four," those totalitarian elements, stirred up turmoil in their midst. Thereupon the state form of government of the dictatorship of the proletariat changed into a form of government of a state run by the dictatorship of a class similar to a feudalistic landlord class. The normal democratic life of the people changed into a "dictatorship of the masses" with endless conflict and struggle. However, this was definitely not a question of the dictatorship of the proletariat itself, but of a particular phenomenon of a particular period in the history of the Chinese Communist Party. It was merely because all of this "particular phenomenon" appeared in the guise of a "dictatorship of the proletariat" and all shook the "iron fist of the dictatorship of the proletariat" with good and bad people all jumbled together that to this very day people still speak of a tiger changing its stripes. As soon as the dictatorship of the proletariat is brought up, one feels lingering fear and eternal regret.

For this reason, it is not that there is something wrong with this knife of the dictatorship of the proletariat itself, even though in the past it hurt some of those on our side. It is that those wielding the knife are not yet able to use it properly. There is definitely a lesson to be learned from the fact that after smashing the "gang of four," they brought out the "four steadfasts." One of them is "steadfastness in maintaining the dictatorship of the proletariat." Since this word "steadfast" means that it is stipulated in the first clause of the first paragraph of the Chinese Communist Party Constitution that China's form of government cannot be changed, at the same time it should also mean that we must correctly and effectively bring into full play the functions of the dictatorship of the proletariat. We must thus prevent a false dictatorship of the proletariat--feudal, fascist dictatorships and things like "dictatorships of the masses"--from intimidating people.

One thing is clear. There are two problems that can be readily solved. One is the form of government of the dictatorship of the proletariat and the question of the normal democratic life of the people. Originally, the state machinery of the dictatorship of the proletariat was used to repress subversive and destructive actions by international class enemies within the country and new capitalist-class elements that had sprung up within the state structure. Towards the great mass of the people, it exercised the right of protecting them. For this reason, the dictatorship of the proletariat and a normal political life for the people can exist parallel and not contrary to each other. The normal progress of the people's democratic life under the protection of the dictatorship of the proletariat definitely does not mean that the people will be able to enjoy democracy only if the form of government is changed to a "people's democracy." There is no question here of the terminology not being suited to the realities.

The second is the question of opposing feudalism, bureaucratism and the practice of special privileges. This was formerly the crucial point in Chinese communist society. But one of the important functions of the dictatorship of the proletariat is that it must continuously wash itself clean of corrupt elements and wash away fascism, bureaucratism and special privileges to guarantee the purity of state political power. This is actually a question of the state machinery of the dictatorship of the proletariat consolidating itself and strengthening itself "through political movement" and not of changing and abolishing what the dictatorship of the proletariat can accomplish very well on its own. Of course, here it is necessary to emphasize people's democracy and allow people in a state system of a dictatorship of the proletariat to enjoy the true right of being the guardians of their own form of government.

The above are the superficial views of an enthusiastic reader of CONTEND which are especially brought up here to respond to CONTEND's suggestions and teach it a little wisdom.

'Proletarian Dictatorship' Label Disliked

Hong Kong ZHENGMING [CONTEND] in Chinese No 35, 1980 p 22

[Article by Li Chenghui [2621 4453 6540]: "Looking at 'A Suggestion' From the Point of View of National Political Life"]

[Text] "Ordinary people have their share of responsibility whether a nation prospers or falls." The editorial in the August issue of CONTEND brought up the suggestion that the form of government of a "dictatorship of the proletariat" should be changed to a "people's democracy." I support this suggestion.

The idea of a "dictatorship of the proletariat" was introduced by Marx more than a hundred years ago. Very great changes have occurred to produce the historic conditions and class situation of today's society. The general concept of the dictatorship of the proletariat, however, has been in use for over a hundred years without change. This is neither realistic nor scientific; at its worst, it is dangerous!

What the CCP has emphasized in the 30 years since the state was founded has been "the dictatorship of the proletariat." Which kind of situation has been created as a result? The People's Congress should examine this question deeply. Lu Xun said that if a knife is used improperly, a person can hurt himself. In fact, in the past 30 years they have not been dictating to the enemy but to their own class. For people to take their own comrades and old revolutionaries and drive them into cowsheds and tyrranize them to the extent that a hundred million people were harmed is a lesson that goes as deep as one's very blood. Is it possible not to be introspective about it?

I lived in China for nearly 20 years and was nearly stifled to death. From the first day I arrived in the country until the day I left, all I saw was people in conflict with one another. Today I struggle against you, tomorrow it's your turn to struggle against me. In actuality, no one is a class enemy of anyone else. Many of those who were struggled against were themselves workers, Communist Party members, or even old revolutionaries who had shed their blood for the nation like Liu Shaoqi, Peng Dehuai and He Long. As soon as an allegation was made, they could be paraded through the streets, struggled against, made to grovel, beaten and kicked and even thrown into prison and tortured to death. Really! If one were to say that this was like fascist dictatorship or the despotism of the first emperor of Qin, one would not be far off.

During the initial period after the state was founded and in order to consolidate the revolutionary political power, a dictatorship of the proletariat was carried out against the remnants of antirevolutionary organizations. In addition, these were suppressed so as not to have any opportunity to launch a counteroffensive. This was proper, to avoid a failure like that of the "Paris Commune." However, for them to carry on with this until after political power was consolidated and still want to emphasize a "dictatorship of the proletariat" was really using the knife incorrectly. When it comes to opening fire on one's own comrades, is this not really too cruel?

To consolidate the power of the dictatorship of the proletariat, it is important to do a good job in two things. The first is to increase production to build the four modernizations and raise the people's standard of living. The reason the Chinese worker class and laboring people wanted revolution in the first place was that they wanted to improve the people's lives, allow the nation to change from being poor to being prosperous and enable China to have a better tomorrow. They did not want people to struggle against one another and struggle all the way to a communist society. If people have a good life, then state political power will be consolidated as a matter of course. If they eat well, have a good place to live, dress well and have freedoms, who would then want to overthrow his own good government?

Secondly, put into effect rule by law. This is a most fundamental question in governing a country. Rule by law is actually a form of government of a dictatorship of the state in accordance with practices in a people's democracy. It has a decisive effect on the consolidation of a state power and on the stability, unity and prosperity of a society.

I wish only that the CCP would throw away this label of the "dictatorship of the proletariat" and abandon its ideological pressure on the people so that the brand-new aspect of the nation could emerge.

PARTY AND STATE

LENIN'S TEACHING ON MILITANT MATERIALISM PRAISED

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 4, 25 Apr 80 pp 3-6

[Commentator's Article, "Uphold Militant Materialism--in Memory of the 110th Birthday of Lenin"]

[Text] Lenin has left us an abundant and very precious philosophical heritage. His "Materialism and Empirical Criticism," "Philosophical Notes" and his many other related works are brilliant contributions to Marxist philosophy. He successfully applied and developed Marxist philosophy in the protracted struggles of the Russian democratic and socialist revolutions. Lenin became unashamedly the heir of Marxist philosophy.

In his later years, Lenin wrote "On the Significance of Militant Materialism." In this famous piece of writing he penetratingly elucidated the significance of militant materialism. At that time (1922) the Russian proletariat was faced with the arduous task of consolidating the Soviet regime and of building a socialist society. On the ideological front, Lenin defended the militant task of materialism against the philosophical idealism, which was then very popular in the bourgeois countries, against a Russian idealism that persistently followed these fashionable reactionary philosophies and decorated itself with Marxist formulations, and Lenin also tried to educate those "communist party members who outwardly appeared as Marxists but who were actually distorting Marxism" and were directing their propaganda against the members of the Russian communist (Bolshevik) party. Lenin's revolutionary theories and practices were shining models of the defense of militant Marcist materialism. The historical experiences of the international communist movement, especially of our Chinese experiences in revolution and construction, have proven that the key to success in the proletarian causes of revolution and construction is to firmly uphold an ideology of militant materialism. This ideology is even in our days of the greatest actual significance for the Chinese people as they are presently engaged in the heroic struggle to realize the four modernizations.

"Marx and Engels defended political materialism with utmost firmness and furthermore made it repeatedly clear that all tendencies to abandon this fundamental concept would be erroneous to the extreme." (Lenin's Selected Works, Vol 2, p 442). Lenin was faithful to the revolutionary tradition of the militant materialism of Marxism. With extreme clarity he set forth that materialism is the fundamental theoretical position of Marxism. "General materialism holds that the existence of objective reality (material) does not depend on human consciousness, perception, experience, etc. Historical materialism holds that the existence of society does not depend on human social consciousness. In these two positions consciousness is merely the reflection of existence, at most merely an almost perfect (fitting and extremely precise) reflection." After clarifying this general truth about Marcist philosophy, Lenin immediately follows it up by pointing out: "From this Marxist philosophy, molded as in one whole block of steel, it is not possible to strip off any of its fundamental preconditions or important components, as otherwise it would mean departing from objective truth and throwing oneself into the arms of reactionary fallacies." (Lenin's Selected Works, Vol 2, pp 332-333). Materialism is one such fundamental precondition and basis of Marxist philosophy. Abandoning this fundamental precondition and base would of necessity mean departing from objective truth, departing from Marxism, and it would not make the slightest difference whether and how many enticing Marxist philosophical formulations were added. The truth which Lenin reveals in the above mentioned expose is the truth of Marxism which cannot be subverted by turning it upside down or by adding any supplements to it.

Lenin faithfully believed in the Marxist theory of the struggle between the two basic lines of materialism and idealism that at all times and everywhere exists in fundamental philosophical questions. Through an examination of Marx's philosophical statements in "Das Kapital" and in his other works, Lenin realized that upholding materialism was a "consistent and inalterable thesis" set forth by Marx and that Marx contemptiously ridiculed any retrogression toward idealism. As a consequence Lenin came to the penetrating conclusion that "the core of all philosophical statements by Marx is the explanation of the two opposing lines." (Cf. Lenin's Selected Works, Vol 2, p 344). Historical developments have not shown that this theory of Marxism-Leninism on the fundamental political problem of the struggle between the two lines is outdated or immaterial, to be adduced or ignored at will. On the contrary, practice has proven that the Marxist-Leninist theory of the struggle between the two lines in philosophy cannot become stale or decay. The struggle between materialism and idealism will never cease and can never be reconciled. It is also not possible to place oneself philosophically above materialism and idealism or to transcend their antagonistic stand and struggle. The history of philosophy is the history of cognition, but one must not confuse the history of philosophy with the history of politics or the concrete and special history of science. We must not disregard or neglect to the slightest degree the position and role of the struggle between materialism and idealism throughout the history of philosophy. We must at all times bear in mind this one lesson that Lenin taught us: "In all the great many novels, strange and weird formulations and the utterly pedantic, tedious talk that tries to solve philosophical problems, we see without exception these two basic lines, these two basic factions, emerge into view." (Lenin's Selected Works, Vol 2, p 342). Only by a conscious and absolutely clear separation of the materialist line and the idealist line in all problems, can we consciously defend the scientific world view of Marxism.

Lenin believed the revolutionary dialectics in Marxism are "the decisively significant elements in Marxism." He applied dialectics in the theory of reflections and in the process and development of cognition. He pointed out that a modern proponent of materialism must of necessity be a proponent of dialectic materialism. When he urged to organize the systematic study of Hegel's dialectics and when he did a comprehensive research on the actual use of dialectics in Marx's "Das Kapital" and in his other historical and political works, Lenin explicitly pointed out that it is necessary to employ a materialist viewpoint in the research, explanation and propagation of dialectics. When explaining and promoting dialectics, he always emphasized the unity of dialectics and materialism. In the 16 paragraphs of his famous "Key Elements of Dialectics," the first paragraph deals with "The Objectivity of Observation." When using dialectics in the study of objective phenomena, he always taught people not to introduce subjective voluntarism into the study. He harshly rejected the evil tendencies of regarding revolutionary dialectics as a kind of fashionable empty talk or pleasant-to-listen-to pretty language. He engaged in an uncompromising struggle against revisionists such as Kautsky and Otto Bauer who played around with the terminology of dialectics, but actually trampled Marxism underfoot, stubbornly adhered to outworn ideals and who, being a petty bourgeois democratic faction, had not the slightest knowledge of Marxism. Following the development of practice, Lenin gave new impetus to the study of dialectics, and at that time he started out from the objective world, that is from the natural and social developmental changes, continuously revealing new aspects of dialectics. At the time of defining consisely and to the point the thesis that dialectics is the unity of opposites, he emphatically pointed out that "this, however, requires explanation and elaboration." (Lenin's Collected Works, Vol 38, p 240). This prevented the erroneous tendency of having the dialectical rule becoming in its scope over-simplified, one-sidedly and altogether an ossified thing. For this reason, the Marxist dialectics as developed by Lenin are "a thing full of life, a many-sided knowledge (with new aspects continuously increasing)." (Lenin's Selected Works, Vol 2, p 714).

The reason why Lenin's materialism is a thoroughgoing system is its firm adherence to the principle that the standards of practice must be basis for the theory of knowledge. (Cf. Lenin's Selected Works, Vol 2, p 137). He held that "the entire living human practice is to penetrate deeply into the very body of epistemology; it provides the objective standards of truth," "life, the viewpoint of practice, must be the primary and basic viewpoint of epistemology. This viewpoint will of necessity lead to materialism" (Cf. Lenin's Selected Works, Vol 2 pp 192, 142). Lenin's thesis has been expounded from a deep philosophical world view and a vivid and abundant practical revolutionary experience. He integrated Marxist theory and proletarian revolutionary experience into an inseparable entity. Not only in his systematic theoretical expose but also in practice did he steadfastly carry out the principle that "when theory is converted into practice, practice gives life to theory, theory is corrected by practice and is also tested in practice." (Lenin's Selected Works, Vol 3, p 398).

It is a basic principle of Leninism that practice exercizes a checking and correcting function with regard to theory. Lenin has never regarded Marxism as something immutable and frozen, or as something sacred and inviolable. He firmly opposed the erroneous tendency of "mere faithfulness to the text of a theory without faithfulness to the spirit of a theory." At all times he checked every step in the revolutionary progress on the basis of practical experience. He was adept in replacing old formulas, be they by Marx, Engels or even by himself, if they had become no more appropriate for new historical conditions, replacing them by new formulas and conclusions based on experiences from new historical conditions and as fitting the new historical tasks. Lenin praised the genius of Marx and Engels in that "they did not mark time and stood still, mulling over epistemological problems that had already been solved," and that they "over a lengthy period of time, about half a century, developed and expanded materialism and advanced it toward a fundamental school of philosophy." (Cf. Lenin's Selected Works, Vol 2, p 343). Lenin conscientiously adhered to this Marxist line as he was continuously advancing Marxist philosophy under newly arising historical conditions.

In the practice of leading the Russian revolution, Lenin steadfastly upheld the principle of learning from the experiences of the proletarian mass movement and deriving lessons from these experiences. He emphatically pointed out: "We are not going to such an extreme as to demand from Marx and other Marxists all knowledge of concrete conditions that would show us the road to socialism. That would be foolish indeed. We only have knowledge of the general direction of the road and know which classes will give strength on that road, but as to the concrete and actual conditions, these will only become revealed to us in the practical experiences of the thousands upon thousands of people." (Lenin's Collected Works, Vol 25, p 273). His confidence in the revolutionary practice of the proletariat is in its spirit in striking contrast to Plekhanov and the opportunists and revisionists of all brands who slander the revolutionary practice of the proletariat and "rebuke" the revolutionary masses.

Lenin's faith in the revolutionary practice of the proletariat is also demonstrated in his courageous acknowledgement and correction of his own mistakes. He once said: "Clever people too make mistakes. There is no man, and there cannot be any man, who is completely free from mistakes. A clever man is one who does not commit serious mistakes and who also will easily and quickly correct his mistakes." (Lenin's Selected Works, Vol 4, footnote on p 192). Lenin spoke and also acted in this manner. He courageously admitted his mistakes and quickly rectified his mistakes, for instance on the question of objecting to the boycott of the Witte Duma in December 1905, on the question of dispersing the "democratic congress" in September 1917 (Cf. Stalin's Collected Works, Vol 4, p 281), and on the question of coping or dealing with "lie wei" [0441 4850] at the Third International, (Cf. Lenin's Selected Works, Vol 4, p 598) Lenin pointed out: "Don't be afraid to acknowledge your own mistakes. Don't be afraid to adjust these mistakes again and again. This is the way we get to the top of the mountain before us." (Lenin's Selected Works, Vol 4, pp 601-602). Only because Lenin adopted this scientific attitude toward himself and preserved a materialist spirit throughout the revolutionary practice could it be avoided that there was a spread and growth of such evil trends as the unscientific and anti-Marxist deification and idolization of the proletarian leadership and the ossification and rendering absolute of Marxism-Leninism itself. In this way he could at all times preserve a clear, sober and scientific mind. He repeatedly reaffirmed that "there is nothing more dangerous than misconceptions (and having one's mind turned, especially in the highest places)." (Lenin's Selected Works, Vol 4, p 597). The great victory of the socialist October revolution led by Lenin was a feat unparalleled in the history of the proletariat. However, Lenin never allowed himself to become dizzied by success; on the contrary, his grasp of the overall situation of the proletarian revolutionary movement became ever more prudent and perfect. He led the Russian proletariat in thoroughly shattering the counterrevolutionary attacks by the Russian and foreign bourgeoisie and also in steadily moving on to the task of socialist economic construction. Lenin's life was one of firm adherence to militant materialism, and as a consequence his revolutionary undertakings throughout his entire life had always been successful and constituted one continuous advance from victory to victory.

Lenin viewed as extremely important the role of revolutionary theory in the course of proletarian revolutionary practice "Without a revolutionary theory there would be no revolutionary movement." (Lenin's Selected Works, Vol 1, p 241). This is a famous and well-known saying of Lenin. On the other hand, however, he was strongly opposed to exaggerating the role of consciousness and thought. He pointed out: "To derive inevitability, causality, regularity, etc from pure thinking amounts to idealism." (Lenin's Selected Works, Vol 2, p 167). Marxism-Leninism has always regarded social movement as the course of natural history which follows certain laws. These laws are not only independent of man's will, consciousness and hopes, but on the contrary, it is they that determine man's will, consciousness and hopes. As Lenin expressed it: "Speaking of the party of the proletariat, the most dangerous mistake would be to build one's strategy at the organizational stage on wishful thinking," and "to build the strategy of the proletariat on subjective desires would amount to destroying these hopes." (Lenin's Collected Works, Vol 24, p 207). Note how serious these dangers are to the proletarian cause if the idealist error were committed of allotting an exaggerated role to subjective consciousness and if policy were built on subjective wishful thinking!

The philosophy of Marxism-Leninism is always militant and full of vitality. In his "On the Significance of Militant Materialism," Lenin pointed out that members of the communist party should form alliances with non-party elements who are confirmed materialists, and also with modern scientists, especially those of the natural sciences, to guide all the masses without exceptions in the defense of materialism and Marxism He pointed out that the task of militant materialism in the defense and development of Marxist philosophy is, first of all, to resolutely expose and attack all the various popular philosophies of idealism and scepticism, also to carry out untiringly propaganda for atheism and against religious superstitions and obscurantism. Secondly, to give attention to the various problems most recently set forth by the revolution in the natural sciences and furthermore to employ dialectic materialism in the struggle against any infiltrations of the bourgeois world view. Thirdly, to study systematically Hegel's dialectics and the dialectics actually applied by Marx. Lenin said: "Materialism that would not set itself these tasks step by step cannot possibly become militant materialism." (Lenin's Selected Works, Vol 4, pp 609-610). Lenin left us these important last admonitions regarding philosophical research work. He clearly pointed out the correct road that we must follow in the development of Marxist philosophy.

The great victories of our Chinese revolution were all gained under the guidance of Marxism-Leninism. While we have been taught serious lessons by rampaging idealist trends of thought in the course of our socialist revolution and socialist construction, we again emphatically declare that the theory in defense of militant materialism as revelaed by Lenin is a universal tenet of Marxism. Lin Biao and the "gang of four" have for a long time launched unbridled attacks against Marxist philosophy, distorting it and trampling it underfoot. In this situation it is our foremost task to restore the basic theories of Marxist philosophy, and for that reason we must give first priority to the defense of militant materialism. Marxist-Leninist philosophy is a science; it does not finalize truth, but it is the road which in actual practice continuously opens up further developments of Marxist philosophy. If we are today not able to promote and advance Marxist-Leninist philosophy according to the progress of practice, we shall not be able to defend the militant materialism of Marxism. We are determined to observe and follow the teachings of Lenin, namely to "give consideration to the true facts of the realities," to be adept at using new principles and new conclusions to enrich and develop the Marxist philosophy. Let us forever remember the great teachings that Lenin left us regarding the defense of militant materialism, wipe out idealism and advance victoriously on the correct road of Marxism-Leninism and Mao Zedong Thought when proceeding on our new long march toward the realization of the four modernizations.

PARTY SECRETARIAT'S THREE NEW MEASURES PRAISED

Hong Kong DONGXIANG [THE TREND] in Chinese No 24, 16 Sep 80 pp 19-21

[Article by Li Jiang [2621 3068]: "The 'Three Trail-blazing Measures' of the Central Secretariat"]

[Text] During the slightly more than half year since the Central Secretariat was established by the Fifth Plenum of the 11th Central Committee of the Chinese Communist Party, this Secretariat, headed by Hu Yaobang, has been conducting deepening investigation and study, facing realities, seeking truth from facts, and doing a job really full of sound and appearance. Following the three great undertakings it has already disposed of during the initial stage (planning the administration of the capital municipality from an overall situation, rectifying the extreme left line in Tibet, and putting forward a plan for the development of education), new measures adopted by the Secretariat have recently again become the subject of happy conversation among the people of the mainland. Among these, the castigation of the "offspring of those in power," the bombardment of the "petroleum kingdom," and the rectification of the operations of the Civil Aviation General Administration [CAGA] received especially high praise. Concerning these three incidents, the ringleader that got all the proceedings started was, on the surface, RENMIN RIBAO; however, people all know that without the support of Hu Yaobang and Zhao Ziyang, Hu Jiwei [5170 4936 0251] would never have been able to initiate these three great events which shook the whole country.

Trying Out the Sword First on the "Petroleum Kingdom"

Let us first discuss the bombardment of the "petroleum kingdom." This so-called "petroleum kingdom" means certain leading figures who have entered the high stratum of Beijing because of their background in handling petroleum operations. In the early period of the exploitation of oil resources at Daqing, they really made meritorious contributions to the cause of petroleum exploitation in China. However, confined by their past experience, they are inclined to aspire to large-scale operations and eager to score successes, and they also tend to violate scientific principles and ignore economic laws in their conduct. As a result, they have by this time come to stand in the way or possibly even to sabotage the progress of the four modernizations.

Without due decisiveness and determination, the Secretariat would not have dared touch such a huge entity. This battle was begun first of all in connection with the incident of "Bohai No 2." This so-called "Bohai No 2" incident has to do with the fact that oil-drilling rig "Bohai No 2" of the Oceanic Petroleum Exploration

Bureau of the Petroleum Ministry capsized on the morning of 25 November last year in a tagging operation in the Bohai Gulf when its drilling position was being changed from one location to another, causing the death of 72 persons and involving a direct economic loss of over 37 million yuan (equivalent to more than HK $100 million).

This incident took place last November, but it was not until 21 April this year that the Tianjin Municipal Bureau of Labor submitted an indictment to the Municipal People's Procuratorate. And it was 7 May before the Tianjin Municipal People's Court accepted the indictment submitted by the Municipal Bureau of Labor, began to conduct its investigation, and established the case. Furthermore, it was not until 21 July that XINHUA NEWS AGENCY publicly announced this incident for the very first time and raised the question of tracing responsibility. From this time schedule, it can be seen how thorny the disposition of the incident must have been.

Selecting a Beneficial Outlet for Breakthrough

But China's economic construction today is really harboring too many bad habits; practices stressing rash and foolhardy pursuits, violating the scientific spirit, and ignoring workers' lives and security are quite prevalent. The Petroleum Ministry has always bragged about "speaking honest words, doing an honest job, and being an honest man," but in reality, its conduct deviates from its words; it deceives those above and hoodwinks those below, and is in fact not very honest at all. And the way the incident of "Bohai No 2" occurred and the Petroleum Ministry's attitude in coping with it later have constituted quite a model in this regard. In proceeding from this incident of "Bohai No 2," it may be said that the Secretariat has selected a very beneficial outlet for a breakthrough. The incident of "Bohai No 2" reflects several inveterate diseases in China's economic construction today.

First and foremost is the bad atmosphere of bragging and resorting to empty talk. The Bohai Gulf is plagued by cold currents, high winds, and big waves in winter; it is very easy for the oil-drilling rigs to shift their locations, and this often results in already drilled wells being left unused. Also, none of the oil-drilling rigs is ice-resistent. Yet the Petroleum Ministry put forward the question: "Are we going to spend the winter standing idly by or exerting ourselves at work?" Hence, the Oceanic Petroleum Exploration Bureau undertook to raise the challenge to the exploration teams: "We must spend the winter exerting ourselves at work, and not allow the rigs simply to soak through the season; we must pass a revolutionized winter." When the staff and workers expressed dissent, the chieftain of the Oceanic Bureau would say: "Even if our rigs must capsize, let them capsize in the sea and not in the Wharves." These words sounded heroic and magnificent, but they merely constituted great empty talk.

Next is the practice of directing modern economic construction with wartime experience and the old troop-commanding methods, in violation of the laws of economic construction. Fighting a battle, of course, cannot avoid unknown factors and must often involve elements of risk, but construction must depend on a solid, scientific basis and cannot allow any adventures. Fighting a battle causes people to die, and this is inevitable, but as a matter of principle, construction must do its best to avoid causing people to die. Fighting a battle takes advantage of fighting opportunities and often stresses concentration of forces, but, in the case of construction, the emphasis should be placed more on democracy and on listening to the opinions of technical personnel. But during the incident of "Bohai No 2," those responsible precisely ignored the differences between economic construction and the conduct of warfare by employing methods for the conduct of warfare to direct construction, thus leading to serious ill consequences.

The third is the working style that does not show respect for the masses. Today, not a few cadres of the Chinese Communist Party are accustomed to not showing respect for the masses; they tend to make decisions by a single word of their own on all matters. The expression "even if our rigs must capsize, let them capsize (for my sake) in the sea" uttered by certain cadres of the Oceanic Bureau serves as a good illustration as to this question. The words "let them...(for my sake)" are indeed incisive in depicting the blatant and domineering posture of certain bureaucrats of the Chinese Communist Party here. These bureaucrats show respect neither for the masses not for science. In the case of "Bohai No 2," for example, it had been 7 years since it was imported; yet not a single word of the instructions for its use was ever translated. Some officials not only show no respect for science, but they even purposely violate objective laws in their conduct. Oil-drilling rig "Bohai No 1" was once forcibly sent out to sea under conditions when it should not have sent; the result was that one of its legs was broken. Luckily, under the urgent rescue of the sailors, no casualties were involved. Yet the Petroleum Ministry seized upon this to put out unrestrained propaganda by designating it as a case of how "man will conquer nature."

The fourth is the working style of deceiving those above and hoodwinking those below and exhibiting inconsistency between words and deeds. The capsizing of "Bohai No 2" was really the consequence of the "will of the superior." After the incident occurred, however, the Oceanic Petroleum Exploration Bureau chose to write a false report, saying that "big winds were suddenly encountered and they were irresistible," that "there was no error in the direction of the operations," and that "the rescuers were very brave." Family members of the dead were even instigated to lie in support of the report. Petroleum Minister Song Zhenming even took the lead in altering the report submitted to the State Council, changing "big wind of the 10th class" to "a big wind of the 11th class," and thus lying about the condition of the battle.

The fifth is the bad habit of not treasuring workers' lives and not treasuring the property and materials of the state. After the occurrence of the "Bohai No 2" incident, a responsible person in the Oceanic Petroleum Exploration Bureau lightheartedly said to the investigation group: "Struggle requires sacrifices; we must pay a price for the war years. We must also pay a price for the work of the four modernizations. The death of the 72 persons is worthwhile in this regard. They are heroes; we cannot help but pay our tuition!" On the day of the incident, the dispatch office of the petroleum minister, in a telephone call to the National Commanding Headquarters for Security on the High Seas, which is in charge of uniform deployment and direction of rescue work on the high seas, even stated as follows: "We request that the National Commanding Headquarters for Security on the High Seas inform us whether or not there are any vessels passing by; if there are, please ask them to rush to the scene for rescue work before 9 o'clock on the 25th. If they cannot reach the scene before 9 o'clock, then please don't trouble them any further." Treating workers' lives with such an attitude is indeed tantamount to treating human lives as being no more than grass.

Song Zhenming Is Ultimately Dismissed

These bad habits have more or less persisted among Chinese Communist officials; on the one hand they have strangled the workers' enthusiasm, and on the other hand they have obstructed economic development. It is necessary that they be removed. The incident of "Bohai No 2" was ultimately brought to a close with the dismissal from office of Petroleum Minister Song Zhenming and the punishment of Vice Premier Kang Shi'en, who is in charge of the Petroleum Industry, by the marking of a great demerit. This example of disposal was virtually the very first since the founding of the state by the Chinese Communists; it thus shook the whole nation. It constituted a serious warning not only to the Petroleum Ministry but also to all economic departments, factories, mines, and enterprises in the country. This precedent created by the Secretariat will have an inestimable influence on the future economy of China.

All Opinions Point to "Grievances" about CAGA Service

After the bombardment of the "petroleum kingdom," the second department subject to rectification by the Secretariat was the CAGA.

It may be said that all opinions about the service of the CAGA point to "grievances." There is great incongruence between the prices it collects (based on prices for external tourists) and the services it provides. Yet it has been sustaining losses over long years and thus has become a burden on the public finances of the state. The first salvo designed to rectify the CAGA was fired on 4 August. RENMIN RIBAO did something unusual on that day, as it issued an editorial without corresponding news under the title "Civil Aviation Must Follow the Path of Turning Itself Into an Enterprise."

Domestic and foreign tourists have expressed many opinions about the low quality of service provided by the CAGA and the inefficiency it has shown in its work. This has seriously damaged China's reputation, and it demands that the CAGA by various means train competent technical personnel and high-caliber service personnel, establish a system of rules and regulations, and, most important, change the situation in which leaders of the CAGA look at but do not see such existing shortcomings and problems, see them but do not bother with them, or both with them but do not handle them earnestly. This constituted criticism of the CAGA Director Shen Tu [3088 0956] without specifically naming him, and it also indicated why the CAGA failed to achieve improvements for such a long time. The editorial pointed out that CAGA personnel should be replaced in order to "allow those with competence in management to guide civil aviation enterprises."

But after the publication of this editorial, the CAGA effected no improvements, nor did it express any reaction; a sentiment of resistance seemed to prevail. This is not hard to understand. For a long time, the CAGA has "enjoyed a monopoly at headquarters, with no competition elsewhere." Those who were selected to join the CAGA happened to be all "proud sons of heaven" superior to others. Under such circumstances, how could they accept anybody's criticism? Thus, 13 days later, RENMIN RIBAO fired its second round of bombardment; using the space of more than a quarter of a page, it published two letters from readers criticizing the CAGA's services. With domestic tourists thus telling their own experiences, one letter pointed out three discretions regularly exercised by the CAGA; changing flight-times freely and providing flights when it pleases; most planes not providing meals, and nobody looking after passengers awaiting their flights; and lying when flights are delayed. The other letter poignantly put forward several observations about service personnel lacking due courtesy, the quality of meals being too low, and improper care of luggage.

Director Shen Tu Forced To Deliver Self-Criticism

Three days later, a third round of cannonballs were fired. This was criticism expressed by foreign envoys stationed in the capital: two staff members at the capital airport changing airport regulations without authorization, making matters more difficult for foreign envoys, treating them with crude manners, and even abusing the wife of the ambassador of Chad, hence causing the ambassador of Chad to say that in his experience as a diplomat in four continents he had never encountered this kind of treatment anywhere else.

Just as RENMIN RIBAO pointed out, these lax practices were not a question of individual staff members; rather, they had a great deal to do with the improper management of civil aviation enterprises. Civil aviation in China may be said to be a principal channel of China's communication with the outside world. At a time when China is engaged in modernization work, generally appeals for foreign economic and technical cooperation, and seeks to unite with friends of various countries in joint opposition to Soviet hegemony, the CAGA can only serve to sabotage the strategic goals of the Chinese Communists. Under such circumstances, rectification of the CAGA naturally became an urgent problem requiring solution by the Central Secretariat.

Today, it looks as though obstacles to the solution of this CAGA problem are likely smaller than those concerning the "petroleum kingdom." At just about the same time as Song Zhenmin was specifically criticized by name, CAGA Director Shen Tu ultimately indicated his own attitude, acknowledging the inadequacy of service and expressing a willingness to accept criticism. Of course, whether this was representative of a real intention to rectify existing faults or a mere concession designed to protect his office, only time can tell.

Relentless Castigation of "Offspring of Those in Power" Pleases Everyone

Another matter disposed by the Central Secretariat which pleased everybody was the relentless castigation of the "offspring of those in power," by which children of high-ranking cadres were subject to blows. In mid-August, XINHUA NEWS AGENCY reported that, unafraid of privileged personalities, the Beijing Municipal Court had sentenced three children of high-ranking cadres to 3 to 6 years' imprisonment for illegally detaining others, extortion, and theft.

Among these three children of high-ranking cadres, two were named Xu [1776]; they are brothers. Their father was originally deputy political commissioner of a certain army; their mother was deputy director of the Beijing internal combustion engine accessories plant. The other person was the son of the chief of the cadre department of a certain military region.

Certain children of high-ranking cadres resorting to mistreatment of others on account of the power behind them, violating laws and discipline, and their parents preferring to shield them, and similar practices, have in recent years become a salient problem in mainland society. Taking advantage of their social status and relations, they have resorted to illegal activities, backdoor deals, abuse of the masses, transmission of yellow publications and photographs, and amusing themselves with women. Some even set up rpivate courts to try to exact confessions from people, commit extortion and blackmail, and do whatever they please. All this presented a lively picture very much of the kind exemplified by the vicious offspring of those in power in the novel "Shuihu Zhuan" ["All Men Are Brothers"].

Their conduct not only affected public security but also had a very bad influence among youths, and this was deeply hated by the vast ranks of the people. The reason certain literary works, such as "General, You Can't Do This!" and "In the Files of Society," "If I Were Genuine," etc., have aroused so much vigorous response in society in recent years is inseparable from the blatant and imperious way certain children of high-ranking cadres have sought to exercise their privileges.

In the past, certain Chinese Communist departments seemed to have adopted an approach of suppression with respect to literary works which reflected such problems; this could only inflate the arrogance of the privileged and render fruitless the earnest Chinese Communist attempt to restore close relations between the party and the masses. Therefore it has now become imperative for the party to eliminate obstacles and to face squarely, with strict impartiality, the question of the privileged among the ranks of the cadres, in order to solemnly deter the children of high-ranking cadres who violate laws and discipline. This was another challenge facing the Secretariat, since the resultant approach was bound to affect the personal interests of a sizable part of high-ranking cadres and, hence, offend not a few people.

Firm Decision of the Secretariat

Facts indicate that the Central Secretariat finally made a firm decision to strike at the lawbreaking children of high-ranking cadres, so as to uphold laws of the state. At the same time as XINHUA NEWS AGENCY reported the news about the three children of high-ranking cadres being subjected to punishment by the law, BEIJING RIBAO also published a Commentator's article entitled "A Warning to Those Children of Cadres Who Violate the Law and Commit Crimes"; the poignant title of this article has been rare. In a righteous and solemn tone, the article pointed out: "Don't think that, since you have your fathers and your mothers behind you, others would of course never dare to touch you. In the case of the people, they would not hesitate to touch even if it were the seat of a tiger or a lion. When you commit a crime, the people's judiciary organs will always have ways to grab you and bring you to justice, no matter in which shelter you seek to hide. For the sake of the state's four modernizations and for the sake of your own future, you had better change, fold up your 'awful airs,' and spend your energy in practical study and work. If you treat history well, history will treat you well!"

Meanwhile, BEIJING RIBAO and RENMIN RIBAO also published articles at various times demanding that parents who happen to be high-ranking cadres refrain from placing themselves in any privileged position, or placing their children in any such position. These articles warned that, since parents who have committed a crime would not implicate their children, neither would parents who have established merits be in any position to provide shelter for their children. If anyone should continue to send people to plead for favors in an attempt to shelter his children who have committed a crime, then he would be impinging on the law and discipline and would thus be subject to punishment in accordance with party discipline or the laws of the state.

Reading these articles gives one great pleasure. It is hoped that the Secretariat of the Chinese Communist Party will keep up with such efforts and, in winding up the remnant case of the Cultural Revolution and readjusting economic construction and aspects of the like, direct and stage even more heroic and magnificent repertoire items.

PARTY AND STATE

CONSTITUTIONAL ARTICLES SUITABLE FOR REVISION PINPOINTED

Hong Kong DONGXIANG [THE TREND] in Chinese No 24, 16 Sep 80 pp 7-8

[Article by Bi Ming [1732 6900]: "The 10 Places That Should Be Revised in the Constitution"]

[Text] At the recently convened session of the National People's Congress, a suggestion of the Chinese Communist Party Central Committee was accepted and a special committee was established and given the responsibility of revising the Constitution that had been passed by the First Session of the Fifth National People's Congress in 1978.

This [session of the] National People's Congress revised Article 45 of the Constitution; that is, the provision concerning the "four bigs" was deleted from the article, which had read: "Citizens enjoy freedom of speech, correspondence, the press, assembly, association, procession, demonstration and the freedom to strike, and have the right to 'speak out freely, air their views fully, hold great debates, and write big-character posters.'" Apart from this article, then, what other articles of the Constitution may be revised?

As we open the text of the Constitution formulated in 1978 and compare it with the Chinese Communist Party's various new policies during the past 2 years, we discover that at least nine [additional] places must be revised.

1. "Preamble," Section 2: "Since the founding of our state, under the leadership of Chairman Mao and the Chinese Communist Party, the people of all our nationalities have carried out Chairman Mao's proletarian revolutionary line in the political, economic, cultural and military fields and in foreign affairs and have won great victories in socialist revolution and socialist construction through repeated struggles against enemies both at home and abroad and through the great Proletarian Cultural Revolution."

Here, "the Great Proletarian Cultural Revolution" as a political movement in the positive sense was written into the Constitution. However, as early as National Day last year, the Chinese Communist Party had already subtly negated the Cultural Revolution, and by this time the "Cultural Revolution" has already become a synonym for "catastrophe." Therefore, this passage is liable to be revised.

2. In the "Preamble," Section 4, it is prescribed: "The general task for the people of the whole country in this new period is: To persevere in continuing

the revolution under the dictatorship of the proletariat, to carry forward the three great revolutionary movements of class struggle, the struggle for production, and scientific experiment, and to make China a great and powerful socialist country with modern agriculture, industry, national defense, and science and technology by the end of the century." But in Ye Jianying's speech at the meeting in celebration of National Day last year, the general task was broached this way: "To unite the people of all nationalities and bring into play all positive factors so that we can work with one heart and one mind and go all out, aim high, and achieve greater, faster, better and more economical results in building a modern, powerful, socialist country." Later on, in the revised draft of the Constitution of the Chinese Communist Party, the general task was again changed: "To unite the people of all nationalities so that we can work with one heart and one mind, according to plan, and proportionately achieve greater, faster, better, and more economical results in developing our socialist economy and building a modern, highly democratic, highly civilized, and powerful socialist country." It was said that the deletion of the expression "bring into play all positive factors" was meant to avoid the possibility that some might try to guess who the "negative factors: were, or that some might look upon themselves as "positive factors." "Go all out, aim high" was deleted, and "proportionately at a high speed" was added, because the former did not have any substantive meaning; adding "highly civilized, highly democratic" before "modern" was designed to make the concept of modernization more complete. Insofar as this new concept of modernization is concerned, Yao Yilin [1202 0181 2651] had already applied it in his report to this session. It looks as though, in the forthcoming revision of the Constitution, the way the general task is to be broached will also be revised.

3. "Preamble," Section 6: "We should consolidate and expand the revolutionary united front, which is led by the working class and based on the worker-peasant alliance, and which unites the large numbers of intellectuals and other working people, patriotic democratic parties, patriotic personages, our compatriots in Taiwan, Hongkong, and Macao, and our countrymen residing abroad." Here, intellectuals were still regarded as objects to be united; however, according to the new point of view of the Chinese Communist Party, intellectuals have already become part of the working class.

4. "Preamble," Section 7: "Taiwan is China's sacred territory. We are determined to liberate Taiwan and accomplish the great cause of unifying our motherland." Beginning New Year's Day last year, such wording as "liberation of Taiwan" was no longer used, and in its place is now "the return of Taiwan to the motherland."

5. Chapter 1, General Principles, Article 2: "The Communist Party of China is the core of leadership of the whole Chinese people." It is said that, with regard to the party's character, the new draft of the Constitution of the Chinese Communist Party has added this statement: "The Communist Party of China is the faithful representative of the people of all nationalities of China." This statement is neither superfluous nor uncalled-for embellishment; its addition makes the party's character far more clear. It looks as though the new Constitution will also be revised in this manner.

6. Chapter 2, "The Structure of the State," Article 1: Deputies of the National People's Congress "should be elected by secret ballot after democratic consultation." In the new Electoral Law, this method of election has already been changed

to differential election; that is, the number of candidates should be greater than the number of those to be elected. Besides, the kind of "method of election," theoretically through "consultation" but really through designation by a higher level, has long been the subject of repeated criticism.

7. Article 34: "People's congresses and revolutionary committees are established in provinces, municipalities directly under the central government, counties, cities, municipal districts, people's communes, and towns.

"People's congresses and revolutionary committees of the people's communes are organizations of political power at the grassroots level and are also leading organs of collective economy.

"Revolutionary committees at the provincial level may establish administrative offices as their agencies in prefectures."

According to the new organic law, revolutionary committees at various levels have already been eliminated and replaced by people's governments at various levels. Therefore, articles of the Constitution involving "revolutionary committees" will be revised.

8. Article 48: "Citizens have the right to work. To ensure that citizens enjoy this right, the state provides employment in accordance with the principle of overall consideration." According to the provision of this Constitutional article, people have no freedom of employment, since it must be provided by the -tate in accordance with the principle of uniform arrangement. Over the past 30 years this practice has revealed very great defects, and China recently has encouraged freedom of vocational choice and propagated the "double door" employment approach. Hence, this article of the Constitution also looks likely to be subject to revision.

9. In the forthcoming constitutional revision, the repeal of lifelong tenure for cadres should be added and the limitation of tenures for cadres should be prescribed. This will be the most welcome article to the people in the forthcoming constitutional revision.

The above 9 items, plus the deletion of the "four bigs," make 10 altogether.

The reason China is undertaking a constitutional revision at this time is because the old Constitution has already run into contradiction with China's new political situation, and some of its articles still carry certain erroneous propositions of the Cultural Revolution period. It is estimated that the new Constitution, after revision, will incorporate certain new conclusions from China's theoretical research during the past 4 years, so as to preserve in constitutional form the results of those 4 years.

SIGNIFICANCE OF THE LAWYER SYSTEM EXPOUNDED

Jinan DAZHONG RIBAO in Chinese 3 Sep 80 p 3

[Article by Yu Xiangyang [0060 0686 7122]: "Discussing the Lawyer System"]

[Text] The people's lawyer system is an important item in China's socialist legal system, an embodiment of the socialist democratic principles and a part of the content of the systematization and legalization of democracy. It has an important significance in safeguarding the people's democratic rights, maintaining the socialist legal system and promoting the development of the socialist construction.

China formally created the people's lawyer system in 1956. Serving the people in law, the lawyers were enthusiastically welcomed by the masses. Speaking highly of the system, Comrade Dong Biwu [5516 1801 2976] urged its "rapid popularization." However, it encountered unjust criticisms in the anti-rightist movement in 1957. Some lawyers were erroneously classified as rightists for "defending criminals" and "shielding evildoers." For this reason, the system existed in name only. When Lin Biao and the "gang of four" advocated, during the Great Cultural Revolution, thoroughly "smashing the public security organs, procuratorial organs and people's courts," the lawyer structure was completely destroyed, and defense by lawyer became an untouchable "forbidden area." As a result, large numbers of unjust, false and erroneous cases occurred and many innocent cadres and people encountered persecution. The damages resulting from Lin Biao and the "gang of four's" destruction of the socialist legal system and abolition of the lawyer system proved the necessity of the lawyer system. After declaring the reinstatement of the lawyer system, the Second Conference of the Fifth National People's Congress recently published the "Provisional Regulations on the Lawyers of the People's Republic of China." Such measures are completely in keeping with the fundamental interest and desire of the broad masses.

As the work of lawyers was interrupted for more than 2 decades, currently some cadres and people do not have a clear understanding of the significance of the lawyer system. Some people feel that "defense by lawyer is a formality, a show, and not essential." It is an indication of their failure to understand

China's judicial process. Defense by lawyer is an indispensable link in China's trial work. The criminal procedure passed by the Second Conference of the Fifth National People's Congress provides: Besides exercising the right of defense himself, the defendant may entrust the following persons to conduct his defense: (1) a lawyer; (2) a citizen recommended by a people's organization or the defendant's unit and approved by the people's court; (3) a close relative or guardian of the defendant. Among the defenders, the lawyer is a professional in legal work and an expert in legal knowledge, and possesses experience in handling cases. In a lawsuit, he is an independent participant, free from any restraint by the defendant or interference by any organ, organization or individual. He enjoys more extensive rights than other defenders, such as checking into material relevant to the case, making necessary investigations and interviewing and corresponding with the defendant under detention. In court, he occupies a position of equality with the public prosecutor, and he may argue with the prosecutor. During the argument, he will present, in accordance with the facts and the law, material and opinions favorable to the defendant, thereby concretely guaranteeing the full exercise of the defendant's right to defense, aiding the court to clarify the case, enhancing the quality of the handling of the case and avoiding injustice.

There are also those who feel that, "by arguing for the defendant, the lawyer speaks for the criminal," and that he "loses his class standpoint." First, those holding this view have confused the distinction between a defendant and a criminal. They feel that the defendant is a criminal, and the criminal equals to the defendant, which is actually wrong. Criminal cases are very complicated. Generally speaking, there may be three kinds of defendants: a true criminal, a good person violating the law (such as accident due to negligence); a person falsely accused. Before the court renders a guilty verdict, they are all referred to as defendants. Only after investigation, prosecution and trial will the innocence or guilt be finally determined. After trial when the guilt of the defendant is proved, but not as grave as charged, and the sentence should be reduced, or the criminal responsibility should be eliminated, the lawyer must also argue for the defendant. Next, they do not understand the responsibility of the lawyer in criminal defense. Article 28 of China's "Criminal Procedure" provides: "The responsibility of the defender is to present material and opinions, in accordance with the facts and the law, to prove the defendant's innocence or the lightness of his offense, plead for reduction of sentence or elimination of criminal responsibility, and protect the defendant's legitimate rights." Obviously, when defending a defendant in court, the lawyer starts from upholding the dignity of the law and discharges his responsibility from the standpoint of the state and the people. He absolutely does not "speak for the criminal" or "lose his class standpoint."

One important task of the people's lawyer is to accept the invitation of organs, industries, professional units, people's communes and social organizations to serve as a legal adviser. With the progress of the four modernization construction, besides serving as defenders in criminal cases, lawyers will develop a great impact on settling the economic disputes among the state, industries, collectives and individuals, on safeguarding and supervising the conscientious performance of all kinds of contracts between industries and on handling issues of foreign trade, insurance, and joint operation of enterprises by China and foreign countries.

ABOLISH LIFE TENURE SYSTEM OF CADRES

Jinan DAZHONG RIBAO in Chinese 3 Sep 80 p 3

[Article by Jiao Yuke [3542 3768 3784]]

[Text] To build China into a modern socialist power by the end of the century is the established political line of our party in the new historical era. "After the political line has been decided, the cadres are the determining factor." ("Selected Works of Mao Zedong," vol 2 p 514). In accordance with the requirements of the political line, reforming the cadre system, especially abolishing life tenure, which actually forms a part of the cadre system, will produce a momentous impact on assuring the realization of the party's political line and the smooth progress of the four modernization construction.

Linked with the political system of the state and with that of feudal dictatorship, the cadre system is a hereditary life tenure system. Meanwhile, what is linked with the socialist system is proletarian democracy. The concentrated manifestation of such democracy is the election and dismissal of the leaders of all levels according to the opinions of the majority, in order to promote those most representative of the fundamental interest of the proletariat and the laboring people and those with the best management talent to the leading posts of all levels.

Ours is a socialist country. After the founding of the nation, our party vigorously followed the principles of Marxism-Leninism and Mao Zedong Thought, actively built the political power of the state and introduced the people's democracy. However, as the gradual perfection of the socialist democracy must undergo a process and as there are various historical and social factors, life tenure actually exists in China's cadre system today. As long as he does not make grave errors, a cadre will keep his position as an official throughout his lifetime. Similar to the cult of the individual, one man's say, factional activities and the prerogative mentality, such life tenure is actually a feudal remnant and easily turns into a parasite of patriarchy and bureaucraticism. Therefore, it is fundamentally inconsistent with China's socialist system.

Our position as the party in power requires that our cadres always represent the interest of the masses. Thus, life tenure must be replaced by the election and rotational system, in order to prevent the power holders from severing themselves from the masses and becoming bureaucratized.

Aside from representing the interest of the proletariat and the laboring people, the proletarian party in power has no prerogatives. Its cadres naturally must accept the supervision of the masses and be responsible to the masses. However, life tenure actually in existence in the cadre system easily leads our cadres to feel responsible only to the superior, not to the inferior, only to look up, not down, and only to be officials, not common people. Inevitably, the masses lose their supervision over the cadres, while the latter lapse into the mentality of "ironclad job security," sticking to the old ways, remaining in a rut, guarding their own turf, seeking no improvement and enjoying their emolument regardless of the quality of their work. The draft revision of the party constitution abolishes the life tenure of cadres and places the cadres of all levels under the people's supervision. It is an important measure, because, by abolishing the life tenure of cadres, the people will enjoy a true, not nominal, power of supervision, making it possible for them to elect those trusted by them to the leadership posts, to dismiss the incompetent whenever necessary and to promptly purge the corrupt. At the same time, it will encourage the cadres of all levels to maintain their close tie with the masses, promptly concentrate the wisdom of the people, understand their difficulties and preserve their own vitality. Some people feel that abolishing the life tenure of cadres may affect the continuity and stability of the party's lines and policies. Such worry is superfluous. The majority of the people of a state, a region, is a stable entity, and the people's will and desires of the era are indestructible and indomitable. The party's lines are the concentrated reflections of the people's will and desires. When the leaders of the various levels are truly elected, subject to rotation and dismissal, and the supervision of the masses, the continuity and stability of the party's lines will have a correct and firm foundation and a reliable guarantee.

Abolishing the life tenure of cadres will benefit the implementation of the cadre line of selecting the able and promoting the competent and making appointments on the merits. Ours is a large country and we have people of talent in great numbers. Yet the life tenure system blocks the metabolism of the cadre ranks and stifles large groups of talented people. Arrogant and domineering, some cadres actually regard the power granted by the people as their private property, practicing nepotism, feeling jealous of the able and the competent, and discriminating against those of different views. Thus, it becomes difficult for the promising young people of both virtue and talent to grow and attain important posts. To eliminate such defects and to promote talents unrestricted to one pattern, primarily life tenure must be abolished. By so doing, the outstanding people trusted by the masses will be promoted to leadership posts, while those who are inferior by comparison will be eliminated, and the cadre ranks will maintain their vitality.

Only by abolishing life tenure will the proletarian party in power effectively prevent the careerists from usurping the leadership power of the party and the state and safeguard the stable and unit i political situation. That Lin Biao and the "gang of four" could remain in power for 10 long years was not unrelated to the life tenure system. Lin Biao wanted to become the chairman of the state and Jiang Qing wanted to become the empress, because they thought that such positions, once acquired, would be for life, and that they could turn the people's republic into a feudal dynasty of "one surname through the generations." Therefore, one may say that abolishing the tenure system will at least block the path of the careerists in the cadre system. When the cadres of all levels are placed under the constant supervision of the people and the people select and replace the cadres according to their own will, though the careerists infiltrating the cadre ranks may triumph for a time, they will not be able to play the tyrant for long.

The strenuous historical task of the four modernization construction requires the abolition of the life tenure system. The arduousness of the task calls for the prompt solution of the "aging" problem of the cadre ranks. Once the life tenure system is fundamentally solved, the "aging" problem will be easily handled, and the leadership teams of the various levels will become youthful and vigorous. The complexity of the four modernization construction necessitates changes in the composition of the cadre ranks. The four modernization construction involves all realms of modern science and technology, and organizing modern mass production requires all kinds of scientific management knowledge. We must have large groups of cadres proficient in science and technology, in all kinds of professional knowledge and in organizing. Abolishing the life tenure system of cadres and placing professional talents in important posts constitute the proper way to change the cadre composition and conclude the irrational situation of the layman leading the expert. If we truly introduce the cadre policy of selecting the able and promoting the competent, then, we will, on the one hand, encourage the cadres to learn professional knowledge, turning from laymen to experts, and eliminate those satisfied with their status as a layman and, on the other hand, make it possible for those with professional skills and with enthusiasm for the four modernization construction to be selected for leadership posts. Furthermore, in the four modernization construction, while assimilating the lessons of experience of the past 30 years, we must also continuously study and solve the new situations and new problems. In face of this strategic task, our cadres of all levels must always maintain their fighting spirit, their vitality, an active mind, a strong desire for knowledge and proficiency in their field. After remaining at the leadership posts for a long time, some of our cadres have become ossified or semi-ossified in their thinking. They are satisfied with the status quo, desire no progress, stay in a rut and want no reform. If such mentality is not promptly changed, not only will it be impossible to realize the four modernization construction, but the survival of the nation will become a tremendous problem. Therefore, abolishing the life tenure of the cadres is definitely not an expediency, but a long-range momentous strategic measure. It is the trend of the times and imperative.

INTELLECTUALS URGED TO APPLY FOR OFFICIAL POSITIONS

Shanghai JIEFANG RIBAO in Chinese 11 Aug 80 p 4

[Article by Xiao Lin [5135 2651]: "Select Cadres From Among Intellectuals"]

[Text] Recently, the following news reports have come to my attention: The Xingtai Municipal Stocking Plant--one of "eight hopeless enterprises" in Xingtai City, Hebei Province--has been quickly converted from a backward unit into an advanced enterprise since college graduate Li Xianggen [2621 4382 2704] was named its director and secretary of its party branch in October 1977.

A chemical plant in Xiaoyi County of Luliang Prefecture, Shanxi Province, which once bordered on bankruptcy, has received a shot in the arm and has made its products competitive on the market since a college graduate who knows this trade well was appointed its director.

Actually, examples of this kind are not lacking in Shanghai. At least two out of several hundred textile mills in Shanghai are well known for their scientific management systems and good organizations for production. They are Shanghai Cotton Textile Mills No 12 and No 28. During a recent tour of the two textile mills, I was told that their directors were also trained in this particular field. There should be laws governing the development of such outstanding examples that have repeatedly emerged in our society. Selecting cadres from among the intellectuals and appointing young and robust intellectuals of political integrity to leading posts should be regarded as urgent measures for accelerating the tempo of the four modernizations.

Comrade Mao Zedong once said: "Cadres are a decisive factor, once the political line is determined." Today, our party's political line is a call for accomplishing the four modernizations before the end of this century. With this political line growing steadily more popular with each passing day, people throughout the country sincerely hope that leading organs at all levels will take a giant step forward in carrying it through to the end. Everyone must understand that the organizational line is subordinate to the political line; the promotion of the four modernizations has little in common with the promotion of land reform and the cooperative movement, and therefore it has placed a new demand on the organization line.

The four modernizations program is aimed at modernizing our country under the socialist system. Bearing this in mind, we are required to radically reform our existing cadre system and to set new standards for promoting cadres on the merit of their moral qualities and aptitude. By moral qualities, we mean their degree of commitment to the socialist road and the cause of the four modernizations. By aptitude, we mean their ability to lead the four modernizations program, which requires professional knowledge. Cadres not armed with professional knowledge are in no position to lead the four modernizations program. At present, the number of cadres with professional knowledge is relatively small and therefore far from being able to meet the requirements for promoting the four modernizations.

How can we change this situation? There are two ways to solve this problem. First, in-service cadres must be required to study hard in order to change from nonprofessionals into experts. Second, bold steps must be taken to select cadres from among the intellectuals.

Except for a few who were born in the old society, the overwhelming majority of intellectuals in our country have been trained since the birth of new China. Most of these intellectuals were trained in new schools founded since the construction of new China. During the past 30 years, the number of our college and middle school graduates has increased to 8 million, most of whom have spent 10 or 20 years or even longer working in various fields of practical work. They now form the backbone of a work force employed by various departments, trades, enterprises, and establishments. Among them are outstanding public service workers. In addition, there are cadres who were born of worker and peasant families and who have studied hard to gradually turn themselves into experts. If we select one-tenth of the 8 million intellectuals as cadres, the number will be nearly 800,000. In other words, the conditions are now ripe for selecting cadres from among intellectuals.

Some comrades have worried that selecting cadres from among intellectuals may violate the party's class line. This unnecessary worry reflects a lack of clear understanding of the nature of our party's class line, which is based on the support of the working class. But the content of the working class on which our party relies sometimes may or must undergo changes. For example, the most reliable mass organizations allied with the working class in the countryside now accommodate more elements than in the days of land reform and the cooperative movement. Today, through 30 years of work, practice, and education, the overwhelming majority of intellectuals in our country have become part of or outstanding members of the working class. During the past 20 years or more, they have personally witnessed the struggle against rightists unfold and escalate and they have experienced the 3 years of economic difficulties, as well as the 10 years of turmoil caused by Lin Biao and the "gang of four." No one can deny that the overwhelming majority of intellectuals who have survived these three major tests are reliable and good. The reason is that, through these tests, they have proven themselves to be patriots, staunch supporters of the Communist Party leadership, and good workers diligently sharpening their professional skills to serve the cause of the socialist construction, with the conviction that only socialism can save China. Since the downfall of the "gang of four," they have worked even harder than ever for the sake of the revolution. Now let me ask: Can any nonworking-class intellectuals perform that kind of feat? Can anyone say that they are not outstanding members of the working class? Is it in line with the requirements of the party's class line for this new historical period, for us to resolutely rely on and trust these outstanding members of the working class, and boldly promote able intellectuals of political integrity to leading posts?

Some people contend that our party may be in danger of going revisionist and our country may risk changing color if political power falls into the hands of the intellectuals. We must break with this totally erroneous traditional idea that has shackled the people's minds and bound their feet and hands for years. If this viewpoint had any merit, there would never have been any Marxist party nor any state under the dictatorship of the proletariat in the world, since Marx and Engels, cofounders of Marxism, and Lenin and Stalin, who founded and led the world's first state under the dictatorship of the proletariat, were all typical intellectuals. This fact alone can prove this viewpoint absurd.

It is important to select cadres from among intellectuals. In the future, our cadres not directly engaged in production will be recruited mainly from among intellectuals (including outstanding workers and peasants trained by various schools and party schools). But this does not mean that every intellectual can become a cadre, just as every piece of pig iron is not necessarily good raw material for making steel. Anyone who can meet the standards of intellectual maturity and political integrity required of cadres should be selected. Practical experience shows that the key to success in accurately selecting cadres lies in the mass line. Specifically, the following methods should be adopted for selecting cadres from among intellectuals: first, reliance on recommendations from the masses and grassroots organizations; second, reliance on self-recommendations; third, recruiting through advertisement; fourth, combining elections with appointments. Of course, the first three methods must be coupled with a screening and examination procedure. In this connection, I strongly urge those interested in public service to recommend themselves. In the history of China and other countries, there have been many distinguished public figures who voluntarily offered their services to their nations. The secretary of the treasury under America's first president, George Washington, was a man who recommended himself to the President for that job when he was in his thirties. Later, he helped President Washington solve many financial problems that others considered impossible of solution. Today, we must encourage people to recommend themselves for public service. This is one way to find more talented people to serve this country. Those who can recommend themselves for official positions are mostly persons with a strong sense of responsibility and a high degree of dedication to public service. Their bold decision of this kind usually stems from their desire to serve their country and is based on a conscientious analysis of subjective and objective realities. Once the chips are down, they will do everything possible for the benefit of the country. At a time when our country is in urgent need of able intellectuals to speed up the tempo of the four modernizations, people must be encouraged to voluntarily apply for official positions. Anyone who has the courage to bear the heavy responsibility and is able to serve the public interest should be respected and admired. Recruiting new cadres through advertisement is believed to be another fruitful measure for encouraging talented people to recommend themselves for official positions—a measure which should be widely promoted by all trades and enterprises.

BEIJING WARNS XINJIANG TROUBLEMAKERS

Paris LE MONDE in French 28 Oct 80 p 4

[Article by Alain Jacob: "Central Government Warns Troublemakers 'Regardless of Their Nationality'"]

[Text] Beijing--What happened in Xinjiang last spring? Rumors had begun to make the rounds in Beijing during the summer to the effect that there had been serious clashes between elements of the Uigur population and civil servants (or military personnel) of the Han nationality stationed in the region. The incidents reportedly were so serious that the families of some of those civil servants had to be evacuated and returned to Beijing. There was talk of dead and wounded but this was entirely too vague to enable anybody to get an exact idea of what had really happened.

Hardly more is known today but the fact that these incidents did take place was confirmed on the occasion of the mission carried out that month to Xinjiang by Mr Wang Zhen, member, Political Bureau, Communist Party, and specialist for this region, because he had served there at length right after liberation. Talking at Urumchi on 9 October, during a meeting organized in connection with the presence of Mr Wang Zhen, one of the regional party committee secretaries, a man by the name of Mr Temur Dawamad said that "events that took place recently are harmful to unity among the nationalities and unity between the army and the people and they have had an adverse effect." "We must," he added, "deal severely with those few persons who stirred up dissent and who undermine unity. We must isolate those few bad individuals."

Mr Wang Zhen himself during that same meeting did not expressly refer to these incidents but he did describe "the strengthening of unity between all nationalities" in Xingjiang as "the primordial task" on which depends the interest of each and every one. He issued a severe warning in the name of respect for the law: "We will not tolerate any act contrary to the law or any irresponsible actions. We are determined to fight against all wrongdoers who undermine the social order. All criminals will be punished, regardless of who they may be and what their nationality may be."

But Mr Wang Zhen went even further in expressly mentioning the role of Soviet agents: "We must realize," he said, "that the Soviet social-imperialists are stepping up their activities of subversion and we must be on guard against the kind of discord which they create among us in order to undermine our fatherland's unity."

These words must be viewed in the light of reports disseminated in July by a "clandestine" radio station called "Radio 1 August" (the anniversary date of the founding of the Chinese People's Liberation Army), generally considered an offshoot of the Vietnamese and Soviet special services.

These reports--which must be treated with the utmost caution because of their origin--specifically mentioned incidents that happened in April in the western part of Xinjiang, in the region of Aksu.

Although some of these statements are quite wild, it is nevertheless true that there has been trouble in Xinjiang which justifies, if not alarm, then at least very special attention on the part of the Chinese central government.

In contrast to other regions inhabited by national minorities, Xinjiang was considered an area suitable for population settlement by Beijing. Right after liberation, there were only 6-7 percent Han residents. With more than 4 million individuals, they today constitute almost one-third of the regional population although they are not integrated into an environment which is still profoundly Muslim, an environment from which they are separated by ethnic, sociological, and religious barriers. In spite of an undeniable effort at economic advancement, this relatively recent evolution certainly does create a delicate situation charged with tension.

It is not entirely inconceivable, finally, that the troubles in the more remote Islamic countries--linked to Xinjiang by very ancient and traditional relationships--may have produced an echo in that region and may have constituted a supplementary ferment for agitation.

PARTY AND STATE

MEASURES TO REHABILITATE 'STIFLED TALENT' REPORTED

Hong Kong DONGXIANG [THE TREND] in Chinese No 24, 16 Sep 80 pp 26-27

[Article by Lin Xi [2651 5045]: "Important Measures for Rehabilitating Stifled Talents"]

[Text] Today, the Chinese Communist Party is concentrating on realizing the four modernizations by the end of the present century. In this great march, a serious problem is the lack of talented people, especially scientific, technological and management talent. In order to solve this problem, what is even more important and more urgent, apart from the development of educational enterprises, is how to tap the potential of existing talent.

At the national conference on employment problems last month, a salient measure was put forward under the handling of Wan Lin, the major exponent of the practice faction. This called for allowing professionals to choose their professions and for giving scope to their interests and expertise, with the condition that the interests of the state and the collective as well as the individual be taken into consideration. In its wake, RENMIN RIBAO published articles at different times stressing permission to effect appropriate interchange of talented persons. The articles said: "At present, the adoption of resolute and strong measures is urgently required to break down barriers, to liberate suppressed, wasted talented persons from 'warehouses' and 'little manors,' and to let them demonstrate their talent and fulfill their ambitions at relevant posts." This was indeed a strong measure to give scope to the potential of existing professional talented persons and to promote the work of modernization.

In the mainland today, "what one is doing is not what one has studied, and a lack of openings to serve the country" constitute the common vexation of many intellectuals. The phenomenon of a large-scale brain drain in recent years has been significantly related to nothing more than this very situation.

Late last month, RENMIN RIBAO devoted entire pages to letters from readers reporting how "what one is doing is not what one has studied." These letters can all be said to have consisted of words of tears and voices of sorrow, reflecting the hearty appeals of a considerable part of the intellectuals:

A university student majoring in industrial economics was, upon graduation, assigned to an agricultural machinery plant with only 50 workers to take on the duties of custodian, statistician, cashier, secretary, etc. He was later transferred to the propaganda department of the County Party Committee to write reports.

A university student majoring in urban sociology was, upon graduation, given a job of shepherd.

A graduate of the astronomy department at Nanjing University was assigned to the Wuhu regional administration meteorological bureau in Anhui Province, where what he did was to repair the plumbing and provide services to conferences--by selling cigarettes and meal tickets.

A student who had graduated from the math-dynamics department of Beijing University was assigned the job of bank teller.

A university student majoring in mechanical manufacturing was assigned as a teacher, and what he taught was human biology and hygiene.

There were also those majoring in oceanic geology and topography who were assigned to county bureaus of civic administration; those majoring in oceanic meteorology who were assigned to the job of repairmen at county chemical fertilizer plants; those majoring in aerial photography who were assigned to middle schools to teach physics.... Situations like these have been just too common in China. Some of these [people] have been subject to such torture for 10 to 20 years, with the most precious springtime of their life already behind them. They painfully appealed to the authorities not to "make matches at random" any more, since that had resulted in wasting talent.

The reason for such a situation has a great deal to do with the entire employment system of the Chinese Communists in the past, which was called uniform assignment. Since it was assignment, naturally one had to do what one was told to do, regardless of the interest and expertise of the individual involved. If assigned to a good superior, that would be one's luck; otherwise, one would be condemned to a lifetime of misery. Many special talented persons who were assigned to do what they had not studied were by no means satisfied with encounters of this kind; they earnestly hoped to serve the country's construction. But what could they do? Even if you wanted to return to your own specialty, and even if another appropriate unit wanted to use you, it would still be very hard for you to leave, because you had no power of self-determination, and the will of your superior would decide on your right to a professional choice.

There were not a few who submitted requests to their superiors for transfer, but they encountered replies such as "this can be studied," "we may discuss this a little," "this matter is rather complex," "we will let you know after our considerations," "you must remain at ease until the transfer," etc. In a word, the secret of dealing with you was to delay; some would simply attach a label to you such as "struggling for your own individual fame and profit" or "not working at ease on your own job." In such cases, your days from then on would be even harder.

Under ordinary conditions, scientific and technical personnel who wish to be transferred from their present jobs must venture through four passes--namely, the pass of their own respective unit, the pass of the party branch, the pass of the party committee, and the pass of the higher organ which has to examine and approve their requests. Some must venture through even five or six passes, and if any one of them turns out to be blocked, transfer is out of question. Therefore, some scientific and technical personnel said: "To effect a transfer of one's job is really harder than applying for a visa to go abroad!"

China's four modernizations lack talented persons, on the one hand, yet they waste talents and put talents in deep freeze on a grand scale on the other. This kind of practice is really intolerable. The permission now granted for appropriate freedom of professional choice and for appropriate interchange of talented people constitutes precisely the kind of measures that would bring talent out of the deep freeze.

First of all, it would make professional personnel feel pleasant and comfortable, so that they would tend to take the initiative in their work.

Secondly, it would change the habit of clinging to the iron ricebowl and eating from the common pot. In the past, staff members would only enter an organ but not leave it; the upshot would be the same whether one did well or very badly--that is, to stay put. Natura-ly, a person's incentive to exert himself became dampened. Now permission is granted for interchange of personnel, and with competition, scientific and technical personnel will of course strive to improve their own work capabilities.

Thirdly, it may improve work efficiency. The talents that I lack may be secured from you, and the talents you lack may be secured from me. Working personnel thus all become experts in their own fields; they naturally feel much more comfortable at work under such circumstances.

More important, permission for interchange of personnel makes it possible for all personnel to devote their talent to their jobs. This serves to put into effect the emphasis the authorities have placed on the value of men.

Apart from transfers of jobs, interchange of personnel may be subject to other uses; concurrent offices, concurrent teaching, and temporary borrowing, for example, are adoptable methods.

But while interchange of personnel is both feasible and needed, in view of the mainland's current situation, there will probably still be obstacles in the way if it is to be applied on a universal basis. The persons in charge at the various enterprises, units, and organs may not all be able to consider questions from the point of view of the interests of the state and the overall situation, or from the angle of the scientific and technical personnel. It is possible that they will indulge in the "power" they used to enjoy in controlling people's life and death. They may believe in the motto "it is nice to serve as officials when there are more people," and at the same time they may be afraid to let scientific and technical personnel be transferred, because if such transferred personnel should achieve meritorious results in other units, would that not constitute a deprivation to themselves? In a word, in such matters as desire for power and old habits, sudden change is not easy.

But such obstacles must be overcome. A situation in which some idle to death, some work to death, some suppress their talents, and some thirst for talents can no longer be permitted to continue. If people are allowed to work at odds with each other like this for very long, it can only serve to extend the gap between China's scientific level and that of foreign countries. It looks as though the Chinese Communists should consolidate the interchange of personnel in legal form, so as to ensure that professionals can request transfers with a sense of justification, and so as to ensure that the talent of all people is relevantly devoted to their work.

YOUNG CADRES ENCOUNTER RESISTANCE IN MOVING UPWARD

Liaoning Cadres Promoted

Beijing GUANGMING RIBAO in Chinese 3 Sep 80 p 1

[News report by GUANGMING RIBAO correspondent Sun Jun [1327 6874]: "Liaoning Promotes Outstanding Youth Cadres to Leading Posts"]

[Text] Party organizations at all levels throughout Liaoning Province have encountered some ideological obstacles when they took steps in promoting a number of outstanding young cadres to leading posts serving the needs of the four modernizations in accord with the guidelines of the Fifth Plenary Session of the 11th Party Central Committee. In a statement commenting on this problem, Ren Zhongyi, first secretary of the Liaoning Provincial Party Committee, said: Further efforts must be made to eliminate the vestiges of feudalism in our society which still stand in the way of our efforts to promote cadres.

Ren Zhongyi said: A survey shows that at present, the idea of promoting cadres on the basis of seniority remains the biggest ideological obstacle to the appointment of young cadres to leadership positions. Some comrades who urge evaluating cadres on the basis of seniority, regarding experiences as the principal qualification for promotion, always tend to neglect young cadres' potentials to catch up with and overtake senior cadres in terms of performance and always nitpick on what they have done. Other comrades even have lodged protests with authorities which have promoted or are about to promote young cadres to leading posts. This indicates that the forces emphasizing seniority as principal qualification for promotion remain predominant in our country; the vestiges of the feudal order characterized by grades, ranks and respect for seniority remain in effect in our society, along with sectarianism which reflects high regard for "nobles and their disciples and old associates." Today, we often hear someone say: "I still want to take orders from my old boss rather than from that new appointee." We have also detected that favoritism and nepotism are still being practiced by those in authority. Where did such malpractices originate? They are actually vestiges of feudalism. There are still some people who classify our society into groups on the basis of their class origin, and in the light of whether they were born red or black. These people who are influenced by the feudal ideology also consider "nobles always nobles and poor always poor."

Analyzing the origin of the aforementioned ideology, Ren Zhongyi said: Our party has led the people in a semi-feudal and semi-colonial country to successfully capture the political power. Because the influence of feudalism remains deep-rooted in our society, we must get a clear idea about its essence and danger so that we can consciously strive to eliminate its vestiges.

Ren Zhongyi said: We must revitalize our cadre system so as to promote truly outstanding young cadres to the leading posts at the service of their country and nation. By revitalization, we mean replacing the archaic regulations which have the effect of suppressing talented people, preventing them from moving up and wasting their energy with effective measures aimed at training and promoting outstanding professionals to serve the needs of the socialist modernization. We also mean retiring inept cadres and taking care of their welfare for the rest of their lives and transferring those misplaced personnel to more suitable posts. In short, we must take necessary and reasonable measures to retire the old and bring in fresh blood to revitalize the cadre system. Today, I am glad to announce that we have made some breakthroughs in this field. For example, some units have adopted the democratic election system to select and promote cadres to the leading posts, while others have applied the civil examination measure to recruit workers. In the future, we must continue to reform the cadre system so that all outstanding professionals can be placed in suitable posts. For example, directors of small franchise manufacturing businesses can become managers of their big corporations through fair competition. In this way, the system of promoting people on the basis of seniority is bound to die a natural death.

Ren Zhongyi said: Comrades in charge of organizational work should emancipate their minds. If they still refuse to emancipate their minds and if they still persist in promoting their colleagues on the basis of seniority, always considering their young colleagues too premature to be worthy of any higher positions, outstanding young cadres will never have chances to move up. All political departments should act as vanguards in cherishing and promoting outstanding young cadres rather than deliberately preventing them from moving upward.

Changzhi Promotes Educated Youths

Beijing GUANGMING RIBAO in Chinese 3 Sep 80 p 1

[Article by Lu Jiasheng [7120 0857 3932]: "Changzhi Municipality Promotes a Group of Specialists to Leading Posts"]

[Text] Since their promotion to leading posts at all levels over 2 years ago, some 80 college and middle school graduates and youths of corresponding academic achievement in Changzhi Municipality, Shanxi Province, have been warmly praised by the masses for promoting production and other work.

In the process of selecting and promoting cadres to leading posts at all levels, a point that commands our special attention is that their promotion is a departure from the old tradition but not from the party's principle.

In the process of promoting cadres, the erroneous idea emphasizing poor class origin as principal qualification for promotion has given way to the party's policy which emphasizes performance as key qualification for promotion. A typical example is the promotion of Zhang Qingjian [1728 3237 0256], a surgeon of the Changzhi Municipal Hospital, to its deputy superintendent despite the problem of his past class origin. During the past 30 years, as a supporter of socialism and the party leadership, Zhang Qingjian has worked and studied hard and has distinguished himself as an outstanding surgeon in the medical circles of Changzhi Municipality. He was commended by the 1978 National Science Conference for guiding a scientific research project to success, whose outcome enlightens the surgeons to the fact that a patient survived after his circulation system abruptly stopped functioning for 8 minutes. Since his promotion to the position of the Changzhi Municipal Hospital's superintendent, he has worked even harder than ever, and has made new contributions to the branch of medical science.

In the process of promoting cadres, intellectuals have been regarded as members of the working class. For example, when the Luan Mining Bureau was reorganized, college and middle school graduates of the 1950's and 1960's were invited to join the principal leading groups of its 4 affiliated mines; 6 out of 10 positions of the deputy directors or higher leading cadres of the Wangzhuang Coal Mine are held by college and middle vocational school graduates; "professional cadres" have also been invited to join the staff of the Zhigejie, Wuyang and Zhangcun coal mines.

In the course of promoting cadres, the erroneous idea of selecting cadres for promotion from among the party members and government staff members alone on the basis of seniority has also given way to a new system of evaluating them on the basis of their ability to handle practical problems. For example, 35-year-old Kang Lin [1660 2651], a Taiyuan Institute of Technology graduate of 1970, and a staff member of a synthetic fat acid plant, was promoted last April to the position of its deputy director in charge of production. Since his promotion, he has joined other leading cadres of the plant in actively redrafting and improving its regulations governing the organization of production. He has also helped the plant improve the quality of its products, increase its output and earnings, and fulfill its various economic and technical targets ahead of schedule. In addition, Changzhi Municipality has promoted cadres from outside the party to leading posts. For example, nonparty cadres Huang Yang [7806 2254], He Hao [0149 3185] and Tao Xu [7118 6070] have been promoted to the positions of deputy principals of the Changzhi Municipal Middle Schools No 1 and No 2; nonparty cadre Lu Qinqiao [7120 2953 2890] to the position of deputy principal and concurrent dean of students of the Changzhi Municipal Middle School No 6; nonparty cadre Luo Guoliang [5012 0948 5328] to the position of deputy director of the Changzhi Municipal Theatrical Troupe; and nonparty cadre Chen Xifang [7115 0823 5364] to the position of deputy principal of the Changzhi Municipal Drama School.

BRIEFS

SHANGHAI FIRE, EXPLOSION ACCIDENTS--Our city made very great achievements in fire prevention work during the January-September period this year. Compared with the same period last year, there was a more than 20-percent drop in the number of fire accidents, property losses and the number of casualties involved. This was also the lowest record of losses to fire compared to the same periods of the past 4 years. This was revealed at the municipal conference on winter fire prevention work today. The conference also noted that at present, there are still many problems faced by Shanghai in its fire prevention work. Particularly since the beginning of October there have been successive fire and explosion accidents, causing considerable property losses to the state and a number of deaths and injuries. This situation should arouse the vigilance of leaders at all levels and the people throughout the municipality. The winter season is approaching. Because of the expected strong winds, dry weather and increased use of fire and electricity in the winter, slight negligence may cause a fire accident. The conference called on all units to widely publicize the need for fire prevention, organize inspections to remove any hidden cause of fire hazards and insure safety in using fire and electricity during the winter. [Text] [OW081145 Shanghai City Service in Mandarin 1130 GMT 5 Nov 80]

SHANDONG MARRIAGE LAW--The propaganda department of the Shandong Provincial CCP Committee recently issued a circular on publicizing the marriage law. The circular calls on propaganda departments at all levels to conscientiously carry out this work in line with their actual conditions and to emphasize the basic contents and significance of the marriage law to ensure its implementation. All party committee propaganda departments are urged to conduct propaganda activities on the new marriage law in November. [Jinan Shandong Provincial Service in Mandarin 2300 GMT 5 Nov 80 SK]

STUDY OF PARIS COMMUNE--After 5 days of discussion, the second annual meeting of the Chinese Society for Studying French History concluded in Zhejiang's Hangzhou City on 5 November. Attending the annual meeting were 89 researchers of French history from 51 units, including institutes of higher learning, scientific research institutes, and journalists and publishing organisations from all parts of China. All discussions were focused on the special topic of the Paris commune. Some 30 papers were submitted to the meeting, dealing with the characteristics, significance and experience of the Paris commune and its impact in China. Next year marks the 110th anniversary of the founding of the Paris commune. [OW061056 Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 5 Nov 80 OW]

GUANGDONG CADRE ARRESTED--(Wen Yitao), secretary of the (Jiaqi) commune CCP committee of Lufeng County, took advantage of his power and position and shot dead an innocent youth in violation of the law. He was arrested on 19 October with the approval of the people's procuratorate in Lufeng County and in accordance with the law. The (Lutian) troupe of (Jiaqi) commune of Lufeng County staged a performance on the evening of 7 October. When (Lin Kangke), a commune member of (Yuankeliao) village of (Lixin) production brigade, was entering the theater with a ticket in his hand, he got into a quarrel with a militiaman of (Aidui) production brigade who was maintaining order in the theater. The militiaman beat and injured (Lin Kangke) and sent him to the commune. Some people from (Yuankeliao) village went to the commune entrance and strongly demanded that the commune handle the case. Some commune members medicated in the quarrel and eased the tension. However, (Wen Yitao) suddenly ran out from a room and scolded the masses. This made the people very angry. He then fired a shot in the air which made the people even more angry. They dashed into the commune and broke some windows. (Wen Yitao) hid in the room. When the masses tried to seek him out, he fired five shots at the door and hit (Cai Liangru), a young man of the 18th team of the (Aishe) production brigade, who was watching the scene from a tree outside the door. After failing to respond to emergency treatment, (Cai Liangru) died. (Wen Yitao's criminal act exerted a very bad influence and the broad masses of people strongly urged the commune to prosecute him according to law. At present, this case is under investigation. LIAONING NATIONALITY WORK SESSION--The Sixth Standing Committee meeting of the Fifth Liaoning Provincial People's Congress was held 5-7 October. The meeting approved a report on provincial nationality work, endorsed the provincial government report on reward and punishment regulations for forestry enterprises, discussed a draft method on maintaining ties between congress Standing Committee members and the deputies and discussed the election and dismissal of personnel. Huang Oudong, chairman of the Standing Committee of the provincial people's congress, addressed the meeting. He urged special attention to minority legislative work to ensure the rights of minority nationalities in political, economic and cultural fields. [Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 7 Nov 80 SK]

JIANGSU CYL CONFERENCE--A Jiangsu provincial conference to exchange experience among grassroots CYL units was held in Nanjing 3-5 November. Secretaries of CYL committees at prefectural, municipal and county levels and representatives of advanced CYL branches, totaling some 500, attended the conference. Hu Hong, secretary of the provincial CCP committee, and Hu Dehua, secretary of the CYL Central Committee, spoke at the conference. Eight CYL branches made work reports and 400 advanced CYL branches were commended at the conference. [Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 5 Nov 80 OW]

HUBEI MEDIATION WORK--In the past few years, Hubei Province's people's mediation organizations have been developing well. These organizations were established and perfected under the guidance of leaders and people's governments at all levels. At present, there are 3,067 leading mediation groups, 35,370 mediation committees, 248,050 mediation groups and 881,800 cadres working for mediation in the province. These organizations have been working in accordance with the government policies and laws to settle civil disputes, giving the people's courts more time to deal with serious cases. [Wuhan Hubei Provincial Service in Mandarin 1100 GMT 1 Nov 80 HK]

ANHUI TU COUNCIL MEETING--The Anhui Provincial Trade Union Council recently held a work meeting in Tongling City to discuss how to mobilize women workers in Anhui to contribute to the four modernizations, safeguard their legal rights and solve their problems. The meeting noted that due to the influence of the left-leaning line and sabotage by the "gang of four" over a protracted period of time, labor protection for women workers in Anhui has been quite inadequate. The meeting called on cadres of women workers to conscientiously study the party's policy, analyze women workers' problems in production and daily life and take immediate action to solve them. The meeting also urged women representatives to speak out and reflect workers' opinion at workers' congresses and supervise the implementation of motions related to the vital interests of women workers. [Hefei Anhui Provincial Service in Mandarin 1100 GMT 5 Nov 80 OW]

ANHUI JUDICIAL ADMINISTRATION FORUM--A provincial forum on judicial administration was recently held in Hefei, Anhui. Vice Governor Cheng Guanghua addressed the forum. The forum called for strengthening judicial administration organs, training of judicial cadres, the lawyer system and notarization work. It also called for giving wide publicity to the legal system and disseminating knowledge of the laws among the people. It urged the departments concerned to help judicial organs overcome material difficulties so that they can have the necessary conditions under which to work. [OW121321 Hefei Anhui Provincial Service in Mandarin 1100 GMT 7 Nov 80]

HUBEI PREFECTURAL REGULATIONS--Hubei Jingzhou Prefectural Administrative Office recently issued regulations on strictly controlling expenditure. This year, Jingzhou Prefecture was hit by severe floods, therefore, it is necessary to cut expenditure in order to provide relief. The Jingzhou Prefectural Administrative Office made four stipulations: 1) all units must economize expenditure and should not spend more than the quota allocated by the financial departments; 2) all departments concerned must conduct less meetings to cut expenditure; 3) no units must pay superflous items, such as vehicles and so on; 4) it is strictly forbidden to repair and construct offices, except under special circumstances. CHINA WOULD LIKE U.S. AID TO MODERNIZE AIR FORCE

Paris LE MONDE in French 14 Oct 80 p 4

[Article by Alain Jacob: "Beijing Wants Washington's Help in Modernizing Its Air Force"]

[Text] Beijing--Officials responsible for Chinese defense apparently are giving priority to the modernization of their Air Force. Various projects involving other services have been suspended in the light of the economic policy of "readjustment" which this year involves a reduction of something like 13 percent in the military budget. Several signs indicate that these austerity measures do not directly affect the Air Force. Now, the Chinese aircraft industry itself is not able to meet the needs which have to be satisfied.

Last January, the New China News Agency reported flight tests involving a Chinese-made combat aircraft which theoretically can fly at three times the speed of sound. But it also reported the conditions connected with this test flight which, quite frankly, would make one's hair stand on end. According to Western experts, the aircraft in question is a delta-wing twin-jet of which only about half a dozen copies are now in existence and it would be incapable of achieving the performances, in flight, for which it had been designed.

Chinese aviators thus turned to foreign suppliers either to improve the aircraft they already have or to get new ones.

A contract has just been signed between Marconi Avionics, an affiliate of British Electric, for an amount of $95 million. This involves electronic target-spotting and firing systems intended for the Mig-19 aircraft of which the Chinese have about 2,000.

On the other hand, Beijing has for a long time been interested in the British VTOL aircraft, the Harrier. Chinese experts however have tempered their initial enthusiasm by noting that the employment of such perfect aircraft would require the existence and operation, without failure, of technical and logistic support services on the ground which the Chinese Air Force would have trouble providing.

In view of these conditions, Chinese officials have turned to American aircraft builders.

According to trustworthy sources, both Chinese and Western, China is supposed to be particularly interested in two types of aircraft: the Phantom F-4, which is already being sold not only to NATO member countries but also to Japan, Iran, Israel, etc., and the F-15, likewise sold abroad, especially to Saudi Arabia. These two aircraft were built by McDonnell-Douglas, which also builds the DC-9 Super 80 civilian transport aircraft, regarding which conversations have been in progress with China for the past 2 years.

Washington said and repeated that the delivery of "offensive" military materiel to China--such as combat aircraft--was ruled out. Only sales of logistic equipment or equipment for "mixed" civilian and military use were officially authorized, such as ground and air transportation equipment, observation systems, data processing machines, etc.

It seems however--if we are to believe certain Western experts--that exploratory or preliminary conversations were started last summer between Chinese representatives and American builders. These same specialists noted the large number of American missions representing groups connected with American industry which have followed each other to China.

The Chinese are not thinking of any massive purchase of aircraft which would make China's Air Force dependent in case of conflict on the political goodwill of a foreign supplier. The contracts contemplated supposedly are of a "technological" nature, that is to say, they involve the delivery of a limited number of aircraft (about half a score, at most) and the acquisition of licenses permitting progressive manufacture in China even of larger series.

The Americans it seems are trying to take precautions regarding the future without any too abrupt changes. American sales to China were increased ten-fold over a period of 3 years, slightly topping a figure of $1.7 billion in 1979; but that volume could be considerably increased in the next several years--provided, however, as Washington knows very well, that a suitable proportion of military orders would be accepted along with civilian orders.

MILITARY AND PUBLIC SECURITY

INDICTMENT AGAINST PLA LEADERS CRITICIZED

OW172206 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 17 Nov 80

[Text] People ask, is the indictment against Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Jiang Tengjiao objective?

1. These ranking military officers are included in the 10 principal defendants of the Lin Biao and Jiang Qing counterrevolutionary cliques and are to be tried by a special court. It was said that the special court would correctly decide their responsibilities for the 10-year havoc and would sentence them fairly. The problem is that, in the past, they and other leading personnel of our armed forces loyally implemented CCP military commission chairman Mao Zedong's orders and directives. Because soldiers must absolutely obey orders. It was proper for them to obey the orders and directives of the CCP military commission chairman and the state's supreme commander. Why are they now deounced for committing serious crimes? We want to ask: Those who implemented erroneous orders were severely punished, but the one who issued erroneous orders was not punished. Is such a trial fair?

2. There are many problems and suspicious points in the indictment about the five military officers' so-called plot to conduct armed rebellion and murder Chairman Mao.

First of all, both the nature and content of the indictment are similar to the notorious "outline of Project 571." After the downfall of the "gang of four," it came to light that all the contents of the so-called "outline of Project 571" were plotted and mapped out by the "gang of four." We want to ask: Can the groundless crimes fabricated by the "gang of four" be used as the main evidence in the trial against our military leaders?

3. At present, there are persons making special efforts to exaggerate the gang-fabricated myth the so-called Lin Biao counterrevolutionary clique planted a time bomb at Chairman Mao's (?residence) in May of 1971 to kill him.

Furthermore, there are persons currently spreading a rumor claiming that the bomb, which recently exploded at the Beijing railway station, was planted by PLA soldiers. For his ulterior motives, a certain person even claimed that this bomb was from the warehouse of a division of the Beijing PLA units and was carried to the Beijing railway station to be planted in the special railway car reserved for Vice Chairman Deng Xiaoping in an attempt to kill him. However, due to carelessness, the bomb exploded prematurely and killed many persons at the railway station. The rumor obviously attacks our armed forces, particularly some leading comrades of the Beijing military region, attempting to convince people that sworn followers of the so-called Lin Biao counterrevolutionary clique were hiding in the armed forces, saying that they are very dangerous enemies and were plotting to kill central leading personnel. It is obvious that the rumor was spread only to create a tense atmosphere for the trial of the five military leaders as well as for the continuing purge of the so-called persons associated with the Lin Biao clique.

CLARIFICATION

In JPRS 76825, 17 November 1980, No 138 of this series, p 60 in article entitled 'BA YI RADIO' SAYS U.S. GIVES PRC MILITARY SECRETS TO TAIWAN, please make the following change to paragraph 3, line 4:

Thus, these Americans had every single detail of the guided missile testing ground in Shuangcheng, an important secret base of ours.

This supplies indistinct words in broadcast.

BRIEFS

SHANGHAI CRIMINAL CASES--Since the beginning of this year, Shanghai public security organizations have relentlessly punished active criminal elements in order to improve social order and protect the masses. As a result the number of criminal cases has declined greatly. To promote the coming winter-spring security work, the municipal public security bureau held a meeting of cadres and policemen on 3 November and called for efforts to track down criminal gangs, smugglers and profiteers, to clamp down on black market activities and to arrest thieves and swindlers in public places. [Shanghai City Service in Mandarin 1130 GMT 3 Nov 80 OW]

LIAONING LUDA GARRISON COMMAND--Shenyang, 8 Nov (XINHUA)--Commander Zhang Huairui, political commissar Wang Congzhou and other principal leading cadres of the PLA Luda Garrison Command in Liaoning recently visited coastal outposts by sea to firmly grasp work at grassroots units. From 10 October till 29 October they covered the 1,000 li sea defense line and visited 7 regimental units and over 30 frontline platoons. Wherever they went, they listened to the voice of cadres and fighters, tried to understand the situation on the spot and urged personnel concerned to work together and study solutions. [Beijing XINHUA Domestic Service in Chinese 0238 GMT 8 Nov 80 OW]

SICHUAN MILITARY SKILLS CONTEST--The Sichuan provincial security and military skills contest was held for 8 days. It closed on 9 October. All militiamen and policemen did well in the contest. This proved that the training they have received is indeed adequate. [Chengdu Sichuan Provincial Service in Mandarin 2300 GMT 10 Oct 80 HK]

SICHUAN NATIONAL DEFENSE INDUSTRIES--The Sichuan provincial national defense industries has turned to producing civilian products when there are not enough production tasks in the winter. These products include motor vehicles, bicycles, cameras, electronic calculators, radios and so on. This year's civilian product production plan has so far accounted for 60 percent of the total production value. Workers' income has increased and subsequently so has their enthusiasm. [Chengdu Sichuan Provincial Service in Mandarin 2300 GMT 18 Oct 80 HK]

SHANGHAI WATERFRONT SECURITY IMPROVEMENT--Public security, shipping and other concerned units in Shanghai have made vigorous joint efforts to improve public security and order in the Shiliupu area, in suburban Shanghai, where the country fair trade is in a peak period. Passenger traffic to and from the area by land and river transportation has increased sharply. Criminals are active in the vicinity of the Shiliupu passenger wharf, engaging in ticket scalping, picking pockets, and other illegal activities. In the past 2 weeks or so, more than 560 cases have been solved, and the offenders have been punished according to law. [Shanghai City Service in Mandarin 1130 GMT 8 Nov 80 OW]

JIANGSU AIR DEFENSE WORKS--The major cities and towns of Jiangsu Province actively make use of the people's air defense works during peacetime. Presently, more than 300 such defense works, with a total space of some 110,000 square meters, can be turned into underground workshops, warehouses, reception centers, restaurants, stores, conference halls, offices and hospitals. By utilizing the air defense works during peacetime for production and catering services, the functions of such works can be fully tapped for providing more employment opportunities. In Nanjing Municipality, a people's air defense command has been turned into an underground hostel with 350 beds and a mess-hall capable of accommodating some 300 customers. In Wuxi Municipality, a huge air defense work has been turned into an underground park to attract tourists. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 10 Nov 80 OW]

JIANGSU MILITIA MEETINGS--The Jiangsu Provincial Government and the provincial military district held on-the-spot meetings in Yangzhou and Nanjing from 5 to 10 November on the organization and training of the militia antiaircraft artillery (AAA) battalions and regiments of the province. The meetings were held in accordance with the guidelines issued by the State Council and the Central Military Commission in their directives on building militia antiaircraft artillery contingents. Present were responsible comrades of the municipal and county people's governments in Jiangsu, military subdistricts, Nanjing Garrison Command, the municipal and county people's armed forces departments and the provincial people's air raid defense office as well as leading comrades of Nanjing PLA units, the provincial CCP committee, the provincial government and the provincial military district. Also present were representatives of Shanghai Garrison Command, Zhejiang and Anhui provincial military districts and PLA air force, artillery and armor units in Nanjing. Participants visited a number of AAA battalion and regimental command posts and firing ranges and watched firing and the command training of militia cadres. [Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 10 Nov 80 OW]

ORDNANCE CADRE TRAINING UNIT--The Shandong Military District has recently put into operation an ordnance cadre training unit [dui] to train some 130 ordnance cadres from the military subdistricts and county-level people's armed forces departments. The training is to improve ordnance management work and the cadres' professional level in view of the characteristics of militia ordnance work under the new historical conditions and on the basis of existing weapons and equipment, which will speed up the building of the rank and file of ordnance cadres and strengthening logistics work to meet the needs of modern warfare. In order to effectively run the training unit, the Shandong Military District made special efforts to establish a teaching office and to transfer cadres with professional know-how, practical experiences and teaching abilities to assume teaching positions. REINTERPRETATION OF RELATIONSHIP BETWEEN LITERATURE, POLITICS

Anhui ANHUI WENXUE [ANHUI LITERATURE] in Chinese No 4, 1980 pp 66-70

[Article by Liu Guangyao [0491 0342 5069]: "Recognize Anew the Relationship Between Literature and Art and Politics"]

[Text] In our garden of socialist literature and art, do we truly have "one hundred flowers blooming?" Are our poets truly emancipated from the improper restrictions of the past, and do they express themselves freely? If we seek the truth from the facts, the answer should be in the negative. For many years, our pitiful Muse beat her head against the fences and the high walls and, when Lin Biao and the "gang of four's" evil trend prevailed, was simply placed under "total dictatorship." To be frank, the development of art even today is not without obstacles. What is the reason? I feel that one important reason is the long existing biased interpretation of the relationship between literature and art and politics. For more than 2 decades, the theory or principle followed by us is: "Literature and art serve politics." But is this a truly scientific slogan? To clarify the right and wrong of theories and bring prosperity to literary and artistic creation, the writer wishes to express his dissent for instructions by the experts.

In Terms of the Objective of Artistic Understanding, Literature and Art Cannot Serve Politics

We know that the most fundamental reason for the classifications and distinctions among the sciences is because of the different objectives of their understanding (or objects of understanding). As a special social ideology, literature and art also have their own unique objective of understanding.

The objective of literary and artistic understanding is man.

Gorki pointed out: "The material for literature is man and his multiple pursuits and actions--man in the course of his growth or destruction." Therefore, he called literature "the study of man."

Then, how should literature and art understand and express man? Do they precede or succeed life?

According to the materialist reaction theory, literature and art can only understand and express man in life, and they appear subsequent to man's living activities. In this sense, literature and art succeed life. Gorki paid serious attention to this characteristic. He admonished: "It must be remembered that people only began to write about the French Revolution of the late 18th century in the mid-19th century when not only the flame of the French Revolution had quenched, but the coal had also been covered by the petit bourgeois' cold ashes." ("On Literature").

In view thereof, literature and art obviously cannot serve politics. To put it more concretely, politics is always manifested in the formulation and introduction of concrete policies and measures. When a policy is merely a policy and has not been enforced, literature and art cannot serve it. The reason is because it still belongs to the realm of concept and is a so-called "conceptual thing," while literature and art are the tools to understand and reflect objective things and also belong in the category of conceptual things. Under such a situation, asking literature and art to serve politics is no different from asking a concept to "understand" and "reflect" a concept, which is naturally extremely ridiculous. Meanwhile, before the completion of the political process, when a policy is still in the midst of enforcement, it likewise cannot become the objective of artistic understanding and reflection, and the so-called principle of "literature and art serving politics" is likewise impossible. Because at this time, man's "multiple pursuits and actions" have not fully manifested themselves, "the course of his growth or destruction" has not taken its final form, and his "human nature" has not "materialized" and "objectivized" in the product of his practice. In other word, man has not yet created "his work and his world of reality;" therefore, there is not yet the objective which can enable him to "directly perceive himself." Before the end of the so-called Great Cultural Revolution, for instance, when Lin Biao and the "gang of four" just began to enforce the policy of cultural tyranny, it was inconceivable for the artistic images of Xie Huimin and Song Baoqi to emerge. Yet very obviously, when a policy, by means of practice, is converted from a "conceptual thing" into a "real thing," into "life," "literature and art serving politics" becomes an empty phrase, because by now the so-called "politics" no longer exists. If it still exists, it is no longer politics in its original sense, but something which has inextricably intertwined and merged with other factors (economic, legal, ethical, moral, etc.) of social life. Furthermore, such intertwining and merging are not imposed mechanically or manifested abstractly. As "man is the sum total of all social relations," such intertwining is expressed in form of his concrete perception. Under this situation, to "serve politics" and to understand the law of motion of politics, one must discard its living perceptual form and abstract it from the organic whole of multiple social factors, yet this apparently cannot be accomplished by art. The understanding of an object by literature and art is premised on retaining the perceptual form of the object, and there is no art if the perceptual form of the object is discarded. Just think: if literature and art no longer exist, how can they "serve politics?"

If literature and art are forced to "serve politics," it will inevitably lead to the following consequences:

(1) Turning literature and art into diagrams for political concepts, policies and regulations; depriving them of their power to intervene in and understand life;

(2) resulting in the artificiality, formalization, conceptualization and dishonesty of character images. Has this situation not been revealed repeatedly in our literary and artistic creations for many years?

In Terms of the Method of Literary and Artistic Understanding, Literature and Art Cannot Serve Politics

We know that, conditioned by the different attributes of the objects of understanding, man created two different methods of understanding, viz., abstract understanding (logical thinking) and image understanding (image thinking). The most essential characteristic of abstract understanding is discarding the perceptual form of a particular object, its individuality and its specific characteristics to arrive at the understanding of its general characteristics. This method is adopted in politics to study the general state of things and create policies adjusted to such general state. On the contrary, image understanding follows the method of retaining the perceptual form of a particular object and its specific characteristics and seeking its maximum individual clarity. Thus is art. Goethe's view is correct: "... comprehending the individual and describing the individual constitute the true life of art." ("Goethe's Conversation with (Aikeman)").

In view thereof, art, which serves to understand the individual characteristics of things, and politics, which serves to understand the general characteristics of things, are in a contradictory state right from the beginning. "Any general is particular (one part, one aspect, or the essence). Any general can only approximately include all the particulars. No particular can be completely included in the general.... Any particular, after thousands of conversions, is linked with the particular of another category (objects, phenomena, processes), etc." (Lenin, "Notes on Philosophy"). That a particular object is particular is because it contains things incompatible with the general. Furthermore, the general, in another aspect, is relatively stable and immutable, while the "particular" is continuously changing and moving and incessantly battering at the barriers of the "general." True, the force of such battery is minimal, but its uninterrupted quantitative change will lead to changes in the general essence of an object. Doubtlessly, when the changes of the "particular" have not grown strong enough to affect the "general," its principle or manifestation is not recognized by the "general," but the "particular" ignores such recognition or its absence, persists in its own power of movement and change, and adheres to its contradictory position to the "general." Precisely because of such contradiction between the particular and the general, it is impossible for art to serve politics.

The issue can be illustrated as follows.

For more than a decade, Lin Biao and the "gang of four's" rampage created serious destructions to the society of our country. Its aftereffect is still felt today, leading some innocent and flawless people to the road of crime, such as Jiang Aizhen [5592 1947 3791] of Xinjiang's Shihezi region. This state of things is reflected in some of the recent novels. The culprits in such novels are, like (Lazi) in the Indian film "Wanderer," innocent, but the law has to adjudge them guilty. Just think: Can politics write under its own banner that "the culprit is innocent because he committed the crime under the influence of the evil consequences created by Lin Biao and the 'gang of four's' disruption?" No. Politics can only premise itself on recognition of the general state, on adapting to such general state, and gradually reform it. However, what about literature and art? Literature and art cannot treat life so simply. Do we not see clearly here the contradiction between literature and art and politics? How aptly Mr Lu Xun [7627 6598] put it! "Politics must maintain the status quo; naturally it is in a different direction from literature and art which are dissatisfied with the status quo." ("Parting of the Ways between Politics and Literature and Art"). However, his words have been forgotten.

The contradiction between the particular and the general is manifested, in creation, as that between literature and art and politics. The conflict between the particular and the general is manifested, in creation, as the intervention of literature and art in life and in politics--the reason for the vitality of works voicing dissatisfaction with the status quo and resisting it in the history of literature and art, because it expresses the creative motions of life and the effort against restrictions and for new developments, and it belongs to the future. That the literature and art "extolling virtues and achievements" are lifeless is because they obliterate the tendency of the motions and changes of things and strive to polish and smooth out the figures for the purpose of diagraming a certain kind of politics, so that the individuality of the figures is dissipated in general principles. How can they possess vitality?

What Is the Political Essence of Literature and Art?

The foregoing discussion does not reject the political essence of literature and art. The contradiction between literature and art and politics itself denotes such essence. Then, how does one interpret the political essence of literature and art?

I feel that the political essence of literature and art mainly rests in its indirectness, in its conceptual link with definite social "norms," and in its ideological link with certain future political policies. However, such links are after all indirect, and it is impossible for them to directly lead to a political movement. The Renaissance of Europe happened more than 200 years before its 18th century political revolution. The "Peacock Flying Southeast" was an indictment of feudal ethics in the Han Dynasty, yet the earnest anti-feudal struggle did not begin until the "4 May" movement.

In view thereof, though literature and art possess a political essence, they themselves are not political. To put it more concretely, the reasons are: (1) Though literature and art contain certain ideals concerning politics, they are far from complete political doctrines, nor concrete and feasible political programs. What they attempt to express is "nothing else but human nature." They cannot assign themselves the task of creating political doctrines. As aptly put by Tolstoy, "the goal of the artist is not indisputably solving problems, but in making people love life by means of the countless and inexhaustible living phenomena. If I am told that I can write a novel and use it to indubitably decide on the views on social issues considered by me to be right, then I will spend not even 2 hours working on such a novel. But if I am told that today's children will want to read what I write 20 years from now, and that they will cry over it, laugh over it and love life, I will dedicate my entire life and total effort to such a novel." (2) Politics possesses a "direct realistic quality;" it can use certain coercive means to enforce a political program. On the other hand, literature is merely "conceptual." Its strength indirectly acts on society, and it cannot directly intervene in the political life. "Lisao" contained Qu Yuan's political ideal, but it was not political, nor did it "serve politics." Had Qu Yuan been able to introduce smoothly his political line, he would not have reached the stage of being "emaciated and pallid in appearance" and "chanting poetry next to the pond." When he composed "Lisao," there was no politics to be "served" by it.

Nevertheless, for many years in our country, in accordance with the theory that "literature and art serve politics," the issue of literature and art has been summarily classified as a political issue, resulting in the tragic persecution of writers and artists and the "encirclement and suppression" of literature and art time and again! Comrade Zhong Dianfei [6945 8410 2787] pointed out sorrowfully: "If it is said that literature and art are politics itself, what does it indicate? It does not indicate anything. What it actually means is that literature and art should perish. Since we already have the politics which can lead China's revolution to victory, why bother with such superfluities? I hope that the readers will not think that I purposefully write such shocking words and play with concepts. It is not so. It is precisely because of the ever more aggravating controversy between the two views on literature and art in the past 30 years and the tragic and painful lessons undergone by us that I have finally recognized the truth." ("Thoughts on Film Literature").

Since art is not political, one naturally comes to the following conclusion: The provisions and norms of a political policy cannot serve as the criterion to judge the political tendency of an artistic work. The political issue involved in an artistic work is considered as the "subject matter" by art. As it itself is the object of artistic judgment, naturally it cannot "reverse the positions of the guest and the host" and serve as the criterion to judge literature and art. Take the novel "Li Zicheng" for instance: Can we say that the political policy advocated by Li Zicheng's peasant army in the novel was its political tendency? Obviously not. The reason is because if so, its political tendency would apparently fall under the category of the peasant petit bourgeoisie, while very obviously, the political tendency of "Li Zicheng" belonged to the category of the proletarian world outlook. The same may be said of modern themes and issues involving current policies. What determines whether the political tendency of a literary work is revolutionary or reactionary is not the political issue involved in it, but whether its interpretation of such issue is compatible with reality and consistent with the Marxist world outlook. As long as it is consistent with the Marxist world outlook, its political tendency is revolutionary or progressive. As for whether it conforms to the requirements in the clauses of a certain policy, such determination will be superfluous and arbitrary. According to the law of art itself, it is contradictory to politics to start with. Furthermore, is it possible for its policy [sic] to be wrong? Who can guarantee that we will not make mistakes today and in the future?

In Terms of the Functions of Literature and Art and Politics, Politics Should Serve Literature and Art

Any science and any department of human production (spiritual and material) have their special and irreplaceable functions. Comparing their different special functions is an important means to study their mutual relationships.

What is the function of literature and art?

To be concise, it is to understand the beauty of the objective world and uncover and grasp the "rule of beauty" in the objective world.

What is the function of politics?

To be concise, it is to manage--managing the things of the state, such as the economy, culture and military affairs. Such management is realized in form of appropriate policies formed by a given political group according to the concrete conditions in the realm of practical life. It studies the links between all kinds of practical activities and the multiple social relations, and the social conditions relied on by such activities for their pursuit, uncovers the patterns therein, and thereby supplies the necessary social conditions for their smooth progress. In this sense, management is service.

However, isn't politics the manifestation of the class struggle? Is it pure management?

To be sure, politics is the struggle between the classes, and the formulation of political policies is conditioned by the interest of a specific class. However, politics is a product of the state, and the state itself is a sort of managing organ created for the purpose of averting the destruction of society in the class struggle. It itself is "a force which comes from society, places itself above society, and becomes ever more severed from society." (Lenin, "the State and Revolution"). It is entirely possible for the interest of a specific class to coincide with the common interest of the whole society. Even for a class in its decline, its political decisions, on certain concrete issues, may possibly contain popular factors. Therefore, the class essence of politics and its management function are not contradictory. Furthermore, with the proletarian seizure of political power, the disappearance of domestic exploiting classes and the concentration of the main force of the state on economic and cultural construction, politics will become pure management more and more. Needless to say, we have begun to advance into such an era.

In view thereof, to enable literature and art to perform their function normally, should politics not study the conditions needed by literary and artistic activities and thereby serve literature and art?

Precisely thus Vice Chairman Deng demands that politics serve literature and art:

"The party's leadership of literary and artistic work is not by issuing orders or by demanding that it subordinate itself to temporary, concrete and direct political tasks, but by helping, in accordance with the characteristics and development laws of literature and art, the literary and artistic workers acquire the conditions for the continuous prosperity of the literary and artistic enterprise, raise the literary and artistic level, and create superior literary and artistic works and performing art worthy of China's great people and great era." ("Congratulatory Speech at the Fourth Congress of China's Literary and Artistic Workers").

In that case, what conditions, generally speaking, are needed for artistic prosperity?

A true policy of "100 flowers blooming; 100 schools of thought contending" is needed! The true freedom of creation is needed!

In the past, we dreamed of "100 flowers blooming; 100 schools of thought contending," but due to many historical, political and understanding reasons, we did not attain it. However, "today, we can say with full confidence that it will not be long before such a situation appears, and the condition for the true realization of the Marxist policy of '100 flowers blooming; 100 schools of thought contending' is ever maturing." (Ibid.)

Let us welcome the arrival of the true "100 flowers blooming; 100 schools of thought contending!"

SOCIOLOGICAL, EDUCATION AND CULTURE

EDUCATOR LISTS WAYS TO REFORM MIDDLE SCHOOL EDUCATION

Shanghai WEN HUI BAO in Chinese 23 Aug 80 p 3

[Article by Shao Ailing [6730 1947 3781]: "Four Suggestions for Improving the Structure of Middle School Education in Shanghai"]

[Text] The proper structure of middle school education has a direct bearing on the selection of talents by institutions of higher learning, the development of qualified new students and the supply of able workers for the reserve labor force. It is my opinion that structural reform in the urban middle schools calls for the establishment of "multiform senior middle schools," that the reform should mainly be directed toward the adoption of a flexible policy of using various ways and means in the management of schools, that there should be proper control over the development of ordinary senior middle schools, that different types of technical and vocational schools should be developed according to a plan, and that technical courses should gradually be introduced into the ordinary senior middle schools. The important reforms stated above would enable education to render further service to the socialist construction projects of four modernizations.

Many advantages accrue to the bringing about in a positive manner structural reforms in the system of higher education in Shanghai. Shanghai is a vital base for industry, science and technology and foreign trade. In other words, it enjoys a supremacy in terms of industrial, economic, cultural and technological power. The various organizations in society, the industrial and mining enterprises, the various trades and business enterprises all have the capability of meeting the conditions for establishing schools and various types of vocational schools either by themselves or in cooperation with other interested parties. In view of its economic, scientific and technological development, Shanghai is certainly in a position to raise the standard of the various types of middle school education. Prior to the Great Cultural Revolution, Shanghai had a long tradition of running various types of middle schools. In 1964, there were 76,018 junior middle school graduates in Shanghai. After graduation, 26,790 went on to ordinary senior middle schools (35 percent of the total for that year), 8,869 (12 percent) went on to mid-level special schools, 6,617 (8.7 percent) went on to branch schools, 11,614 (15.3 percent) went on to various types of trade schools, and 22,128 (29 percent) joined the military services, entered cultural supplementary schools or waited for employment. In that year, the number of senior level technical and trade school students was slightly larger than the number of ordinary senior middle school students. This would seem to indicate that Shanghai is in a favorable position to bring about structural reforms in the middle school education system and that it enjoys a headstart in the establishment of a large number of new schools. It is also to be noted that beginning in 1981, the number of middle school and primary school students is expected to show a drop in proportion to the drop in the birthrate. That is also an advantage insofar as our effort to readjust and reorganize middle school education and to bring about reforms in its system and structure is concerned.

Structural reform in middle school education involves such areas as the developmental projects of the entire educational system, the economic structure, the labor system, the system for the admission of students and the policy toward young intellectuals. This complex social reform also involves the vital question of the education and career of thousands upon thousands of boys and girls. The education, economic, labor and financial departments of the city should jointly set up a reform advisory committee and organize the necessary personnel to conduct a survey and research of the principles, the policies and the methods of the reform and to draw up an overall plan on an experimental but positive basis with an eye to the best interests of all the concerned parties so that the structure of middle school education may meet the needs of the four modernizations, the development of talents by institutions of higher learning, and the development of the various trades and enterprises. In order to meet the needs stated above, it is suggested that emphasis should be placed on the following.

(1) Readjustment and putting in order the system of ordinary middle schools. When studying the question of extending the period of senior middle school education in Shanghai, adequate consideration should be given to the question of how to establish different types of senior middle schools and how to raise their standard qualitatively and quantitatively. Aside from efficiently operating demonstration middle schools and supplying institutions of higher learning a large number of qualified new students, we should also make technical education available in ordinary senior middle schools or offer elective courses in vocational education on a trial basis. We should study ways and means to provide senior middle school students some expertise in the professions and certain skills in productive labor within the limitations of the schools and according to the needs of economic development.

(2) Establishment of vocational classes or vocational senior middle schools on a trial basis. The setting up of vocational classes in ordinary senior middle schools or turning ordinary senior middle schools into vocational senior middle schools requires joint planning on the part of the municipal education department and the concerned labor planning departments. To make the most of the positive attitude on the part of the parties concerned in the establishment of such schools, the various vocational training classes and vocational schools (not including the existing middle vocational and technical schools) should take different forms and adopt different methods. These schools may be established by the education department, or they may be established by the production and mining enterprises. The length of the courses should be flexible. However, such schools must be established with the approval of the concerned departments so that there may be a uniformity in vocational education in the city. This type of vocational classes or vocational senior middle schools must see to it that, on top of the main cultural courses offered by senior middle schools, the students are offered vocational courses and the opportunity to acquire certain skills in productive labor. The government is not to be responsible for the assignment of jobs. It is up to the

cooperating units and the concerned parties to select the candidates for employment. The various types of vocational senior middle schools should hold themselves responsible for making their graduates take the entrance examination for admission to institutions of higher learning.

(3) Readjustment and putting in order the existing middle vocational schools and technical schools. Efforts should be made to gradually upgrade the importance of senior middle vocational school education to approximate that of middle school education and to set up a proper ratio between middle and senior vocational schools and ordinary senior middle schools and a proper ratio in the courses offered by the middle vocational schools themselves. Our present task is to readjust and to put in order the faulty distribution of middle vocational schools and the overall planning of the courses offered by vocational schools. In the process of implementing the policy of readjustment, restructuring, consolidation and improvement, the technical schools should upgrade their quality by making the necessary readjustments and well-considered developments in a positive manner.

(4) Marshalling the positive factors of all quarters in planning the establishment of various types of senior, middle and junior vocational schools and labor and cultural supplementary schools. These schools are for the benefit of new graduates and old graduates who are looking for employment or waiting for admission to institutions of higher learning. They should organize these graduates and get them to study culture or science so that they may acquire some professional knowledge and certain manual skills. These schools are mainly for the purpose of answering the different needs of junior and senior middle school graduates who are unable to get admitted to institutions of higher learning or to find employment and of meeting the needs of a constantly changing society. After readjustments have been made, some of these schools may be turned into various types of institutions for spare time education. In going about our task, we should exercise some foresight so as to eliminate the possibility of waste and to make the maximum use of the limited educational funds.

The concerned parties should also adopt the necessary measures to establish step by step an army of teachers and professionals well-versed in the field of vocational and technical education in order to bring about the needed reforms in the structure of middle school education.

HAINAN EDUCATION BUREAU CALLS MEETING TO EXCHANGE VIEWS

Haikou HAINAN RIBAO in Chinese 30 Aug 80 p 1

[Text] The Hainan Bureau of Education recently convened a meeting for the exchange of views on the work of strengthening the political ideology of students of middle and primary schools. Among the 100-odd participants were the responsible comrades representing the city of Haikou and the education bureaus in the various counties, leaders who have distinguished themselves in political work in the schools, class teachers, pioneer counselors, teachers of political instruction and representatives of students who were good in health, good in their studies and good in their work.

In the course of the meeting, 13 representatives of progressive units and other individual representatives, in talking about their experiences, generally agreed that, in this new historical era, the young students are most active in their thinking, that the work of strengthening their political thoughts has a profound meaning, that, bearing in mind the special features of different schools, the work of instilling political ideology in the students should be closely coordinated with teaching. The main job of schools is to teach, and teaching is done mainly in the classroom. Within the contents of the syllabus and with consideration to the actual needs of the students, the teachers should instill in them the correct ideologies and make ideological education available to them on a regular basis. That is the way to develop the work of instilling political ideologies in the schools to the best advantage. To remedy their lack of ideals for the future, their laxity of discipline and an unwillingness on the part of the students to make a serious and painstaking effort to learn, the teachers of different courses at the Diao Lou Primary School in Lin Kao County make it a practice to instill in the students ideological education in the normal course of their teaching. For example, language teachers, while teaching such lessons as "Attacking the Frontier Pass" and "The Man Who Knows No Fatigue," told of the fearless exploits of Chen Jingrun [7115 2529 3389] in scaling the heights in the field of science to inspire the students to apply themselves diligently to their studies, to overcome difficulties in capturing the frontier pass, and to learn the necessary skills in order to enable themselves to make their contributions to the four modernizations. After sustained efforts to make available to the students education of an ideological nature, the school showed a decided improvement in discipline

To get the instillation of political ideologies in the middle and primary schools to a good start, it is essential to take into account the characteristics of the young people. It is the view of the representatives at the meeting that, while their views of the world are still in the process of taking shape, their thoughts, not having been set, have a high degree of pliability. At this stage, while undergoing a period of intellectual and physical growth, they have a keen desire to learn and to emulate role models. That being the case, they are easily swayed and influenced in the course of their activities and their contacts. The work of instilling political ideologies in the middle and primary schools must, in addition to classroom instruction, place emphasis on education outside the classroom. It is necessary to take into account the special characteristics of the young and to engage them by various means in activities that appeal to them so as to get abstract ideas across to them by tangible means and to educate them through the exercise of their strong sensory perceptions. That was how Han Yan [7281 3601], a teacher at the Xin Lian Primary School in Wen Chang County and an outstanding school counselor of the province, went about his work with remarkable results.

Another meaningful experience underlines the importance on the part of teachers to set personal examples and to do what they preach. It is the opinion of the representatives that, in view of the tendency of the students to pattern themselves after role models, the thoughts and actions and even the mode of dress of school leaders, political cadres and teachers have a profound influence on them. Li Kaiming [2621 7030 2494], a sixth grade class teacher at the Hainan Middle School, is particularly adapt in this respect. She treats her students like her own children and shows a deep affection and concern for them. She also sets a personal example for her students. She is the first to do what she expects her students to do, and she is the first to observe what she expects her students to observe. Her students regard her as a loving mother and mentor, hangs on to her every word, and takes her as a model worthy of emulation. Thus, she encounters little difficulty in her work as class teacher, and her students are able to develop mentally and physically in a healthy manner.

It is also the opinion of the representatives that, in order to do a good job in the instillation of political ideologies in the middle and primary schools, it is necessary to bring into full play the positive role that can be assumed by organizations, groups and student associations and to achieve close coordination with different sectors in society in mobilizing all the positive factors to jointly develop a new generation of young people.

ZHENGZHOU UNIVERSITY UPGRADES TEACHING OF BASIC COURSES

Beijing GUANGMING RIBAO in Chinese 2 Oct 80 p 1

[Text] According to reporter Yin Ping [3009 1627], steps taken by Zhengzhou University to focus the teachers' main efforts on the teaching of basic courses and to organize the teachers in a positive manner to study better methods of teaching in order to raise the quality of the teaching of basic courses have shown encouraging results. At the present time, the level of teaching in the basic science and arts courses has reached or surpassed the highest level achieved by that university prior to the "Great Cultural Revolution."

Last spring, after the party committee of the university had shifted its main attention to exercising its leadership in the area of teaching, it discovered a widespread weakness in the teaching of basic courses in the various departments and an unacceptably low standard of the quality of teaching. After a period of intensive study, the party committee put forward certain recommendations to upgrade the teaching of basic courses. It called for the teaching of basic courses by the professors, associate professors and lecturers in the various departments and special units who are experienced in teaching and who have proved their competence as teachers. The party committee also decided that the principal teachers of basic courses must be exhaustively evaluated and approved by the university and department leadership. That represents a basic departure from the practice of having basic courses taught by a "relay" of young teachers. The university is to use the quality of teaching and the compilation of reference materials and suggestions for better teaching methods by the teachers of basic courses as a basis for determining their rating in scientific research and for their job classification and promotion the same way teachers engaged in scientific research are evaluated. Teachers of basic courses who have demonstrated a correct attitude in teaching and who have shown a qualitative competence in their teaching are to be given prior consideration for promotion. This practice has yielded positive results in the teaching of basic courses. During the last school year, 63 percent of the principal teachers of basic courses were professors, associate professors and lecturers. This semester, the figure has risen to 73 percent.

In strengthening the teaching of basic courses, the university attaches great importance to encouraging the teachers to undertake research on teaching in a positive manner. Discussion meetings are being held on a regular basis by the university, the departments and the teaching research group for the exchange of teaching experiences, especially with reference to the strengthening of the teaching of basic theories, the dissemination of basic knowledge and training in basic skills. Teachers make it a practice to attend each others' classes in order to compare notes. In addition, the university also sends selected teachers to other institutions of higher learning to undergo further studies or to attend lectures given by nationally known specialists and professors or to participate in discussion panels in order to widen their field of knowledge and to upgrade their competence in the teaching of basic courses.

After over a year of experience, the quality of the teaching of basic courses at the university has registered an upward swing. The university has basically reached or surpassed the highest level achieved prior to the "Great Cultural Revolution" in mathematical analysis in the mathematics department, higher algebra, optics in the physics department, inorganic chemistry in the chemistry department, ancient Chinese in the Chinese department, and rudimentary archaeology in the history department. The various departments have compiled over 50 pieces of improved supplementary material on the quality of basic courses, thus enriching the contents of the teaching of the basic courses. As a result of the strengthening of the teaching of basic courses, an overwhelming majority of the students have shown better achievements.

MONGOLIAN WRITERS, ARTISTS URGED TO SERVE MODERNIZATION

Hohhot HONGYAN in Chinese No 4, Jul 80 pp 55-57

[Article by Yan Xinsheng [7051 2450 3932]: "Strengthen Leadership in Making Creative Work Flourish; Vigorously Unfold Mass Cultural Work"]

[Text] In May, greenery returns to the world, and signs of spring characterized by youthful vigor are seen everywhere around this capital of Inner Mongolia. On 5 May--a lovely day this spring season--cultural bureau chiefs from all over Inner Mongolia Autonomous Region gathered in Hohhot for the opening session of an 11-day-long cultural work discussion meeting.

This meeting represented a step forward in implementing the guidelines of the Third Plenary Session of the 11th Party Central Committee and of Comrade Deng Xiaoping's congratulatory message to the Fourth National Cultural Congress and the communique of the National Conference of Provincial, Municipal, and Regional Cultural Bureau Chiefs. In addition to summing up and exchanging the experiences that they have gained over the past 3 years following the downfall of the "gang of four," the delegates to the meeting studied the problems of cultural and artistic work for this new historical period and related principles and policies. They also discussed the matter of how to arrange cultural work for the next 2 years, in accordance with the policy of readjustment, restructuring, consolidation, and improvement, and the ways to strengthen and improve the leadership over cultural activities.

During the meeting, responsible persons of the party and government in Inner Mongolia Autonomous Region Wang Feng [3769 6912], Kong Fei [1313 7378], Wang Yilun [3769 6654 0243], Jie-er-ge-le [2638 1422 2706 0519] and Zhou Beifeng [0719 0342 5478]; responsible persons of the Propaganda Department of the Inner Mongolia Autonomous Regional Party Committee Chao Luomeng [3390 3157 3443], Bao Xiang [1405 4382], and Yun Zhaoguang [0061 3564 0342]; responsible persons of the United Front Work Department of the Inner Mongolia Autonomous Regional Party Committee Ke Ligeng [0344 0500 2577] and Zhao Yuding [6392 0358 1694], and other comrades received the delegates to the meeting and posed for group pictures with them. Following the reception, Comrade Wang Feng, secretary of the Autonomous Regional Party Committee, delivered an important speech at the meeting.

Comrade Yun Zhaoguang, chief of the Autonomous Region Cultural Bureau, delivered a report to the meeting. He pointed out: Cultural workers must try their best to serve the purpose of the four modernizations. To this end, the leadership over writers and artists should be strengthened in order to further enliven literary and artistic creative activities and to constantly raise the ideological level and artistic qualities of literary and artistic works. We must help the minority people in our region actively develop their cultures and arts, which reflect the glorious life and history of people of the Mongol and other minority nationalities. We must create and present to the public literary and artistic works of unique national character in our region. Forces must be organized to help the people of all nationalities discover and preserve their precious cultural legacy.

In his report, Comrade Yun Zhaoguang pointed out: We must present to the public further good literary and artistic works in the spheres of plays, operas, motion pictures, dance, songs, music, ballad singing, and storytelling, in addition to revolutionizing and popularizing literature and art. At the same time, it is necessary to develop a literary review and research program and to train and organize a huge contingent of writers and artists capable of keeping in touch with reality and of seeking truth from facts. Only in this way can we create a fresh style of literary and artistic review and research which can correct mistakes through a process of mutual discussion, free debate, and struggle for truth. Leading comrades at all levels in charge of cultural affairs must take the lead in emancipating their thinking, resolutely implement the party's policy on literature and art, and further diversify the themes and styles of literary and artistic works. We must correctly guide artists to create works that glorify our great people and reflect the life of this great era. We must introduce democracy to the artistic world and implement the principle of "three don'ts." Although the days are gone when we could dictate orders to writers and artists and adopt a high-handed policy to tamper with their creative activities, today we should not take an overly cautious attitude toward them or hesitate to lead, guide, criticize, and place demands on them. We must assume a leading role in the spheres of literary and artistic creations and theatrical performance programs. We must also guide them to produce a variety of nutritious spiritual food for the benefit of the people of all nationalities. On the other hand, writers and artists should also take into consideration the effect their works may have on society and should present to the public works full of lofty ideals and decent characters which inspire the people to push forward the wheel of history.

In his report, Comrade Yun Zhaoguang also reviewed his bureau's cultural work, outlined plans for its future development, and commended advanced individuals and units on the cultural front. During the meeting, delegates also discussed plans to strengthen the ideological building of the mass cultural organizations in rural, pastoral, and frontier areas with the aim of enlivening the cultural life there. They suggested that potential resources be pooled to gradually reorganize or expand existing cultural centers and their activities and to build new ones which will be operated by the communes or the state and be financed by the public funds, and that pilot projects be developed to open cultural centers in small townships. The meeting pointed out: Further efforts must be made to improve and consolidate existing cultural centers and to sum up and promote their experiences. Cultural rooms should be established in those production brigades and production teams which have the resources to do so. The people should be encouraged to spend their spare time voluntarily organizing small-scale, inexpensive, multipurpose cultural activities, including spare-time theatrical troupes and cultural propaganda teams for the benefit of the public. Popular art exhibition halls and cultural centers at all levels should increase their cultural activities in rural, pastoral, and frontier areas by helping their subordinate units develop mass recreation and entertainment programs with the aim of enriching and enlivening their cultural life. Ways must be found to develop mass cultural work in pastoral and frontier areas. Cultural centers in various localities may sell tickets to some theatrical performances in order to reduce their financial burdens and solve the problems of financing such programs. But in doing so, all cultural centers should make sure that "all proceeds from such entertainment programs should be used solely for cultural development purposes."

Also invited to the meeting were responsible comrades of cultural centers in Qahar Youyi Zhong Banner, Ongniud Banner, Horqin Zhoyi Zhong Banner, Ulantuge commune of Darhan Muminggan United Banner, and Ejin Horo commune of Ejin Horo Banner. During their discussions with the cultural bureau chiefs who attended the meeting, they also emphasized the importance of various cultural programs to their areas. They unanimously pointed out: During the past 2 years, and especially since the Third Plenary Session of the 11th Party Central Committee, the exhilarating economic prosperity resulting from the party's decision to shift the emphasis of its work to the socialist modernization and its step-by-step implementation of the economic policy for the rural and pastoral areas have given rise to an urgent desire among the broad masses of peasants and herdsmen for an enlivening of their cultural life. In view of this, cultural centers throughout Inner Mongolia must play an important role in promoting and enlivening socialist cultural life and in inspiring the people to accelerate the tempo of the four modernizations, and they must expand, consolidate, and improve their programs. During the past few years, commune-operated cultural centers financed by public funds have been widely established in Ongniud Banner of Ju Ud league in an effort to satisfy the people's demands for enlivening of their cultural life. They have established production brigade-level spare-time theatrical troupes, opened libraries and reading rooms to the public, displayed bulletings, shown color slides, organized choirs or bands and storytelling activities, and given lectures on the four modernizations. They have launched propaganda programs to educate commune members in agriculture and animal husbandry and other branches of science. Since the Third Plenary Session of the 11th Party Central Committee, the cultural center operated by the Qahar Youyi Zhong Banner--an advanced cultural unit in Inner Mongolia--has organized special teams to hold exhibitions, show color slides, and give lectures to peasants and herdsmen in the widely scattered rural and pastoral townships and villages. The aim of these programs is to deepen their scientific and cultural knowledge, enrich their cultural life, and introduce healthy social activities welcomed by the masses.

Last year, representatives of cultural centers from all over Inner Mongolia met in Hohhot to exchange their experiences. Since the close [of that meeting], the Autonomous region Cultural Bureau has helped concerned departments to establish state-operated cultural centers in Ulantuge commune of Darhan Muminggan United Banner and Horo commune of Ejin Horo Banner, respectively, and to organize tours of communes by cultural service units on wheels in the sparsely populated pastoral areas. Since last December, a cultural service unit on wheels organized by the Ulantuge commune cultural station has visited 4 communes, 12 brigades, and 25 production teams, in defiance of snowstorms and frigid weather. During the trip it showed films, held exhibitions, and loaned books to the people in addition to acting as an agent for commodity sales. It has also used radio recorders to capture 10 or more popular songs for wider distribution in the future, given lectures on the party's principles and policies, and launched other programs aimed at introducing healthy social practices and acquainting the people with the four modernizations. These have been programs which were warmly welcomed by herdsmen. Wherever this cultural unit on wheels went, it was greeted by a large crowd of herdsmen who said happily: "Never before has anyone brought culture on wheels to yurts or Mongol dwellings. To us, cultural units on wheels are something unheard of. Today, we have everything we want. We should hold high our golden milk cups as a token of gratitude for the party's solicitude for us." At forums they hailed cultural service units on wheels as an effective measure to open less-developed minority areas to civilization, with the blessing of the party and government.

Comrades who attended the forums unanimously said: There are 800 million peasants in China. We must attach importance to the task of improving their cultural well-being. Party and government organizations at all levels must assume a leading role in promoting mass cultural work, and attach importance to it. Furthermore, efforts must be made to strengthen and improve party leadership in this field. The party's "double-hundred" policy and other policies on literature and art should be resolutely implemented. Economy must be practiced in carrying out small-scale, sparetime, voluntary, and multipurpose cultural programs. As an integral part of the national cultural program, mass cultural work should be regarded as an indispensable factor in building China into a modern socialist power. Efforts must be made to further strengthen this work.

At the closing session of this meeting on 16 May, Comrade Bao Yinda [1405 7299 6671], deputy chief of the Autonomous Region Cultural Bureau, summed up the meeting with a speech. In his speech, he pointed out: During the meeting, a wide range of problems have been brought up for discussion. Among them are the orientation of cultural work, principles and policies regarding literature and art, the purpose of literature and art, the relationship between literature and art on the one hand and politics on the other, how to emancipate the mind, how to uphold the four basic principles, how to correctly implement the "double-hundred" policy, how to strengthen and improve the party's leadership over writers and artists, and the effect of literary and artistic works on society. Through discussion, comrades have basically reached agreement on ways to solve the aforementioned problems, have clarified their thinking, and have increased their confidence in the future of our cultural program. By exchanging their work experiences, they have also laid a fine ideological foundation for cultural work in this new historical period.

Comrade Bao Yinda pointed out: In the future, our writers and artists are urged to advance along the socialist path. Only in this way can they adapt themselves to the needs of the current situation resulting from our party's decision to shift the emphasis of its work to socialist modernization; fulfill their pledges to resolutely serve the people, the dictatorship of the proletariat, and the socialist cause of the four modernizations; meet the people's growing demands for improving their spiritual well-being; help foster new socialist personalities; and assist the people of all nationalities in raising their ideological, cultural, and moral level. An important item that has been discussed and debated during the meeting is the relationship between literature and art on the one hand and politics on the other. Through discussion, they have basically agreed that since literature and art cannot be estranged from politics, they should be geared to serve politics. But we must remember past lessons by refraining from interpreting this point in too rigid and narrow-minded a manner. In actuality, it is absolutely unwise to simply emphasize the "portrayal of politics as a central task," in gross disregard of the special nature of literature and art. Generally speaking, we must give full play to the role of literature and art as a propaganda and educational medium in the struggle to "foster the proletariat and eliminate the bourgeoisie." There should be close coordination between mass spare-time cultural activities and theatrical programs for propaganda purposes. Cultural bureaus in various localities must attach importance to mass cultural work and overcome the tendency to overly emphasizing the professional but neglecting the spare-time troupes, as well as of overly emphasizing the cities and neglecting the countryside. Vigorous efforts must be made to promote programs for showing films and for displaying cultural objects and paintings, in addition to other mass cultural activities. Aware of the growing needs of the peasants and herdsmen for an enlivening of their cultural life, we must keep in touch with the basic-level units and with reality, conduct investigations and study, and overcome cultural poverty as soon as possible in rural, pastoral, remote mountainous, and frontier areas. We must strengthen mass cultural work and develop literary and artistic works that cater to minority people in a manner appropriate to local conditions and improve the leadership in this field We must produce literary and artistic works that show respect for the language, customs, and tradition of the people of Mongol and other minority nationalities in various localities, and actively help them develop their culture and arts. There may be works involving relations between different nationalities. Before presenting them to the public, their writers must take into consideration their possible effect on society. The development of such works calls for scientific and careful investigation into the relevant historical background. Only in this way can they present to the public perfect works not tinged with racial slurs that would hurt the feelings and dignity of certain nationalities and split the nation as a whole. Departments in charge of cultural affairs must actively take measures to ban any theatrical works that disgrace or humiliate minority people in our country. In addition, we must conscientiously study plans to save cultural legacies.

Comrade Bao Yinda pointed out: We must persist in implementing the "double-hundred" policy. In doing so, we must recognize its obvious class nature. This policy does not imply the handing of a blank check to writers and artists for whatever they want to write and portray. We must insure that Marxism will assume a predominant role and reign supreme in the ideological field. No writer or artist should overlook the educational role of his works. nor will he be allowed to produce, purely from an economic point of view, works that cater only to the vulgar tastes of the people. He must be well aware that any literary and artistic works of feudal and bourgeois influence will have a detrimental effect on the broad masses, especially youngsters. We must persist in the policy of "making the past serve the present and foreign things serve China, and weeding out the old to bring forth the new" in dealing with traditional theatrical works and ancient and foreign cultural matters.

Comrade Bao Yinda concluded his speech by saying: Now resting on our shoulders is a heavy but glorious responsibility. Comrades attending the meeting must strengthen their sense of responsibility to the party and people and do a good job of promoting mass cultural work for the Inner Mongolia Autonomous Region. They should take the initiative to strengthen their leadership over cultural work, voluntarily report their works to the local party committees, and seek advice from them. They should work and study hard, keep in touch with reality, conduct investigations and study, overcome interference in our mass cultural work from various erroneous trends of thought, and play a role in unifying the people of all nationalities and leading groups at all levels behind the common endeavor to accomplish the four modernizations with faster results.

CHINA SCORES SUCCESS IN SETTLING FEUDS BEYOND COURT

Beijing GUANGMING RIBAO in Chinese 7 Sep 80 p 3

[Article: "Solve Disputes and End Feuds--People's Mediation Committees Basically Restored and Gradually Strengthened in Cities and Countryside throughout the Country"]

[Text] With their functions basically restored and gradually strengthened in rural and urban China, our people's mediation committees at all levels have played a positive role in settling civil disputes and ending feuds. According to incomplete statistics tabulated by 16 provinces, municipalities and autonomous regions by the end of 1979, there were over 410,000 mediation organizations staffed by nearly 3 million mediators throughout the country.

Our party and government have consistently attached importance to the work performed by the people's mediation organizations since the State Council of the Central People's Government proclaimed the "regulations governing the organization of the people's mediation committees," which stipulate them as mass organizations devoted to settling general disputes and minor criminal cases through mediation under the guidance of the basic level people's governments and courts.

For a long time, they accumulated valuable experiences in settling civil disputes through mediation. But during the Great Cultural Revolution, as the people's courts disintegrated, so did the people's mediation committees. It was not until 1973 after the people's courts were reinstated that many localities moved to reactivate their mediation organizations. Since the downfall of the "gang of four," the mediation committees have scored successes in mediating and settling disputes and in consolidating stability and unity. Thus far, cases of civil dispute prosecuted by local people's courts in various provinces, municipalities and autonomous regions have been far outnumbered by similar cases handled by their corresponding mediation organizations. In 1979, mediation organizations in Shandong Province succeeded in settling nearly 540,000 civil disputes through mediation, 35 times more than the cases of civil dispute prosecuted by their corresponding people's courts. Incomplete statistics indicated that mediation committees in 14 provinces, municipalities and autonomous regions succeeded in settling nearly 3 million disputes.

The successful settlement of a large number of civil disputes by the mediation organizations has resulted in reducing the rates of litigation, and the number of civil and criminal cases and has prevented crimes, thus enabling the courts to devote more time to handling more serious and complicated cases.

Of the cases of dispute handled by the mediation organizations, many could not be easily settled. Some cases were very complicated and tough or even dangerous. In the absence of mediation, some ordinary neighborhood disputes and family quarrels are quite likely to deteriorate into sharp contradictions, violence or even commission of murder and suicide. With timely mediating services and patient assistance provided by the mediation committees, such contradictions can be minimized or resolved, feuds can be contained and disasters can be nipped in the bud. For example, in 1979, Guangdong Province succeeded in settling nearly 175,000 disputes through mediation, prevented commission of over 3,400 suicides and murders and saved over 2,700 lives. Typical was the case of an intellectual couple's marriage dispute satisfactorily settled through mediation by the Xinglong Neighborhood Mediation Committee in the Nankai District of Tianjin Municipality. During the 14 years of their marriage, the couple spent nearly 13 years trying to get a divorce. Their quarrels arose from the female's complaints that her husband never wanted to help her out with the house chores and had never given her any loving care. She also resented his suggestion that she get an abortion when she became pregnant for the third time, thus leading her to suspect that he might have another woman on his mind. From then on, they hated each other and lived apart for a prolonged period of time. Initial efforts were subsequently made by their respective neighborhood committees and employers to mediate and resolve their feud, but without success. In October 1978, the Xinglong Neighborhood Mediation Committee spent 2 months trying to settle their quarrels after she pressed for divorce again with the court. Aware that she loved her two children, the mediation committee immediately gave them instructions as to how to dissuade their parents from a divorce. Later, their 12-year-old son told his mother: "Mama, no divorce! If you are divorced, I will have to be separated from my sister. Once the family is broken, it is unlikely to reunite." It was this little talk that moved her to tears, and eventually made her agree to become reconciled with her husband. Noting this progress, the mediators lost no time in carrying that message to him. During the meeting, in addition to scolding him that it was wrong not to take good care of his family and his wife, the mediators reminded him of his difficulties in raising his children without a mother. Toward the end of the meeting, he quickly expressed his willingness to be reconciled with his wife. Noting that the condition was ripe for reconciliation between the two sides, the mediators swiftly moved to get the feuding couple together, accompanying them to withdraw their vows for divorce from the court. As a result of self-criticism, the couple are now determined to live together in harmony.

Our system of settling the people's feuds through mediation has become a subject of study by foreign visitors. During its recent visit to Wuhan Municipality, a Harvard Law School delegation concluded its study of the role of China's people's mediation committees by saying: China has done a very good job of preventing civil disputes from worsening and killing them in the bud once they become known.

SHAANXI COUNTY COMBATS SUPERSTITIOUS ACTIVITIES

HK100643 Xian Shaanxi Provincial Service in Mandarin 2300 GMT 8 Nov 80

[Excerpts] According to SHAANXI RIBAO, Fengxiang County has taken measures to arrest a sinister trend of feudal superstitious activities. In the early part of the fourth lunar month (Changcun) commune held a trade fair at (Lingshan). Certain people whose thinking was seriously infected with feudal superstition seized the chance to make contact with each other. They launched activities to build temples, with leadership and planning. They carved seals and mobilized a number of people to go around the place collecting donations. Under the influence of this activity, building of temples was also launched at (Xuanwushan). Certain superstitious peasants were hoodwinked into abandoning production and going up the mountain to take part. Certain brigades and production teams sent trucks and tractors to transport wood, bricks and lime to the site. In less than 1 month, five large temple buildings were erected at (Lingshan) and three at (Xuanwushan). Sect leaders cheated people by pretending to cure illness, while witches and wizards disguised themselves as gods and devils, confusing the masses.

In view of these superstitious activities, the leading comrades of the Fengxiang County CCP Committee and responsible comrades of the county propaganda and united front departments and public security bureau went up the mountains to find out the situation and patiently conducted persuasive education for the masses. They advised them to go back to work at their production teams. The sect leaders, witches and wizards had their errors pointed out and were required to immediately cease their illegal activities. The county people's government also issued a three-point decision: 1) all building of temples must immediately cease on the mountain tops and elsewhere, and nobody is allowed to collect donations under the pretext of building temples; 2) all material diverted to building temples must be taken back to the communes [words indistinct]; 3) sect leaders, witches and wizards organizing the building of temples and the accountants, storemen and others responsible for the work must be examined at their communes, and return their illegally-acquired property.

Beginning in mid-August, the county office for straightening out social order convened the sect leaders, witches and wizards together with backbone elements in superstitious activities to explain the policies. They exposed how, after the sinister wind of building temples had been whipped up, certain bad people seized the chance to fabricate rumors to hoodwink people and engage in corruption. Through investigation and verification, they revealed the problems concerning the organizers of temple building, and dealt with them according to the nature of the case and their attitude.

NEWSLETTER DESCRIBES SUN YAT-SEN'S LIFE IN HONOLULU

OW101221 Beijing XINHUA Domestic Service in Chinese 0808 GMT 10 Nov 80

[Newsletter by XINHUA reporter Ye Zhixiong: "Cherish High Ideals and Admire New Things--on Mr Sun Yat-sen in Honolulu"]

[Excerpts] Honolulu, 10 Nov (XINHUA)--Honolulu is a picturesque place where Mr Sun Yat-sen attended school and conducted revolutionary activities when he was a youth. For this reason, I longed to visit Honolulu more than any other place. During this visit, I have had the pleasure of seeing those old sites which had something to do with him.

Sun Yat-sen had two elder brothers and two elder sisters. In 1972, his eldest brother, Sun Mei, came to Hawaii with his uncle from Cuiheng village of Xiangshan County (now renamed Zhongshan County), Guangdong. Sun Mei then ran a grocery store in Honolulu and successfully trial-produced rice in nearby swamp land. He enjoyed some prestige in Honolulu and his name was listed in the 1880 Hawaii yearbook. In June 1879, Sun Yat-sen came to Hawaii with his mother, Yang Shi, through Macao via British steamship "(Glanork)."

At first, he helped his brother in looking after the grocery store. Three months later, he entered the (Jolani) school run by the Episcopal Church. In school, he used his formal name "Zaizhi." In his biography, he described his ideological condition then as "cherishing high ideals and admiring new things."

After graduation from the (Jolani) school, he pursued advanced studies at the (Aushiu) college, then the highest institution of learning in Honolulu. Soon afterwards, he received a letter from his family asking him to return to China.

In the summer of 1894 he made a trip to Tianjin and wrote to Li Hongzhang to demand a reform. His demand was ignored. From then on, he became firmer in taking a democratic revolutionary road.

In the winter of 1894 he returned to Honolulu from Shanghai, gathered some intellectual youth, small businessmen and small peasants from among the overseas Chinese who opposed the Qing regime, and organized Xing Zhong Hui [Society for Rebuilding China], the earliest democratic revolutionary organization of the Chinese bourgeoisie.

Someone told me that there is a Mr Sun Yat-sen's statue in Honolulu's China town. With high respect, I visited the China town.

When I took a close look at the statue, I found that it was donated in 1976 by the Kaohsiung Municipal Kuomintang Committee in Taiwan. The overseas Chinese and people of Chinese descent in Honolulu very clearly know China's history of the past century. Like the people throughout China, they have great respect for Mr Sun Yat-sen, a great pioneer of democratic revolution in China. The Taiwan authorities "donated" the statue in order to take advantage of Mr Sun Yat-sen's lofty prestige among the overseas Chinese and the people of Chinese descent in Honolulu. The intention behind the donation is self-evident. Today, the statue is in good condition, but the inscription on its foundation written by the Kaohsiung Municipal Kuomintang Committee has been damaged and blurred by some angry persons. This shows the following fact: Some overseas Chinese and people of Chinese descent here have said that the Kuomintang authorities in Taiwan should contribute to the reunification of the great motherland if they truly respect Mr Sun Yat-sen's will.

PRC, BBC TO COPRODUCE ANIMATED FILM

OW051128 Beijing XINHUA in English 0216 GMT 5 Nov 80

[Text] Beijing, November 5 (XINHUA)--Zhao Wei, deputy manager of the China Film Co-production Corporation, announced today that agreement had been reached between the Shanghai Animation Film Studio and the BBC on co-production of a full-length animated film.

This will be the first time that China ever produces a full-length animated film in cooperation with a foreign enterprise.

The Chinese side is now preparing a script based on a Chinese folk tale entitled "Subduing the Spirits" written in the Ming Dynasty (1368-1644). The story tells how an immortal conquers fox spirits. The script will be submitted for discussion early in the coming year before the Chinese draw the main characters. The BBC will endeavor to form a consortium of international investors to underwrite a substantial part of the film cost. In return, the consortium will control all rights outside China. The Chinese investors will share in the profits made abroad.

Mr. Gunnar Rugheimer, general manager of program acquisition for the BBC said, "I consider this deal a major breakthrough which will give Western viewers an opportunity to savor the genius of Chinese animators."

The cartoon, puppet, paper-cut and paperfolding films produced by the Shanghai Animation Film Studio enjoy great popularity in China. Eighteen of the studio's productions have won awards in international film festivals.

The new animated film will be directed by Wang Shuchen, vice director of the Shanghai studio. Wang Shuchen is a famous scenarist-director of animated films who began his career in this field in the early 1950s. "Nazha Conquers the Dragon King," which he adapted and directed, was chosen as the best animated film in a national poll held earlier this year.

REPORT ON STUDENTS' INDIFFERENCE TO MARXISM

OW031359 Hong Kong AFP in English 1338 GMT 3 Nov 80

[Text] Beijing 3 Nov (AFP)--Chinese students are showing increasing indifference to courses in Marxism-Leninism, the GUANGMING DAILY said today.

Quoting from a study conducted last spring by the communist party propaganda department in the provinces of Hunan, Guangdong and Fujian, the newspaper said that despite the efforts of their teachers, students either showed no interest or "failed to accord due importance" to courses on elementary Marxist theory.

In some teaching institutions a third of students enrolled did not attend classes while others used class time to read novels, write letters, prepare for other classes or study a foreign language, it said.

Some disillusioned students felt that Marxist theory had no basis because "he who is in power is always right" or that they could not have confidence in Marxism because it could be "changed to suit anybody."

Others were reported to have said that Marxist theory was of no use because it did not serve to help solve the concrete problems facing the country.

Confusion on the subject at the time of the death of late Chairman Mao Zedong in 1976 was such that many students and even some teachers wanted to do away with these courses altogether.

Digging into the reasons for such attitudes the study quoted by the newspaper said that a considerable number of people, including "leading comrades" felt that theoretical education was not indispensable at a time when China was engaged in its economic modernisation.

It also attributed this state of affairs to the low level of political culture on the part of many teachers and the opening of China to the world, especially with regard to the influence of Hong Kong.

HEBEI PEOPLE'S COMMUNE EXPANDS CULTURAL FACILITIES

OW150748 Beijing XINHUA in English 0703 GMT 15 Nov 80

[Text] Shijiazhuang, November 15 (XINHUA)--The example of a people's commune 100 kilometers northwest of Beijing is indicative of what peasants can do to enrich their cultural life, says a deputy director of the Hebei provincial cultural bureau following a recent tour of the commune.

Community efforts to set up cultural facilities within their economic means are a necessary supplement to government spending, which are still limited, the official said. Today, 38 commune-run centers supplement some one hundred government-run centers scattered throughout the province.

The cultural center of the Xinbao'an commune, a commune with a population of 13,000, includes a library, reading rooms, a table tennis room, chess rooms, an open-air cinema, a sportsground, and an auditorium where films can be screened on cold or wet days.

The Xinbao'an facilities were built in 1975 with 90,000 yuan from the commune's public accumulation fund. The commune, in Huailai County, is one of the higher income farming units in north China, with 120 workshops and side-line occupation groups run by the commune and its subdivisions, the production brigades.

The cultural facilities are self-sustaining. The 13,000 yuan from 505 film shows given last year was enough to cover the operational costs of the commune center including pay for the five staff members. To keep costs within reason, the staff members all perform more than one job. The film projectionist, for example, draws lantern slides, paints, provides accompaniment for theatrical performances, serves as a judge at table tennis matches, and acts as the center's accountant.

The center is open in the evenings, on weekdays and the whole day on Sundays and holidays. Two to three thousand people come every day to read, play, view films or watch sports matches.

An amateur theatrical troupe and a story-telling team perform regularly in the center and the staff have organized lectures in painting, music, dance and agronomy.

Before the cultural center was set up, the peasants in Xinbao'an commune had to depend on government mobile film teams for their cultural needs. The government-run county cultural center is not within easy reach, because the county seat is 10 kilometers away. The need for cultural activities was especially acute in a place like Xinbao'an where one-fourth of the population have at least seven years of schooling.

Production brigades in the commune also have their own facilities. The Dongyuan production brigade has bought a film projector and gives an average of two film shows a week. Another brigade, the Xiyuan brigade, has an auditorium with a seating capacity of 1,000; the place attracts peasants from neighbouring villages whenever a theatrical event takes place.

BRIEFS

CHINESE LANGUAGE ASSOCIATION MEETING--The Chinese Language Association held an inaugural meeting in Wuhan on the morning of 21 October attended by more than 200 linguists from different parts of the country. (Li Shuxiang), famous linguist and deputy director of the linguistic department of the Chinese Academy of Social Sciences, presided over [illegible]e opening ceremony. The Hubei Vice Provincial Governor Li Fuquan and other responsible comrades of departments concerned were invited to attend the meeting. Li Fuquan spoke at the meeting, congratulating the Chinese Language Association on its inauguration. [Wuhan Hubei Provincial Service in Mandarin 1100 GMT 21 Oct 80 HK]

ANHUI SECONDARY VOCATIONAL SCHOOLS--Following the central authorities' directive on restructuring secondary school education, 10 municipalities in Anhui have now set up or improved 46 secondary vocational schools, with a total of 86 classes and 4,500 students. A meeting on restructuring secondary school education in 12 municipalities was held in Anqing from 19 to 22 October. Vice Governor Wei Xinyi, responsible comrades of the provincial planning commission and the provincial education department and vice mayors of the 12 municipalities in charge of cultural and education attended. The meeting called for efforts to solve the shortage of teaching materials, teachers, equipment and founds [as printed] [OW040220 Hefei Anhui Provincial Service in Mandarin 1100 GMT 3 Nov 80 OW]

QINGHAI TIBETAN PUBLICATIONS--The publishing house in Qinghai Province has published a number of books in the Tibetan language on political science, natural science, technology, literature, art and Tibetan medicine. They have also published a Tibetan dictionary and 19 textbooks for middle and primary schools in the Tibetan language. [OW121207 Beijing Domestic Service in Mandarin 0900 GMT 11 Nov 80 OW]

LIAONING COLLEGES--In order to enable more students to receive higher education, colleges and universities in Liaoning have established branch schools, evening schools or correspondence schools. Workers colleges run by enterprises have been opened to persons outside the enterprises. By managing various forms of schools, Liaoning has 89,000 more students than the state-set quota for students pursuing higher education. [Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 8 Nov 80 SK]

LIAONING NEW DRAMA--A new drama "Luo Feng Tai" on how rural areas exert efforts to become more prosperous, such the first drama since the downfall of the "gang of four," premiered at Zhonghua Theater in Shenyang, Liaoning, 8 November. [Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 9 Nov 80 SK]

YUNNAN TEACHERS' GATHERING--The Yunnan Provincial People's Government held a gathering in Kunming on 25 October to promote 22 special-grade teachers. Yang Kecheng, vice provincial governor, announced the decision to promote special-grade teachers and Liu Minghui, governor and secretary of the Yunnan Provincial CCP Committee, presented the certificates and awards to teachers. Gao Zhiguo, deputy secretary of the Yunnan Provincial CCP Committee, delivered a speech on behalf of the provincial CCP committee. He said: Education is the key to the progress of the four modernizations. Special-grade teachers in Yunnan Province must enhance their political, ideological and cultural standards in order to meet the demands put forward by Comrade Hu Yaobang at the national teacher's training forum. [Kunming Yunnan Provincial Service in Mandarin 1100 GMT 25 Oct 80 HK]

SHANGHAI JOURNALIST'S BIRTH ANNIVERSARY--Chen Yi, deputy secretary of the Shanghai Municipal CCP Committee, and some 40 personages paid respects at the Zou Taofen Memorial Hall in Shanghai to mark the 85th birth anniversary of the late journalist, political commentator and publisher on 5 November. [OW121251 Shanghai City Service in Mandarin 2300 GMT 5 Nov 80 OW]

SHANGHAI BOOK SERIES--Shanghai, 6 Nov (XINHUA)--A set of "Wenyi Zhishi Congshu" [Series of Books on Literary and Art Knowledge] is being published in Shanghai, introducing literary and art theories as well as important writers, works, literary and art trends and schools in the literary history of China and foreign countries. This will help the advancement of literary enthusiasts through self-study. [OW121251 Beijing XINHUA Domestic Service in Chinese 0124 GMT 6 Nov 80 OW]

JIANGSU LIBRARY SUPPLIES--China's first library supplies company was founded in Wujin County, Jiangsu, in March this year. The company is formed with the assistance of the Beijing library and the county's 18 factories. It sells book shelves, typing tables, book carrying carts and other library supplies. [Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 11 Nov 80 OW]

TAIWAN MOUNTAINEERS--Hong Kong, 8 Nov (XINHUA)--According to a dispatch from a newspaper in Taiwan, the Himalaya Mountain range survey team of the Taiwan Mountaineers Association has successfully reached the 5,546 meter high (ka-la-bo-ta) mountain peak at 1015 hours in the morning of 29 October. The team consisted of 16 members: 13 of them successfully climbed the (ka-la-bo-ta) mountain 6 peak on that day. They were: Captain Cai Lile, secretary (Yi-xi-zhuo-ma), members Wang Jing, Zhou Wen, Lin Tianxiang, Wang Douji, Pan Zegan, Liu Tiande, Lin Shuzhi, Jin Zhijie, Gao Quanhui, and Li Zhaoming and reporter Qiu Yanyao. The team of mountaineers safely descended from the peak after completing their mission. [Text] [OW092151 Beijing XINHUA Domestic Service in Chinese 1520 GMT 8 Nov 80]

SMUGGLING IN OPERA TROUPE--Beijing Nov 7 (AFP)--Several members of a Chinese opera troupe took advantage of trips abroad to engage in smuggling, the latest edition of TIANJIN DAILY available here reported today. The newspaper only identified those of the troupe who had smuggled in the most--the vice-director of the Chaozhou Opera, Yang Lieming and the person in charge of its supplies, Lin Fideng. While visiting Hong Kong last April the two collected a range of goods valued at 20,000 yuan (13,000 U.S. dollars). These included TV sets, tapes, calculators and various other electronic gadgets which they smuggled in with the troupe's baggage. The newspaper reported that the Guangdong Provincial Disciplinary Commission would examine the cases of Yang and Lin shortly. Li Xueguang, the director of the opera troupe of Chaozhou, [word indistinct] the southern Guangdong Province,' is accused of having failed in his duty to take adequate steps against this smuggling. [Text] [OW070908 Hong Kong AFP in English 0808 GMT 7 Nov 80]

SPORTS DELEGATION VISITS EUROPE--Beijing, 9 Nov (XINHUA)--At the invitation of the Romanian State Committee for Physical Culture and the Swiss Physical Culture Association, a three-member Chinese physical culture delegation led by Lu Jindong, vice minister in charge of the State Physical Culture and Sports Commission, left Beijing 9 November by plane for friendly visits to Romania and Switzerland. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

NEW U.S. NUCLEAR STRATEGY AGAINST GOVERNMENT CRITICIZED

OW091954 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 9 Nov 80

[Text] It is necessary to make known to the public in clear terms the question of U.S. nuclear guided missiles aimed at 100 Chinese targets. It is reported that U.S. presidential secret document No 59 on a new nuclear strategy concerns a decision to strike 100 targets in China with nuclear weapons when necessary. They include navy, army and air force military bases, large industrial centers, major cities and scientific research institutions.

It is necessary to point out that as early as last year, our country's intelligence organization reported to the central authorities on U.S. nuclear guided missiles targeted at the Beijing, Tianjin, Shanghai, Shenyang and Guangzhou (?military regions). Moreover, the power of the guided missiles is 25 to 30 times stronger than the atomic bomb that the United States dropped on Japan's Hiroshima in 1945. However, our country's leaders ordered that this question should not be brought to light for fear that it might obstruct the development of friendship and allied relations between China and the United States. In accordance with Comrade Deng Xiaoping's instruction, this intelligence report was not relayed to senior military cadres. Of course, the masses of commanders and fighters, as well as the people, were even more ignorant of this report. The yankees refused to comment on the report on the U.S. plan to carry out nuclear strikes at China when necessary. The central authorities concealed from the whole army and the people of the whole country the U.S. imperialists' sinister plan. Vice Chairman Deng was even more reluctant to openly and explicitly bring up this question to the U.S. President out of fear that it might rupture relations with the United States.

After our government commented mildly and indirectly on this question, the U.S. State Department spokesman rudely rejected the Chinese comments in a way that the imperialists treat their colony, alleging that the U.S. strategy plan was U.S. internal affairs and that it did not have to consult with foreign countries on this matter. Such an arrogant attitude assumed by the U.S. Government has aroused the strong indignation of the Chinese people. However, some people in the central authorities are attempting to defend the U.S. leaders' stand. At a meeting of the party Central Committee's Military Commission held last month, somebody said that the U.S. plan for a nuclear attack on China will be carried out only under special circumstances:

If our country liberates Taiwan with force or directly harms U.S. interests. Such a view is extremely ridiculous. First whether or not our country liberates Taiwan is our internal affair and has nothing to do with the United States. Second, China and the United States are equal powers in the world. How can the United States decide, based on the value of using China and on the extent of its impact on the U.S. interest, whether or not to use nuclear weapon against China?

Why has Vice Chairman Deng ignored the opinions of other colleagues and stubbornly refused to ask the U.S. leaders for an explanation of their sinister plan? It is absolutely not allowed to conceal from the whole army and people of the whole country the danger of a U.S. nuclear attack on China [words indistinct]. Holding back the facts from the people shows a lack of political farsightedness and is a betrayal of the Chinese people.

BEIJING AUDIENCE ACCLAIMS ROMANIAN COMEDY ON BUREAUCRACY

OW091720 Beijing XINHUA in English 1612 GMT 9 Nov 80

[Text] Beijing, November 9 (XINHUA)--A Romanian comedy satirizing bureaucracy and other social malpractices was acclaimed by a Beijing audience here this evening.

"Fair Opinion" is the first Romanian play to be staged in the Chinese capital by the Beijing People's Art Theatre.

Written in 1967 by the well-known Romanian playwright Aurel Baranga, the comedy features an honest journalist, Chitlaru, who is determined to work for reforms.

The play develops around a struggle between Chitlaru and his newspaper chief, a bureaucrat. Chitlaru's supporters are upright, open and above-board, while Cristinoiu's cronies rely on flattery, deceit and trickery.

The theme of tonight's presentation was clearly spelled out by a line spoken by one of Chitlaru's supporters: "During the transition from capitalism to communism, all the most glorious things are beginning to flower while our sordidness and decadence are being exposed. Therefore, my ideological headquarters has issued three directives: do not make a fuss, do not grumble and do not be afraid."

Commenting on the production, Fang Guande, well-known Chinese comedian and director of the play, said: "Through the medium of the press, the play touches upon all aspects of the life. It reveals the playwright's love of life and high ideals."

Ma Qun, who played the part of Chitlaru, said: "Many of the things reflected in the play also find their expression in China. The reason we put on this play is that we want to improve things in our own country."

"Fair Opinion" has remained in the repertoire of many Romanian theatres since its premiere more than ten years ago. During its rehearsals, the Beijing People's Art Theatre received support and assistance from the Romanian Embassy, the Romanian Council of Socialist Culture and Education, Romanian theatres and Romanian experts in Beijing.

EUROPEAN PARLIAMENT PRESIDENT URGES UK TO STAY IN EC

OW070756 Beijing XINHUA in English 0718 GMT 7 Nov 80

[Text] London, November 6 (XINHUA)—Madame Simon Veil, president of the European parliament, said here tonight that political cooperation was "vital" in the European Community and that the European parliament "refuses to envisage" the possibility of British withdrawal from the community.

Speaking at a British Government dinner given in her honour by Lord Hailsham, the lord chancellor, she emphasized that it was in the sphere of political cooperation that the community had in recent years achieved the most substantial progress. "It is essential that, in future, progress on political cooperation should go hand-in-hand with progress on the community's domestic front. The gradual co-ordination of the external policies of the member states clearly presupposes that there exists between the latter a convergence of interests which will grow as the community becomes more unified," she added.

She said she hoped that all members of the European Community "will join together to build a stronger community" and believed that the withdrawal of the United Kingdom from the community would undermine the foundations of the latter. She pointed out that in the present climate of uncertainty, provoked by conflicts which might escalate at any moment and worldwide economic difficulties, citizens of the European countries were right to expect the community to help them by joint action.

The speech by Mme Veil marked the first official reaction from a European leader since the Labour Party of Britain voted at its annual conference last month for withdrawal from the European Community.

Her host, Lord Hailsham, replied: "Europe must co-operate or Europe will perish."

Mme Veil is in London on a two-day visit.

POLISH POLITBURO MEMBER DISCUSSES ECONOMIC PROBLEMS

OW070818 Beijing XINHUA in English 0729 GMT 7 Nov 80

[Text] Warsaw, November 6 (XINHUA)--Poland's economic difficulties are deepening with no signs of relaxation in social tension. "The situation is serious and extremely complicated," said Stefan Olszowski, Politburo member and secretary of the Central Committee of the Polish United Workers' Party yesterday.

Speaking at a meeting of activists in Gdansk Province, he said that the severe cold which came earlier than usual had affected the harvesting of sugar beet, potatoes and other crops. Potato output could be only half of the planned target.

In industry, he said, owing to the shortage of raw materials, factories are operating below capacity. And it will be hard to fulfil this year's planned targets. Hard coal output will be 12 million tons less than the target, iron 280,000 tons less and electricity 1.5 billion kwh less. The production of export commodities declined at a bigger margin.

He said the main tasks of the country's economic work at present are to greatly increase production, practice economy, ensure supplies and introducing economic reforms. Reforms will be carried out in two phases. Phase one calls for improvement of management by giving more power of self-management to enterprises, improving the method in drawing up economic plans and lowering the output targets set by the leadership. In phase two, a new comprehensive programme for reform will be worked out in accordance with the changed social conditions, with emphasis on drawing up new constitutions for enterprises and increasing the role of the workers' self-governing committee.

Olszowski said that in the difficult economic situation, aids from the Soviet Union and other countries are important. However, he added, Poland "must rely on its own strength to overcome the difficulties."

Referring to the social conditions, he pointed out that parallel with the economic difficulties there exists "an especially unfavorable phenomenon--chaos in social consciousness and the minds of the citizens." This can be overcome with the participation of all healthy social forces.

He said, "It should be the task of all party members to oppose by political means efforts of organizing strikes."

U.S. ADMIRAL MAKING FOUR-NATION TOUR OF SOUTH ASIA

OW151212 Beijing XINHUA in English 1200 GMT 16 Nov 80

[Text] Beijing, November 16 (XINHUA)—Admiral Robert L. J. Long, commander in chief of U.S. forces in the Pacific and Indian oceans, told reporters in New Delhi the purpose of his four-nation trip (Pakistan, India, Sri Lanka and Bangladesh) was to meet security officials there, know their views on their respective countries' relations with the United States and explain U.S. policies, according to reports from New Delhi.

The U.S. admiral is in India after a three-day visit to Pakistan from November 10 to 13. He will leave for Sri Lanka tomorrow.

He gave no details of his talks in New Delhi with the chiefs of staff of the Indian navy, army and air force. He also met the U.S. defence and foreign ministry officials.

In a briefing connected with Long's visit, a high U.S. military official said in New Delhi that the United States had ended "a period of drifting" and would seek cooperation from countries in the Indian Ocean region to keep the Straits of Hormuz open.

The official added that the United States had between 30 and 35 navy ships in the Indian Ocean and that the Soviet Union maintained approximately the same number.

A REUTER report from New Delhi said "there was no immediate indication that as a result of Admiral Long's visit, India would allow U.S. navy ships to visit its ports, the way Soviet ships do occasionally."

PAPUA NEW GUINEA, U.S. AGREE ON 'FREE ASSOCIATION'

OW180206 Beijing XINHUA in English 0149 GMT 18 Nov 80

[Text] Washington, November 17 (XINHUA)--A formal government compact of "free association" with the United States was initialed by a representative of the Republic of Papua New Guinea, a newly-founded mid-Pacific nation, at a ceremony held in the State Department at noon today.

Two other Micronesian entities--the Marshall Islands and the Federated States of Micronesia--initialed the same document on October 31.

Under the terms of "free association," the United States will retain plenary authority in defense and security matters for a period of at least 15 years, and thereafter as mutually agreed. The Micronesian states will acquire internal self-government and authority over their foreign relations, other than those aspects which the U.S. determines to be defense and security-related. According to the State Department, the compact and its subsidiary agreements will allow the United States continued use of the Kwajalein missile range in the Marshall Islands and the right to establish training areas and other military facilities in Papua.

The compact is pending for final approval in each of the Micronesian entities by its legislature and, in plebiscite, by its voters, as well as by the U.S. Congress. Once the compact is approved, the United States will present the completed arrangements to the United Nations and seek termination of the trusteeship agreement.

The three Micronesian states were previously ruled by Spain, Germany and Japan, and have been administered by the U.S. as a trusteeship of the United Nations since 1947.

The NEW YORK TIMES quoted government officials as saying that "the greatest U.S. strategic stake is simply in keeping unfriendly navies out of the area and thus heading off a potential threat to Hawaii, Guam and other Pacific points."

U.S. FIGURE SKATERS PERFORM IN BEIJING

OW121938 Beijing XINHUA in English 1858 GMT 12 Nov 80

[Text] Beijing, November 12 (XINHUA)--An impressive demonstration by the visiting U.S. figure skating group drew warm applause from spectators here this evening at the capital indoor stadium.

The exhibition included routines by 20-year-old Tai Babilonia and 22-year-old Randy Gardner who captured the pair champion at last year's world figure skating championships. Their triple turn and ice dance showed a high standard of mastery and virtuosity and drew cheers from the 18,000 spectators.

In a gesture of friendship, olympic champion Peggy Fleming Jenkins, already known to Chinese T.V. spectators, performed an ice dance to the strains of the Chinese music.

Peggy, who became a professional skater after winning the title at the Olympic Games in 1968, said, "I feel excited to perform here. I am out of competition for a long time, but I still enjoy it." Peggy now has a four-year-old boy. Her husband, Doctor Gregory Jenkins, is accompanying her on the China tour.

Chinese figure skaters during this evening's program included 16-year-old Wumaerjiang of Uygur nationality.

Chinese coach Huang Yushi said: "The U.S. group is truly of world level. They have brought new techniques to us. We have learned a lot from the clinics given by them these last few days."

Group official Charles de Moore said: "The Chinese skaters have a lot of talent. They should learn the latest techniques in their skating."

The visitors will give another exhibition tomorrow evening and leave here for home on November 14.

SOVIET RELATIONS WITH AUSTRIA STRAINED

OW141548 Beijing XINHUA in English 1505 GMT 14 Nov 80

[Text] Vienna, November 13 (XINHUA)--The Soviet Union has cast a shadow over its relations with Austria.

According to press reports here, the "Hofburg Theater" of Austria originally planned to make a performance tour of the USSR in mid-November this year in accordance with a cultural agreement between the two countries. However, when more than 100 actors of the theater were ready to depart on the morning of November 11, they learned with surprise that the Soviet Foreign Ministry had declared Pavel Landovsky, a Czechoslovak actor working in the theater, persona non grata and described as a "mistake" the issuance of an entry visa to him by the Soviet Embassy here.

As a quick and strong response by the Austrian Government, the tour was cancelled. Commenting on the November 11 event, Federal Chancellor B. Kreisky stressed that this was not a case of taking an actor out from the theater but a demand that all the actors be chosen by the Soviet authorities. At a press conference on the following day, Foreign Minister W. Pahr pointed out that the Soviet action ran counter to the spirit of the Final Act of the Helsinki conference. At the same press conference, Minister of Education F. Sinowatz announced that he had cancelled his visit to the Soviet Union scheduled for November 11, because it had become meaningless.

Landovsky is a famous Czechoslovak writer, director and actor who signed the "1977 Charter" of Prague. He has worked in the "Hofburg Theater" since last January after he formally got a visa from the Czechoslovak authorities. The Soviet ambassador to Austria told Foreign Minister Pahr that the reason why Landovsky was refused to enter the Soviet Union was that his citizenship had been revoked by the Czechoslovak authorities, and as a result, his visa was null and void. However, Landovsky knew nothing about this. In an interview with newsmen here, director of the "Hopburg Theater" Achim Bennig noted, "It is totally confusing that the revocation of the citizenship of a Czech is told by a Soviet ambassador."

POLISH WORKERS' PARTY'S POLITICAL BUREAU MEETS

OW051548 Beijing XINHUA in English 1529 GMT 5 Nov 80

[Text] Warsaw, November 5 (XINHUA)—The Political Bureau of the Central Committee of the Polish United Workers' Party met to hear and approved yesterday reports on the talks between Polish and Soviet leaders and the negotiations between Premier Jozef Pinkowski and the delegation of the "solidarity" independent trade union.

According to the Polish press agency, the Political Bureau pointed out that under the current complex international situation and the difficult circumstances in Poland, the relations between Poland and the Soviet Union "are of special significance." Brezhnev's belief that "the Polish communists and labouring people are capable of settling acute problems in the political and economic development" is "in conformity with the will and action of the Polish party to stabilize the country's situation."

The Political Bureau also pointed out that the two countries have "identical views" on the existing crucial international issues, especially in the opposition of nuclear armament.

After hearing Pinkowski's briefing on his talks with the representatives of the "solidarity" independent trade union, the Political Bureau noted that "we should do our utmost" to settle a number of most important problems and meet the numerous demands. The very immediate concern is normalization. Things will not take a turn for the better "if we do not do a good job of our work and production," it stressed.

Strong feelings including the threat of strike have aggravated tension in the country, the Political Bureau emphasized. At present, the tension is far from being relaxed, it added.

POLAND FACES GRAVE FOOD SITUATION

OW051334 Beijing XINHUA in English 1240 GMT 5 Nov 80

[Text] Warsaw, November 5 (XINHUA)--"This is a disastrous year. The yield of every crop is unsatisfactory," declared Leon Klonica, Polish minister of agriculture at a press conference here yesterday.

To cope with the grave situation, the Polish Council of Ministers met on November 3 following a joint meeting of the Polish United Workers' Party and the United Peasants' Party on agricultural policies held not long ago.

Klonica said that up to November 4, the target of potato purchases was only fulfilled by [number indistinct] per cent and the total potato yield is estimated at 25 million tons which is only 60 per cent of last year's figure. By the end of October, the government only bought 5.5 million tons of beets as compared with 11.5 million tons in the planned target. Meanwhile, 40 per cent of Chinese cabbages, 20 per cent of radish and three per cent of apples have not yet been harvested. The head of pigs and cattle are declining while state purchases of livestock are 160,000 tons less than that of last year.

As a result of the drop in cereal output, Poland has imported eight million tons of grain this year and even likely to exceed [number indistinct] million, tons which is an all-time high record.

The decrease in agricultural and livestock production has directly affected market supply, the life of the people and industrial production using agricultural products as raw materials.

In view of the situation mentioned above, the Council of Ministers called on departments and units concerned to adopt "emergency measures" to gather in all agriculture produce as quickly as possible to be sent to the market or the processing plants. The council also required government functionaries, high school students and armymen to help in harvesting and transporting farm produce.

BRIEFS

SCHMIDT REELECTED--Bonn, November 5 (XINHUA)--Helmut Schmidt was re-elected chancellor of the West German Federal Government today. Out of the 491 members of the Ninth Federal Assembly (Bundestag), 266 voted for Schmidt and 222 against. This will be his third term of office as chancellor. His chancellorship will be the longest with the exception of Konrad Adenauer since the founding of the Federal Republic of Germany. Under the West German basic law, the chancellor's candidate is to be nominated by the president. President Karl Carstens nominated Schmidt as chancellor on the recommendation of the ruling Social-Liberal coalition which won the election on October 5 of this year. [Text] [OW061224 Beijing XINHUA in English 1215 GMT 6 Nov 80]

EEC WORLD ROLE--Brussels, November 6 (XINHUA)--Political cooperation among member states of the European Community should be strengthened in relations with Third World countries, stressed Roy Jenkins, president of the EEC Commission, this evening. In his lecture entitled "The Community's Role in the World," at the Royal Institute for International Relations here, Jenkins said: "Political cooperation does not in practice extend to all important foreign policy questions although the range of subjects covered is constantly expanding. The process remains primarily one of cooperation and not of integration." "For the moment the important thing is to develop all practical means for making political cooperation more effective and to set its longer-term objectives." With regard to north-south dialogue, Jenkins said: "The community has a special role to play." He expressed the desire to establish a new economic world order and said the community does not wish to cling to the old order. In conclusion, he said that the European Community will make a more and more efficient contribution to the solution of the problems besetting the world. ATHLETIC MEET WITH S. KOREA--Bangkok, November 6 (XINHUA)--China emerged today on the top in Group B to qualify for the finals of the Sixth Asian Youth Basketball Championships after overpowering Singapore 123:37 (half time 63:10) in the last group match here. In Group C, Japan, Saudi Arabia and South Korea have identical records of three wins and one loss, but South Korea placed third after points count, leaving Japan and Saudi Arabia to play in the finals with the two winning teams in Group A and B. In the girls' competition, three rounds of 12 games have been played and their group matches will continue until November 9. The two unbeaten teams, China and South Korea, will meet day after tomorrow. [Excerpts] [OW070726 Beijing XINHUA in English 0707 GMT 7 Nov 80]

REPUBLICANS IN U.S. CONGRESS--Washington, November 5 (XINHUA)--The Republicans captured the control of the U.S. Senate for the first time in 26 years in Tuesday's election, according to the final returns released here this evening. Together with the election of the president and vice president, the American voters elected 34 senators, one-third of the 100 members of the Senate, and all the 435 members of the House of Representatives as required by the constitution. The Republicans got a net gain of 12 Senate seats from the Democrats, completely wiping out the Democrats' dominant 59-41 edge in the Senate. The new line-up of the Senate is: Republicans 53, Democrats 46, Independent 1. In the House of Representatives, the Democrats lost 35 seats to the Republicans but are still in control with 241 seats against the Republicans' 192 seats. In the outgoing House, the Democrats have 276 seats, the Republicans 159. Meanwhile, the Republicans won 7 governors with a net gain of 4 out of 13 contests at stake in the governor election yesterday. That put the Republicans' count at 23 governors of 50 states, the party's best number in a decade. [Text] [OW060734 Beijing XINHUA in English 0726 GMT 6 Nov 80]

AFRICAN TRADE FAIRS CLOSE--Khartoum, November 17 (XINHUA)--The third All Africa Trade Fair which began a fortnight ago closed here this evening. The Fourth International Fair of Khartoum held simultaneously also ended. Thirty-two African countries and 127 companies participated in the All Africa Trade Fair. Abdel Wahid Labini, acting manager of the fair, told XINHUA that at present trade volume between African countries and the Eastern and Western countries made up 95 per cent of the total trade volume of Africa, while the trade volume within the African continent only occupied five per cent. The sponsors of the All Africa Trade Fair hoped to change the situation by developing and expanding trade among African countries. During the fair, the United Nations Industrial Development Organisation arranged a seminar on the transfer of technology to Africa, and the United Nations Economic Commission for Africa and the International Trade Centre jointly held a symposium on promoting trade among African countries. The fair is held once every four years. The next one will be held in Accra, Ghana. [Text] [OW180219 Beijing XINHUA in English 0116 GMT 18 Nov 80]

KISSINGER ON EUROPEAN CONFERENCE--Paris, November 16 (XINHUA)--Former U.S. Secretary of State Henry Kissinger considered it "absurd" to hold the follow-up conference on European security and cooperation under the current circumstances. Kissinger, who is a foreign policy adviser to President-elect Reagan, said here today at a press conference that it was "sort of absurd to hold the conference less than a year after the Soviet intervention in Afghanistan." He believed that the conference would achieve nothing important. He pointed out, "History has shown that it is easier to negotiate with the Soviet Union when you have a predictable foreign policy based on a clear definition of your national interests than when you have a unforeseeable foreign policy." Referring to future relations between the U.S. new government and France, Kissinger believed that "relations between President Valery Giscard d'Estaing and President Reagan will be very good. I have always believed that the fundamental interests of the U.S. and France are parallel." Kissinger arrived here today from Lisbon on a private visit. [Text] [OW171240 Beijing XINHUA in English 1225 GMT 17 Nov 80]

ACROBATS IN NEW YORK--New York, November 5 (XINHUA)--The Guangdong Acrobatic Groupe from China gave its premiere at the Radio City Music Hall here this evening to an exceptionally warm welcome by 6,000 spectators. Every item the troupe presented received loud cheers and warm applause. "Excellent"! "marvellous"! shouted the spectators, including many delegates to the United Nations from various countries. At the end of the performance, the audience rose to give a prolonged, thunderous applause. [Text] [OW111727 Beijing XINHUA in English 1210 GMT 6 Nov 80 OW]

AMERICAN SCIENTIST--Tianjin, November 9 (XINHUA)--Well-known American scientist Herbert Simon, the 1978 winner of the Nobel Prize for Economics, has been invited by Tianjin University to be an honorary professor. Mr Simon recently lectured at the university on administrative policy-making. [Text] [Beijing XINHUA in English 0128 GMT 9 Nov 90 OW]

SOVIET MILITARY IN KABUL--Beijing, 13 Nov (XINHUA)--According to Western sources, diplomats in New Delhi said on 12 November: Almost every day last week a large number of Soviet military columns arrived in Afghanistan's capital of Kabul. One diplomat said: The columns, which included tracked vehicles and trucks carrying military supplies, arrived in Kabul at 2300 after the curfew was imposed. Afghans who recently arrived in New Delhi from Kabul said: About 10,000 Soviet troops have been deployed to the Afghan capital. According to a reliable Afghan source, these new Soviet military personnel were deployed to replace the first batch of Soviet soldiers who occupied Afghanistan. The sources said: Since last week the Afghan Muslim guerrillas have repeatedly attacked Soviet military columns in Lowgar and Paktia provinces. Both Soviet and Afghan government troops suffered heavy casualties. According to guerrilla sources, the guerrillas seized the enemies' food, ammunition and other materials. SOMALI DELEGATION--A delegation of cadres of the Somali Socialist Revolutionary Party arrived in Nanjing on 7 November. Hu Hong, secretary of the Jiangsu Provincial CCP Committee, feted the Somali visitors on 8 November. The Somali visitors toured Nanjing and Yangzhou cities during their stay. They left for Beijing on 11 November. [OW121447 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 11 Nov 80 OW]

DANCE ENSEMBLE'S AFRICAN TOUR--Beijing, 12 Nov (XINHUA)--China's Oriental Song and Dance Ensemble will heave shortly for a month's tour of Egypt, Sudan and Algeria. Its program of 20 items, which begins in Egypt on 18 November, is made up of Chinese songs and dances, including those of China's minority nationalities, and Egyptian, Sudanese and Algerian songs and dances. The 35 members of the tour group are led by Wang Kun, an actor for more than 40 years and a member of the National Committee of the Chinese people's political consultative conference and a council member of the Chinese Musicians' Association. The group's art director is Aitura, a member of the Uygur minority nationality, who has been a dancer for 30 years. She will present a solo item during the tour. Aitura is a deputy to the National People's Congress, a member of the Nationalities Affairs Commission and a council member of the Chinese Dancer's Association. Wang Kun said today: "We all hope to contribute to the promotion of friendship and understanding between the Chinese and other peoples of the world. We also see this tour as a good opportunity to learn from Arab artists to further our cultural exchanges." [Text] [Beijing XINHUA in English 0707 GMT 12 Nov 80 OW]

ACROBATIC TROUPE IN MADAGASCAR--Tananarive, 7 Nov (XINHUA)--The Shaanxi Acrobatic Troupe of China left here by special plane for home this evening at the end of a 10-day performance tour of Madagascar. Among those seeing the troupe off at the airport were Ramiliarison Henri, secretary-general of the Ministry of Revolutionary Culture and Art; Chinese Ambassador to Madagascar Gan Yetao and representatives of overseas Chinese. During its stay, the Chinese troupe gave a total of 8 performances at Tananative, Diego-Suarez and Tamatave for more than 11,000 spectators. Rakotoarivelo Jonah, president of the Executive Committee of Tananarive Province, gave a farewell dinner yesterday evening for the Chinese guests. Before its arrival in Madagascar on 28 October the troupe had visited Zaire, Burundi, Rwanda, Mauritius, Kenya and Somalia. It gave 53 performances for 130,000 spectators in its 92-day tour. [Text] [Beijing XINHUA in English 0756 GMT 8 Nov 80 OW]

POLISH OFFICIALS RESIGN--Warsaw, November 5 (XINHUA)--The first secretary of the Krakow Municipal Committee of the Polish United Workers' Party Krystyn Dabrowa has requested to resign his concurrent post of chairman of the City People's Council, according to PAP. His request was approved on November 3 by a plenary session of the People's Council which appointed former vice-chairman of the People's Council and editor-in-chief of the Literature Publishing House Andrzej Kruz to take his place. Before this, the first secretary of the Torun Provincial Party Committee Boleslaw Kapitan also resigned his concurrent job of chairman of the Provincial People's Council. Earlier, the sixth plenary session of the Central Committee of the party passed a decision restricting the tenure of office and jobs held concurrently by party and government leaders. The newspaper TRYBUNA LUDU has pointed out that this was an important measure to speed up the democratization of domestic political life. [Text] [OW051632 Beijing XINHUA in English 1617 GMT 5 Nov 80]

POLISH OFFICIAL ON GOVERNMENT--Warsaw, November 5 (XINHUA)--The recent negotiations between the chairman of the Council of Ministers and the independent self-governing "solidarity" trade union were practical and there were differences, but they clarified many matters and there was consensus on some of them, said Polish government spokesman Jozef Barecki at a press conference yesterday, according to PAP. The conclusion is that negotiations are necessary, he said. The spokesman said that the trade union could once again rest assured that the government hoped to cooperate as a partner and would always live up to what it had accepted in the agreement. The spokesman quoted chairman of the Council of Ministers Jozef Pinkowski as saying during the talks that mutual trust should be the basis for every piece of realistic work and cooperation, that it was necessary to get rid of the difficulty now besetting the country, and that the government regarded the meeting as an indication of sincerity and mutual respect for the signed agreements. The chairman was also quoted as saying that the trade union should not be confined to making claims but should also work to maintain order and ensure satisfactory work. [Text] [OW051730 Beijing XINHUA in English 1641 GMT 5 Nov 80]

REAGAN'S SCIENTIFIC ADVISORS--Beijing, 15 Nov (XINHUA)--According to a recent report by the NEW YORK TIMES, the scientific advisers of U.S. President-elect Reagan have urged him to strengthen military, industrial and space technology plans as the way to reestablish the strategic and economic superiority of the United States. The report says Reagan recently appointed an advisory group composed of 15 scientists and engineers to advise his transition team on technological problems. Most members of the group are well-known figures in military aeronautics, space navigation, and the nuclear and electronics industries. The cochairman are (Simon Lamore), (senior vice general manager of the General Electric Company in charge of technology). The report says members of the group unanimously regarded science as a means to strengthen U.S. military might and economic competitiveness and unanimously held that the United States lags behind other countries in many important technological fields. Edward David, one of the members, said: "The 1970's were the years of our technological recession, and the public is worried about this. The government has changed policies repeatedly. Scientific and technological developments have not kept up with expectations, thus enterprises have been unable to increase production." They held that the areas needing special attention are computer science, robotics and other production technologies, raw material engineering, nuclear energy research, meteorology, oceanography and improving scientific and engineering education. [Text] [OW161824 Beijing XINHUA Domestic Service in Chinese 1200 GMT 15 Nov 80]

U.S. AID TO POLAND--Beijing, 15 Nov (XINHUA)--U.S. State Department spokesman Trattner on 14 November said to reporters that the United States is carefully considering a request for economic aid made by the Polish authorities recently. He said the United States still firmly believes that giving Poland economic aid is in line with U.S. interests. He added: "The economic stability in Poland is in line with not only U.S. interests but European interests as well." A U.S. Government official has disclosed there are people who have made a number of proposals for giving Poland economic aid, including loans for Poland to purchase U.S. grain. The NEW YORK TIMES reported on 14 November that U.S. Secretary of State Muskie has proposed to increase agricultural loans to Poland for 1980-1981. Last September, President Carter announced the extension of an agricultural loan of $670 million to Poland. He has now suggested to increase that figure to $900 million. According to REUTERS, British Minister of Trade Cecil Parkinson, who is currently visiting Poland, said that Poland has begun discussions with Britain on trade-related credit loans. He said his 4-day talks in Poland have given him the impression that Poland is trying to obtain new loans from all its trade partners. TRANSITION FROM HUA GUOFENG TO ZHAO ZIYANG APPRAISED

Hong Kong ZHENGMING [CONTEND] in Chinese No 36, 1 Oct 80 pp 18-19

[Article by Ma Lu [7456 6424]: "How To View the Succession of Zhao Ziyang"]

[Text] The proceedings of the Third Session of the Fifth National People's Congress have now been completed. This session cannot but attract the attention of Chinese at home and abroad, or even of the whole world, because it carried out a major reorganization of the government: it replaced the Premier and a due number of vice premiers, and Zhao Ziyang's "new cabinet" has taken the place of Hua Guofeng's "old cabinet." Such a major reorganization of the leading stratum of government is not rare in the developed capitalist countries of Western Europe and North America (including, of course, Japan), but it is seldom seen in a communist-led country or in what are called Third World countries. In these countries, once a person gains control of political power, he is seldom willing to give it up unless prompted through a bloody coup, by the appearance of violent mass disturbances (such as the recent strikes in Poland), or as a result of intervention by foreign forces. After Hua Guofeng acceded to control over the State Council in 1976, Japan's circles of political analysis liked to use the term "the Hua regime;" this hinted that Hua Guofeng's leadership was estimated to be likely to develop into a new regime and to continue for a long time. Domestically, there was at the same time the saying that Hua might lead the Chinese people into the 21st century. These were both instances of people conventionally following the conception mentioned above--that is, the leader of a country would not quit unless overthrown. An event such as the abdication and change of position that have occurred this time, with no resultant disturbance, is seldom seen, indeed.

The Weight of Premier Zhao's Burden

Some say that even though Hua recommended Zhao Ziyang to replace him, what was replaced was but the office of the Premier of the State Council; he himself remains party chairman. According to the principle of the party guiding the government, Hua still wields great power, and whether Zhao's succession can have any great effect is still rather doubtful. But in reality, the principle of separation between the party and government has been put forward this time. The Communist Party is the party in power; however, it should only provide guiding opinions on the line, principles, policies, and programs, and at the same time lead all its members to play a positive and active role in the government and in mass organizations in order to assure the execution of various decisions. It should not directly command or interfere with the government's work. Only the National People's

Congress, as the organ of supreme power in the whole country, and its Standing Committee can directly command and intervene in the government's work (as [an organ of] government, the State Council is responsible only to the National People's Congress). Of course, for a long time the National People's Congress had become simply an instrument that "votes according to the imperial edict;" it had lost its proper function precisely because the party had taken its place. The Third Session of the Fifth National People's Congress has really changed this situation to a definite extent. The questioning, scrutinizing, and impeachment activities of the delegates vis-a-vis various departments of the government more or less exercised the functions of the organ of power. Some say that this was but a decision by the Communist Party; "what one can make, one can also break." If at some point certain leaders of the Communist Party should decide once more to recover their power, then what is to be done? We cannot say that such a possibility does not exist. But we must see that the profound lessons of the past 10 to 20 years have already made most Communist Party leaders gravely sense the danger of "the party ruling the state"--that is, if one person or a few persons like the gang of four can succeed in controlling the party and in carrying out a set of policies to the detriment of the country and the people, while the National People's Congress and the government are bogged down in an impotent position, the whole country may well collapse. Restoring and perfecting the functions and powers of the National People's Congress and allowing the government to work independently is precisely the Communist Party's important decision today. Whether it is Hua Guofeng or anyone else, if he is not in charge of governmental duties he cannot interfere with governmental work on the basis of his personal wishes, no matter how high his position in the party might be. If he did so, he would be violating the party's decision.

On the other hand, this man Zhao Ziyang is also unlikely to agree to serve merely as "a prime minister keeping the emperor company at dinner." In taking over the Premiership of the State Council, he knows deeply how difficult and heavy his responsibility is, as he is allowed only to succeed and not to fail. Without the power to work in the absence of restraint, he would not have accepted the appointment at a time of "transition between the new and the old." This is not a personal matter for Zhao Ziyang; it likewise reflects the party's decision.

As has been observed above, this major transformation of China's modern political system was accomplished peacefully. But if we perceive a degree deeper, is that not a direct result of the mass movements ranging from the "4 May Movement" until the smashing of the gang of four? In other words, it took 4 years for unprecedented political struggle that appeared in October 1976 to become roughly settled in a general situation. It may be said that this struggle was very complex and complicated and not very easy to manage. But it may also be said that those in China's leading stratum, having gone through important domestic and foreign experiences and lessons, have now reached the point of full maturity. They know that the Chinese people, whose wounds are extensive and whose grievances are deep, are hardly able to weather another stormy climate, and they must thus carefully and prudently manage the great affairs of state. Just as Mao Zedong said, one must eat one mouthful at a time. The general situation becoming only roughly settled after 4 years might seem too slow, but in reality this also can only be done that way. To be able to have such an achievement is already a very good thing insofar as the Chinese people are concerned. The major historic significance of the Third Session of the Fifth National People's Congress also lies here.

Can the "Crisis in Trust" Be Eliminated?

Some say that after this session of the National People's Congress, the "crisis in trust" in China should be able to be resolved.

As for those delegates who participated in this session of the congress, those members of the Chinese People's Political Consultative Conference who were present at this session, and those who are well versed in China's internal conditions, this kind of thinking may be appropriate. But to most of the domestic population and overseas brethren, it is still too early to say so.

To make this observation is not to suggest that the present government leaders are not trustworthy. It is equally baseless to think that in the past they were not trusted and that today they are absolutely trusted. Just as Lu Xun said: "Hopelessness is as false as hope itself." At that time, of course, Lu Xun had something else in mind, but today the situation does present some similarities. After repeated reversals of more than 20 years, some who originally had full confidence in the Communist Party have come to find that it has become progressively eroded, reversal after reversal. Each reversal in the past was said to have been a major change, and the situation was said to be fine and greatly hopeful, but each time the result turned out to be a greater disappointment. The story about "The Wolves Are Coming" has left them nothing to trust, they feel. Hence, in their eyes, the statements made at this session of the National People's Congress, the bills and regulations passed, and the personnel changes that took place seem but the same routine; no one knows when another negation is to take place, they feel. This is one point. Then, in terms of the domestic social atmosphere, many people perhaps had too many fears until the smashing of the gang of four; those powerful political campaigns made it necessary at least for people to follow the rules on the surface. In addition, mass communication organs used to report only the pleasant but not otherwise. Therefore the outlook still seemed somewhat "revolutionary," and those arriving from the outside world could not help but look at the ongoing situation with some respect. As for today, since emphasis is placed on emancipation of thinking and on breaking down conventions, many ideas buried deep in people's minds, many ugly things that had been covered up, and plenty of previously unknown and unspeakable personalities and things are all becoming gradually exposed. These included selfishness and avarice, stupidity and senselessness, and also the disposition toward worshiping things foreign and fawning to those from abroad on account of the opening door. All of this now comes to the surface. Judging by such phenomena alone, it would seem that the social atmosphere today has become worse than it was before the smashing of the gang of four. For instance, the direct feeling of residents of Hong Kong is that precisely during these past few years the number of escapees has increased. Why has this been the case? No answer can be found no matter how hard one ponders. Thirdly, an "indigenous emperor" style rather generally prevails among the local cadres, who resort to perverting justice for bribes and plotting avenues for private gain, and not a few working personnel evidence a dragged-out, tired-out, listless attitude; thus it is clearly discernible that the medium and lower echelons of cadres are not doing their job. Yet, continuation of the work in question depends on them. This being the case, even though the State Council has brought in Zhao Ziyang, Wan Li, and the like to exercise power, can continuation be assured? Can absence of deviation be guaranteed? In the case of these medium and lower echelons of cadres, even if they are replaced, there is no certainty that better persons will be found. They say: It most probably is impossible for Zhao Ziyang, Wan Li, and the like to take charge of everything from top to bottom; then, if those below pretend to follow orders but actually obstruct them, and hence stand in the way, what is to be done?

Precedents in the Transformation of the Cadre System

Are we worrying too much in saying all this? Not necessarily, because all of what is said has a factual basis. But is such an estimation completely correct? Of course not. Such an estimation, in reality, is still based on conditions prior to the smashing of the gang of four (including the conditions left behind) without due attention being paid to the fact that in many aspects there already have been fundamental changes. Among these changes, the main one is that concerning excessive concentration of power and the lifelong tenure of cadres, which, in a positive sense, means the establishment of democracy and a legal system. "Personal reputation and status, in particular, cannot be granted through others:" this is a correct concept that had already appeared in the days prior to the Qin Dynasty. But since the founding of the Chinese Communist state, not a few titles and positions have been granted as if they were rewards for merit and services; hence the largest number of offices and posts in history has come to be established. This session of the National People's Congress broached the issue of Beijing University's "18 Lohan:" 9 party secretaries, and 9 president and vice presidents. Actually this has been a generally prevailing situation: in many organs there are often 8 or 10 "vice excellencies," most of whom are usually ceremonial figures partaking in the spoils and nothing else. This time, old vice premiers and vice chairmen of the National People's Congress took the lead in resigning; this may be said to be entirely unprecedented. It created the precedent, in fact, for transforming the cadre system. The ultimate result is going to be a gradual advance toward employment of personnel strictly on the basis of talent, so that only the able will be in office, with their reputations matching their positions. This will serve to steer work in various aspects forward and put things on a course as arranged by the Third Session of the Fifth National People's Congress, thereby overcoming the various phenomena mentioned above and changing people's impressions accordingly. It takes time to achieve all of this step by step. The restoration of the people's trust in the Communist Party must also be determined by how much can be done in this regard. Therefore, to say that the "crisis in trust" has already been solved is but something said to placate oneself. But even if one is merely saying that, as long as efforts are made to really follow the present decisions and carry them out in practice, such "trust" will eventually be restored, along with the emergence of fruitful results, and the "crisis" will have then become a thing of the past. That would be something to be expected.

PARTY AND STATE

SCIENTIFIC FAITH OF MARXISM SAID ESSENTIAL TO MODERNIZATION

Wuhan JIANG-HAN LUNTAN [JIANG-HAN (CHANGJIANG AND HAN RIVER) FORUM] in Chinese Vol 3, 1980 p 39-43

[Article by Fan Zuogang [2868 0155 0474]: "Uphold the Scientific Faith of Marxism"]

[Text] "All humans have faith" is the mid-Tang translation of a teaching from the Avatamsaka Sutra of Buddhism; "An honest man is born relying on faith" is a thesis of Martin Luther, the 16th century German religious reformer; "The enemy can cut off my head, but he cannot shake my faith" is an oath the proletarian revolutionary Fang Zhimin [2455 1807 2404] made in prison. Each of these statements has its own unique meaning, and the ideological levels are as different as heaven and earth, but they express a common theme: In all times and places, people who live on this earth have been unable to be without their own ideals and faiths.

When man finally split off from a purely animal state, simultaneously there came into being the awareness and thought peculiar to man. Faith is one form of thought: it is a derivative of thought activity.

Faith is a yearning, a pursuit, an attraction toward something, and people draw strength from this spirit to explain, adapt or change the natural world and the social environment. Like thought, faith is produced and constrained under certain material conditions of social life. People's thought, knowledge and faith increase and develop along with the development of productive forces and go through a process from low to high, from shallow to profound and from blind pursuit to conviction of scientific truth.

In primitive society, the level of production and the ability to think is extremely low; people are still in a barbaric state, "totem worship" has become a universal form of faith for people, and they use certain animals or natural objects as symbols, piously worshipping them and using them as natural protective forces to maintain their own class. This is a kind of blind and illusory faith.

After entering the stage of class society, people's faith takes on a fresh class coloring: "In each period the ideology of the ruling class is the ideology which occupies the dominant position." For hundreds and thousands of years, the many faiths of Confucianist theories, Buddhist sutras, teachings of God, and even the utilitarianism which flouishes today, in essence all belong to the class which dominated the material means of production and that class, to maintain its ruling position, proclaimed and inculcated the faith which would benefit it and attract those they ruled to abandon their own faiths and accept what the dominant class advocated. For example, Dr Hu Shi, the apologist of the compradore class, early in this century proclaimed "study questions more and talk less about isms" to resist the transmission and promotion of Marxism in China. But this Doctor of Philosophy did not categorically oppose faith, for the peculiar pragmatism of the sort that "if it has breasts, it's a woman," was imported into China from the United States in the hands of Hu Shi. It is obvious that whatever the exploiting class believed or did not believe had a class bias, and thus this faith also was an antiscientific opiate and corruptant which violated the laws of history.

The faith of the ruled class and the workers had one aspect of what had been inculcated by the ruling class, and at the same time from their own enslaved position there was also their own faith which was opposed to that of the ruling class, expecially when there are social struggles and human vicissitudes. It is, as Lenin said, when the bottom is not willing to go along with the old life and the top cannot rule as before, then in particular, the embodiments of the laboring people's rejection of evil, longing for ideals and upholding of faith can be concentrated. "The Blue Heaven is dead, the Yellow Heaven has taken over"; "do not serve gods buddhas, or ancestors"; "equalize noble and humble, even up rich and poor"; "with a three-foot sword the world can be conquered and the world becomes a place to wander at will";..., such battle cries issued by revolutionary leaders throughout history immediately became passionate faith for people who wished to change their situations, motivated them to fight and deal a heavy blow to the ruling class and the faith it worshipped, thus it made it possible for people's aspirations to be realized to a certain degree. But because of class restrictions and the limitations of historical conditions, these faiths are only simple concepts which come from a desire to throw off bitter conditions and are not built on a foundation which correctly reflects the laws of historical development, but, because of the obstruction of scientific culture and the influence of religion, "to start an enormous storm, the vital interests of the masses must be draped in the garb of religious teaching," so people's faith frequently had to be wrapped in the mysterious colors, thus in practice, it was impossible finally to realize their own desires and complete the historical mission of liberating themselves and transforming present conditions, therefore, these faiths still were unscientific, visionary forms of faith.

However, after Marxism appeared and changed socialism from vision to scientific reality, there was a revolution unprecedented in its profundity in the realm of people's knowledge and the content of faith.

Marx and Engels critically carried on the essence of mankind's ideological and cultural legacy, summarized the production struggle, the class struggle and the latest achievements of scientific experimentation, revealed the objective laws of social development and pointed the way for the advance of history. Thus Marxism is the sole scientific ideological weapon for the liberation struggle of the proletariat and the vast numbers of workers. The creation of Marxism made people cast off the divine aura of religious faith. "The historical mission is to establish the truth of this world." Before it, of all the various blueprints for socialism and the varieties of faith, those which are true and false will be discriminated and those which should be accepted and those which could be rejected will be determined. The theory and practice of Marxism and scientific socialism is still the faith on which people rely to build the sole scientific foundation so that "people with reason can think, act and build their own reality."

There is one view that Marxism is science, and that science is the object of research and not the object of faith, thus Marxism cannot be something in which to believe. This inference is a little hard to understand because research and faith are not mutually exclusive and opposing concepts. The opposite of science is ignorance and superstition, but faith is definitely not a synonym for superstition. No matter what dictionary you use, as long as you are not playing etymological games, the word "faith" can be understood by anyone as including ideas of belief, conviction, reverence and respect and is used as a compass and yardstick for behavior. Above we said that different times have had different faiths, different classes have had different faiths, also. There is blind faith and scientific faith, but faith in Marxism is scientific faith. Of course, the fact that Marxism is a scientific theory has been the object of research, but "in essence, it is critical and revolutionary." Its break with the ossified and superstition is constantly perfected and developed in practice. Just because of this, the fundamental principles and scientific system of Marxism is long-lived and evergreen, and already through over a hundred years of practice has proved that it is the ideological weapon of the liberation struggle of the proletariat and the workers and is the worldview and methodology for people to understand and change the objective and subjective. It is the guiding ideology of our socialist nation and this is clearly incorporated into the constitution of the People's Republic of China. If Marxism is something only for discussion in the study and not a guide for action, then there is no way to expain the historical picture which has developed in China over the last 60 years with the help of Marxism.

In recent year, Chinese with lofty ideals have made many valuable attempts to find arguments for saving the nation and people, without being able to realize their ambitions. But when Marxism spread to China and, on the basis of combining with Chinese revolutionary practice, Mao Zedong Thought was produced, people achieved enormous power of faith. "Beheading is not important as long as the ideology is true." People ran about shouting slogans, making speeches on street corners, setting up regimes in mountain villages, fighting on the battlefields and in the torture chambers. Everyone felt the same and struggled to build a brand-new socialist mansion. Under the leadership of the Communist Party, whose guiding thought is Marxism, after many difficulties, the court of Jiang Jieshi, which had been upheld by an army of 8 million was finally defeated and an unreasonable social system of several thousand years duration was brought to an end, and by a tortuous path the great victory of socialist revolution and socialist construction was won.

"All faith can only be secured in revolutionary theory," "everything can be abandoned in the search for truth." The martyr Zheng Zhixin's [1728 1807 2450] solemn pledge made in prison clearly showed her faith in Marxist science, and gave her incomparable wisdom and inexhaustible strength so that in the evil wind and miasmas she could distinguish the fallacies and perversions of the "gang of four's" false Marxism and anti-Marxism; so that in the face of violence she had a lofty and unyielding character and in the face of danger she was not afraid and was faithful and unyielding, showing an unshakeable faith in and iron will of Marxism. Similarly, in the spring of 1976 in the national mass movement which centered on Tiananmen Square, in the dangerous circumstances when the brutal control of the "gang of four" was at its peak, what thousands of people expressed was "the vow to respect and defend the country at all costs and clearly distinguish Marxism-Leninism and protect state power." The time of "righteous indignation rose to the heavens and red hearts will rebuild our China" was most strident. This is a review of the struggle of Marxism, showing eloquently the power of faith of people armed with Marxism.

Through the harsh test of battle, our troops began a new long march, and in the wake of bitter experience, people broke open the ideological door behind which they had long been imprisoned and began to consider our past, present and future. Behind the keynote of triumphant advance there chanced to appear a low note: it was said that Marxism was in crisis, socialism had no future, etc. There may be a variety of reasons for the appearance of this way of looking at things and I would like to analyze them here from the perspective of the history of socialism and its present state.

It should be admitted that we have not used Marxism with sufficient correctness and there are still some gaps and errors in our scientific socialist theory and practice, there is some lack of correspondence in the achievements and contributions we should have made, especially during the turbulent era of the Great Cultural Revolution, the calamity brought on by Lin Biao and the "gang of four" when history moved backwards; after the smashing of the "gang of four" when spring was in the air, a period when we had a new lease on life, some new contradictions gradually began to appear, such as, that democracy was not healthy, that the legal system was not perfect, that bad bureaucratic practices were not yet extinguished and that special privilege thinking had a resurgence, so that people's feelings of detesting the world and its ways and their ideas of grief for the times and the nation were entirely understandable.

We are thorough materialists, seek truth from facts, proceed from actuality: these are fundamental points and points of departure for Marxism and Mao Zedong Thought. To build faith on a scientific foundation selfconsciously requires that the original face of history be accurately restored.

We have lived in socialist society for 30 years and Marxism has been in China for 60 years. This time is only an instant in the long process of historical development. Historically, the alternation of different social systems or the shaping and establishment of a new social system frequently goes through a prolonged process, and there might even appear to be a brief retreat. This is not unprecedented. When the Germanic peoples established the Frankish Kingdom in Western Europe, the process of making it feudal took over two centuries to complete. The bourgeois revolution in England also went through the several decade-long Stuart Restoration. In France, that which is presently termed the Fifth Republic means that in the past 200 years of capitalist political system which it has gone through, there have already been four crises in the system of government. In the final period of the Chinese feudal monarchy, because of the invasion of foreign capitalism in the mid-19th century and its alliance with feudal forces, China was unable to follow the usual developmental path of turning capitalist and through the process of becoming semifeudal and semicolonial finally evolved towards socialism. All the above, however different the class content and manifested form, clearly explains that history does not develop in a straight line. The succession between exploitative systems is still like this, and the establishment of the socialist system, of course, cannot be without some tortuousness.

China's past is that of a feudal society which continued for several thousand years, small-scale production was the rule and in the treasure house of Marxism there were no ready-made models for how to build a socialist mansion. Socialism was not victorious first in developed capitalist countries as Engels had predicted. Although when our party was first established, with enthusiastic conviction Lenin vested his hopes of the final victory of socialism in the vast territory of the East, including China, but it was all up to our ancient country to practice and create it ourselves.

At the same time, socialism also was created in an environment in which both at home and abroad there existed hostile forces. "Socialism will abolish class." Lenin had enunciated this thesis very early. But when socialism was first established, classes were numerous and complex. Like the counterrevolutionary clique of Lin Biao and the "gang of four" they epitomized anti-Marxist and antisocialist forces and in a certain climate they utilized our shortcomings and mistakes (in essence, this was also distorted or violated Marxism) to run rampant for a long time with heavy damage and profound consequences, so that the splendor of Marxism and Mao Zedong Thought and the reputation of socialism suffered severe damage.

However, this was, after all, the product of special historical circumstances (such as the climate of the Great Cultural Revolution, and the formation and upsurge of modern superstition). History cannot simply repeat itself. Such conditions cannot reappear in their original form, but the important thing is that our party and people endured severe discipline and testing, paid a heavy price and gain extremely rich and valuable experience and are even more mature politically. We put an end to the sources of disorder, stopped the hidden peril, conscientiously developed democracy, gradually rebuilt the legal system, got rid of modern superstition with the fearless spirit of materialism and corrected the series of errors and distortions which were brought about by modern superstition. What we are carrying out now is proceeding from actuality, seeking truth from facts and the ideological line of testing knowledge with practice; a political line for building socialism centered on the four modernizations, an organizational line of unity and stability of the party and promoting only the worthy. From this more than 3 years of practice, anyone can feel intimately from our political situation, economic situation, material culture and life style, that things have clearly taken a turn for the better, much better and faster than people originally thought, and this is truly a very moving scene.

All of this is the proper sense of the Marxist task, and the victory of Marxism. If it can be said that Marxism was defeated, then this is its restoration; if it can be said that Marxism was stagnant, then this is its development. The theory and practice of these 3 years has proved the vitality of Marxism and the so-called crisis was only the crisis of false Marxism and anti-Marxism.

Of course, this is not to say that there are no problems, troubles or difficulties ahead of us, or that the process of advancing is not tortuous. On the socialist path there are many realms of necessity which we must continue to explore, in our party style and peopleness there are many feudal (mainly manifested as special privileges thinking), small-scale production (mainly manifested as conservativeness and force of habit) and "gang of fourish" (mainly manifested as ultraleftist thought tide) pernicious influences which are far from having been eliminated and are still corrupting the socialist body, and capitalist "popular" styles (mainly manifested as blind worship of foreign things and self-deprecation) which are still prevalent. All of this must go through a long and difficult period of education and struggle, of this there is no doubt. But, what do we rely on to change this situation? Anarchism? This has already been proven bankrupt in the history of the international communist movement and in our Great Cultural Revolution; liberalization? The Marxist view of liberalism has always recognized the coexistence of mutual reliance and mutual restraint of discipline, just as with democracy and collectivism. Abstract freedom cannot be found. Recently, those who advocate democratic freedoms in China have been unable to drag the "freedom" of old China into the society they idealized, how much less can such free acts as having the four modernizations, which are unprecedented in our history, depart from party leadership, praise the "democratic group" and even seek help from "those who hold difference political views" be permitted?

Things return to their roots, whether it be 30 years or 2 years. From the lessons of experience both positive and negative, we still have faith in Marxism and uphold Marxism. Feudal, small-scale production and capitalist precepts are incompatible with Marxism. The special privilege thinking which people detest and which fills them with indignation is not the measures adopted by the Party Central Committee organizationally, systematically or from ideology and public sentiment. If the punishment is increased will they disappear? Of course, this is no easy matter. But, if only the correct line of Marxism is maintained, all non-Marxist things sooner or later will have no place to hide.

Of course, the vitality of Marxism and the superiority of the socialist system ultimately still depends on our realizing the modernizations within this century, as especially after catching up with and surpassing the production levels of the world's advanced capitalist countries, it will become completely obvious. However, as Communist Party members and as citizens with high aspirations, can we sit and wait for that day to come all by itself? During the time of democratic revolution and socialist transformation, even when we lack the material conditions, do we not also constantly feel the vitality of Marxism and the superiority of the socialist system? To realize modernizations and build a strong socialist country is in accord with the will of the people and the general trend of events. Even people abroad accept this. Their basis and our possibility are not the same, but we reach the same goal though by different routes. Realizing Chinese-style modernization is imperative: this is the common conclusion. But please consider this: recently, on the basis of actual experiences in his scientific research, the American physicist Yang Zhenning [2799 2182 1380] analyzed objectively our ardent search for order during the last 2 years and after the plans proved impractical, he thought "the revised new modernizations plans are even wiser, and I believe from this experience, China must learn how to manage the arrangement of financial affairs. China has resources--both manpower and material--and with more correct management, ultimately will achieve the goal of modernization. This goal is not likely to change: it is a fundamental, long-term policy." It should be said that this prediction is fair and sound. A U.S. Congressional Economic Committee last year also made an appraisal of China's economy, and although they said "we foresee that the future course of China's economic policy may be especially difficult" and there are some puzzles, after analyzing the theory and practice of China's "economic scale," it must be pointed out that "in the next 10 years, certainly China will be able to maintain an average rate of economic growth roughly the same as that for the past 25 years, and this will mean that by the end of this century, the gross value of China's domestic production will increase by four-fold." "This will easily move China into the rank of the five great economic countries." Of course, in making this prediction, they are not going too far either.

It is not that we are gaining inspiration from the U.S. Congress, but that this shows they are making this prediction on the basis of the developmental trends of the past 3 years (i.e., the so-called "post-Mao Chinese economy). But these 3 years were still 3 years of the unlimited vitality of Marxism, still the close combination of Marxist scientific theory and Chinese socialist practice over the past 20 years, and thus were 3 years of brilliance. They have no way of understanding this point and are unwilling to acknowledge it. But here we have made more profound the conviction that Marxism is science, and we must uphold and have faith in scientific Marxism.

ON SUCH SLOGANS AS 'FEAR NO SACRIFICE'

Beijing RENMIN RIBAO in Chinese 4 Sep 80 p 8

[Article by Dong Fang [5516 2800]: "On Such Slogans as 'Fear No Sacrifice'"]

[Text] Some people use the slogan "Wherever there is struggle there is sacrifice" to put off responsibility for accidents which involve heavy casualities and this must make people seriously think about this slogan and analyze it.

"Wherever there is struggle there is sacrifice, and death is a common occurrence." Comrade Mao Zedong said this when mourning Comrade Zhang Side [1728 1835 1795]. What it really means is that in the process of struggle a certain amount of sacrifice is unavoidable. But in a more profound sense it means that the Chinese Communist Party and the revolutionary ranks under its leadership are selfconsciously and bravely struggling for the thorough liberation of the people and for the interests and well-being of the people, and thus, not only should they not fear this sacrifice, but they also should consider it a matter of inestimable glory to be able to make this sacrifice. Hence, "When we die for the people it is a worthy death"; "To die for the people is heavier than Mount Tai." These words express in concentrated form the revolutionary will of all our ranks, and represent the solemn vow all of us revolutionaries make to the people. It has become a viewpoint which is an important element in our revolutionary outlook on life; it has become a revolutionary spirit which has always been one of our precious fine traditions. In the new revolutionary struggle we are carrying on to realize the four modernizations, each revolutionary should be able to maintain this revolutionary outlook on life and continue to develop and glorify this revolutionary tradition. But at the same time that Comrade Mao Zedong spoke these words, he also said "We should do our utmost to reduce those unnecessary sacrifices. Our cadres should be concerned about each other, take good care of each other, help each other." This reflected the essence of the relationship between comrades in the revolutionary ranks and expressed the demands and aspirations of all revolutionaries.

It is evident that revolutionaries' view and attitude of sacrifice has always been analytical and discriminating. There are two kinds of sacrifice: one is the unavoidable and necessary sacrifice. Revolutionaries have always welcomed this kind of sacrifice selfconsciously and full of ardor and sincerity. Countless revolutionary martyrs and people with lofty ideals have been glorious models of this. He who flees this kind of sacrifice is not a sincere revolutionary, and some have even become shameless deserters. Second, we should do our best to avoid unnecessary sacrifice. Not only should every person who has leadership responsibility do his utmost to think of ways to avoid this kind of sacrifice, but each comrade also should use his brains to offer advice and plans to make every effort to avoid it. Everyone who causes this kind of sacrifice because of neglect of duty should take the blame, reform and atone for his crime. Even those who boast that the dereliction of command duty that caused the accident was a heroic deed, are criminals of the nation and people, and by rights should be punished according to law.

In short, in the process of struggling for the interests of the people, revolutionaries should dare to make sacrifices, but should also not take making sacrifices lightly. This alone is the integrated viewpoint and seeking truth from facts attitude revolutionaries take towards sacrifice.

Speaking of the present, I think that we should adovate this kind of spirit of self-conscious bitter struggle and fearless sacrifice with a seeking truth from facts attitude. This kind of spirit should be especially emphasized among cadres, because among our cadres, the development of this spirit is far from sufficient. On the other hand we should oppose the tendency to speak of sacrifice lightly or rashly, a tendency which is divorced from reality and easily encourages pointless sacrifice and we should especially watch out for those people who rely on rash and idle talk of sacrifice in order to escape responsibility. For many years the broad masses have paid more than enough unnecessary sacrifices because of this. Since certain leadership comrades of the Petroleum Ministry and the Bureau of Offshore Oil Exploration, have in reality already turned their backs on the principle "Our cadres should be concerned about every single soldier...", what right or qualifications do they have to talk to the masses about "sacrifice"? And as for Lin Biao, Jiang Qing, Kang Sheng and that gang, in the ten year catastrophe, with even more ulterior motives they incited people to should the slogans "Be resolute, do not fear sacrifice, wipe away all difficulties and go and win the victory" to pursue "all-out civil war" so as to create those shocking "sacrifices" and because of this many people gave their lives in bewilderment. This painful historical lesson should be remembared forever.

Thus, we should adopt this kind of attitude towards the slogan "First, don't fear suffering, second, don't fear death."

PARTY AND STATE

RISE OF ZHAO ZIYANG, NEED FOR ECONOMIC REFORM TRACED

Hong Kong ZHENGMING [CONTEND] in Chinese No 36, 1 Oct 80 pp 15-17

[Article by Chen Jianshi [7115 1696 0013]: "The Background of Zhao Ziyang's Rise to Power"]

[Text] Zhao Ziyang's accession to the office of Premier, with authorization to carry out economic reforms, has been warmly welcomed at home and abroad. But it may also be said that he was given the appointment "at a time of crisis," and that from now on he would be allowed only to succeed and not to fail. In other words, the extreme-left line in the style of Mao Zedong is absolutely not allowed to interfere with his work again, or the Chinese Communist Party would really face the possibility of annihilation and the Chinese people might be headed toward a gargantuan disaster.

Everything Must Get Started From the Beginning

Recently, a documentary film "China's Story in Blood and Tears" was shown in Hong Kong. The film covered the vicissitudes from the Boxer Incident, and the invasion of China by the joint forces of eight powers, up to the appearance of Chinese Communist Party Chairman Mao Zedong at the ceremony of the founding of the new state atop the Gate of Heavenly Peace on 1 October 1949. During a period of some 50 years, China underwent countless adversities, such as the disturbances created by Zhang Zuolin and other warlords in North China, Yuan Shikai's assumption of the title of emperor, the first cooperation between the Nationalists and the Communists during the Northern Expedition, the failure of the Great Revolution and the perpetration by Chiang Kai-shek of the "12 April" coup and purge of the Communists, the invasion of China by the Japanese bandits, the second cooperation between the Nationalists and the Communists, victory of the anti-Japanese resistance, and the return to civil war. Finally, there was the founding of the Chinese Communist state and the scene of rapturous hailing of Mao Zedong. The film stopped here and did not continue. But the background narration left a question mark about the destiny of the state under Chinese Communist rule.

During the past 30 years, however, the Chinese Communists have moved from receiving the people's rapturous welcome to the instigation of the Cultural Revolution and hence a total loss of popular support. During this long period, except in the early 1950's when they made certain contributions, they have gradually aggravated their harassment and exasperation of the people, conducted frequent campaigns, and embarked upon a "leftist" line, bringing destruciton to the economy and production and devastation to democracy and the legal system. All this has resulted in great injury to the vitality of China. Especially during the 10-year Cultural Revolution, the Chinese people were placed under feudal, fascist rule that was unprecedented in China or elsewhere throughout the ages; social order, culture and education, and concepts of morality and ethics in the folk tradition all underwent a great regression. China was actually under the rule of a single leader, a heavenly deity; it took only a wave of the deity's hand to prompt the common people to advance wave after wave in battle like worthless ants. The deity wanted the people to "fear neither hardship nor death," and to defend himself and his power he did not cringe at all even at destroying the Constitution and crushing the party he himself had personally created. All kinds of crimes were carried out in the name of "revolution," "continued revolution under the dictatorship of the proletariat," and other similar "leftist" pretexts. This situation finally provoked the earth-shaking, heart-rending "5 April Movement." As this was the direction in which popular sentiments were expressed, it ultimately brought to a close the utterly preposterous tragedy of the Cultural Revolution.

Insofar as China is concerned, the realistic satire is the fact that the two slogans put forward by patriotic youths of the "4 May Movement" of 1919, in terms of a demand for the realization of democracy and scientific progress, turned out to be still empty at the time of the Cultural Revolution; everything still had to get started from the very beginning. Rebuilding democracy, rebuilding the legal system, respecting science, and developing the economy are the new slogans of the 1 billion Chinese people today. Please note what great advances many countries have achieved during these past 60 years: defeated countries have been rebuilt from ruins; colonies have moved from independence to development and to the building of civilized states with balanced development of science and technology. But China is still just trying to make a beginning from the A, B, C of democracy and science.

The Third Session of the Fifth National People's Congress of Communist China decided to carry out great reforms in the systems of the country's leadership and economy, to practise a separation between party and government, to grant full authority to new Premier Zhao Ziyang of the State Council, and to let him promote new economic policies with a free hand. This was a new start on the part of the Chinese Communist Party after it suffered its failures through 30 years of practice under extreme-"left" policies. That is to say, it must abandon those empty revolutionary slogans, develop production in a down-to-earth way, raise the people's living standards, let the common people speak their minds, and grant them greater democratic freedom. This new start was not meant to lean to the other side, the side of capitalism, but to create genuine people's democracy, so that any party member or cadre would be subject to supervision by the people. Like the "4 May Movement," this new beginning step is profoundly supported by the Chinese at home and abroad.

The Burden of the "Petroleum Kingdom"

The emergence of the Zhao Ziyang regime has a background for its inevitability. That is to say, if the Chinese Communist Party had still failed to institute reforms, its political power would certainly have encountered disruption because of economic problems.

When Mao Zedong died in September 1976 and Jiang Qing and the gang of four were overthrown that October, the economy of Communist China was sustaining injuries within and without. An earthquake in the Tangshan area caused devastating damages: more than 700,000 casualties and several million people in the Beijing-Tianjin region homeless. Vietnam pressed for "aid" at this time, and the Chinese had to tighten their belts and do their best to provide it. At this moment, although Hua Guofeng had acceded to power, the "little gang of four," Wang Dongxin, Ji Dengkuei and others, were still usurping high offices. Ignoring the fact that most of the victims of the Tangshan earthquake disaster still had no housing accommodations, they somehow chose to mobilize the country's material resources to build that memorial hall for the leader and also to publish Volume V of the "Selected Works of Mao Zedong." The administration of the Chinese Communists at this time still followed Mao's system. A national learn-from-Dazhai conference exalted Chen Yonggui to the heavens and ordered the various provinces and municipalities (autonomous regions) to build a certain number of "Dazhai counties" within a specific time limit. Stupid measures like "channeling water from the west to the east" continued to be carried out. While the assumption had been that once the gang of four was overthrown, everything would be all right, little did people know that the forces of the "whateverist faction" continued to entrench themselves in party and government organs at various levels. Bureaucratism prevailed as usual. Although the central authorities put forward the call for a more daring and accelerated approach to the construction of the economy, there was a lack of scientific perception in this regard, and the economy by no means embarked upon the desired course. Even while it was clearly understood that the gang of four had brought China to the brink of bankruptcy, resultant problems were not solved. At this time, people only heard all the blame being heaped upon Lin Biao and the gang of four, whereas Mao's faults were mostly glossed over.

Under such circumstances, it was difficult for the economy to develop. But the central authorities were meanwhile burdened by the partial testimonies of the "petroleum faction," thinking that there was petroleum to be exploited everywhere in China. Whenever certain dignitaries were dispatched abroad on visits, they chose to import everything, regardless of price. Without any study as to whether or not it suited China's needs, much equipment was imported by ready agreement, once its proponents were heard to say how advanced it was. The upshot was that these imports greatly exceeded Communist China's ability to pay for them in foreign exchange, but the blind belief continued that many Daqings would be forthcoming in the country. Although leading cadres of the petroleum departments had made meritorious contributions in the past in the exploitation of China's petroleum resources, they had become muddleheaded because of applauses, thinking that if large corps were thrown into the battle, the attendant military means of siege should succeed in everything. As a result, they suffered a great tumble and ultimately turned petroleum, which the Chinese Communists envisioned as the largest source of foreign exchange for their economic construction, into a springtime dream.

In its supply to Japan last year, petroleum had already showed its restrictions when the demand could not be met, even after measures were adopted to appropriate some here and borrow some there. Not until the end of the year was the export of 7.6 million tons of petroleum to Japan accomplished. According to the terms of the 1978 long-range Sino-Japanese trade agreement, the supply of China's crude oil to Japan needs to be increased every year during the 5-year period from 1978 to 1982. From 1983 on, the amount to be supplied will be agreed upon anew, depending on how petroleum production has increased by that time. But after the problem popped up last year, even the supply of 8 million tons this year has been found to be more difficult. Recently, Yao Yiling finally indicated to Japan's Vice Minister of Miti Yano that starting next year, it will be impossible for Communist China to carry out the terms of the agreement to supply 9.5 million tons of crude oil to Japan then and also to supply 15 million tons in 1982. Therefore, he reduced the amount of petroleum to be supplied to Japan in each of those 2 years to 8.3 million tons. Gu Mu even had to apologize especially to Doko for this, saying that the reason China would be unable to continue to supply Japan with petroleum according to those terms was because she had not mastered the data regarding the accurate amount of petroleum deposits, and had underestimated the damage caused by the gang of four, so that petroleum production had become stagnant. As China's own need for petroleum increased, it became impossible for her to satisfy Japan.

Reducing the Internal Supplies and External Sales of Petroleum

The vanishing of Communist China's beautiful dream of building her economy on the basis of exports of large quantities of petroleum brought major consequences to the entire economic plan. After the [Second World] War, none of the various countries started off its economic development with light industry and then carried over to the development of the petroleum industry in a strategic way. In the economic takeoff of Japan and West Germany, the petroleum and chemical industries brought about large amounts of foreign exchange income. The development of petroleum and chemical industries not only directly permitted the development of chemical fibers but also provided great leaps for industries that have to do with the people's livelihood, such as plastics, detergents, paper, etc. The economies of South Korea and Taiwan also started with light industries closely related to the petroleum and chemical industries. Luckily, they both profited from getting petroleum supplies at a reasonable price. But since the petroleum crisis of 1975, these countries and areas time and again have encountered the difficulty of inflated petroleum prices. The era of petroleum supplies at a reasonable price has come to an end. None of the Third World countries has escaped this encounter with the problem of high petroleum prices and the resultant sufferings. Some extremely poor countries have even fallen into major economic crises resulting from annual overexpenditures and insufficient income; Turkey is a good example.

Since Communist China does not have sufficient petroleum and natural gas, her economic planning must change its course. First of all, she will be unable to rely on petroleum exports for the exchange for large factory equipment and expensive advanced technology. Secondly, the source of domestic petroleum power supplies is bound to suffer a blow because of this. Thirdly, those industries that rely on petroleum-based raw materials will suffer a shortage of raw materials. According to a statement made by a provincial delegate at this session of the National People's Congress, nine sets of imported chemical fiber and chemical fertilizer factory equipment could not start operation after their installation because of a lack of petroleum and had to be pigeonholed.

Petroleum control measures are being strenthened at various places; Jilin in the northeast has already started to reduce freight truck driving in order to adapt to the reality of the petroleum shortage. All this explains that the "10 or more Daqings" the Chinese Communists have talked about have not been realized. Petroleum production at Daqing has already reached its peak. The domestic petroleum supply is being reduced, and the ability to provide large quantities for export no longer exists. The Chinese Communists are still continuing to search for petroleum everywhere, and especially in the case of oilfields along the coast, they have signed agreements with 10-odd foreign petroleum companies to let those countries pay their own exploration costs in order to search for petroleum in the East China Sea, the South China Sea, and the Bohai Gulf. Nevertheless, no exciting discoveries of large oilfields have yet been scored up to the present. Efforts are also being made to search for petroleum in Tarim, Zaidamu, and Sichuan. Perhaps new oilfields will be found in the future, but at least for the present, efforts must still be made to cope with this petroleum crisis.

When Yao Yiling reported on the economic plans of the Chinese Communists for the 2 years 1980 and 1981, the amount of petroleum production remained at 106 million tons--i.e., at the same level as during the past 2 years. The fact that petroleum production cannot go higher is thus confirmed in the short run. Luckily, China still has huge coal and hydroelectric power resources; otherwise it would be very hard for the country to solve its energy problem. Even so, in the next few years, at least, the Chinese Communists cannot rely on petroleum exports, but only on an expansion of light industrial exports, to pay their foreign debts.

Stimulating Nature of the "Sichuan Model"

Under such circumstances, Zhao Ziyang's economic construction in Sichuan was given the utmost attention by the central authorities. Why? Because it proved that the moves which he worked out in Sichuan to expand enterprise, commune, and production brigade management autonomy and to open up the free market, and so forth, can solve the food supply problem and, compared to Mao Zedong's empty slogans and policies, which actually resulted in the exasperation of the people, they are as different as heaven is from earth. The "Sichuan model" he has worked out can stimulate the workers' and peasants' enthusiasm for productivity. He said: "We cannot blame it all on the peasants; once production is developed, of course the peasants will feel settled. To solve this problem is a responsibility which we must undertake." In response to other people's praise of his achievements in Sichuan, he usually does not show any ready elation, but instead says: "What we have done in Sichuan is just restore the original shape of things; we cannot rejoice too early. We need to make still greater efforts." He courageously carried out the policy of expanding production autonomy and made it possible for the economy of Sichuan, with its 100 million people, to prosper in a short time. In the free market in Sichuan, there is everything; the people do their best to increase production so as to increase their income; peasants, workers, and merchants combine to link production and sales operations into one continuous process; those who work more, earn more. Thus the economy both in the cities and in the countryside has become swiftly vitalized. The reason why all Sichuanese praise Zhao Ziyang in the same tone is because their livelihood has been really improved.

The Chinese Communist state has been founded for 31 years, already, but it is a pity to observe that, except for the relatively well-completed First Five-Year Economic Plan, the rest of the time has been taken up mostly by Mao's blind commands and his leftist poison-generating policies and slogans which twisted China all out of shape. In certain regions, it is no different from old China. In the large cities, too, except in their central districts, one need only to go slightly deeper into the small lanes to see how the dilapidated conditions there are still the same as in the past. To speak truthfully, the Chinese Communists have been at it for more than 30 years; if they still refuse to change their tack, they will simply be unable to face the people.

It was against this kind of background that Zhao Ziyang acceded to office to devote all his energies to carrying out economic reforms and the daring expansion of autonomy. As he has explained, this policy is not a capitalist path but one which builds China's own socialism on the basis of a capitalist civilization. If China's socialism is not to be developed on the basis of a capitalist civilization, is it going to go back to feudalism?

This statement enabled the people of the whole country to have confidence in him. Indeed, China no longer has any other path to follow, and it simply will not do if it does not work on a new economic policy. The extreme-left line has ruined China and turned it into one of the world's poorest countries. It has put China in a dead corner, and from now on it will never again be allowed to influence China's development.

Some are worried that Chinese Communist policies always waver too much: even if what they are doing now seems all right, there is no guarantee that changes will not take place again. It appears that we need not be overly concerned about this. As long as the policies of Deng Xiaoping-Zhao Ziyang are upheld by the whole country, and the vast ranks of workers, peasants, and urban citizens derive benefits from the economic reforms, then it will be very difficult for Mao Zedong's extreme-left line to stage a "comeback."

How To Restore "Trust"?

During the past 100 years and more, a hoary China, after suffering its full share of abuses by the powers, was further subject to mistreatment by various domestic forms of ruler, such as emperor, president, chairman, and great leader. In a 30-year postwar period of relatively sustained peace, and in particular when conspicuous improvements were coming about in the livelihood of the people of most countries of the world, somehow such a preposterous tragedy as the Cultural Revolution took place in China. Just as Zhao Ziyang has said, during the Cultural Revolution period everything was too leftist; this made the Chinese Communists reflect on the pains after the pains were over, so that they are now fully enlightened and realize that lack of relevant change simply will not do.

The decision made at the Third Session of the Fifth National People's Congress to separate the party from the government, the repeal of the lifelong tenure of leading cadres, and the magazine HONGQI's demand that the people should have the right to recall incompetent officials all indicate that, in coordination with the great reforms in the economy, a great rectification in politics is also imperative under the circumstances. Among the 38 million party members, half of them entered the party during the Cultural Revolution period, and many of these were elements who resorted to beating, smashing, and looting at the time. These elements lack professional knowledge and culture and yet refuse to study. Bureaucratic elements like these, who depend only on their mouths, must be eliminated. Only if the right to supervise government officials is genuinely conferred upon the people, and democracy and the legal system are perfected, can the Chinese Communist Party conscientiously face the people, the more than 300,000 progressive personalities butchered by Chiang Kai-shek during the "12 April" incident in 1927, and the countless martyrs sacrificed during the anti-Japanese and liberation wars.

Mao Zedong's merits and demerits must be clearly differentiated, and no further effort should be made to gloss over everything for him. Only by demonstrating such determination to accept the supervision of the people can the Chinese Communist Party restore the people's confidence. Zhao Ziyang's accession to office has already made a good beginning; with the support of the whole country, the new regime and the new line are surely going to bring about economic prosperity.

PARTY AND STATE

SECOND GENERATION OF GOOD LEADERSHIP VITAL TO GOVERNMENT

Hong Kong ZHENGMING [CONTEND] in Chinese No 36, 1 Oct 80 pp 20-21

[Article by Dong Jin [5516 0093]: "A Delightful Step and Valuable Popular Support"]

[Text] There seems to be a law governing China's historical development: The first generation consists mostly of rulers of magnificent talent, although some of them make a good beginning but fail to keep up in the end; then, if there is a good second generation of rulers who value stability and unity and make a new beginning together with the people, the given dynasty is usually able to last much longer. The sovereign fortune of the Han Dynasty was bolstered precisely by such a second generation and also by a third generation in terms of "rule during the reigns of Emperor Wen and Emperor Jing." Their efforts to have the population rest, grow, and gather strength made it possible for Emperor Wu of the fifth generation to replenish his army, dabble in military arts, resist and attack invaders from the north, and remain in an invincible position. Li Shimin [2621 0013 3046] initiated the "coup at the Xuanwu Gate," suppressed ambitious characters and clowns like Jiancheng [1696 2052] and Yuanji [0337 0679], solicited men of talent, accepted dissidents' suggestions broadmindedly, and put up a high-spirited effort to achieve government. There thus emerged the "reign of Zhenguan," which laid down a firm foundation for the statehood under the House of Tang. Continuity of the Song Dynasty hinged upon Zhao Kuangyi [6392 0562 5030], and that of the Qing Dynasty was made possible by the 60 years of untiring efforts for government on the part of Emperor Kangxi. There are still not a few other relevant examples.

The people's appraisals are usually fair, as they have called these virtuous rulers Taizong [Founding Father] (the posthumous title of Emperor Wen of the Han Dynasty was also Taizong) and honored those valiant rulers who failed to inspire continuity merely as Taizu [Founder] or Gaozu [Early Founder]. Thus, just as one usually divides into two, they have not been denied their merits in founding their dynasties.

There have also been no small number of negative proofs. When the Second Sovereign turned out to be muddleheaded, the Qin Dynasty turned out to be shortlived. Civil government and military achievements under Emperor Wu of the Wei Dynasty outshone those of his predecessors. His successor, Cao Pei, however, knew only how to compose poems and appraise essays, and not how to recognize talented persons and use them, so he was ultimately undermined by the Sima family. If we examine generally why the five dynasties also turned out to be shortlived, the reason is nearly always that they did not have a good second generation of rulers. Such historical examples can be clearly enumerated.

Today's powerholding group in Beijing ought to be called the second generation of the proletarian dictatorship in our country, perhaps. As they have inherited the leftist style that lasted 20 years and another 10-year disaster, it is really not a very light and easy job to figure out how to fold up this messy stall--that is, politically how to return to order from disorder, give scope to a forthright style, practise democracy, and honor the legal system, and economically how to readjust and improve and make strides in respect to the four modernizations and gradually to ameriiorate the livelihood of the people. However, "when a person is hungry, he is easily satisfied with food": when the people see that the authorities really intend to "start anew," when the situation has become relatively relaxed, when the economy has become more flexible, and when life seems to experience some improvement, they immediately start to have confidence in the future, hoping that those running the government have really become the second generation of leaders intent on laying the foundation for long-range rule and stability. Even though they still see deficiencies in their everyday life, some things are not entirely satisfactory, privileged persons especially hold sway, ordinary cadres often drag their feet, efficiency is very low at work, the remnant poison of the gang of four is still not completely eliminated, and even the so-called united front falls victim to formalism and followers therefore have not deviated from the traditional style of accomplices and cronies, yet the people at home and abroad are still full of enthusiasm and entrust to the [leaders] their earnest hopes, give them time, and remain willing to wait. This kind of opportunity and this kind of popular attitude ought to be regarded as extremely precious.

Honestly speaking, since the resurgence of "His Excellency Deng" in the political arena to handle matters of high policy, the steps taken cannot be said to be slow; at the Third, Fourth, and Fifth Plenums of the 11th Chinese Communist Party Central Committee, a great step forward was taken each time. Taking "practice as the only criterion for testing truth," challenging modern superstition, smashing the whateverism of the "new gang of four," rectifying unjust, false, and erroneous cases of litigation, and restoring the reputation of Liu Shaoqi, plus all sorts of reforms symbolized by these measures, ought to be regarded as quite daring in general. It should be recognized that, without the courage and fortitude of a statesman, no one can make up his mind or be able to manage to thrust forth "broad strokes" of this variety.

The session of the National People's Congress that has just been concluded should, in terms of atmosphere, be regarded as representing another delightful stride forward. The fact that delegates dared to question, dared to impeach the derelict, and dared to destroy those two deceptive "red banners," and that several bills passed, all seem "fairly satisfactory." The fact that the leading group has been further renovated and the "pragmatic faction" has advanced a step forward to wield real power especially meets with popular expectations. But we would rather not say what others are saying, and we dare not yet advance any premature substantive appraisal about this development, because, concerning certain matters, we would still like to wait and see. For example, as a united front organization, the role of the Chinese People's Political Consultative Conference is said to be to give full scope to consultation in state affairs. Furthermore, all democratic parties and groups must be independent and self-reliant, and they must exercise long-range mutual supervision with respect to the Chinese Communist Party. All this is undoubtedly fine and constitutes a great momentum giving scope to democracy. But insofar as various levels of leadership of these democratic parties and groups is concerned, all who are in control of such "leadership authority" are "straddling" members of the Chinese Communist Party, whereas ordinary chairmen, directors, committee members, etc., are turned into decorative personalties and praise-singers who must raise their hands, hail, and applaud. In view of such an inveterate situation, is change intended? If this old condition is allowed to persist, then will this so-called independence, self-reliance, giving scope to democracy, and so forth not still remain empty talk?

What are the problems we are preparing to wait and see from now on? To borrow the mode of expression of the "Great Leader" in 1956, in his "On the Ten Major Relationships," we may say as follows:

1. [Are the Chinese leaders] really thinking of working on the four modernizations, or just pretending, or thinking neither in a profound nor in a practical manner?

If they really are thinking of working on the "four modernizations," then they should likewise seriously carry out the fifth "modernization"--democratization of politics. From a theoretical point of view, we entirely recognize that socialist democracy is far more democratic than the Western type of democracy, and that it is genuine democracy. But the common people today are somewhat "realistic" and "rather plain, with no preoccupation with high-sounding theories whatsoever." They merely wish to have a few examples of basic democracy put into practice, real freedom of expression--expression of opinions without fear, the practice of real elections, with organs of public opinion at various levels really able to exercise the right of discussion, passage, veto, and recall, which they ought to have.

Only after these few points of elementary democracy are put into practice can the machinery of "democracy" be really activated, its screws be tightened, and its lubrication be regularly maintained; only thus can talented persons really be selected and trained; only thus can the importation of foreign technology and capital give full play to their role. Otherwise, everything will become empty talk, a dream. In a pool of dead water, it is impossible to raise big fish.

2. [Are they] really thinking of "opening up," and not just pretending to think of "opening up," or [are they] making a half-genuine and half-feigning gesture to "open up?" In the last years of the Northern Song Dynasty, there was a folk ballad which suggested that "when the city gates are closed, the avenues of expression are open"; "when the city gates are open, the avenues of expression are closed." This meant that when the soldiers of Jin laid siege to Kaifeng, Li Gang [2621 4854] was appointed to office and he allowed scholars of the Imperial College to express themselves freely, but when the siege was lifted by the Jin soldiers, no one was allowed to speak any more. Today, the external enemy, "whose intention to destroy us will never die," is in a position to threaten our existence in the long run. In one sense, our concentrated efforts to work on the four modernizations and exert ourselves to the utmost in order to make the fastest headway are designed precisely to race for time and speed in relation to it. The instance between us is too close to allow even one iota of relaxation, and therefore it is necessary for all 1 billion of our people to unite and push forward with one mind and one heart. Under such circumstances, only an "opening up," only a broadening of the avenues of expression on a wide and long-term basis can mobilize all forces to join the formidable enterprises of construction. In order to broaden the avenues of expression, it is necessary first of all to break down the old framework of "public opinion consistency," to listen to (or at least tolerate) some "unplesant words" from abroad, and to open

up some popularly managed newspapers, or newspapers really managed by various parties and groups domestically, so as to give regular opportunities of expression to the demands, opinions, and appeals of the vast ranks of the people. This is really an important indication of "opening up."

3. [Are they] really going to "rectify," or [will they] just pretend to "rectify?"

The Chinese Communist Party, which has trained and produced hundreds and thousands of dedicated and selfless men, is still trusted by the vast ranks of the people today, even though for 30 stormy years they have been subjected to rough going under the party. But it should be acknowledged that a considerable (or not an insignificant) segment of party members have exhibited a change in character: those who enjoy power seek privileges and resort to evil doings, afraid that their power would "become useless once outdated," whereas those do not enjoy any special power simply lead a muddleheaded life, sparing their efforts and wasting their time at work. They suppress criticism and shirk responsibility. All kinds of bureaucratic germs have deeply penetrated the blood of no small number of party members and even medium and high-ranking cadres, so that policies and measures emanating from above become things of a different nature at each level below until they are completely out of shape. The authorities, seeming to have already sensed this "crisis in trust," have called for rectification and accordingly want to "strengthen leadership" and "improve leadership." We must soul-searchingly acknowledge that after 20 years of extrememe leftism and a 10-year period of disaster, the organic structure of the party has been subject to serious erosion, and a situation like that of the last days of Guomindang rule seems to have reemerged! This might sound like overstating a case of danger in order to arouse attention, but it is hoped that the authorities will in fact listen to such "overstatements" and thereby make up their minds to really bring about a state of vigorous exertion by way of "rectification" and really lead the people forward.

People are always good at citing the expression "A journey of 10,000 miles begins with the first step" to explain how one's responsibilities are heavy and how his road is long. I think this constitutes an "excessive embellishment of words." How difficult would it be if one really were to walk the distance of 10,000 miles one step at a time? Nor is it appropraite as an analogy today. A more elementary and approximate analogy would be to compare the cause of the "four modernizations" to a seven-level pagoda which people must climb step by step and reach the top within 20 years in order to "complete the cultivation" [like Buddhists]. This is a responsibility conferred upon the present generation of Chinese by history. The second generation of leaders as a group should today establish this determination to lead the vast ranks of the people to earnestly finish climbing these steps and thus create a sovereign fortune of peace and happiness for all posterity--one that is not going to be threatened.

This session of the National People's Congress may be said to represent another step upward, but it is still only a single step. Whether or not efforts will continue to be made to climb the rest of the steps in an orderly way is something that we have to wait and see from the foregoing three aspects!

PROBE WAYS TO MAKE IDEOLOGICAL, POLITICAL WORK SCIENTIFIC

Beijing GUANGMING RIBAO in Chinese 24 Aug 80 p 2

[Article by Tan Tao [6223 3324]: "A Probe That Is Worth Paying Attention To"]

[Text] The forum on ideological and political work jointly convened by the First Ministry of Machine Building and the National Machine Building Trade Union opened up a new vista, broadened the people's purview, and caused people to think. This forum discussed a question with which people are generally concerned today: how to do our ideological and political work well, do it in a deepening way, and do it in a refined way. They fearlessly put forward the question of how to probe ways to make our ideological and political work scientific and to create a new subject of socialist ideological and political work.

I.

Our party has paid great attention to ideological and political work ever since it began to lead the Chinese revolution. As early as 50 years ago, "On Correcting Mistaken Ideas in the Party," written by Comrade Mao Zedong, already suggested that ideological and political work within the party must overcome subjectivism and make party members' thinking and party life "scientific." The theory concerning ideological and political work and the scientific methods to propagandize and organize the masses, created by our party on the basis of summing up practical experience, have all played a great role in the years of revolution and wars and in the years of socialist construction. But in the most recent years, why have the people not paid attention to ideological and political work, and why has each work not been welcomed by the masses? The fundamental cause is that, for a long time, and especially during the 10-year disaster, the correct theory, guiding principles, and effective scientific methods concerning ideological and political work formulated in the past were sabotaged.

The correct ideological line, political line, and organizational line are the premise for doing our ideological and political work well; thoroughly carrying out the party's correct lines, in turn, is the main task of our ideological and political work. But during the 10-year disaster, all this was sabotaged ideologically, politically, and organizationally by the extreme-left line. For example: the scientific theories of Marxism, such as marking clear boundaries between the enemies and ourselves and correctly handling contradictions among the people, were somehow replaced by a slogan of "taking class struggle as the key link" irrespective of parties, time, location, or conditions involved. Dealing with facts, speaking truth, and stressing reason are fine traditions of our party in ideological and political work, but somehow they were replaced by the crude methods of fabrication, framing up, implicating the innocent, and exaggerating minor mistakes and shortcomings to the level of principle. When our party proceeds with ideological and political work among the masses of the people, a basic point of departure is to care about, sympathize with, and look after every comrade. But when Lin Biao and the "gang of four" held sway, they flung "total dictatorship" everywhere and not only destroyed the intimate relationship between comrades but even treated human beings not as human beings, abused and persecuted people at random, debased their personality, and treated human life like so much grass. When undertaking ideological and political work under such circumstances, how could people help walking into a dead alley? And how could the people welcome such work? If we do not gravely sum up such lessons of failure in our ideological and political work over the years, it will be impossible for us to restore our fine traditions, find outlets for improving our ideological and political work, and find a way to make our ideological and political work scientific.

II.

There is one view which suggests that, since we are mainly concerned with economic construction right now, we need only to employ economic means. This is a misunderstanding.

Economic means are very important: without them, it would be very difficult for us to assure compliance with objective economic laws in our operations and very difficult for us to correctly treat the interrelationship between the economic interests of the state, the collective, and the individual. In reality, if we wish to make our ideological and political work scientific, an important content is to have people perceive and follow objective economic laws in their operations. But in mobilizing the socialist enthusiasm of the vast ranks of the masses, economic means are not omnipotent. Because, apart from material relations and needs, man also wishes to find spiritual satisfaction; this is also objective existence. Comrade Mao Zedong said: "Man must have spirit; the revolutionary spirit of the proletariat comes from there." If man had only a material life and knew only how to eat and drink, how could there have been a history of civilization of several thousand years? In our own country, if people showed no concern about the future of the state and society, no enthusiasm toward collective enterprises, if they did not have ideals, morality, or a spirit of dedication, and if there were no heroes of their respective times, what kind of country would this have become? Then, we would not have had the earth-shaking "5 April" movement, we would not have had in our war of defensive counterattack against Vietnam such numerous heroic fighters and fine commanding officers as Liang Yingrui [2733 5391 3843], Yang Jianzhang [2799 1696 4545], Shan Da [1472 6671], Hu Xuqing [5170 4872 3237], and Li Peijiang [2621 1014 3068], and we would not have been able to insist on the socialist path, let alone to realize communism.

The reason we agree with making our ideological and political work scientific is first of all because: to elevate man's ideological consciousness through study and education is feasible; there are laws to follow in man's thinking and activity. In reality, in our long periods of practice in the past, we have already accumulated a large amount of experience in mastering such laws and thus have laid a solid foundation for making our ideological and political work scientific.

III.

Some comrades say: In pursuing ideological and political work, what we have is plenty of long experience; we can simply restore our old traditions. Such an understanding simplifies things too much.

Documents provided by our party and Comrade Mao Zedong to guide our ideological and political work, such as the well-known resolutions passed by the Gutian conference, "On Practice," "On Contradictions," "On the Self-Cultivation of Communists," the rectification documents, "On the Correct Handling of Contradictions Among the People," etc., are our precious spiritual wealth. Our party has good experience and fine traditions in carrying out ideological and political work, such as unity of theory and practice, exemplification, close links with the masses, proceeding from reality in every case, patiently and carefully developing criticism and self-criticism in the manner of "a gentle breeze and a mild rain": each of these serves really as a specific key to a specific lock which sends warmth into everybody's heart. We must not abandon these fine traditions.

But we must look forward, because many, many new situations and new problems which never appeared before are now with us and require us to study and to solve them. Citying the "three old articles" would not be enough to make our ideological and political work scientific. Past experience always carried with it the characteristics of the period, i.e., mainly applied to the solution of political problems in people's thinking relative to revolution, war, class struggle, and change of the private ownership system. Today, we must continue to eliminate the remnant poison of feudalism and criticize bourgeois ideology, but our main task is to solve ideological and political problems relating to economic construction and realization of modernization. Some of the experience in this regard most certainly cannot be transferred or copied intact: for instance, during the years of war, of democratic reforms and of the remolding of the bourgeoisie, the bitter recollection of and settling accounts with exploitation by landlords and capitalists raised the class consciousness of hundreds and thousands of exploited and oppressed toiling masses and stimulated their strong revolutionary enthusiasm. Some fighters among the reactionary troops were immediately able to turn their guns around and fire at the Kuomintang after their liberation and after the education they gained through airing their grievances. It has also been necessary for the generation born after the birth of new China to undergo such education. But to try to arouse their enthusiasm toward the building of socialism in this way would be impractical. Also, for example, struggling hard is a fine tradition, and it is still necessary to carry on such education. However, it would be quite improbable to think that once the masses of the people recall the difficulties and hardships under which the Red Army underwent in climbing the snowy mountains and passing through the grasslands, they would be indifferent to the difficulties that still actually exist in respect to their clothing, food, housing, and communications.

There was an important matter to be taken up and the First Ministry of Machine Building and the National Machine Building Trade Union jointly convened this forum, and that was to penetratingly discuss the new content and new characteristics of ideological and political work in the enterprises of the new era which are different from the past, and, in response to such new characteristics, to propose a new series of problems that require study and solution today. Their generalizations represent merely a new effort and have not by any means exhausted the efforts of study in this respect, although they have really made a good beginning. In order to do a good job in our ideological and political work, we must do things flexibly according to the time, place, and persons involved. With respect to the infinitely diverse conditions of the people's ideological state, the greatest taboo in trying to make ideological and political work scientific is to "treat everything the same way" with no variation. We must seek truth from facts and shoot our arrows at specific targets: this is the core of both inheriting our fine traditions and making our ideological and political work scientific.

IV.

In order to create a subject in science, we must have our own scientific theory and scientific method. Marxism, as the purest crystallization of the social sciences, is a powerful ideological weapon for perceiving society and changing society. From the beginning, Marxism has always been doing ideological and political work on man's behalf and, in the first place, doing ideological and political work on behalf of the proletariat itself. It clearly ceclares: "Philosophy takes the proletariat as its own material weapon and, similarly, the proletariat takes philosophy as its own spiritual weapon." Marxism arms the proletariat with the scientific, theoretical knowledge of dialectical materialism and historical materialism, political economy, and scientific socialism. It scientifically explains that man is not only a natural being but also a social being; his social existence determines his social consciousness, and consciousness is but a function of his brain and a reflection of objective existence. This serves to open wide the door through which we can master the laws of our ideological activity and make our ideological and political work scientific. Apart from Marxism-Leninism and Mao Zedong Thought, no new subject of socialist ideological and political work can appear in our country.

But Marx, Engels, Lenin, Stalin and Mao Zedong have not studied all problems of society, nor is Marxism the only subject which studies social problems.

For example, sociology is a subject that studies social life and social problems, such as the relationship between family, relatives, friends and neighbors; problems about population, labor, morality, customs, nationality, women, youth, children, and old age; professional teamwork; the influence of the city, housing, the environment and communications facilities upon man; and also culture, recreation, love, marriage, etc. Whether or not these various problems are treated relevantly does affect, directly or indirectly, man's emotions, enthusiasm, happiness, anger, grievances, and pleasure. All of these belong to the realm of sociological study. If we intend to make our ideological and political work scientific, then why can't we also use the scientific principles in sociology as our weapon for probing the laws of man's ideological activity?

For example, psychology is a subject in science. Man's psychology is but a function of his brain and a reflection of the outside world. Lenin said: "Psychological things, the senses, etc., are the highest products of matter (namely, physical things), the functions of an especially complicated piece of matter called the human brain." In doing our ideological and political work, we must always study people's emotions, interests, qualities, and character; we must study people's psychological state. Therefore, it is also very necessary to absorb the results of study in psychology, master the laws of movement of the special characteristics of mass psychology through deepening investigation and study, and thereby make our ideological and political work scientific.

The bourgeoisie has run into many snags since it started to manage society, and it has also continued to sum up the experiences and lessons of its successes and failures. This is precisely how the behavioral sciences have come about. They study the mutual relationship between man's behavior, motives, and needs, how to mobilize man's enthusiasm, the internal relations of the "working collective," the absorption of staff and workers into management work, the behavior of leaders and the modes of leadership, etc. If we intend to make our ideological and political work scientific, why can't we borrow certain beneficial elements from this kind of study? The Western bourgeoisie has the ambition to create a scientific subject out of its management experience, so why can't the Eastern proletariat create a scientific subject out of its own management experience and out of its socialist ideological and political work?

In fact, there has already been a history of several thousand years in which the Chinese have been studying man's behavior. If we flip through the classic works, we can see evidence of this everywhere. Comrade Mao Zedong is one who paid attention to absorbing the thinking and the language of the ancients in this regard. When, in his "On Contradictions" he talked about the need to look at problems from an overall viewpoint, he quoted Master Sun's discourse on military affairs to say: "Know the enemy and know yourself, and you can fight a hundred battles without danger of defeat." He also quoted the words of Wei Zheng of the Tang Dynasty: "Listen to both sides and you will be enlightened; heed only one side and you will be benighted." When he talked about treating contradictions within the party and among the people, he several times quoted the expression "Learn from past mistakes to avoid future ones; cure the sickness to save the patient." Liu Shaoqi also used quotations in his well-known work "On the Self-Cultivation of Communists." He wrote: "In China's ancient past, Master Zeng said: 'I examine myself three times each day.'" This is a discussion of the question of self-reflection. In the "Book of Odes," there are these famous stanzas: "As you cut, then file; as you carve, then polish." This means that between friends there must be mutual assistance and mutual criticism." As the ancients studied the norms of behavior, some reduced their understanding to mottoes and educated the people from their childhood onward; some incorporated their results in discourses on history, such as Sima Guang's "The Mirror of General History To Benefit Current Rule." This may be said to be a work that studied the behaviro of social managers such as emperors, kings, generals, and prime ministers. Of course, different classes all have their own respective norms of morality and behavior. But from the results of study of the ancients, it is still feasible for us to discard their dross and absorb their quintessence. Even the experience and lessons summed up by the ruling class on how to serve as officials and how to treat the subjects are worthy of our borrowing and reference.

The task of science is to reveal the objective laws of the development of things, to probe objective truths, and turn them into a guide for changing the world. Man, as a social being, has both his individuality and his commonality shared by all men. Man's psychological state, ideological state, and behavioral characteristics in various classes and strata all have their commonality; they all have certain laws that we can follow. Otherwise, how could we have achieved those great results in our ideological and political work in the 10-odd years before the "Cultural Revolution?" This explains that the practice of our ideological and political work at that time was basically scientific and followed objective laws in its operation. The only thing is that we have not yet studied it as a subject in science, so as to create a system of knowledge concerning scientific theory and scientific methods. Ideological and political work needs to be made scientific. This is a demand made on us by our realistic needs and a task conferred upon us by the socialist new era. Those comrades who wish to devote themselves to this cause, please exert yourselves so that you can bring new light to the socialist theoretical system.

PARTY MEMBERS, CADRES ENCOURAGED TO LINK STUDY, PRACTICE

Haikou HAINAN RIBAO in Chinese 16 Aug 80 p 2

[Article by Huang Xunli [7806 1789 0448] and Wang Shiyun [3769 1709 7189]: "Teach Party Members and Cadres to Take the Lead in Starting From Themselves"]

[Text] The second brigade of the Nanlu state farm has been appraised as an advanced farm unit for eight consecutive years. In the movement to study the "Guiding principles," this brigade's party branch demands that all of the party members must integrate practice with action and take the lead in starting with themselves.

In organizing party members in the movement to study the "Guiding principles," leading group members of this brigade's party branch first took the lead in study, took the lead in action and further implemented the system of the division of labor with individual responsibility under collective leadership. Since last winter, the party members and cadres of this brigade have all persisted in participating in labor with the group, fulfilled the same quotas as the workers and staff members and participated in checking and accepting and comparing and assessing. All that the party members and masses were asked to do, the party members and cadres had to do first. This year, in fighting drought they field planted rubber tree seedlings and it was originally determined that each worker plant 12 trees. The production brigade heads, Wang Haiming [3769 3189 2494] and Ma Dangxian [7456 3981 0431], of the party branch committee, planted 35 rubber tree seedlings in one day. When the party members and cadres working with the group took the lead, staff and worker enthusiasm increased and everyone happily agreed to raise the quota to 30 trees. As a result, the entire brigade finished the planting of 2,400 trees three days ahead of time. After planting, the party members and cadres again took the lead in carrying water to fight the drought and strengthening management thus causing the survival rate of the seedlings to reach 98 percent.

Each time they organized a production battle or voluntary labor in the brigade, or met with natural calmity, the party branch always educated the party members to use the spirit of the "Guiding principles" to make strict demands on themselves and when faced with difficult tasks to consciously bring into play the exemplary vanguard role of the communist party members. At the beginning of this year, rubber got a severe powdery mildew and it was necessary to organize manpower to take turns during the night to spray a chemical to prevent and cure it. The party branch then educated the party members to integrate the practice with study of the "Guiding principles," to take the lead in bearing hardships and to spur everyone on to continually spray the chemical for seven nights so that they controlled and wiped out the powdery mildew in good time and guaranteed the scheduled tapping. For a high and stable yield, the party members of the entire brigade again took the lead in using after work time to collect and spread manure. With the hard work of all the members of the brigade, this year more than 300 kilograms of manure was collected and spread before the rubber tapping. To improve the backward forest section, the female communist party member Yang Fengmei [2799 7364 2734] gave her work in the nursery to someone else and of her own accord asked to go to handle the overgrown weeds, the abundance of rocks and the many dead seedlings in three forest sections. Each day, she worked from dawn to dusk, cutting sprouts and digging couch grass and filling the gaps with seedlings and green manuring. After half a year of hard work, these three forest sections became one forest section.

In their study of the "Guiding principles," the second brigade party branch educated the party members to arm their minds with the spirit of the "Guiding principles," to dare to grasp and handle various unhealthy trends and evil practices and to be adept in doing well people's ideological work. At the beginning of this year, some workers and staff members wilfully let some ducks go into the fields and they trampled the crops. When deputy brigade leader and communist party member Fu Wengiang [4569 2429 1730] discovered this, he immediately criticized the workers and staff members concerned and reinstated penalty rules. After this affair, his house was stoned by people and the vegetables in his private plot were also destroyed. In the face of this type of threat, some people urged him not to ask for trouble. He said: "When my house is damaged I can fix it and when the melons and vegetables are dead I can plant again. Communist party members must certainly uphold the interests of the nation." With the support of the party branch and the vast numbers of workers and staff members, he, together with other cadres, boldly upheld grasping discipline and grasping ideological work thus causing the workers of the whole brigade to go into action, to adopt measures, handle livestock well and protect the crops. For all those who have made mistakes and been punished, the party branch will also promptly do ideological work well. After two young workers were punished for stealing public chemical fertilizer, the leading members of the party branch promptly sought to talk with them to educate them to ideologically recognize their mistakes and to also point the way forward. This dispelled the misgivings of the two young workers and braced them to advance. Ordinarily, the party branch also fixes a time to hold a party member activities meeting to examine the ideology and expressions of the party members, to analyze the ideological developments of workers and staff members and divide the work to do well the ideological work of workers and staff members. For those workers who are sick and cannot go to work or have household financial difficulties, the party branch also sends out people to drop in to have heart to heart talks with them and express sympathy and solicitude, promptly gives financial assistance to those who deserve it, works to improve relations between the party and masses and between cadres and the masses, and unites them as one to complete each task.

EDUCATION OF RURAL PARTY MEMBERS IN PROPAGANDA WORK URGED

Guiyang GUIZHOU RIBAO in Chinese 9 Sep 80 p 1

[Article by Yang Linxun [2799 2651 8113]: "Do a Good Job of Educating Rural Party Members, Strengthen Grass-roots Level Propaganda Work"]

[Text] A provincial propaganda work conference was held in Guiyang from 8 August to 4 September. Leading cadres from the party committees on propaganda of each locality, prefecture and city, comrades responsible for propaganda work in each county, district and commune, and comrades responsible for propaganda work in each organization of the province participated in the conference.

During this conference, they summarized and exchanged situations and experiences on previous training in rotation of rural party members, drew up plans for present and future work and discussed the problem of further strengthening grass-roots level propaganda work. The conference considered that from the point of view of the whole province the situation of training in rotation of rural party members was good. The paying of closer attention to counties was already fully under way during the last week in July. At present, the training in rotation work of rural party members in nine counties including Xishui is already basically finished. Training can be completed for 47 counties before the three autumn jobs. Party member training in directly related local and county organizations and institutions has already begun in Tong Ren Prefecture the directly subordinate organizations of the southeast prefectures of Guizhou and in the directly subordinate organizations and institutions of Guiyang. To do well the work of training party members, each locality, based on their own circumstances, continued to stress the following points. Firstly, they made the best use of time. All units that carry out and plan to finish training before the three autumn jobs must make the best use of September and strive to basically finish training before the busy period of the three autumn jobs. The rural areas of the entire province must work hard to basically finish before the end of November and in a minority of difficult areas they must finish training by the end of December. Secondly, they must pay attention to quality. A commune which has already finished training in rotation must also carry out an inspection. Communes where quality of training in rotation is not high, and which merely went through the motions must undertake retraining. Thirdly, they must do well summing up checking and acceptance. It is necessary to develop and choose advanced branches and the activities of good party members on the basis of summing up. Fourthly, they must concentrate their energies to grasping the training in rotation of organization party members. Leading cadres must participate in study as ordinary party members and they must guarantee universal training before the Twelfth Party Central Committee convenes.

The conference conscientiously studied grass-roots propaganda work especially the problem of rural propaganda work. Everyone realized in practice that ideological and political work are always the center of party propaganda work. After the focal point of party work is shifted to economic construction, the ideological and political work of economic construction is the central task of propaganda work.

The conference pointed out that from now until before the Spring Festival, we must stress the following two aspects of propaganda. Firstly, to continue to stress propagation of the party's agricultural policy. They must carry out propaganda education to counter the present fear by rural cadres and commune members of policy changes, to counter the situation of thinking of prosperity but not daring to be prosperous or thinking of prosperity but not being able to be prosperous and to counter the type of thought that considers the relaxation of policies as not speaking about policies. Secondly, it is necessary to imbue the rural cadres and masses with socialist ideas and guide them to correctly handle the three relationships of the state, collective and individual. It is also necessary to make great efforts to commend advanced models which were done well in this area and the new habit of cultivating love of the nation and love of the collective and uniting to help each other.

The conference stressed that to accomplish the above mentioned propaganda tasks, we must emphasize the following tasks. The first is to strengthen investigation and study. The second is to grasp well of the disposition of propaganda cadres and to go through propaganda channels to complete the setting up of a propaganda network. It is necessary to establish a grass-roots mass propaganda contingent composed of lecturers, instructors and propagandists. It is necessary to grasp well the propaganda and cultural fronts of peasant night schools, clubs and cultural centers. The third is grasping well the building of cultural centers centered in small cities and towns.

STUDENTS IN UNITED STATES HAVE ROUGH TIME; EXTOL SOCIALISM

Shanghai WEN HUI BAO in Chinese 31 Aug 80 p 4

[Article by Bai Hui [4101 1979]: "Some Thoughts Arising From a Friend's Letter Abroad"]

[Text] Recently I received a letter from a friend telling of the situation of several persons who had gone to the United States to study at their own expense. These people, upon arrival at the United States, had to struggle every day just to make their living. Even when friends and relatives sent a little money to help out it was not enough to keep body and soul together, and they really had rough times. They studied at the university during the day and at night washed dishes or waited on tables at restaurants. The health of many of them had begun to suffer. Of course they had no choice as to what kind of work they did. If they could find a job, they considered themselves fortunate, because sometimes it was even impossible to find work washing dishes or waiting on tables. With no jobs they had no choice but to sing in the streets trying to get enough money to buy something to eat.

No one had given these students any political instruction. They reached the conclusion from their own experience that: "although we haven't been in the United States very long, we have met a lot of people and had a lot of experiences, and gained a great education, at least as to what capitalism is. When we remember what it was like back in China, and compare it to what it is like here (in the United States), we feel that it is incomparably better in China."

This really goes to prove that although the capitalist society may be more developed materially, spiritually it is a wasteland. This is primarily manifested in personal relationships. All conversations are concerned with cold, naked cash. There has never been any doubt as to the superiority of the socialist system over the capitalist system. Why do some people have doubts? It all goes back to a single sentence. Although socialism is better, we haven't done a good job with it. Of course this is because of the sabotage by adventurers and schemers like Lin Biao, Jiang Qing, and Kang Sheng. But it is also because of omissions in our work. We have put a stop to the counterrevolutionary sabotage, the extreme leftist line has been corrected, and I believe that with the proper education the doubts of many people will be eliminated. The problem is that there are still some people, and not just young people, who are infatuated with things foreign. We should have faith in good things foreign. But we should not be infatuated with them. Infatuation is a blind action. For example, different products may be of the exact same quality, but if one has a foreign label stuck on it, it seems to be worth a hundred times more. Given two technicians with the same level of skill, if one has come from overseas, it seems that he has much better abilities. Isn't this laughable superstition? There is one other thing that really makes people angry. It seems that everywhere foreigners go is like a restricted area, and Chinese may not enter. If one carelessly enters there, he will be scolded and chased out by his compatriots. This is not laughable, but is a shameful, slavish action. Naturally we must be courteous in our dealings with foreigners, and we must not discriminate against them. Discrimination is uncivilized behaviour. What is the correct attitude? It is what Comrade Chou Enlai repeatedly pointed out: Be neither haughty nor humble.

QUESTION OF PROMOTING PERSONNEL TRANSFERS ADDRESSED

Shanghai WEN HUI BAO in Chinese 31 Aug 80 p 1

[News report by reporter Xin Guangqi [6850 0342 3825]: "Personnel Transfers Deserve Support From the Whole Society"]

[Text] On 25 August the head of the Shanghai Scientific and Technical Cadre Office spoke to reporters on the question of promoting personnel transfers. He said the personnel transfer methods of the Shanghai Lazer Technical Research Institute and the Shanghai Communications University are worth being promoted. Concerned departments are considering using transfers, double duties, and recruitment to remedy the stagnant situation in management of technical cadre. Shanghai has 200,000 science, engineering, agricultural and medical technical cadres. Because of a number of defects in the cadre system, the potential of this force has not been completely tapped. This is a great waste. The promoting of personnel transfers is an attempt to solve this problem. The head of the Technical Cadre Office feels that the promoting of transfers has the following good points: 1, is to change the unreasonable organization of Shanghai's Technical Corps. Based on the laws of scientific development there must be a definite ratio of high, middle, and primary level technical cadre at research institutes and schools of higher learning. This ratio should be triangular in shape. Only in this way can there be mutual coordination and better effectiveness. However, at present, research institutes of the Academy of Sciences and schools of higher learning have an overabundance of middle level technical cadre, such as research assistants and lecturers. For example, there are more than 1,000 lecturers at Tongji University, but only 400 or so assistant lecturers. Most middle level technical cadre are capable of independent work, but because they are concentrated in one place, one topic that could be completed by one or two persons is often worked on by six or seven people, at a considerable waste of talent, and at the expense of work efficiency. At the same time there is a shortage of backbone teaching cadre at local research institutes, university branch schools and institutes in the Shanghai area, which needs to be corrected. Units with a surplus of personnel should follow the example of the Shanghai Lazer Technical Research Institute and the Shanghai Communications University in sending batches of personnel to local research institutes and branch schools on a rotating basis. 2, make the most use of each person's special talents, so each can make his best possible contribution. Some people have certain special talents, but cannot utilize this talent in the present job. If they were assigned to a different unit, they could do as much as they were able to. 3, it stimulates intellectual thought and helps develop all the different fields of study.

The head of the Technical Cadre Office told reporters that the expansion of this work requires the support of the entire society, especially the cadre of the various units as well as their personnel departments. Some cadre see talented persons as a "possession of the unit" and not as "belonging to the nation." Some technical cadre are unable to use their talents at their own units, but if some other unit wants to borrow them or if transfer orders come from higher authorities, they find all sorts of excuses not to leave. Cadre at educational organizations and personnel departments must learn a little science, a little personnel management to understand that the transfer of personnel is necessary for the development of science. At the same time they must increase the ratio of technical cadre in these departments to help develop the work of personnel transfers. The development of talent exchanges can take many forms. It may be double duties, teaching more than one discipline, such as backbone technical cadre of research institutes of the Academy of Sciences doubling as assistant heads of local research institutes or laboratory chiefs, university professors also having research duties, research personnel teaching specialty courses in universities, the borrowing or transfer of research personnel or teachers to go to units which lack personnel to work for 6 months or a year, will help those units in their work and will permit mutual observation and understanding. If suitable, a permanent transfer can be made. Recruiting: after announcements have been posted and research personnel have applied for the jobs, if those personnel applying are able to complete the set goal on time, there should be a bonus. Contracts: contract methods may be used between units, joint research or contracted missions to complete certain problems or specialty course instruction tasks.

INCIDENT IN SHANDONG SHOWS VALUE OF SPECIALIZED SKILLS

Jinan DAZHONG RIBAO in Chinese 25 Aug 80 p 3

[Article: "In Order To Carry Out the Four Modernizations, We Must Place Specialized Cadres in Important Positions"]

[Text] In a meeting of party secretaries held recently by the Dezhou Prefecture CCP Committee, the deputy secretary of the Qingyun County CCP Committee, Gao Shusong [7559 2885 2646], examined the current situation, related his experience and the understanding which he deeply felt, and argued that in order to carry out the four modernizations, we must promote and place specialized cadres in important positions.

The course of development is as follows. In order to enlarge the irrigation area of Sichu commune, in the eastern section of Qingyun County, the Qingyun County CCP Committee decided last fall to rebuild and enlarge a dam on the Majiahe. Comrade Gao Shusong was in charge of the project and the actual engineering work. After the mechanical engineering work was completed, a serious problem arose in the installation of electricity. The extension wires were made of aluminum, but the outlet in the electric engine was made of copper, and it was difficult to put the two elements together. Therefore, a welder was summoned from the county's agricultural machinery repair workshop. When he saw the problem, he said: "I have done work in aluminum welding, but not with aluminum and copper. Since the leadership wants me to do the work, I will give it a try, but I must have aluminum powder for the purpose."

When the aluminum powder was delivered, he welded the elements. However, when the switch was turned on, the welded elements started burning and smoldering, and there was a danger that the whole engine would burn up.

Comrade Gao and the head of the electricity bureau were nervous. They immediately sent people to get copper wiring. But they feared that they could not get the material or they might not have enough time, because the water was urgently needed to combat drought and for plant protection. How could they resolve the imminent problem? Then someone recommended a worker at the county's agricultural machinery factory who had graduated in the 1960's from Shandong Engineering College and whose specialty was electrical engineering. His name is Ji Hongliang [4764 3136 0081], a technician at the factory. Comrade Gao was happy at the news and immediately invited Ji Hongliang over on the phone. When Ji saw the problem, he said: "No welding is necessary in this case. We can simply resolve the problem by using aluminum pressure tubes."

Ji Hongliang used his lunch hour to remodel three aluminum tubes, which were then taken by the comrades of the electricity bureau for installation. The first installation worked and so did the second, but the same problem arose at the third stage. The comrades of the electricity bureau came to Comrade Gao and told him that it might be necessary to use copper wiring for the transformer. They borrowed some rather small-sized copper wiring from the county's fertilizer factory and used double wiring for the experiment, but in vain. Comrade Gao was very anxious. He said: "It seems as though we amateurs are unable to find out what the problem is. Let us call Ji Hongliang and seek his opinions." Accordingly, they called upon Ji at home and asked him why the elements could not be connected. Ji said: "It is likely that the frequency automation equipment did not fit the rest of the engine." Comrade Gao led the team of technicians, Ji Hongliang, and the head of the electricity bureau to the work site. Ji examined the problem and discovered that, indeed, the frequency automation apparatus did not fit the rest of the machinery. Going by the required technical specifications, Ji suggested that the reels of the frequency automation engine be reduced from 40 to 20 loops. The result was a success!

In the course of the event, Comrade Gao was inspired and educated. He told himself that in dealing with a relatively small project such as irrigation, they had wasted about half a year and a lot of money because none of the leadership cadres and technicians had the appropriate expertise. In order to accelerate the four modernizations, we must henceforth actively and boldly promote and employ young, energetic, and skilled people like Ji Hongliang.

Comrade Gao commended Ji Hongliang to the County CCP Committee. After investigating, the committee decided to promote Ji to the position of deputy head of the electricity bureau. The decision gained the support of the overwhelming majority of the masses and cadres.

PARTY AND STATE

MANY CADRES STILL USING PUBLIC FUNDS FOR SELF-INDULGENCE

Jinan DAZHONG RIBAO in Chinese 29 Aug 80 p 2

[Article: "It is Forbidden To Change Form and Eat and Drink Heavily"]

[Text] Recently, many letters from readers indicate that even though many cadres have indulged less in "heavy eating and drinking," after the promulgation of the "Guiding Principles for Inner-Party Life," the attitude is still rather rampant. Many instances have shown that many people who use public funds to indulge in heavy eating and drinking have merely changed their form and style and continued their habits, though much pressure has been put on them by the law and from public surveillance.

Reduced payment to escape public notice. Some comrades who were used to heavy eating and drinking are now paying a little. After they have engaged in heavy eating and drinking, some comrades pay a few coins or coupons, or in accordance with stipulated daily allowances. They then proclaim that they have corrected their old habit. Some of them said at the banquet table that they would not pay less next time they came, but they still ate and drank as much as ever. A certain deputy head of an agricultural machinery bureau took along his tractors and drivers to help do farm work in a brigade. They feasted for a few days. People were dispatched to fetch chickens and fish in the village, and everything was in an uproar. The bill recorded by the branch store of the brigade shows that in entertaining this deputy head, they consumed 45 cartons of cigarettes, amounting to 14.84 yuan, and 16 bottles of wine, amounting to 9.94 yuan. When the deputy head returned to his bureau, he only paid 11 yuan.

Bills not written to avoid investigation. Some units make use of various means to create "petty cash" accounts for the purpose of giving banquets and gifts. In managing the export of paulownia trees, the Tancheng County Export Company received more than 1,000 yuan from selling the nuts from the trees. They did not list the income but instead used the fund for themselves and for their eating and drinking. Over the 17 months from March of last year to July of this year, on the pretext of entertaining superiors and public relations personnel and sending off workers assigned to other units, the company held more than 10 banquets, spending a total of 517.49 yuan. The fund came from the maintenance fund for dealing with growths on the bark of commercial trees. In the course of the "three summers" production, a commune in Yanggu County penalized units which fell behind in production and used part of the penalty money to treat the investigation personnel. Other people sold the trees in their units and spent the money thus derived in eating and drinking.

Corrupting others so as to spread responsibility. In the past, only a small group of people indulged in heavy eating and drinking. But now, such groups have been widened to include people who have access to such information. Letters from the masses show that in July of this year, a certain bureau in a certain county gave two banquets on behalf of visiting superiors, at a cost of 200 yuan. One of the two banquets had two tables and costing more than 100 yuan. In addition to superiors, people at the host bureau and those from various companies, factories, and stations also participated, and none of them paid anything. In this way, all parties were involved and people had to protect one another.

Some letters point out that in spite of the various ways by which these cadres have hidden their indulgence in heavy eating and drinking, their habit is still known to the public. The [writers] think that such an attitude can be corrected only if the relevant leadership organizations continue to rely on mass surveillance, seriously penalize the concerned parties on every such occasion that is reported by the masses, remove the financial advantages of cadres, and exert severe economic sanctions on such people.

EDUCATION IN MARXIST ECONOMICS CORRECTS ERRONEOUS VIEWS

Jinan DAZHONG RIBAO in Chinese 28 Aug 80 p 3

[Article by Zhang Jun [1728 6511]: "We Must Pay Attention to the Study of Theory"]

[Text] Some comrades once had different views regarding some current economic policies. They even had doubts about and ill feelings toward policies which they considered incorrect. Recently, these comrades have returned to their units after having been educated for several months in party schools in the theory of socialist economics. They now talk about such matters as "bonuses," "profits," "competition," "market economy," "letting some people get rich," and "increase in enterprise autonomy" as if they were different persons. When asked the reason, one comrade replied with a rather strong conviction: "Marxist economic principles have convinced me of my past stubbornness and cleared the fogginess of my thinking."

We have witnessed the role of theory from these examples. We often do not understand matters which we feel, and only after we understand their nature can we truly feel them. In order to really understand matters, one of the essential ways is to diligently learn theory through practice--especially Marxism-Leninism-Mao Zedong Thought. This is because the latter is the product of the proletarian class and of scientific knowledge gained through long-continued practice by the overwhelming majority of working people. This is the theoretical basis and the weapon with which we can examine, analyze, and handle all questions. Our revolutionary forefathers paid a very high price in the search for truth. Once the truth has been grasped, once Marxism-Leninism has been integrated with the reality of the Chinese revolution, China will change its face, and the force of revolution will be engendered, enlarged, strengthened, and launched on its way toward success.

However, since the 10 years of disaster, many comrades have lost their enthusiasm for learning theory. This is because there is still a lot of misunderstanding. "It is better not to learn than to learn, because we will still make mistakes after we learn, but we can still make revolution even if we do not learn." That is one such example. Admittedly, learning does not guarantee that one will not make mistakes, but if we can learn thoroughly, we can make fewer mistakes. When Lin Biao and the "gang of four" were in control, many comrades were deceived. Is it not true that they either had learned a traumatic lesson or had never correctly grasped Marxism-Leninism-Mao Zedong Thought? Now we must take supplementary lessons in order to turn chaos into order and to right the wrongs of the recent past. We must not clamor in an empty way, as Lin Biao and the "gang of four" did. One of the sinister ways by which Lin Biao, the "gang of four," and Kang Sheng handled theory was to use good theory and change it into rigid dogma, which they then used as a tool to usurp the party and seize power. What they propagandized in terms of "sayings," "warnings," "truth," "mottoes," and "absolute authority," and such related metaphysical and platitudinous measures, were means to destroy theory. This is one of the main reasons that our comrades have lost their enthusiasm for learning theory. Therefore, we must further criticize the leftist, poisonous remnants of Lin Biao, the "gang of four," and Kang Sheng; correct our ways of learning and improve our methods of learning; and make an effort to really seek out the truth and to produce significant results in our work by raising the level of our theoretical understanding.

Some comrades say: "Today we say one thing and tomorrow another; there is no way we can learn!" After the smashing of the "gang of four," and especially after the decision was made during the Third Plenary Session of the 11th Party Central Committee to emphasize the four modernizations, new developments have been arising quickly and new situations and conditions have come about by leaps and bounds. We must continuously conduct research, secure new understanding, and produce new solutions, doing all of this in accordance with the principles of objective observations and education. This is in opposition to the "theory" of Lin Biao and the "gang of four" and their fictitious Marxism-Leninism. We are now correctly using Marxism-Leninism-Mao Zedong Thought. Of course, in this new situation we must adopt a serious and solemn attitude in dealing with major theoretical questions. After serious research and scientific verification in order to further raise the level and enhance the unity of thinking of the people, we must firmly put our policies into operation and avoid subjectivity in choosing our goals and policies. However, we must realize that we cannot resolve all the imminent problems of the four modernizations. Based on the trends of development and the theoretical guidance of Marxism-Leninism, we must probe some of the major problems which have not yet been thoroughly understood and realized. The understanding we get and the conclusions we draw may not be entirely correct, and they may even be wrong. We should allow for such a possibility. This is because our understanding can never be comprehensive and direct. If we do not allow room for possible errors, we are not using the principles of dialectical materialism. Therefore, under different circumstances, discrepancies in our theoretical understanding are indications of our activity and progress toward the correct goal. The dogmatism of the past was nothing but mass suffocation and paralysis of theoretical understanding.

Some comrades think that in the course of the four modernizations and the acquisition of scientific knowledge and technology, it is not necessary to acquire theoretical knowledge. It is certainly right for scientific and technical personnel to devote their energies to acquiring expertise in their respective professions for the sake of economic development. However, all comrades have to learn the basic principles of Marxism-Leninism. This is because, in the course of the four modernizations, not only should all comrades learn Marxist-Lenisist philosophy--dialectical and historical materialism--in order to have correct political thinking and to understand the nature of socialism, of basic contradictions, and 4 prospects, but also they should fully realize the superiority of the socialist system, firmly grasp their convictions, and struggle in support of the system for the rest of their lives. Currently, we must seriously dedicate ourselves to Marxist economic and political principles and understand socialism and its fundamental economic principles. Once we know the basis of economic management, we can continuously resolve the problems which arise from new developments and changing situations, and thus we can apply our principles to objectively handle our socialist construction. The experience and lessons we have learned over the past 30 years have also given us a negative example with regard to the importance of theoretical economic principles in developing a socialist economy. Therefore, this new period necessitates our working to acquire theoretical knowledge. The latter is not only important, but also very urgent.

In conclusion, we are facing a lot of problems, and we must use what we learn from theory to find out the causes of the problems. Evidently, we must humbly seek the truth in Marxism-Leninism-Mao Zedong Thought.

STEPS MUST BE TAKEN TO PREVENT CARELESS WASTE

Beijing RENMIN RIBAO in Chinese 15 Sep 80 p 8

[Article by Chen Fengxiong [7115 1409 7160]: "Waste and Deficit"]

[Text] In RENMIN RIBAO I read about the Beijing and Shanghai delegation to the third Plenary Session of the National People's Congress, in which one delegate after another addressed inquiries to the minister and deputy of the Department of Metallurgy in regard to the Baoshan Steel and Iron Plant capital construction problem, thus making the people very happy. We also noticed that the representatives of the NPC and committee members of the Chinese People's Political Consultative Conference made several criticisms of the phenomenon of waste in capital construction. This is an affair of state with which the people are really concerned. The deficit of 17 billion yuan concerns the life of each one of us; each yuan wasted constitutes a part of the deficit.

Let's look at a few figures: the "Shift the Westward Water Eastward Project" used up over 90 million yuan. The sinking of the "Bohai No 2" sank over 37 million yuan, plus 72 lives which were lost. A piece of land with an ineffective oil pipeline wasted over 400 million yuan. One department spent over 2 billion yuan to import 100 pieces of machinery which had little use for production. As a result, several more million yuan had to be spent on building sheds to store the machinery.

These sums alone are enough to make the people frightened, not to mention the sporadic but fairly widespread throwing away of hundreds upon thousands of yuan. This kind of "competiveness" to waste money can be likened to spending money like it was water; I'm afraid that no wealthy capitalist country would dare to be so "generous."

Those "poor, ordinary" people in our nation know very well that only through thrift and hard work can we build up the country, that to increase income we must decrease expenditures, that the crazy idea that we can throw money away and expect it to return cannot be allowed to exist. Where does this country have a pot of gold? Doesn't the filling of the national treasury depend on the frugality of the people? Those producers of waste who frighten people may still have high-sounding motives, and although they have not taken advantage of the situation to benefit themselves, the results actually make people indignant. Presently, malfeasance is a crime, and some people have already been punished or sentenced to prison. This is good. It can stop those "kind-hearted" spendthrifts from their evil custom of squandering the wealth of the people, and it will give them a chance to clear their heads a bit and say with understanding that "waste is a crime," and to know it's not just empty talk.

Today, industrial and commercial enterprises all over the country are making up deficits and increasing surpluses, doing their best to hand over profits to the government, and making contributions in order to achieve an early realization of the four modernizations. Surpluses of tens of thousands and hundreds of thousands of yuan are great news and raise the people's spirits. However, the people will also discover how much the wasting of just a small amount will gobble up their "spirit."

The idea that waste is just a kind of "tuition" for learning is no longer acceptable, but the fact that wrong orders are being issued by amateurs pretending to be experts cannot be denied. How can those who handle large sums of money "issue wrong orders?" How can they "give insufficient thought to the principles of doing what one is capable of doing" or "fail to make a detailed feasibility study?" How can they be in their position so long and still be content [illegible] being amateurs? Regarding these public servants, now is the time of urgent need for a thorough reform of the complete ignorance of economic laws and the lack of democratic style.

Exploring a bit further, how can the leaders who are responsible for the purse-strings of the people hastily approve with a flourish appropriations for expenditures amounting to millions and hundreds of millions of yuan? Of course, China is a big country; however, "being big has its problems," and so we should be even more careful. This is not a game. A pen is a mighty instrument; a little carelessness, a flourish of the pen, and the wealth which was created by the blood and sweat of hundreds of millions of people, and which is still not ample, may be lost.

CADRES ACCEPT RESPONSIBILITY FOR FAILURES

Beijing RENMIN RIBAO in Chinese 15 Sep 80 p 8

[Article by Ou Yang Shigao [2962 7122 2514 7559]: "Self-Punishment"]

[Text] According to a report in GONGREN RIBAO, Zhao Changye [6392 2052 2814], director of the Mudan Coal Machinery Factory, took steps to change [the attitude of] factory departmental managerial personnel who were slow in their work, were not responsible, and showed no regard for the achievements of enterprise management. Dealing with a coalcar workshop which produced 42 poorly made coalcars in one quarter, he drafted a self-punishment resolution on behalf of the general party branch, fining it 50 percent of its monthly wages, beginning in June, until such time as the quality of the coalcars is improved. This resolution was approved by the general party branch, and when it was announced at the worker's congress the workers gaaped in admiration and the managerial personnel were shocked. Thus, the sloppy habits of the cadres were changed, causing all factory managerial personnel to fulfill their duties and responsibilities.

Confucius said: "A ruler is upright." Yue Fei, a famous general of the Song Dynasty, with regard to generals taking the lead in enforcing the law, said it more concretely and clearly: "Make yourself upright, and then you will be able to make others upright; govern yourself, and then you will be able to givern men." It is easy to see how much importance statesmen and strategists of past dynasties attached to the ruler's "making himself upright."

The exemplary role of our leaders is a kind of invisible power. In the formulation of systems and discipline, the leaders have been 100 percent in the lead in enforcing the law. If the quality of products is low grade and the leaders punish themselves first, who will still perform his work in a perfunctory and careless manner? On the other hand, if one does not practice what one preaches, and even goes as far as to dis[illegible]is own words, then it will be difficult for his words to have any appeal. [illegible] correcting the customs of the party and of the people today, cadres at al[illegible]els should see the importance of implementing party discipline, national law, and all types of rules and regulations in an exemplary manner.

INFLUENCE OF 'PETROLEUM FACTION' IN CABINET REVIEWED

Hong Kong ZHENGMING [CONTEND] in Chinese No 36, 1 Oct 80 pp 10-13

[Article by Su Jiong [5685 3516]: "Three Cabinets, and the Rise and Fall of the Petroleum Faction"]

[Text] On the afternoon of 11 November 1978, a female corpse was discovered on a path between fields in the Jinzhan Commune, Chaoyang District, in the outskirts of Beijing. After autopsy, it was discovered that the dead person had been raped and had 39 wounds on her head; death had occurred 24 hours earlier. Ultimately, after more than 2 months of investigation by public security personnel, the truth of this case was clearly revealed. The dead person was originally a girl from Shanghai who worked at the Xingkaihu farm in Heilongjiang. At the time she was on her way back to Shanghai by way of Beijing to get married, but at the train station she was coaxed into entering a passenger car by a middle-aged driver and thus eventually fell victim to his vicious hand. The culprit in this case was that very driver, named Li Bendong [2621 2609 2639]; he was the private driver of Petroleum Minister Song Zhenming. Prior to this Li Bendong had lured a woman from Loyang by the same method, but that woman was alert enough to sense his motive and stealthily escaped from his car.

A habitual criminal as cruel as this culprit should have been arrested and punished at the earliest opportunity; yet in the process of the investigation to solve the case, public security personnel were many times subjected to obstructive attempts by Song Zhenming and others. At first, Song Zhenming offered a guarantee in the name of the Party Group in the Ministry that, "insofar as Li Bendong is concerned, I can take the responsibility." Later, when the public security organ obtained control of the time evidence and demanded the immediate arrest of the culprit, Song Zhenming once more callously refused to allow public security personnel to arrest him in the Petroleum Ministry in Beijing. The reason: Li Bendong was a model worker at Daqing, and his arrest in the Petroleum Ministry would have had a bad influence.

At that time, the "petroleum faction" forces were very powerful, and even a public security organ had to yield to them a little; thus it was reluctantly agreed that he would not be seized in the Petrolaum Ministry in Beijing, but action was eventually taken in Tianjin.

The First "Cabinet:" "Petroleum Faction" Dominant

What kind of people make up the "petroleum faction?"

By way of an analysis of the rank and file of the "petroleum faction," a common characteristic can be discovered: They are not partisan followers of the "gang of four," but during the Cultural Revolution, especially during the late period of the Cultural Revolution, they were all in charge of production and in control of substantive power. Precisely because of this, after the fall of the "gang of four" and after the central authorities placed economic work in the forefront, their forces experienced a precipitous expansion. Since they were not partisans of the "gang of four," they were of course not subject to examination; as they had been in charge of production and the economy for a long time, they were now in an even better position to do what they were good at.

From the list of members of the State Council after the First Session of the Fifth National People's Congress, the forces of the "petroleum faction" can be clearly seen. Of the 13 vice premiers, 5 or 6 are members of the "petroleum faction." At the time, Ji Dengkuei, Chen Xilian, and Chen Yongguei were "whateverists;" Xu Xiangqian and the like never bothered with economic matters; Zhao Ziyang and the like had not yet entered the cabinet. Hence, the "petroleum faction" made up the majority in the "cabinet." Besides, the directorships of the State Council's three most important commissions--the State Planning Commission, the State Economic Commission, and the State Capital Construction Commission--were all taken up by the "petroleum faction" and related personalities: they were Yu Qiuli, Kang Shi'en, and Ku Mu.

For this reason, during the first 2 years after the fall of the "gang of four," it was the economic thinking of the petroleum faction which controlled the Chinese Communists' economic orientation. The 10-year economic plan put forward at the Fifth National People's Congress in the spring of 1978 was nothing more than the crystallization of the petroleum faction's economic thinking.

At the time, because the situation with regard to industrial and agricultural production in 1977 and 1978 was relatively good (in 1977 the rate of industrial growth was 14.3 percent, and in 1978 it was 13.5 percent), the error of the petroleum faction's economic thinking had not yet been fully exposed. Under the guidance of this erroneous thinking in 1978, allocations for capital construction were increased by 50 percent and the accumulation rate was raised to 36.5 percent in order to improve the rate of production increase, and the latter figure was close to the average at the time of the "Great Leap Forward" (39 percent). As a result, the crisis of disproportionate development which had been latent in the national economy suddenly became exposed.

The Second "Cabinet:" The Two Sides Are Even in Strength

In the face of such a crisis, the Chinese Communists were forced to carry out an economic readjustment. In June 1979, Hua Guofeng delivered a Report on the Work of the Government at the Second Session of the Fifth National People's Congress and formally announced that China would concentrate her efforts for a period of 3 years to carrying out an economic readjustment; he proposed the eight-character policy of "readjustment, restructuring, consolidation, and improvement." In order to better proceed with this work of readjustment, the "cabinet" was also reorganized; the Second Session of the Fifth National People's Congress appointed Chen Yun, Bo Yibo, Yao Yilin, and Ji Pengfei as vice premiers. Shortly thereafter, the Standing Committee of the National People's Congress appointed Zhao Ziyang and Wan Li as vice premiers and recalled Ji Dengkuei and Chen Xilian.

The number of members in this second "cabinet" showed an increase over the "cabinet" of the First Session of the National People's Congress, as there were now a total of 18 vice premiers. They were Deng Xiaoping, Li Xiannian, Xu Xiangqian, Yu Qiuli, Geng Biao, Chen Yongguei, Fang Yi, Wang Zhen, Ku Mu, Kang Shi'en, Chen Muhua, Wang Renzhong, Chen Yun, Bo Yibo, Yao Yilin, Ji Pengfei, Zhao Ziyang, and Wan Li. The "petroleum faction" still made up 5 or 6 of these, but the "economic renovation faction," which is opposed to the economic thinking of the "petroleum faction" and energetically advocates readjustment and restructuring, also obtained 5 or 6 seats. Thus, except for Chen Yongguei, and except for the vice premiers not in charge of economic affairs and those whose orientations were not clear, the two factions became two sides whose forces were just about even.

In the course of China's advance toward economic readjustment, differences and contradictions between the two sides gradually developed.

Focus of Contention: "Agriculture, Light Industry, and Heavy Industry;" "Disproportionate Development"

Their contradictions were first reflected in their views on the developmental order of "agriculture, light industry, and heavy industry" and their estimation of "disproportionate development."

The "petroleum faction" was opposed to the order of "agriculture, light industry, and heavy industry" and insisted on the prior development of big steel, big chemical, and big petroleum industries. At the same time, they held that disproportionate development in the past was not too serious; that is to say, it would be all right to work things out just like in the past.

The viewpoint of the "economic renovation faction" is contrary to that of the "petroleum faction;" its members insist on the developmental order of "agriculture, light industry, and heavy industry," and their proposition now is: energy, communications, buildings, agriculture, light industry, and heavy industry. Meanwhile, they hold that disporportionate development in the past has been very serious and that there must be thorough readjustment and restructuring.

In the production, development, and construction of Beijing Municipality, a conflict developed between the "economic renovation faction" and the "petroleum faction."

Beijing Municipal Party Committee Stands-Up Against the Central Authorities

The No 1 person in command in Beijing Municipality, Lin Hujia [2651 0039 0502], is one of the "petroleum faction" personalities. After his accession to office, he first grasped, for the sake of generating good feelings on the part of the masses, a few minor measures intended to ameliorate the people's living conditions, such as food-vending stations, buses, etc. As soon as some results were achieved, he immediately invested all his energies in the development of Beijing's heavy industry.

The Capital Steel Company and Yanshan Chemical Works (originally the East Is Red Oil Refinery) were the key points of his planned development. Because of such blind development of heavy industry, serious pollution appeared in Beijing Municipality; air pollution was seven times higher than the international standard, and the underground water level receded rapidly. The central authorities repeatedly criticized such approaches by Lin Hujia in Beijing Municipality and stressed the developmental order of "agriculture, light industry, and heavy industry," pointing out that, especially in the capital, heavy industry should not have been developed in such a vigorous way. But Lin Hujia refused to listen and stood his ground consistently against the central authorities. Finally, RENMIN RIBAO, which leans toward the "economic renovation faction," suddenly burst forth with the four suggestions on construction in Beijing that were proposed to Beijing Municipality by the Central Secretariat (in this Secretariat the "economic renovation faction" dominates). These four suggestions were:

(1) In respect to public security in society, social order and morality and customs, Beijing must serve as a model for the nation and should also be the best in the world. (2) Efforts should be made to transform the environment of Beijing Municipality, do a good job of covering it with greenery and providing it with sanitation facilities, take advantage of its good conditions such as hills, water, cultural relics and ancient remains, so as to build it into a fine, clean, first-rate, modern city. (3) We must make our capital the city where culture, science, and technology are the most developed and the level of education is the highest in the nation. (4) Its economy must continue to prosper, and the people's living conditions must be stable and suitable.

From the content of these four suggestions, we can see that the central authorities were making the emphatic point of wanting to develop Beijing into a cultural city and not a city of heavy industry--of hoping that Beijing would become the political center, cultural center, and center of international intercourse of the country, and not an economic center.

Publication of these four suggestions put Lin Hujia and others on the defensive; although they dared not air their opposition orally, they were very resentful in their hearts. In practice, therefore, they ostensibly followed but actually went against the suggestions, still placing their attention and focus of work on industries, and gleefully talking about aiming Beijing's industrial products and technical and economic targets at the world's advanced level.

Lin Hujia, a Man Dedicated to Escalation

Shortly thereafter, RENMIN RIBAO published a Commentator's article criticizing the Beijing Municipal Party Committee. The article said: "In carrying out the four suggestions of the central authorities, the attitude of those concerned must be clear, and their actions must be decisive....Some comrades do not feel like saying that the four suggestions are not important, but instead they continue to refrain from agreeing to regard the development of heavy industry as secondary and continue to feel that unless heavy industry is grasped, nothing can "satisfy their craving." How, under such circumstances, can they make up their minds to carry out the suggestions of the central authorities?" Beijing's masses also came to pass on the word: "Lin Hujia is a man dedicated to escalation," meaning that Lin Hujia intended to continue to escalate his efforts in the handling of heavy industry construction and investment.

The differences between the "petroleum faction" and the "economic renovation faction" thus became clearly exposed.

Apart from the question of Beijing, differences and contradictions also developed between the "petroleum faction" and the "economic renovation faction" on the question of the Baoshan Steel Company in Shanghai. The Baoshan Steel Company got started under the ideological guidance of developing heavy industry on a priority basis and "taking steel as the key link." At that time, the one who took the responsibility for negotiating and signing the relevant agreement with Japan was Metallurgy Minister Tang Ke. Originally, he worked at the Petroleum Ministry. When the Baoshan Steel Company got started, Lin Hujia was the responsible person in Shanghai Municipality; he did his best to advocate operating the Baoshan Steel Company on a grand scale. But after the Baoshan Steel Company did get started, many problems appeared--e.g., groundwork, harbor, ore...loopholes seemed to be everywhere. The "economic renovation faction" demanded that the Baoshan Steel Company slow down the speed of its development and reduce its scale. But the "petroleum faction" still insisted on continuing the operation, even saying that "a third-stage construction work must still be undertaken."

In a word, serious differences existed between the two sides on the opinion of the order of "agriculture, light industry, and heavy industry" and disproportionate development.

Discussion of Production Goals, Yu Qiuli Visits Deng Xiaoping To Engage in Big Quarrel

Another great conflict between the "economic renovation faction" and the "petroleum faction" took place over the discussion of the goals of socialist production.

Around November 1979, RENMIN RIBAO published in succession a special Commentator's article, "We Must Clearly Understand the Goals of Socialist Production," and Yu Guangyuan's [0060 0342 6678] "A Brief Discussion on the Question of 'Theory Concerning the Economic Objectives of Socialism.'" The paper also launched a discussion on the goals of socialist production. Economists of the "economic renovation faction" held that "we must begin with the satisfaction of the people's consumption needs in our attempt to formulate our national economic plans and arrange for social production," and [we must] "develop our production with improvement of the people's livelihood as our goal." They also pointed out: "Some comrades pursue only output value but do not consider the goals of production, thinking that, in terms of big projects, the more the better, and in terms of production targets, the higher the better. In some places, the capital construction front is still being extended, with no willingness to shorten it; large amounts of national wealth are spent on many projects which for long periods yield no economic results. This is an important factor hampering the rapid rise in the level of the people's livelihood; in the end, production also fails to gain the kind of development it deserves." Here, the behavior of "some comrades" means of course the line followed by the "petroleum faction."

Not long after this discussion got started, the "petroleum faction" was provoked to fly into a great rage. In great haste and anger, Yu Qiuli paid a visit to Deng Xiaoping to question him vociferously: "Who decided to carry out this discussion?"

In the meantime, the Petroleum Ministry also issued a bulletin censuring the discussion "on the goals of socialist production" as a slogan in opposition to "Production First, Enjoyment Later."

Under the powerful pressure of the "petroleum faction," this discussion, carried on for less than 2 months, was forcibly brought to a close at the end of December.

Not until June this year did this discussion, as a result of the gradual loss of dominance by the "petroleum faction," proceed anew with the approval of the Central Propaganda Department of the Chinese Communist Party.

Bohai No 2 Incident: Deng Yingchao Personally Visits Tianjin To Investigate

The "Bohai No 2" incident was a rock that caused the ship to capsize in the course of the "petroleum faction's" loss of influence. How was this incident exposed through retroactive investigation?

On 25 November 1979, oil-drilling rig "Bohai No 2" of the Oceanic Oil Exploration Bureau, under the jurisdiction of the Petroleum Ministry, capsized. This incident resulted entirely from a lack of respect for science and blind commandism on the part of the officials in charge. During the incident, 72 persons died, and the loss exceeded 37 million yuan.

After this incident occurred, the "petroleum faction" did its best to cover up the true situation and refrained from tracing the cause and responsibility. Leaders of the Oceanic Oil Exploration Bureau even declared: "In order to struggle, there is bound to be sacrifice. In years of war, we pay a price; when working on the four modernizations, we must pay a price, too. Seventy-two persons are worth it; they are heroes, and a tuition must be paid!" On the third day after the incident, they chose to write a report which refrained from reflecting the true situation. They preferred instead to discuss the merit of "Bohai No 2" in being unafraid of sacrifice in the context of the overall situation and to launch the activities of so-called great comparison, great propaganda, and great exaltation, never mentioning the question of scrutinizing the responsibility for the incident, and forbidding even the use of the term "incident." Thereafter, they also used this report to put forward the demand to concerned leading organs for their retroactive recognition as heroic martyrs.

The way the "petroleum faction" disposed of the "Bohai No 2" incident provoked the people's strong resentment; this was especially the case with the families of the dead. The Petroleum Ministry, under the rule of the "petroleum faction," never really cared about the living conditions of the masses over the years. It easily resorted to slogans such as "Put Your Life on the Line and Work Hard" and "Renovation Plus Life-and-Death Struggle," but there had long been murmurs everywhere among the masses. The "Bohai No 2" incident led to a great explosion of feelings on the part of the masses. People started to write letters to RENMIN RIBAO from everywhere, exposing many things and demanding that the true situation of and responsibility for the incident be investigated retroactively.

In the past 3 or 4 years, RENMIN RIBAO has played a very important role in conveying public opinion in the Chinese people's political life and has won the due trust of the people. Many people have acquired the habit of sending letters to RENMIN RIBAO when they encounter cases of injustice.

RENMIN RIBAO relayed these letters to the departments concerned and also began to investigate. But during the course of this investigation, the "petroleum faction" took advantage of its influence and attempted to cover things up or interfere wherever it could. The Central Commission for Inspection of Discipline dispatched Deng Yingchao personally to Tianjin to ascertain the situation. After Deng Yingchao's careful and comprehensive investigation, the true situation was finally made clear.

In July 1980, RENMIN RIBAO publicly reported the "Bohai No 2" incident and aroused public opinion throughout the country to unanimously blame the "petroleum faction." Shortly thereafter, the Standing Committee of the National People's Congress announced that Petroleum Minister Song Zhenming had been dismissed from office and that Kang Shi'en had been given a big share of the blame.

Downfall of the "Petroleum Faction" in Public Opinion

At the same time that the "Bohai No 2" incident was being investigated, certain other mistakes made by the "petroleum faction" also were exposed.

For example, the exploration and exploitation of petroleum are now in an extremely unbalanced situation, with the result that there is likely to be a reduction in petroleum production next and the year after that. It is said that there might be a progressive yearly reduction of 8 million tons in production. This makes it impossible for China to fulfill certain trade agreements signed with foreign countries. China has, for example, already notified Japan that, beginning next year, the agreement by which China was to supply 9.5 million tons, and in 1982 15 million tons, of crude oil to Japan will no longer be carried out. The "petroleum faction" had brazenly bragged about China's petroleum production, taking it for granted that many Daqings would be worked out; this made many of China's officials look at the country's oil exports as if they were an inexhaustible source of foreign exchange, and they have therefore loosely resorted to blind importation and blind investment. This was one of the psychological factors leading to the economic adventurism of 1978. But the "petroleum faction's" false, exaggerated, and empty words could never have been translated into reality from the very beginning; yet the foreign exchange already spent and the irrational investments already made can no longer be recovered.

The public exposure of these mistakes on the part of the "petroleum faction" caused the downfall of the "petroleum faction" in public opinion.

The Third "Cabinet:" "Petroleum Faction" Turned Underdog

At the recently convened Third Session of the Fifth National People's Congress, the "petroleum faction" became the target of all the criticism. The "Bohai No 2" incident, the Boshan Steel Company incident, the question of pollution in Beijing... were all brought out. The matter of Deputy Petroleum Minister Yang Yibang's [2799 5030 6721] trip abroad, involving indulgence in malpractice to benefit himself and violation of the law and of discipline, was also revealed. Several personalities of the "petroleum faction" were even subpoenaed to the congress for questioning. Their once awe-inspiring reputation was dashed to the ground.

In the meantime, the "cabinet" also carried out a reorganization for the third time. Zhao Ziyang was promoted to Premier; this was the greatest victory of the "economic renovation faction." The composition of the group of vice premiers also underwent a major change: five vice premiers well advanced in age resigned, Chen Yonggui was dismissed, and Wang Renzhong would not longer serve as vice premier. Three others, Yang Jingren [2799 7234 0088], Zhang Aiping [1728 1947 5493], and Huang Hua [7806 5478], also filled in as vice premiers without taking charge of economic affairs. The line up of vice premiers now stands as follows: Wan Li, Yu Qiuli, Ku Mu, Geng Biao, Bo Yibo, Fang Yi, Ji Pengfei, Zhang Aiping, Huang Hua, Yang Jingren, Kang Shi'en, and Chen Muhua.

Numerically speaking, the "petroleum faction" still has four or five seats, while the "economic renovation faction" has only three or four seats. But analyzed substantively, the "economic renovation faction" has now achieved dominance. First of all, Zhao Ziyang has taken over the premiership. Next, Wan Li has become No 1 vice premier. Thirdly, Yu Qiuli has lost his post as chairman of the State Planning Commission and been reappointed chairman of the Energy Commission, with Yao Yilin filling in at the important post of chairman of the State Planning Commission. And fourthly, Kang Shi'en was marked with a big demerit, Yu Qiuli was forced to undertake a self-examination, and a great many mistakes on the part of the "petroleum faction" were exposed, dashing its reputation.

Hence, in the third "cabinet" produced by the Fifth National People's Congress, the "petroleum faction" has already been become the underdog, and the scale now tips to the side of the "economic renovation faction." However, the "petroleum faction" still has no small amount of strength, its members still make up the majority in the "cabinet," and Yu Qiuliu is listed as No 2 in the pecking order of vice premiers.

The differences between the "petroleum faction" and the "economic renovation faction" are mainly differences in economic thinking. Working toward modernization is an entirely new issue faced by the Chinese economy; in the process of solving this new issue, the emergence of various contradictions and differences is not at all strange but is even inevitable.

HANDLING ACCIDENTS SUCH AS 'BOHAI NO. 2' DISCUSSED

Guangzhou NANFANG RIBAO in Chinese 4 Sep 80 p 1

[Article by Chen Shucan [7115 2885 3503] and Wang Saiyin [3769 6357 5419]: "Drawing a Lesson From the 'Bohai No 2' Accident to Improve Leadership Workstyle, Guangzhou Unit's CCP Committee Standing Committee Integrates Practice for Diligent Study of State Council Decisions"]

[Text] On 2 September, a Guangzhou Unit's CCP Committee Standing Committee convened a meeting to hear reports from organizational units concerned on various accidents that have occurred during this year to their subordinate units, integrating practice into the study of State Council decisions on the handling of the "Bohai No 2" accident. Everyone realized that the decision of the State Council possessed teaching significance of universal applicability both inside and outside the armed forces, and that it's significance was particularly profound for the education of leadership cadres on all echelons. Formerly, whenever an accident happened in a unit, all echelons of leadership frequently placed a great deal of blame on those beneath them, but now that the State Council has taken the lead, we, too, should lead in looking for reasons.

As a result of its analysis of some actual accidents in units, the Standing Committee realized that the occurrence of these accidents, though possessing problems attributable to grassroots soldier cadres, also really revealed numerous problems attributable to leadership at all echelons in managing education, in mastering policies, in the rigorous enforcement of rules and regulations, and in adhering to the mass line, and that these accidents were also attributable directly to the existence in some leaders of serious bureaucratism, failure to discharge their responsibilities, and even to dereliction.

Why is it that after a serious accident occurs in a unit, there is never any thoroughgoing investigation of the responsibility of the leaders? Everyone believes that an important reason is a subjective desire to exonerate and an evasion of the objective conditions. For example, stress is placed on good intentions, lack of experience, special circumstances, etc. They pointed out that many objective mistakes occur frequently under specific subjective conditions. Under the law, the basis for a thorough investigation of responsibility is, first of all, the damage caused by and the consequences of the accident. If one is to stress only intentions, then what is the use of having laws?

Everybody also analyzed how in the aftermath of some accidents in units, there were protracted delays in reporting or no action taken for a long period of time. They felt that in the maintenance of law and discipline, some leaders were still sheilding and covering up, glossing over, resorting to deception, and such improper behavior. Consequently, under such circumstances, it was all the more necessary to make a strict investigation even while the accident was being quickly checked into.

In the course of discussions, comrades at the meeting said that they wanted to draw on the lessons of the "Bohai No 2" accident making them a "model" for real action and for regular personal study to increase conception of the law, to improve leadership work style, and to strengthen their sense of responsibility. They demanded, at the same time, that every echelon of leadership take the lead in studying the State Council's decision, and to further summarize the lessons of experience from major accidents that have happened in the past, and to undertake reinvestigation and rediscussion of accident questions that have not been satisfactorily settled.

LASER WEAPONS RESEARCH BEING ACCELERATED

Guangzhou GUANGZHOU RIBAO in Chinese 25 Aug 80 p 3

[Article by Wang Zhiming [3769 1807 2494], "'Death Rays' — Laser Weapons"]

[Text] In the color movie, "Death Ray on Coral Island," several soul stirring scenes graphically depicted the power of "death rays," causing viewers to think of the laser weapons that people call "death rays."

The ancients made illusions to death rays. Their chivalrous swordsmen had flashing daggers and flashing swords from which the glint could kill. More than 2000 years ago, the famous mathematician and physicist, Archimedes, used copper sheets to make huge parabolic reflecting mirrors that reflected the rays of the sun to incinerate the invading Roman fleet. Once lasers came into being, these illusions and legends became a reality. In the spring of 1975, deep in mysterious and silent space a strange battle erupted. When two American reconnaissance satellites flew at high speed over the Soviet Siberian missile launching range, all that was seen was a flash and the two "eagles in the sky" went out of control at once, becoming "blind men." The two satellites, valued at several hundred million dollars, were wiped out within a few seconds, becoming the first sacrifices to Soviet anti-satellite weapon experiments.

Laser weapons are a magical light weapon. Unlike common rifles and guns, what they shoot is not metallic cartridges or shells, but bundles of high strength laser beams that are 10 billion times brighter than the sun. Within an effective range, these unusual beams may be used directly to kill or wound the enemy, and to wipe out airplanes, tanks, missiles, satellites, and military installations of various kinds. Laser weapons currently being test manufactured include laser rifles, laser guns, anti-guided weapon lasers, and anti-satellite laser weapons. The United States Army tested laser rifles on Vietnamese battlefields. In the shape of a submachine gun and weighing 10 kilograms, they can totally blind a person within from 0.00 to 0.1 seconds at a distance of 5 kilometers, causing clothing to catch fire, ignite explosives, and render ineffective all kinds of optical instruments. Since 1970, laser guns have been tested on numerous occasions abroad. They have shot down drone planes. Directed against a 2000-meter high missile for less than a second, the warhead exploded into bits; a hole the size of a fist was made in a tank's armor plate at several hundred meters distance. Anti-missile laser weapons use high energy lasers to intercept intercontinental guided missiles. Since the skin of a guided missile is usually made very thin, the firing of a laser beam focused on it can destroy the guidance system in its major part or penetrate its guidance mechanism, thereby achieving its anti-guidance objective. Laser weapons used specifically to intercept satellites are called anti-satellite laser weapons. They use high energy lasers to shine on the satellites, causing the optical sensing equipment on the satellites, the solar batteries, and remote sensing equipment to go blind and become useless. When used on the ground, they are called surface anti-satellite laser weapons, and when installed on satellites or used in flight, they are called space laser weapons. In recent years, both the Soviet Union and the United States may have used surface anti-satellite laser weapons to attack the opponent's military satellites, either blinding them or causing them to fall.

Since the laser bundles have a rapid percussion (300,000 kilometers per second), impacting instantaneously, there is no need to calculate lead, nor is there any recoil. Their direction of fire may also be changed rapidly and at will. For these reasons, laser weapons possess outstanding tactical capabilities not possessed by conventional weapons. As compared with nuclear weapons, there is no radiation damage, and there are no problems from radiation contamination or damage in the course of their manufacture, storage, transportation, or use. At the same time, they can destroy or gasify an intruding nuclear missile head in the air or in the outer layer of the atmosphere, thereby greatly decreasing radiation contamination and damage from the intruding nuclear weapon.

But laser weapons also have their drawbacks. They can also be defended against and destroyed. Absorption or dispersal of laser beams by rain, clouds, fog, and dust open laser weapons to great meteorological impairment, and therefore they cannot entirely replace existing weapons systems. Currently China is also accelerating laser weapons research.

SOCIOLOGICAL, EDUCATION AND CULTURE

PROVINCIAL PARTY SECRETARY ON NATIONALITY POLICY IN GANSU

Beijing MINZU TUANJIE [NATIONALITY UNITY] in Chinese No 8, 15 Aug 80 pp 9-12

[Article by Song Ping, first secretary of the Gansu Provincial CCP Committee: "Earnestly Implement the Party's Nationality Policy and Accelerate the Economic and Cultural Development of the Minority Nationality Areas in Gansu"]

[Text] Recently, the directive issued by the Party Central Committee on work in Xizang and the important speeches made by comrades Hu Yaobang and Wan Li when making their inspection of Xizang reiterated the party's nationality policy and stressed that Xizang reiterated the party's nationality policy and stressed that Xizang, under the unified leadership of the central authorities, must fully exercise its regional national autonomy rights; carry out on all economic fronts flexible policies that are specially suited to Xizang so as to fairly rapidly promote Xizang's economic development; to vigorously restore and develop Xizang's cultural, educational, and scientific undertakings in order as rapidly as possible to raise the material and cultural levels of all nationalities in Xizang; and to vigorously train minority nationality cadres in order to strengthen the unity between the people of all nationalities in Xizang. These instructions have not only greatly encouraged the people of all nationalities in the Xizang region, but also their fundamental spirit is totally applicable to other national minority autonomous areas. With the shift in emphasis of the party's and state's work, and with the people of the country heading for the new historical period of the four modernizations, this series of instructions from the Party Central Committee possesses even more weighty significance.

Gansu is a multinational province in which there are compact communities of over 10 minority nationalities, including the Hui, Zang, Dongxiang, Tu, Yugu, Bao'an, Meng, Sala, Hasake, and Man, altogether 1.43 million people or close to 8 percent of the province's population. The province now has the two autonomous prefectures of Gannan and Linxia and 18 minority nationality counties of which six are nationality autonomous counties. The minority nationality communities occupy a vast territory of about 180,000 square kilometers, which is 38 percent of the province's total area. Over 60 percent of the province's over 200 million mu of natural grassland is in the minority nationality areas, which annually account for about half of the province's total supply to the state of livestock products. In these minority nationality areas, mineral, forestry, and water conservancy resources are very rich and have great production potential. Therefore, doing good work in the minority nationality areas is of extremely great significance for developing the stable and united political situation in the province and for developing production and bringing about a prosperous economy.

In Gansu, the laboring people of the Han, Hui, Zang, and all other nationalities have a long history of getting along pleasantly and developing side by side. But, because successive ruling classes practiced policies of nationality discrimination and oppression, there still exists much misunderstanding in nationality relationships. After the liberation of the entire country, under the leadership of the Party Central Committee, the work in the minority nationality areas of our province achieved great successes. Agricultural production, livestock production, and industrial construction developed swiftly, and, as the people's life improved, the nationality relationships greatly improved. But, in the implementation of the party's nationality policy, there occurred fairly serious errors. The main error was that when class struggle was expanded many good people were harmed. Under the influence of the idea that "the nationality problem is in essence a class problem," especially the disruption and destruction caused by the ultra-"left" line of Lin Biao and the "gang of four," the special features of the nationalities were not considered and the religious beliefs, customs, and habits of minority nationalities were not respected. Many contradictions that originally belonged in the category of those among the people were indiscriminately handled as problems for class struggle, and many cadres and masses of the minority nationalities were attacked and harmed. In economic construction, natural laws were flouted, one-crop agriculture was practiced, grasslands were opened up indiscriminately, forests were destroyed, the ecological balance was wrecked, and the economy of minority nationality areas was damaged. In economic policy, there were excessive restrictions and the enthusiasm of the masses was dampened, which created great difficulties for agricultural and livestock production and for the life of the masses.

After the "gang of four" was smashed, especially since the Third Plenary Session of the Eleventh Party Central Committee, the Gansu provincial party committee has vigorously and thoroughly carried out the policies of the central authorities and has conscientiously done the work in minority nationality areas. While exposing and criticizing the crime of wrecking nationality unity committed by Lin Biao and the "gang of four," the committee brought order out of chaos; made a thorough overhaul; reversed and redressed a great number of grievances, trumped-up cases, and miscarriages of justice that occurred during the Great Cultural Revolution; earnestly solved some major problems left over from history; implemented the party's nationality cadres; and replenished the party and government leading groups at all levels in the minority nationality area and replenished the economic, cultural, and educational departments. The committee reaffirmed the party's policy of freedom of religious belief, restored the provincial Islamic society, the Buddhist society and other religious groups, and lifted the ban on mosques, temples, and religious centers. In rural policies, the committee took some measures to relax restrictions in the minority nationality areas. For example, in some places with fairly big difficulties, it reduced the state purchase quotas, put into effect various forms of responsibility systems for integrated output, converted some communes and production brigades to animal husbandry from agriculture and vice versa according to local conditions, and abolished quotas on livestock for personal needs in farming areas. It also allocated interest-free loans from local finances and helped commune members of nationalities whose religion bans pork to raise sheep for their personal needs. In stockbreeding areas, the committee has universally put into effect the production responsibility system of "fix the output according to the livestock, fix the work according to the group, give instructions to the group, place responsibility on the individual, reward overfulfillment of production targets, and punish underfulfillment of production targets," and relaxed the restrictive quotas on the herdsmen's livestock for personal needs. In order to comprehensively implement the party's nationality policy and conscientiously do good nationality work, in October of last year, the provincial party committee specially held a reeducation study class on the nationality policy for responsible persons of the prefecture, autonomous prefectures, and county party committees and also organized the broad masses of cadres throughout the province to restudy Comrade Zhou Enlai's important speech entitled "On Some Questions Concerning Our Country's Nationality Policy" and to be reeducated about the nationality policy. Recently, the committee also transferred over 100 cadres to form an inspection group that on a big scale inspected nationality work provincewide. With all of this, the committee has forcefully mustered the socialist enthusiasm of the great number of cadres and masses in the minority nationality areas, promoted the restoration and development of agricultural and livestock production in the nationality areas, strengthened nationality unity, and improved nationality relations. However, weighing the directives of the central authorities and the demands of the masses, there still exist in our work many problems and disparities. The main ones are that among a considerable number of cadres there still exists an insufficient understanding of the important position of nationality work in our province, that they have not studied sufficiently the autonomy of nationality regions and the special features of minority nationality areas. Thus, in guiding work, there still exists among these cadres the shortcomings of giving only vague general directions and of doing things in only one way, and there is a lack of effective, special measures for economic and cultural construction in the minority nationality areas and there is often insufficient consideration given to some special needs and interests of the minority nationalities. These problems should be conscientiously and earnestly solved by practical work in the future. With regard to problems that temporarily cannot be solved, we must give clear explanations to the great number of nationality cadres and masses so as to obtain their understanding and support. We must also take a positive attitude toward these problems and strive hard to create conditions for their gradual solution.

In line with the spirit of the Party Central Committee's directive and linking it with the actual situation in our province, the central tasks in the future for our minority nationality areas are: comprehensively and thoroughly implement the party's nationality policy; further develop and perfect nationality regional autonomy; unite the people of all nationalities to work with one mind and one heart; swiftly develop the economic, cultural, and scientific undertakings in the nationality areas; continually raise the material living standards and the scientific and cultural standards of the people of every nationality; and in a planned and step-by-step way gradually make these areas flourish, develop, and prosper. In order to realize this objective, we must do the following items of work well.

1. Conscientiously implement the party's policy on nationality regional autonomy and respect the right of nationality autonomous localities to make their own decisions. The practice of nationality region autonomy is a fundamental policy of our party with regard to the nationality question, and is clearly provided for in the constitution. Comrade Zhou Enlai once emphatically pointed out: "All rights to

nationality autonomy provided by the constitution, as well as all the laws, regulations, and decrees concerning the rights to nationality autonomy based on the constitution, should be respected. In this regard, from the central government to local government, there are some times when insufficient attention is paid to this. We should make more investigations and more criticisms." This directive of Comrade Zhou Enlai's, although given over 10 years ago, still possesses today practical guiding significance, and we should make regular inspections and insist that [the nationality policy] is carried out. The core of the policy of nationality region autonomy is autonomy, i.e., the right to make independent decisions. In this respect, in our province the main point is to grasp five things: First, respect the jurisdiction of the nationality autonomous localities. This is a precondition for the exercise of autonomy in nationality territories. The nationality territories' borders and their natural resources such as grassland, water, forests, and minerals should be conscientiously protected and respected. In these respects, the handling of problems left over from history and of controversial problems certainly must be in line with respect for the autonomous rights of nationality autonomous localities, and must be in line with the principle of being advantageous to nationality unity and to the development of production. We must educate people that there are two sides to a dispute, and, in particular, the Han cadres and masses should take the whole situation into account, in the spirit of mutual understanding and mutual accomodation, and, by means of democratic consultation, reach solutions as rapidly as possibe. Second, conscientiously insure that the autonomous organizations in the nationality autonomous territories, under the unified leadership of the party, fully exercise their autonomy. All general and specific policies, and systems formulated by the higher levels that are unsuitable for the minority nationality areas can be not carried out or can be flexibly carried out. But, with respect to important problems, they must ask for instructions beforehand and, with regard to ordinary problems, they must submit reports afterward. All leadership organizations at every level must respect the right of nationality autonomous localities to make independent decisions and cannot arbitrarily interfere with them. Third, party and government leading groups in minority nationality areas must gradually work toward the nationality cadres being the principal body carrying out autonomy. The first step is for the party and government leading groups to work hard for, within a period of 3 years, the local nationality cadres becoming about 60 percent of the toal number of cadres. Departments concerned at the provincial level also must appropriately deploy minority nationality cadres to hold positions of leadership work. Fourth, in order to protect nationality autonomy and the special interests of nationalities, the autonomous organizations of nationality autonomous localities can, according to the provisions of the constitution, formulate some concrete laws and regulations. Based on the special features of the localities themselves. Fifth, the facilities of the autonomous organizations in nationality autonomous localities can, based on the actual local situation, make decisions on their own, and it is not necessary for them to act in harness with Han areas. The upper-level leadership organizations and professional departments cannot impose uniformity on them.

2. Vigorously develop economic and cultural construction in the minority nationality areas. Comrade Mao Zedong once pointed out: "We must earnestly and sincerely vigorously help the minority nationalities to develop economic construction and cultural construction." Comrade Zhc Enlai also has said: "We must both treat all nationalities equally and make everybody prosper. The fundamental position of

our socialism on the nationality policy is the prosperity of all nationalities." The main problem in the minority nationality areas of Gansu are that the economy is very undeveloped, the culture is extremely backward, and the masses in some of these areas are still fairly poverty-stricken. Therefore, our main effort should be put on developing production and doing well in economic construction. Once production is developed, other problems can be taken care of. All party and government leadership organizations at every level in the minority nationality areas must shift the focus of their work to economic and cultural construction. In the minority nationality areas of our province, there is vast territory and abundant resources. There are vast prospects for the development of animal husbandry, forestry, agriculture, and industry. We should make full use of our distinctive features, and formulate, in line with local conditions, short-term and long-term plans for economic construction, gradually readjust the overall arrangement of production in agriculture, forestry, animal husbandry, and industry so as to give free rein to our superiority and to bring out the strong points and avoid the weak points. Counties in which there is a fairly large area of grassland should give priority to livestock. Forests cover a vast area in Tewo and Zhuqu counties of Gannan Zang [Tibetan] Autonomous Prefecture, and the two counties should be gradually transformed into forestry counties. In all the other counties, agriculture and animal husbandry should be developed simultaneously, and thus should be an integrated development of agriculture, forestry, animal husbandry, sideline occupations, and fishery. We must further relax every economic policy in the minority nationality areas and allow the masses to recuperate and recover so as to benefit the restoration and development of production.

In order to change as rapidly as possible the backward state of affairs in the minority nationality areas, the provincial party committee has decided, for the next 2 years, to provide grants-in-aid to, first of all, the several key elementary schools and the one key middle school in the two autonomous prefectures and in the nine animal husbandry and half-agricultural, half-animal husbandry counties, and also to create conditions so that students in pastoral areas can board at school. For all those nationalities that have their own scripts, the ordinary elementary schools must teach in the nationality's script and language, and in the higher grades the Han language and script will also be taught. In order to quickly bring out talent, we are also preparing to select a group of outstanding students from among the junior and senior middle school students of minority nationalities to be sent to key middle schools in the interior for study (giving them grants-in-aid), so as to train students qualified for institutions of higher education and to lay a good foundation for training special talents.

3. Vigorously train minority nationality cadres. To select and train minority nationality cadres is one important aspect of the party's nationality policy. It is impossible to do well in constructing the four modernizations in the minority nationality areas without a large group of cadres of minority nationality background who can uphold the party's line, who are in the prime of life, and who possess specialized knowledge. The minority nationalities not only want their own nationality's party and government cadres, but also want their own nationality's military cadres and cultural and educational cadres and also scientists, artists, engineers, and doctors as well as people who are talented in other fields. This is a key to solving the nationality problem. In the over 30 years since liberation, following the development of the socialist cause, Gansu Province now has more than

12,000 cadres, of various categories, with minority nationality background, and among them are over 2,000 cadres who hold leading posts in the province, prefecture, county, and commune. The great majority of these minority nationality cadres are good or comparatively good. They are loyal to the party's cause, firmly carry out the party's line, uphold the socialist path, have close relations with the masses, and play an important role on each front. They are the backbone in launching the party's work in minority nationality areas, and are the party's and state's previous wealth. The main problem existing at present is that there are few minority nationality cadres and, among special technology personnel, there are even fewer. Gannan Zang Autonomous Prefecture now has 2,217 special cadres of all categories, and among them only 431 are minority nationality cadres, 15 percent of the total. And there are even fewer people with specialized talents at the higher levels, so that the cadres are far from being suitable for developing the economy, culture, education, and science in the minority nationality areas. The incorrect line delayed the training and maturation of nationality cadres, and, following the development of the construction of the four modernizations, the contradiction of lacking nationality cadres, particularly persons with all sorts of special talents, has become more and more prominent. In order to change this state of affairs, we have, in the past 2 years, in a planned way recruited over 2,000 minority nationality cadres to strengthen each front, and also selected a group of fairly outstanding nationality cadres to be part of the party and government leading groups at all levels. However, to fundamentally solve the problem of too few nationality cadres and their low level of specialized education still requires much arduous, painstaking work. In the future we plan, in addition to continuing to set special work targets and, in a planned way to recruit a group of minority nationality cadres. The focal point will be on getting a good grip on training nationality cadres. We intend to ask the Northwest Nationalities Institute and institutions of higher learning concerned to help train nationality cadres and to offer courses on nationalities at Gansu Agricultural University and Gansu Teachers University, and also to train by rotation in groups leading cadres and specialized cadres of the nationality areas at classes in party and cadre schools at all levels. In order to strengthen work in the minority nationality areas, we once in the past assigned large numbers of Han cadres to work in the nationality areas. They bore the great trust placed upon them by the party and the people of all nationalities and did highly effective work there. The great majority are well acquainted with local conditions and have established close relations with the minority nationality masses, and moreover, enjoy the masses' confidence, love and esteem. Provided their state of health permits, they should remain there and continue to strive to do good work so as to, as rapidly as possible, change the features there in line with the sacred duty given to them by the party. All cadres who came from outside to work in nationality areas must conscientiously learn the language and script of the local nationality, respect the local nationality's customs and habits, exemplarily carry out the party's nationality policy, unite as one with the cadres and masses of the local nationality, and, in order to change as rapidly as possible the backward state of affairs in minority nationality areas, to make new contributions to the construction of the four modernizations in these areas. At the same time, the cadres of each nationality must unite with them in fraternal love, mutual respect, and mutual study. With regard to the small number of cadres from the outside working in the minority nationality areas who truly have actual difficulties, they must be, in a planned and orderly way, transferred to the interior where they will be assigned work and have satisfactory arrangements made for them. From now on, the cadres transferred to the minority nationality areas, with the exception of key members of the leadership, will mostly be specialized graduates of universities and middle schools and talented people who have specialized knowledge or special capabilities, in order to accelerate the development of economic construction and cultural construction in the minority nationality areas.

4. Comprehensively implement the party's policy of freedom of religious belief. Among the great majority of minority nationalities, the influence of religion is fairly deep, and moreover these religious beliefs are frequently intertwined with the customs and habits of the minority nationalities. Therefore, the conscientious implementation of the party's religious policy, the correct handling of every kind of religious problem, and the earnest respect for the customs, habits and religious beliefs of the minority nationalities is extremely significant for the strengthening of nationality unity and the doing of good nationality work. We must comprehensively implement the party's religious policy, protect the freedom of religious belief, and respect the normal religious life of the religious masses. We must conscientiously protect the existing mosques and temples, and, based on actual conditions, also appropriately increase the number of centers for religious activities, making it convenient for the masses to engage in regular religious activities. At the same time, educating the religious masses to be on their guard against a small number of lawless elements who would use religion to engage in illegal activities. With regard to the patriotic figures in the upper religious strata of the nationalities, we must conscientiously do good work on unity and education. We must show solicitude for them politically and give appropriate consideration to their life, giving them an opportunity to learn and do good deeds for the people, so that they play the role they can play in the construction of the four modernizations and in the international struggle against hegemonism.

To accelerate the construction of the minority nationality areas is an honorable and arduous task assigned to us by the party and the people of all nationalities. Let us, under the unified leadership of the Party Central Committee, unite even closer, uphold the four basic principles, uphold the party's political line and its ideological line, and resolutely and thoroughly carry out the party's nationality policy in order to change, as reapidly as possible, the poor and backward features of the minority nationality areas in our province, and also struggle hard to make them, as rapidly as possible, flourish, develop and prosper.

HOW FOUNDER OF TANG DYNASTY EDUCATED HIS CHILDREN

Hangzhou HANGZHOU DAXUE XUEBAO [HANGZHOU UNIVERSITY JOURNAL] in Chinese No 1, Mar 80 pp 21-23, 59

[Article by Wei Deliang [7614 1795 5328]: "How Li Shimin Educated the Crown Prince and Other Princes"]

[Text] Tang [Emperor] Tai Zong, Li Shimin, was one of the preeminent statesmen of our country's ancient period. He fully emphasized, and moreover was skilled at summarizing, historical experience and using it as a lesson on which to firmly build Li-Tang rule. The most outstanding manifestation of this was his education of the crown prince and the various other princes.

During the years of the Zhenguan reign, Tang Tai Zong and his court officials often discussed the problem, "Which among the tasks of an emperor is more difficult, to found or maintain a dynasty?" During the founding period of the Li-Tang Dynasty, Tang Tai Zong frequently risked his life and endured hardships, so he had a deep personal understanding of the "difficulties of founding." But it was only after he assumed the reins of power that he came to know the urgent and practical difficulties of "maintaining" the dynasty.

In reality, "maintaining" was a problem of how to preserve and strengthen Li-Tang political power. From history, Tang Tai Zong recognized not only that the length of Li-Tang rule would naturally depend on his own actions, but also that an even more important responsibility would fall on his children, especially on the person acceding to the imperial throne--that is, the crown prince. He said: "We have viewed the rulers who have, in earlier dynasties, put down disorders and established their dynasties, who because they were born and raised among the people recognized emotions and falsity and so were seldom defeated. But the succeeding cultured rulers, who had been born to wealth and did not know hardships, were brought to destruction."[1] Because of this conclusion, he took the education of his children very seriously.

First, he put special emphasis on teaching "the way of a ruler." Aside from asking the tutors always to teach the crown prince and other princes about "affairs that happen among the common people,"[2] Tai Zong himself often used [the precept that] "the way of the ruler requires first keeping the common people in mind" to educate his children. This was especially true after the original crown prince, Chengqian, having gone from excessive luxury and indulgence in women and song to forming a subversive faction and secretly plotting to seize the throne, was reduced to the status of commoner. Tai Zong's treatment of the new crown prince, the Prince of Pu, Li Zhi, was even more a matter of "one must instruct as things are encountered." Seeing the crown prince eating rice, Tai Zong taught him: "Do you know about rice? All the toils and hardships of a farmer's life are met with human effort, and yet if we do not steal his time, we will always have this rice." Seeing the crown prince mounting a horse, Tai Zong again taught him: "Do you know about horses? They are able to take the place of human labor. By giving them timely rest we do not exhaust their strength, so we then can always have horses." Seeing the crown prince boarding a boat, Tai Zong then advised him: "Do you know about boats? A boat can be compared to the ruler and water to the masses. Water can carry the boat, but it can also overturn the boat. Thus, if you are a ruler, can you not be afraid!" Seeing the crown prince resting beneath a bent tree, Tai Zong again admonished him: "Do you know about this tree? Although crooked, if this tree is tied up, it will become straight. A ruler, although without the way, will become sagelike if he receives remonstrance."[3] Tai Zong thus used trivial matters of daily life to teach his children the "way of the ruler," a way that entailed protecting the common people by not taking their time and not exhausting their strength, by restraining one's sensual desires, and by accepting remonstrance. In the year before his death, that is to say the 22nd year of the Zhenguan period, he also edited the "Difan" [Standards for an Emperor] in 12 chapters in order to give it to Crown Prince Li Zhi. The chapter titles of this work are: The Theory of Rulers; Bringing Up the Family; Seeking the Worthy; Examining Officials; Accepting Remonstrance; Warding off Slander; Admonition Against Waste; Honor Frugality; Rewards and Punishments; Serving Agriculture; Inspecting the Military; and Venerating Culture. This work, the "Difan," in reality then is a summation of Tang Tai Zong's lifetime of political experience. He enjoined the crown prince: "Cultivate yourself to rule the state; the rules are all in this book. Never violate them, for there is nothing it does not tell you." He also raised from his own lifetime "errors committed in action" to admonish Li Zhi: "You ought further to seek the ancient sage-kings as teachers, for to listen to me is not sufficient. If you pattern yourself after the best, you will certainly obtain their level; if you model yourself after the mediocre, you unavoidably will become inferior. Since I have been on the throne, I have done quite a few wrong things. Brocades, embroideries, pearls, and jade are previously unmatched; the palaces are being constantly built; and animals are collected without regard for distance. I travel everywhere and my every request is immediately imposed on someone. I have been deeply involved in all of these things, but you should not pattern yourself after me."[4] Originally he exploited the people and indulged himself, for pride, luxury, debauchery, and idleness are the real nature of the landlord class, and as a feudal emperor, Li Shimin was certainly unable to cast off the essential characteristics of his class. He was, however, able to open his eyes to the long-term interests of Li-Tang rule and to learn lessons from those rulers in history who had lost the state. At the same time as he strove to control his own excesses, he was able often and everywhere to use this spirit to instruct and restrain his own children. Objectively speaking, this still necessarily has a positive meaning.

Next, in the matter of his children, Tang Tai Zong also emphasized teaching "virtuous conduct." He personally admonished his children and brothers: "For a person to establish himself, only virtuous conduct is precious. Why seek "glory and riches."[5] Certainly for the family of an emperor, "honor and wealth" come naturally, so there is no need to worry or be apprehensive about these things. But we do need to worry and be apprehensive about whether we can permanently protect this "glory and riches." Tang Tai Zong, by unifying historical experience, knew that glory, wealth, and power without virtuous conduct, intelligence, and scholarship cannot be relied on. Since ancient times, the younger brothers and sons of emperors had been enfeoffed with land and had lived in incomparable wealth and glory, but very few of them had been able to protect their wealth and position for very long. The reason for this was that they were born within the palace and grew up entirely in women's hands and so were without ability, lacked virtue, and were given to personal arrogance and idleness. "Therefore they fell down calling on each other, and few were able to help themselves."[6] The fact that "Emperor Wen of the Sui had been harsh toward his sons and caused many to act without etiquette, so when he died they were all exterminated"[7] further triggered Tai Zong's vigilance. Because of this, he again instructed his children: "You all occupy places among kings and your families are fed by your fiefs of maintenance; . . . you ought to limit and encourage yourselves, causing your good deeds to become daily news, and not give yourselves over to your desires and unrestrainedly indulge your emotions." "If you do not honor my admonitions and guidance, and forget and abandon etiquette and law, you necessarily will end up being executed. And even though your father loves you, what could he do about it?"[8] At this time, he again especially ordered Wei Zheng to "record how, from ancient times on, the sons and younger brothers of emperors have failed. Call this work 'A Record of the Evil of the Nobility of Ancient Times' and give a copy to each of my children and brothers, for I want them to keep this book by their sides and use it as a basis for character development."[9]

Third, in order to strengthen the education of his children, Tang Tai Zong also emphasized the selection and effective use of tutors. Moreover, he considered "searching for the worthy and virtuous in order to assist the alternate palace (meaning the crown prince), and accordingly for the various princes to seek out upright scholars,"[10] to be directly related to one of the major issues of national security. Tang Tai Zong stressed education, study, and the assistance of tutors from birth. He said: "A man who attains knowledge without perseverance will deviate from what he has been taught." At the same time, he used King Cheng of the Zhou Dynasty and Emperor Ershi of the Qin Dynasty as examples to clarify that "a man's good and evil truly come from his recent training." When King Cheng of Zhou was young, "those whom the Zhou summoned to be palace guardians were all worthy, so he daily heard refined instruction, which was sufficient to give long life to his benevolence and to increase his virtue, causing him to become a sage ruler." Qin Ershi, Huhai, "employed Yue Gao as his teacher and was taught punishment as a method, so when he succeeded to the throne, he executed meritorious ministers, murdered his relatives, and was extremely cruel. Thus in a very short time he was lost."[11]

Because of these examples, [Tang Tai Zong] personally selected "straightforward and trustworthy" great ministers to assume responsibility as tutors to the crown prince and the other princes. Among these were Wei Zheng, Changsun Wuji, Fang Xuanling, Wang Gui, Li Baiyue, Yu Zhiyu, Zhang Xuansu, Du Zhenglun, Linghu Defen, Kong Yingda, and the like. Those who fulfilled their instructional duties were praised and rewarded, while those who failed in these duties were exiled or punished. Tang Tai Zong considered that serving as one of the crown prince's mentors--the "three masters" (that is to say, the crown prince's grand tutor, grand master, and grand guardian, who were together termed the Three Tutors to the Eastern Palace)--was to be "one who uses virtue to lead a person. If the teacher is himself base, the Crown Prince will be without the wherewithal to gain principle." Therefore he ordered compiled "The Annotated Etiquette for the Crown Prince's Reception of the Three Masters," which laid out the rules for the crown prince's meetings with his tutors, so that they fully met the requirements of decorum. He decreed: When the three masters go to the Eastern Palace, "the crown prince will greet them in front of the door to the palace hall. He will first bow to the three masters, who will bow in reply. At each door, the crown prince will make way for the three masters. When the three masters sit, then the crown prince may sit. When he reads with the three teachers, he will be apprehensive both before and after reciting, and he will bow again." At the same time, he also taught his children that whenever they met a tutor, "it is as if you were facing me, and you should be very respectful and not at all negligent."[12] Tang Tai Zong greatly raised the tutors' political status, establishing the tutors' reputation and dignity in order to make full use of their instruction. The crown prince's second tutor, Li Gang, had a diseased foot, so that it was uncomfortable for him to move about. Tai Zong especially bestowed on him a "sedan chair, ordered three guardsmen carry him into the Eastern Palace, and commanded the crown prince to place him at the head of the hall and personally bow to him, greatly raising Li Gang's prestige."[13] Tai Zong was able to see that his children were growing up deep within the palace and would spend their youths in riches, with the result that they would have the weaknesses of pride, idleness, and lack of restraint. Therefore he adopted these policies as measures to rectify the shortcomings of their character.

Historical experience, especially the lessons of the Sui's fall, had brought Tai Zong to recognize why "there was often disorder in going from the ancestral founding ruler to his descendants." It was not only because "the young rulers grew up deep within the palace and spent their youths in wealth and glory, not experiencing the emotions and falsities among the people, so that in governing the state they often threw the government into chaos," but, moreover, it was also because "the sons of meritorious ministers were often without ability and used their ancestors' coattails to obtain high office, while not cultivating their own virtue and righteousness, but rather were too fond of extravagance and given to licence." The result was that "the ruler was young and weak and his ministers were also without ability, so that they were at the top but were unsupported. How could there not be rebellion!" Therefore at the same time as he educated his own children, Tai Zong demanded that his officials also "admonish and encourage their sons so as to make them faultless."[14]

The ferocity of the popular uprisings in the late Sui had an extremely deep influence on Tang Tai Zong, as he had been on the battlelines of the anti-Sui struggle, giving him a comparatively clear understanding of the great power of the masses: "As for the Song of Heaven, if a man has the way, he is propelled by the people into being the ruler; if he is without the way, then the people will abandon him, for they do not need him."[15] Because of this, "keeping the common people in mind" was then his general motto for the tasks of governing the country, pacifying the borders, and educating his children. This explanation of the historical reality of feudal politics was, within a certain time period and at a certain stage, sufficient to accept the lessons of the peasant uprisings. Naturally, Tai Zong's purpose in saying "Keep the common people in mind" was not actually for the sake of the common people but rather to make firm the feudal autocratic rule and to preserve a long and peaceful reign for the Li-Tang Dynasty. It was exactly in this summarizing of the past and bringing it forward that he put forth his effort, summarizing historical experience and earnestly seeking lessons from the fall of the Sui.

But the historical experience of "to live in peace and think of danger" and "to govern while thinking about rebellions" could not be a thoroughly restrictive force on a feudal emperor, because of the fundamental character of the feudal landlord class. Even Tai Zong, who took himself to be "a ruler who suppressed rebellion and established a dynasty," and who said of himself that "there is nothing in the suffering of the common people with which I am unfamiliar,"[16] was no exception, for "after he came to the throne," and especially in the later period [of his reign], how could he not "indulge in pleasures that exhausted the people, so that the traces of his frugality changed with the years and the emotions of arrogance and extravagance daily became more remarkable!"[17] As for his several children, who "grew up deep within the palace and spent their youths in wealth" not knowing the emotions and falsity of the people, not knowing of the toils and troubles of the peasantry, naturally we need not say anything more. Because of this, even though Tai Zong emphasized the education of the crown prince and other princes, putting great effort into this task, the objective results can be visualized without difficulty. Wei Zheng pointed out, while analyzing the reasons Tang Tai Zong "was unable in the end to overcome his thrift and frugality:" How could he not receive the honors of a great state and have the wealth of the whole world, when none opposed what he said and people had to follow whatever he did. He indulged his desires and was lacking in etiquette because of his sensual desires.[18] Why did such a situation occur? This is a question that Wei Zheng did not answer, and was basically without the means to answer. Only with Marxism are we able to see clearly that the fundamental cause lay in the feudal autocratic system.

If that system is not changed and efforts are only exerted in the content and methods of education, there can be no fundamental solution. Naturally, when we expose and criticize the essential class character of Tang Tai Zong's education of his children, we can still see, based on the principle of historical materialism, that while being a feudal emperor, Li Shimin was still able to use the fall of the Sui as a mirror and concentrate his mental efforts directly on a line of approach that advanced the education of his children, using the idea of "keeping the common people in mind," and that this was a positive contribution to real needs. When compared to the many feudal emperors in our country's history, Tai Zong had areas in which he excelled the others. Speaking for today, the experience of his educating his children, and the lesson drawn therefrom, still should not be lost.

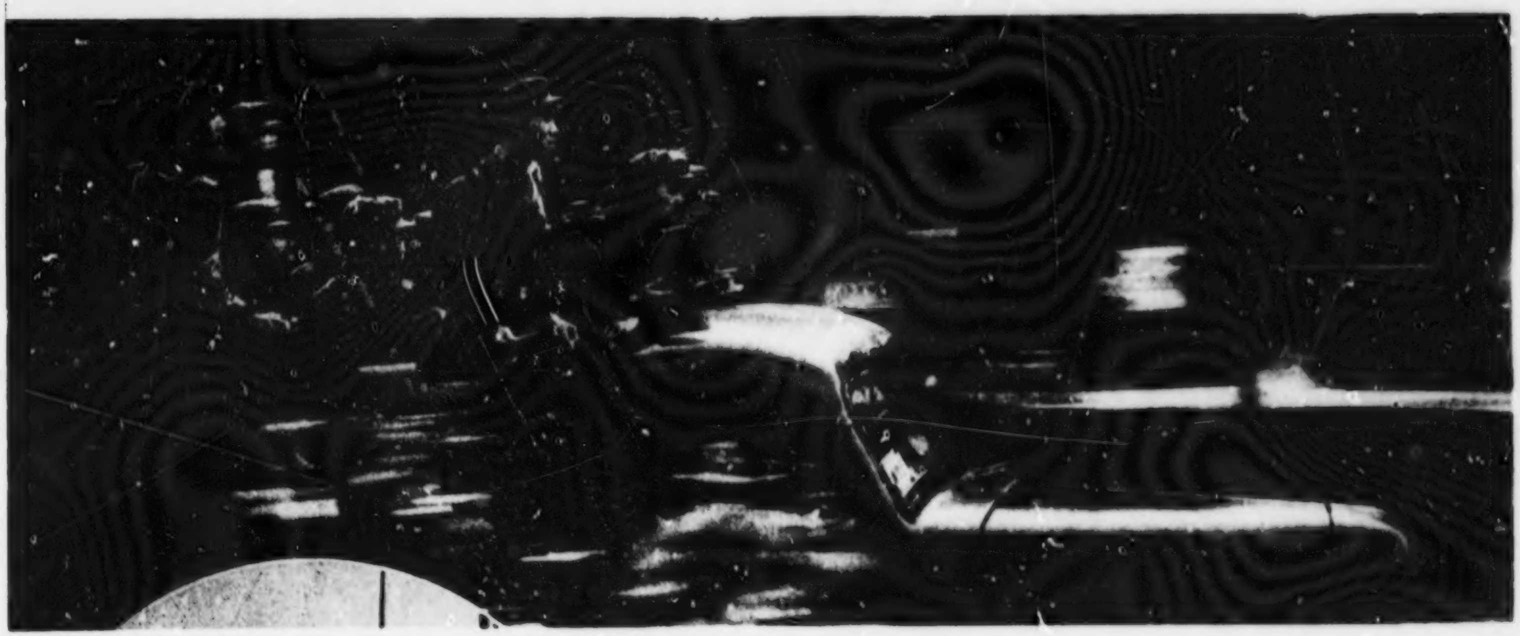
TRAINING IN RADIO COMMUNICATION WARFARE DESCRIBED

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 11, 1980 pp 4-5

[Article by Zhao Fasheng [6392 4099 3932] and Zhou Yi [0791 1473]: "Radio Communication Warfare"]

[Text] In order to meet the needs of signal communications in a war against aggression, a radio company of an unidentified unit of the Nanjing Units has placed emphasis on training radio operators in how to counter jamming.

With the rapid development of electronic technology, the task of jamming radio signals and countering jamming in a future war will be even more highly sophisticated. To improve the radio operator's knowledge of this task, the radio company organized everyone to study specific battle examples and analyze various signal warfare operations of foreign armed forces so that they can see the importance of signal warfare. They also studied such technical materials as "An Outline of the Radio Communication Warfare of Foreign Military Forces" and "Several Methods of Jamming Employed by Our Jamming Detachment," came up with three types of multiple jamming signals, made arrangements to learn to distinguish and identify them and gained an understanding of the types and characteristics of jamming operations which strengthened their knowledge of jamming and anti-jamming operations. During basic training in anti-jamming operation, by grasping the weak link of signal copying in this operation, they relied mainly on breaking interference and key control operations to deal with the various types of interference the "enemy" employed. The company launched training activities in which a thousand unit groups were consecutively transmitted and received under interference conditions without any mistakes. Rapid operations in tuning, receiving and making contact are important technical measures in anti-jamming operations and they are also the key points in the transition from anti-jamming training to applied training. In carrying out the training of the "three rapid operations," they strongly advocated that they should think up ideas to increase the speed and find ways to simplify the operation so that they can take action quickly, perform the operation proficiently and use flexible methods to continue to achieve new successes in anti-jamming training.



Training in anti-jamming underway

Communication interference network

A 15-watt transmitter-received vehicle carrying out training in rapid tuning, receiving and making contacts while on the move

Setting up a jamming position to carry out training in rapidly changing frequencies

The time for erecting antennas is shortened from five to two-and-a-half minutes

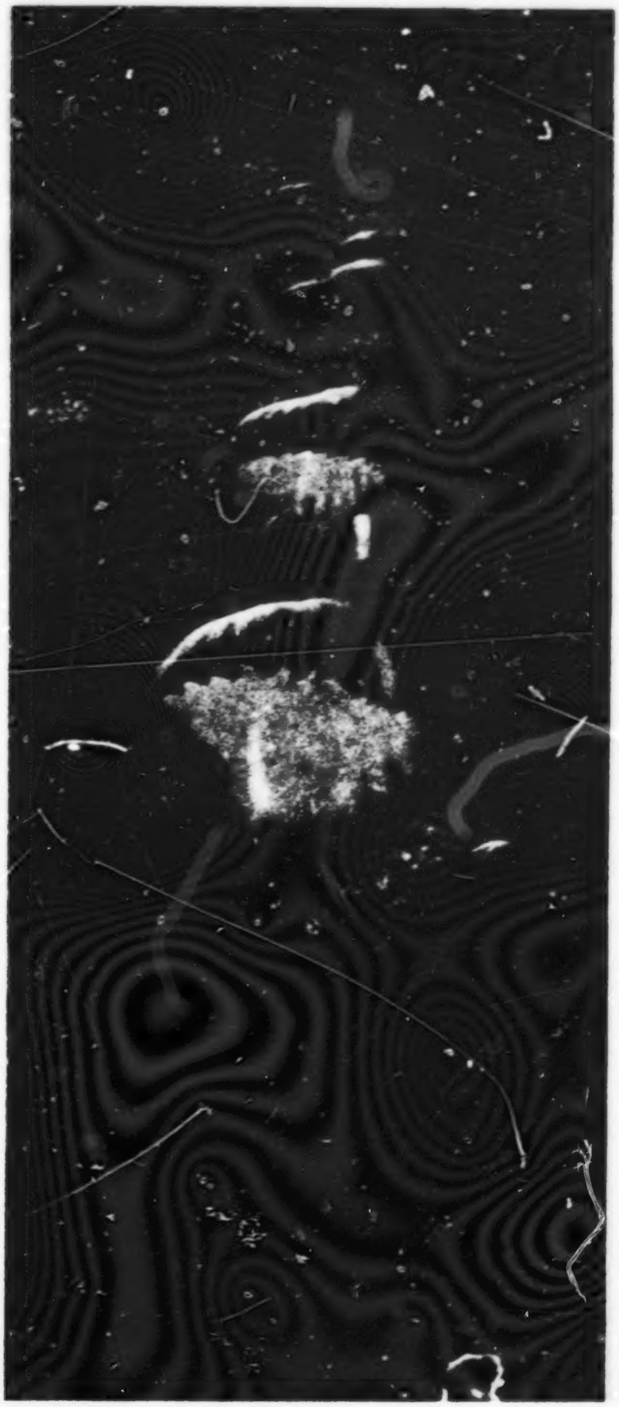
AIRBORNE UNIT TRAINING DESCRIBED

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 11, 1980
pp 8-9

[Article by Li Qiaobin [2621 0829 2430] and Huang Daizhuang [7806 0030 8369]: "Forces Descending From the Sky"]

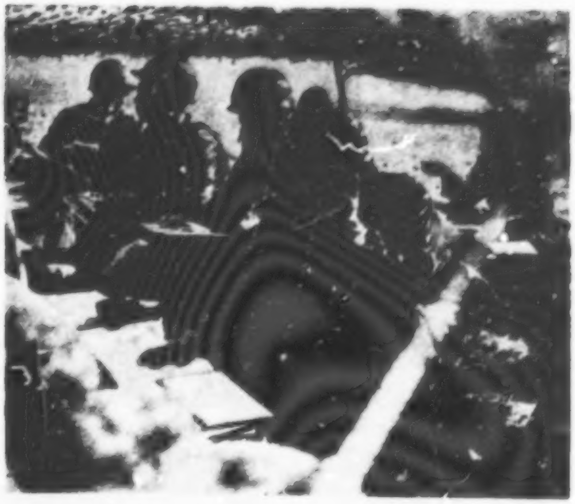
[Text] In view of the fact that airborne combat involves being exposed to enemy attacks on all sides and complicated conditions, an unidentified airborne unit has rigorously trained in combat skills under various types of situations. They organized cadres and fighters to study materials on airborne combat of foreign military forces and to become familiar with infantry-air, infantry-tank and infantry-artillery combined tactics so that the airborne forces' mobile and rapid strike role could fully be brought into play. During training exercises, numerous types of situations were created in a single training course and training in various types of fighting methods was done under each situation, thereby improving the cadres' command capability and strengthening the unit's combat skills.

Boarding an aircraft



Coming down towards a predesignated area

An airborne artillery appears in the "enemy's" rear are



Quickly setting up a command post

Taking advantage of dense fog to establish a favorable combat position

Ammunition and combat supplies being dropped along with paratroopers in the "enemy's rear area"

RECREATION CENTER OFFERS NUMEROUS FACILITIES

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 11, 1980 pp 10-11

[Article by Cao Xiafu [2580 7209 1381], Wang Feng [3769 6912] et al: "Fighters' Home"]

[Text] In an unidentified unit of the Nanjing Units there is a well-known cultural and recreation center called the Fighters' Home which has attracted the broad masses of cadres, fighters, staff members and workers and their family members. During after class hours, holidays and vacations, this place has people coming and going and is filled with talking and laughter....

This "Fighters' Home" was opened last October. Here, the facilities include a reading room containing various books, magazines and local newspapers and journals from the fighters' home villages, a recreation room which offers 18 types of recreational activities, a photo exhibition showing the unit's advanced individuals, a game room for chess, a music room, a table tennis room and others. An abundant array of activities has afforded the fighters a useful place for recreation and has also opened up a good educational front for the unit's political work.

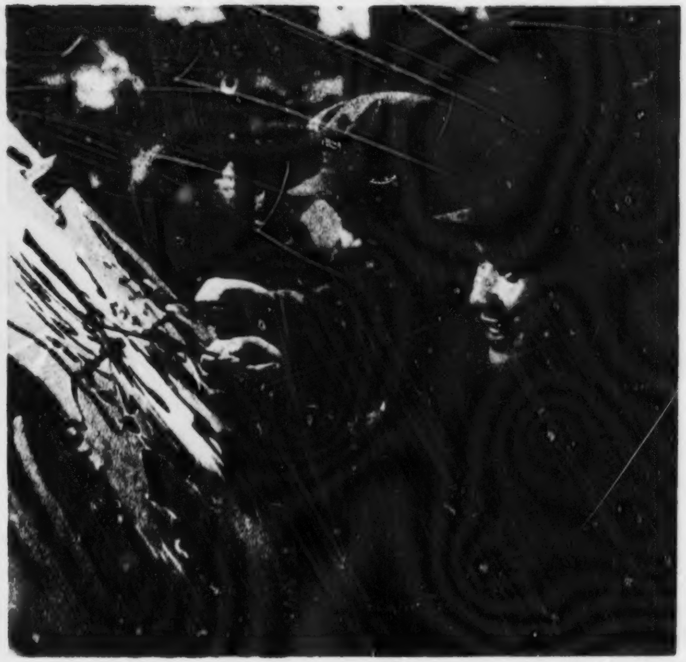
In recent years, almost 30,000 people have participated in activities at the "Fighters' Home" with good results. Based on their personal experiences, a large number of cadres and fighters have written letters to the upper-level organizations and newspapers and journals praising the "Fighters' Home." Squad leader Shen Yongchang said, "In the past my heart would pound when I saw a senior officer. Having taken part in activities at the Fighters' Home, I became acquainted with a number of senior officers and they have become my good teachers and helpful friends." Fighter Hu Huaqi said, "Previously, I thought of myself as stupid. But when I participated in such activities as solving riddles and math problems, I felt myself becoming quite sharp." New fighter Wan Hui said, "When I just joined the unit, I felt that life was dull. Once the Fighter's Home came into existence, I felt life was full of fun and felt at ease about life in the unit." Deputy political officer Yu Chengpin said, "With the establishment of the Fighters' Home, every comrade found a place with activities suitable for him and by engaging in these healthy activities resisted the corrosive influence of unhealthy ideology. This has brought new changes to our company."

Music enthusiasts playing sweet-sounding songs in the music room

Setting up a photo exhibition of the unit's advanced individuals

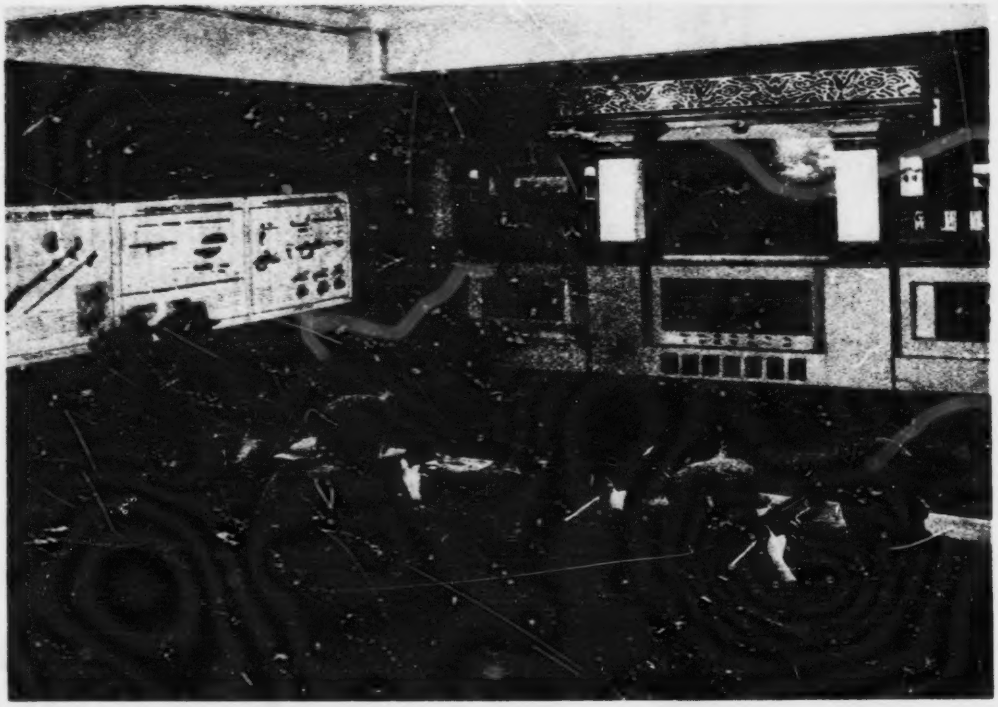
"Light the firecracker by looking in a mirror"--It is done by seeing through the appearance to get at the essence without being misled by the mirror image

A senior officer and a fighter, on intimate terms, match each other in a game of chess



A number of gentle and quiet fighters playing a "paint the rooster" game--doing it carefully and calmly so that the "rooster" will not crow

Just like a sea of knowledge, the reading room provides the cadres and fighters with a rich supply of interesting reading materials



In the air-rifle room, sharp shooters challenge each other in "shooting at tanks"

RESCUE TRAINING DURING 'NUCLEAR ATTACK'

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 11, 1980 p 12

[Text] A simulated nuclear bomb exploded! The field medical station of Hospital No 268 and the antichemical warfare detachments and engineering emergency detachments rushed to the "nuclear" casualty area. Tian Yuan [3944 0954], the "battlefield" rescue commander and head of the hospital, led his personnel and very quickly selected the area where treatment would be given. In only 14 minutes, they completedly set up more than 10 tents, more than 40 hospital beds and more than 150 medicine kits. After they got the command, the medical rescue personnel donned protective clothing and rushed off to the "nuclear" casualty area carrying medicines, equipment and stretchers. Through practice in such things as examinations, emergency treatment, decontamination and classifying war casualties they were tempered in conditions close to actual combat.

'DEFENSE' AT THE POINT OF BREAKTHROUGH

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 11, 1980 p 13

[Text] After a "nuclear" attack in a hilly area, the "enemy" used massed tanks to rush our positions. The commander of the defense units of an unidentified unit rapidly checked the situation of the "enemy" and decided to block off the breach made by the "nuclear" attack. The artillerymen used heavy firepower to carry out a blocking bombardment, fast-moving detachments to create obstacles, quickly mined the area through which the "enemy" wanted to move, the tank detachments savagely shelled the "enemy" tanks and the cool-headed infantry resolutely held its positions. The commander seized the favorable combat advantage and promptly organized the units to carry out a main attack to completely put the "enemy" out of action. Through this exercise, the cadres and fighters acquired some experience in the laws of combat under conditions of nuclear attack.

阻滞分队快
速布下地雷。

The delaying detachment quickly lays land mines

Cool-headedly engaging in combat by using the cover of defense works

Taking advantage of combat opportunity, infantry and tanks cooperate in the main attack

FUJIAN VINYLON PLANT IN OPERATION

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 11, 1980 p 24

[Article by Ren Qishun [0117 0366 7311] and Zhang Dongfeng [1728 5516 5358]]

[Summary] The Fujian Vinylon Plant was official put into operation in January of this year. It is a chemical complex engaged in mining ores to make vinylon short fibers. The equipment in its principal workshops was copied from imported technical equipment and is highly automated. During trial operations in the past few years, staff members and workers throughout the plant made efforts to master advanced techniques and corrected the irrational parts of some 50 projects, insuring stable production and raising output quantity and quality. In 1979 it produced 8,291 metric tons of vinylon short fibers, exceeding the originally designed output capacity of 7,000 metric tons. Quality, too, was up to advanced domestic levels.

In addition to supplying the textile mills in Fujian Province, the vinylon short fibers turned out by this plant are shipped to Shangdong, Guangdong, Sichuan, Jiangsu and Zhejiang.

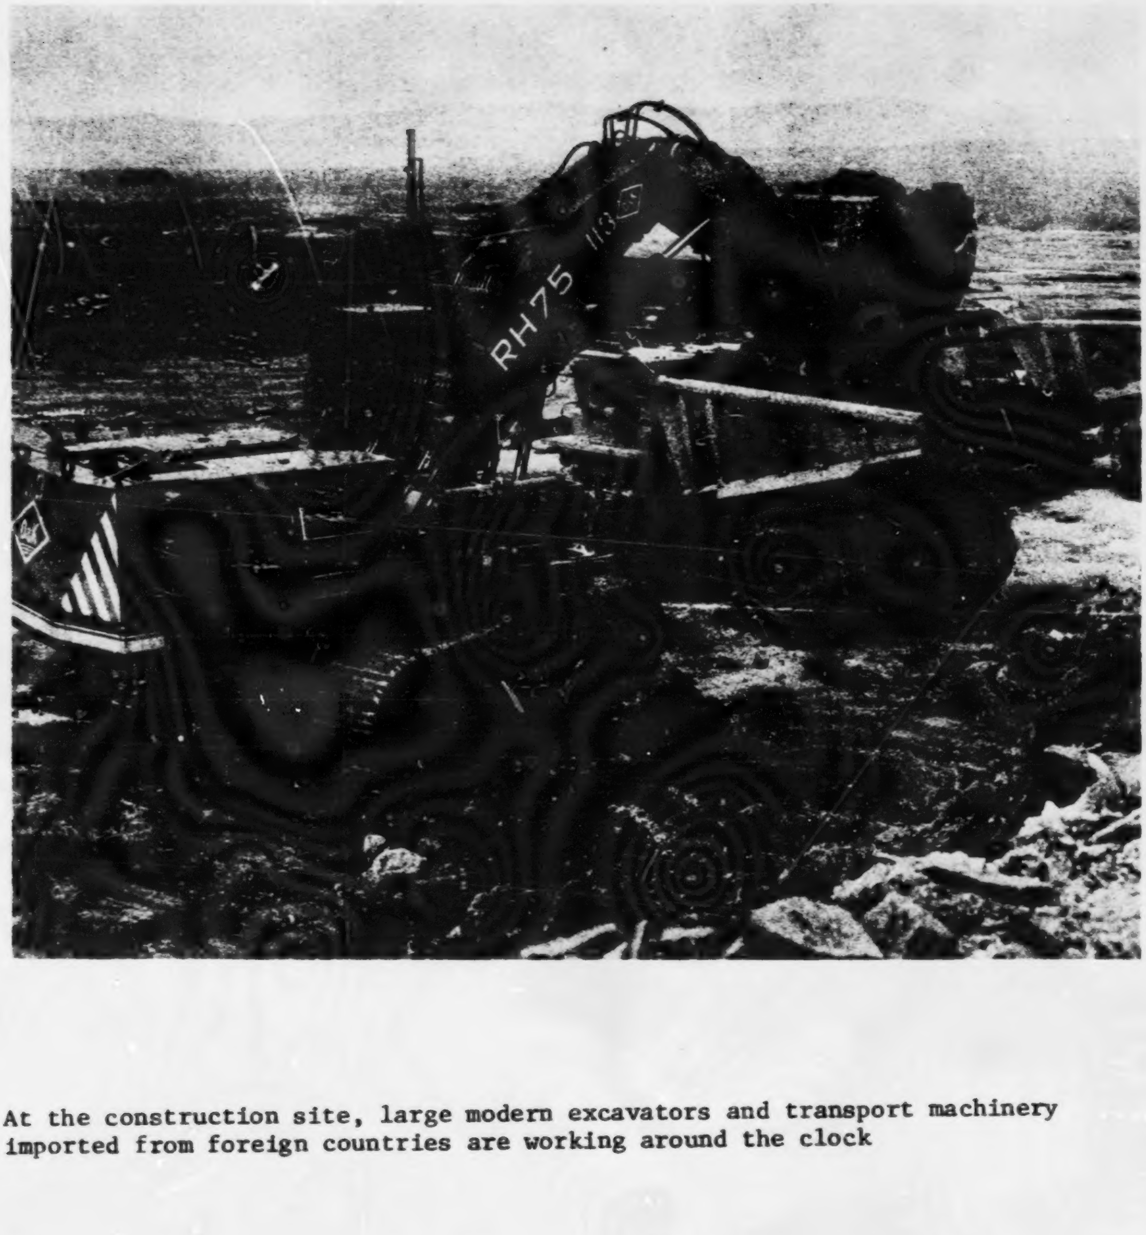
EXPLOITING THE HELINHE NEW COALFIELD

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 11, 1980 pp 25-27

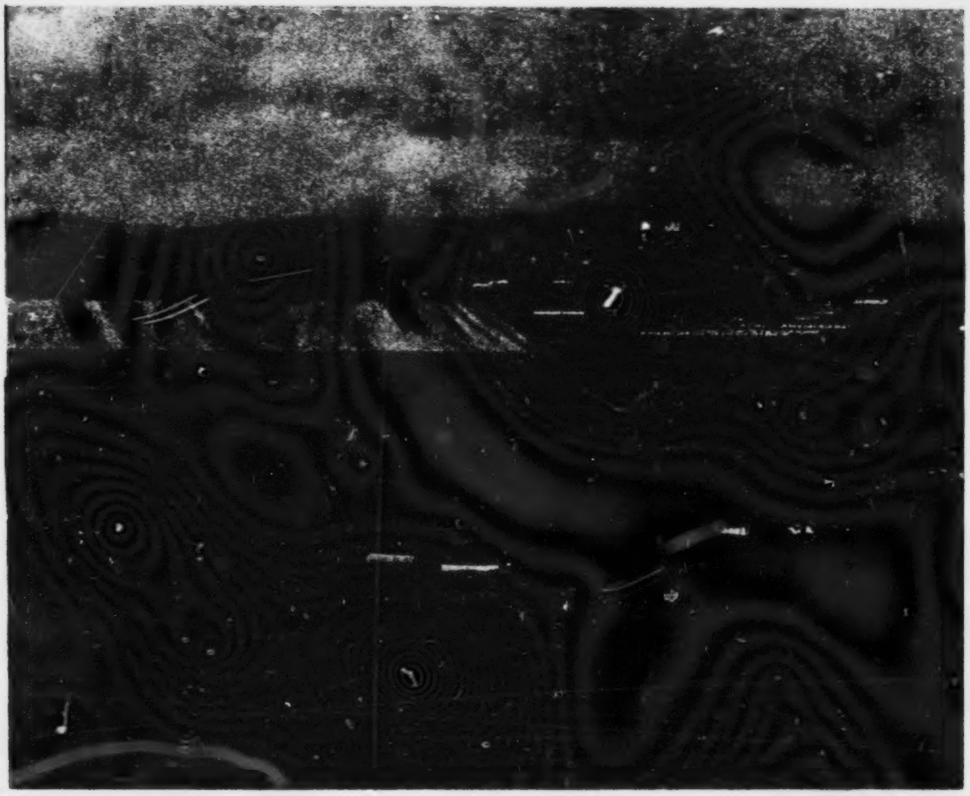
[Article by Liu Hui [0491 2585] and Zu Ruiting [0194 3842 0080]

[Summary] Located in the Keerqin Grassland, Nei Monggol AR, the Helinhe Coalfield is one of China's key construction projects of the eighties. It covers a vast area and has abundant reserves. The coal seams are thick, deposits shallow and the inclination gentle. Results of geological surveying and prospecting indicate that this coalfield is 60 kilometers in length and 9 kilometers in width and has 10 extractable coal seams. The cumulative total thickness is close to 75 meters. The geological reserves are 12.9 billion metric tons. It is one of China's largest coal bases.

In order to exploit the Helinhe Coal Mine, China imported machinery and equipment of advanced world levels in the seventies from the United States, West Germany, Sweden, Japan, Britain and Finland. The exploitation and utilization of this coal mine will play a major role in solving the fuel motive power shortages in the Northeast and a part of Nei Monggol, promoting industrial and farm production and animal husbandry, boosting the economy in the border regions and consolidating border defense. A certain unit of the Capital Construction Engineering Corps is responsible for exploiting this coal mine. Since April this year, stripping work has been in full swing. Despite the arduous tasks and difficult conditions, the commanders and fighters, working feverishly around the clock, succeeded in fulfilling their tasks for this year 5 months ahead of schedule.



At the construction site, large modern excavators and transport machinery imported from foreign countries are working around the clock



The exploitation and construction of the Helinhe Coal Mine will further promote the development of industrial and agricultural production and animal husbandry in the Keerqin Grassland

Chief operator Yang Fanglin has trained 16 operators with rich experiences. He has received favorable comments from foreign experts on his skills

Seize the day, seizing the hour and work around the clock

Young cadre Shi Guangde, who was recently promoted to assistant engineer, has browsed through pertinent data from more than 40 countries in order to be proficient in his work and has become an "electrical equipment expert" on imported machinery

RH75 111
110
75

In order to insure the successful fulfillment of the construction task, the commanders and fighters meticulously inspect and repair machinery and equipment

The excavators strip large tracts of earth to expose the coal seams before starting open-pit mining operations

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

SUGGESTIONS FOR CONSTITUTIONAL REVISIONS

Hong Kong ZHENGMING in Chinese No 36, 1 Oct 80 pp 30-33

[Article by Qin Huaihe [4440 3232 3109]: "Humble Suggestions for Revising the Constitution"]

[Text] As early as March 1979, ZHENGMING monthly had already issued an appeal that China's current constitution should be revised (as contained in the article "Communist China's Constitution Should Be Revised Now," by Li Yan [7812 1750]). Today, the Third Session of the Fifth National People's Congress finally passed the resolution on revision of the constitution and establishment of a Constitutional Revision Committee. On the afternoon of 15 September, the Constitutional Revision Committee held its first plenary meeting to declare its establishment. Its chairman id Ye Jianying; its secretary general, Hu Qiaomu; deputy secretaries general are Wu Lengxi [0702 0397 6007], Hu Shun [5170 4939], Gan Chisen [3927 4379 2773], Zhang Youyu [1728 0645 3342], Ye Duyi [5509 4648 5030], Xing Yimin [6717 0076 3046], and Wang Hanbin [3769 3352 2430].

The constitution is the fundamental law of a state. The work of revising the constitution is a major event in the political life of that state. Overseas Chinese and the brethren in Hong Kong and Macao are all concerned with this event. This writer would like to put forward some of his own views on those articles of the country's current constitution that should be revised, so that they may serve as a reference for the Constitutional Revision Committee.

Where Do the Problems in the Current Constitution Lie?

China's current constitution was revised and passed by the First Session of the Fifth National People's Congress after the smashing of the gang of four; the second and third sessions of the Fifth National People's Congress revised some individual articles, such as removing citizens' rights to "speak out freely, air their views fully, hold great debates, and write big-character posters," etc.

But in this writer's opinion, the constitutional revision work to be undertaken by the Constitutional Revision Committee at this time should not be a revision of individual articles but a fundamental, systematic, and overall revision.

Why?

Because even though China's current constitution was formulated after the smashing of the gang of four, the savor of "whateverism" at the time was still rather thick, and the leftist line still penetrated the constitution, which thus still contains certain articles that reflect obsolete political and theoretical viewpoints and conditions no longer in accord with objective realities. Also, the prescriptions of many articles are far from complete, succinct, concrete, or clear. Even more important, since the First Session of the Fifth National People's Congress, and especially since the Third Plenum of the 11th Central Committee of the Chinese Communist Party, political life, economic life, and cultural life in Chinese society have all undergone tremendous changes and new developments. The current constitution is already fundamentally incapable of adapting to the needs of the new situation. Therefore it is very necessary to proceed immediately with its revision on a large scale.

The "Preamble" Must Be Systematically Revised

The "Preamble" indicates a country's orientation of development. On this, we must start a big operation and make a fundamental, systematic revision.

The second natural section of the "Preamble" reads: "Since the founding of the state under the leadership of Chairman Mao and the Chinese Communist Party, the people of all our nationalities have carried out Chairman Mao's proletarian revolutionary line in the political, economic, cultural and military fields and in foreign affairs and have won great victories in socialist revolution and socialist construction through repeated struggles against enemies both at home and abroad and through the Great Proletarian Cultural Revolution. The dictatorship of the proletariat in our country has been consolidated and strengthened, and China has become a socialist country with the beginnings of prosperity." This is a description of the process of the country's development and the country's outlook since the founding of the state. Quite obviously this is a bureaucratic composition that does not seek truth from facts. And it is definitely erroneous for part of this composition to devote so much space to the "Great Proletarian Cultural Revolution" and to affirm it positively. Nor is it appropriate to put "Chairman Mao" ahead of "the Chinese Communist Party." The way the "great victories" and "beginnings of prosperity" are broached also merits examination.

The third natural section of the "Preamble" reads: "Chairman Mao Zedong was the founder of the People's Republic of China." This approach definitely runs counter to the idea of the "Internationale" that "there never was any savior," not to mention the fact that Mao was not the only person who founded the People's Republic of China. There wer also Liu Shaoqi, Zhou Enlai, Zhu De, and other revolutionaries of the older generation and countless revolutionary martyrs; there were also hundreds and thousands of revolutionary people. These merits cannot all be attributed to a single person. Therefore, this sentence should be revised.

The fourth natural section of the "Preamble" reads: "The triumphant conclusion of the first Great Proletarian Cultural Revolution has ushered in a new period of development in China's socialist revolution and socialist construction." Here, not only is "disaster" written as "triumph" but, even more erroneously, "the first" is emphasized; this suggests that later on there will be a "second" and a "third." Therefore, this sentence should be among those subject to complete elimination.

This section further reads: "In accordance with the basic line of the Chinese Communist Party for the entire historical period of socialism, the general task for the people of the whole country in this period is: To persevere in continuing the revolution under the dictatorship of the proletariat, to carry forward the three great revolutionary movements of class struggle, the struggle for production, and scientific experiment, and to make China a great and powerful socialist country with modern agriculture, industry, national defense, and science and technology by the end of the century."

Although the so-called "basic line" here is not further expounded, everyone knows that it means "the three exists" (there still exist classes, class contradictions, and class struggle; there still exists the struggle between the two paths of socialism and capitalism; and there still exists the danger of capitalist restoration), and they must be "discussed yearly, monthly, and daily." This "basic line" was the final refuge of the sins that caused all the struggles for 10 to 20 years in Chinese society, and it is an old tune that should no longer be played again. The "general task" that is derived from the basic line also chooses to make "class struggle" salient, but it is far from complete since it does not make salient the shift of the focus of the party's and state's work. In Ye Jianying's speech at the meeting held to celebrate National Day last year, the "general task" was broached in a new way--that is, "to unite the people of all nationalities and bring into play all factors so that we can work with one heart and one mind and go all out, aim high, and achieve greater, faster, better, and more economical results in building a modern, powerful, socialist country." Later, in the revised draft of the Chinese Communist Party Constitution, the general task was further changed: "To unite the people of all nationalities, so that we can work with one heart and one mind, develop our socialist economy in a planned, proportionate way and with greater, faster, better and more economical results, and build a modern, powerful, socialist country with a high degree of democracy and a high degree of civilization." The constitutional revision this time should have an even more succinct and clearer formulation on the "general task," so as not only to make salient the focus of the state's work, which is modernization, but also to realize the spirit of democracy and rule of law in the country's political life.

The fifth natural section of the "Preamble" reads: "We must persevere in the struggle of the proletariat against the bourgeoisie and in the struggle for the socialist road against the capitalist road...." This is the Chinese Communist Party's basic line as reflected in the constitution. The so-called "bourgeoisie" actually no longer exists--the bureaucratic, comprador bourgeoisie was long overthrown; the property of the national bourgeoisie was long ago confiscated by the state; national bourgeois elements have long been transformed into laborers living on their own strength. Under such circumstances, continueing to talk about persevering in the struggle is like shooting an arrow without a target. Above all, what is meant by the "capitalist road" is conceptually very vague and can easily lead to confusion. Therefore, the revised constitution should no longer have these two "perseveres."

The sixth natural section of the "Preamble" reads: "We should consolidate and expand the revolutionary united front, which is led by the working class and based on the worker-peasant alliance, and which unites large numbers of intellectuals and other working people, patriotic democratic parties, patriotic personages, our compatriots in Taiwan, Hong Kong, and Macao, and our countrymen residing abroad." Here, the way intellectuals are excluded from the "worker-peasant alliance" as objects of the effort for "unity' is out of rhythm with the new point of view of the Chinese Communist Party, as expressed by Deng Ziaoping in emphasizing that intellectuals have already become part of the working class. It must be revised.

The seventh natural section of the "Preamble" reads: "Taiwan is China's sacred territory. We are determined to liberate Taiwan and accomplish the great cause of unifying our motherland." Everybody knows that the way to broach the Taiwan question now is "Taiwan's return to the motherland." Therefore, it is necessary to replace "We are determined to liberate Taiwan" with "Taiwan's return to the motherland."

The world is changing; international relations are also changing. The suggestion in the last natural section of the "Preamble" concerning the handling of international relations in accordance with "the theory of the three worlds" also warrants consideration. Although it is obviously rather difficult for all members of the Third World, such as China and Vietnam, to become "associated"--or "united," a trend of "association" between China and countries of the "Second World," and even United States of the "First World," has somehow emerged, and the formation of an "international united front" seems possible. Therefore, the principle and line concerning the handling of "international affairs" must also be revised somewhat.

"General Principles": Focus for Revision

The "General Principles" chapter prescribes the basic program for structuring the state and presents the overall outlook of Chinese politics, economy, and culture. Along with progress in the democratization of the state and the demand to further carry out democracy and the rule of law, and along with major reforms of the leadership system of the state and the national economic system that are in progress or are scheduled, the "General Principles" section of the current constitution would naturally become the focus for revision at this time.

Article 1 of "General Principles" prescribes: "The People's Republic of China is a socialist state of the dictatorship of the proletariat led by the working class and based on the alliance of workers and peasants." The state system of "a socialist state of the dictatorship of the proletariat" prescribed here no longer is in accord with China's present conditions. Along with the new changes in the conditions of the classes in the country, the working class, the peasantry, the petty bourgeoisie, and national bourgeoisie, and also those former landlords and rich peasant elements whose labels have already been removed, all belong to the category of the people. A relationship between those who dictate and those who are dictated to does not exist among the people. The "dictatorship of the proletariat" has fundamentally lost the objects of its dictatorship. And in political and economic life today, when the modernization of the state is being pursued, the question of people's democracy becomes very important; it is the principle aspect of the life of the state. Whether or not people's democracy is put into effect concerns whether or not the work of the four modernizations can be accomplished. Therefore, the suggestion of a "dictatorship of the proletariat" has become unecessary; it must be replaced by "people's democracy." This stroke should be one that concerns the fundamental blueprint of the future and the destiny of the state.

Articles 2 and 3 prescribe: "The Communist Party of China is the core of leadership of the entire Chinese people"; "all power in the People's Republic of China belongs to the people. The organs through which the people exercise state power are the National People's Congress and the local people's congresses at various levels." (And "The National People's Congress is the highest organ of state power" -- Article 20.) Here, if Articles 2 and 3 are considered together with Article 20, there is quite a contradiction. "The highest organ of state power" is not "the core of leadership," and "the core of leadership" is not a legally prescribed "organ of power." Then what is the relationship between the two? According to past experience (or we should say lessons), this means "Substituting the party for the government"--"the core of leadership" rules over the "organ of power." But China's political system from now on should incline toward "separation of the party and government." People's congresses at various levels and their standing committees must genuinely exercise their functions and wield their power. Hence, it obviously will no longer do to put "the core of leadership" above the "organ of power." Consequently, the wording regarding "the core of leadership" should be revised.

Article 5 prescribes: "There are mainly two kinds of ownership of the means of production in the People's Republic of China at the present state: socialist ownership by the whole people, and socialist collective ownership by the working people." Today, the state allows private individuals to run industrial and commercial enterprises, and allows the existence of individual economy and its development within certain limits. Therefore, the two kinds of ownership should be changed to three kinds of ownership, with the addition of private ownership.

Article 7 prescribes: The rural people's commune sector of the economy is a socialist sector collectively owned by the masses of working people. At present, it generally takes the form of three-level ownership--that is, ownership by the commune, the production brigade, and the production team, with the production team as the basic accounting unit. A production brigade may become the basic accounting unit when conditions are ripe.

"Provided that the absolute predominance of the collective economy of the people's commune is ensured, commune members may farm small plots of land for personal needs and engage in limited household sideline production, and in pastoral areas they may keep a limited number of livestock for personal needs." Here, the idea that "a production brigade may become the basic accounting unit" is no longer suitable to the spirit of the time; it was a product under the influence of "transition in poverty" exemplified by Dazhai; this is point one. Point two, the Chinese Communists' economic policy in the countryside has already undergone considerable change; the "three self and one fix" (the extension of plots for private use, the extension of free markets, the increase of small enterprises with sole responsibility for their own profits or losses, and the fixing of output quotas based on individual households), which used to be regarded as the "black model" for capitalist restoration, has now been reaffirmed. At present, a "fever for fixing output quotas" now prevails in China's vast countryside. Therefore, the prescription "provided that the absolute predominance of the collective economy of the people's commune is ensured" should be revised. The "three self and one fix" should now be prescribed in the newly revised constitution, and be prescribed more clearly and more concretely.

Article 11 prescribes: "The state adheres to the general line of going all out, aiming high, and achieving greater, faster, better and more economical results in building socialism...." This so-called "gerneral line," together with the "Great Leap Forward" and the "people's communes," make up what people have come to know as "the three red banners"; they were the representative products of Mao Zedong when he began to promote his "leftist" line in the late 1950's. The "Great Leap Forward" has already been rejected; "people's communes" are full of problems; and the general line has long been criticized as being representative of the fanaticism of the petty bourgeoisie. Regarding this line, words like "going all out, aiming high" are at best the nature of a poster or a slogan void of any substantive meaning. According to the new situation and new task under the state program for the four modernizations, it is fundamentally impossible for this "general line" to guide the Chinese people to their expected destination. Therefore, the revised constitution must prescribe a general line, in form as well as in substance, that can really become the criterion for action by the Chinese people to their expected destination. Therefore, the revised constitution must prescribe a general line, in form as well as in substance, that can really become the criterion for action by the Chinese people in their attempt to build socialism. It is necessary to incorporate the spirit of the new economic principles--"give full play to superior local conditions, exalt strong points and avoid weak points, protect competition, and promote association."

The same article also prescribes: "In developing the national economy, the state adheres...to the principle of taking agriculture as the foundation, and industry as the leading factor...." This, too, is no longer in accord with current conditions in the development of China's national economy. In the past, because of the emphasis placed on the principle of taking "industry as the leading factor," the foundation was "trampled underfoot." This seriously affected the development of the national economy of a China established on the foundation of agriculture. Hence, "industry as the leading factor" should no longer be suggested; instead, the proportionate development of energy, communications, the building industry, agriculture, light industry, and heavy industry should now be suggested.

The provision of Article 12 concerning the "development of scientific enterprises" must clearly add some wording on encouragement and rewards for scientific and technical workers who come up with inventions and creative achievements.

Article 13 prescribes: "...Education must serve proletarian politics and be combined with productive labor, and it must enable everyone who receives an education to develop morally, intellectually, and physically and become a worker with both socialist consciousness and culture." This means that the education principle and the education work principle prescribed by Mao Zedong have been written into the text of the constitution. The question of education being combined with productive labor" and the question of training the "worker," which once was emphasized here, led to great deviations and brought great losses to the educational enterprises of the state. This made the schools neither civilian nor military institutions, and a considerable part of the students neither well nor poorly trained. Therefore, the wording about education being "combined with productive labor" should be discarded, and the training of the "worker" should be changed to the training of "competent personnel for the four modernizations."

Article 14 prescribes: "...All cultural undertakings must serve the workers, peasants, and soldiers and serve socialism." "The workers, peasants, and soldiers" are of course the principal players in the state, but they are not the only players. "Serve the workers, peasants, and soldiers" must be changed to "serve the people of all of China."

Article 15 prescribes: "The leading personnel of state organs at all levels must conform to the requirements for successors in the proletarian revolutionary cause, and their composition must conform to the principle of the three-in-one combination of old, middle-aged, and young." This article clearly must be amended: Repeal the lifelong tenure of cadres, recruit them young and make them professional, and carry out a cadre retirement system.

Article 17 prescribes: "The state adheres to the principle of socialist democracy and ensures to the people the right to participate in the management of state affairs and of all economic and cultural undertakings, and the right to supervise the organs of state and their personnel." Whereas China in the past has not seriously practised people's democracy or insisted on the principle of democracy, and whereas for a long time it has subscribed to "rule of man" rather than "rule of law," and whereas, from the point of view of a basic blueprint to run the country, democracy and rule of law are fundamental, the principle of democracy and the principle of the rule of law are equally important, and the absence of either of them will no do: therefore, this article must be amended with the provision that the state adheres to the socialist principle of rule of law and insists on the equality of everyone before the law.

The provision of Article 18 on landlords, rich peasants, etc., is no longer suitable to the present conditions and may be discarded.

Article 19 prescribes: "The Chairman of the Central Committee of the Communist Party of China commands the armed forces of the People's Republic of China." Such concentration of party authority and military authority in one person is a premise for "substituting the party for the government" and the key to the shaping of a dictatorship by the party leader. Since the Party Central Committee Chairman legally wields military power, it is easy for him to command everything, in the absence of all restraints. The reason Mao Zedong was able to carry out a "patriarchal system," to practise "only what I say counts," is fundamentally because he held the military power in his hands. Have people not often said so? The reason Mao Zedong was able to instigate the "Cultural Revolution," dared to start the "Cultural Revolution," and overthrow whomever he wished to overthrow was precisely because he held military power and firmly secured the military. This lesson has been painful! From now on, whether or not China's military power should continue to be wielded by the party chairman, and whether or not the constitution should still provide that the "Chairman of the Central Committee of the Communist Party of China commands the armed forces of the People's Republic of China," are things that really must be considered carefully! Besides, the military is ordinarily an important component of the state apparatus. The party is the party, the government is the government, and the military is the military; it is neither appropriate to "substitute the party for the government" nor permissible to "command the military through the party." From now on, China's military power should be rationally entrusted to qualified, prestigious generals well versed in military affairs (Mao Zedong would ordinarily be considered well versed in military affairs), but not necessarily to the party chairman in charge of ideological leadership. This question concerns matters of great and far-reaching importance; the Constitutional Revision Committee must treat it seriously!

(The above are this writer's views on the "Preamble" and "General Principles" of the current constitution. Other views will be contained in another article, to be published in the next issue.)

PARTY AND STATE

FURTHER DISCUSSION OF 'EVERYONE IS EQUAL BEFORE THE LAW'

Shanghai SHEHUI KEXUE [SOCIAL SCIENCE] in Chinese No 4, 20 Aug 80
p71-78

[Article by Pan Nianzhi [3382 1819 0037] and Qi Naikuan [7871 0035 1401] of the Shanghai College of Social Sciences, Legal Research Institute: "Further Discussion of the Issue 'Everyone is Equal Before the Law'"]

[Text] In our article "On 'Everyone is Equal Before the Law'" we pointed out that this principle of the socialist legal system is an all-embracing principle, incorporating not only the legal system but also the legislature. After publication of this article some comrades expressed agreement while others expressed opposition. Those comrades in opposition said that "everyone is equal before the law" is appropriate only for legal equality and cannot be "enlarged" to include legislation. The reason is that "law is a tool of class oppression while it itself has no class equality to speak of. The application of Marxist class theory to legislation can make no mention of class equality as this would produce class harmony and revisionism." This opinion probably refers to "there can be no talk of equality between anti-revolutionaries and revolutionaries." Anti-revolutionaries of course cannot be given any equal rights but whether or not the law itself has factors of equality or socialism has equality is altogether another matter and they cannot be treated together. To go from complete prohibition of saying "everyone is equal before the law" to permitting the explanation of it as no one is above the law cannot be called any great progress, but thought must be liberated and all taboos must be removed. We now present several topics which explain the implications of the slogan "everyone is equal before the law.

(1) A Discussion of the Concept

The main reason why there has been so much controversy over the slogan "everyone is equal before the law" is because everyone has different ideological viewpoints and at the same time the concept is unclear and also because surface meanings are given for some specialized terms so that divergent explanations thus occur. In order to clarify the concept and significance of "everyone is equal before the law" we first present here a quote from Lenin's ZIYOUPAI JIAOSHOU LUN PINGDENG [DISCUSSIONS OF EQUALITY BY LIBERAL FACTION PROFESSORS].

Lenin said: "While the bourgeoisie was struggling with the Middle Age, feudal, slave system of class privilege it made demands for completely equal citizen's rights." (LIENING QUANJI [COMPLETE WORKS OF LENIN] Vol 20, p 138)

First of all Lenin explains that the first use of the slogan "everyone is equal before the law" was in bourgeois opposition to the feudal system. This points out the goal and the historical background, which is of great help in understanding the content of this slogan. Next, and also very important, it explains the contrast between the class privileges of the feudal system and the completely equal citizen's rights advocated by the bourgeoisie. It actually opposed feudal privileges and demanded the implementation of equality for everyone as found in bourgeois democracy.

A reading of bourgeois documents on law proves that Lenin's thesis is absolutely correct. In the "American Declaration of Independence of 1776, "everyone is equal before the law" included the rights of life, liberty and the pursuit of happiness. The "French Declaration of Human Rights" of 1789 said "people are born with the right to lifelong feeedom and equality," "all citizens are equal before the law." The "Constitution of the Swiss Federation" of 1874 said "All Swiss citizens are equal before the law. In Switzerland there are no relationships of servant and master or any privileges of position, birth, status or family." The "Constitution of Japan" of 1946 said "All the people are equal under the law and there are no differences because of race, creed, sex, social status or family status in political, economic or social relationships." All of these passed through legistative processes and very clearly make legal stipulations regarding the equal status of citizens and oppose special privileges. However, the bourgeois democratic system ultimately is but a private ownership system and as far as the proletariat is concerned it is nothing but an empty form. Just as Lenin said, "Bourgeois democracy asserts that at all times and in all places all citizens have equality of sex, creed, race and nationality, but this equality has never been implemented anywhere and, moreover, capitalist dictatorship prevents it ever being implemented. A soviet government or proletarian dictatorship immediately implements equality of this kind because only through elimination of the bourgeois private ownership system and by opposing the division or re-division of the workers' rights over the means of production can this goal be attained." (GONGCHAN GUOJI DIYICI DAIBIAO DAHUI [FIRST CONGRESS OF THE COMMUNIST INTERNATIONAL] in LENING QUANJI Vol 28 p 442) Lenin herein points out the emptyness of the so-called bourgeois equality, that only proletarian equality is real, and moreover points out the reasons underlying the discovery of these differences.

In ZIYOUPAI JIAOSHOU LUN PINGDENG Lenin said, "Socialist references to democracy awaays mean social democracy and equality of social status." "Politically it refers to equal rights and economically it eliminates classes." Lenin's equal rights "give all the masses true equality with general participation in all affairs of state." Elimination of classes "means that all citizen's have the same rights to make use of the public means of production, public land and public factories when engaging in labor. (LIENING QUANJI Vol 20 p 139) This gives a very clear explanation of the content and definition of the slogan "everyone is equal before the law" within the socialist system.

Comprehension of Lenin's statements given above provides a simple and clear concept of our use of the slogan "everyone is equal before the law." This is to say that the "equality"refers to equal rights and "everyone" refers to the legal code. The law must of course be implement d so it refers to the application of the laws. The complete meaning and content of "everyone is equal before the law" is opposition to all exploitive privileges and the implementation of socialist democracy. To this point in time which of our leaders and which of our party and state documents have favored privileges and opposed democracy? None of course. However, there are some comrades who refer to the "class nature of law" and "a dictatorship cannot speak of equality" to oppose the slogan "everyone is equal before the law." It appears that our article cannot be concluded here but must make an analysis of these statements.

(2) How to Comprehend "Elimination of Classes"

Some comrades say that classer are unequal so that in a class society there can be no equal relationships between people and that only after the elimination of classes can there be equality. Therefore, they not only denounce the bourgeois formulation "everyone is equal before the law" as empty and also say that our use of "everyone is equal before the law" is not practical (which entirely refutes this slogan) or is not completely practical (this partial approval permits legal equality but does not permit legislative equality). We do not entirely agree with these statements. "Equality means the elimination of classes" is a Marxist principle and the founders of modern social science Marx and Engels have said that if we do not understand equality as the elimination of classes it is merely an empty word. This of course is correct, the problem lies in understanding the "elimination of classes."

The class structure of each society is different and the class relationships are also different. There are several different conditions involved in making a connection between equality and class.

First, in countries with landlord-bourgeois dictatorships all property and all political power is in the hands of the property owners. They depend on their financial and political powers to engage in exploitation. The workers lack property and depend on selling their labors to earn a living and thus cannot escape repression and exploitation. "Since capitalists and landlords have financial and political power and the workers lack these powers there can be no true equality between factory owners and workers or between landlords and peasants." (GUANYU SULIAN XIANFA CAOAN [ON THE DRAFT OF THE SOVIET UNION CONSTITUTION] in SIDALIN XUANJI [SELECTED WORKS OF STALIN] Vol 2, p 402) This is one condition.

Next, when the proletariat has won political power and controls political power, yet the bourgeoisie continues to engage in a life and death struggle, then in order to suppress bourgeois resistance and defeat the bourgeoisie the proletariat cannot but eliminate their weapons and take away their rights. "Victory is complete," "in a transitional period and is a time of fierce struggle we not only do not permit freedoms but issue warnings that we will take away the rights of those citizens who obstruct the socialist revolution." (QUANE GONGHUE ZHONGYANG LISHIHUE QUANHUI [THE ALL RUSSIA CENTRAL UNION MANAGERS CONFERENCE] in LIENING QUANJI, Vol 29, p 265) This also is a condition.

Of course Lenin also said, "To win equality we must eliminate classes, so we must also eliminate the differences between workers and peasants."(QUANE SHEHUIJIAOYU DIYICI DAIBAIO DAHUI [FIRST ALL RUSSIA CONGRESS IN SOCIAL EDUCATION] in LIENING QUANJI Vol 29, p 322)

Just what is the elimination of class? What Lenin said was to place all citizens in a position of equal status in their relationship to the means of production, which is to eliminate the bourgeois private ownership system, eliminate exploitation and implement a socialist system of public ownership over the means of production. The key problem is the elimination of exploitation because to have exploitation means to have privileges which then prohibits equality. Therefore he said: "The exploiters cannot be equal with those exploited," "not until the possibility of one class exploiting another class has been completely eliminated can there be any true and practical equality." (WUCHANJIEJI GEMEING HE PANTU KAOCI [THE PROLETARIAN REVOLUTION AND REBEL (kaoci ji) [5072 5412 1015]] in LIENING QUANJI Vol 28, p 234) The reason why he made a connection between elimination of classes and elimination between the differences between workers and peasants was because at that time the peasants were private owners and part-time laborers and there is the possibility of the private ownership of the petty bourgeoisie becoming capitalism, so he "had to take the necessary precautions to avoid aiding the bourgeoisie." As for the private plots, household sideline occupations and individual village ecomomies now found in China as long as there is no exploitation then there is no variance form Lenin's concept of private ownership.

From this it can be seen that the key to eliminating classes is to eliminate the exploiting class. The phrase having classes prevents equality refers to the relationship between the exploiting class and the exploited class and is an opposition to class relationships. As for the time when the exploiting class has already been eliminated and three is no class opposition, that is a different condition.

Therefore, the problem is very clear. Under the dictatorship of the exploiting class the working people do not have equal rights and when elements of the exploiting class still are in opposition the proletariat cannot give them equal rights. Another problem also is very clear. When the proletariat has become the ruling class and won democracy, eliminated the private ownership system and the system of exploitation the workers wil then have broadranging, real democracy. When the exploiters no longer are in opposition and classes have been eliminated equality can then be broadly extended to the whole populace and it can truly and thoroughly implemented.

(3) The Question of Whether or Not Socialist Law has Equality

Some comrades say that both the law and the state are tools of class dictatorship and have class nature rather than equality. We believe that this problem cannot be treated as a whole but rather must be concretely divided up, as the question of equality in socialist law is one requiring special investigation.

Law expresses the will of the ruling class and it works in the interest of the ruling class. There is no error in this. The problem arises from the complexities of class interests and class consciousness as there cannot be one without the other. The common interests and will of the exploiting classes are to engage in exploitation but because of changes in the proportions between production relationships and class forces in different societies at different times, exploitation is carried out by a variety of means and methods. In order to carry out exploitation the ruling class adjusts the internal relationships and in order to distribute the spoils of exploitation the ruling class must make even greater adjustments to the internal relationships. The law simultaneously reflects the various social relationships, among them are the aspects of repression and the lack of it, the aspects of equality and the lack of it. There also is the condition of formal equality and actual inequality, and bourgeois laws are specially like this. So practically speaking all exploiting class laws serve to maintain the rights of the exploiting class to carry out exploitation and for the working class these laws are fetters and cudgels and there is no equality to speak of.

Socialist societies and the exploiting classes are fundamentally dissimilar. The proletariat opposes exploitation, eliminates private ownership of the means of production, eliminates exploitive systems and ultimately eliminates classes. Therefore there is no class opposition in a socialist society. In the early period of a socialist society there is an exploiting class and exploitive elements and there are antagonistic class relationships but these are remnants of the old society and are not fixed features of a socialist society and are to be eliminated rather than kept for any length of time. When the proletariat transforms the old society and builds a new one it does not need any privileges but uses the worker-peasant alliance as a base to unite over 90 percent of the people in combining their strength as one. In this way socialism eliminates exploitation and eliminates class and it struggles for equality and implements equality. Lenin never said that the proletariat ignores and does not want equality but said: "If equality is precisely understood as the elimination of classes then the proletarian fight for equality and the slogan about equality truly have great significance." (GUOJIA YU GEMING [STATE AND REVOLUTION] in LIENING QUANJI, Vol 25, p 458)

Socialist law embodies proletarian will and the protection by proletarian leadership of the broad people's interests and naturally has a class nature.

Socialist law is established on the basis of the socialist public ownership system and moreover serves this basis. It reflects the proletarian will, demands the eradication of all exploitative systems, eliminates traitors, counter-revolutionaries and other criminal elements, firmly supports socialist democracy, protects the people's legal rights, mobilizes all positive factors, and guarantees smooth, complete socialist construction. This is the class nature of socialist law and also is the task of the proletarian dictatorship. From the point of view of surrprssing the resistence of the exploiting classes and punishing criminal elements it is a tool of implementing dictatorship. However, socialist law also functions to protect democracy and the people's rights, so from this aspect it is a tool for implementing democracy.

Socialist law has a class nature and this is the elimination of exploitation and classes. Since the elimination of classes means to be equal socialist law then possesses equality. Both class nature and equality exist within socialist law, the two are the same and there is no contradiction. Lenin said, "Democracy is a national form, a sort of national attitude. Therefore, it is like any nation in that it systematically organizes the use of force on the people. This is one aspect. But from another aspect, it means the formal recongition of the equality of all citizens and recognizes that everyone has equal rights to determine the national system and manage the state." (GUOJIA YU GEMING in LIENING QUANJI Vol 25, p 459) When democracy (equality) and dictatorship exist within a unified national attitude there must be a change from excessive equality for some of the people to equality for all of the people. How then can it be said that laws which are a tool of class repression have no equality?

In a speech titled GUANYU ZHONGHUA RENMIN GONGHEGUO XIANFA CAOAN [ON THE DRAFT OF THE CONSTITUTION OF THE PEOPLE'S REPUBLIC OF CHINA] given in June of 1954 Comrade Mao Zedong said: "The draft of our constitution has both principle and vitality. There basically are two principles -- democratic principles and socialist principles." According to these constitutional principles China has implemented broad ranging people's democracy not only of workers, peasants and intellectuals but also including national bourgeoisie, enlightened gentry among the rich landlords, Nationalist Party soldiers and officers who engaged in uprising and other Chinese nationals, and all of these equally enjoy citizenship rights under the leadership of the proletariat. As for the minority nationality areas, since they were areas of the peasant slave class and were not objects of the dictatorship they have always enjoyed equal citizenship rights. This principle if equality is related to the great democratic united front strategic thinking of the Chinese Communist Party. This democratic united front today includes the workers and patriots within the scope of the even broader revolutionary patriotic united front. Because of our concrete national situation and the party's correct policies there has been a weakening and reduction of resistence from the exploiting class, obstruction has been transformed into assistence and there is no need to exercise dictatorship over any entire class. Practice is the only standard for testing the truth and after undergoing practice is it implementation of the democratic united front policy that will benefit the nation or is it lifelessly hanging on to a theory of inequality that will benefit the nation? The equality of socialist law is an actual social condition, the manifestation of revolutionary practice and a development of Marxism. It cannot be refuted.

As for legislative practices, in 1954 China promulgated the first constitution, and article one of section three (the whole document consists of 85 articles) stipulates: "The citizens of the People's Republic of China are all equal before the law," which incorporates the general principles of rights and duties of all citizens. After this comes the citizen's rights which incorporates an affirmative statement of all political rights. Except for the article concerning voting rights and candidacy rights there are no "provisos." All of the rules of the constitution naturally are laws. Since the constitution rules that "everyone is equal before the law" how can anyone deny that this is a legal principle. After the proletariat came into power it opposed the bourgeois repression of the minority nationalities and of women and immediately promulgated equality for the minority nationalities and equality of the sexes. These principles were mentioned by Lenin, Stalin and Mao Zedong and moreover they were clearly stated in the Soviet Union constitution in 1936 and in the Chinese constitution. Since equality of the minority nationalities and the sexes are legal principles why isn't equal rights for all citizens also a legal principle?

There are two special regulations concerning voting and candidacy rights. One is that some former landlords and rich peasants have no political rights. The 1954 constitution says, "For a period of time the state laws shall deny political rights to feudal landlords and bureaucratic capitalists." The 1978 constitution says, "The state laws deny political rights to unreformed landlords, rich peasants and reactionary capitalists." The phrase "for a period of time" has become "unreformed" and among the landlords and rich peasants are a number of enlightened gentry whose political rights were never denied, so obviously this does not refer to an entire class. This is just like Stalin's GUANYU SULIAN XIANFA CAOAN of November 1936 wherein he quoted Lenin's words of 1919, "The Soviet government's denial of voting rights to non-workers and exploiters is not permanent but is temporary and for a limited period of time." Stalin also pointed out, "In 1919 Lenin said that in the not too distant future the Soviet government would realize the benefits of completely unrestricted general voting rights. Please take note -- completely unrestricted." (SIDALIN XUANJI [SELECTED WORKS OF STALIN] Vol 2, p 417) After Stalin made these remarks the Soviet Union constitution was formally adopted and with completely unrestricted elections.

In China the scope of denial to these various elements is being reduced daily and many people are no longer branded but have had their political rights restored. In 1975 the standing committee of the National People's Congress issued several rulings which gave general pardons to all incarcerated war criminals and former Nationalist Party elements above county and regimental rank and granted them citizenship rights. After the promulgation of the 1978 constitution a rather large number of officials who had "undergone educational reform and demonstrated good behavior" were no longer branded as landlords, rich peasants, reactionaries and bad elements and were granted citizenship rights. After developments in socialist construction are made the proletarian dictatorship becomes more secure and the persons undergoing reform are rehabilitated, perhaps never again to be exploiters to be branded and have their political rights denied them. In this way, except for those violators of the criminal code who have lost their political rights, hasn't the time arrived when there no longer will be anyone whose political rights are denied them by constitutional stipulations? Practice has proven that when the proletariat is already secure in its political power, and when the exploitive system has been eradicated then all those who favor socialism, all those who may not wholeheartedly favor socialism but who do obey the laws and all patriots can be granted equal citizenship rights and this not only does not harm socialist construction but is even beneficial to the revolution and to construction.

As for the differences between the cities and the countryside in the number of representatives from an electoral district this is another matter of an entirely different nature and cannot be used to make claims for any legal principle of class inequality. This is because, first of all, in terms of voting rights the peasants and workers alike have one vote per person. Next, in terms of candidacy rights the peasants are neither denied them nor have stopped using them. The reason for the difference in the number of representatives for the cities and the countryside is that at present China's total population is largely composed of peasants. An example of another election law is that which covers the minority nationalities areas which have an especially small population. The number of representatives is at a lower ratio that for other groups of people. This regulation should not be called a tendency toward inequality for minority nationalities but rather should be called a policy which implements equality for nationalities. This explains how our election laws regulate the selection of representatives for different population ratios and is not class inequality. Anyway, the rural population is not entirely peasants and not all town and city persons are workers. Almost all of the original bourgeois elements and other patriotic people live in cities and they participate in elections just as the workers do. So how can one say that the original bourgeois elements and other patriotic people have a class status superior to that of the peasants?

In his 1954 report titled GUANYU ZHONGHUA RENMIN GONGHEGUO XIANFA CAOANDE BAOGAO [REPORT ON THE DRAFT CONSTITUTION OF THE PEOPLE'S REPUBLIC OF CHINA] Comrade Liu Shaoqi said: "Because of the various actual conditions now found in elections, for a certain period of time we must use legal methods to deny voting and cnadidacy rights to feudal landlords and bureaucratic capitalists, must also regulate different per capita proportions of delegates for the city and countryside, implement a multi-grade electoral system and in the basic level elections must also use a system of majoirty opproval. Our electoral system must be gradually improved and after preparations have been completed a general, equal, direct and secret voting system must be implemented." The principle is that all citizens are legally equal and its vitality is that in a concrete situation within a certain time period it is flexible and adaptible and this felxibility permits it to change according to changing conditions. Isn't this a realistic application of Marx-Leninism?

(4) The Question of Equality for Everyone under the Dictatorship of the Proletariat

Some comrades say that China has a proletarian dictatorship which should be exercised over its targets and that political rights should be denied to these targets. The people and the enemy can never be equal. This naturally is correct. Marxism teaches us that without being subjected to proletarian dictatorship the bourgeoisie cannot be defeated, and there will be no building of socialism and communism. However, to correctly understand the theory of dictatorship it is first necessary to understand the tasks and historical changes of dictatorship.

According to the explanation of Chairman Mao Zedong the first function of proletarian dictatorship is to repress the nation's internal reactionary class, the reactionary faction and the exploitive elements which oppose the socialist revolution and to repress those destructive elements which oppose socialist construction. The second function of dictatorship is to prevent the nation's external enemies from engaging in activities to overthrow the revolution or from staging an invasion. The goal of the revolution is to guarantee that all the people can peacefully engage in their labors and build China into a socialist nation with modern industry, modern agriculture and modern science. According to Stalin's explanation a socialist state has three functions. The first is to suppress internal bourgeous opposition, the second is to prevent external invasions and the third is to carry out economic and cultural construction. This is just what Chairman Mao said, although he made socialist construction a goal of proletarian dictatorship and made the two other functions into methods for accomplishing this goal, which is a clearer and more precise explanation. In addition to such negative methods of guaranteeing socialist construction as opposition and destruction by internal and external enemies there also is a positive function in the mobilization of all forces to carry out peaceful construction.

This line of uniting some and opposing others changes according to developments in the revolutionary situation and changes in the class structure. Chairman Mao always divided up the categories of the people and the enemy according to different countries and the different historical periods in the individual countries. During the periods of socialist revolution and socialist transformation the overthrown landlords, rich peasants, bureaucratic capitalists and other reactionary forces do not accept their defeat and oppose socialist transformation, oppose proletarian dictatorship and plot their restoration by carrying out various revolutionary activities. They must be strongly attacked and fiercely repressed and a violent large-scale class struggle cannot be avoided. At that time the target of proletarian dictatorship, the enemies of the people, will of course be those landlords, rich peasants, bureaucratic capitalists and other anti-revolutionary elements. However, a relatively long period of socialist revolution and socialist transformation has passed and conditions have already changed. Last year Comrade Hua Guofeng presented his analysis at the second session of the Fifth Congress. He said that because the party has adopted a very reasonable policy of which the great majority of people approves, the feudal system and the capitalist exploitative system have already been eradicated, the small-scale production system has been transformed and landlords, rich peasants and bureaucratic capitalists no longer exist. Since these latter groups no longer exist the ranks of the workers have also been enlarged. The new formulation is that intellectuals are workers, bourgeois elements have already been transformed into workers, and the original landlords, rich peasants and bourgeois elements have already been transformed into self-supporting workers. his historical task is fundamentally complete and is the major contribution of the Communist Party and Mao Zedong.

China has now reached a new era of modern socialist construction. The revolution has developed, the situation is the class struggle has changed and the object of the dictatorship has also changed. The system of exploitation has been wiped out and the exploiting class cannot return, which is to say that we have taken a large step toward the final goal of "elimination of classes" and the period of "implementing general elections without any restrictions whatsoever" is within sight. Today there are a number of comrades who still feel that under proletarian dictatorship there is no equality worth mentioning and who take the "legislative class inequalities" as eternal principles. Isn't this entirely without basis and hasn't it turned into target shooting minus the target?

Can we do without proletarian dictatorship whether or not here now is any class struggle? The answer is no. This, first, is because the primary task of proletarian dictatorship is socialist construction. This task is not only incomplete but is even more urgent and has become the focus of work for the party and state. Second, there is no lessening of the task of preventing outside aggression. Because of the strengthening of the socialist-imperialist nations' powers of aggression, our anti-aggression tasks have become more prominent and more important. Third, the internal class struggle still exists to a certain degree and the task of repression has not been completely eliminated. In the present period of building socialist modernization our society still has counter-revolutionary elements and enemy agents, still has some remnants of the "gang of four" and some unreformed old exploitive elements and still has new exploitive elements who engage in corruption, bribery, speculation and profiteering. They are capable of taking an anti-socialist stance and continuing to engage in activities which oppose and destroy the socialist system and socialist construction. A firm class struggle must be waged against them and it would be a complete error to relax the struggle against them. However, under normal conditions these anti-socialist elements cannot form a class. Therefore, the spearhead of proletarian dictatorship is today not pointed toward any class but rather is pointed toward those few anti-socialist elements, who are such major criminals. This class struggle against these major criminals, whether on a political, economic or ideological level operates entirely according to the law in following the legal processes of investigating to determine the facts and in following the laws to determine what crime has been committed and what the punishment should be.

Our constitution very clearly stipulates the "four resolutes" and stipulates that the basic task of the proletarian dictatorship of the state is to "protect the socialist system, repress all rebel and counter-revolutionary activities, punish all traitors and counter-revolutionary elements, punish the new bourgeois elements and all other bad elements," and "protect the socialist revolution and socialist construction." The constitution similarly stipulates the citizen's basic rights and duties, with equality for all, no class restrictions and no special privileges for anyone. Our new criminal code stipulates that for counter-revolutionary crimes, crimes against public safety, destructive crimes against the socialist economic order, crimes against the democratic rights of citizens, financial crimes, crimes against socialist managerial order, crimes against marriage and the family and dereliction of duty there will be punishment of a severity consonant with the seriousness of the crime and no matter what the class status of the criminal the punishment will be determined according to law. The criminal code is an extremely sharp and prominent tool of the dictatorship and one which does not determine punishment according to class status. This clarifies the point that the target of our proletarian dictatorship is serious criminals and what is important is whether or not they have endangered our socialist endeavors, whether or not there is evidence of crime, and not making destinctions based on class status. Dictatorship must be exercised over all major criminals elements and the policy that citizens are "all equal before the law must be implemented. This is the dialectical unity of proletarian dictatorship with the concept "everyone is equal before the law."

Some comrades still feel that for the proletarian dictatorship, in addition to repressing class enemies, there ought to be more equality between the leaders and those led. An example is that although peasants and the bourgeoisie both have the right to participate in the legislative process they have virtually no function in determining policy and law and cannot be on an equal footing with the workers. Such an explanation is entirely incorrect.

We know that in socialist countries proletarian leadership is accomplished through the communist party and that party leadership of the proletarian dictatorship and socialist endeavors has a history of 60 years of true Marxism, and that the party's correct policies and the party members' model actions exercise a leadership function for all the people. Our constitution stipulates that the proletariat is the leadership class and the Chinese Communist Party is the leadership core for the entire nation but it does not stipulate that the proletariat and the party or the workers and the party members have any special privileges. The workers and peasants as well as all other people are of equal status. In politics everyone has voting and candicacy rights and has the right to be chosen as a people's delegate or responsible person in a government organization. All those chosen as delegates have the right to make speeches, offer legislation and make decisions. There are no distinctions such as first and second class delegates and so such distinctions as delegates with or without rights. In our country the only distinction is that of type of labor and there are no distinction of noble or humble people. There are no slaves lower than others or nobles superior to anyone. Cadres of all levels are the people's public servants and their only duty is to earnestly serve the people. They have no special political or economic rights. All party members are equally comrades and fellow warriors and leading party cadres serve the people with an attitude of equality. The secretary of the party committee is on an equal basis with the members of the party committee, the secretary or first secretary should be good at providing a consensus of opinion rather than permitting any single voice to decide issues or the existence of any head-of-household style system. The party organization and party members should have close contacts with the masses, go among the masses, be observed by the masses and not be permitted to rise above the masses. There is complete social equality between the leaders and those led. If there is not true equality between the leaders and those led and the leaders rise one level above people then there certainly will be other levels of privileged people above them, just like the layers of a pagoda. Would therethen be any people's democracy or people's rights? Would there then be building of socialist modernization? This explanation of "everyone is equal before the law" is not only totally negative, it also destroys the worker-peasant alliance and democratic unity. It is of great danger and must be opposed.

(5) Several Points of Explanation

All the above explains the the significance of "everyone is equal before the law," opposes privileges and favors democracy. It is equal political rights and an absence of economic inequalities rather than any other sort of equality. After they become legislation and the law stipulates these principles of equality the people must demonstrate the spirit of equality. This sort of equality can be found only in a socialist society which has socialist laws and cannot be found in other societies with other legal systems. It can be completely manifested only with eradication of the exploitive system and with the elimination of the exploiting class. At that time society will already be without any opposing class, there will be no "class equality," and naturally there will be no "theory of class harmony." Such equality is equality in principle because the concrete problems of each age and each situation produce special conditions, such as in the case of the denial of political rights resulting from criminal offenses, but not denying the principle of legal equality, because equal rights are granted through laws and the denial of political rights is because of individual responsibility in breaking those laws.

Equality in application of the laws is also another type of equality though this is not the basic significance of "everyone is equal before the law" but is to operate according to the law (actually it only means to follow the law in making verdicts). To operate according to the law has no independent significance and has no equality or inequality , it is only that the laws that are followed can produce different results. Only if the content of the laws is equal do they have the potential for equality in application, if the content of the law is unequal there is no possibility of equality. For example, if the law stipulates that some people have special privileges while others do not and that different people receive different punishment for committing the same crime then in the application of the laws there is no equality for all people. If the law says that men deserve respect and women do not, that women should adhere to the three obediences and the four virtues, then observance of such laws will reinforce the inequality of men and women.

We would like to add here that in our last article we said that Marx revealed the stupidity of bourgeois scholars who do not oppose the partiality of the law and yet dream of getting just decisions, to which some comrades responded by saying that was wrong. We now repeat the quote and add a few more points so the people can see how things really are.

Marx said: "If one believes that there can be fair judges under the partiality of the legislators that really is a stupid, unrealistic fantasy. Since the laws are selfish and self-interested what then is the significance of those just and unselfish decisions? The judges can only go along with the expression of the selfishness and self-interest of the laws and give them unconditional support. Under such conditions a just decision is but a formality and embodies no justice, The substance of the decision is already determined by the law. If the legal procedure is ultimately nothing but a vain exercise then this empty formality lacks and independent value." (DILIUJIE LAIJUNSHENG HUIYIDE BIANLUN [THE DEBATE AT THE SIXTH (LAIJUN) PROVINCIAL CONFERENCE]in MAKESI ENGESI QUANJI [COMPLETE WORKS OF MARX AND ENGELS] Vol 1, p 178)

Marx very clearly says that the application of the law (a verdict) is but a formality which is subordinate to the substance of the law. The substance of the legislature, judiciary and the laws cannot be separated from the application of the laws (we extend our thanks to a comrade for this point), even though there still are some bourgeois scholars who do not oppose the partiality of the laws and still have fantasies of just decisions. In illustration of this, we ask if Marx's revelation is not an excellent, fair and accurate criticism of the present-day division of the legislature and the juciciary which then only faces the question of legal equality and ignores legislative equality?

Since the founding of the country the party and the state have had three formal documents which utilized the slogan "everyone is equal before the law." In 1954 the constitution said: "The citizens of the People's Republic of China are all equal before the law," which is the general principle of rights and duties of the citizens. The 1978 public report of the Third Plenary Session of the Eleventh Party Congress says: "The people are all equal before their own laws," and this is derived from the demands for "developing democracy and strengthening the legal system and "systemizing and legalizing democracy." The 1979 National Day slogans were "everyone is equal before the law" and "everyone is equal befo e the truth," which opposed anyone monopolizing law and truth and demanded that people equally discuss law and truth and equally obey law and the truth. Although the wording of these three is dissimilar the substance is exactly the same. Some comrades feel that the new formulation "the people are equal before their own laws" emphasizes a legal distinction between the people and citizens, but this is a mistake. Wasn't this matter cleared up 10 months after the party issued the National Day slogans? In his speech on the National Day of the 30th year celebration Comrade Ye Jianying said, " We must advance in improving the party record and the socialist legal system, truly protect the democratic rights of all party members and all citizens and systemize and legalize party democracy and socialist democracy." This is another instance wherein a leader points out the actual significance of "everyone is equal before the law."

As for our legal system right now, it awaits perfection in both the legislative and judicial aspects. What is more important is that some comrades use their status or individual will to implement head-of-household style leadership. They attack and wreck the laws, explain the laws according to their personal feelings, transform the laws, carry out so-called local policies, local laws and systems which are actually inequal, and severely damage socialist democracy and the socialist legal system. We are now explaining and implementing the principle "everyone is equal before the law," increasingly promoting the perfection of our legal system, making it more democratic and more equal, and more strictly operating according to the law to give the law more authority and greater significance.

Everyone is equal before the law is an old problem but it now has new significance, which is how to unite the anti-special privilege meaning found in this statement with the need for giving vent to democracy and strengthening the legal system; how to unite ideological liberation in theory and practice and explain the dialectical relationship between proletarian dictatorship and socialist legal equality; and how to eliminate ultra-leftism and dogmatism, be realistic, investigate the new conditions, solve the new problems, serve the government even better and serve economic construction. These are important subjects for present-day legal studies and we must strive to carry them out.

"Everyone is equal before the law!" We wish to give vent to democracy, eradicate superstition, suggest a few important legal problems in our current practices, carry out realistic, comradely debates, grasp the truth and correct errors and advance Marxist legal theory. Our views are not necessarily fully developed and we invite criticism from our comrades.

PARTY AND STATE

EIGHT MEASURES FOR RESTRUCTURING ECONOMY PRAISED

Hong Kong ZHENGMING in Chinese No 36, 1 Oct 80 pp 22-24

[Article by Fang Hua [2455 5478]: "China Adopts Eight New Measures To Restructure Its Economy"]

[Text] When Communist China's Vice Premier Yao Yilin made his report to the recently concluded Third Session of China's Fifth National People's Congress on the plans for the national economy this year and next, he expounded the eight measures China was going to adopt in order to restructure its economy:

1. Carry out an overall expansion of enterprise autonomy among state-run industries.
2. Actively organize various forms of economic association.
3. Widely develop competition under the guidance of the state plans.
4. Allow independent management on the part of the banks.
5. Gradually reform the taxation system.
6. Carry out market adjustment under the guidance of the state plans.
7. Continue to restructure the foreign trade control system.
8. Strengthen economic legislation and economic jurisprudence.

These eight measures may be said to be the summing up of the experience of practice in provinces of the interior, such as Sichuan, Anhui, Guangdong, Fuijian, and Jiangsu, where the pace of carrying out the restructuring of the economic system has been relatively fast during the past 2 years. The unequivocal proposing of these restructuring measures as the rubric of China's economic policies for the next 2 years was both concrete and clear, and it was welcomed by people in China as well as abroad.

Taking a careful look at these eight restructuring measures, we can see that they symbolize the Chinese Communist Party's great resolve and fortitude for carrying out the four modernizations. Two or three years ago, we should say, the proposing of these eight approaches aimed at reforms of a fundamental nature would have been unimaginable. The content of these few economic reforms has broken through certain taboo areas, transcended the conventions imposed upon the economic arena during the past 30 years, and daringly adopted entirely new approaches. Insofar as the Chinese Communist Party is concerned, this really amounts to a revolution--a revolution with the most earth-shaking power in the economic arena since the founding of the Chinese state. In the attempt to accelerate the four modernizations, these reforms are entirely necessary.

"Speed" Is Reflected

These eight economic reforms first of all reflect "speed": it is imperative to tightly grasp the time factor in order to develop the Chinese model of a socialist economy with greater speed, and thereby to enable China's relatively backward economy to achieve a breakthrough in a relatively short period and hence reach the takeoff point for economic development.

Practice is the only criterion for testing truth. Practice during the past 30 years proves that the economic management system enforced by the Chinese Communists in the past is no longer suitable to the developmental needs of this economy in China's present society; at least it does not demonstrate the superiority of the socialist economic system. There is reason to believe that this is basically because the policies relating to transformation of ownership were carried out too hastily after China's liberation. The old China before liberation was a semifeudal, semicolonial society with a small-farm economy as its mainstay. After the founding of the Chinese People's Republic, the Chinese revolution instantly turned from a new democratic revolution into a socialist revolution, and the country began to carry out agricultural cooperativization, industrial cooperativization, and public-private joint management of capitalist industry and commerce, which was shortly further turned into pure public management. Leaping from a semifeudal, semicolonial society to a socialist society, China did not pass the stage of capitalist society. From the concrete practice of the Chinese revolution, it looks as though the country did not need to pass through this stage of capitalist society. Precisely because of this, however, the speed of the fundamental transformation of ownership was far greater than that of the development of backward productive forces, whereupon a gap was created. That is to say, the productive forces fell behind their production relations, and they became mutually incongruous. Under such circumstances, economic measures more suited to the actual conditions of the time should have been put forward to allow the existence of a certain individual economy, and even methods colored by capitalist economy should have been adopted as transitional measures of expediency. The pity was that, after the antirightist campaign of 1957, Chinese Communist policies, including economic policies, became more and more leftist; the leftist wind blew harder and harder, with the result that, by the time of the "Cultural Revolution," it reached the unprecedented No 10 wind-warning signal and wiped all those relatively practical approaches away. This serves to explain why, 30 years after the founding of Communist China, the speed of its economic development has fallen far behind that of the two defeated states, West Germany and Japan.

In the past, especially during the 10-year Cultural Revolution, any doubts about or attempts to reform the existing system would have been unforgivable and inevitably taken as a case of "capitalist restoration," "revisionism," or even "counterrevolution." The fact that some Liu Shaoqi's relatively mild measures, such as the "three-self and one fix policy," etc., were ruthlessly deprecated as "capitalistic" is a typical example. This economic system of 30 years standing thus to have become a taboo area which nobody was supposed to touch. After the overthrow of the "gang of four," the higher leadership level of the Chinese Communist Party began to sense the seriousness of this problem: such an excessively leftist, unbending economic management system could only become a stumbling block. It is was pushed forward without change, they would have had to follow past steps and proceed into a blind alley. Three or four years ago the Chinese Communists, beginning with trade, started experimenting with certain reform measures, such as "combination of industry and trade," "combination of production and sales," etc., in the hope of promoting enterprise productivity. Looked at from today's standards, these reforms could only be termed most elementary, but at that time they represented great progress and even proved to be meritorious enough to arouse the deaf and the blind. In foreign trade, they first brought forth conventional practices in trade long followed by people in the outside world, such as "processing imported materials and imported samples," "assembling imported parts," "ordering goods by their brand names," etc. These methods, which were customary in other countries and areas, led to great commotion in the trade departments in the interior; at the time, reporters at the Canton trade fair even devoted long pages to such news reports and special interviews. Chinese and foreign businessmen also were extremely pleased, thinking that China's trade had somehow finally become more flexible. But these measures were only superficial and secondary; they were far removed from economic reforms. Among the high-level leaders of the Chinese Communists at the time, there were still certain people who worried quite a bit and who dared not touch upon certain questions of a fundamental nature; this affected the progress of economic reform.

Still fresh in this writer's memory was the fact that in the later half of 1978, the Chinese Communists began to relax a little in the restructuring of their foreign trade management system, promulgating several flexible modes of trade such as compensatory trade and others. Shortly thereafter, it was reported that it was possible for China to proceed with joint ventures and to welcome Chinese and foreign businessmen to invest and build factories in China. At that time, this news was most stimulating to Chinese and foreign businessmen, who regarded it as a harbinger of relaxation of Chinese policies, because joint ventures and the capital of capitalists obtaining a legitimate status for operations in China constituted a sensitive question--a question touching upon exploitation. Looking back now, general negotiations have already begun in the interior regarding joint ventures or even purely foreign ventures; they are no longer any sensational news. Two years ago, however, such negotiations would have seemed "out of the ordinary." It has become known that the official who first revealed this news to reporters was later subjected to great pressure and criticism, so that when he saw reporters again, he would turn away. This shows that at that time many problems were still not solved in the execution of economic policies, and that the conventions and taboo areas in people's thinking could still not be broken. Because of these reasons, China's economic development during the 3 or 4 years immediately after the overthrow of the "gang of four" did not turn out to be ideal. People overseas were disappointed, and the four modernizations seemed remote. Witnessing this situation, the Chinese Communists made up their minds to institute a fundamental reform. Beginning last year, they developed experimental areas in many provinces and municipalities for carrying out certain daring methods of economic reform. According to reports, there were about 6,000 experimental areas connected with the restructuring of the economic system throughout the country the first half of this year; they made up 45.5 percent of the output value of enterprises owned by all the people. From now on, they [Chinese Communists] are going to accelerate the process of restructuring the economic/management system on the basis of these experimental areas develop their strongpoints, protect competition, promote association, and mobilize enthusiasm in all aspects, with a view of speeding up and speeding up still more in order to obtain economic results as soon as possible.

Economic Competition, Chinese Style

Secondly, the eight economic reform measures have broken through certain taboos and paved the way for China to develop the Chinese model of socialist economy from now on. This writer is of the opinion that, in this regard, the most interesting is the third measure of reform: "Widely develop competition under the guidance of the state plans."

In the past, competition was invariably taken as a capitalist gimmick; in reality, competition is one of the economic laws of capitalism. Marxist economic theory holds that competition, the anarchial state of production, and the absolute impoverishment of the working class are the laws by which capitalist production relations exist, whereas under the socialist system, along with the disappearance of such capitalist production relations, these laws disappear from the economic process. Marx did not go into any detail as to whether or not there can be different kinds of competition. Competition under capitalist production relations is free conpetition. Its ultimate goal is to seize the sales markets, the sources of raw materials, and the places for investment in order to control the production and sale of commodities, and it ultimately develops into monopoly. Therefore, free competition is reflected in the anarchical state of production, and it is drastically destructive. Viewed from its essential purpose, China's championing of the protection of competition today is altogether different from that of free competition under capitalism. What China has brought forth is competition under the guidance of the state plans; that is to say, the competition and development of the enterprises are included in the state's economic plans, and they constitute a component part of the development of the national economy. For this reason, such competition is planned, is proportionate, and as a result cannot lead to blind production or blind development. Hence it is both positive and constructive.

Because of competition, there are bound to be the good and the bad; if measured by the law of free competition under capitialism, the fittest would survive. In the final analysis, there are but two outlets for bad enterprises: bankruptcy, or absorption by the triumphant ones. Under such circumstances, monopoly gradually results. The outcome of competition in China looks similar to that of free competition--that is, the good ones develop and the bad ones become reorganized, with those enterprises which turned out to be inferior in competition and which foresee no future in their development being merged into those enterprises which triumphed in the competition, and with some of the former being converted to other lines of production, such as the production of parts for those enterprises that have strong competitive capability. The fit survive; the unfit are eliminated: this is the inevitable law of competition. But under conditions of socialism, elimination should be "reorganization" under the guidance of the state plans. The forms of reorganization cannot depart from the following three kinds: (1) annexation; (2) combination; (3) conversion to other lines of production. Also, in stressing competition, China wishes to promote the spirit of socialist cooperation and to develop technical exchanges. Although enterprises assume the status of rivals in competition, they share the same goals and they all serve socialism. Hence, matters of mutual cooperation and mutual support still exist. This is what free competition lacks.

Generally speaking, socialist competition means that under the uniform planning and guidance of the state, and on the basis of developing the national economy and production, various enterprises compete among themselves and compare their economic results. Their purposefulness is consistent, and there is no such phenomenon as endlessly struggling to annex one another, as exists among capitalist enterprises.

Expansion of Enterprise Autonomy

Thirdly, the eight reforms generally exhibit a dedication to the spirit of democracy. The Third Session of China's Fifth National People's Congress fully stressed democracy; it proposed to build a modern China with a high degree of democracy and a high degree of civilization. The reform of the political system gave scope to democracy; the reform of the economic system was also permeated with the spirit of democracy.

In the past, the old economic system, like the political system, was one of centralized authority. The central government directly ordered local governments to carry out various economic activities, and the opinions of local governments could hardly affect the overall situation. In other words, the control was too rigid, and the whole economic management system operated like an iron board, both inflexible and stiff. But today the eight measures exude an atmosphere of democracy in general.

The quintessence of economic reform is expansion of enterprise autonomy. Although the enterprises are still under the guidance of the state plans, with regard to their own personnel, finances, resources, production, supplies, and sales they now enjoy far greater autonomy that in the past. The atmosphere of democracy is reflected in three aspects of enterprise management. The first is the relationship between the enterprise, under the condition that it assure the fulfillment of the task of supplying goods as prescribed by the state, may arrange its production plans or take on obligations of cooperation according to market needs, and, in addition to the resources provided by the state according to existing plans, it may buy the materials it needs according to the principle of securing the best. That is to say, in the conversations between the enterprise and the central authorities from now on, there really can be a mutual addressing of points with each other. The practical, developmental needs of the enterprise itself are respucted, and the enthusiasm of the enterprise hence becomes elevated. The second is the relationship between the enterprise and the outside world. In the past, an enterprise could not deal with a foreign concern independently; everything had to be done under the guidance of the leading organ at the higher level. Today, a large enterprise and its associated bodies, upon approval, may begin to experiment with direct management of foreign trade. The establishment of general trading companies in various provinces and municipalities for the sake of developing their foreign trade is also a reflection of this measure. The third is the enterprise's internal relations. In the past, the party committee secretary ruled supreme within the enterprise; the secretary became the reincarnation of the party committee and of the party itself. Only what he said would count, and he would follow a patriarchal system under which ordinary workers and or even cadres would have no right to express any opinions. The enterprise became the party committee secretary's enterprise. Whether management of the enterprise entailed gains or losses, and whether it was good or bad, nobody had any right to interfere. Now it is prescribed that each enterprise and establishment must install a congress of staff and workers or a staff and worker representative assembly. Members of such congress or assembly have the right to make decisions on important questions of their own unit, to recommend to the superior level the recall of incompetent administrative leading personnel of their unit, and to elect step by step the leading personnel in the appropriate categories.

The establishment of these congresses of staff and workers or staff and worker representative assemblies serves the same function as Yugoslavia's workers' committees. Insofar as China is concerned, the establishment of these congresses and assemblies is an unprecedented, refreshing event that represents the approach of the Chinese Communist Party in making up its mind to carry out democracy. On this point, it has enabled the Chenese workers to really realize the spirit of becoming masters of their own house.

Guiding Economic Activities by Economic Means

In the fourth aspect we see reflected the fact that the Chinese Communist Party has begun to realize that the guiding of economic activities by political means in the past was a failure; the six [as published] reforms indicate that the Chinese Communist Party now has made up its mind to guide economic activities by economic means, to respect objective economic laws, and to stress economic results.

The second of these reforms clearly suggests that an enterprise must establish independent accounting and cannot "eat from the common pot." The practice of letting an enterprise "establish independent accounting, allow the state to collect pertinent taxes, and take the responsibility for its own gains and losses" has actually been promoted at certain experimental places for some time, and has been done effectively. The light industrial machinery company of Shangahi, for example, has had a good taste of this practice while experimenting with it; it has proved far more effective than in the past, when [the company] knew only how to carry out the plans assigned by the higher level. Under this [new] practice the 40 enterprises within the jurisdiction of this company reportedly see to it that their staff and workers do the best they can to open up new avenues of production, increase products suitable for consumption beyond given plans, calculate meticulously everywhere, augment their income, and cut down their expenses. In a short period of time a conspicuous change has taken place within the entire company: the profits and tax monies realized between January and July this year turned out to be more than 70 percent higher than those of the corresponding period last year. The result is that the state collected more taxes, the enterprise retained more profits, and the staff and workers made great gains.

The fifth of these reforms--gradually reforming the taxation system--is meant to encourage the enterprises to run their affairs according to economic laws by making use of the economic means of taxation.

To guide the enterprises to develop by the economic means of profits, taxation, pricing, credit loans, etc., is to be China's approach to enterprise management from now on.

The eight economic reforms will be the norms of China's economic activities for a fairly long period. But these constitute merely a beginning. In order to reverse

China's backward economic outlook even faster, many problems remain to be explored and solved. We can definitely say that the evolution of the country's economic system will continue to deepen in the years ahead, that new measures of reform are bound to be put forward, and that all reforms are going to be tested in practice, just like the case of the eight economic reforms today; they are ultimately elevated to the level of policy measures and promoted in practice across the country only after they are proved, through 1 or 2 years or an even longer period of practice, to be genuinely suitable to China's economic development today.

PARTY AND STATE

MALFEASANCE OF CADRES, NEED FOR DISCIPLINE DISCUSSED

Leading Cadres Disciplined

Guangzhou NANFANG RIBAO in Chinese 19 Aug 80 p 1

[News report: "The Secretary of the Party Committee of Yuanchengmai County, Wang Yueqing [3769 1471 7230], Is Removed From Office"]

[Text] The party has taken disciplinary action against three county-level leading cadres for violating party discipline, for abusing their authorities, for building luxurious residences for their private use at the government expense, and for resettling a large number of rural households in urban areas in violation of the related policy. They are Wang Yueqing, secretary and chairman of the Yuanchengmai County Party and Revolutionary committees; Zeng Xiangji [2582 4382 6549], deputy secretary and vice chairman of the county party and revolutionary committees; and Wu Xianming [0702 7359 2494], former standing committee member and vice chairman of the county party and revolutionary committees. Wang Yueqing has been removed from his office as secretary of the county party committee, while Zeng Xiangji and Wu Xianming have been reprimanded by the party for committing the aforementioned mistakes.

This disciplinary action was initiated by the Hainan Prefectural Party Committee and taken by the Guangdong Provincial Discipline Inspection Commission with the approval of the Guangdong Provincial Party Committee.

Wang Yueqing and two other comrades originally lived in comfortable government-provided houses with floor space ranging from 80 to 130 square meters of land, with which they were still not satisfied. In October 1978 they began to dream of building more luxurious homes for their families. To translate that dream into reality, they selected 42.49 mu of land located in Zhongzhai brigade of Chengcheng commune as sites for building their new homes under the pretext of housing projects for city dwellers and retired old cadres. In compensation for the land acquired, they promised to reduce the Zhongzhai brigade's annual grain taxes by 41,052 jin. Of the 42.49 mu of land, 339.56 square meters of land went to Wang Yueqing, who later built a 20,800 yuan home covering 228.17 square meters in floor space; 328.9 square meters of land went to Zeng Xiangji, who constructed a home occupying a floor space of 157.55 square meters at a cost of 14,000 yuan; and 387.79 square meters of land went to Wu Xianming, who spent 24,000 yuan building a home covering 254.8 square meters in floor space.

Wang Yueqing and two other comrades also obtained, free of charge, enormous amounts of building materials, and manpower from factories, communes, state farms and other government organizations, along with motor vehicles which were used to move materials to the sites where their cozy nests were under construction. When motor vehicles were used to move building materials, they paid only for their gasoline costs.

When they acquired the public land and construction got underway, the general office of the provincial revolutionary committee and the Hainan Prefectural Revolutionary Committee sternly warned them against building private homes in real estate of public ownership. Responsible comrades of the Hainan Prefectural Party Committee also repeatedly dissuaded them from building private homes on public land in violation of the related government policy.

After receiving instructions from the higher authorities or leading groups, they ordered the county revolutionary committee to issue a circular to cadres at the bureau chief and higher levels advising them to stop building private homes on public land, while stepping up the construction of their own homes in gross disregard of the government policy. Their attitude toward the instructions from the higher authorities was actually one of overt compliance and covert opposition.

In an attempt to obtain adequate building materials, and manpower for building their projected homes, Wang Yueqing, Zeng Xiangji and Wu Xianming abused their authorities by approving a migration of a sizable agricultural population from the countryside to the urban areas in violation of the State Council's and Guangdong Province's household migration policy. They also promised to provide the new urban settlers with free food grains in exchange for their labor needed for the construction of their homes. From January 1978 to August 1979, they approved a transfer of 135 rural households or 455 persons to the urban areas. Under their influence, other leading cadres in Chengmai County also followed suit by giving similar approval to the migration of a large number of households from rural to urban areas in violation of the government's longstanding policy. According to incomplete statistics, they approved the requests of 738 rural households or 2,104 persons for resettlement in urban areas from January 1978 to August 1979, along with applications for food rationing. The overwhelming majority of them moved into the city through back door deals in violation of the related policy.

In order to teach Wang Yueqing and his two accomplices a lesson, and to educate other comrades in strictly observing party discipline and in rectifying the party's workstyle, the Guangdong Provincial Party Committee has decided to confiscate the newly built homes and turn them over to the government real estate management department as part of public property, in addition to taking appropriate disciplinary action against the aforementioned three comrades. Their construction costs will be reimbursed on the basis of actual estimation. The cases of those rural people who have been permitted to settle in the urban areas and have since become workers entitled to the food rationing in violation of the related policy will be seriously and properly handled by the authorities concerned in accordance with the related regulations put into effect by the central and provincial authorities.

Need for Party Discipline

Guangzhou NANFANG RIBAO in Chinese 19 Aug 80 p 1

[Commentator's article: "Enforce Party Discipline, Strengthen the Party's Workstyle"]

[Text] The Guangdong Provincial Party Committee has taken disciplinary action against three leading comrades for violating the law and discipline, for abusing power and for promoting bad workstyles. The three are Wang Yueqing [3769 1471 7230], secretary and chairman of the Yuanchengmai County Party and Revolutionary committees; Zeng Xiangji [2582 4382 6549], deputy secretary and vice chairman of the Yuanchengmai County Party and Revolutionary committees; and Wu Xianming [0702 7359 2494], former standing committee member and vice chairman of the Yuanchengmai County Party and Revolutionary committees. That disciplinary action taken by the party against them was absolutely necessary and correct. We hope that the "guiding principles for inner-party political life" will be more thoroughly implemented, the party's workstyle will be further improved, party discipline will be more strictly observed and the leading groups of the party committees at all levels will be further strengthened as a result of the official announcement of that disciplinary action.

In addition to betraying the interests of the state and people, undermining the party's fine workstyle, and dampening the enthusiasm of the cadres and masses for promoting the four modernizations, Wang Yueqing and two other comrades have caused otherwise unnecessary damage to the cause of the party. Their mistakes are so serious that they deserve the great attention of our party cadres, especially those leading cadres.

As the vanguard of the proletariat, our party requires that all its members devote the rest of their lives to serving the people's interests, and they should never try to seek any privileges to enhance their private interest. Clearly, this fundamental requirement was disregarded by Wang Yueqing and two other comrades when they decided to build more luxurious homes for themselves, with floor space ranging from 200 to 300 square meters. They originally lived in homes with floor space ranging from 80 to 130 square meters, living conditions which were far superior to housing units occupied by the masses. To satisfy their insatiable desires, they abused their authorities so that they could acquire public land, building materials, motor vehicles, manpower and everything else they needed in building their new homes free of charge. They even unscrupulously and illegally approved the migration of households from the rural to urban areas and their requests for food rationing in exchange for their services and building materials needed in construction of their homes. This fraud reminds us that if every communist party member or party leading cadre is unaware of his responsibility as the people's servant, and pays no attention to their interests and plight, and if he cares only about his own comfortable life, he may be unable to resist the temptation to use his authority to enhance his private interest at the expense of the public interest in violation of party discipline and in betrayal of the public trust. For this reason, we must guard against the erosive influence of the bourgeois ideas and feudal ideologies and foster a world outlook of whole-hearted dedication to the people's interests.

Communist party members must strive to increase their awareness of the need to foster strong party character and strictly observe party discipline as a guarantee for a correct implementation of the party's line, principles and policies, and as an insurance against committing mistakes. As leading members on the county party committee, Wang Yueqing and his two accomplices were well aware of the regulations governing the construction of housing projects on public land issued by the Guangdong Provincial Revolutionary Committee long ago, as well as the policies of the State Council and other central authorities concerning the resettlement of agricultural households in the cities, the rationing of food grains and the recruiting of workers. As leading cadres, they should have acted as models in implementing these policies and regulations. On the contrary, blinded by the lust for private gains, they have deliberately violated these policies and regulations, and thrown them into wastebaskets along with party discipline in order to build some cozy nests for themselves. When the Hainan Prefectural Party Committee tried to stop them after their wrongdoing came to its attention, they adopted a double-dealing attitude by promising the obey its order in public but continuing their malpractice in private. Finally, their lust for private gains led them to commit more mistakes in violation of the laws. Believing that "bureaucrats are interested in protecting one another," Wang Yueqing and his two accomplices divided their newly acquired land and property up among themselves and others associated with them on the basis of their ranks, by way of dirty back door deals. They did so on the assumption that since "all partners have a fair share of the property," they would do their utmost to protect their common interests that they have secured. Nonetheless, they terribly underestimated the ability of ordinary cadres and the masses to expose their back door deals. Their "partnership for mutual protection" eventually went broke when the cadres and the masses armed with the "guiding principles for inner-party political life" strove to expose their back door deals to the public. Facts show that party members or leading cadres cannot avoid making mistakes and cannot correct their errors unless they consciously welcome inspection and admonition from the higher level party organizations and the party discipline inspection commissions, and accept criticism and supervision from the masses.

Since the proclamation of the "guiding principles," party organizations at all levels throughout the province have made great efforts to strengthen party discipline and improve the party's workstyle. But this marks only the first step forward during a long march. We must realize that malfeasance still exists in varying degrees in many localities and units; the fact that authorities were abused by leading members on the Chengmai County Party Committee to build their new homes and to approve the migration of households from rural to urban areas in violation of the related policy is not an isolated case which deserves the great attention of party committees and leading cadres at all levels. To avoid similar mistakes, we must check our ideas and workstyle against the "guiding principles" ignored by the three erring principal leading cadres on the Yuancheng County Party Committee, consciously draw lessons from our past experiences, strengthen party character and our sense of organization and discipline, eliminate the influence of the feudal system in which cadres are granted privileges, and voluntarily accept supervision from the masses. Only in this way can we resolutely wipe out all forms of malpractice and make ourselves qualified communist party members.

INSTITUTE OF MICROBIOLOGY ACCUSED OF DEFAMING RESEARCHER

Beijing RENMIN RIBAO in Chinese 6 Sep 80 p 4

[Letter to the Editor from Yang Mo [2799 3106]: "This Instance Occurred Today as China Is Marching Toward the Four Modernizations"]

[Text] Dear editor-comrades:

I want to reflect to you a serious instance of retaliatory attacks against a scientific researcher with an intent to discredit his work.

It occurred when I spent the winter of 1978 in Tianjin doing some writing and building a friendship with Comrade Liu Yaguang [0491 0068 0342], a researcher of the Institute of Microbiology of the Chinese Academy of Sciences. We lived in the same guest house when he was on a lecture and scientific experimental tour at the Tianjin Public Health Bureau's request. He spent day and night working diligently on a project aimed at combining advanced science--microbiology with herb medicine. I was deeply moved by his hard working spirit. One day in that winter, I suddenly received an unexpected long-distance telephone call from one of my relatives. He did so at the urging of someone working at the Institute of Microbiology who was aware of my growing friendship with Liu Yaguang. The caller relayed a message accusing Liu Yaguang of being a "swindler trying to deceive people everywhere," and imploring me to alert the departments concerned in Tianjin not to be fooled by Liu Yaguang any more. The caller also revealed that the Institute of Microbiology was withholding his salary for the reason of misconduct. Although I was surprised to hear this, I did not act as "instructed" by the caller. From that day on, I began to watch Liu Yaguang more closely than ever in order to satisfy my curiosity and fulfill my responsibility to the people. To get a deeper insight into the significance of Liu Yaguang's research project and his personality, I later visited some leading members of various Tianjin public health centers and hospitals, and his associates at the Institute of Microbiology. They unanimously told me that his advanced scientific research work is valuable, from which they themselves have also benefited. None of them thought that he has ever done anything wrong. Nor did anyone accuse him of being a "swindler." On the basis of this investigation, I can say for sure that Liu Yaguang is a young and resourceful scientific researcher wholeheartedly devoted to the four modernizations. Later, I continued to investigate his activities when I was in Beijing and Zhejiang. I ended almost a year-long investigation with literary reportage entitled "He is that kind of person," an article that appeared in ZHEJIANG RIBAO of 25 December 1979. In that article, I emphasized the significance of his scientific research work, his efforts to overcome innumerable difficulties in scientific research, and his hard working spirit. At the same time, I criticized the Institute of Microbiology without mentioning its name for suppressing and attacking Liu Yaguang, for falsely accusing him of being a "swindler" and "politically unreliable," and for unreasonably withholding his salary. Upon learning of this criticism, its leading members flew into a rage and retaliated by printing and circulating in the name of their organization a message to the nation (in three installments), attacking my literary reportage as a challenge to the scientific circles and charging me with "misleading the central authorities, deceiving the masses and spreading rumors and slanders" for which they hold me legally responsible. The message also falsely accused Liu Yaguang of being a "swindler" and "trumpeter," and calling his experiment with the Chinese medical nostrum aimed at "resuscitating the muscle of the heart" a "fraud." This message has had the effect of vicious slander on the nation. Is there any truth to such charges? I have learned that since Liu Yaguang's transfer to the Microbiological Medical Research Institute affiliated with the Zhejiang College of Chinese Medicine, his innovative research work has commanded the attention of the Ministry of Public Health and the Zhejiang Provincial People's Government, which submitted a joint report on his work to the Party Central Committee and the State Council with a suggestion that funds be earmarked in support of his research. In response to this suggestion, the State Council has provided funds for the purchase of equipment for the Microbiological Medical Research Institute after Liu Yaguang achieved a breakthrough in research in controlling cardiovascular disease. At the same time, his published essays have also received commendations from the medical circles at home and abroad. For example, he has received a letter from an American professor inviting him to give lectures in the United States. In that letter, the American professor said: "We earnestly look forward to directly learning from your outstanding work on Chinese medicine and especially your technical application of microbiological pharmacology. We consider your work most outstanding of all, comparing with a few other systematically organized studies in this field." He has also received letters from a number of colleges in Japan, inviting him to visit Japan to explore the possibility of his cooperation with them. A biochemist with doctoral degrees from Hong Kong recently came to Hangzhou to confer with Liu Yaguang on the prospect of their cooperation in research and in jointly publishing books.

A nationally and internationally known Chinese language publication recently carried an article written by someone in the assumed name of Shi Xiyuan [4258 1585 0337] pouring cold water on this meaningful research work. This article spreads rumors that Liu Yaguang's "heart resuscitation" experiment is a fraud, and his statistical estimation based on it means nothing as a result of his misuse of the labeled isotopes. As a matter of fact, this charge is unfounded, because Shi Xiyuan based his article neither on experiments nor on any investigation of laboratories associated with Liu Yaguang. The Hospital No 262 Laboratory where Liu Yaguang worked revealed that over 7,000 guinea pigs and over 200 rabbits have been used in this experiment which has provided the medical profession with a large amount of reliable information; only one right kind of labeled isotopes has been used in the experiment; the information resulting from this experiment has been checked out and endorsed by related medical authorities at the request of the Beijing Military Region's health department. In addition, Liu Yaguang has made public the outcome of his experiment in an article published by a medical journal with the blessing of the Hospital No 262.

In addition to the "heart resuscitation" experiment, Liu Yaguang has adopted the same experimental method to check out the effectiveness of another ancient Chinese medical nostrum in reviving the msucles of the heart. The outcome of this scientific experiment was also verified last March by a group of 11 associated professors headed by Professor Zhang Yi [1728 3015], honorary chairman of the All-China Society of Pharmacology, at the request of the Chinese Medical Bureau of the Ministry of Public Health. In their joint statement, the 11 professors said: "Applying the advanced microbiological technology to study the effectiveness of the Chinese medical nostrum in resuscitating the msucle of the heart is an advanced and correct method, which has come up with convincing results. The nostrum called 'heart revival liquid' can speed up the chemical process of deoxyribonucleic acid (DNA) after the muscle of the heart is deprived of oxygen supply and damaged. Such results are good news to patients suffering from the hardening or blocking of the coronary arteries, and a contribution to the research project for controlling the cardiovascular disease." Not long ago, a study group of specialists and cadres organized by the Zhejiang Provincial Scientific and Technological Committee also agreed through discussion that this experimental method is scientifically sound. In view of this, I feel that if the Institute of Microbiology disagreed with this experimental method and related essays, it can feel free to make its opini-ns known in various medical publications. Unfortunately, it did not take this course. In addition to disseminating slanders against Liu Yaguang, it recently published a big-character-type article in an ordinary journal with the aim of misleading the general public. More absurd is that Shi Xiyuan's article likens ordinary scientific researcher Liu Yaguang to the Soviet Union's Lesechko, drawing a parallel between our central authorities' support of Liu Yaguang and Stalin's support of Lesechko. More intolerable is that in addition to disseminating misleading information on Liu Yaguang, a leading comrade of the Institute of Microbiology has talked some newspapers and journals into rejecting all articles written by me and other comrades who want to present to the public a true picture of the aforementioned experiments. This suppression of different opinions occurred at a time when the need is being emphasized to strengthen democracy and the legal system in our country, in the wake of the downfall of the "gang of four." Can we call this a flagrant violation of the citizens' right to discuss science and art in a democratic way? As a deputy to the People's Congress conscious of my responsibility to the people, I presented to the public that literary reportage on the four modernizations only in the capacity of a conscientious writer. It is contrary to my wishes that the publication of that literary reportage would drive Shi Xiyuang and other people of the Institute of Microbiology to launch fiercer attacks against Liu Yaguang and to go all out to defame him as an individual and to distort his experiments, thus creating numerous difficulties for the modernization of scientific research in herb medicine. As a result of the publication of my article, I have also been subjected to a series of criticisms and even have been forced to shut my mouth, depriving me of the right to openly answer their charges. This has occurred at a time when our country is embarking on a march toward the four modernizations. I think that this is a serious violation of the democratic rights. For this reason, I implore RENMIN RIBAO to support the victims of this violation. I also hope that the Ministry of Justice and other related departments will conscientiously initiate an investigation into this case, and will mete out necessary punishment to those found guilty of deception, reprisals for personal reasons and undermining the scientific research work, in accordance with the provisions of party discipline and state laws.

ZHEJIANG PARTY OFFICIALS CENSURED FOR EXTRAVAGANCE

Hangzhou ZHEJIANG RIBAO in Chinese 30 Aug 80 p 1

[Article: "Infringing on the Interests of the Masses Is Absolutely Forbidden; the Provincial Commission for Inspection of Discipline Has Taken Strict Action Regarding the Extravagant Eating and Drinking of the Group for Conveying Greetings and Appreciation on the Old Liberated Areas of Leqing County, Ordering the Responsible Leaders of the County Party Committee to Make an In-Depth Criticism and Instructing the People Involved To Return Expenses Incurred in Violation of the Guiding Principles"]

[Text] In order to flaunt its style, the Leqing County group sent to convey greetings and appreciation had many banquets during its tour. The eating and drinking wasted a large sum of national and collective assets. The masses expressed a lot of criticism about this kind of behavior, which disregarded the party Central Committee's repeated orders, infringed upon the masses' interests, and violated the "Guiding Principles." Recently, the provincial commission for inspection of discipline undertook an investigation and took the following strict action: The Leqing County Party Committee was instructed to follow the "Guiding Principles" and make serious conclusions on their experience and lessons, and leaders concerned were instructed to make a public criticism. Public funds that were used by the committee leaders for entertainment should be repaid, in line with the principle of "the one who initiates the idea should pay for it." Members of the group for conveying greetings and appreciation and nonproduction cadres of the communes who participated in the eating and drinking should repay their share of the cost, and the excessive allowance received in violation of regulations must be returned.

In April of this year, Leqing County organized a group for conveying greetings and appreciation for the old liberated areas. It was led by three members of the Standing Committee of the county party committee, and 30 people of the departments, committees, offices and bureaus concerned took part. From 17 April to 6 May, they went to 34 communes and production teams in the old revolutionary districts to undertake consolation. Wherever the group for conveying greetings and appreciation went, the majority of communes and production teams mobilized cadres and the masses to welcome them. Public funds were used and people were sent especially to buy liquor, food, candy, and cigarettes, etc, in order to set up banquets to entertain them. Everywhere they went, they ate and drank with cadres and caused financial and material waste. Statistics from Chennan and 4 other communes alone showed that over 1,000 yuan was spent. On 17 April, the group for conveying greetings and appreciation, some cadres, and over 30 representatives ate lunch and dinner at a production team in Chennan Commune. There were eight tables; desserts and cigarettes were also consumed. The total cost was 229.40 yuan, averaging over 7 yuan per person, but members of the group for conveying greetings and appreciation donated only 1 yuan per person. The excess 215.40 yuan was paid out of the production team's common reserve fund. On 24 April, the group for conveying greetings and appreciation and cadres of communes and production teams, totaling over 50 people, ate lunch and dinner at another commune. There were 8 tables and the total cost was 203.10 yuan. The group for conveying greetings and appreciation did not pay a penny; the entire cost was covered by the production team. In order to flaunt their style and extravagance, they violated the financial system, arbitrarily used public funds to buy radios with cassette recorders, expensive liquor, cigarettes, and candy, and to make group flags, streamers, and badges. They also arbitrarily raised the group members' food allowance from 0.80 to 1 yuan. The excess expenditure was 1,535.54 yuan. Besides, this consolation was undertaken during the busiest spring plowing season. Many commune cadres were busy attending meetings, studying the selection of representatives, sending people to put up posters, buying goods, and organizing welcoming groups; therefore, production was affected. To make matters worse, all this was done when some of the people of the old liberated areas were enduring unusual hardships. For example, Sidi Commune suffered drought last year, and in order to alleviate the masses' hardship, the state had granted relief food and funds. Its individual production teams did not even have money for school windows and desks. When the group for conveying greetings and appreciation came to this commune on 26 April, it had neither money nor food, so it borrowed 90 yuan from the credit coop's mountain highway construction funds and 10 yuan from office funds to pay for the eating and drinking expenses of over 80 people. The masses were extremely displeased with this kind of behavior, which ignored the masses' hardships and infringed upon the commune members' laboring income and collective interests. They even called the group for conveying greetings and appreciation "eating and drinking group" and "trouble group"; some also asked: "Is this group for conveying greetings and appreciation consoling us people of the old liberated areas, or are we people of the old districts consoling them?"

After this incident, the Disciplinary Committee of the Leqing County Party Committee followed the advice of the provincial and district disciplinary committees and undertook an investigation. It had made reports to the county party committee. At the beginning, the county party committee did not have a sufficient understanding of this problem, and some of its comrades did not have a correct attitude, so the problem was postponed and not handled. Recently, after the provincial committee for inspection of discipline issued its opinion on the handling of this problem, and with the instruction and help of the district committee, the Party Committee of Leqing County stated that it would undertake measures to rectify this improper practice.

REVOLUTIONARY COURAGE, REALISTIC WORKING SPIRIT URGED

Hangzhou ZHEJIANG RIBAO in Chinese 10 Sep 80 p 3

[Article by Tan Tian [6223 1131]: "Combining Revolutionary Courage With a Realistic Working Spirit"]

[Text] Stalin pointed out that there are two special characteristics of the Leninist work style, "1, the Russian revolutionary courage, and 2, the American realistic spirit." He said, "The Leninist work style is simply the combination of these two special characteristics in party and national work." This combination is one excellent traditional work style formed by our party through long revolutionary struggles. It heightened the fighting capacity of our party. It is essential to restore this excellent tradition and work style. The combining of revolutionary courage and realistic working spirit is the unification of the class nature of the proletariat and objectivity, the unification of theory and practice. We of the Communist Party firmly believe in the dialectical materialism and historical materialism, and are dyed-in-the-wool idealists who are afraid of nothing. This fearless spirit is one kind of revolutionary courage. Materialism is "from the object to awareness to thought," it is everything starting out from objective reality. This naturally demands a scientific attitude of a realistic working spirit. When speaking of what revolutionary courage was, Stalin said, "Revolutionary courage is a force that moves men's hearts, it stimulates thought, launches advances, destroys old things, and opens new frontiers." If we have revolutionary courage, in the field of revolution and reconstruction, especially when coping with major turns of events, or when we meet seriously difficulties or set-backs, we will be able to be farsighted, we will have heroic proletarian spirit, will be confident of success in the future and we will dare to make firm decisions for the people. What is a realistic working style: It is seeking truth from facts. Comrade Mao Zedong explained: "Facts are everything that exists objectively, truth is the internal connections of objective things, seeking is to investigate." Simply stated, it is to begin from reality and work from objective laws. To combine revolutionary courage and a realistic working spirit is the embodiment of the party spirit of the proletariat. The proletarian party spirit is the combination of these revolutionary and scientific natures.

Dialectical materialism holds that all world developments must follow objective laws, and that these laws cannot be changed by the desires of man. If man wants to change nature, to change society, he must follow these objective laws, and work within these objective laws. To combine revolutionary courage and a realistic working spirit means that in the face of these objective laws we are neither slaves to these objective laws nor can we violate these objective laws, but we must give full play to the combining of man's subjective mobility and strictly adhere to the objectivity of these laws. We have had many bitter lessons in this area. We will not mention things that happened a long time ago, but just take the sinking of the Bohai No 2 drilling platform and the construction projects to turn the "Western water Eastward" for example. They were ignorant, subjective "workings in violation of nature." They were in violation of objective laws.

We must understand that subjective perversity is not "revolutionary courage." Such things as "the earth can produce as much as man has the courage to make it produce," "fear only that you do not think of it, do not fear that you can not do it," as well as not respecting the autonomy of the production units in agriculture activities and forcing them to all harvest and plant at the same time is really "there are many ways of doing things when there is no plan, and a lot of resolution when the situation is unclear." This kind of "blind leadership," "boasting," and "communism" has delivered serious set-backs to our national economy. Just like Engels said, "Disdain for dialectics must be punished." The realization of the four modernizations will be a great change. Facing us on many fronts is the realm of necessity which is not yet familiar. If we are successfully to implement the four modernizations it is even more critical for us to combine revolutionary courage with a realistic working spirit. There are two trends that must be overcome. One is a small number of cadres with petrified thinking. They follow the old ways and habitually do things according to established methods. In their work consciously or unconsciously they become the Monk Tang (of the Westward Journey) reciting the Incantation of the Golden Hoop and not Sun Wukong who dares to do and say and to upset the Palace of Heaven. These comrades need a little more revolutionary courage, like Stalin said, "Revolutionary courage is the tonic for purging ideological blockage due to habits, old style thinking, and conservatism, as well as traditional attitudes of blind obedience." The other trend is some comrades only know bragging, lying, and empty talk. They don't understand investigation and research, starting from objective reality, studying new situations, and solving new problems. They do not do something which obviously can be done in a short time, but persist in complaining about some things which can not be done in a short time. This is actually a departure from reality, it is a bureaucratic style divorced from the masses. Lenin pointed out, "The use of nice words and phrases to cover up an unpleasant situation, as far as the proletarian revolution is concerned, is the most injurious and most dangerous thing for the work of the laboring masses. Boasting, lying, and empty talk will not solve the problems of the four modernizations. It will, however, nourish and foster bureaucracy and seriously damage the prestige of the party. There is a common saying that 10 idle talkers are no match for 1 doer, and 1,000 mouths are no match for 1 working hand. We are placing total emphasis on practice and "one practical action is more important than a dozen programs." If we are to really combine revolutionary courage with a realistic working spirit in all of our work, then we must relate theory with practice, practice what we preach, speak and act in an honest fashion, strive to work in accordance with objective laws, and advance along one step at a time.

IDEOLOGICAL, POLITICAL WORK MUST NOT BE OVERLOOKED

Guangzhou NANFANG RIBAO in Chinese 1 Sep 80 p 1, 3

[Article by staff commentator: "The Entire Party Must Pay Close Attention to Ideological and Political Work"]

[Text] The All-Province Propaganda Work Conference has discussed the question of how to strengthen ideological and political work in the new era, analyzed present ideological trends within and outside the party, and put forward the tasks and requirements of ideological and political work. This was entirely necessary. At present, when our country is undergoing profound changes in all aspects, and in the face of ideological problems that still largely exist in society, not only must the propaganda departments grasp ideological and political work well, but we must emphasize that the whole party needs to pay close attention to ideological and political work.

How to look at the ideological trends in society in our province at present, and how to appraise them, are questions we must first explore when we proceed with our ideological and political work.

Since the Third Plenum of the 11th Party Central Committee, the ideology of the vast ranks of cadres and masses in our province has undergone fairly great improvement; it has become more and more unified under the spirit of the Third Plenum of the 11th Party Central Committee. The party style and social customs have both been developing in a desirable direction. The people's thinking has been greatly emancipated and has become very lively. But we should also see that, in the ideological realm, some problems really exist at present, and they are fairly serious problems. These problems, fundamentally speaking, all constitute a question of perception concerning the party's general line centered on the work of the four modernizations. Among the cadres and masses, not a few people wish to realize the four modernizations but, at the same time, they also half believe in but half doubt the four modernizations, tag along but also look around, and lack confidence. Either they lack ambition, attach too much importance to the difficulties we face and the unavoidable secondary problems in the process of our reform, fail to see beneficial conditions, and fail to see the overall situation, or, because some practical problems in their lives cannot be solved, they have come to feel discouraged; or, because they see that bureaucratism and the style of particularization cannot be quickly rectified, they have become impatient. Some people not only harbor doubts about the four modernizations, but they also feel antagonistic in different degrees toward the restructuring of the economic system and certain new policy measures. Because they have been influenced fairly deeply by the extreme left line, they take as manifestations of the superiority of the socialist system certain practices carried out in the past which exceeded the current level of productive power, which violated economic and natural laws, which hampered the development of production, and which restrained the enthusiasm of the masses. And if we proceed to reform these irrational practices, they think we are being "rightists," "revisionists," and "retrogressive." Still other people mainly certain youths, doubt the very superiority of the socialist system. Political views pertaining to bourgeois democracy and freedom, the ideology of extreme individualism, and the psychology of envying Hong Kong and Macao and worshiping foreign ways of life have sprung up and spread among them. Apart from these people, there are also a few hostile elements who hate the four basic principles and the party's general line, and who take advantage of contradictions among the people to create confusion and sabotage our stability and unit. To sum up: Different ideas and contradictions exist in the ideological realm at present, but the fundamental question is the struggle between those trends adhering to the party's general line, centering on the work of the four modernizations, and those trends doubting and resisting this general line.

Concerning the problems which exist in the ideological realm today, if we go a bit deeper to explore their cause, we will see that these problems have already existed for a long time and are the continuation of the consequences of the 10-year turmoil. Some problems existed even before the 10-year turmoil. During the 10-year turmoil, Lin Biao and the "gang of four" messed up our ideology, messed up our system, messed up our policy, peddled the goods of sham socialism as genuine socialism, and brought the national economy to the brink of collapse. Thus they seriously sabotaged our party's fine traditions. This turmoil enabled the influences of feudalist ideology, bourgeois ideology, and petty bourgeios ideology to greatly extend their front, leading to the emergence of various complicated trends of thought and the emergence of all kinds of views concerning the superiority of the socialist system, concerning the party's leadership, concerning Marxism-Leninism, and concerning Mao Zedong Thought. A good many people not only did not have enough confidence in the building of socialism, but they also worried about the future of the Party and the state. It was only because of the feudal, autocratic rule of Lin Biao and the "gang of four" that people generally dared not discuss their real thoughts openly, and hence such problems became concealed. After the smashing of the "gang of four," people have dared to speak out and have dared to bring out problems. The Third Plenum of the 11th Party Central Committee reiterated the ideological line of seeking truth from facts, and the people's thinking has once more become lively. The congested, simultaneous appearance of previously concealed, half-clear, half-obscure trends of thought is what has contributed to the complex, complicated situation in the ideological realm.

The appearance of these various trends of thought at present is also closely related to the entry of our country into a new historical era. In order to triumphantly proceed with our work of socialist modernization, we are seriously summing up the positive and negative experiences of our 30 years of socialist revolution and socialist construction and are exploring the correct path for building socialism. The 10-year turmoil did not arise from imagination. Therefore we must, through practice, examine various principles, policies, systems, and theories since the founding of our state; inherit and develop those which are correct; and change those which are incorrect, old, and not in agreement with our new task. At such a turning point, when the old is eliminated and the new is deployed, diverse reactions are likely to be aroused and a struggle between new and old thoughts is bound to emerge.

To sum up the above, we can see that it is inevitable that certain complicated situations should emerge in the ideological realm at present. Some are the remnant poisons of Lin Biao and the "gang of four"; some are affected by the erosive influences of external bourgeois ideas; some are remnant poisons of feudalist thinking and reflections of the ideas of the small producers; and some reflect the shortcomings in our work. Insofar as these situations are concerned, we must pay close attention to them, seriously do a good job in our ideological and political work, provide relevant guidance according to propitious conditions, and direct the people's thinking onto the correct course. On the other hand, we must not exaggerate their seriousness or fail to distinguish between the main current and the side currents--between the whole and the parts. Some think that a certain confusion which exists in the ideological realm at present has resulted from our failure to do a good job in propaganda work or from the emancipation of our thinking. This view does not accord with facts.

The complicated, complex interaction of diverse thoughts at present includes both interference of remnant poison from the extreme left and influences from the rightist direction; it includes struggles between the advanced and the backward, between renovation and conservatism, and between the correct and the erroneous; it likewise includes class struggle. Hence, in pursuing our ideological and political work we cannot adopt "the same cut." We must proceed from the actual situation in our own localities and our own units, and thereby opposition to whatever erroneous ideas exist--emphasizing opposition to whatever erroneous ideas are found to be the principal ones. We must not indiscriminantly put forward opposition to the "left" or to the right.

In line with the actual situation in our province, together with the continued elimination of remnant poisons from the extreme left, we must at the same time stress the importance of opposing the erosion of bourgeois ideology. Because of the geographical position that Guangdong occupies, and also because of historical factors, the influence of bourgeois ideology has always been relatively great. In recent years we have strengthened our external activities, our exchanges with the outside world have expanded, and our contacts with the capitalist world have been more frequent. All this is necessary. But at the same time, the bourgeois idelogy and its way of life have started to seep in through various channels. We cannot take this lightly. This is a new condition appearing in the ideological realm under the new situation. We must carry out patriotic education among the cadres and masses as well as education on the ideal future, education on moral character, education on democracy and rule of law, and education on hard struggle, so as to build a great wall in our ideology and resist the erosion of bourgeois ideology, we must at the same time pay attention to eliminating the remnant poison of feudalist ideology.

In regard to the current discrepancy in ideological perception within the party and among the people with respect to the party's line, principles and policies, the substance is what kind of society, after all, a socialist society should be. Different views have always existed with respect to this question ever since the founding of our state. Our country has advanced from a semifeudal and semicolonial society into a socialist society. The level of our productive power is very low, however, and the country is therefore in a low stage of socialist society. But in the past, we had erroneous views as to what kind of society the present stage of our socialist society should be. For instance, it was thought that we could ignore the developmental level of our productive forces and artificially change production relations, thereby speeding up our effort to make ownership public and carry out uniform ownership by the whole people. Efforts were made to carry out egalitarianism in the realm of distribution; efforts were made to implement a high degree of concentration in the realms of production and circulation, leading to dead rigidity, etc. At present, the controversies that have emerged in our country about the long-term coexistence of elements of many different types of economy, about the use of market adjustment, about the development of commodity economy, about protection of competition, about restructuring the economic management system, and other such problems have, in the final analysis, all arisen from those different views as to what kind of society a socialist society should be. Therefore we must educate the cadres and educate the masses anew, and understand our socialist society anew. We must take ideological and political work in this aspect of our economic construction as the central task in our propaganda work, strengthen our economic propaganda, strengthen our propaganda on the economic theory of socialism, and help everybody understand the objective economic laws of a socialist society. Only in this way will everybody stop feeling stunned by our economic reform and the party's policy measures.

Our party has a fine, longstanding tradition in ideological and political work, and plenty of successful experience in it. But during the 10-year turmoil, Lin Biao and the "gang of four" resorted to an expansion of class struggle, confused the two kinds of different contradictions, criticized at random, struggled at random, and thereby seriously sabotaged our ideological and political work. And today, some comrades have again partially understood how to manage the economy by economic means but have overlooked how to mobilize the people's enthusiasm through ideological and political work and of thinking that ideological and political work is something we can take or leave. On the basis of the characteristics of the new era, they must launch ideological and political work, eliminate the interference of all erroneous trends of thought, and enable the vast ranks of cadres and masses to struggle with one heart and one mind for the building of a modern, powerful, socialist country.

PARTY AND STATE

ELIMINATION OF 'PERNICIOUS' INFLUENCE OF FEUDAL THOUGHT URGED

Jinan DAZHONG RIBAO in Chinese 26 Sep 80 p 3

[Article by Wu Yuli [0702 3768 7812]: "Eliminate the Pernicious Influence of Feudal Thought"]

[Text] In the real life of our country, the pernicious influence of feudal thought continues to exist in various forms. This is a publicly recognized fact. Through 10 years of fomenting disorder, Lin Biao and the "gang of four" stirred up despotism, cultism, factionalism, and the notion of special privilege, and even unscrupulously instigated literary persecution. These are the stuff of feudalism. During the days when they were running wild, such feudal remnants, like settled dregs which float upwards--an ill wind which spreads like a plague--brought upon our party, country and people a great calamity of unparallelled severity. Following the smashing of the "gang of four," this kind of thinking met with further criticism, but it still did not disappear without a trace. There continues to be a bad odor emanating from every corner of socialist life, poisoning the people's minds and becoming an obstruction to the realization of socialist modernization and the democratization of political life. Because of this, eliminating [illegible] pernicious influence of feudal thought has become one of our great tasks on the ideological battlefront.

I

The feudal society of our country had a long history of 2,000-3000 years. And semi-colonial feudal rule lasted more than 100 years. This has given feudalistic thinking a long heritage, leaving it deeply entrenched and allowing it to penetrate extensively into every aspect of social life. Some things have already become a force of habit. The feudal despotic system and the system of feudal thought which emerged from the natural economic base of small-scale production, developed to relative maturity and completeness in our country. Its outstanding characteristics were:

1. Feudal rulers personally held absolute power. Beginning with the Qin Dynasty, our nation formed into a united, autocratic country with centralized authority. The emperor was the supreme ruler and enjoyed absolute power. Simply by being "the magnificent Son of Heaven" one then "possessed the wealth of the world." The will of the emperor was law. His emotional states determined the personal fates of the people, their rise and fall, glory and disgrace.

All the people of the country were the subjects of the emperor. They had to follow completely the orders of the emperor and could not resist. To do otherwise was to be labeled "traitorous." Rivers and mountains became personal property, as in "The emperor in the country." The emperor had the authority to reward any person by giving them noble rank, official position, property, special privileges, or the honorific titles of religious clergymen. He could also put anyone to death on "fabricated" charges. The actions of those on high were imitated by those below. For the country as a whole it was the emperor who decided everything; for the localities or the ministries it was the officials who decided everything. Each level of feudal officialdom relied on the protection of the emperor. And by utilizing the power that came into their hands, feudal officials were able to oppress the people at will and seize the wealth of society. Sayings such as: "magistrates are free to commit arson, while the common people are forbidden to even light lamps," and "three years as a Qing Dynasty magistrate, 100,000 pieces of silver," are profound indictments of this kind of despotism.

2. A rigid stratification system and wideranging feudal privileges. During the long period of feudal society in our country, from beginning to end a rigid system of stratification and special privilege was practiced. The feudal ruling class made use of each of the multilayered, pyramidal levels of bureaucratic organs to govern and control the entire country. The emperor implemented the systems of heriditary nobility and lifetime tenure. The officials, in accordance with the level of their rank, enjoyed varying degrees of political and economic privilege. To become an official was to strike it rich, as in the saying "To have authority is to have everything." Ever since the system of "reward nepotism" [The rewarding of officials with positions for their sons] began in Han times, "once one man entered officialdom, his descendants and relatives could all receive official rank." If princes, nobles, or bureaucrats committed crimes, under the law they all enjoyed special privileges which allowed them to lessen, avoid, buy their way out of, or use official rank to mitigate punishment. The employment of feudal officials generally followed a system of appointment and discharge in which authority ran from the top down. The basic principle in employing persons was "instate only relatives." Because of this, elevation of the mean to respectability, rigidity of rank, mutual deception and distrust, battles for rights and advantage, manipulation of the law for personal gain, acceptance of bribes for official services, following the beaten path, and corruption and incompetence became inherent features of feudal, bureaucratic politics.

3. Promotion of cultural despotism and obscurantism. The feudal rulers, in order to maintain political unity, also needed to establish a single pattern of governing thought and to promote a cultural tyranny. Qin Shihuang carried out the "burning of the books and burying of the scholars" which set the precedent for cultural despotism; but Qin Shihuang and others like him did not realize that the Confucian doctrines were actually very useful tools for maintaining despotic, centralized rule. Only Jong Dongshu in Han times, through his historical and practical experience, recognized this point and raised the idea: "Do away with the Hundred Schools and respect only the Confucianism." Having passed through the editing and explication of Jong Dongshu, the Confucian

doctrines were subsequently utilized by monarchs throughout history. By Sung times, "The Four Books, Collected and Explained" by Ju Xi became required reading for the intelligentsia of the feudal society and supplied the standard answers for the feudal imperial examinations. Schools and teachers were limited to teaching "The Four Books," "The Five Classics," "The Historical Lectures," and the like. Whoever did not operate according to this set of regulations would be charged with "departing from the classics and rebelling against orthodoxy" and would meet with persecution and dismissal. This type of ideological and cultural tyranny is intimately associated with political oppression. It was particularly severe during the literary persecutions which arose during the Ming and Qing dynasties. If the emperor was offended by so much as a single book, a single poem, a single line, or even a single word, then the originator would be labelled "traitorous" and be put to death; guilt by association could fall on the family as well, bringing misfortune to both relatives and friends. The cultural despotism which the feudal rulers promoted was, by its very nature, a kind of obscurantism. Among the things which the feudal rulers and their agents did their utmost to propagate, and which had the greatest influence on society, were these three: First was the theory of the Mandate of Heaven. There appeared in China, beginning in the Yin and Zhou periods, a religious concept of Heaven's will. Based on this idea, Confucius suggested that "life and death are ordered, the determination of wealth and nobility rests with Heaven," thereby viewing "Heaven" as a "God" with a will and the ability to direct all events in the human sphere. Jong Dongshu of the Han era restructured the Mandate of Heaven theory and created a teleological and theological system of philosophy. He did his best to advocate that "heaven" was "the great sovereign of all gods," "the ancestor of all things"; and that all things were purposefully arranged by "heaven." Further, Heaven's son was called the "Son of Heaven," and "the Son of Heaven received his mandate from Heaven, the world received its mandate from the Son of Heaven." The sovereign's authority was divinely given. In this way the emperor was "deified." Due to the fact that the emperor was the "Divine Son of Heaven," his revered divinity was inviolable. From Han times this point was written into law. Second was the idea of loyalty to the sovereign. In feudal society, the sovereign-minister relationship was, in actuality, a "master" and "slave" relationship. "The minister serves the monarch with loyalty." Loyalty to the person of the emperor became the highest standard of virtue and the highest political principle of feudal society. As such, "if the sovereign desired the minister's death, it was disloyal for the minister not to die." A man could only praise the monarch and could not speak of his slightest imperfection. In this kind of a situation, sycophancy and fawning flattery were rampant in every feudal dynastic period. Those accomplished and outstanding figures in history who expressed critical opinions of the emperors who abused their despotic powers frequently met with tragic ends; whereas those ambitious, scheming sorts, on the other hand, would use "superficial loyalty," flattery and other means to deviously secure trust and snatch power. Third was the "three nets and five constants" patriarchal concept of ethics. At the heart of this patriarchal concept of ethics were the "three nets." These were explained as: "The sovereign is the net of the minister, the father is the net of the son, and the husband is the net of the wife," and "The three nets of the Way of the King can be sought in Heaven." In this way divine right, imperial right, the right of nobility, and the rights of the husband were all cast in the same furnace and together embodied the thought and system of feudal patriarchal ethics. They formed a complete framework of enormous ropes which maintained the feudal despotic system and bound the thought of the people. For a long period of time, this conception of patriarchal ethics, along with the Mandate of Heaven theory and the idea of loyalty to the sovereign, combined to form a kind of traditional force of habit, and produced an extremely evil and penetrating influence in our country.

After the 1940 Opium War, China step-by-step became a semi-colonial, semi-feudal society. In the old China, during more than 100 years of semi-colonialism, and semi-feudalism, the feeble bourgeois class never once carried out a serious, penetrating criticism of feudal thought. On the contrary, feudal thought and the slavish thought of imperialism formed a reactionary alliance and became the ruling thought of society. The Revolution of 1911 nominally established a republican system, threw out the emperor and replaced him with that of president. In fact, however, things remained much as before: dictatorial rule by both large and small feudal warlords. The May Fifth Movement of 1919 was a forceful attack on the ideology and culture of feudalism. It aroused the masses from the suffocation of several thousand years of feudal despotism, but, as before, did not touch the foundation of feudalism. As such, feudal thought in every area of life in our society continues to have a vast and profound influence.

II

In overthrowing the feudal reactionary rule and the feudal system of ownership, the New Democratic Revolution led by our party was successful and thorough. But it did not really complete its task of eliminating the pernicious influence of feudal thought. During the course of the socialist revolution, our criticisms of the bourgeois notions of harming others to benefit yourself, planning based solely on profit, and opportunism, and of their decadent lifestyles were completely necessary; but in the course of our actual work, we underestimated the extent of the influence of the insidious remnants of feudal thought, and we did not firmly grasp the struggle to eliminate the pernicious influence of feudal thought. This was so to an extent that the insidious feudal remnants and the forces of habit they engendered have quietly grown, obstructing and damaging the consolidation and development of the socialist system. During their 10 years of fomenting disorder, the reason that Lin Biao and the "gang of four" were able to rampage in such a manner and carry out their unscrupulous perversities lies in the fact that the poisonous effects and influence of feudal thought not only existed in the minds of the masses, but had also penetrated into the party. If it were not for this state of affairs, Lin Biao and the "gang of four," these dregs of feudalism, could not possibly have put into effect such an enormous counterrevolutionary capacity.

For a long time now, due precisely to our neglecting to carry out a serious and systematic criticism and elimination of the pernicious influence of feudal thought, we have, in the course of our actual work, frequently been unable to throw off the influence of such thought. This is so even to the point that, in regard to certain problems, we have promoted feudal things, taking them to be socialist things. For example, some of our comrades, being unable to draw a clear line between proletarian centralism and the system of feudal patriarchy, have preserved the system of feudal patriarchy, taking it to be proletarian centralism. As a consequence, in the course of actual work, they demonstrate a deficient understanding of the concept of democracy and place the individual above the group or the masses. They become egotistical and act arbitrarily. Because of not clearly drawing the line between self-reliance and isolation, they frequently advocate isolation, taking it to be self-reliance. The result is that they sink into conservatism, backwardness, and arrogance. Feudal despotism; the concept of patriarchal ethics; feudal, patriarchal styles of leadership; as well as feudal class distinctions; special privilege mentality; and the force of habit are frequently manifested by our cadres and the masses in various forms.

In addition to the reasons analyzed above that enable the residual poison of feudal thought to continue to influence every aspect of life in our society, there remains a two-sided situation worthy of our attention: First, the existing concrete institutions are not perfect; many defects exist. For example, the existing system of lifetime tenure for cadres has developed into a force of custom which allows cadres to rise but not to fall; the employment of cadres basically continues to follow an appointment system with authority running from the top down. One seldom hears the opinions of the masses in regard to the selection of cadres. This leads to cadres with improper thinking who are responsive to those above and not responsive to the masses; thus reversing the relations between the individual and the masses, between the public servant and the masters. Consequently, it is easy for these cadres to become infected with the perverse style of feudal sycophancy, seeking the favor of their superiors, acting arbitrarily toward those in lower positions, and being unconcerned with the hardships of the masses. Second, in our country small-scale production has been as expansive as the oceans, with a history of more than 2,000 years. Through socialist reform and construction this situation has been greatly changed, but by and large, the level of development of our productivity remains very low. Especially in agricultural production where hand labor continues to be the basis in most areas, there remain certain special characteristics of small-scale production. The influence of the styles of thought and living of small-scale production remains widespread. All of these are important reasons why the pernicious influence of feudal thought can continue to exist and, under certain conditions, can stir up great troubles and poison the cadres and the masses.

III

Both the perversities of Lin Biao and the "gang of four" and the lessons of experience we have received in our actual work show fully the depth of the influence and the extent of the danger that the residual poison of feudal thought holds for the social life of our nation. Therefore, we must work hard in the areas of thought and politics to eliminate the remaining influence of feudal thought and liberate the vast number of cadres and the masses from these spiritual shackles. Otherwise, completion of the ongoing process of democratization of political life will be obstructed and all aspects of the line, direction, and policy of the Central Committee of the CCP cannot be thoroughly carried out. And this will directly influence the smooth development of the work on the Four Modernizations.

This being the case, how then should we go about criticizing and eliminating the pernicious influence of feudal thought?

First, lines must be clear, attitudes must be firm. We must use the tools of Marxist-Leninist and Mao Zedong Thought to seriously analyze the social and historical roots produced by feudal thought. We must summarize the practical lessons we have learned on the ideological battlefront through 30 years of nation building and clearly draw the lines between proletarian thought and feudalistic and bourgeois thought; between democratic centralism, the authority of our leaders, and despotism; between the role of the individual and the cult of personality; between appropriate distinctions in the treatment of others and notions of special privilege; between the democratic essence of our cultural legacy and the feudal dregs; and between the pernicious influence of feudalism and the unscientific methods and flawed systems produced in our work owing to a lack of experience. We must also raise our self-awareness in opposing the influence of feudal thought. In clarifying these lines and accurately spotting the influence of the residual poison of feudal thought--and its manifestations--we must aline ourselves with reality and carry out serious criticism. In this respect, we must hold fast to the scientific attitude of seeking the truth in facts and not rouse a storm of activity and label everything feudalism without analyzing it.

Second, we must vigorously perfect our party discipline and national law, as well as the regulations in each area of our system. Eliminating the pernicious influence of feudal thought, as far as the masses and cadres are concerned, involves a kind of self-education and self-reform. Therefore, we must make use of the methods of thorough reasoning and calm discussion. At the same time, in eliminating the influence of feudal remnants, the important thing is to thoroughly reform and perfect every aspect of the party and state systems.

As for those system regulations which do not fit the demands of the four transformations, that continue to retain traces of feudalism, and that leave holes which make it easy for feudalism to grow and exist, we must firmly implement reforms. For example, doing away with the system of lifetime tenure actually in use for cadres and leaders at every level, and establishing and perfecting cadre management systems for dealing with the selection, evaluation, supervision, commendation and censure, recall, rotation, and retirement of cadres are important aspects of carrying out such reform.

Third, we must be tenacious. Because the long history of feudal thought has had a profound influence on the social life of our country, also on the political life of the party, some things have already developed into a stubborn force of habit. Therefore, the criticism and elimination of the pernicious influence of feudal thought is both an urgent task, and a long-term process. The kind of attitude which does not fully recognize the long-term nature of this kind of struggle; which lacks tenacity; which, upon meeting obstacles or setbacks, presses for quick completion or gets discouraged and loses determination is not correct. Nor is it advantageous to bringing this arduous task to completion.

The reason we say that criticism of feudal thought is a long-term struggle lies in the fact that thorough elimination of the pernicious influence of this kind of thought, in the final analysis, depends upon developing society's productivity to a high degree and greatly raising the scientific and cultural level of all the people. This is because all the thoughts, styles, traditions, ideas, customs, and the like which are created by specific material conditions can, in the end, only be thoroughly changed through the creation of new material conditions. Therefore, for the moment, we must strongly cherish and protect our excellent situation of stability and unity, with common minds and hearts, proceed with the four transformations. During the New Long March to realize the Four Modernizations of Socialism, we must create the material base and social conditions to thoroughly bury the pernicious influence of feudal thought.

SCHOOLS OF THOUGHT MAKING UP WORLD OUTLOOK EXAMINED

Beijing BEIJING RIBAO in Chinese 25 Sep 80 p 3

[Article by Ceng Bairong [2582 4105 5816]: "Exactly How Many Schools of Thought Make Up a World Outlook"]

[Text] Since the founding of the People's Republic of China, there has been one type of statement: "As far as a world outlook is concerned, if you are not a member of the proletariat then you are a member of the bourgeoisie." Does this type of thesis correspond to the real situation?

A world outlook was originally a reflection of the existence of a people's material society. However, with regard to Chinese society there are already many people who argue that "the society of the past 3,000 years was a feudal society" and that even after the overthrow of the emperor, and during the long period before liberation, China was no more than a semi-feudal and semi-colonial society and that "the big imperialist powers" who caused China to become a semi-colony, "also caused China's feudal landlord class to become the mainstay of their domination of China." How could a feudal class which was this powerful suddenly disappear along with its remnants and influence within only one night after liberation?

There have been articles which have analyzed this by saying of China's national bourgeoisie that "their power was very weak." But in the socialist period it seems that the bourgeoisie changed from being weak to being extremely strong, with bourgeoise rightists numbering in the several hundred thousands. This still only refers to politics; when we talk about world outlook, their number is countless. Therefore, if today there is an anti-bourgeoise rightest trend, tomorrow the bourgeoise white flag will be raised again. The result was that several hundred million peasants all grew bourgeois tails and they repeatedly had to be cut off on a nationwide scale. Because of this, class struggle could only become more and more intense and more and more complex. It is as if everyone, in complete madness, wanted to restore the lost bourgeoise heaven. In the end, this stirred up a 10-year calamity, and as many as 100 million people could not escape in the face of this inexorable doom.

The bitter lesson is that we forgot that the dregs of the bourgeoisie still exist. Those patriarchal systems, the condition of what one person says goes, bureaucracy, the condition "large and complete and small and complete," the lack of contact even with neighbors--aren't they the brands of feudalism?

The dregs of feudalism headed by Lin Biao and Jiang Qing, made deliberate misrepresentations, caused Marxism to be capitalism, falsely accused the proletariat of being capitalists, said the revolution was counterrevolutionary and said the great counterrevolution was the great revolution. Given their world outlook this is natural and not surprising, otherwise how can you explain it?

How much blood, how many lives and how many tears were expended? It is because the evil shadow of feudalism still exists.

From the 1940's right up to the present, historians have been unable to explain clearly exactly when the dividing line between China's 3,000 years of feudal society and slave society occurs. Yet, early feudal lords and slave owners, early peasants and slaves, in many respects must be clearly distinguished, but to do so is really hard. For example, during these years the "three nots" were consistently advocated. The first one was not to come down with the big stick. Who came down with the big stick? Was it the feudal class? I think it must have been the slave owner class.

Therefore, I think that in regards to a world view, if you are not a member of the proletariat, then you are a member of the bourgeoisie, if you are not a member of the bourgeoisie, then you are a member of the feudal class and if you are not a member of the feudal class, then you are a member of the slave owner class.

'BOHAI 2' INCIDENT EXEMPLIFIES GANG'S EVIL EFFECTS

Tianjin TIANJIN RIBAO in Chinese 20 Aug 80 p 1

[Article by Wen Zhu [2429 4554]: "We Must Never Again Engage in Sham Ideological Political Work"]

[Text] The sinking of the Bohai No 2 drilling boat is an incident that causes one to ponder deeply. This painful lesson makes one think about many questions, and how to strengthen our ideological political work is one of the questions we must think about.

Right now, some comrades in ideological political work feel that it is difficult to do their job, because no one listens to what they say, and every time they try to reason, people think that it is only empty verbiage. Some comrades associate this with the evil wind that is blowing in society, and think that ideological political work must be strengthened.

Due to changes in objective conditions, ideological political work has also encountered new problems. The tendency to overlook ideological political work does exist. Some people lack a correct understanding of ideological political work, and think that "political study is useless." If you try to reason with them, they say it is verbiage; if you try to talk facts, they talk nonsense. All of these situations do in fact exist; therefore, ideological political work must be strengthened, not weakened.

But comrades who are leaders and who are doing ideological political work should also pause and reconsider why nobody wants to listen. How can we improve and strengthen ideological political work?

The sinking of the Bohai No 2 drilling boat typically reflects the fact that the evil effects of Lin Biao and the "gang of four" still exist in ideological political work.

This incident caused 72 deaths, and the direct economic loss was 37 million [yuan]. At the time, the people's thinking must have been greatly upset, ideological political work should have been followed up. But how did the leaders in the Ocean Petroleum Exploration Bureau grasp ideological political work? Summing it up with the one word "sham" is not too excessive. The incident, which was due to being irresponsible and unscientific, was described as having happened "because of a sudden strong wind that could not be resisted." In order to standardize thinking, they even forbade any mention of the word "incident." And they even proclaimed that we should "pay attention to the new trend of class struggle" and "prevent others who have a particular intention of confusing the situation." How could they explain the 72 deaths? They still talked as if they had good reasons: "Where there is struggle, there is sacrifice; where there is a price to pay for a war, there is a price to pay for the "four modernizations"; "the 72 deaths are worth it." The loss of 37 million [yuan] was described as "tuition" that was paid to the ocean. One of the characteristics of sham ideological political work is loud noise followed by "great conclusions," "great criticism," "great propaganda," and "great praise."

It would be very strange for anyone to listen to this kind of ideological political work, unless there is such delusion that it seems flawless or one is under heavy pressure. Our party once had very high prestige, and one of the important reasons was that we were practical and realistic. The sham, big, empty wind blown by the "gang of four" seriously damaged our party's prestige; and sham, big, empty words were what leaders of the Ocean Petroleum Exploration Bureau told the masses regarding this sinking incident. You said it was "paying tuition," but wouldn't others wonder how could we afford this kind of tuition? You said they were heroes, but wouldn't others wonder how could we afford losing our heroes this way?

Ideological political work should also be realistic and practical. Ideological political work needs reasoning; it is necessary to talk reason, but it must be related to facts. Newspapers have been openly reporting the incident of the sinking of Bohai No 2 drilling boat. They have analyzed the true situation from the facts, and have clarified the responsibilities, and have handled it seriously. They also have talked a lot about respecting science and the masses. People do not feel that these are empty words, because they are true and are related to facts. Sham and empty words cannot strengthen ideological political work. We must not blame others for not listening, but must ask ourselves whether we believe it or not.

Some of our ideological political work makes people feel that it is not pinpointed at issues and is not sincere, and therefore the results are not ideal. It is not like the sinking incident, where some people were trying to cover things up, but it still lacks overall consideration and clear purpose, and so it is unpersuasive. Sometimes this situation gives people a feeling of sham. For example, after an incident in the past, leading bodies of some units would describe the problem as being very serious, and a general incident would be classified as a political incident. It would seem as though they were very serious about ideological political work, but in fact the result was just the opposite.

As to how to strengthen ideological political work, there are many problems to be studied. The incident of the Bohai No 2 sinking reminds us that we should do this task well, pay attention to cleaning up the evil effects of Lin Biao and the "gang of four," and not engage in sham ideological political work any longer.

EVIL DEEDS CANNOT CHANGE INTO GOOD DEEDS

Beijing BEIJING RIBAO in Chinese 20 Sep 80 p 3

[Article by Su Donghai [5685 2639 3189]: "An Accident Can Only Be an Accident"]

[Text] The correct handling of the "capsizing of the Bohai No 2 oil rig" was carried out to the immense satisfaction of the people. Some people say that this was an evil deed changed into a good deed. If the matter can be seen in this way, I feel it is worthy of further study.

What is an evil deed that is changed into a good deed? Some say that it indicates a thing which has transformed from its evil aspect to its good aspect. Good and evil are a pair of contradictions which can mutually transform. When the evil aspect overcomes the good aspect it is called an evil deed but otherwise it is called a good deed. Yet, a thing always possesses its determined character and the struggle of contradictions always has an outcome. If the outcome is a good deed then it is a good deed and if the outcome is an evil deed then it is an evil deed. If the matter already has an outcome which is an evil deed, then how can it change into a good deed? The capsizing of the Bohai No 2 oil rig has already become "an accident." It can therefore only be an accident and cannot turn into something meritorious.

However, for many years, people often lumped evil deeds and the handling of evil deeds together without distinguishing between them. It seemed that if an evil deed was handled well--for example, a lesson was learned, mistakes were overcome, or work was improved, and so forth--the evil deed was changed into a good deed. I think that this is incorrect. This is confusing the inner and outer contradictions of things. The good and evil of a matter form a set of contradictions which decide whether the matter is a good deed or an evil deed. For the handling of good deeds or evil deeds, there are also the contradictions of good and bad and this forms another set of contradictions. This set of contradictions decides whether the results of this matter are good or evil. The latter is a contradiction induced from the former and although both are connected, yet they have the relationship of outer contradictions. No matter how well the party Central Committee and the State Council handled the capsizing of the Bohai No 2 oil rig, they could not change the intrinsic nature of this accident. Evil deeds are after all evil deeds. To say that if an accident is handled well, the accident becomes a good deed is obviously a type of confusion of thought.

It is not only a matter of errors in thinking. For many years, it has often become a subterfuge for concealing mistakes, causing people to not face up to mistakes. Since evil deeds can change into good deeds, then what is there to fear from making mistakes? If the making of mistakes can even "spur on" the improvement of work, it therefore becomes a great good deed. Methods of thinking like this which are similar to A Q's spiritual method were prevalent for more than 18 years and the mistakes did not change into good deeds. Furthermore, greater and greater mistakes were made, and it was not known where it would all end. Fortunately, the "gang of four" was smashed, the party again returned to the scientific ideological line of dialectical materialism, and these idealistic modes of thought were exposed one by one. In acclaiming the correct handling of the capsizing of the Bohai No 2 oil rig, should we not again examine this topic of evil deeds changing into good deeds?

RANKING MILITARY PERSONNEL, CADRES VOLUNTARILY STEP ASIDE

Retired General's Reminiscences

Hangzhou ZHEJIANG RIBAO in Chinese 21 Sep 80 p 1

[Interview by Chen Guanbo [7115 0385 2672] and Jiang Ping [3068 0988]: "What Are the General's Thoughts?--Interview With an Old Warrior of the Red Army, Former Deputy Commanding Officer of Provincial Military District Zhou Changsheng"]

[Text] The Third Session of the Fifth National People's Congress just concluded has solemnly put forward the question of making the ranks of our cadres young, intellectual, and professional. As our party proceeds to select large contingents of youthful and able cadres, what do the old comrades think about it?

In order to find answers to this question, we interviewed Comrade Zhou Changsheng [0719 7022 0524], former deputy commanding officer of the provincial military district, in front of a quiet building at the sanitarium for retired cadres of the provincial military district.

As soon as we met each other, Zhou Changsheng spoke high-spiritedly: "I joined the revolution over 50 years ago, but this is the first time I have heard about old comrades at the central headquarters taking the initiative to make way for others; this is a terrific event. The reform of China's cadre system is going to make a good beginning now!" With the magnanimity representative of a fighting general, he started to guffaw openly.

He especially mentioned Deputy Chairman Nie Rongzhen and his letter of resignation. As political commissar of the First Red Group Army in the early days, General Nie always remembered that he had under his jurisdiction a model company commander by the name of Zhou Changsheng, who fought heroically. After liberation, General Nie would always call for Zhou Changsheng each time he came to Hangzhou and would ask about his work and about his health, showing utmost care. Not long ago, Zhou Changsheng saw General Nie receive "the little Japanese lady" on television when he was weak with illness, having to be supported by two persons before he could stand up. He had worried ever since about the health of his old chief. He had even thought of telephoning General Nie to comfort him somewhat. At this session of the National People's Congress, he read General Nie's letter of resignation, and he was moved to tears. Although the old chief was old and often sick, he still frequently thought of successors who must carry on the cause of the party; now he was setting an example for us, [Zhou] thought. We were now also nearly

70 or 80 years of age; if we still refused to vacate our positions and let young people take over, then "with the person lying in the hospital, and his title upheld at commanding headquarters," how could we realize the four modernizations? Thinking along this line, my life in these years since my retirement has proved really worthwhile.

As a general, Zhou Changsheng fought countless battles. Since he joined the revolution in the Jiangxi soviet area in 1929, he has spent more than half of his life in the military ranks. He sighed as he spoke these words: Everybody has a period of youth in his lifetime; when we took on the title "commander" and started to lead troops, we were but young lads less than 20 years old. Even when we became cadres at division and army levels, we were not much older than 30, and we were then already directing "thousands of troops." During the war years, the emphasis was always placed on promoting young cadres. When I first became a battalion commander, the regimental commander at the time, Yang Dezhi [2799 1779 1807], was the very one who had taught me how to lead and command troops, and he did so with his own hand guiding mine. I remember during the battle at Sandingbao in northern Shaanxi, our regiment commander was wounded, our political commissar was martyred, and the whole regiment only had myself left as chief of staff. The enemy was right in front of us, and the situation was urgent. At the time, political commissar Xiao Hua [5618 5478] at division headquarters decisively issued an order for me to shoulder the burden of commanding the whole regiment, and he also dispatched the chief of staff from division headquarters to bring me several directives for fighting the battle. I started to work on the job, and the battle, it turned out, was not fought too badly. Today, there are not a few fine young cadres in our army. Not only the "1938 model" and the "liberation model" cadres during the years of revolutionary wars, but after the founding of our state we had a very rich experience in fighting during the resist-America and aid-Korea campaign. Those who participated in the war of self-defensive counterattack last year also fought very well. All cadres of these categories need old comrades to help the party organizations select them correctly. And just selecting others still will not do; it is also necessary for them to vacate their positions in favor of younger comrades and to let themselves retreat to the second or third line. Only thus will such cadres become lively in their work.

At this point, we interrupted him to say: Today, some old comrades are still mindful about becoming advisers and about retiring. Zhou Changsheng said: This requires them to look from the point of view of the overall situation. If you wish to ensure the continuity and stability of the party's leadership, those old and sick comrades will have to retire gradually. They must not wrangle too much about their salaries and cling to a telephone, a passenger car, and a small foreign-style building. Communists cannot run after such things. We have had so many comrades-in-arms who died fighting and enjoyed none of these material comforts. They died in the grasslands, they died on the snowy mountains, they died in the rivers, and they died under the gun barrels of the enemies: they did not even see socialism. We cannot forget them.

The sunshine of early autumn beamed into the guest hall. The general waved his hand and said: Let us go out and take a look in the yard! With one hand resting on his waist and the other pointing at rows of flowers and bushes thriving under the autumn sun, he said, crisply: Actually, life in retirement is not bad at all. We have a chance to read all the prescribed documents, to read newspapers regularly, and whenever we have some leisure we can plant some vegetables here and some flowers there. Once in a while, we go to a hospital to rest for a few days and have our "old machinery" examined and repaired somewhat. Life is very severe but we are by no means idle. When I relax, I always think about my war life, write memoirs, or analyze examples of guerrilla warfare. He thereupon asked a family member to bring a copy of "Life in the Military Ranks," which includes memoirs written by him and other old comrades. As he flipped through its pages, he said: Perhaps this can also be regarded as an inheritance bequeathed to posterity! Living such a restful life, our spirit and our health both fare well. Some comrades even joked that if he had not retired, we probably would have gone to see Marx long ago. As he spoke at this point, he once more let forth unrestrained laughter.

In the yard in the vicinity of Hangzhou, surrounded by serene fields, the general's heart still beats in close synchronization with the pulse of the times.

Division Staff Chief's Voluntary Demotion

Hangzhou ZHEJIANG RIBAO in Chinese 6 Sep 80 p 4

[XINHUA dispatch from Nanjing: "Division Chief of Staff in the Provincial Military District Voluntarily Asks To Step Down"]

[Text] XINHUA reporter Wu Dongfeng [0702 2639 1496] reports: Zheng Renbo [6774 0088 3134], chief of staff of a certain division in the Zhejiang Provincial Military District of the People's Liberation Army, voluntarily asked to step down and make way for a competent comrade.

Since joining the army in 1960, Zheng Renbo has performed many years of leadership work at the basic level. In 1967 he was promoted from regimental commander to division chief of staff. Along with the development of modernization work among the troops, he has increasingly felt that the command of various armed forces to fight a coordinated war touches upon a great deal of military science and cultural knowledge. His own cultural level is rather low however, and feeling he could not competently handle the job himself, [he feared] this might well damage the cause of the party. Consequently, he voluntarily submitted to the higher organ a request that he no longer serve as division chief of staff, and expressed the hope that he might be used at a lower post.

After Zheng Renbo's request for demotion was submitted, many people felt dumbfounded. Some comrades said: There is a great difference in living standards between division-level cadres and regimental-level cadres; this approach is rather stupid. Other comrades said: Only when one has committed errors does one ask to be demoted. Chief of Staff Zheng Renbo has not committed any errors, so he should not be demoted. Countering these discussions, Xheng Renbo explained patiently. He said: I am not suited to serve as division chief of staff. To vacate this position in favor of a comrade with a strong professional capability is beneficial to the revolutionary cause.

In August last year, Zheng Renbo was dismissed from his post as division chief of staff, and he is once more serving as regimental commander. During this past year, he worked together with a "squad" of regimental party committee members with one heart to conduct investigation and study, to seek truth from facts while attempting to solve "old, big, and difficult" problems, to mobilize the masses, and courageously to renovate education and training, thereby conferring an inspiring new look on regimental work. Cadres and fighters all praised Zheng Renbo, saying that even though he was demoted, his zeal was not reduced; he is a good cadre and a good party member who understands and upholds the overall situation.

Cadres' Retirement

Shanghai JIEFANG RIBAO in Chinese 17 Sep 80 p 3

[Report: "Nanjing Military Unit Looks After Retired Cadres: 138 More Division-Level Cadres Retire This Year"]

[Excerpts] The party committee of the Nanjing military unit respects and looks after retired old cadres and makes it possible for one group of retired cadres after another to happily embark on their new life. From January to August this year, 138 more division-level cadres from the whole unit have been given permission to retire to rest.

Among the retired old cadres this year, many fighters are old models and old heroes who have always enjoyed the respect of the vast ranks of commanding officers. Among them are Li Yenfu [2621 5888 4395], senior division-level consultant to the Nanjing Garrison District and member of the old Red Army, who struggled hard for a total of half a century and who was recently appraised as a fine communist; Li Peizhen [2621 0012 2823], third-class people's hero of East China and deputy division-level consultant to the Nantong Military Subdistrict; and so on. These old cadres understand and support the overall situation. They have voluntarily obeyed the organization's decisions, and not a few comrades have taken the initiative to recommend talented successors. Their lofty style and fine quality have been encouraged and exalted by the leading organ of the unit.

The party committee of the Nanjing military unit actively adopts measures to look after the livelihood of retired old cadres. Principal responsible comrades of the military district regularly go down to the basic level to understand and solve the practical problems of retired cadres.

BRIEFS

ADMISSION TO MILITARY SCHOOLS--In early August, nine fighters of a certain antiaircraft regiment of the naval unit stationed on Hainan Island received admission notices from military schools. They elatedly declared: This is inseparable from the fact that the leaders of the unit are paying attention to cultural study and grasping it well. This regiment has always paid greater attention to cultural study by cadres and fighters, and has achieved good results. Last year, seven fighters passed the entrance examinations of universities and military schools. This year, the regiment party committee paid even greater attention to grasping well the cultural study of cadres and fighters in order to make early preparations for the training of personnel by schools at military units. On the basis of the requirements of these schools, they specifically sought to grasp the study of fighters with a junior middle school and senior middle school level of culture. The whole regiment conducted 27 junior middle school level classes and 9 senior middle school level classes, and selected 90 comrades with definite teaching competence from the cadres and fighters as teachers, while the party committee allocated one standing member to take charge. Because the leaders paid attention and the methods adopted were appropriate, the cultural level of the cadres and fighters of this regiment has been rising steadily. During the student recruitment operations of the military schools this time, 16 comrades from this regiment registered to take the entrance examination; 9 fighters have already been formally admitted, and 2 more comrades are still awaiting their notices. This is the regimental-level unit in which more fighters than elsewhere have passed the entrance examination to military schools. [Excerpts] [Haikou HAINAN RIBAO in Chinese 4 Sep 80 p 3] 9255

WORK FOR WOUNDED VETERANS--The Tianzhu County Revolutionary Committee has properly placed [in work posts] the gloriously wounded and maimed veterans of the war of self-defensive counterattack against Vietnam. Of the 23 veterans in the county, except in the case of one on account of a particular situation, the other 22 happily walked to their posts of work. In order to handle this job well, the county delegated a vice chairman of the County Revolutionary Committee to be in charge and to hold many meetings of responsible persons of the People's Militia Department, the Personnel Bureau, the Bureau of Civil Administration, etc., which conducted case studies on the question of their specific placement. The placement office also convened a forum to seriously listen to the [veterans'] demands and opinions. [Excerpts] [Guiyang GUIZHOU RIBAO in Chinese 7 Sep 80 p 2] 9255

MILITIA ANTIAIRCRAFT UNIT CONFERENCE--The provincial military district's militia antiaircraft gun construction on-the-spot experience exchange conference lasted

4 days. It was concluded on 13 [September] in Daqing Municipality. The more than 140 delegates from the province listened to the presentation of Daqing Municipality's experiences, watched the division-regiment-battalion three-level drill exercise of the Daqing militia, witnessed the demonstration of actual firing by the militia's antiaircraft guns, and visited the militia's armory, gun positions, three-level command headquarters, and training corps facilities. At the conference, the provincial military district deployed the militia's antiaircraft gun construction tasks. The general staff headquarters, the Military Commission artillery corps, the Shenyang Military District, and Liaoling and Jilin provincial military districts all sent representatives to participate in the conference. RECRUITING YOUNG, EDUCATED LEADERSHIP CADRES URGED

Beijing GUANGMING RIBAO in Chinese 25 Sep 80 p 3

[Article by Teng Wensheng [3326 2429 3932]: "Strive To Lower the Age of Leading Personnel and Provide Them With Intellectual and Professional Training"]

[Text] One of the very important and pressing issues in our current national political life is to actively rejuvenate various leadership organizations, gradually lower the age level but raise the level of professional expertise of our leadership personnel. Whether or not this issue will be well handled is related to whether or not we can truly develop the superiority of the socialist system and the progress and failure of the socialist modernization programs.

We must adhere to the policies and goals stipulated during the Fifth Plenary Session, firmly persist in rejuvenating the various leadership organizations, gradually lower the age level but raise the level of professional expertise of our leadership personnel. In order to achieve the latter, we must liberate our thinking in a big way. By liberating our thinking, we mean that we should liberate ourselves from the obsolete views and thinking as mentioned in the following.

Firstly, we must liberate ourselves from our prejudice against education and intellectuals and similar leftist thinking. Scientific and cultural knowledge is an indispensable force in the advancement of socialism. In the course of the four modernizations, a leader has to have certain expertise and specialized knowledge, no matter which position he holds. We cannot perpetuate our socialist system on the basis of illiteracy of semi-illiteracy. As Engels put it nicely: The enterprises of a proletarian, socialist society need lawyers, as well as "doctors, engineers, chemists, agricultural pharmacists and other specialists. This is because we not only have to handle our political apparatus but also the entire production system; and for this purpose we have no need for pompous words but a wealth of knowledge." ("Collected Works of Marx and Engels," No 22, p 487). However, owing to various historical reasons, especially after years of destruction and sabotage by Lin Biao and the "gang of four," there still exists among our peer groups the leftist tendency towards devaluing education and intellectuals. Some comrades consider intellectuals politically apathetic when they bury themselves in pursuit of research work for the benefit of the people and society. Some consider them arrogant when these educated people show that they think independently and express different opinions. Still others consider the mental work of intellectuals as something which alienates them from the masses. They even consider their lifestyles bourgeois. As a result of such an attitude, intellectuals have neither been entrusted with responsible positions nor have they been recruited. This leftist tendency to devalue education and intellectuals is without doubt an indication of the fact that feudal ideas and small peasant mentality have not yet been eradicated. If our comrades, particularly those who hold responsible positions, cannot rid themselves of this leftist ideological trap, our goal to create a class of leaders with professional expertise and specialized knowledge is nothing but empty talk.

Secondly, we must liberate ourselves from the reins of bureaucracy. The recruitment of talented people is mainly a matter of organization and management. We do have great talents. Since the founding of New China, we have trained more than 3 million college graduates and 5.3 million high school graduates. After one or two decades of revolutionary training and experience, most of them have acquired a modicum of political and professional status, and these people are young and energetic. There is also a group of young and middle-aged cadres who came from the working class and peasant families and who have, by diligence and self-discipline, acquired a literacy level equivalent to that of college or high school graduates. In conclusion, we can find talented people everywhere who are qualified to handle the tasks of modernization. The problem is that our leadership cadres are imbued with bureaucratic ideas and they have never made an effort to seek out or recruit these people. Some of our leadership organizations and cadres are unable to understand the current situation. They occupy high-level positions but work by the book, and they recruit those whom they know or people who are older. Their vision is limited and they do not pay attention to the issue of training or creating a class of professional specialists among cadres. Only by forsaking such a bureaucratic attitude and extending our vision to include the masses can we recruit talented people in all walks of life who are young and energetic. We should also boldly recruit these people into the ranks of the party, government, economic bureaus, and scientific and educational institutions.

Thirdly, we must liberate ourselves from the old habit of promotion based on seniority. The credentials of a person indicate his experience and history of struggles. However, titles and credentials per se do not necessarily indicate the depth of one's education or expertise. In the course of recruiting and appointing cadres, we should consider their credentials but in no way can such credentials be considered as the sole criterion. We should understand that the backward notion of seniority is still pervading the minds of many people, and it seriously affects our work in personnel reorganization. If we do not achieve a breakthrough in this respect, our distinguished young and middle-aged people will remain ignored for a long time and our enterprises will suffer great losses. We have learned many similar lessons in the past. Take the factory as an example. If we do not appoint someone who has a relatively high level of professional expertise as well as management capabilities as the head of a factory, but rather we select someone on the basis of seniority or credentials alone, it will be impossible to run the factory well. We have currently witnessed such incidents. In some units and enterprises, the workers select their own cadres. But there are cases of people with lesser background experience and qualifications but who have quickly demonstrated their capabilities by transforming the nature of their units. They have done so merely by self recommendation. Can we not consider these people? Of course, by attempting a breakthrough in the matter of seniority, and boldly recruiting and appointing distinguished and talented people, we do not mean to repeat our experience during the Cultural Revolution when people secured high positions overnight. Rather, we should do as Lenin said when he was advocating recruitment of new cadres: "We must boldly discontinue our old ways," "train these people and help them quickly gain access to suitable posts," and "let them have the opportunities in practicing their talents in their professions." ("Collected Works of Lenin," No 4, p 81).

While liberating our thinking, we must reform and perfect our organizational and cadre systems so as to ensure that young and energetic people who possess expertise can exercise their talents at their positions. Herein lies the key in realizing the rejuvenation and professionalization of all leadership cadres. Whether or not our organizational system or cadre system is good or perfect depends on its ability to fully develop the wisdom and talents of our cadres. It also depends on its ability to rejuvenate the various leadership organizations, so that distinguished, talented people will not be ignored and forgotten. Using the latter as a criterion, it is obvious that our present organizational and cadre systems are very imperfect, and that they are blighted by many defects and inefficiencies, which are unfavorable to the recruitment of young or relatively young and distinguished, talented people into responsible positions. We must reform these systems.

For a long time, our various departments and units have rarely applied entrance examinations and recruitment tests in appointing cadres. Rather, the organization or the personnel department assigns positions to individual applicants depending on their capabilities. Evidence shows that sole reliance on assignment is no longer able to meet with the requirements of our modernization programs. Therefore, we must reform our assignment policy and gradually elaborate our recruitment system to include testing, advertising, and selection procedures. We must reduce the number of cadres hired by assignment to a minimum.

The tenure policy for leadership cadres is not only prevalent in all of our organizations but also it has become implicitly accepted as a rule. This policy has seriously hindered the possibility of creating a class of efficient, forceful, and distinguished leadership cadres, and it is one of the reasons leading to the senility of our leadership personnel. In order to change this situation, it is important that we should specify the length of tenure for all cadres, but not let them think that they can hold their positions for an indefinite length of time.

We must review our past lessons and experiences while keeping in mind the history and present conditions of our cadres, and devise a practical and concrete policy with regard to examination, review, training, promotion, appointment, supervision, reward and punishment, retirement, and dismissal of cadres. With a concrete policy of examination, review, and training, we can make cadres learn diligently, move ahead, and raise their levels of education and professional expertise. With a concrete promotion and appointment policy, we can guarantee that we can promote talented people who have distinguished themselves in their work; and we will make room for these people. With a concrete supervisory and reward and penalty policy, we can tell the right from the wrong and dismiss those who are not capable at work. With a concrete retirement and dismissal policy, we can make proper arrangement for weak and old cadres. In conclusion, only with a comprehensive and healthy policy can we guarantee that our cadres will meet the requirements of the four modernizations, frequently rejuvenate and reform themselves. We can also guarantee that cadres at various levels are people who adhere to the four principles, who are rich in experience, and who have a revolutionary zeal and who possess specialized knowledge and leadership talents.

Old cadres shoulder an important and honorable position in the course of rejuvenating and creating a class of professional specialists at various levels among our leadership cadres. Many comrades have keen insights in this matter. They are willing to retreat to the second rank for the sake of the four modernizations. By allowing younger people with specialized knowledge to serve as the successors of the revolution, these old cadres are doing a service to the party and the people. They have served as commendable models and hence are well respected and praised by the people and society. However, we must see that, though some old cadres understand that their first task is to fulfill the responsibility to train and promote younger successors, many are still not enthusiastic in carrying out their task because of various misgivings.

Some comrades are paranoid because of their experience during the Cultural Revolution, and they are worried that they may not be able to recruit the right young people. Will they recruit people who belong to factions or who have factional ideas or who are undesirable? This is because there are still areas, departments, and units in which the leadership hierarchy has not yet been reorganized. Some factional groups will want to use the pretext of promoting young people in order to recruit their own kind. However, we will not make the same mistakes that we did during the Cultural Revolution so long as we maintain a high degree of vigilance, insist on the right ideology and political and organizational lines, rely on research and the masses, and perform our task boldly but meticulously.

Some comrades feel uncomfortable at the possibility of recruiting young cadres who do not have adequate experience or who cannot do their job. The worry is unnecessary. In fact, we can understand this issue better by reviewing the experience of our old comrades. How old were our old comrades when they first shouldered important responsibilities? They were merely in their 20's or 30's. Some of them became team leaders, group leaders, or generals when they were in their 20's. It is a fact that our young comrades are rather lacking in training and experience. It is natural that they are so because they "have not been in such positions and hence do not know the business." Just because they lack training, we must give them the opportunity. Just because they are lacking in experience, they need help and guidance from old comrades.

Some comrades say that since they are no longer on the front rank, why should they keep struggling for the party? This is a misunderstanding. Having tenure as a leadership cadre is not the same as struggling for socialism for the rest of one's life. By changing the tenure system, we do not change the fact that one has to work for socialism throughout one's lifetime. Insofar as a Communist Party member is concerned, even if one is relieved of all party responsibilities, one's honor of having been a party member will never be disregarded. As members, we must forever fight on behalf of the party of its own sake and for the sake of the people.

Some comrades worry about the complaints of their families and relatives as well as social pressure once they retreat to the second rank. It is true that such a condition is commonplace, but it all depends on how we look at it. As Communist Party members, we should not be hampered by old values and habits and public opinions. We must have the magnanimity of communism, and we should dare fight against old values and habits and the incorrect views of the public. Of course, our party and government should make proper arrangement for retired cadres or cadres who have retreated to the second rank in terms of their political living, and learning conditions. This is because we have to be responsible not only to these old cadres but to history and the people.

To realize the recruitment of young leadership cadres who have specialized expertise and high educational levels is an urgent task in our country's socialist modernization programs. The latter is a necessity based on objective conditions. If we work hard to implement this reform, our country and people will have a great future, and our modernization programs will come to fruition.

WRITERS MUST PORTRAY THE NEW PEOPLE OF SOCIALISM

Beijing GUANGMING RIBAO in Chinese 24 Sep 80 p 4

[Article by Lu Guishan [7120 6311 1472]: "Project the Images of New People in the New Long March"]

[Text] After studying the literary works of the past year or two, I have made a salient observation: Not a few literary works choose to combine the projecting of the images of new people with the reflecting of social contradictions. Especially in the case of certain new authors in literary circles, they dare to expose various social contradictions in the new era with the courage of an artist by means of projecting the images of new people in the New Long March, and thereby they carry out daring explorations on how to project the images of new people and reflect social contradictions.

I.

It is possible for an artist who observes life with the Marxist world view to combine the projecting of the images of new people with the reflecting of social contradictions better, more clearly, and more consciously. Just as Gorkiy pointed out in his letter to Chekhov in his day, an author should stand at "the height of life," aim accurately at the empty spaces in life, and "drive deep into life like driving iron drills into the shell of the earth." True heroes are not vain and stern deities, nor are they strawmen without blood and flesh, without life. They are deeprooted in the soil of life; to put it in the words of Balzac, "these people are conceived in the viscera of their time." The heroes of the ages usually rush back and forth on horseback on the battlefield and charge forward in the front of the fight, where sharp, major social contradictions are solved. As the people's representatives, they shoulder the heavy tasks of the time and cry out the heartfelt words of the people. Their ideas and actions are not accidental, not determined by their narrow individual senses and selfish goals but, just as Engels pointed out: "Their motives do not come from their trivial individual desires, but are derived from the historical trends in which they are situated." The character Li Jian [2621 0256], in "Report the Blossoming of the Spring Flowers," says: In the 30 years since the founding of our state, our economy has been very backward. Can I sit still? This impulse and excitement of "not being able to sit still" are precisely "derived from the new historical trends." This expresses the fiery, flaming emotions of millions upon millions of the Chinese people to revive China.

Chekhov said: "A new writer should forever begin his career with works he has created independently." These images of new people come largely from the pens of the new literary personalities who are active in the forefront of creative work. These new literary personalities live among the characters they describe; they can display their shining dispositions with their sensitive observing and captivating power and, by means of their singular discoveries, can accurately manage the contents of their ideas and actions, endowing them with the brilliance of the time.

Only by understanding new life and struggles and by revealing new social contradictions can one provide a characteristic, typical environment for projecting the images of new people. The characteristic, typical dispositions of socialist new people are shaped precisely in the concrete social environment which is full of given social contradictions. Apart from revealing the social contradictions in realistic life, one would have no way of describing the typical personalities in a typical environment. A typical environment is not abstract or singular; it is always lively, concrete, and tied to definite class relations and all kinds of social contradictions. The so-called typical environment should be understood as an environment structured by typical social contradictions. Socialist new people are really living and struggling in a typical environment structured by given social contradictions. Their heroic behavior and lofty thinking are both determined and aroused by definite social contradictions, and at the same time they are expressed in the process of solving these contradictions. Only by revealing new social contradictions fraught with feelings of the time can one provide a given typical environment for the projection of socialist new people, thereby exploring the ideas and actions of the socialist new people marked by fresh characteristics of the time and enabling them to play out one act after another of the drama in the overcoming of hardships and obstacles.

II.

The author of "Factory Director Qiao Takes Office" says: "The need for courage is sometimes more urgent than the need for genius." An author must face the stern life, participate in life, discover life, and dare to dig out highly meaningful social contradictions from the viscera of the time, and then generalize the important and urgent social problems with which millions upon millions of the people are concerned, in the hope of arousing the party and the people to ponder on them.

The play in cinematic literature "The Tower Is in Their Hands" (DIANYING CHUANGZUO [CINEMATIC WORKS] No 1, 1980) may be characterized by a certain naivete on the part of a new writer, but it has somehow succeeded in revealing in time the diverse irregularities in our ideology, our leadership style, and our cadre system: certain leaders who are tinged by bureaucratism and the style of officialdom [are seen as personalities who] give orders blindly; they take wasteful extravagance as something "required by revolution"; they take not paying attention to work efficiency as "carrying on steadily"; they cover the "will of the superior" with the cloak of the party's leadership; and they put the armor of rules and regulations on redtape and scholasticism.... By revealing new contradictions in the process of the four modernizations, this work points out that the four modernizations are scientific undertakings. A magnanimous revolutionary cause must proceed from the interests of the people and follow scientific laws in its operations, and must not take upon itself the position of a "mother-in-law" and throw its weight around at random. Being responsible to science is consistent with being responsible to the people. Whoever brags about being responsible to the people apart from being responsible to science is only resorting to smart but harmful, empty words. In the struggle against vain, benighted bureaucratism and subjectivism, the work dexterously projects this image of a new person, Chen Zhenhua [7115 2182 5478], who combines in one personality the courage and fortitude of a revolutionary and the strict, scientific attitude of a professional. It fairly successfully describes the practical spirit and scientific attitude of Chen Zhenhua as a youthful revolutionary, as well as his foresight and adaptibility in gaining control over objective laws, and thus it demonstrates his assertive style and aptitude in rising at the slightest suggestion of opportunity and taking action with alertness and poignance.

The novels "Public Servant" (XINWAN [NEW COLLECTION OF EXTRACTS] No 3, 1979) and "After the Promotion" (CHANGJIANG WENYI [CHANGJIANG LITERATURE] No 2, 1980) suggest to people the question of how cadres who assume leading posts anew can take control of power and exercise power well on behalf of the people. These two works project the images of two likable, respectable party member cadres who serve as public servants. They forget about themselves and are honest and devoted, with a fiery character and a crystal-like heart. The attitude with which they resist and eliminate the base conduct of those who take advantage of their office to secure privileges for themselves and show how they hate evil as if it is their enemy, and the measures by which they proceed to remove evil as thoroughly as possible, reflect the deeply held desires of millions upon millions of people. The principal character of "Public Servant," Gu Xingchen [7357 2502 6591], who resumes office as the old chief of the Shuangfenghe Farm Management Bureau, has the style of an explosive mine and the spirit and vigor of spring. He serves as the renovator for the development of modern agriculture with a problem-solving capability unencumbered by trivial details, and as a trailblazer sweeping away thorny obstacles. He seeks to streamline institutions and cut off the tumors on the body of the leading organ. He respects the talented and seeks out the virtuous, and he recommends specialist personnel well versed in agriculture and technology to important posts. He energetically works for the "exploitation of intelligence" and organizes staff members and workers at the farm to march toward science and technology.... These firm and decisive measures fully demonstrate the political foresight of Gu Xingchen as a leader for the modernization of agriculture. "After the Promotion" projects the image of a respectable servant of the people. The novel describes how Shen Huaide [3088 2037 1795], quiet and subdued for 20 years, was suddenly elevated to the post of secretary of the County Party Committee like a new star rising in the sky above the yard of the County Party Committee. Shen Huaide sheds all vulgarities associated with the "newly rich whose complexion changes." He takes the power which the people confer on him not as a means for fishing for praise and reputation but as a burden and responsibility on the shoulders of a public servant. The novel fairly profoundly reveals the root cause of why cadres fail to fulfill their duties. The reason why people's power is trampled underfoot is because some cadres are superstitious about power, just like that which is believed in and promoted by Yu Jinzhong [3266 6651 1813] in the novel. The power in his hand is used as the fragrant bait to draw people to his side, the opium to corrupt people, and the especially effective and very reliable weapon to conquer people's souls. At the same time, certain masses with narrowminded ideas about small production also worship power. With a penetrating eye and a vigorous and poignant pen, the author sketches and anatomizes the faces and souls of those worshipers who surround Shen Huaide after his promotion. From his sides, which have been cold and quiet for 20 years, there now seems to burn a fire that can really warm people's hands. Shen Huaide suddenly becomes noble. His acquaintances and relatives seem to have become suddenly more numerous; these people, humbly bowing, tendering deferential handshakes and ingratiating good wishes, and even mystifyingly flirting, all converge on him from different angles. How badly the people need a hero who remains unmoved in his lofty posture, in the face of the power-worshiping disease and the foul air of fawning and obsequiousness! Coldly holding his ground vis-a-vis such vulgarities in his mundane world, Shen Huaide "begins to grin cheerlessly in his mind as a matter of course, his bushy eyebrows join in a knot, and his peaceful face suddenly becomes gloomy." Such a sketch not only indicates the concern and contempt that a helper of the people feels in the midst of such a foul atmosphere of power worship, but also, in contrast, it forcefully illustrates the true spirit of Shen Huaide's firm, pure, and lofty political ideology as a servant of the people. Being superstitious, worshipful, or abusive in respect to the power conferred by the people is tantamount to committing a crime against the people. Shen Huaide thus prudently and sparingly uses the power the people have conferred upon him. In order to "rectify the official style and mollify the people's feelings," he suggests that the party's leading organs must pay attention to the following points: guard against erosion by social diseases and poisons, so as not to allow the deformation of the yardsticks for judging people; be vigilant vis-a-vis the fact that some people perhaps have many false masks up their sleeves and always stand ready to put one of them on at the right time and according to the relevant need. Thus, one must rely on one's own discerning eyes and one's own Red heart that cannot be blackened, so as to recognize people's true faces, penetrate their foul or pure character, remain conscious at all times of possible illness or change among the ranks of our cadres, and thereby assure a blood-and-flesh relationship between the people's regime and the masses.

"The Love of the Big Wild Goose," "When a Man Reaches Middle Age," and "Expectations" bring out in a timely way the major issue now attentively considered by the whole society as to how, in the process of the four modernizations, talented persons should be discovered, trained, cared for, and used. "When a Man Reaches Middle Age," in particular, not only shows the uncontrollable anger that scientific and technical personnel's hard-up circumstances have provoked in the author, but also penetratingly sketches the true conditions of life. The issue it raises is channeled to the social trend, so that it touches the hearts of hundreds and thousands of people and therefore has earned the heartfelt liking of the vast ranks of readers. This novel contains a suggestion to improve the living conditions and salaries of scientific and technical personnel, and also a criticism of such erroneous attitudes as indifference toward the special needs of complicated labor and even scorn or abuse pertaining thereto. While public opinion has been aired day in and day out about how talented personnel should be discovered and respected, the exits for braindrain somehow are not stopped: this is really a rather poignant and satirizing situation. The principal character of the novel, eye physician Lu Wenting [6424 2429 1250], succeeds in restoring to health people's diseased eyes by means of her consummate skills and sophisticated techniques. The author of the novel also plays the role of an eye surgeon; through her writing, she operates on society's "diseased eyes" and performs a successful "cataract removal," enabling society to reopen its eyes to see the importance and urgency of paying close attention to talented personnel, and also to see the happily surprising outlook of socialist new people with an outstanding, resilient character like Lu Wenting. Lu

Wenting does not shout great empty words, but is practical and meticulous and serious and responsible in her work; she lets the blood flow quietly. She accepts life's trials and shoulders the heavy burden of her work like a lone, unassisted warrior who is bold and resolute, stubborn and faithful like a camel in the desert, unmindful of hardship, and aiming at a distant destination, despite the heavy task involved. Her boiling patriotic blood never coagulates; her burning enthusiasm of devotion to the motherland never cools off. She longs to receive the motherly love, understanding, and comfort of the motherland, but she never gives up her kindred love for the mother just because the mother happens to be poor, weak, often sick, and hence unable to look after her as carefully as she would like. In turn, then, does such a good daughter of the motherland like Lu Wenting not deserve the party's and the people's precious care and love? Does she not deserve the respect and support of all of society?

III.

Through the projecting of the images of new people and the reflecting of social contradictions, one can more directly and more forcefully participate in life, touch on shortcomings of the time, and also point out the direction for solving major social contradictions and social problems in the interest of consolidating our faith in sure victory and enhancing our courage in struggle. Through the exploration, pursuit, and aspiration of the new people in respect to the solution of new social contradictions and social problems, and through the demonstration of their blueprints, measures, and various efforts to face squarely and change irrational things, one can hint at the bright future of struggle and the trend of history in the interest of exalting uprightness, fostering the spirit of revolutionary heroism and revolutionary idealism. Even more important, the socialist new people of the era of the New Long March, as a new reality, already exist in the soil of our life. Their images and achievements are vivid and believable. These new people have inherited and given scope to the revolutionary ideas and traditions of the older generation of our proletarian revolutionaries. They have also stamped on them fresh imprints of the new era and garnered the poetic feelings of the new era; they have achieved a lofty spiritual state of mind. The strengthening of the character and ideology of these new people of the new era fully reflects the great power and vitality--solid and unshakable, and indestructible by any force--which are poured forth by our party and people in their attempt to solve the new social contradictions and social problems. Their very existence is a challenge and a protest to such negative emotions in our society as emptiness, downheartedness, listlessness, self-abandonment, and misgivings.

Creative literary works should facilitate the eradication of the gloomy atmosphere of pessimism and nihilism and help stimulate a revolutionary spirit, light the fire of idealism in the minds of the youths, and strengthen their faith in socialism through a demonstration of the brilliant achievements of the socialist generation of new people, through a demonstration of their wisdom in discovering, studying, and solving new problems and their courage in facing reality squarely and changing their own environment, through a demonstration of their fortitude, audacity, and truth-seeking spirit as revolutionaries, through a demonstration of their pursuits and explorations in respect to the new world, and through a demonstration of their longing and aspiration for the programs, measures, and blueprints for changing irrational social phenomena and toward their future life.

For example, the question of opposing bureaucratism and improving and strengthening party leadership is a matter of concern to millions upon millions of people. Not a few persons adopt a guarded approach to this, or lack confidence, or even feel completely discouraged. Many works have daringly, yet prudently, proposed this sharp social question. The authors have provided this and that kind of answer to this with their ever-burning, fiery excitement for the party and the people's cause. A simple expose is not easy to grasp accurately, and it can even evince mishandling or cause confusing contradictions of different kinds, making people feel puzzled and unable to see the outlet for solving this question. Propagating the ideas of anarchism knowingly or unknowingly may constitute a punishment for bureaucratism; however, not only is anarchism not the way to overcome bureaucratism, but on the contrary it is likely to be used as a pretext. Only by taking the correct standpoint, penetratingly analyzing the root causes of the rise of bureaucratism, and pointing out the correct path for overcoming bureaucratism can one succeed in achieving the real goal of improving and consolidating party leadership. For this reason, the key to the correct demonstration of this major thesis lies in discovering the new people rooted in the life of the new historical era. In the recent period, images of the new people projected by literary works have offered new explorations as to the root causes of and the solution for bureaucratism. Around the question of improving and developing the people's regime, the authors have made commendable efforts. They have projected the images of new people as [examples by which] servants of the people are best able to profoundly sense the earnest hopes on the part of the vast ranks of the people for the people's regime. They have grievously felt the erosive and disintegrating effect that bureaucratism has had on the people's regime, and they have fully understood the urgency and importance of eliminating the system and style of bureaucratism during the construction of the people's regime. They have exposed the fact that the root causes of the rise of bureaucratism, apart from other important factors, also have a very important relationship to the irrational nature of the cadre system and institutions. "The Small But Lingering Heart" describes the cruel story of how persecuted old cadres who have resumed their leadership posts once more become isolated from the people. The new person in "The Tower Is in Their Hands," Chen Zhenhua, was originally a trailblazer in opposing bureaucratism and the style of officialdom. However, when he occupies an important position, he somehow becomes inevitably affected by a heavy dose of bureaucratism and the style of officialdom, thus turning himself from an anti-bureaucratic hero into a captive of bureaucratism. Can this have nothing to do with our cadre system at all? Such a thought-provoking, artistic description points up the importance of improving the leadership system. Shen Huaide in "After the Promotion" puts it very well: "The absence of superb cadres occurs in direct ratio to the falling off of their working style." This opinion shows considerable insight. In order to maintain the organic health of the people's regime, it is necessary to cut off the superfluous tumors attached to the body of the leadership, remove the heavy burdens from the people's shoulders, and uproot the weeds of bureaucratism. The understanding of bureaucratism and the various adopted measures pertaining thereto, as exemplified by the images of new people projected by these works, have directly molded public opinion on how to improve the party's leadership system, reflected the principal contradiction in the construction of our regime, and cried out the heartfelt words of millions upon millions of our people in wishing the power wielders in our party's and government's leading organs of various levels to really become "servants of the people."

How to reflect new social contradictions through the projecting of the images of new people is an important issue in literary theory and literary practice. The images of new people have already poured forth from a realistic life full of new social contradictions. Since creative works in this regard are still in their infancy, it would be unrealistic to think of summing up any theoretically mature experience therefrom. But authors must penetrate the various realms of socialist modernization to discover new people, and they must play a necessary role in bringing out and solving new social contradictions through their energetic reflection of the spirit of exploration and pursuit on the part of these new people, so as to promote the speedy and vigorous development of the undertakings of the "four modernizations."

SOCIOLOGICAL, EDUCATION AND CULTURE

RELATIONSHIP BETWEEN EDUCATION, ECONOMICS DISCUSSED

Beijing RENMIN JIAOYU [PEOPLE'S EDUCATION] in Chinese No 5, 20 May 80 pp 11-14

[Article by Zheng Yan [6774 6056]: "Correctly Understand and Handle the Relationship Between Education and Economics"]

[Text] How to correctly understand and handle the relationship between education and economics is a question that urgently awaits solution in our socialist modernization work. The Fifth Plenum of the 11th Party Central Committee put forward the "definition of educational plans and educational systems suited to the needs of the development of the national economy" for inclusion on the important agenda of work of the whole party as a major issue in our march, toward the four modernizations, and demanded that it be speedily solved without any loss of time and opportunity. This was a major strategic decision after the summing up of international and domestic experience in economic construction. In order to correctly understand and handle the relationship between education and economics, we must do a good job of carrying out penetrating work of propaganda and persuasion.

I.

After the Second World War, a trend toward an increasingly closer combination of education, science, and economics has emerged in the world's developed countries; the role of education and science and technology in economic development has become even more salient. It looks like this is a phenomenon in the nature of a law. Marx said with foresight long ago: "The development of fixed assets indicates the considerable degree to which general social knowledge has become direct productive power...and hence the considerable degree to which the process of social life itself has come to be subject to the control of general intelligence and to transformation by such intelligence." The development of modern society proves that this dictum on the part of Marx is entirely correct.

The development of economics determines the development of education; the developing conditions of education may also promote or delay economic development. In a situation in which social productive forces are not yet quite developed, education cannot have a high degree of development. Even though as early as the middle of the 18th century, classic economist Adam Smith had already discoursed on the economic effects of education, this did not arouse the attention of the bourgeoisie. By the 19th century, because of the development of large machinery industry, the bourgeoisie began to sense that to carry out compulsory elementary education was a necessary condition for developing production. But because what the bourgeoisie cared most about was how much profit were involved, it was willing only to put up a pathetic amount of money to administer education at the time. By the late 19th century and early 20th century, capitalism had developed to the monopolistic stage, society-wide large-scale production had made new developments in science and technology, and people who had mastered science and technology increasingly revealed their formidable role in the development of production and the elevation of labor productivity. Only then did the bourgeoisie begin to pay attention to education. Many bourgeois statesmen came to realize that talents were also a kind of wealth; it was necessary to invest in the "exploitation of human capabilities." International competition was a technological competition; technological competition was educational competition. Only by energetically "exploiting the resources of manpower" and elevating the scientific and cultural level of the workers would it be possible to gain great profits. Hence, during the recent decades the bourgeois in the capitalist countries have demonstrated great enthusiasm for the training of learned laborers and the development of educational enterprises. The emphasis placed on the training of scientific and technological talent and the energetic development of educational enterprises constituted a major reason why the economies of certain countries were able to gain speedy recovery and development after the Second World War.

Lenin paid close attention to the formidable role of science and education in developing the economy. While personally presiding over the formulation of the electrification plan in the RSFSR in the 1920's, he tied the development of the economy and the development of science and education closely together. When Stalin grasped the Soviet Union's educational reform in the 1930's, he put forward the well-known slogans "Technology determines everything" and "Cadres determine everything." Because of his energetic efforts to develop education and train scientific and technological talent, he accelerated the process of the country's industrialization and made it possible for the Soviet Union's science and technology to achieve leading positions in the postwar world in certain important fields. The launching of the Soviet Union's first sputnik in 1957, in particular, shook various countries of the world. The great practice of Lenin and Stalin enabled people to understand the formidable role of education and science and technology in promoting the development of the social economy.

If the socialist system is to triumph over the capitalist system, it must in the final analysis create a labor productivity higher than that of capitalism. The improvement of social labor productivity is determined mainly by the development of science and technology and the improvement of the people's educational, scientific, and cultural level. Developing educational enterprises and improving the level of education are both very important strategic measures for the realization of the four modernizations and the ultimate triumph of the socialist cause.

The economically developed countries in the postwar world have been paying close attention to the study of the relationship between economics and education and to the calculation of the economic results of educational investment. According to the view of American educational economist Schultz, the ratio of the effect of the capital spent on education in the United States in 1967 among all the factors augmenting the national income was 33 percent. According to an estimate in the Soviet magazine ECONOMIC PROBLEMS, the national income obtained through education and the improved skills of working personnel increased threefold from 1960 to 1975 and made up 30 percent of the sum total of the national income in 1975. Our scholars have not yet found out the economic returns of education. But if we simply look back somewhat at the history of the past 30 years, it is not hard to see the formidable role of education in economic construction. In the 1950's, our education enjoyed greater development and succeeded in training more than 2 million high-ranking experts and medium professionals; by the 1960's, they played a major role in education, scientific research, and production. After the 10-year sabotage by Lin Biao and the "gang of four," we still have a contingent of several million professional cadres. Those who are playing a core role on various fronts today are mainly the students trained during the 17 years after the liberation of the whole country.

Ours is a big country of more than 900 million people; our manpower resources are very abundant. As long as we pay attention to the exploitation of our manpower resources and continue to elevate the scientific and cultural level of the whole nation, we shall have an endless supply of talent. Marxism holds that labor power is the important factor of productive power, and the instruments of production are created and wielded by the workers. The higher the scientific and cultural level of the workers is elevated and the more special talents are trained by the educational front for society, the more new productive forces will be created. Therefore, we must make up our minds to energetically develop our educational enterprises; only thus can we accelerate our socialist modernization work.

II.

Both positive and negative experiences in our socialist construction indicate that the development of education and the economy must be maintained in appropriate proportion to each other in order to have the two develop harmoniously. Otherwise, both education and the economy will come to play a destructive role.

People all think that arrangements during the First Five-Year Plan period were fairly well made, so that education and the economy developed quite harmoniously. From 1953 to 1957, total industrial and agricultural output value increased by 67.8 percent, and the number of students enrolled in higher institutions increased 130.9 percent, at middle professional schools 22.3 percent, and at ordinary middle schools 152.3 percent. Except in the case of the middle professional schools, which developed more slowly, the development of higher institutions and ordinary middle schools far exceeded the rate of increase of total industrial and agricultural output value. This was because old China was a "poor and empty" country; when the building of socialism got started shortly after the founding of the new state, a salient problem was the realization that competent personnel were sorely lacking. Hence it was taken into consideration that, since the cycle of training competent personnel was going to be long, it was not only necessary to satisfy the needs of the First Five-Year Plan period in this regard, advance arrangements to meet the needs thereafter must also be made.

During the 3 years after 1958, excessively high and urgent demands were made on the development of education because of erroneous estimates of the economic situation and mistakes in work guidance. All this resulted in an overall shortage of school facilities and competent teachers, and the quality of education was also lowered for a period. After 1960, a very difficult situation occurred in our economy; there was insufficient foodgrain, and the number of people consuming commodity grains had to be reduced. Hence, the schools that were developed after 1957 were forced to beat a retreat. After 1964, our educational undertakings scored a recovery pursuant to readjustment and rectification. Not only were quantitative increases steadily scored, but the quality of education and main aspects of scientific research all approached, and were catching up with, the world's advanced levels. This resulted in a fairly harmonious development of both education and the economy.

The 10-year sabotage of Lin Biao and the "gang of four" brought the national economy to the brink of collapse and also pushed education toward the point of destruction. They resorted to "suspension of classes for the sake of revolution," so the universities stopped recruiting students; in 10 years they trained over 1 million fewer university students for the state. They went all out to criticize the so-called "revisionist educational line of Liu Shaoqi" and the "two kinds of educational systems," and thereby almost wiped clean all middle professional schools, half-work and half-study schools, agricultural middle schools, and professional technical schools. They fanatically persecuted the leading cadres and teachers in the schools and criticized the teaching materials compiled during those 17 years as being "feudalist, capitalist, and revisionist." Large numbers of school buildings were occupied, teaching equipment and library materials were nearly all subject to destruction, and the quality of education was brought down precipitously. They sent middle and elementary school [children] down to the countryside, to the communes and production brigades, and thus lowered the rate of elementary schooling attendance in the countryside and at the same time greatly increased the number of illiterates. The livelihood of middle and elementary schoolteachers was very harsh, and the ranks of teachers failed to achieve stability for a long time. After the smashing of the "gang of four," the focus of work on the whole nation was shifted to socialist modernization. The salient contradiction was once again the shortage of competent personnel, and educational enterprises could not keep pace with the development of economic construction. Students trained at higher institutions were found to be seriously dislocated, both quantitatively and qualitatively, relative to the demands of the four modernizations. The large numbers of medium technical personnel and technical workers required by economic construction lacked sources of supply. A shocking amount of waste was found in the development of production. The scientific and cultural level of economic management cadres was found to be too low to adapt to the demands of modern large-scale production. Elementary education in the countryside was not sufficiently popularized, technical personnel in agriculture were sorely lacking, and both of these [deficiencies] were seriously affecting the development of agricultural production. This disproportionate development between education and economics served to pull the legs from under the four modernizations; if effective measures are not adopted, the situation is bound to create still more serious consequences.

The seriously disproportionate development between education and economics today, apart from the sabotage by the "gang of four," also has to do with problems in our work which mainly are reflected in too little investment in education. The ratio of our educational funds in relation to our gross national product, calculated according to comparable measures, is not only far lower than that of the economically developed countries, but even lower than that of economically backward countries. According to UNESCO statistics, in 1975 the ratio of U.S. educational funds to the Gross National Product was 6.2 percent; those of Japan, 5.5 percent; those of India, 2.8 percent; and those of Egypt, 5.7 percent; but ours in 1978 was only 2 percent. Viewed in terms of the average educational funds per person according to national population, ours is also extremely low. In 1975, average educational funds expanded per person in the United States was US$471.40; in Japan, US$247.70; in Egypt, US$15.00; and in India US$3.90; but in our country the figure was only US$2.70. Because the investment that the state has made in education has been relatively lower, conditions for running schools have become worse and worse; this has seriously affected the quality of education.

For a long time, our investment in education and investment in production have not been in proper proportion to each other. In order to develop the national economy more speedily, we must raise the ratio of educational funds in the national income and the state budget. At a time when the state is experiencing difficulties in finance and in the economy today, taking out a sum of money to use on educational undertakings might seem to affect the speed of economic development. But from the long-range point of view, laying the foundation of our educational enterprises, expanding the number of trained personnel, and raising the scientific and cultural level of technical personnel, technical workers, and peasants would enable us to achieve high-speed, sustained development. In this sense, correctly handling the relationship between education and economics is a major decisionmaking question that affects the future and destiny of the state. Therefore, educational funds should be given a relatively stable and rational rate in relation to the national income and the budgeted financial expenditures of the state. This ratio must be defined after serious study, in line with our economic and education situation and with reference to foreign experience, so that it can be made the basis for the formulation of programs and plans.

III.

In order to correctly handle the relationship between education and economics, we must also make the internal structure of education adapt to the changes in economic structure, and thereby cause education to adapt to economic development.

In 1978, Comrade Deng Xiaoping emphatically pointed out in his "Speech at the National Educational Work Conference" that the plans to foster and train experts and labor reserves should adapt to the planned, proportionate development of the national economy; they must not only visualize short-term needs but also foresee long-term needs; they must not only be based on the demands of the development of production and construction but also fully estimate the developmental trend of modern science and technology. The present situation, whereby the internal ratio of education is not adapted to the economic structure, must be gradually changed.

First of all, if we look at the ratio of development between all-day universities, middle schools, and elementary schools, we can see that it is not quite harmonious. Neither quantitatively nor qualitatively are our university students able as yet to meet the demands of our socialist modernization work. From now on, we may base ourselves on needs and possibilities and gradually develop collegiate short-term universities and middle professional schools in order to satisfy the urgent needs of economic construction. In the case of all-day universities, we must pay attention to qualitative elevation while taking steady steps to develop them. We must make up our minds to concentrate our limited manpower, material and financial resources to manage a few key universities and the key specialties of certain universities well, so as to truly turn them into educational centers and scientific research centers that will play a model role among all-day universities.

The number of students at all-day general middle schools, especially senior middle schools, is too large today. Those senior middle school graduates who can hope to be admitted to higher institutions make up only 4 percent of the total; most of these students must find employment. Because they have not undergone professional and technical training, they cannot adapt to the demands of economic construction after they find employment. Therefore, in the case of general senior middle schools, we should control and compress them from now on in order to have more middle professional schools and technical professional schools. We should also increase professional and technical courses in the senior middle schools so that after the students graduate, they can more speedily adapt to the demands at work.

How to popularize all-day elementary schools, mainly elementary education in the countryside, as soon as possible is a major problem requiring urgent solution in the modernization of our agriculture. The key to popularizing elementary education in the countryside today is to transfer those teachers who are at schools run by the people, and who are found to be qualified through examination and turn them into state employees group by group and period by period according to the financial capabilities of the state. All countries of the world take education as a state undertaking, and most countries generally practise compulsory education. Our country should give timely consideration to the means to carrying out a compulsory educational system and popularizing a 5-year system and 8-year system of education in a planned way.

Secondly, from the structure of our secondary education, we can see that the middle professional schools, agricultural middle schools, and professional technical schools constitute a weak link. Our socialist construction requires a large number of specialist personnel and middle-level technical personnel, and it should keep the two contingents in a rational ratio to each other. At present, the ratio of the number of students enrolled at universities and colleges to the number of students enrolled in middle professional schools is about 1:1; the number of students enrolled in general senior middle schools makes up 86 percent of those at all senior middle schools. This is irrational. The largest number needed for economic construction is middle-level technical personnel and technical workers. Therefore, the structure of secondary education (mainly the senior middle school stage) needs to be revamped, the middle professional schools and professional technical schools must be greatly reinforced.

Thirdly, from our present educational system we can see that adult education also constitutes a weak link. Among our staff members and workers today, 70-80 percent have a cultural level below that of junior middle school, and 5 percent are illiterate. Not a few responsible cadres at factories do not understand how to manage their affairs, and there are still many basic-level cadres in the countryside who are illiterate. In some provinces, 95 percent of farm machinery operators have never received any professional training; when the machines break down, no one knows how to repair them. The condition of low cultural level, low technical level, and low management level which generally prevails among our staff members and workers and countryside cadres is an extremely great obstacle to the realization of the four modernizations. We must make up our minds to strive to raise the cultural level of those staff members and workers with relevant conditions and cadres from those of the people's communes in the countryside up to a plane higher than that of junior middle school before 1985 through off-worksite studies and spare-time studies. We must also raise the scientific and cultural level, management level, and Marxist theoretical level of our in-service staff members and workers through the use of higher institutions for staff members and workers and peasants, television universities, correspondence and evening schools, or training classes so as to adapt to the developmental needs of our socialist modernization.

Fourthly, from the internal structure of higher education we can see that reform is needed. At present, the specialties at our higher institutions may be divided into 12 categories; the ratio between students enrolled in these various categories of specialties is irrational and needs to be adjusted. We do not have enough specialist personnel. None of those graduating in these specialties can yet meet the needs of our economic development. But we are even more short of specialist personnel in agriculture and forestry, finance and economics, and government and law.

At present, our agriculture is still relatively backward. The modernization of agriculture plays a decisive role in the four modernizations, but the number of our specialist personnel in agriculture and forestry falls far short of meeting our needs. At present, the number of students enrolled in the specialties of agriculture and forestry at schools is not even quite 70,000, or only 6.81 percent of all students enrolled in higher institutions. In order to adapt to the modernization of agriculture and make a go of scientific research in agriculture, agriculture and specialties serving agriculture must be strengthened from now on.

Scientific economic management is an important link in the realization of the four modernizations. All of the world's economically developed countries pay close attention to the training of economic management talent and have established many related subjects and new specialties such as information science, operations research, systems engineering, computer application, etc. The number of students enrolled in the specialties of finance and economics in our higher institutions today is scarcely more than 21,000, making up only 2.1 percent of the total of all students enrolled in such institutions. In order to make a go of our economic management science and realize the modernization of our economic management, we must energetically train management personnel and develop management science.

Strengthening the legal system is an important condition for maintaining social stability, protecting the people's interests, and realizing the four modernizations. Today, students in the specialties of government and law presently enrolled at schools number only slightly more than 3,300, making up a poor 0.3 percent of students of all higher institutions. Therefore, strengthening the specialties of government law in the higher institutions and speedily training personnel in government and law really constitute an urgent task.

To sum up the above, we must still undergo long, hard struggles in order to have the structure of our education adapt to the developmental needs of our national economy and to have education and the economy develop harmoniously. If we can do a good job of adjusting the proportionate relations between education and economics before 1985, do a good job of reforming the internal structure of our education, and firmly establish our socialist educational system, then we shall have created even more beneficial conditions for the four modernizations. In order to achieve this, it is necessary for the whole party to pay attention, and especially for leading comrades at various levels to look ahead, so that the development of education will be taken as an important condition for the realization of the four modernizations, and so that the relationship between education and economics will be correctly understood and handled. As long as comrades throughout the party can exert themselves and advance in the direction pointed out by the Fifth Plenum of the 11th Party Central Committee, we are definitely going to be able to realize the four modernizations by the end of the present century.

PARTY AND STATE

'SEPARATION OF PARTY, GOVERNMENT' EXPLAINED

Hangzhou ZHEJIANG RIBAO in Chinese 9 Oct 80 p 4

[Party Members' Mailbox Column: "The 'Separation of Party and Government' Aims at Strengthening Party Work"]

[Text] May the "Separation of Party and Government" Weaken Party Work?

Dear Comrade Editor:

Recently, we the lower basic level, begun to understand that some of the comrades engaged in party work are very much concerned about the "separation of party and government" when they are studying documents of the Third Plenary Session of the Fifth National People's Congress. Some of the comrades are worrying about whether party work will be weakened or even be minimized after the separation of party and government. It is understood that a great number of the leading cadres of the grass-roots level party organizations think this way. We hope that an answer will be given in the special column "Party Life."

Dai Beijun [2071 0271 6511], a Communist Party member of the Political Department of the Provincial Economic Commission.

Dear Comrade Dai Beijun:

Your letter has been forwarded to us by our editorial department asking us to speak out our viewpoint on this question. We have learned from practice: Since the separation of party and government, party work has not been minimized, nor has it been weakened, but on the contrary, it has been strengthened.

Since the Third Plenary Session of the 11th Party Central Committee, we have preliminarily practiced the separation of party and government. All administrative work of and important technical problems encountered in scientific research are studied and resolved by the director in charge of division of labor, and by the regular academy council and the administrative meeting chaired by the director. It is in this way that our general party branch has been relieved from specific professional work to make it possible to implement party lines, principles, and policies, to play an exemplary vanguard role of a party member, and to unite and organize the masses of cadres within and outside the party, striving for the accomplishment of the mission of our unit in a realistic way. We at first concentrated our efforts to look after party members of the whole institute. We encouraged and supported them in bringing about professional and technical innovations and creations to enable party members to give full play to their role in their respective posts. At present, 25 of the 45 party members of the whole institute hold leading positions at all levels and have become the mainstay of the institute. For the purpose of making the leading groups at all levels young, knowledgeable and specialized, we have successively promoted 14 intellectuals to leading posts at institute and division (section) levels to fully develop their initiatives and thereby guaranteeing the development of scientific research work. In recent years, 20 achievements have been won by us one after another, and 5 of them filled the gaps of our country. Our institute has been successively elected to both the provincial and municipal "advanced unit of scientific research" and "red flag unit." Last February, the general party branch of our institute was rewarded a certificate of merit of "the fighting fortress having brilliant exploits in the four modernizations."

Since the separation of party and government, our general party branch has been relieved of some routine duties, making it possible for it to concentrate its efforts on conscientiously working on political ideology of party members and on supervision of organization. This is to penetrate ideological work into scientific research activities in order to ensure that scientific research work is carried out smoothly. We have conscientiously worked on party member education, for which the system of learning at party schools has been reinstated. At the same time, what the party members and the masses think are usually analyzed so that ideological work can be done without delay. A division chief in charge of special subjects, who has for long been comparatively practical and hardworking, has for a certain period of time become dispirited. He showed no interest in monographic experiment, and progress in it was directly affected. At first, we tried to talk to him in person, but that produced little effect. Later on, we found the reason through a thorough investigation and study. We then acted to "suit the remedy to the case," and his ideological problem was quickly resolved. At a later time, this director of special subjects achieved better results in experiments. In the course of doing a good job in ideological work, care has been taken to help solve practical problems of the masses by paying attention to protecting their economic interests in an effort to improve their material as well as cultural life. Party organizations have in this respect played their part in promoting and guaranteeing practical work. In the past 2 years, our institute has built 2,000 square meter family quarters with self raised funds, in addition to renovation of the old houses, which helped relieve 50 households of dwelling problems, and bachelor workers are provided with separate rooms. The dining room has been renovated, and the mess hall has been put in order. A nursery is provided to take care of the children of workers and staff members. Grain supply centers and briquette shops are coordinated to deliver grain and coal door to door. A total of seven married couples living in two different places have been reunited through our help. These are the 10 good deeds we have accomplished successively. And all of these have directly aroused the enthusiasm of the masses.

In short, the separation of party and government is not to minimize the work of party organizations, or to deprive or weaken party leadership, but rather to avoid over concentration of authority. By doing so, leading cadres of the party can be relieved from routine duties, bureaucracy can be overcome, and party work can be strengthened. This is an excellent measure for improving and strengthening party work.

PARTY AND STATE

COUNTY-LEVEL DIRECT ELECTION BEGINS IN HAINAN

Haikou HAINAN RIBAO in Chinese 16 Aug 80 pp 1, 4

[Article by Pan Qiongxiong [3382 8825 7160], deputy secretary of the Hainan Prefectural Party Committee and head of the Election Work Office of the Hainan Prefectural People's Government: "Do a Good Job of County-Level Direct Elections, Strengthen Political Power"]

[Text] In accordance with the "Electoral Law" and the "Organic Law" adopted and proclaimed by the Second Plenary Session of the Fifth NPC, and the instructions of the Guangdong Provincial Party Committee and the Guangdong Provincial People's Government, the Hainan Prefectural Party Committee and the prefectural government have basically concluded county-level direct elections in three selected counties, notably Qionghai, Qiongzhong and Wenchang. Using their experiences as a guide, the Hainan Prefectural Party Committee and the Hainan Prefectural People's Government are preparing to hold similar elections in other counties of the prefecture, and to bring them to a successful conclusion. The holding of the county-level direct elections is a very significant step in spurring the personnel of the state organs to adopt the viewpoint of the masses more consciously and firmly, and to serve the people in a better way, and in inspiring the people to work hard for the realization of the four modernizations. Various county and municipal party committees must fully understand its significance, draw lessons from those selected counties' experiences in holding elections, and effectively strengthen their leadership in order to elect deputies to the people's congresses and county-level leading groups welcomed by the masses.

The experiences of the three selected counties--Qionghai, Qiongzhong and Wenchang tell us that conscientiously doing a good job of training cadres is a key to success in holding county-level direct elections. The election work which involves policies and laws is a complicated process that cannot be successfully concluded without securing the services of a large number of cadres skilled in this work. For this reason, the election work must begin with a crash program to train the cadres of counties, municipalities, communes (townships), brigades (neighborhoods), production teams and state organs in charge of the election work, and to help them grasp the basic spirit of the "Electoral Law" and the "Organic Law" and understand the significance of the election work and related regulations and approaches. Various selected constituencies have successfully concluded the training of cadres who form the backbone of the election work force. A total of 8,182 such cadres were trained in Qionghai County; 92 percent or more of brigade- and production-level cadres there have undergone training in the election process. Qiongzhong County has completed the training of 2,000 cadres, two-thirds of whom are a minority nationalities. These cadres have played a great role in bringing the elections to a successful conclusion. They have learned to strictly observe the laws and have actively persuaded the voters to go to the polls. After the elections were over, they organized the newly elected deputies to contact the masses and gather proposals from them. It is this election work force that should be relied upon to bring the elections to a successful conclusion.

A propaganda and educational campaign must be launched to make the "two laws" widely known to the masses and to teach those in charge of the election work to strictly observe the laws. The new "Electoral Law" and the "Organic Law" which draw their essence from China's 30-year experiences in this field form a guideline for expanding socialist democracy and for strengthening political power for this new historical period. The majority of the constituencies of the selected counties have permeated the entire election process with a propaganda drive to educate the voters in the "two laws," and have learned to apply the "two laws" as a guideline for mobilizing, organizing and inspiring the cadres and people to increase their consciousness of the need to enforce and defend the "two laws." During the elections, the provisions of the "two laws" dealing with the functions of the election organs, the division of constituencies, the registration of the eligible voters, the nomination and recommendation of candidates, the election of deputies, the convention of the county people's congresses and their standing committees and the formation of the leading groups of the county people's governments have been strictly observed by cadres in charge of the election work, who have been praised by the masses for a job well done.

A successful county-level direct election means giving full play to socialist democracy and realizing the aspirations of the voters. In other words, socialist democracy holds a key to success in elections. When the elections were being held in the three selected counties, many constituencies gave the masses the privilege of deciding who were qualified to run for deputies, in addition to providing them with opportunities to fully exercise their democratic right and to freely express their will. During the county-level direct elections, more candidates than the actual number to be elected were nominated, so that the voters could choose the ones they liked most as their representatives to form the county and commune-level leading groups. In short, elections provide a good opportunity to educate cadres and the masses. Following elections, Huang Yongkun [7806 3057 0981] of the Li nationality, director of the Heping commune general factory, Qiongzhong County, has been unanimously nominated by the newly elected deputies to be the chairman of the commune executive committee for his energetic and professional performance and "dedication to the four modernizations." This has come after the deputies turned down a suggestion from the commune executive committee to appoint a deputy secretary of the commune party committee to that position. The elections that took place in the selected counties emphasized not only the advanced character of deputies but also the broadness of their representation. Following a process of nominating and recommending candidates and repeated consultations about their qualifications for running for the deputies to the people's congresses, the masses in Wenchang County have elected 516 deputies, of whom 337 are party members, accounting for 65.3 percent; 179 are representatives without party affiliation accounting for 34.7 percent; 112 women accounting for 21.7 percent. Representatives of educators, public health workers, scientists and technicians, urban dwellers, industrialists and businessmen, democratic parties, retired servicemen, families of martyrs, returned overseas Chinese, compatriots of Taiwan origin and Kuomintang personnel who have defected to our side also account for a specific percentage of the total.

A successful county-level direct election does not mean neglecting the development of the four modernizations program and interrupting the current process of production. The primary aim of the county-level direct election is to bring democracy into full play, strengthen the political power, and mobilize the broad masses to enthusiastically work for the realization of the four modernizations with one mind and one heart. For this reason, we must make the election go hand in hand with production. Great efforts have been made by the three selected counties to combine the election with production, and to insure that production would not be interrupted by the election. During the election, the responsibility was evenly divided among all units concerned in the county, communes and brigades and was discharged by them under the guidance of a unified leading group so that both the election and production could go on simultaneously. Production was emphasized by Qionghai County as its central task during the election. In other words, the election was held in close coordination with production; workers were organized to spend spare time engaging in the election campaigns. As the election progressed, Qionghai County called on the cadres and people to promote production and to greet the opening of the county people's congress with outstanding achievements in production. As a result, it succeeded in promoting not only production but also other work as well. To bring the county-level direct elections to a successful conclusion, party and revolutionary committees at all levels must strengthen their leadership over the election work. As everyone knows, our election work has been suspended for years as a result of sabotage by Lin Biao and the "gang of four." At the same time, we must confess that the provision of the "Electoral Law" dealing with the county-level direct election in which more candidates can be nominated than the actual number to be elected is new to us. For this reason, this election work should be listed as an important item on the agenda of party and revolutionary committees at all levels. To make the election proceed without a hitch, every county party committee is advised to nominate one of its secretaries or deputy secretaries to head its election committee, which must be formed by responsible comrades of various departments concerned, social figures without party affiliation and PLA representatives in accordance with Guangdong Province's related regulations. The election committee must go into operation immediately after its inauguration. Under the committee there should be an executive office with staff transferred from other departments concerned. Two or three able and competent comrades must be selected to head this office. At the same time, a considerable number of cadres must be selected by the county party committee to help communes lay the groundwork for the elections. Cadres in charge of the election work must be organized to study the "Electoral Law" and "Organic Law" until they can understand and enforce the laws. Only in this way can they resolutely act according to the laws, struggle against their violators and defend the sanctity of the judicial power. Before the county-level direct election begins, every county or municipality is advised to try it out in one of its communes and then conscientiously sum up and extend its experiences to other communes through meetings attended by responsible persons of their election committees.

Some cadres and people now seem to be losing interest in our election process since it has been suspended for so many years, and after watching democracy and the legal system trampled under foot during the 10 years of catastrophe. For this reason, we must educate the people in the basic spirit of the "Electoral Law" and make it widely known to every household in connection with the election campaigns. At the same time, an educational program must be instituted in order to overcome factionalism, sectarianism and all forms of interference that have emerged in the election process; those who have taken a scornful attitude toward the election must be severely criticized, along with violators of the "Electoral Law," in order to insure success in the election. Every propaganda department, newspaper and radio station must also play a role in educating the public in the "Electoral Law," and strengthen the ideological education of cadres in this field. We must do a good job of registering the voters in order to get more of them to go to the polls on the election day. Serious and conscientious efforts must be made by cadres in charge of the election work to register the voters and verify their eligibility in accordance with the related regulations. Various ways of registration must be devised at their convenience. The eligible voters should be registered on a unit-by-unit basis and their names must be listed and posted at public places in individual constituencies not later than 30 days before the election day. After their names are posted, eligible voters must be mobilized to verify whether there are any errors and duplicates or any eligible voters whose names are left out. When schools are closed for vacations, their registration of voters can be postponed until students return. Every possible effort must be made to urge voters to go to the polls on the election day. A successful election depends on how many voters will go to the polls on the election day. The returns on the elections in the selected counties of our prefecture indicated a lower turnout rate than that in other selected counties of the province. In some constituencies of the three selected counties, only 60 percent of voters showed up at the polls on the election day. Furthermore, absent voters must be allowed to cast their ballots by proxy, or are advised to return to their original units before the voting date. Before the election day, absent voters who are away from home on business trips should be contacted and informed about the elections through newspaper advertisements or by correspondence. More polls must be set up or even polls on wheels should be devised for the benefit of the voters in the sparsely populated rural areas on the election day. These are the only effective ways we can devise to get 95 percent or more of voters out of their homes and cast their ballots at the polls on the election day.

PARTY AND STATE

MASSES URGED TO RECOMMEND CANDIDATES FOR LEADING POSTS

Chengdu SICHUAN RIBAO in Chinese 21 Sep 80 p 1

[News report by Li Shitai [2621 0013 1132] and He Shizhong [0149 0057 1813]: "CCP Committee of Kai County Urges People To Nominate Cadres to Leading Positions"]

[Text] The CCP Committee of Kai County has departed from past practice and followed the mass line in selecting and appointing cadres to leading posts. At its urging, party members and people throughout the county have been mobilized to recommend able and competent candidates for positions such as secretary and deputy secretaries of the county party committee, chairman and vice chairman of the standing committee of the county people's congress and head and deputy heads of the country people's government.

Kai County will hold its next party congress and people's congress in late October and December, respectively. During the party congress, a new county party committee will be elected. When the county people's congress is in session, new members will be elected to its standing committee and a new county people's government will be formed. In order to encourage resourceful people to enter government service, to appoint outstanding cadres to the leading posts and to speed up the tempo of the four modernizations, the county party committee has called on party organizations at all levels and mobilized party members and people to fully exercise their democratic right to recommend candidates for the county party committee, the county people's government. The county party committee has also emphasized the need to appoint to leading posts those robust, long-tested, and outstanding young cadres of fine ideological and political standing who are armed with professional knowledge and able to provide fine leadership.

To this end, the county party committee has publicized information on the numbers of leading county-level positions to be filled and the qualifications for them. These positions include secretary and deputy secretaries of the county party committee, chairmen and vice chairmen of the standing committee of the county people's congress and head and deputy heads of the county people's government. In addition to announcing the procedure that should be followed in recommending the candidates, the county party committee has also advised the party organizations at all levels to carry out the following tasks: first, they must effectively strengthen their leadership and recommend persons in an openminded manner. Second, they must conscientiously mobilize party members to seriously study related documents until they can fully understand the significance of this democratic process of recommending county-level cadres and standards to be met by the candidates recommended. Third, they must urge party members to strengthen their sense of responsibility to the people and to follow a correct procedure in exercising their democratic rights. Fourth, commune party committees, party organizations of industrial and mining enterprises, and party branches of county-affiliated organs must hold meetings attended by party members and forums attended by the masses. At such meetings, candidates can be recommended and nominated through repeated consultations and discussions. Recommendations of candidates for the aforementioned positions should be sent to the county party committee for consideration, along with statements of why they are recommended and what positions are most suitable to them. Fifth, leading comrades at all levels should warmly welcome recommendations from the masses without prejudice. In response to the county party committee's appeal, party members and people throughout the county have decided to recommend those leading county-level cadres they like and trust the most.

SICHUAN MARKS ANNIVERSARY OF TIBETAN AUTONOMOUS PREFECTURE

Commemorative Meeting

Chengdu SICHUAN RIBAO in Chinese 2 Sep 80 p 1

[News report by SICHUAN RIBAO reporter Kang Zhengxiang [1660 2973 4382]: "Kangding Celebrates the 30th Anniversary of Garze Tibetan Autonomous Prefecture"]

[Text] On 1 September the people, dressed in their holiday best in this ancient city of Kangding, greeted with colorful buntings and placards the arrival of representatives attending the 30th anniversary of the founding of the Garze Tibetan Autonomous Prefecture.

The event also drew groups of congratulators from Beijing, Chengdu, Chongqing, Liangshan Prefecture and snow-covered regions and pastoral areas throughout the country. The NPC Standing Committee and the State Council sent their respective congratulatory messages.

In his speech to a celebration meeting, Xie Hechou [6200 7729 4693], vice minister of the State Nationalities Affairs Commission, extended warm greetings and cordial regards to the people and cadres of all nationalities, patriotic democrats, public security cadres, and PLA commanders and fighters stationed in Garze Tibetan Autonomous Prefecture. He did so on behalf of the NPC Nationalities Commission and the State Nationalities Affairs Commission. Hailing Garze as one of the PRC's earliest minority autonomous prefectures dominated by the people of Tibetan nationality, he said: The exercise of the right of self-determination by the people of Tibetan nationality here means that they have become true masters of their home prefecture. We firmly believe that under the leadership of teh CCP Committee of Sichuan Province and its people's government, and with the help of local cadres, they can play a great role in building Garze into a new, united, affluent and cultured prefecture.

He Haoju [0149 6787 3515], secretary of the Sichuan Provincial Party Committee and vice governor of Sichuan Province, was the second speaker extending congratulations and greetings to the people and cadres of all nationalities and PLA commanders and fighters in Garze. He delivered his speech on behalf of the Sichuan Provincial Party Committee, the provincial people's congress, the provincial people's government, the provincial military district, and the Sichuan Provincial Committee of the Chinese People's Political Consultative Conference. In his speech, he said: The people of all nationalities in Garze are known for their glorious revolutionary tradition and industriousness. Their contributions to the democratic revolution and socialist construction will be remembered by us all. We must grasp the most favorable current opportunity to study and implement thoroughly the central authorities' instructions on work in Tibet. In doing so, we must take into account the local actual conditions.

Qin Rao [2953 4935], head of the Garze Prefectual People's Government, also addressed the meeting. In his speech, he said: Since its establishment on 24 November 1950, under the leadership of the party Central Committee, the State Council, the Sichuan Provincial Party Committee and the provincial people's government, the people of all nationalities in this autonomous prefecture have worked with one mind and one heart to end feudal serfdom, realize a socialist transformation, develop production and bring about earth-shaking changes in the outlook of society. An initial success has been scored by the departments of agriculture and animal husbandry in changing primitive and backward modes of production. In 1979 the gross value of agricultural production, total grain output and the gross value of livestock production registered increases of 250, 220 and 160 percent, respectively, over the 1950 figures; the number of domestic animals in all categories increased by 140 percent; and there was a noticeable improvement in the marketability of livestock products. At the time of liberation, industry was nonexistent in this prefecture. But 30 years later, enterprises engaged in the production of woolen textile goods, leather, leather shoes, building materials, chemicals, farm machinery and mica have sprung up along with pharmaceutical plants, sawmills and hydroelectric powerplants. Some 5,600 kilometers of highways crisscrossing the prefecture have been constructed and are open to traffic. And with the development of production have come demands for improvements in cultural life, education, physical education and health care. Indeed, there have been great improvements in the people's standards of living. Comrade Qin Rao emphasized that during the past 30 years, as a result of the conscientious implementation of the party's nationality policy by party committees and local governments at all levels, a new socialist relationship of nationalities based on the principle of national equality, brotherhood, unity and mutual assistance has taken shape. This prefecture has devoted years to training a great number of cadres of minority nationalities who now form the backbone of the work forces on all fronts. A large number of cadres of Han nationality have also made considerable contributions to the construction of the Garze Tibetan Autonomous Prefecture since their arrival here years ago. In coordination with minority cadres, they have struggled and worked hard and have persevered in keeping the work going at this high plateau. In conclusion, he pointed out: During this new historical period, our prefecture's central task is to strengthen unity between the cadres and the people, mobilize all positive factors to accelerate the tempo of economic and cultural construction and raise the cultural level of the people of all nationalities and their material living standards, so that the people of this prefecture can enjoy prosperity and affluence.

The meeting was followed by theatrical programs performed by various amateur troupes from counties in Garze Tibetan Autonomous Prefecture. A large-scale trade fair was held by the Garze prefectual commerce department in connection with the commemorative event. On display were 170 kinds of commodities, which were welcomed by local consumers.

'SICHUAN RIBAO' Editorial

Chengdu SICHUAN RIBAO in Chinese 2 Sep 80 p 1

[Editorial: Strengthen National Unity; Establish a New, Socialist, Modernized Garze Autonomous Prefecture"]

[Text] The 30th anniversary of the founding of the Garze Tibetan Autonomous Prefecture is being celebrated in connection with the long march undertaken by the people of all nationalities throughout the country to carry out the general task for this new historical period. We are full of joy in extending our warmest congratulations to the people of all nationalities in Garze on this festive occasion.

Garze's revolutionary tradition dates back to 1936. That year, the Boba government—the first people's political power in the history of the Tibetan nationality—was established with the CCP's help and with the support of a visiting column of the Red Worker-Peasant Army. In 1950, after nationwide liberation, Garze became the first minority autonomous prefecture dominated by the people of Tibetan nationality, thanks to the support of the party Central Committee.

During the past 30 years, under the guidance of the party's nationality policy, and under the leadership of party committees and governments at all levels, cadres and people of all nationalities in Garze have worked hard with the top-echelon patriots of local religious sects to win great victories for the democratic revolution, the socialist revolution, and the cause of socialist construction. They have also worked together to end the feudal serfdom and slaveowning system, thus making vast numbers of former serfs and slaves masters of their home prefecture. Like people in other parts of the country, the people of all nationalities in Garze suffered miserably from the 10 years of catastrophe and from the implementation of the ultraleft line by Lin Biao and the gang of four, in gross disregard for the party's nationality policy. Since the downfall of the gang of four, and especially since the Third Plenary Session of the 11th Party Central Committee, party committees at all levels have conscientiously implemented the party's political line, principles and policies and have scored successes in all fields of endeavor. But we must realize that for various subjective and objective reasons, our progress remains too slow and the level of production is still relatively low. The glorious task now facing the people of all nationalities in Garze is to implement conscientiously the party Central Committee's recent instructions on work in Tibet and the guidelines of the work conference of the three prefectures called by the Sichuan Provincial Party Committee; to rally the people of all nationalities behind a common endeavor to accelerate the tempo of economic and cultural construction, to raise their cultural level and material standards of living, and to bring prosperity and affluence to this multinational society as soon as possible.

It is not only possible but also absolutely necessary to realize those objectives. Garze is a prefecture with over 70 million people of Tibetan, Yi, Hui and Han nationalities known for their industriousness, heroism, intelligence and revolutionary tradition. In the future as in the past, they can be expected to make great contributions to the four modernizations program. Garze is also a vast rural area known for its abundant natural resources, which can be developed to brighten the prospect of its economy. Garze now has nearly 100 million mu of natural pastureland, dense forests covering 10 million mu or more of land with inexhaustible water resources, rich mineral deposits, large quantities of precious medical herbs, and rich varieties of native products. All these form an important material basis for promoting the four modernizations. During the past 30 years, a great number of well-trained minority cadres and scientists and technicians have emerged in Garze and can be expected to play a decisive role in all fields of work in the future.

It is necessary to strengthen unity among the people of all nationalities in order to insure success in developing the local economy and culture. Party committees and local governments at all levels must continue to reeducate the people in the party's nationality policy and must spare no effort to implement it thoroughly. At present, under the unified leadership of the central authorities and the Sichuan Provincial Party Committee, they must conccentrate their efforts on creating a situation in which autonomous prefectures such as Garze fully enjoy the right of self-determination and the people of minority nationalities are granted the privilege of controlling their own affairs as masters of their home prefecture. To meet the nee s of autonomous prefectures, a great number of minority cadres with communist consciousness and professional knowledge must undergo training so that in future they can play a greater role in the government. Attention must be given to the thorough implementation of the party's policy toward religions. Under this policy, normal religious activities will be respected, unlawful activities in the guise of religions will be banned, and control over all religious activities will be strengthened. We must continuously do a good job of uniting, educating and remodeling the top-echelon patriots of the national religious sects and of consolidating and expanding the revolutionary and patriotic united front.

Building Garze into a prosperous and affluent prefecture is a rather difficult task. To realize this objective calls for common, pioneering efforts by party committees and governments at all levels and cadres and people of all nationalities in Garze. We must pay tribute to the cadres and workers of Han nationality who came here from the interior years ago and who have ever since cooperated with local minority cadres and people in developing this plateau; they have contributed greatly to success in socialist revolution and socialist construction in Garze. We hope that these comrades will continue to work with local minority cadres and people to develop the excellent situation of stability and unity and swiftly change the outlook of poverty and backwardness with the kind of enthusiasm, ingenuity, revolutionary spirit, and wisdom they displayed during the democratic reform period. At the same time, all provincial-level departments and units in other parts of the country are urged to give material, financial and technical support to this endeavor. We hope that, under the leadership of the party Central Committee and the Sichuan Provincial Party Committee, the people of all nationalities in Garze Prefecture will be united as one so as to make still greater contributions to the prosperity of Garze and the modernization of the motherland.

MINISTER CRITICIZED FOR SEEKING SPECIAL PRIVILEGES

Beijing RENMIN RIBAO in Chinese 3 Nov 80 p 4

[Article: "Beginning of a New Era of Democracy: A Cook Criticizes a Minister"]

[Text] Lots of new things are happening in the China of the 1980's. A few days ago, a young cook, Chen Aiwu [7115 1947 2976] revealed to our party a criticism of the minister of commerce for demanding special privileges whenever he went to the Fengzeyuan Restaurant to eat. The young cook's being praised by the central Commission for Inspection of Discipline is one of these new things.

In the old society, it would be unimaginable for a young apprentice in a shop even to think about accusing a minister, not to mention being successful. Even after liberation such things were rare. After the news was released in the newspapers and over the radio, the news agency phones never stopped ringing, there were heated discussions everywhere, and there were telegrams of congratulations from abroad. The intensity of the reaction to this affair is worth some serious thought.

Special privileges are residual poisons from the feudal system. Although the emperors have been gone from China for half a century, the concept of class privileges set up by the emperors is like a ghost that still runs around in peoples' minds. When someone becomes a leader, he feels he is a little bit better than the common man. If he wants to ride in a sedan chair, then there must be someone to carry the sedan chair. Therefore the various sorts of special treatment, so-called "serving the leaders," have come to be viewed as natural and correct. In follow-the-leader fashion, this has expanded to the degree where one need only have a little authority to be able to "pluck a few feathers from a passing goose." The practice of "use it, look at it, or enjoy it on a 'trial' basis" has become very respectable. "Family relationships" serve as a pretext and disguise for taking advantage of the state, and "private use of public funds" is a disguised form of graft. These dishonest practices have already become a social evil which is seriously eroding the body of our party and our society and poisoning the hearts of our people. With regard to this kind of danger, if we sin in our sedan chairs with the curtains drawn, no one will ever see it or be aware of it. Those leaders feel: I have worked very hard for the people. What does it matter if I get a little special consideration? Therefore, although the "Guiding Principles for Political Life Within the Party" has been in print for more than 6 months, it has not moved them to compare themselves against the standards to to work according to the "Guiding Principles."

If this evil is not removed, there is no hope for the four modernizations. It must start with the self, and with the leaders taking the initiative. The special privileges and bureaucratic activities of some leadership cadres have caused some people who had hope for the four modernizations to feel discouraged. "The arm cannot twist the leg, and it will do no good to talk about it," sigh some people. "That is just the way society is and there is nothing we can do about it" is the excuse used by some people.

"We just have to see if the leaders have the determination." This is the reason for the enormous reaction to the news that the central Commission for Inspection of Discipline supported the cook in criticizing the minister. The masses are happily running around telling each other: "They really mean business."

After that, a number of comrades heard the news and went to restaurants to pay full cost for meals they had eaten at a discount.

Then everyone everywhere began setting up systems to plug the loopholes that allowed petty advantages be given to "special guests," correcting these dishonest practices.

How encouraging this is!

In the past we have worried about some young people who felt hurt and were disillusioned with this world. Some comrades have even blamed young people for being unreachable with ideological work. Please note how the cook criticizing the minister will move the hearts of the young people who have become disillusioned with this world. Fan Baishun [2868 2672 7311], a young person from Shaoxing in Zhejiang, said in his letter that he had [previously] set guidelines for himself: "Read more, think less and be inconspicuous." After he read about Chen Aiwu, he felt that this was not just "a lot of thunder with a little rain." But he was worried about Chen Aiwu. He had offended a high-ranking cadre of the state, his own immediate supervisor; that was really something! He had never thought that practical action to correct these mistakes would come so fast. The communique of the central Commission for Inspection of Discipline and [Commerce Minister] Wang Lei's personal self-criticism destroyed [Fan's] "guidelines." In the first letter he had ever written to a news agency, he said, "I now believe that if we have the courage to challenge dishonest practices and rely on the party and the people, then and only then will we be able to change the disillusionment of the young people. I hope that many of the young people who are taking part in the debates on the philosophy of life will learn from those who have the courage to join and change the real world, and that they will not just sigh in lament but will go forth and struggle!"

We can see from this that if you want to arouse the enthusiasm of the masses for socialism, then you must set yourself up as an example and "start by correcting your own mistakes." By no means can you view special privileges and petty advantages as a trifling matter. Even less can you underestimate the importance of public self-criticism by a minister and his going to the restaurant to pay up his shortages, or the hope, confidence, and strength this gives the people. It is just like another young person said: "This is more effective than the issuing of 100 documents."

Our young people are really worthy of our love and trust. Read a little of what Chen Aiwu had to say and you will really be moved: "To tell the truth, Comrade

Wang Lei has helped me a lot. He is my boss. He has paid attention to my growth and encouraged my progress. When I revealed his mistakes, I was not attacking him personally but was trying to help him. It was not an attack on him individually, but it was done to expose certain leading comrades who practice dishonesty through special privileges. I was practicing my right as a party member through organizational procedures. I was making a stand for carrying out a reform in our system."

We can see from these words that the concept of strict feudal classes has been eliminated and that in its place there is a cadre-masses relationship of a camaraderie, equality, and mutual support and help. The people support their public servants. The public servants require supervision by the people. With such a relationship, we need not worry that evil cannot be corrected. Some comrades cannot get used to the idea of such things as a cook criticizing a minister by name, and they are worried that this sort of "offending higher levels" might incite the masses to dissatisfaction toward the government. This goes to show how difficult it is to rid the mind of old ideas, and it also shows their lack of understanding of the awareness and feelings of the masses after 10 years of enormous hardships. If one's ideology and feelings are widely divorced from those of the masses, then one will see what is clearly a great and good thing as something bad.

This is absolutely something good, and not only because it arouses the faith of the masses toward correcting wrong practices and realizing the four modernizations. Of even greater significance is the fact that it ties in with other things, such as the delegates exercising consultative powers at the National Peoples' Congress, launching a new trend in democracy. It lets us take one more step toward our high goals for socialism and democracy. This typical example makes two things vividly clear to the masses:

1. Every public servant has to accept the supervision of the people. "In our China, people do different kinds of work, but no one is more honorable or more humble than anyone else. No one is a slave, a class lower than anyone else, and no one is a nobleman, a class higher than anyone else. The kind of thinking that one has unlimited privileges is the corrupt philosophy of feudalistic privileges. This kind of thinking must be criticized and corrected." ("Guiding Principles for Political Life Within the Party") To effect a high level of democracy, it is necessary for the people to have the right--and execute that right--to supervise, criticize and appoint and remove public officials.

2. The supervision of public officials, the praising of good deeds, and the criticism of mistakes in the newspapers are necessary means of developing criticism and self-criticism among the people and of establishing proper democratic life. For the past many years the extreme left ideological tide of cruel struggle and heartless attacks sabotaged the excellent tradition of criticism and self-criticism in our party. It seemed as if criticism were nothing more than a means of taking care of an enemy. Once someone was criticized by name in a newspaper, then it was a call to topple him, make him stink. If he were not overthrown, however, then even if he made mistakes he could not be criticized. "Respect for the prestige of the office" turned criticism of high-level leadership cadres into even more of a forbidden area. If you were to publicly criticize someone by name, "Comrade, you make a mistake there," he would jump up and say, "Who authorized you to criticize me by name? Why don't you work inside the party first, and then outside the party?" It sounded like his "organizational concept" and "party spirit" were very strong. But how

would these comrades answer if someone were to ask them: "Who authorized you to have special privileges? When you assumed your special privileges, were you thinking of the party or of the bad influence you were having outside the party? Were you thinking of protecting the prestige of the party?"

The setting up of these two lines of defense really is "insurance" for the protection of the prestige of honorable persons. Unfortunately, over a period of time this could lead to the belief that "if you have privileges and do not use them, after a while they will be forfeited." "Just a little won't hurt." No attention will be paid to your "principles." Also, it could lead to "mutual protection and collusion among officials," which could result in its being impossible or difficult to expose special privileges. Public servants would become the masters, and there would be nothing that the people could do about it. The actual situation in China now is not that there is less guarantee for the respectable, but that there are fewer avenues for public supervision of public officials and less guarantee that there will not be victims of retaliation. An education minister in Denmark was publicly criticized and dismissed because he overstepped his authority and wasted public funds. After he had replaced the wasted funds, he gradually regained some leadership duties. If the capitalists can have this sort of democracy, should it not be even better under communists?

Some comrades are afraid that if the people are allowed to criticize leading cadres by name in the paper, it will lead to a lack of organization and a promotion of the "four greats." Democracy is not anarchy. Democracy is orderly, regulated, and organized. 1) Criticism must be in accord with the facts. 2) If criticism is allowed, then rebuttal must be allowed. 3) False accusations must be punished. 4) The handling of cases must be done by the organization: if there has been a violation of party discipline or national laws, then it must be handled by the Commission for Inspection of Discipline and the procuratorate organs. It can thus be seen that the development of criticism in newspapers is something completely different from the irresponsible pasting of big-character posters in the streets. Experiences and lessons in foreign countries and the facts during our 31 years as a nation prove that there are internal conflicts in the societies of socialist nations, too. To keep these conflicts from intensifying, we must go through broad democratic means to alleviate and resolve them. The newspaper is one major democratic avenue that can be used.

If the people's supervision of public servants is to be preserved, then the position and function of the Commission for Inspection of Discipline must be respected. As I see it, it should be a prestigious organ for the maintenance of party discipline and the party's ways of doing things. It should be the equal of the party committee and be at the same level. Both should be generated by elections at the party congress. Stalin once abolished the censorship committee and replaced it with a Ministry of Supervision. As a result it led to the destruction of democracy and an expansion of the elimination of counterrevolutionaries. The histories of the Soviet Union and China prove that even leaders who have long been tempered make big mistakes if they are not supervised by the people. Have these lessons not been painful enough for us? Can we allow any leadership cadre not to be under the supervision of the Commission for Inspection of Discipline, or allow him to brood over the fact that he is being supervised?

If we are to develop modern socialist construction, then politically we should create a democracy that is greater and more solid than that of the capitalist nations. This should be one of the great superiorities manifested by our socialist system. We are living in a period of great changes. Our party is advancing. If we want to create a high degree of democracy, there is a lot more work we have to do. There is a long road we have to travel. But just because of this, we must not cling to established customs and become victims of petrified thought. Democracy, democracy: the basic point is that the people must become the masters of the state. People today are becoming increasingly disgusted with feudalistic practices. They are making increasingly stronger demands for democracy. When they achieve some advance, some breakthrough, some creation, can any communist not be elated? When the great situation develops smoothly along with the desires of the people, how can one "profess fear of what one fears," or ever pour cold water to dampen enthusiasm? Therefore, the good episode of the cook's criticizing the minister by name, which has far-reaching significance, must be praised, must be supported. Now that our party is supported, there is great hope for our cause.

PARTY AND STATE

LENIN'S COLLECTIVE WORK SYSTEM SAID WORTHY OF EMULATION

Beijing RENMIN RIBAO in Chinese 3 Oct 80 p 5

[Article by Lin Jizhou [2651 1015 3166]: "How Did Lenin Preside Over Collective Work Conferences?"]

[Text] An important task now facing the party organizations at all levels throughout the country is to strengthen their leadership, and overcome their bureaucratic and dilatory workstyles. To this end, they must put into effect the collective work system, adopt new methods that can help bring every meeting to a successful conclusion, and improve the efficiency of work. Some measures taken by Lenin to speed up the proceedings of the Collective Work Conference when he acted as its chairman are worthy of our emulation.

Lenin was appointed chairman of the People's Council in October 1917 and concurrent chairman of the National Defense Council (renamed National Defense Action Council in 1920) in November 1918, and held these two positions until his death in January 1924. The People's Council and the National Defense Action Council were two collective leadership organs. The former was the supreme state executive organ and the latter was charged with overseeing the national defense affairs, coordinating and directing the activities of various ministries under the direct leadership of the former. In the "resolution concerning the establishment of the worker-peasant government," drafted by Lenin in November 1917, he called the collective leadership the principle of the highest order for the Soviet government. In his December 1918 draft of "the regulations concerning the administration of the Soviet organs," Lenin further stipulated: "All administrative problems facing the Soviet organs must be resolved through collective discussion; the Soviet government must clearly specify responsibility for all its staff members. This regulation must be put into effect immediately so that an efficient supervising system can be truly set up and the most qualified people can be selected and appointed to various posts." Lenin's guiding thought can be summed up this way: Is it necessary to discuss problems collectively, and specify responsibility for everyone in public service.

When Lenin was their chairman, the People's Council and the National Defense Action Council often brought up their problems for discussion at their Collective Work Conference, and decisions could be adopted by a majority vote before being submitted to their chairman for a signing into law. If the chairman did not agree with the decisions adopted by the majority vote at the Collective Work Conference, he had two options open to him: send them to the All-Russian Central Executive Committee (equivalent to our NPC Standing Committee) or the Central Politburo for reconsideration. If they were approved by the two organizations, the chairman had no other alternative but to sign them into law. These were regulations which were consistently observed by Lenin. He never made any decision on major policy matters without going through collective discussion, nor interfered in the affairs of other offices which were beyond the power delegated to him by the laws governing the operation of the executive branch of the government. Lenin felt that acting this way could avoid mistakes and confusion in the government, giving the collective leadership members due respect. For example, when the acting director of the General Fuel Control Bureau wrote a letter to Lenin on 22 Feburary 1922, seeking his approval of a rider to the budget of the Coal and Water Resources Development Bureau or an alternative proposal for its retrenchment, Lenin sternly said: this action was initiated by a person unfamiliar with the rudimentary regulations regarding the government operations, a request for such actions should be submitted to the People's Council for approval instead of its chairman. Lenin consistently upheld the collective work system. During the early stage of the Soviet government, it had no administrative experiences. At that time, all matters, both significant and insignificant, were brought to the attention of the People's Council, which was in turn forced to meet almost daily from 8 pm to 1 or 2 am. On its daily agenda were several scores of problems that needed to be urgently solved. To change this situation, the People's Council adopted regulations governing the proceedings of each meeting as suggested by Lenin. When the state began to shift the emphasis of its work to the economic construction in 1921, as a result of the implementation of these regulations, all meetings were reduced to the minimum; regular plenary sessions of the People's Council and the National Defense Action Council were held only once a week, with the exception of the emergency meetings; each meeting was not permitted to exceed 4 hours (which later were cut to 2 hours on Lenin's recommendation). According to statistics tabulated from 1921 to 1922, the People's Council met 5 times a month on average and could solve at least 10 problems at each meeting; the National Defense Action Council met 8 times a month on average and could solve at least 22 problems at each meeting. This indicated that the Collective Work Conference chaired by Lenin had a reputation for high efficiency. Lenin usually attached great importance to the pre-meeting preparations. The regulations governing the preparation of agenda for each meeting drafted by Lenin stipulate: Each People's Council member is required to submit a written request for putting his proposal on the agenda of the next scheduled meeting along with a brief statement of its content attached with necessary reference information and accompanied by written statements from its other cosponsors. When the agenda was completed, it should be distributed to participants not later than 24 hours before each meeting was convened. Lenin often had high respect for other People's Council members' opinions. To enable them to get acquainted with what was to take place at the coming meeting, he would like to carefully pore over the agenda item by item and then added his own opinions to it for their benefit. In the event of too much to be read, Lenin would underline the most important portion of the agenda and instruct them to go over it carefully. If he encountered any item that needed clarification, he would personally summon its sponsor for a face-to-face discussion. In the case of a problem that involved several units, he would advise them to schedule a pre-collective work conference meeting to thrash it out and come up with a common proposal, so as to prevent them from dragging their feet and passing the buck during the conference, thus delaying the search for a solution to the problem. A typical example was the problem of how to prepare to meet the needs of major textile mills in the Ivanovo-Voznesensk region on the agenda of the People's Council session scheduled for 12 April 1921. Before the session, Lenin personally met a delegation from that region in order to acquaint himself with the general situation there. Later, he suggested that nine central organs concerned with the textile industry meet with visiting comrades from there so that they could work out specific assistance measures and figure out how much financial aid, fuel, equipment and food were needed in developing the textile industry. As a result of this thoughtful preparation, the draft proposal for the development of the textile industry in the Ivonovo-Voznesensk region quickly passed the floor of the People's Council following a minor revision. In the event of a dispute, Lenin would first like to hear out opinions from both sides. When confronted with the important policy-matters concerning finance, economics, science and technology, he would first hand them over to a special committee for study before seeking advice from individual scientists and specialists. Before matters of prime importance were listed on the agenda, he would repeatedly exchange views with related individual colleagues by correspondence or through face-to-face meetings. In this way, the situation of endless discussion without decision could be avoided; decisions that take into account actual needs could be quickly made.

To shorten the meeting time, the People's Council adopted the "regulations governing the convention of the People's Council" specifically drafted by Lenin. Included in the regulations were specific requirements for bringing each meeting to a successful conclusion, and the specific length of time allowed each speaker in the meeting. This set of regulations was strictly observed by Lenin in all meetings chaired by him. In discussing problems, Lenin made it a rule that everyone would speak within the length of time allowed and not beyond. At each meeting, he always laid before him a watch for monitoring the length of time each speaker was allowed. He always urged his colleagues in meetings to express their views in a clear and laconical way so as to avoid wasting time. In other words, all meetings chaired by Lenin were tightly scheduled.

The members of the collective leadership were niether omnipotent nor omniscient. For this reason, the People's Council and the National Defense Action Council often invited representatives of other state organs, specialists, scholars and other experienced and professional workers to their collective work conferences so that they could pool their wisdom to help solve problems. When a proposal was put to vote, only the People's Council members (or alternate members) had voting rights. As soon as the discussion of one problem was over, persons not involved in the upcoming discussions would normally be asked to leave the meeting.

Although Lenin placed strict demands on others, he cherished the democratic work-style. As a leader and good listener who never considered his views final, Lenin always encouraged others in meetings to feel free to debate him and to express their views without reservations. People attending meetings chaired by Lenin never felt ill at ease with him because he could enlighten them to fresh ideas which merited further discussions. Lenin welcomed clear, accurate and elucidative statements of facts and statistic figures and positive suggestions while opposing pointless, ambiguous, ambivalent and meaningless rhetorics. As a matter of principle, Lenin never forgave inexcusable mistakes. Whenever he heard anyone deliver a good speech full of valuable suggestions, instead of summing it up in his own terms as every other chairman normally did at the end of each speech, Lenin would ask the speaker to repeat it once more so that the stenographer could take it down accurately as reference. In short, Lenin always urged those who attended the Collective Work Conference to freely and fully express their views so that they could come up with some realistic decisions based on careful analysis.

Lenin emphasized that the collective leadership should be adopted as a method for overseeing the state affairs. But he also pointed out: "Any overstatement and distortion of the collective leadership system may result in dilatory and irresponsible workstyles and may turn collective leadership organs into places of aimless talks. This negative aspect of the collective leadership which is bound to have a bad effect on society should be eliminated as soon as possible at any price." Lenin never stopped urging the collective leadership to specify responsibility for everyone in government service at all times and under all circumstances. He also wanted to specify responsibility for leading cadres and other lower level personnel in every state organ so that no one could pass the buck around. He advised that problems that could be resolved by the lower level authorities should not be submitted to the People's Council and the Central Politburo for solution. In May 1922, Lenin received a telegram addressed to the Politburo for approval. That telegram was a reply to an inquiry from two Russian negotiators overseas about the quantities of fuel and scrap iron involved in the trade and lend-lease agreement under negotiation. After reading that telegram, Lenin told Stalin: "This telegram should not be addressed to the Politburo for approval in the first place. The Soviet government regulations should be observed in handling similar problems in the future. This telegram should be signed and sent by two vice chairmen of the People's Council and chairman or vice chairman of the Lend-Lease Committee and director of the General Fuels Bureau, who can verify whether the figures involved are accurate or not, and who can make sure whether this instruction to the two negotiators follows the Soviet laws and Soviet government regulations. It is their duty to check out this telegram. For this reason, I refuse to sign it." In Lenin's opinion, the party organizations should refrain from directly interfering in the affairs of the government and economic organizations which should do everything possible in their power to solve their own problems.

PARTY AND STATE

HU QIAOMU ON IMPORTANT ROLE OF JOURNALISTS

Beijing XINWEN ZHANXIAN [NEWS FRONT] in Chinese No 4, Apr 80 pp 2-9

["Comrade Hu Qiaomu's [5170 0829 2606] Speech at the Inaugural Meeting of the Beijing Journalists Association, 6 February 1980"]

[Text] Members of the senior generation in journalistic work, colleagues in journalistic work, comrades, and comrades-in-arms present:

Comrade An Gang [1344 1511] has just mentioned that the inauguration of the Beijing Journalists Association at this time is a propitious occasion in the 30-year history of our journalistic circles. Let me first of all extend my congratulations on the establishment of the Journalists Association. The date of this inauguration happens to be the eve of the first spring festival in the first spring of the 1980's. Let me wish all comrades present good health and good work!

Not long ago, before the establishment of this Journalists Association, Comrade Deng Xiaoping delivered an important speech. Part of that speech touched upon journalistic work; other parts of the speech also were closely related to journalistic work. Therefore, the date for the establishment of the Journalists Association was very timely and well selected, and this indicates that the work of the Journalists Association is definitely likely to develop forward smoothly, as everyone wishes.

I have had some ties with journalistic work. But, honestly, I should say that I am not a formal journalist. After joining the revolution, I ran a little tabloid in Peiping. This little tabloid could not be considered a formal newspaper. But from that period of work, I gained some experience. Running to and from the printing plant frequently, I came to know what editing and typesetting were all about, and what proofreading and printing were all about. After that, I also ran a similar little tabloid in Shanghai. Apart from these [experiences], what I have done has been only indirectly related to journalistic work. Therefore, when you want me to serve as honorary president of the Journalists Association, to give me this honor, I really do not feel equal to it. There are many members of the senior generation present; they are the real pioneers in China's journalistic enterprises. It is they who have participated in pioneering journalistic enterprises or in the pioneering enterprises of revolutionary journalistic work, progressive journalistic work. I wish to learn from them.

Now, let us skip superfluous words in this regard. Since you have conferred upon me this incongruous honor and want me to speak a few words, let me just say a few words about my hopes in respect to journalistic work that come to my mind.

In his own speech, Comrade Deng Xiaoping emphatically mentioned the question of stability and unity and leadership of the party. When he talked about stability and unity, he also mentioned the role of journalistic work. In his speech, Comrade Deng Xiaoping hoped that our newspapers and journals would become the ideological center contributing to the stability and unity of our entire state and entire society. I think this is a very important matter that lies before us. What I wish to talk about in terms of my hopes in respect to our present journalistic work is namely how to put into effect satisfactorily the call that Comrade Deng Xiaoping has issued to us.

Since we wish to work on the four modernizations, we must have a political environment of stability and unity. Why would stability and unity constitute a problem? This is because there are still certain factors of instability and disunity prevailing in our society; certain factors of instability and disunity still exist in the thinking of part of the people. All action takes place under the guidance of a definite kind of thinking. I remember that in Gorkiy's recollection of the situation after Lenin encountered an assassination attempt, when Gorkiy went to see him Lenin had this to say: Everyone takes action according to his thinking. This means that no matter how bad the person who made the assassination attempt on Lenin might be, she followed her own thinking in carrying out such a base, vicious act. Therefore, in wishing our state, our society, to make continued progress in the process of the four modernizations and to advance a thousand li each day, as everyone wishes, if we fail to make efforts to solve the question of stability and unity in our thinking, and hence let certain factors hampering stability and unity continue to become a kind of serious problem, then we are bound to encounter difficulties. Our work will not be smooth. And when we cannot smoothly arrive at our expected destination, many more problems will arise. People will argue: Why are we making such slow progress right now? They will argue that it is because of these reasons or those reasons, etc. Therefore, in hoping for the realization of the four modernizations, in hoping for the rapid, smooth realization of the four modernizations, we cannot but emphatically consider the need for a political situation of stability and unity, as well as the need to lay the ideological foundation for such a political situation.

The 10-year history of the Cultural Revolution has already taught us a very agonizing lesson. But for part of our comrades, for part of the people and part of the youths in society, this lesson did not seem agonizing enough. Some even think that they should still go on denying everything as they did in the past, forming certain factions, and continuing to carry out activities against the leadership of the party. Among these people are first of all various forms of remnants of the "gang of four" who in certain places still constitute a force detrimental to stability and unity that should not be underestimated. But generally speaking, this segment of people have a rather limited influence on journalists. Or we should say that comrades in our journalistic circles maintain a high degree of vigilance toward them and have achieved great results in struggling against them in the past few years. On the other hand, there are people who are forming small factions of various kinds; although they are not remnants of the "gang of four," they actually also advocate "continued revolution under the dictatorship of the proletariat," and while some among them even oppose the dictatorship of the proletariat, they nevertheless advocate continued revolution. I think all comrades present will probably agree that this slogan of the so-called "continued revolution under the dictatorship of the proletariat" is rather preposterous. Everybody knows that it was proposed by that adviser; he belongs to the same company as the "gang of four," and he is one of those who committed serious crimes against the Chinese revolution. Proposing this slogan is itself a crime. Today, for some people, the people we have just mentioned--those who have not yet learned the lesson they should have from the 10 years of sabotage--this problem is still not solved. Do you wish to realize the four modernizations? In those people's eyes, the present leaders are incapable of guiding the four modernizations. Then what is going to be done? [In their view,] this requires a change of this leadership; this requires "continued revolution." Various principles, various systems, and various leading organs must all be appraised anew, debated anew, and begun anew. If you oppose this, then you are opposing democracy. The number of these people is very small; but their capability cannot be considered very small. They have created an important ideological trend of instability and disunity, and the views and attitudes of our journalistic workers toward this ideological trend are not necessarily entirely consistent. Therefore, I wish to say a few more words on this.

Comrade Xiaoping has said that we must not underestimate this group of people. Really, we really must not underestimate them. Although their number is very small, they have many characteristics: They are organized. Their organizations are secret. These secret organizations of theirs are in turn connected with one another throughout the country. They also have pertinent programs and "theories." Although the programs and "theories" of various organizations are not all the same, many in fact are the same. For the realization of this [common] program, they also have various strategies. Also, they continue to study and adopt different strategies according to different situations. These people are not entirely isolated in society; there is a fairly large number of people who harbor sympathy toward them or who even support them, even though such people may not understand, or not entirely understand, their internal situation.

Our society has undergone great changes; our socialist cause has undergone great vicissitudes. Even though today, as Comrade Xiaoping said in the beginning portion of his report, we have already achieved great progress in the past 3 years, not all people perceive such progress, understand such progress, or acknowledge such progress. Nor do all people know that the realization of every step of such progress has taken great struggle and plenty of hard work. Of course, 3 years are a short period of time, and it is impossible to accomplish many things within such a short period of time. Also, the situation during these 3 years has been so complicated that under the circumstances, nobody could have avoided making this or that kind of mistake. We cannot say that our work during these 3 years has always been correct and has satisfied everyone. This is impossible. Furthermore, our work during these 3 years has of course not been sufficient to make all people in society remove the doubts, disappointments, and dissatisfaction caused by the vicissitudes we experienced during the past 10 years. It is not easy to remove the lack of confidence, the doubts, and the dissatisfaction that all kinds of people in society have harbored toward our socialist cause on various grounds. We need a much longer period of time, we need to do a lot more work, and we need to achieve many more results. Unquestionably, such a day will come. By that time, an overwhelming majority of people and an overwhelming majority of youths in our society, not to mention an overwhelming majority of communists and journalists, are bound to be able to remove the doubts, disappointments, and dissatisfactions that have occurred in the past. They will sense anew that in our state, in our social life, all aspects are full of hope, and an overwhelming majority of people are bound to have full confidence in the future. Our problem today is that we have not yet reached that day. Today, some difficulties, some problems, some things that dissatisfy and disappoint people still exist. Of course there will be such things any day, but there happen to be more of them today. This causes stability and unity to become a serious problem.

I have just spoken of this problem in a relatively large realm. But this is still not enough. We must observe the factors of instability and disunity which exist in our society and in our politics; we must see the still larger realm.

We often hear comrades with these kinds of questions, who say: Since we say that our socialist society has already eliminated the classes, yet at the same time we also say that in a certain area class struggle still exists, how can these two statements go together? Is this not a contradiction in logic? Let us not bother for the time being about whether or not this constitutes a contradiction in logic. But first of all, this is a fact. It is not because, since we have talked about class struggle for many years in the past, we have to continue to talk about it, so that even though the way we say it now is different, it will not seem to do if we refrain from mentioning it completely. This is not the case at all; this is an objective fact. In our society, the exploitative class as a class really no longer exists. But our country must have relations, many kinds of relations, with many other countries, many capitalist countries. The scale of such relations today is something that we had never reached since the founding of our state, and it is going to develop further from now on. These relations are going to penetrate and influence various realms of our social life continuously. They of course are also going to influence the remnants of some old classes in our society. And in our country, there are still certain special conditions. For instance, Taiwan is China's territory; do classes not still exist on Taiwan? Hong Kong and Macao are also China's territory; do classes not still exist there? The exploitative classes in those places are not just remnants, but still constitute a class which is engaged in exploitation; those classes also have various kinds of relations with us. Along with the passage of time, these relations will also become more and more numerous. Take Tibet, as another example: a group of people escaped from Tibet; this group of people was organized. They have not disappeared; they still exist. They are having these and those kinds of relations with our state, different kinds of relations. Therefore, when we say that in our country the exploitative class no longer exists as a class, what we are saying here does not necessarily include places like Taiwan, Hong Kong, and Macao. These places are not within the realm of our control right now. Those groups wandering abroad are also of this nature. Of course, we are not saying that people of these exploitative classes are all opposed to socialism, but neither can we say that all of them will accept socialism. All of the above is what we cannot help but consider when we talk about our country's classes.

Around our mainland are deployed various kinds of espionage organizations. The Kuomintang's espionage organizations exist not only on Taiwan, nor just on Quemoy and Matsu, nor just in Hong Kong and Macao, but similarly in the border areas beyond Yunnan and Tibet, and they are active every day. They are engaged in a life-and-death struggle against our state, against our socialist system, against our socialism, and against our people. How it be said that there is no class struggle? What else can this be if it is not class struggle?

Even in terms of domestic conditions, we cannot help but acknowledge that class struggle still continues to exist from various different sources and in various remnant forms, and there is a certain degree of relationship between them. We cannot say that all class struggles are interrelated, but neither can we say that they are not interrelated at all. In the case of certain secret groups, they declare that they have established this party, that party, or this association, that association. But among them, there actually are such groups, and certain people thereof not only carry on certain exchanges with all kinds of people from capitalist countries who enjoy legitimate positions in Beijing, but some of these exchanges are not so legitimate. And, they are also interrelated with some of the espionage organizations in Taiwan, Hong Kong, or others in areas beyond our border. Of course, such problems do not exist among certain people among these organizations, but they too are related to the above-mentioned people. Up to now, they still have not cut their ties with those counterrevolutionary and antisocialist elements, be they Chinese or foreign, whether or not in each case they themselves have understood such relations. Certain people among them are secretly plotting terrorist activities, and sharp class struggle is taking place between these people and the vast ranks of people in the whole country. This is something that any person who is willing to objectively treat and understand this world cannot help but acknowledge.

As has been observed above, there are historical conditions, there is a historical basis, which turn stability and unity into a problem. The fact that we are struggling for stability and unity is also a task put to us by history. Stability and unity are not something that can be advanced in any society, under any historical conditions. In a capitalist society, or in the class society before capitalism, no problem of stability and unity existed. In those societies there could be no stability, let alone unity. In other developmental stages of socialism, or in its future stage of higher development—communist society—such a problem of stability and unity is still less likely to arise. It is in the present specific historical conditions that we are confronting such a problem. This is objective reality which confronts us. We cannot but acknowledge the existence of such a problem, and it must be solved. Our comrades pursuing journalistic work especially cannot help but see, acknowledge, consider, study, and treat such reality as properly as we can in our work. These factors of instability and disunity have of course come to be greatly reduced, compared to 30 years ago or still earlier. But they still cannot be belittled or underestimated. As I have just said, in the past 3 years we have done not just a little work; but can we hope to cure all the wounds left over by history on the basis of the work of these 3 years? It cannot be done, has not been done, and is not yet possible. Once there is a wound, it can well become a factor of instability and disunity. If germs and poisons have set in, that would be still more of a foregone conclusion.

If our newspapers, journals—and in this regard, newspapers are even more important than journals—do not calmly and comprehensively consider this situation, consider how we should cope with this situation, then it is inevitable that some errors are going to appear in our work. Hence, this problem is worth studying. In attempting to solve this problem, we are not going to avoid it in a negative way, but we must first of all strengthen the forces of stability and unity in our society in a positive way. The Party Central Committee has declared many times that we have basically realized a political situation of stability and unity and liveliness; we must first consolidate and develop this situation, and especially consolidate and develop this situation ideologically. Comrade Xiaoping's report suggested that our newspapers and journals--what he meant was the party's newspapers and journals--should become the ideological center for realizing stability and unity. How to achieve this goal? Can this goal be achieved? Are we capable of undertaking this task? We are completely capable and definitely capable. Our newspapers and journals will definitely become the ideological center for consolidating the political situation of stability and unity and liveliness, as the Party Central Committee has hoped and called for, and they will also further promote the development of this political situation of stability and unity and liveliness.

In order for our newspapers and journals to accomplish such a task, many things need to be done. Right now I am thinking of making this wish--that we should seriously study a little, systematically propagate some of the foundations, bases, for stability and unity in our socialist society in a planned way and on a long-range basis. Once the ideological perception of the people throughout the whole country and of the youths throughout the whole country becomes consistent, many factors of instability and disunity will disappear. Not all the factors, of course; as I have just said, this is predicated on all kinds of factors, and some are factors which the strength of our newspapers and journals cannot eliminate. But no one shall underestimate our strength. If some of the factors of instability and disunity cannot be underestimated, then our own strength can still less be underestimated.

How is it that our socialist society can achieve stability and unity while a capitalist society cannot? This is first of all because our socialism is built on the basis of the fundamental consistency of the interests of all the people, or of almost all citizens. We have common interests and common consequences; that is to say, we not only have common interests, but we also have common dangers. We need to explain this point fully in our newspapers and journals. The interests of this part of our people and that part of our people are interrelated and basically consistent, apart from the bad elements. The interests of our people and our government, of our people and our party, and of our people and our army are basically consistent. Although certain minor contradictions have occurred, and there still are and will continue to be such minor contradictions, these do not hamper our basic consistency. This is something we can never overlook, and we must absolutely not weaken our propagation to our whole society sharing such common interests. Therefore, even when we wish to expose certain contradictions, if those contradictions must be exposed, then they will not weaken such propagation with regard to the consistency of our interests, either. This is because we have common interests, and these interests are of a fundamental nature of interests which govern not only our today but also our tomorrow as well as our future--our very, very distant future.

Our society has common ideals; this is also something a capitalist society is incapable of having. So-called ideals are namely pursuits of our future interests, our future common interests. Not only must our interests today be pursued and realized, but we must also pursue our future interests and make up our minds to realize them. In this way, our society is bound to have common ideals. Such ideals on our part are realizable; they have a scientific basis. That is to say, the realization of such ideals is inevitable; hence we also have common beliefs.

The fact that we have common beliefs and confidence includes both the present and the future. When speaking of belief, people often mean the future more than they do the present. If some people do not have enough belief in the future, then at least we ourselves, all our journalistic workers, all our revolutionaries must have such belief, and our belief in this regard is unshakable. Only thus can we persuade others. Some of our friends, some of our comrades, have sometimes said something like this: "I just don't have confidence." I wish these comrades would refrain from saying anything like that. Saying such a thing is spreading a kind of influence and spreading a kind of thinking, and it is bound to arouse a chain reaction. "Even so-and-so said he did not have any confidence," so then how could he make others have confidence? During the 4 May period, Lu Xun wrote in the "Improvisations" section of XIN QING NIAN [THE NEW YOUTH] expressing the hope that our youths would all have full confidence, eliminate the atmosphere of coldness and [encourage the idea] where there is a ray of warmth, there is a ray of light, and refrain from spreading the atmosphere of lacking confidence. It is harmful to spread such an atmosphere of lacking confidence; it may even be said to be immoral! This especially is not in accord with Communist Party members' revolutionary morality! Because it hinders the efforts of all of us; it hinders the common struggle of the people of our entire country for the realization of the cause of our modernization. If people have an opinion about something or about some person, then by all means present it. They can present it through all kinds of means, but do not let them spread this atmosphere of lacking confidence.

Because we have common interests, common ideals, and common beliefs, we therefore also have common moral standards. I have just said that spreading the atmosphere of lacking confidence may be said to be a violation of our present moral standards. We have many moral standards, and they do not of course mean one single thing. Our moral standards have been subject to sabotage, but they are being restored. For example, some time ago it was reported in the press that when a student at middle school No 108 fell in icy water, three comrades from the Liberation Army and several worker comrades all rushed forward to rescue him, and the rescue was successful. The teachers of middle school No 108 also exerted themselves to a certain extent in this matter. But at the time some people really did certain things they should not have done and said certain things they should not have said. But after reading this report, I still felt a kind of consolation. When some students said, "Members of the Liberation Army, the time for you to establish merits has arrived," or when they told the workers, "Perhaps you are thinking of joining the party," their attitude was wrong. But they also inadvertently acknowledged this premise: they acknowledged that the Liberation Army is the true defender of the interests of the people; they acknowledged that the Communist Party is the vanguard of the people. Therefore, even though they were but backward students, they still acknowledged these two points. Hence, I cannot say that our society today no longer has common moral standards, or that such standards have all fallen to the ground. Our moral standards are being restored, and everyone's effort is required. Yesterday's RENMIN RIBAO published a news item which indicated that Zhang Bin [1728 2430], the director of a factory in Qiqihar, was dismissed from party membership. A report in RENMIN RIBAO had prompted the disposal of this matter. RENMIN RIBAO's report was correct; Qiqihar's treatment of Zhang Bin was also correct. This shows that our society is undergoing changes, really undergoing changes every day. Even though such changes do not take place fast enough and need to be prompted every day, we must first of all acknowledge that our society is changing daily in the right direction, and our moral standards are also daily recovering their strength. I hope all our journalistic workers can come forward to propagate this kind of common morality. Our newspapers have already done no small amount of work; what I am saying today is that I hope we not only can report many things but also can discuss and prove them logically, ideologically, and theoretically.

Since we have common interests, common ideals, common beliefs, and common morality, this also leads to our having common action and common struggle. Without what I have just said, a society can have common actions. We cannot say that a capitalist society does not have common action; nor can we say that there is no common action in a factory run by capitalists, because their factory sometimes acts even better then ours. But what I term common action is different from the common action that takes place in a capitalist society, because we act on the basis of common interests and for common goals. This means not just action in a small arena, but common action in the entire society, and this is something that cannot be realized or achieved in a capitalist country or in a country prior to capitalism. The reason why we can act together and why ours is a very effective kind of common action is because we have common leadership. In other countries, in capitalist countries, it is impossible to have this kind of common leadership. Sometimes, for example during the Second World War, we cannot say that Roosevelt did not lead the entire United States to struggle against fascism. But this kind of common leadership cannot be mentioned in the same vein as our common leadership. Our kind of common leadership penetrates all realms of our social life. It is possible that today in some corners this kind of common leadership is still not realized or not correctly and fully realized, but this by no means negates our common leadership. Our common leadership was sabotaged during the Cultural Revolution period, and sabotaged in a most serious way; but at that time the people still acknowledged in their minds the authority and power of this kind of common leadership. They therefore cherished this kind of common leadership and made efforts to restore this kind of common leadership; this was what led to the Tiananmen Incident. The Tiananmen Incident did not occur in order to sabotage our common leadership but to rebuild this kind of common leadership. When people cherished Comrade Zhou Enlai, they cherished not just him personally but also his cause, the party to which he dedicated himself, and the principles he followed throughout his life. Apart from these things, why should the people cherish Premier Zhou Enlai? If Comrade Zhou Enlai had not been a communist, if he had not been an outstanding leader of the Chinese Communist Party, if he had not struggled all his life according to the principles of the party and the principles of communism, then how could we explain the fact that he was cherished by the people? How could we explain the Tiananmen Incident? If some people wave the banner of the Tiananmen Incident but insist on opposing the leadership of the Communist Party, wish to dissolve the authority of the Communist Party in the minds of the people, and wish to stop the people from advancing toward the goals of struggle put forward by the party, then these people are practicing deception. They are not propagating the Tiananmen Incident but slandering it.

The reason our socialist society is powerful is because, just as we have said, it has so many common things; only on the basis of this consisten can there be common leadership. Even though this kind of common leadership was sabotaged during the

Cultural Revolution period, it has already been restored, and restored very well; it is acting and working very effectively. Today, the thinking of our party's leaders is very liberal. We must emancipate our thinking; this is not in any way a contradiction with our need to unite around the Party Central Committee, nor should there be any such contradiction. If some persons should forcibly create some contradiction, then this does not mean emancipating our thinking but, it may be said, it means casting our ideology with the liberalism of the bourgeoisie and becoming its slaves.

Our people have common action, common leadership, and common discipline. Discipline can be interpreted differently in different areas. To citizens of the whole country, this means the law; to the party, the Youth Corps, or other revolutionary organizations, it is called discipline; in some other areas, it may be said to be a kind of common norm of behavior. In a word, because we have such disciplinary rules under which we can carry out common action under a common leadership for a common goal, we not only have common moral norms, but such moral norms are materialized through the discipline of the common organization. It is in manner that the august power of socialism, to which nothing else in human history is comparable, is structured. Therefore, our socialist society has its superiority; our socialist society can advance faster than capitalism, and it is definitely going to be faster than it. We cannot reach the conclusion that socialism is not as good as capitalism just because we see in some aspects, and at some times, that capitalism advances faster and that socialism, in these same aspects and at these same times, advances slower. This is simply not the case. Socialism is still very young; during the course of its growth, it has suffered many hardships and gone down many tortuous roads. But even so, socialism as a whole still develops faster than capitalism. Today, socialism has not yet reached the level of the developed capitalist countries in many aspects--technology, labor productivity, and management. This is first of all because our point of departure has been too backward, too low. At the same time, it is also because, apart from the mistakes we have committed, many things which we should learn have still not been learned. But we are bound to learn them, and after we have learned them we of course are going to advance even faster. In some years in the past, the capitalist world has made certain faster advances. Comrade Huan Xiang [1360 6763] has interpreted this by saying that West Europe is already past its golden era. Not only is this the case with West Europe, but the entire capitalist is now experiencing a crisis; the spread of its development has already been reduced; and at present it is still not easy for it to find a way to escape that crisis. Many economists in capitalist countries also foresee that even after it gets out of the present crisis, the speed of development of capitalism will not be very fast. Therefore, we cannot harbor skepticism toward socialism just because some countries at some times in the past have enjoyed faster development whereas, in contrast, certain misfortunes have occurred in our own socialist state.

Comrades who have joined the Journalists Association! You are the guides of public opinion in society. Public opinion in society depends on comrades present today for its guidance. We hope that, through the comrades who have joined the Journalists Association—comrades working on revolutionary newspapers and journals and progressive newspapers and journals, we can all work together to propagate socialism's various kinds of superiority which capitalism is incapable of possessing. Our state has undergone difficulties, and today it still faces difficulties;

our comrades present must genuinely unite around the Party Central Committee and help the Party Central Committee quickly overcome such difficulties. The weapons in the possession of our comrades are all very powerful, and our comrades are very good at using the weapons in their hands. Therefore, as long as our comrades are determined to do so, are determined to do a good job of propagating these fundamental, essential strongpoints possessed by our socialist society--our society with its common interests, common ideals, common beliefs, common morality, common action, common leadership, and common discipline--then we should be in a position to make a very great contribution to the stability and unity of the whole society, and to greatly reduce certain factors of instability and disunity which still exist in our society.

After we have discussed so many common things, would there be a problem arising in our minds like this: All this being so, are we not going back to the days of "uniform public opinion"? Are we not going to lose our "freedom of expression"? Are we not going to be deprived of our "double-hundred principle"? Are we not going to lose our liveliness? This problem does exist among some of our comrades. In conclusion, therefore, we need to speak a few more words about this problem.

It is not that "uniform public opinion" is not needed in any sense. If by "uniform public opinion" we mean that uniformity is required in discussing any problem, any specific thing, then that would be inappropriate, impossible, not in accordance with the principles of socialism, and not in compliance with the requirements of socialism. But we cannot advance from this to the other extreme and think that public opinion in our socialist state, in our socialist society, should not be uniform on any problem and in any sense. For example, is socialism better or capitalism better, after all? Should China insist upon socialism or should she not, after all? For the sake of building socialism and for the realization of the four modernizations, do we or do we not need the leadership of the party, after all? If anyone thinks that on problems like these we should not have uniform public opinion, then from my point of view that kind of thinking is not correct. On fundamental questions such as these, we are in fact "uniform." Precisely because of this, we are powerful. If we were not uniform even on these questions, then our steps would be confused. Some would be going east, some west, some south and some north, and our rank and file would not be able to march forward. Then we would not be able to unify our forces into a consistent body and speed toward our common destination; we would become split into fragments and could accomplish nothing.

Does the "freedom of expression" we advocate include counterrevolutionary freedom of expression? According to Article 102 of the Criminal Law passed by the National People's Congress last year, if someone calls for the overthrow of the proletarian dictatorship or opposition to the socialist system by way of posters, handbills, or other forms, he should be sentenced to 3 or more years' imprisonment. This is listed in the section on "counterrevolutionary" crimes. This means that, according to the Criminal Law passed by the National People's Congress, there is no freedom to proclaim counterrevolution. The view that proclaiming counterrevolution may also enjoy freedom is erroneous! Our newspapers should not publish such erroneous expressions and especially should not defend such erroneous views!

One opinion suggests that counterrevolutionary expressions should be allowed to be published freely. "You can debate with them! Why not refute counterrevolutionary views with revolutionary views?" This suggestion seems to "sound reasonable," but this "reasoning" is not the reasoning of the proletariat and not the reasoning of Marxism; it is the reasoning of the bourgeois. If we were to let counterrevolutionary expressions spread freely and then seek to offset them with revolutionary expressions, this would, by analogy, be like allowing someone to commit arson and then dispatching the fire brigade to fight the fire. If this can be the case, and there are 100 persons setting fires, how many fire brigades should we have? How many people must join this kind of work? Take another example: If 100 persons spread 1,000 rumors in one day, how many people would we require in order to clearly investigate the facts related to those rumors and then declare that they are rumors and not facts? How much time would be needed for this? Perhaps even 10,000 persons spending 10 days would not be sufficient. Nay, before old rumors are cleared away, new rumors may be forthcoming; however hard you may work, your efforts would not suffice. In addition, even if you succeeded in correcting the rumors, how could you get all those who have heard the rumors to listen to your corrections and to believe your corrections? Therefore, for the sake of enabling our state to have sufficient strength and to concentrate this strength for the realization of the four modernizations, we cannot grant freedom to counterrevolutionary expressions. Our society is not a park where you can say things this way and someone else can say things that way, and after that nothing would happen, no flowers would be injured, no grass would be injured, no trees would be injured, and everyone would leave the park and go home. This is absolutely not the case. We absolutely cannot waste so much time and consume so much energy on such kinds of problems. Therefore I think the prescription of our Criminal Law is correct in this regard; we cannot grant freedom to counterrevolutionary expressions. That would be of benefit to none of us except those counterrevolutionary elements. In order to prove that our revolution is just, that socialism is just, and that socialism is superior to capitalism, we do not need to invite a number of people and let them proclaim that socialism is no good, that capitalism is good; and then refute them one by one. If we really proceeded this way, then it would be very difficult for our society to achieve stability and unity; nor would it be easy for us to give full scope to the superiority of socialism. Our country is very backward. The reason we are able to have certainty and confidence that we will catch up with the capitalist countries in a relatively short period (so-called relatively short is of course not very short) is because we have this kind of superiority which the capitalist countries cannot have. This being so, we certainly should not abandon our superiority or any part of it. We should not prove the superiority of socialism by adopting the method of granting freedom of counterrevolutionary speech.

We must propagate the superiority of our socialism. We call upon the people of the whole country to proceed with our common action on the basis of our common interests, for the sake of our common ideals, under our common leadership, and according to our common morality and common discipline. Only thus can we attain our goals and attain them relatively speedily. Otherwise, we will remain backward. Carrying out such a policy and propagating such a policy will not hinder our liveliness. The liveliness we demand is socialist liveliness--the kind of liveliness over which we need not debate with counterrevolutionary elements. Although we are sometimes forced to carry out such a debate, we do not expect to demonstrate our superiority in this regard, because we need to do too many things. We cannot waste our time on this. Hence, it is my hope that after this Journalists Association is thus established, it will be able to follow the principles put forward by Comrade Xiaoping in his report, unite, and give full play to the august revolutionary power of the weapon of journalism that is in our hands. Our cause is just; we are bound to be victorious. Thank you, everyone.

CASES OF MISCARRIAGE OF JUSTICE DISCLOSED

Beijing RENMIN RIBAO in Chinese 3 Oct 80 p 5

[Article by Cui Min [1508 2404]: "Violations of Law Must Be Investigated"]

[Text] Newspapers recently reported rulings on a number of cadres charged with violating law and discipline. Although the majority of the cases were handled properly, justice was not done to a few others. For example, some of the cadres who were found guilty of committing crimes were disciplined by the party and government actions but not tried by the court in accordance with the due process of law. The masses have complained that the punishment meted out to them seemed too light, saying that "handling criminal cases this way is a miscarriage of justice, which will incur the great wrath of the masses and will make the evil spirit prevail over righteousness." Such complaints from the masses have brought to light this sharp question: What should be done to preserve the dignity of the legal system and truly make all people equal before the law? This question should be dealt with seriously rather than lightly.

Disciplinary action and penal arrangement have nothing in common. The former is only a warning or an admonition to those who committed a misdemeanor, while the latter is a punitive action against law-offenders. Since few can entirely avoid making mistakes, it has long been our party's policy to permit people to commit and correct mistakes. Our party has consistently emphasized education as a principal measure to help comrades who have erred correct their mistakes. If necessary, it may also take disciplinary action against them as a supplementary form of ideological education aimed at helping them "learn from past mistakes in order to avoid future ones, and treat the illness in order to save the patient." But extremely stern measures should be taken against law-offenders. Under no circumstances should we tolerate or condone criminal acts. Punitive legal actions should be taken against criminals with the aim of protecting the people. For this reason, a clear line needs to be drawn between those who commit crimes and those who make mistakes, and between disciplinary action and penal arrangement. It is wrong to impose penalty on those who committed a misdemeanor which merits only disciplinary action. Nor is it right to just lightly discipline or reprimand those who committed felonies which deserve server punishment.

It is also wrong to exempt a party member, a cadre or a leading cadre from criminal liability if they are found guilty of crimes. Doing so is a manifestation of the pernicious residual influence of the feudal system once opposed by the bourgeoisie which was the first to suggest that "all be equal before the law." As everyone knows, the idea of dividing society into classes was at the core of the entire feudal government system, which put into effect laws openly granting privileges to certain sections of people, thus creating social injustice. At the heart of its judicial system was the notion that "senior officials are above the law." This system which was handed down from one dynasty to another is still deeply rooted in China. Its principal role was to exempt any noble bureaucrats from criminal liability and punishment.

The existing laws in our country represent the interests and will of the working class and the broad masses of people. Once a law is enacted and signed into effect, it will carry a judicial power that will affect all regions, departments, units and individuals. Before the law, no one is an exception. The socialist legal system knows no classes and privileges. Anyone who is found guilty of violating the law and committing crimes should be dealt with according to the law, no matter how long his service, how high his position or how great his contributions to his country. Only in this way can the socialist legal system be consolidated and order and peace can long be maintained in our country. But ours is a country evolved from the semi-feudal and semi-colonial old society, a country where the residual influence of the centuries-old feudal ideology still holds sway over our party and society at large. This being the case, no one should underestimate its destructive effect on the development of our socialist legal system. Under this influence, some people still consciously and unconsciously defend the idea that "senior officials are above the law," assuming that the laws are enacted to control the people alone and therefore have no binding effect on those leading cadres in authority. Some leading cadres who were found guilty of violating the law and committing crimes still believe that they can reasonably expect to have their sentences reduced or their crimes acquitted because of their length of service, positions and contributions to the nation. Perplexed by this argument, some of our law enforcement organs have become reluctant to indict them or bring other leading cadres and their children to justice after they were found guilty of violating the law and committing crimes since they have been disciplined by the party and reprimanded by the government. This idea is actually a variant of the notion that "senior officials are above the law." This muddle-headed idea or wrong way of thinking is bound to have detrimental effect on the interest of the party and our modernization program. We must insure that "violations of law are investigated" and all are truly equal before the law.

NEED TO DISTINGUISH FELONY FROM MISDEMEANOR EMPHASIZED

Beijing RENMIN RIBAO in Chinese 3 Oct 80 p 5

[Commentary by Zhang Zhiwen [1728 0037 5113]: "Farewell to 'Do Not Do It Again'"]

[Text] A recent report on the State Council's dispassionate and swift handling of the incident of the capsized "Bohai No 2" oil drilling platform represents a radical departure from the past tradition which made the people believe that "senior officials are above the law." This report has also given the party and people throughout the country a profound education and has provoked deep thought among them. Excited by this report, some comrades have asked: Can this good example set by that central authority be followed by all lower level units? This question is not unjustified, because some leading cadres who were found guilty of violating discipline and law have been covered up with some seemingly reasonable and indisputable allegations and have henceforth been acquitted. Clearly, resolute and vigorous efforts have yet to be made to remove the obstacles that still stand in the way of our endeavor to eliminate such malpractices and to do people justice.

One of the obstacles that still prevents us from strengthening law and discipline is the seemingly plausible admonition "do not do it again" now being widely used by some units and departments to acquit law-offenders. For example, there are leading cadres who have been found guilty of building homes for themselves in violation of financial and economic discipline, abusing their power by winning special favors for their families through the "backdoor deals," aiding and abetting their delinquent children in showing contempt for law and justice, soliciting valuable gifts from foreign businessmen in disregard of our national dignity, using foreign exchange money to import merchandise for themselves, and dereliction of duty which has resulted in serious accidents causing damage to property and loss of lives. These are malpractices which cannot be tolerated by party discipline and state laws and are deeply resented by the people. Nevertheless, some higher leading organs assigned to handle such cases have shown reluctance to do anything about them, and have emphasized leniency rather than law and order in dealing with such cases. They even have resorted to all kinds of tactics to cover up and exonerate law-offenders, and have gone all out to defend them so as to prevent the law-enforcement organs from bringing them to justice. As a matter of formality, such cases often end up with a pledge "not to do it again" from the law-offenders after they have undergone some criticism. After taking note of this situation in which "the legal system is applied only to the masses but not the leading cadres, and party discipline is effective in controlling only those at the bottom but not those on top," many people have expressed skepticism over whether our laws and discipline can be completely and genuinely enforced throughout the country.

As a matter of fact, it is not only unreasonable but also illegal to acquit violators of law and discipline in exchange for their promise "not to do it again." This practice itself is not only an epic contempt of the law but a serious violation of our legal system. In this connection, a clear line needs to be drawn between violations of law and discipline and the general misdemeanor of shortcomings. For this reason, there should be different approaches to the handling of these two categories of legal cases. There are some cadres who may have committed ordinary mistakes. Such misdemeanor can be exonerated after they have undergone education and criticism and expressed their willingness to correct it. Yet, this policy is not applicable to the criminals who must be dealt with according to the due process of law, which cannot be replaced or nullified by their pledge "not to do it again," because all criminals must bear political, economic and legal responsibilities for what they have done. By emphasizing that all are equal before the law, we mean that the laws must be observed, and strictly enforced, and their violations must be investigated. In a sense, this stipulation is a reminder to the leading cadres that they cannot enjoy the privilege of standing above the law that has binding on all people. Further, any intention of deliberately acquitting a leading cadre found guilty of violating the law or sentencing him to less severe terms than necessary in consideration of his high position and strong backing is also a violation rather than an observance of the law. If we behave this way, how can we make the people trust us and how can we preserve the dignity of justice? It was said that the trend of seeking law-breakers' pledge "not to do it again" as a way of settling criminal cases is thriving on the reason that "it has long been our policy to permit the people to commit and correct mistakes." True, there has been a code of conduct for our party members that they should correct their mistakes as soon as they know they have committed them, and that they will be forgiven as soon as they do so. In other words, they are permitted to commit and correct mistakes. But this should not be regarded as an excuse for condoning and exonerating violations of law and discipline. But offenses must be dealt with according to the law on a case-by-case basis. The process of penalizing violators of law and discipline is in itself an educational measure to teach them to learn from their past mistakes, and to punish one as a warning to a hundred others. Punishment of violators of law and discipline is also not an indication that they have been deprived of opportunities to mend their ways. If we throw away the party discipline and state laws and if we only take a law-breaker's promise "not to do it again" at its face value, in lieu of any other legal actions, we will fail in our duty to teach him a lesson, give the masses an education, and uphold the social order. If we allow this practice to take the place of the law, the crime rate is certain to rise, thus making a mockery of our laws and discipline. It appears likely that some offenders who pledge "not to do it again" after being subjected to criticism may go back on their word and may commit crimes again and again because they feel that they can profit from this kind of illegal business at the expense of the party and people. At the same time, the inferiors may follow suit after noting that their superiors found guilty of crimes were exonerated. If a leading cadre is not brought to justice after offending the laws, he will set a bad example for others to follow, crime will run out of control, and law and order will become an empty slogan. For this reason, the view that the admonition "do not do it again" can take the place of law and discipline as the only measure to help the people mend their ways is entirely untenable. Facts show that some leading organs and leading cadres who know the law well have deliberately used the admonition "do not do it again" as a good excuse for condoning and exonerating crimes committed by their subordinates. By doing so, they can also conceal their own wrongdoings from the public. Of course, every cadre must hold himself responsible for what he has done. But the problem is that those leading organs and leading cadres who want to cover up crimes committed by their subordinates are not clean themselves in every sense. This is why those lower level cadres associated with them have become so bold to commit crimes and violate the law without fear of being caught. This being the case, in order to cover up their own mistakes and absolve themselves from any responsibility, those high level leading organs and leading cadres are willing to use that graceful and ingenuous admonition "do not do it again" as a measure to acquit their subordinates so that they can reduce major issues to minor ones and minor ones to naught. In view of this, the admonition "do not do it again" can be used not only as a coverup of their mistakes and unlawful acts but also as a haven in which they can enjoy mutual protection. To strengthen law and discipline, we must give up the admonition "do not do it again" as a way of condoning wrongdoings. No one should be permitted to enjoy the privilege of standing above the law no matter how high his position and how great his power. This is the only right thing we must do.

HALT TO PRACTICE OF INTERCEDING ON BEHALF OF FRIENDS, RELATIVES URGED

Beijing BEIJING RIBAO in Chinese [illegible] Sep 80 p 3

[Article by Zhou Zongkui [6650 1350 1145] and Chen Xiande [7115 6343 1795]: "Stop the Practice of Interceding for People"]

[Text] If the "best work" is to be selected from among the novels that criticize present-day evils, we shall cast one vote for Wang Meng's "Shuo Ke Ying Men (A Houseful of Persuasive Visitors)."

When a manager of a paste factory imposed punishment on an employee according to regulations, people came to intercede for him 199.5 times within a 12-day period due to the fact that this employee was the son of a cousin of the District Party Committee' Secretary. A theoretician who happened to be the manager's older brother-in-law hung around for a total of 21 hours. In addition some interceded by telephone, totaling 33 times; and there were 33 intercessions by telephone and 27 by letter.

The novel has apparently been written in an exaggerated way but, in real life, there are truly quite a few phenomena like this. During a period as short as one week, namely, from the 9th until the 16th of August, there were, in two newspapers, three pieces of news about intercession were reported: BEIJING RIBAO reported on 9 August that, after the exposure of the criminal activities of the three children of some high-ranking cadres, the mother of criminals Xu Yu Wan and Xu Yu Qi, Wang Yong, who was also a state cadre, not only failed to expose and report them to the authorities but, on the contrary, went around to all the places to intercede on their behalf.

JENMIN RIBAO reported on 11 August that a young worker of a certain refining and compressing plant, named Sun Li Qiang, had committed robbery and had thus been sentenced. his father, Sun You Liang, a state cadre, took advantage of his office to seek help from his former leaders, colleagues and associates, totaling 28 men, to intercede for his son in various ways so as to free him from the responsibility for his crime.

BEIJING RIBAO reported on 16 August that, after the Security Bureau's Zhao Yang Branch Office had exposed through its detective activities a case of a smuggling band organized chiefly by the children of cadres, some of the parents of the band members wrote, some telephoned, and some begged their relations and friends to contact the public security organs to intercede on their children's behalf. There were 20 cases of some of these parents visiting the public security office to intercede in person.

The energies of such enthusiastic interceders have reached astonishing proportions. The masses look on it askance; public opinion is confused. Its influence is extremely bad.

When did intercession start? It requires further study. Nevertheless, there is one thing we are sure about: it started in ancient times. "The History of the Three Kingdoms" recorded: Zhou Yin, Zhou Yu's second son, happened to be married to a member of the imperial family. He was later given the title of general and marquis. Because of a crime he committed while "indulging in sensual pleasures" he was removed from his post and awaited further punishment after due investigation. Thereupon Zhu Ge Jin and Bu Zhi took the lead to intercede for the marquis and memorialized the throne jointly. Quoting classics, they implored Sun Quan to consider Zhou Yu's case and to show mercy and release Zhou Yin. Subsequently, Zhu Ran, Quan Zong and many others followed suit. Sun Quan at first was obstinate but could not stand a houseful of persuasive visitors and in the end bent the law out of consideration for relatives. Anyone can intercede as long as he has a mouth. Among the interceders we find both patricians and plebians. In so far as their efficiency and accomplishment are concerned, however, there is a great difference between the two. The minimum requirements for one to succeed in interceding are: a) having special privilege, b) having connections, c) having a high degree of feelings, and d) being shameless. What is especially important is the first factor. A common citizen, without support from someone who possesses special privileges may find his words ignored by his party completely notwithstanding that he has a face full of mouths. Intercession by those who have power and influence are easily successful because influential officials can "protect each other". It is thus clear that intercession is, from the outset, linked with special privilege. In the feudal ages, the feudal class' special privileges were shown not only in its members' taking government positions generation after generation but also in the fact that "laws were not applied to influential and officials." Often the safeguarding of such privileges was inseparable from the art of intercession. When a certain influenctial feudal official or his relatives happened to violate the criminal law and had to be investigated, the other influential officials would set out one after another to intercede for him with great effort and repeatedly. A major problem could be explained as a minor one, and a minor one explained away, with the result that a matter might be left unsettled. Although sometimes the were "upright Mr Bao's", this was extremely rare. All in all, "to intercede for people" was a product of the feudalistic special privileges. At the same time, it served to protect these special privileges. The practice of interceding for people in our society today is actually a tradition we have inherited from the distant past. This tendency has become more severe because Lin Biao and the "gang of four" wreaked havoc for 10 years. It seems that, if we want to stop the practice of interceding, we must uproot the feudalistic ideology of special privilege.

The crux of the matter in checking the practice of interceding for people, I am afraid, besides scolding and punishing the interceders, is to grasp those who practice favoritism. In fact, intercession is like flattery. The reason why the interceder can succeed, besides the fact that he has skill at wagging his tongue is chiefly because there are men who practice favoritism. Imagine, if a man is impartial and incorruptible, upright and does not flatter, does not practice favoritism and does not bend the law, even if interceders flock through the door, what good will it do? Some leading cadres have said, "It is certainly good for a man to behave like this, but I am afraid that he will probably be divorced from the masses." This alibi is, in fact, groundless. If a man can be divorced from the masses by enforcing the laws impartially, then wouldn't bending the law out of favoritism be the best means of strengthening ties with the masses? Is this a logical argument at all? To be impartial and incorruptible will definitely mean being "divorced" from an extremely small number of interceders and will offend some people whose special privileges mentality is strong. But what's wrong with this sort of "divorce?" The broad masses will surely give warm support to it. All in all, to be a member of the Communist Party, a leader and enforcer of laws, one must have the spirit of "not being bent by power and force" as well as the spirit of "as an official if I cannot support the people, I would rather go home and sell my sweet potatoes," i.e., the willingness of acting like the "upright Mr Bao." Otherwise, all such slogans as "any law that exists must be obeyed; any person who violates the laws must be dealt with" will become empty phrases. "The members of the Communist Party are steel, not paste!" The expression made by the main character in "A Houseful of Persuasive Visitors" is quite worthy for some of our comrades to give deep thought to. When confronted with the practice of intercession, are you a piece of "steel" or a pot of "paste"?

'LIAONING RIBAO' DEFENDS POLICY OF GOING BACK TO OLD ROAD

Beijing RENMIN RIBAO in Chinese 13 Oct 80 p 5

[Commentary by LIAONING RIBAO commentator originally published by LIAONING RIBAO of 6 October 1980: "On 'Returning to the Old Road'"]

[Text] When the "gang of four" were in their heyday of power, there were many political labels in circulation. Today, a few remain in circulation although most of them have been consigned to the garbage heaps of history. One of these political labels termed "returning to the old road" is still darting around to sting the people in the back these days.

For example, we heard this "gunshot": "They are leading us back to the old road again," when many localities this year scored fruitful results from the trial implementation of the system of division of responsibility for production designed to fully mobilize commune members to spur the development of agriculture. In the dictionary of the "gang of four," "returning to the old road: means restoring capitalism, or an inexcusable crime. A "gunshot" like that could send shivering cold waves through the bones of those people with lingering fear, silence those relatively outspoken people and provoke others determined to defend that system with this remark: "We are not led back to the old road; we are now on the move forward."

As a matter of fact, "returning to the old road" is not dreadful at all, for people sometimes may find themselves in a position where they will have no alternative but to turn back. This is a kind of life. It is humane for the people to return to the old road when they find that they have been following a wrong way for too long. Otherwise, they may get lost. People moving past their destination must also trip back a few miles or so. Otherewise, they may move too far away from their destination. Even a foot soldier engaged in close fighting has to move backward a few steps before he can thrust forward. Only a fool or the insane will unreasonably thrust forward after reaching a dead alley or impassable swamps which may cost him his life, and will call this "an heroic act in defiance of storms," or "revolutionary advance." The same is true of building socialism. Our socialist practice must go through a period of trial. In this connection, there is no straight road laid out for us. This road always follows a zigzag pattern. Sometimes, we may have to retreat if we want to make progress. Only in this way can we accumulate experiences and find a right path. There is literally no point of no return in this world. Everyone sometimes has to go back a little bit before he can make progress. This was true in the past and is still true today. This truth is also applicable in the future. "The road ahead is winding and long; one has to explore it carefully all the way." This proverb also presents a sense of the inevitability of returning to the old road.

The proponents of the system of division of responsibility have been accused of leading the people back to the old road. One of the accusers' main reasons is that this system was old stuff of the 1950's and the 1960's and therefore cannot be applied in the 1980's. They asked: if this is not a "restoration of the old order and retrogression," what is it? This question seems sharp. Nevertheless, they have consigned this basic Marxist principle to oblivion: Whether a relation of production is progressive or not depends on whether it spurs or hampers the development of the productive forces and whether it is in harmony with it; the question does not lie in whether "it has been used or not ever before." The fact that this system was effective in the past and remains so today clearly indicates that it meets the desired standards for developing the productive forces, and is welcomed by the masses. How could anyone call it a "retrogression"? We will be guilty of glorifying capitalism if we call everything useful capitalist stuff.

This political label obviously still holds sway over those comrades who have proven incapable of smashing the shackles of the left-deviationist ideology. For a long time, this theory has been in vogue: The progressive, revolutionized and socialized relations of production must be large in scale and all-inclusive. This mistaken idea has driven many people to embark on adventures in violations of the objective laws. Under its influence, they even tried to accomplish things, that in Lenin's language will take years to complete, in a few days or a few months. Capitalizing on this mistaken idea to their advantage, Lin Biao and the "gang of four" blatantly called on the nation to "continuously revolutionize the relations of production," to "persevere in moving forward and opposing retrogression," to "tide over the period of poverty," and to "promote the Dazhai experiences." Consequently, they did serious damage to the social productive forces, bringing the national economy to the verge of bankruptcy. Could we blindly go on after we were misled for such a long time? Should or should not we go back to the socialist road? Few know the naswer better than the masses, who said: "The problem is not that we must return to the old road but that we have passed and missed the point of our destination long ago." Only by coming to grips with this philosophy can the vast numbers of cadres and people further emancipate their minds, deepen their understanding of the party's new policies and new measures, and reform our systems with courage. In short, when we are talking about "returning to the old road," we must be aware of what kind of road is laid out for us to go back to. It goes without saying that we will resolutely resist going back to capitalism. We will be pleased to see our country return to the embrace of scientific socialism. To those who attempt to use the term "retrogression" as a magic weapon to intimidate and inhibit us from reforming our system, we want to pass along this message: "What you said is damn right! We certainly want to beat a quick retreat whenever we find that the road we follow leads to a dead alley. However, we want to assure you that we will never return to the capitalist road. Just as Lenin taught us, 'a retreat is designed for a better and more forceful leap forward!'"

POSSIBILITIES, ACTUALITY IN MATERIALIST DIALECTICS ANALYZED

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 2, 25 Feb 80
pp 27-31

[Article by Ren Yulong [0117 3768 7127]: "On Possibilities"]

[Text] Possibilities and actuality are a pair of basic categories in materialist dialectics. Here, we shall inquire primarily into the category of possibilities.

(1) Relationship between possibilities and impossibilities. What are called possibilities are tendencies toward certain types of development of things that have not achieved complete maturity on an objective basis and under prerequisite conditions. "Objective basis" indicates an internal contradiction in a thing, an internal contradiction being an internal cause of the development of thing. Comrade Mao Zedong said, "Internal causes are the bases of change." "Prerequisite conditions" indicate the external contradictions of a thing, i.e., that there is a relationship of unity and opposition between this thing and other things. They are the external causes of the development of things, "external causes being the conditions of change." Internal causes and external causes are present at the same time and exert their effects at the same time. The combining of internal and external causes with internal causes being dominant provide the two types of causes of the development and change of all things. It is also the inherent basis and the essential external condition for the production of possibilities. Possibilities are the tendencies that are produced in the process of development and change of things. Although there are definite bases and conditions for them, these bases and conditions have not yet matured. Before the problem of who is to win and who is to lose in a struggle between two sides of a contradiction has basically been resolved, the destruction of old things and the birth of new things serve merely as possibilities and do not determine an invariant reality. The category of possibilities only reflects the direction and prospects of development of two sides of a contradiction in the process of strugge and there is an essential distinction between it and actuality: Possibilities indicate the struggle between two sides of a contradiction and tendencies toward

development, whereas actuality indicates the results of who achieved victory and who was defeated in a struggle between two sides of a contradiction and is the resolution of a contradiction. Actuality indicates that a thing in which life exists is a possibility that has been realized, whereas a possibility indicates that a thing that may emerge in the future is at present something that does not exist.

There is not only an essential distinction between possibilities and actuality, but there is also an essential distinction between them and impossibilities. The distinction between them and impossibilities lies in the following: There is not an objective basis for them. When in the course of development of a thing it cannot be transformed into a corresponding thing because because it lacks a definite objective basis, we say that this phenomenon is not possible. There are two types of impossibilities. The first type are those impossibilities which, because they lack all objective basis, cannot rise to become possibilities under any conditions and which cannot be transformed into actuality, being forever unrealizable. These are called "absolute impossibilities." For example, a stone can never hatch a chick. "Perpetual motion" is something that can never be achieved. The inherent nature of imperialism and reactionary classes can never be changed. Because the intrinsic qualities of a thing are inherent internal determinative characteristics of a thing, it cannot remain itself if its intrinsic qualities change. The boundary between impossibilities of this kind and possibilities is absolute and cannot be changed. The second type are those impossibilities that originally do not have an objective basis and that are basically impossible at a given time. However, as things develop and as social practive and the level of consciousness of the people become elevated, these original impossibilities can become transformed into possibilities. For example, "Chang'e Runs Away to the Moon" is a magnificent popular traditional fiary tale that has been well-known for several thousand years. "Running away to the moon" was basically impossible in the past. But now, because of the rapid development of industry and scientific technology, more than ten human beings have in succession have flown in space vehicles and have succeeded in landing on the moon. They have even brought back several hundred kilograms of rocks and soil from the moon, thus realizing the fantasy of "running away to the moon." As another example, in the age of laissez-faire capitalism, it was not possible for the socialist revolution to obtain its first victory in a nation. However, in the age of imperialism and of the proletarian revolution, this impossibility was transformed into a possibility. Thus, it can be seen that the boundary between some impossibilities and possibility is not absolute and invariable but is, rather, relative and variable. These are called "relative impossibilities."

On the other hand, can possibilities be transformed into impossibilities? There are two situations here as well. The first type is one in which the essential tendencies of the development of a thing have been embodied, indicating that the old thing has died out and that there is the possibility of the birth of new things. From a long-term standpoint, this possibility cannot be transformed into an impossibility. For example, the possibility of the realization of the Four Modernizations in our country and the possibility of a final world victory for communism are possibilities that are inevitable, that conform to law and that can never be altered. The second type are those possibilities for which there was a certain objective basis at the time of their production but of which the bases were not established on the basis of objective laws and which were brought about because of various chance factors. For these reasons, they are very unstable and can disappear very easily. When the original objective basis has disappeared, possibilities that have been established on such a basis also disappear. Thus, possibilities can be transformed into impossibilities. This type of phenomenon is also very frequent. For example, after the October Revolution of 1917 in Russia, a situation developed in which two regimes were present at the same time. Lenin, on the basis of the circumstance that the provisional government of the capitalist class lacked the means of force, raised the slogan, "All political power to the soviets," foreseeing that there was the "possibility for peaceful development of the entire revolution." Later, the provisional capitalist government, having made thorough preparations, got control of such apparatuses of force as the armed forces and the police, and, in July carried out a bloody suppression of the demonstrations of the masses, thus terminating the state of two regimes being present together. This resulted in the disappearance of the possibility for the peaceful development of the revolution, a possibility having been transformed into an impossibility. Without delay, Lenin changed the tactics of his struggle and proposed a policy of armed uprising, in the end using violent revolution to overthrow the provisional capitalist government and to obtain the great victory of the October Revolution.

(2) Analyzing possibilities from the standpoint of quality and quantity. All things and phenomena have the determinative characteristics of both quality and quantity and are unities of quality and quantity. Simply be carrying out qualitative and quantitative analyses of things, it is possible to get an overall grasp of things. What are quality and quantity of possibility?

First, let is consider its quality. Possibility itself is not matter. Rather, it is a basic mode whereby material things are commonly related to each other. It reflects the relationships between material things in terms of tendencies toward development and change and is a bond linking things in the past, the present and the future. Actual things existing in the present are the results of transformations of possibilities of the past, while existing things contain the possibilities for the production of new things. Once their bases and conditions have matured, these types of possibilities can become transformed into new actualities. This type of mutual transformation between possibilities and actualities repeats itself in endless cycles. With each cycle, a thing can develop to a new stage. This is the dialectical process of the development of things.

Why is it that things develop the possibility of transformation to actuality? This is the result of the struggle between contradictions. The insides of all things are permeated by contradictions. Each contradiction is divided into two antitheses and there is unity and struggle between these two antitheses as a consequence of which impetus is given to the movement and transformation of things. The two antitheses of a contradiction are, qualitatively, basically antagonistic to each other, and, in tendencies of development, are completely relative to each other. Consequently, at the same time and place and under the same conditions, a thing has two relative possibilities of development. One of these represents the inevitable tendency of development of the thing and is a progressive and good possibility. The other runs counter to the inevitable laws of development of a thing and is a regressive, bad possibility. A seed that is planted in the earth may sprout or it may not sprout. A person who comes down with a serious illness may be cured or may not be cured. These two types of qualitatively relative possibilities are both produced on definite objective bases. All that is necessary for them to be transformed into actuality is for the essential and sufficient conditions to be present. The key lies in ascertaining of which possibility the bases and conditions are more adequate and more mature. Of these two relative possibilities, there is only one possibility that becomes transformed into actuality. Both of them cannot become transformed into actuality at the same time. The realization of one possibility signifies the destruction of another relative possibility. However, from the standpoint of the objective historical laws of the development of things, the possibilities that represent the inevitable tendencies in the development of things are ultimately certain to triumph over bad possibilities. This victory is inevitable and irresistable. For example, in a socialist society, there is the contradiction that new communist factors and old remnants of capitalism exist together at the same time. Consequently, there are two relative possibilities for development in a socialist society. One of these is a gradual transition toward communism. This is historically inevitable. The other is a backwards retrogression toward restoration of the old order. Retrogression toward restoration of the old order is nothing more than a temporary, chance phenomenon and is an exceptional manifestation of the tortuous character of the development of things. Even if a bad possibility becomes transformed into actuality, in the course of its realization it will come to contain new factors that negate it. These new factors have the possibility of final victory.

In the foregoing, I have distinguished between two types of relative possibilities in terms of their basic dissimilarities in character. However, among possibilities of the same character, one can also differentiate between the two types, direct possibilities and indirect possibilities, on the basis of differing degrees of maturity of their objective bases and prerequisite conditions. There are some possibilities which, because they are basically endowed with objective bases and various conditions, can quickly be turned into actuality simply through subjective effort. These are called "direct (or actual) possibilities." There are other possibilities that are still very far from the bases and conditions of realization and that can only be realized at a later stage of development. These are called "indirect (or nonactual) possibilities." For a possibility to become transformed into actuality it must undergo a process of development and is always realized gradually from the remote to the near. First, there is an indirect possibility that undergoes development to become a direct possibility, after which the direct possibility is then transformed into actuality. The transformation from possibility to actuality is a qualitative change and is a leap. However, before this there must be a cumulative process of quantitative change. An indirect change at first is no more than something latent that is an embryonic stage. All that is necessary is for it to undergo continuous consolidation and development and uninterupted expansion of its own position for it to undergo a gradual transition from an abstract, indirect possibility to a direct possibility. We cannot separate indirect and direct possibilities nor can we place them on a par with each other, ignoring the intrinsic relationships between them. Further, we cannot solidify them as if a direct possibility is a certain way from the outset without undergoing a process of development or that an indirect possibility is forever distant and indistinct and cannot be realized. Food must be eaten mouthful by mouthful, a road must be walked step by step and the tasks of revolution and construction must be completed in sequence. During the period of the democratic revolution in our country, the indirect possibility for a socialist revolution lay latent. Each time the democratic revolution took a step forward, the possibility for a socialist revolution increased slightly. The victory of the democratic revolution resulted in the indirect possibility for a socialist revolution becoming elevated to a direct possibility.

Next, we shall analyze possibility from the standpoint of quantity. The quantity of a possibility refers to the magnitude of a possibility and to the extent of its magnitude. The magnitude of a quantity of this kind can be measured mathematically using the theory of probability. For example, if cotton seeds are planted in the earth, we can say that there is the possibility that they will germinate and emerge. But just how great is this possibility? Is it a matter of a small number of individual germinations or is it a matter of a large number or total germination? If there were 400 cotton seeds and all of them germinated, then the frequency of this event would be 400/400 = 100%. The probability that a seed would germinate would be 1, i.e., 100 percent. If many repeated tests are conducted under similar conditions of air temperature, soil and moisture content, the greater is the number of tests the more accurately they will express the magnitude of the possibility. If all of the seeds germinated in each test, then there would be a transformation from the initial "chance event" to a "necessary event," with what was originally only possible becoming necessary. Under conditions of this kind, possibility and necessity coincide with each other. Necessity can be seen as a special condition of possibility. It is one-hundred percent possibility and it is absolute necessary possibility. Judged from the standpoint of quantitative relationships, it is the possibility of a probability of 1. At the same time, there is the possibility of "not germinating," the probability of which is zero. This type of possibility declines to become an impossibility. Thus, from the quantitative relationship, it can be clearly seen that the complete transformation of a possibility into an actuality means the complete disappearance of another antagonistic possibility.

The contradictions in the world are complex and the development of and changes in things are subject to the restrictions of many-sided factors. One-hundred percent possibility without any chance necessity does not exist either in the natural world or among social phenomena. Even if one has the most excellent seed and even if its possibility of germinating is very great, it is nevertheless subject to such chance factors as natural conditions in its environment, with the possibility existing that it will not germinate. Suppose that we plant 400 cotton seeds and that 390 seeds germinate, while 10 do not germinate. Then, the frequency of germination of the 400 cotton seeds would be 390/400 = 97.5% and the probability of germination would be 0.975. The frequency of not germinating would be 10/400 = 2.5%, with the probability being 0.025. When the two are compared with each other, it is evident that the possibility of germination is far far greater than the possibility of not germinating. If 200 seeds germinated and 200 did not germinate, then the possibilities of germinating and of not germinating would each be one-half. These are "events of equal possibility," i.e., the two opposite possibilities are equal. If not one seed comes out, then the frequency of germination is zero. In this case, the possibility of germination becomes transformed to an "impossible event." Impossibility is the complete opposite of necessity. If two incompatible, diametrically opposite possibilities exist in the same thing during the same process of development, they are called "mutually antagonistic events." The sum of the possibilities of this type of event is a necessary event and their probability is 1, i.e., $P(A + \bar{A}) = 1$. Thus, to analyze this in terms of quantitative relationships, an increase in one type of possibility means a relative decrease in another relative possibility. The complete realization of one possibility means that it has been elevated from a possibility to a necessity and that it has become an "absolute possibility." However, the other possibility that is opposed to it is completely eliminated and falls from being a possibility to being an "absolute impossibility."

Analyzing the magnitude of possibilities in terms of quantitative relationships is very important to us in getting a grasp of the basic tendencies of the development of things. In whatever activity we undertake, we must "have numbers in our brains." For example, in checking the quality of the products of a factory, it is generally considered that there are two possibiltiies, i.e., that there are products that meet the standards and that there may be products that do not meet the standards. But which of these possibilities is greater? One cannot make a general estimate; rather one must carry out a detailed quantitative analysis in which spot checking of the products is carried out. The greater is the frequency of the spot checks and the greater is the number of spot checks each time, the more accurate the results of the tests will be. If the frequency of products that meet the standards comes closer and closer to a constant, for example, 99.9%

(ratio of products meeting standards and number sampled) as the result of repeated sampling, then we can say that the probability that the products of the factory will meet the standards is 0.999, thus conforming to quality requirements and indicating that the product is excellent. If it is 85-90%, this is a generalization. If the probability of defective goods is equal to or greater than the probability of goods meeting the standards, then there are serious problems regarding the products of the factory that must be rectified within a limited period. Earthquake predictions and weather reports are like that. One cannot simply say that something is "possible." One must also say how great the possibility is. When we analyze any problem, we must not only consider it from a qualitative standpoint, but we must also consider it from the standpoint of quantitative relationships. This is because "All qualities are expressed as definite quantities, there being no quality if there is no quantity" (MAO ZEDONG XUANSHU [Collected Saying of Mao Zedong], Vol. 4, page 1380). It is only through the quantitative relationships that the qualitative connections and distinctions can be seen. The essence of science lies in its precision. If something is not precise, it cannot be called science. As science and technology have developed, mathematics has been applied more and more widely in various fields of science. This is an important sign of the day-by-day perfection of the natural sciences and the social sciences.

(3) Relationships between the objectivity of possibilities and the subjective activity of people. What is the objectivity of possibilities? That is so say that possibilities are the objective tendencies in the development of things. It is closely related to objective things and to the laws of their development. The production of a possibility is the result of the internal contradictions of a thing becoming its objective basis. The development of a possibility is the result of the struggle between the two sides of a contradiction becoming its motive power. The realization of a possibility requires definite conditions. A possibility is essentially a latent realization; it is actuality in an embryonic and germinative state. A possibility is the objective and common form of relation in the course of the development of a thing. Its existence and development are not diverted by the subjective wills of people. People cannot make or eliminate possibilities at will. However, this is not to say that people are powerless in the face of possibilities. Through practical activity in remoulding the objective world, people can come to understand the various possibilities for the development of a thing and can select the best possibility among the various possibilities present at the same time, actively creating conditions and accelerating the transformation of a particular possibility toward realization while doing everything possible to avoid or slow the transformation of bad possibilities into actuality.

The key to whether a possibility can be transformed into actuality lies in conditions. In the natural world, conditions develop gradually and spontaneously, and, without the participation of human beings, possibilities can also spontaneously change into actualities. However, in the sphere of social activity, the situation is completely different. The essential factor in social activity are human beings and not things so that apart from the practical activity of human society possibilities cannot become realized spontaneously. Although human beings cannot create laws and possibilities, they can and must create conditions. Conditions, from a state of nonexistence to a state of existence and from immaturity to maturity, are the result of the practical activities of human beings. There are objective and subjective conditions. Objective conditions are various types of objective factors that exist apart from and independently of the subjective will of human beings, while subjective conditions refer to the level of ideological awareness and the degree of subjective effort of human beings. When an objective basis and a basis of objective conditions exists, the subjective effort of human beings is the definitive force that impels possibilities to become transformed into actualities. To negate objective bases and essential conditions and to view possibilities as things that can be followed according to one's inclinations is a manifestation of the "indeterminism" of idealism. On the other hand, negation of the action of subjective activity on the transformation of possibilities is a manifestation of "fatalism." It is negative and inactive and it is one of the theoretical bases of the way of thinking of the coward and the sluggard.

In our practical work, we must deal with the relationship between good possibilities and actualities. When we do any piece of work, we must start out from practice and manage the work on the basis of actual conditions. Lenin has pointed out that, "The policies of Marxism are things based on reality and do not take probable things as their bases." (LIENING QUANSHU [Complete Works of Lenin], Vol. 35, page 256). In dealing with a problem, we must base ourselves in actuality and do a good job of the work at hand. However, we must also see through to the following tendency of development and strive to achieve good prospects. Actuality is the foundation, while possibilities belong to the category of the ideal. The two are the relationship between the present and the long-term. If we insist on doing something today that will only be possible to do in the future, this is a "Left" deviation. On the other hand, if we put off to the future something that it is possible to do today, taking the view that it cannot be done, then it is impossible. This is Right deviation. "Left" deviations and Right deviations break the relationship between possibility and actuality, although from different aspects.

There are some of our comrades who hold that, in our socialist nation, possibilities can become realized spontaneously. It is an error to confuse possibilities with actuality. For example, planned proportionate development at a highly rapid rate is an objective law of socialist economic development. Before a law has been realized, it exists only in a state of possibility that is not equivalent to actuality. A highly rapid rate is a possibility that is produced on the basis of the superior socialist system. In order to transform this possibility into a true actuality, various conditions must be provided. There are two of these that are of the greatest importance. The first is correct leadership by the Party and the second is reliance on the subjective effort of all of the people of the nation. It is only when work on all fronts has been done well that it is possible for realization to occur smoothly at a highly rapid rate. The rate at which realization of the Four Modernizations occurs progresses in direct proportion to the extent of the effort of the entire Party, the entire military force and all of the people of the nation. Let us use our own industriousness and labor to accelerate the transformation of the Four Modernizations from a possibility to an actuality.

FOUR MODERNIZATIONS IN NEED OF ALL KINDS OF TALENT

Beijing RENMIN RIBAO in Chinese 3 Nov 80 p 8

[Article by Xu Diankun [1776 7820 3540]: "The Big Fellow in Wu Dalang's Store"]

[Text] The comic cartoon "Wu Dalang Opens a Store" is really interesting. The proprietor Wu Dalang cannot stand talent. He will not allow any employee in the store to be taller than he. Such laughable ideas and excellent drawings. When people see it they start thinking about other things and become aware of things not in the cartoon. I have wondered. What would be the fate of some capable big fellow who came to work in Wu Dalang's store? As Wu Dalang's custom was not to hire anyone taller than he, the big fellow would be chased out, or if he stayed he would have to stoop and bend. If the big fellow ever stood up tall or raised his head and let the proprietor notice that he was taller, or if a guest said that the big fellow was taller than Wu Dalang, then he would suffer the ire of the boss.

The leaders of some of our units are jealous of talent. They have some of the laughable ideas of Wu Dalang, who will allow no one to work in his shop who is taller than he. They often suppress or attack talented persons. Some persons undauntedly work on technical innovations, but when they have some success, they not only cannot get the support of the leaders of their own unit, but they suffer all sorts of attacks. Some people work night and day on scientific research, but when they make some discovery and are praised by members of their own profession they are not given recognition by their own unit. The expression "When flowers bloom inside the wall, they color the outside of the wall as well" is well respected in society but is cause for lowering one's esteem in one's own unit. Some people write literary compositions in their spare time. They have made contributions to theoretical research, and are often published in periodicals and newspapers. However, they are despised by the leaders of their own units, who make them wear hats saying "fame seeker" and "not doing one's own proper job," and life is made difficult for them. Some people are very capable, energetic, have a strong sense of duty, are concerned about the work of their own units, and actively make reasonable suggestions. Not only are they not praised, but they are suppressed in many ways. In these units the "little fellow" can get by with some effort, but it is really rough for the "big fellow." He is forced to wear an inlaid "golden hoop" hat and forced to wear high-heeled glass slippers. He is only allowed to bow his head and stoop. He is not allowed to hold his head up and brace his shoulders. What crime has the "big fellow" committed? His only crime is being taller than the proprietor.

At the time of Wu Dalang, there was a common scholar by the name of Wang Lun . He was very narrowminded. He was very intolerant. He made trouble for Lin Chong everywhere. He chilled the hearts of heroes everywhere. Even the three Ruan heroes who lived near Liangshan did not dare to go up the mountain. Of course, there was no way Liangshan could become strong. On ly after Chao Gai and Wu Yong, moral and talented persons, went to Liangshan and recruited all the heroes in the country did the cause of Liangshan prosper daily and did Liangshan become famous. For the four modernizations, we need all kinds of talent. We have to use talented persons to the utmost. We cannot be jealous of or suppress talent. Whether or not people are used affects the success or failure of the four modernizations. Those who get such people will prosper; those who lose such people will fail. Some leaders of certain units had better think about this.

USE OF AIR RAID SHELTERS FOR PEACETIME PURPOSES URGED

Tianjin TIANJIN RIBAO in Chinese 7 Aug 80 p 2

[Article by TIANJIN RIBAO reporters Xiao Huo [5135 3752] and Deng Yuhe [6772 3768 3109]: "Don't Forget the Underground"]

[Text] Over the years, the proportional relationship between the "bones" and the "flesh" of Tianjin municipality has been seriously lost; not only is housing tight, but for a long time there have not been enough public facilities and public places. Are there now in the municipality empty rooms that can be used?

Yes! Right under your feet!

They are the underground civil air defense works. In the construction of these works, we have, over the years, invested a large amount of capital, cement, reinforcing bars, and sweat. For the most part, all the works that were hastily built before 1972 are already on the verge of becoming abandoned "inundated areas." Those built after 1974, according to shelter-grade standards, only need a little repair and tidying up to be put to all kinds of uses.

The other day we paid a visit to several civil air defense works in which peacetime and wartime uses have been integrated--underground meeting places, restaurants, workshops, warehouses, hospitals, and hotels. When we went up some steps and then went down into the spacious and well-lit underground halls that run from Nankai district to Yanglu Street, responsible comrades of the Nankai District Party Committee were listening to neighborhood reports on the use of civil air defense works. The hall was brilliantly illuminated and beautifully decorated, and its atmosphere was peaceful. On all the side pillars and whitewashed walls were pictures of animals, scenery, flowers and grass. In this district, which lacks cultural facilities, the varied activities provided by the underground cultural center are enthusiastically welcomed by the masses. In the past, teenagers strolled here and there on the streets; now almost every day they come here to look at books and pictorials or watch color television, to play chess or ping-pong. On a simple stage, small-scale programs can be performed. During midsummer, when the sun is scorching hot, here it is pleasantly cool, like autumn. The cultural center attached to the inn can bring in a monthly income of over 3,000 yuan. It not only equips itself, but also makes arrangements for six youths awaiting employment. It not only acts as a "self-sustaining shelter," but also as a "people-sustaining shelter."

The use of underground civil air defense works to serve production and the people's life is truly something worth advocating. The underground dining room of the newly opened canteen in a small grove of Hebei district provides a convenient place for meals for local residents and transients. When we went to this brightly lit dining room with its large seating capacity, the female attendants were carrying out steaming hot stuffed buns from the food preparation room and putting them in front of the customers. An old teacher put me in the picture: "From the time this was built and opened in 1976, it has done good business. Because it is warm in the winter and cool in the summer, even beer can be kept fresh for many more days." The canteen's proprietors have put their storerooms, locker rooms, and cooked wheaten food preparation rooms underground, thereby enlarging their business space. It is calculated that the monthly total business volume of this canteen is 45,000 yuan, with the underground volume being over 44 percent of this total. Underneath this five-layered structure, a new dining room decorated in marble is now being built.

Seeing the well-ordered underground warehouse of a glass household utensils plant in the Baimiao industrial district and the neat, clean, dry, and bright rooms of the Wangchuan Square Hotel and the Jiangua Road Pingzhan Hotel reversed our past impression that civil air defense works were damp and dark. Our municipality does not now make as much use of civil air defense works as does Beijing and Shanghai, and, therefore, it is very necessary to widely popularize the integration of their peacetime and wartime functions. These two peacetime-use underground works in Hebei district, in the second quarter of the year, supported by the district and neighborhood civil air defense committees, were opened one after the other as hotels, and they invested money in the purchase of some beds and bedclothes, and made arrangements for 17 youths who are awaiting employment; each hotel has 40 to 50 beds and brings in a monthly net income of about 1,000 yuan. The underground works are put to both peacetime and wartime uses. This dual use kills several birds with one stone, and so what is there against it?

A developing trend in this century is for some technologically advanced countries to want to use underground space for urban construction. Abroad, there are already underground structures of 10 and more layers, and our country is also probing into deep layers underground. In case a future war breaks out, it will be a three-dimensional war, without a front or a rear. Therefore, on what do we rely to destroy the enemy and preserve ourselves? Only by using the "shield" of underground works will we be able to deflect the "spear" of nuclear weapons.

We visited the underground works of this municipality's Red Cross hospital, which would have the mission of providing relief in case of a nuclear attack. The patients there were resting and receiving medical treatment in an environment with suitable temperatures and air circulation. This 670-square meter underground space has ventilation, virus filtration, and dehumidification equipment. It has a 10-centimeter-thick airtight door for protection against atomic, chemical, and germ attacks. Most of it is already used for civil air defense purposes. There is a storeroom, an isotope room, an X-ray room, a laboratory, and an electrical transformer room. In the underground ward, the temperature is moderate, there is no noise, the air is clean, and there is very little dust or bacteria. It is well suited for patients convelescing from high blood pressure or heart disease. Patients suffering from burns are not easily infected and are quickly cured. The anti-earthquake properties of underground works are good. After the 1976 earthquake, many badly injured patients were shifted underground, where the doctors and nurses could concentrate on caring for them and the patients could concentrate on resting and recuperating. In a period of about half a year, the underground ward admitted more then 230 patients, and this became an exercise similar to one under wartime conditions.

In integrating peacetime and wartime functions, Tianjin municipality's best use of underground space is for knitting mill underground workshops. The workshops cleverly use the cold air underground, so that not only are the workshops pleasantly cool for people, but also the low temperatures in the workshops draw the intense interest of foreign guests toward this cost-free way of saving energy.

Our municipality now has a large amount of civil air defense works that could be, but are not, used. If they are used, we will advance; if they are wasted, we will retreat. Starting from the local urgent requirements, to turn the unused works to good account will directly serve the four modernizations!

NATIONALITY ISSUE, CLASS ISSUE ARE NOT THE SAME

Beijing MINZU TUANJIE [NATIONALITIES' UNITY] in Chinese No 9, 15 Sep 80 pp 36-39

[Article by Xu Liming [1776 3810 2494]: "Confusion Between Nationality and Class Issues Cannot Be Tolerated"]

[Text] The saying that "the nationality issue is in essence a class issue" has been bandied around for a number of years. For a period of time it also formed the basis of our rationale for handling our nationality issue.

During our criticism and united front campaigns in the early 1960's, those engaged in work involving the nationalities, in the name of "implementing the capitulationism and revisionism line," published in the newspapers and magazines a long list of articles which came to be regarded as a "general truth according to Leninism, arrived at through numerous practical experiences." They turned the united front policy, the nationalities policy and the policy toward religion, so successfully pursued by the party since liberation, into "capitulationism" and "revisionism." They arbitrarily further claimed that the most basic elements of the capitulationism and revisionism line were a repudiation of the idea that nationality issues were substantially caused by class issues; that our class issues, class contradictions, class struggles, and the struggle between socialism and capitalism were at the root of our nationality problems; and that the solution of nationality issues was a problem involving class struggle and revolution. Placed at the mercy of such "theories," our united front workers, workers in the fields of nationalities and religion, and a number of our comrades were among the first to fall victim to this leftists trend of thought.

During the 10-year period of instability, Lin Biao and the gang of four, with a view to their usurping power, embraced this point of view and pushed it to the extreme. They completely confused nationality and class issues and the issues stemming from the contradictions between the enemy and ourselves. They promoted the idea that the problem of minority nationalities and the problem of class struggle were one and the same. This view became the theoretical basis adopted by Lin Biao and the gang of four in launching their feudalistic, fascist type of dictatorship in the minority nationality regions and in pushing through their reactionary minority nationality policies.

Even today the so-called idea that "the nationality issue is in essence a class issue" continues to hold sway, hampering the implementation of the party's policy toward the minority nationalities. For this reason, a clarification of this issue is called for from both a theoretical and a practical point of view.

In analyzing the minority nationalities issue, as in analyzing other social issues, we must proceed from a basic principle of Marxism-Leninism: "In analyzing any social problem, Marxism-Leninism absolutely demands that the problem be placed within a particular historical time frame." ("Selected Writings of Lenin," vol 2, p 512) That being the case, let us analyze the proposition that "the minority nationalites issue is in essence a class issue" from both a theoretical point of view and from actual facts, since it is of great practical significance that we clarify the relationship between the minority nationalities issue and the class issue.

The minority nationalities issue has always been part of the whole social issue. It is not an isolated issue; neither is it resistant to change or everlasting. Under different social systems and at different historical periods, the minority nationalities issue will take on the character and the revolutionary objectives of a particular historical period of time. For this reason, in order to correctly identify the character and objectives of the minority nationalities issue, it is essential that it be placed in the context of the whole developing and changing social milieu and the historical conditions actually existing at the time. We should not and must not put the so-called "substance of the minority nationalities issue" at different historical periods in the same general category.

Nevertheless, there was a time when some comrades took the proposition that "the minority nationalities issue is in essence a class issue" as an immutable law in assessing and handling all minority nationalities problems. "In assessing and handling minority nationalities problems," they said, "we must bear in mind this Marxist-Leninist prinicple, no matter whether we are dealing with problems of international colonialism or with problems of our own minority nationalities, and no matter whether we are dealing with the minority nationalities problem during our democratic revolutionary period or during our socialist revolution and reconstruction period." They further put problems of international colonialism and the essence of our minority nationality problems that existed at the time of our democratic revolution in the same category of problems stemming from the oppressed minority nationalities and from the exploiting class' preying on these oppressed minority nationalities.

This line of reasoning obviously runs counter to Marxist theory and confuses the minority nationalities issue as it has existed at different historical periods. As is well known, the Great Soviet Socialist October Revolution ushered in a new era in human history. The human race entered a new era which came on the heels of the proletarian socialist revolution. With the changing times, the extent and nature of the movement against racial colonialism have undergone vast changes from the time of the ascendancy of capitalism. The problem of racial colonialism had become a part of the whole problem of the global proletarian socialist revolution. It had become a global problem involving the liberation from imperialism of the oppressed peoples of the dependent states and colonies.

Regarding the substance of the problem in the colonies and dependent states during that historical period, no classical writer has come up with the generalization that it was the exploiting class that gave rise to the problem. It was Stalin who pointed out, "The substance of the nationalities problem is this: The masses of the nationalities in the colonies and dependent states are opposed to the economic exploitation and political and cultural enslavement imposed upon them by the imperialistic bourgeoisie of the ruling nationalities." ("Collected Writings of Stalin," vol 7, p 184) He pointed out that the nationalities problem is "essentially a problem of the peasantry." ("Collected Writings of Stalin," vol 7, p 61) As for the attempt on the part of some people at the time to equate the nationalities issue created by imperialism with the struggle among the bourgeoisie of the nationalities, he made the profound observation that this [error] was due to the "underestimation of the latent power of the nationalist movement and the failure to understand the profound nationalistic and revolutionary nature of the nationalist movement." (Ibid)

The conclusion drawn by Stalin furnishes a considerable guiding force to our effort to understand and analyze the nationalities problem at the time of our democratic revolutionary period. Citing the conclusion that the nationalities problem is "in essence a problem of the peasantry," Comrade Mao Zedong made it clear that the Chinese revolution was in substance a revolution waged by the peasantry, that the problem of the peasantry was a basic problem of the Chinese revolution, and that it was the power of the peasantry that constituted the mainstay of the Chinese revolution.

It is clear, therefore, that at the time when imperialism held sway as well as during the proletarian revolutionary period, it is contrary to objective facts, whether in dealing with the nationalist colonial problem on the international level or in dealing with the period of our democratic revolution, to draw in an abstract manner the general conclusion that, in substance, the nationalities problem is a class problem, or to draw the direct conclusion that it is a problem of the exploiting class. To do that would be to ignore the changing times. It is also contrary to objective facts to regard the exploiting class as the most important component in the nation.

Some comrades may ask, "What contradiction is there, since Stalin's views on the substance of the nationalities problem were of the substance of the classes?"

The crux of the question is this: Stalin, ever mindful of the developing situation at different historical periods, had come forth with different and specific observations on the substance of the class issue in dealing with the nationalities problem. That represents exactly the essence of Marxism-Leninism. To suggest that "the nationalities problem is in essence a class problem" is to confuse the nationalities problem existing at different historical periods. To conclude in an abstract way that the nationalities problem is in essence "a class problem" or a problem of the exploiting class is contrary to the Marxist principle of analyzing specific problems in a specific manner.

It is not correct to draw the general conclusion that the nationalist colonial problem when imperialism held sway and at the time of the proletarian revolution and the nationalities problem at the time of our democratic revolution are in essence a class problem. It is even more incorrect to conclude that ti is in essence a class problem in this socialist era.

The real intention of those who claim that "the nationalities problem is in essence a class problem" after our socialist reforms were basically completed is to represent our nationalities problem during the socialist period as a problem of the exploiting class among the minority nationalities and as a problem among the hostile classes. To cite an example, they have made the claim that "our present nationalities problem is in essence a class problem, having its root in the classes, in the contradictions among the classes, in the struggle among the classes, and in the struggle between capitalism and socialism." At the same time, they have arbitrarily denied the existence of a nationalities problem among the working class, saying that "the so-called problem of relations among the nationalities has no place among the working class," and that "the so-called nationalistic contradictions are a reflection of the contradictions between the enemy and ourselves and contradictions among the classes." Hence, they have offered the opinion that the only way to solve the nationalities problem during our socialist period would be to wage a class struggle, to wage a struggle against the enemy, to completely suppress all antirevolutionary activities, and to further pursue the socialist revolution. This point of view completely ignores the developing and changing objective circumstances during our socialist period.

The problem will come into clearer focus if we study and analyze the history of the development of relations between the classes and between the nationalities during our socialist period.

The establishment of the People's Republic of China signified the basic conclusion of the new democratic revolution and the beginning of the socialist revolution. It also signified basic changes in relations between our nationalities. Marxism-Leninism holds that all basic revolutionary problems involve the political power of a country, and that everything hinges on when and by whom political power is held. With the collapse of the reactionary Kuomintang government, there was established a people's democratic autocracy, based on an alliance of workers and peasants under the leadership of the working class, which completely eradicated the evil system of suppression of nationalities throughout the nation, brought about political equality among the different nationalities, and altered the entire situation wherein workers of different nationalities had been deprived of power. As Comrade Mao Zedong so aptly pointed out, "The establishment of the People's Republic of China marks the beginning of a large family made up of the different nationalities throughout the nation in a spirit of fraternal love and cooperation." (Quoted from JENMIN RIBAO, 14 Dec 51) Furthermore, in the early stages following liberation, strenuous efforts were made by the party and the people's government to develop cadres among the minority nationalities and to institute autonomy step by step in the minority regions, thus laying a solid foundation for the assumption of political power by an alliance of the working class and the minority nationalities.

The conclusion of democratic reforms and the ushering in of socialist changes marked the establishment of our socialist system as well as the advent of further basic changes in relations among the nationalities. In 1953, when the Central Committee of the Chinese Communist Party set forth the general line and mission during the transition period, it also pointed out, "In our common task of developing our mother country, efforts should be made to promote step by step the political, economic and cultural development of the different nationalities (including steadily bringing about the necessary social reforms), and to eliminate the historic vestiges of inequality among the different nationalities, so that the backward nationalities can join the ranks of the advanced nationalities in the transition to socialism." In line with this policy, democratic reforms had been made in most of the minority regions by the end of 1953. This was followed by the introduction of socialist reforms. Democratic reforms, first instituted in 1955 in some of the minority regions that still remained under the thrall of serfdom or bondage, were completed by 1958 or 1960. These reforms were followed by socialist reforms. Through democratic and socialist reforms, the vestiges of the original commune system, the bondage system, the feudal ownership system, the feudal land ownership system, and the capitalist system of labor employment were eliminated. Thus the different nationalities were put on the road to socialism and the suppression of and discrimination against nationalities in society were eradicated. This led to basic changes in the structure of the different classes among the minority nationalities and in the relationships among them. Political rule of and economic exploitation by the exploiting class were effectively ended. The workers among the nationalities truly became masters in society, masters of the means of production, and masters in a position to determine the relationship among the nationalities. Hence, the relationship among our nationalities was placed on the economic foundation of the united socialist system of public ownership and on the basis of the common interest of the workers among the nationalities. This brought about a new socialist relationship among the nationalities--that is, basically a relationship among workers.

After the gang of four was smashed, the party Central Committee came forth in a down-to-earth manner with a new Marxist dictum regarding the state of affairs relating to the classes, pointing out that the exploiting class had ceased to exist as a class, and that the overwhelming majority of the members of that class had been turned into workers who were earning their own keep. This dictum is in tune with the objective circumstances of our entire society as well as those in our minority regions. Among the minority nationalities today, such exploiting classes as slave-owners, serf masters, landowners, and livestock owners have been extripated and the capitalist class no longer exists. In a socialist society, the masters are the socialist workers, farmers, herdsmen, intellectuals and other patriots who uphold socialism.. The class struggle, of course, still goes on. Furthermore, our class struggle is tied in with that in other countries. Sometimes this class struggle is a reflection of the relationship among the nationalities (such as the sowing of the seeds of discord among the nationalities, disrupting the unity among the nationalities, breaking up and destroying national unity, etc). In such situations we must, instead of sitting on our hands, be on the alert for all exigencies. At the same time, we must clearly understand that class contradictions are no longer the chief contradictions in our society today, much less the chief contradictions among our nationalities, and that class struggle among the nationalities is an internal matter among the different nationalities themselves. Generally speaking, class contradictions should not be treated as a problem among the different nationalities. In the present historical era, the nationalities factor plays a diminishing role in the contradictions between the enemy and ourselves and among the classes, whereas problems arising out of the differences and special features among the nationalities have come to the fore. Under such circumstances, it is most damaging to use "full understanding of the complexity of the nationalities problem" as a pretext for confusing the nationalities issue with the class issue and for treating the substance of our nationalities issue as an issue created by the exploiting class and an issue between the hostile classes. To do that would be to fail to truly reflect the objective situation of the classes and the struggle among the classes in this new era. It would lead to a repetition of the tragedy brought on by Lin Biao and the gang of four, who made the cadres and masses among the nationalities the targets of their attack during their period of rampage. Should not the high price paid for this by the people of the different nationalities serve as a lesson to be etched in the minds of our children and our children's children?

Some comrades have used Comrade Mao Zedong's thesis that "the struggle among the nationalities is, in the final analysis, an issue involving class struggle" to buttress their theory that "the nationality issue is in essence a class issue."

Little do they know that the pronouncement made by Comrade Mao Zedong on 8 August 1973 in support of the justifiable struggle waged by the black people of the United States was directed against racial discrimination perpetrated by reactionaries and the system of racial repression practiced by the American monopolistic class. His chief purpose was to point out that in the final analysis the racial discrimination and repression suffered by large numbers of black people in the United States constituted class repression, that the contradictions between large numbers of black people on the one hand and the monopolistic and reactionary groups on the other were essentially contradictions among the classes, and that the racial struggle being waged was in fact a class struggle. For that reason, it is only when large numbers of black people unite with white workers that they can bring about their own liberation. An analogy may be found in the period during the rule of the Kuomintang, when the people of different nationalities made it their common mission to overthrow its reactionary rule.

With the liberation of our country, racial repression and the struggle against racial repression no longer exist. For this reason, that opinion expressed by Comrade Mao Zedong no longer applies to our country after liberation, and especially after the basic completion of socialist reform in the relationship among the nationalities in our nation. To arbitrarily lump the issues together is to make indistinguishable the differences between different nationality issues under two different social systems, to confuse the issue and to hamper the implementation of our policies.

In short, the proposition that "the nationalities issue is in essence a class issue" has the dangerous effect of confusing the nationalities issue with the class issue and the conflicts of two different natures between the enemy and ourselves. For this reason we must resolutely abandon this erroneous line of thinking.

CHANGCHUN'S NEW COMPREHENSIVE UNIVERSITY FOR DAY STUDENTS

Beijing GUANGMING RIBAO in Chinese 18 Oct 80 p 1

[Article by Wu Fengyi [2976 7685 0308]: "A New Comprehensive University for Changchun"]

[Text] With the approval of Jilin Provincial People's Government, Changchun city established a comprehensive joint university for day students--Changchun Joint University.

When the examination for schools of higher learning was completed this year, more than 2,000 candidates in Changchun who had received high marks still failed the examination. They are eager to attend schools for advanced study. Changchun Municipal People's Government thus decided to make full use of the superiority in the city's universities, plants and scientific research units to establish this comprehensive joint university for day students on the basis of the principles of "overall consideration and all-round arrangements, complete planning, doing one's outmost, doing what lies in one's power, weighing one's steps by thinking of consequences, and doing what is appropriate according to the circumstances."

Changchun Comprehensive Joint University will enroll students who had failed in the entrance examination for schools of higher learning this year. It has now started registration and will select some 1,100 students with high marks. According to the actual needs of national economic development and the substantive condition of the departments now existing in various colleges and universities, the university is aimed at training various kinds of professional personnel currently needed in general and in urgency. There are 28 departments which include applied electronics, industrial management, machine building, engineering geology, environmental protection, civil construction, cotton spinning, woolen spinning, horticulture as well as liberal arts, history, laws, mathematics, physics, chemistry, foreign languages, etc. Education takes 3 years. A few complicated subjects will take 4 years. School hours will be in day time. Each student contributes a monthly tuition of 10 yuan. The Provincial People's Government will divert a special subsidy from the local funds for expenses. A diploma will be issued to each student upon graduation after passing the examination. The government will not make allocation for jobs, but the school will make recommendations to related units, which will hire them according to their academic achievement. Those hired will receive the same pay as graduates from colleges and universities in general.

Changchun Comprehensive Joint University conducts their education by adopting the method of "scattered classes but concentrated and centralized management." Teachers will be provided by colleges and universities, large plants, and scientific research units. Classrooms will be collectively provided by the municipal government and the universities and plants engaged in the education work by exploiting latent capacity, trying to economize, and doing what is appropriate according to the circumstances. To ensure that various universities will complete their teaching and scientific research missions without diverting too much of their efforts, and to enhance the teaching quality of the comprehensive university, an administration committee of the joint university is established, to be attended by responsible comrades of the units participating in the education work. The secretary in charge of culture and education of the Changchun Municipal Committee of the Chinese Communist Party becomes the president of the university.

ACADEMY OF SOCIAL SCIENCES OPENS NEW INSTITUTES

Beijing GUANGMING RIBAO in Chinese 10 Sep 80 p 1

[Article by GUANGMING RIBAO reporter Jia Shumei [6328 2885 2653]: "Meet the Needs of Four Modernizations and Strengthen the Study of Social Sciences"]

[Text] The Chinese Academy of Social Sciences [CASS] has devoted the past 3 years to broadening its scope of scientific research in an effort to meet the needs of the program for the modernizations of China. To this end, it has opened 12 newly built research institutes and expanded the old ones.

The CASS's predecessor was the Philosophy and Social Sciences Department under the Chinese Academy of Sciences. The CASS now has 26 research institutes, compared with 14 before the Great Cultural Revolution, with the number of its researchers increasing from 1,264 to 1,996. The CASS is also a publisher of 38 professional journals with a total circulation of 15 million copies a year.

In the economic field, in addition to the old Economic Research Institute and World Economic Research Institute, the CASS has built and put into operation the new Industrial Economic Research Institute; the Agro-Economic Research Institute; the Finance, Trade and Supply Research Institute; and the Technical Economic Research Institute. Since their inauguration, these new institutes have given first priority to research work closely associated with the four modernizations program. Since 1979, over 100 researchers have been organized to investigate and study economic activities in various localities and departments. Thus far, as a result of their investigation, they have come up with a series of reports and suggestions and have published many research essays, in addition to assisting the party and state in formulating economic policy and reforming the economic structure. During the past 3 years, forums on a series of major theoretical problems dealing with the formulation of the national economic study programs and the development of the national economy have been held by these economics institutes for the benefit of scholars. Among them were problems concerning the principle of to each according to his work, the law of value, coordination in planning and marketing, the objective of production, the system of ownership, circulation, economic structure, reform in the economic system, and the residual influence of feudalism in the economic field. These forums have provided economists with an opportunity to emancipate their thinking, conscientiously sum up new China's experiences in developing the economy, and explore the objective laws governing the development of socialist economy. The CASS has also resumed studies in sociology, political science, and law--subjects which had long been considered "forbidden areas" or "phony branches of science cherished by the bourgeoisie"--since the opening of its newly built Sociology and Political Science Institute.

The Law Science Institute has expanded its study program to include international law, economic law, criminal law, and civil law. It has also been invited to participate in the drafting and revision of 18 laws and regulations, including criminal law and the law of criminal procedure.

The CASS has devoted time to strengthening in varying degrees studies in Marxist theory, international politics, domestic politics, culture and social problems. Since their opening, the newly built Marxism-Leninism-Mao Zedong Thought Research Institute, the World Political Research Institute, the Institute for the Study of Southern Asia, the Institute for the Study of Japan, and the Journalistic Research Institute have scored gratifying successes in their fields.

HUBEI CANNOT AFFORD TO HIRE AGRICULTURE SCHOOL GRADUATES

Beijing RENMIN RIBAO in Chinese 23 Aug 80 p 4

[Article by RENMIN RIBAO reporter Tu Zhengfeng [1458 2973 1496]: "Why Are Graduates of Agricultural Schools Not Assigned Work?"]

[Text] During my recent news coverage tour of Hubei Province, I was told by departments concerned with agricultural production that there was a shortage of agricultural scientists and technicians in this province. Later, I found that many agricultural school graduates could not be successfully placed in jobs for which they were trained. What a bizarre contradiction!

There now are nine agricultural middle schools in Hubei, with a total of 1,000 or more graduates each year. This year's graduates, who numbered 1,109, were claimed by these schools to be the best they have ever produced in terms of academic achievement. But they have also met the same fate of being turned down. Four out of eight prefectures in the province have expressed unwillingness to offer them any jobs. As a result, hope of finding jobs for these graduates is now in doubt. Presently, graduates fresh from agricultural colleges in the province are also facing the same problem. This was not caused by any excess in the supply of agricultural scientists or technicians in the market. There are now over 11,000 agricultural specialists on the staff of the Hubei Provincial departments of agriculture and animal husbandry. In other words, Hubei Province now has only 2.5 agricultural specialists for every 10,000 persons, and no more than 2 such specialists available for every 10,000 mu of farmland. This problem reportedly was caused mainly by shortages of funds allotted each year to agricultural departments, which could not afford to hire any additional agricultural school graduates because no additional funds were appropriated by the state. With the size of their present budgets, many counties even have difficulty paying the wages of their agricultural staff. As long as this problem exists, it will adversely affect not only the morale of educators but also the growth of the contingent of agricultural scientists and technicians. I hereby suggest that effective measures be taken by departments concerned to solve this problem.

YUNNAN SOLVES NEW PROBLEMS IN RURAL EDUCATION

Beijing GUANGMING RIBAO in Chinese 8 Oct 80 p 1

[Article: "Yunnan Provincial People's Government Takes Measures to Solve New Problems Encountered in Rural Educational Work"]

[Text] Following the development of the rural situation and the further establishment and perfection of the production responsibility system, new conditions and problems are also encountered in the rural educational work at present. There emerged in Yunnan Province the phenomena that the teachers are unstable, the students shift readily, there is a reduction in the percentage of school enrollment, and schools were even suspended in some places. In light of these problems, the Yunnan Provincial People's Government transmitted four suggestions proposed by the Provincial Bureau of Education requesting people's governments at all levels to solve them by linking them with the actual conditions at local places. The four suggestions as broadcast by XINHUA are:

1) Stabilize the local teachers ranks and insure their pay and rations. In the process of establishing and perfecting the responsibility system for production posts, various places are requested to ensure that the pay and ration of local teachers will not be lower than their original levels. In order that local teachers concentrate their efforts in teaching, they should generally not be given output quotas. The subsidy disbursed by the government to local teachers should be issued according to the original method, and it should not be illegally deducted or misappropriated for other purpose by any units. Appointment and dismissal of local teachers should be made by strictly following the related regulations of the State Council.

2) Adopt a variety of forms of education so as to meet the needs of production. Now that the rural policy has been relaxed, many parents ask children of school age to go home to pasture domesticated animal, to feed fowl, and to care for younger brothers and sisters. Thus, as regards the form of education, it is impossible to continue using such all-in-one method as the simple all-day classes. Various forms of education should be adopted, taking into account such different conditions as economy, nationality, population, geographical terrain, weather, etc. Such forms include the all-day class, the half-day class, the two-part class, the every-other-day class, the day class and evening class, the noon class, circuit to fixed places to teach, etc. Different places should do what is appropriate according to the circumstances and adopt the form of education which is most suitable to the characteristics of the local life, thus enabling the maximum number of children of school age to enroll in schools and moreover making them learn something. We must insist on different

requirements and quality standards from schools of various forms and carry out different teaching programs and educational systems.

3) Earnestly do well at key elementary schools and at commune's elementary schools. Manpower, materials, and funds should be concentrated so that many rural elementary schools holding all-day classes will do well. Every county should do a good job at three or four key elementary schools and use them as model schools. Communes should do a good job at their elementary schools. One or several brigades in areas of certain conditions should jointly do a good job in running an elementary school of all-day classes.

4) Strengthen leadership of rural education and improve the workstyle. Every perfecture and county and especially the county people's government should strengthen leadership of rural education and give prompt study and find solutions to the important issues in rural education.

LOCAL TEACHERS OF YUNNAN PROVINCE BECOME STATE EMPLOYEES

Beijing GUANGMING RIBAO in Chinese 8 Oct 80 p 1

[Article: "More Than Twenty Thousand Local Teachers in Yunnan Become State Employees"]

[Text] XINHUA Kunming 7 Oct--Since last year, more than 20,000 local teachers of different minority nationalities in the border nationality regions and the barren inland mountain regions in Yunnan Province have become state employees.

These local teachers were appointed state employees after achieving superiority in cultural test. Proper care is given to the minority teachers, especially to those who teach in their own locality. This year alone teachers of minority nationalities accounted for 46 percent of state employees who were originally local teachers in various counties of the border regions.

The measure adopted by Yunnan Province is very significant in stabilizing the teachers ranks, in developing the educational enterprise, and in strengthening national unity. It is welcomed by the minority people of the border regions.

SOCIOLOGICAL, EDUCATION AND CULTURE

COLLEGE ENROLLMENT SYSTEM REVAMPED

Beijing RENMIN JIAOYU [PEOPLE'S EDUCATION] in Chinese No 5, 20 May 80 pp 20-21

[Article by Zhao Sheng [6392 3932]: "New Regulations on Admitting Students to the Institutions of Higher Learning"]

[Text] Since its reinstatement, the college entrance examination system has continued to be improved and perfected along with related regulations. This year, the regulations governing the enrollment of college students have been revised again to include the following three new provisions based on experiences acquired by educators over the past 3 years:

I. Colleges Admit Students According to Their Choices of Departments

The fact that colleges will admit students according to their choices of departments as indicated in the revised application forms is a great improvement in the college enrollment system. Earlier, all colleges admitted students according to their choices of courses or study programs in which they will major. For example, in 1977 there was a student of liberal arts whose first choice was Beijing University and whose two areas of concentration were literature and world history. Upon entering that university he went straight to take these two courses of his original choice as his majors. If a student like that applies for admission to Beijing University this year, his choices of study should be the Departments of Chinese Liberature and History. Following his admission, he will have to join other students of these two departments in taking a number of introductory courses in the freshman year before he can choose his areas of concentration on the basis of his academic achievements and teachers' recommendations.

There are hundreds of institutions of higher learning in our country which offer a wide variety of professional courses and study programs not known to our college-bound students. A course selected by an applicant as his major before his admission might turn out to be a program not suited to his particular needs and interests. A case in point is that some students have passed up courses they should have selected but not because they were unfamiliar with them. According to the new regulations, a freshman student must first complete a study of introductory courses so that he can gain a deeper understanding of various professional courses offered by the departments of his choice, which will help develop his intellectual interests and will provide him with opportunities to select a program or course in which he will major. This arrangement can also give schools ample time to observe the intellectual aptitude of freshman students so that teachers can assign to them programs that best reflect their intellectual interests. In this way, a well-balanced qualitative development of various courses can also be achieved. Apart from these advantages, before proceeding to their areas of concentration, freshman students can collectively carry out their study of introductory courses in large classrooms where they can take full advantage of such modern teaching aid as color slides, television sets and film projectors. Furthermore, with this arrangement, the schools can cut down the consumption of manpower, financial and material resources, which can be used to improve the quality of teaching for introductory courses. As a result of this arrangement, the acute shortages of teachers associated with introductory courses can now be relieved.

II. Provinces, Municipalities and Autonomous Regions With Great Numbers of College-Bound Students Are Required To Hold Preliminary Tests on the Eve of the Nationwide College Entrance Examination

Statistics show that hundreds of thousands of cadres and teachers had to be mobilized to test out applicants for admission to colleges, who totaled 16 million during the past 3 years. The disadvantage that has resulted from allowing so many students to take the annual nationwide college entrance examination is that a great number of educators from colleges and middle schools have to spend a long summer working on test papers, thus depriving them of opportuniites to refresh themselves and to improve the quality of teaching programs for colleges and middle schools; the state has to earmark large funds for this purpose each year; allowing so many students to take the annual nationwide college entrance examination at one time may result in errors and scandals; educators of different persuasions assigned to oversee the examination may have difficulties in meeting the nationally applied requirements for evaluating and monitoring test scores; false records on political and physical examinations cannot be verified because of the shortage of manpower. In an effort to screen and select students accurately and carefully, and to reduce the workload, the State Council has approved and put into effect a new regulation which stipulates that those provinces, municipalities and autonomous regions with extraordinarily large numbers of college-bound students shall select truly outstanding ones to take part in the nationwide examination, and shall hold preliminary tests for this purpose. This idea was initially tried out by some provinces in 1977 and 1978 on the eve of the nationwide college entrance examinations. In these 2 years, the number of students who passed such preliminary tests was nearly five times the number of students to be actually admitted to the colleges. Judging from this fact, truly outstanding students could not possibly be deprived of their opportunities to go to college. Experience proves that that arrangement for preliminary tests is advisable and feasible. Such prelimininary tests are expected to take place in many more provinces in our country this year. All educational units are urged to support this arrangement in accordance with the State Council-approved regulations. Special efforts must be made to educate the public in the policy on the nationwide college-entrance examination.

III. Foreign Language Test Score Shall Weigh More Heavily in the Computation of the Total Test Score in the Future

At present, courses in foreign languages are either unavailable or far below desired standards in many middle schools throughout the country. Every possible effort must be made by schools to help students raise their level of foreign languages in order to enable them to meet the requirements for developing science and technology and promoting the four modernizations. Beginning this year, the foreign language test score in the nationwide college entrance examination will account for 30 percent of the total test score. The foreign language test score will weigh more heavily in the computation of the total test score in the years to come. This emphasis on foreign languages will force all middle schools to strengthen their foreign language study programs and improve their quality, and will stimulate the institutions of higher learning throughout the country to step up the training of foreign language teachers.

CAUSES, SOLUTIONS FOR JUVENILE DELINQUENCY DISCUSSED

Shanghai SHEHUI KEXUE [SOCIAL SCIENCE] in Chinese No 4, 20 Aug 80
pp 81-85

[Article by Xu Jian [1776 1696] of the Huadong College of Politics and Law: "Research on Juvenile Delinquency Problems"]

[Text] A nation's youth is its future and the hope of its people. The burden of social progress and development invariably falls generation after generation on the backs of the young generation. Juvenile degeneration and crime not only are the problem of the young person alone but also are the misfortune of the family and are related to the future of the nation and the success or failure of important national affairs. Both past and present there has never been a nation or an age that did not value the young generation. There are a number of valuable experiences from our national history. Guanzi said, "If education of the young is improper then the people will be dispirited, there will be chaos and the throne will be endangered." This says that if the younger generation is poorly raised and educated the feudal dictatorship will be endangered. Hanfeizi said, "To inculcate youth with the law is most basic of all." This emphasizes the importance of problems in the younger generation. Therefore, the study of and correct solutions for juvenile delinquency are a matter of great urgency and broad concern.

Socialism is Outstanding in Lowering the Juvenile Delinquency Rate.

The phenomenon of crime did not exist from the origins of mankind but is a historical category. It occured after the origin of the private ownership system and together with the origins of such sociological phenomena as classes, nations and laws. The ruling class followed its own wishes in using the power of the law to define crime as behavior which transgressed against the interests of the ruling class and thus prevent people from doing so. Therefore, in terms of origins, the basic reason for the origin of crime lies with the origin of the private ownership system and with the system of exploiting people. After our old liberated areas were liberated they implemented a new social system and the face of society was renewed. The well-known American reporter Edgar Snow in his book XIXING MANJI [RED STAR OVER CHINA] recorded his personal experiences in the liberated areas and said, "In the counties long under socialist government the blatant corruption common to most parts of China appeared to have been eliminated," for example "opium was completely eliminated," "no one seemed to know of any corrupt officials," begging and unemployment were "eradicated," "slavery and prostitution were already eliminated" and so on. This is a fair, correct and objective presentation of the facts.

After the founding to the People's Republic of China the social order was quickly stabilized, all criminal elements were effectively reformed and all types of criminal cases, including cases of juvenile delinquency showed dramatic declines and long periods of stability. In many places including the cities there appeared the phenomenon of "lost objects remaining untouched and doors not locked at night." Shanghai for example was called a "paradise for adventurers" in pre-Liberation days and was an area of concentration for illegal activities that was wide open to the activities of army ruffians, gangsters, gamblers and robbers. In 1949 the party and people's government liberated this city from the hands of the imperialists and Guomindang reactionaries. At that time there was a crime rate of over 40,000 cases per year wich is to say that in Shanghai a crime was committed every 10 minutes. While the people were overthrowing the old system and bringing about radical changes they also transformed the historical progression of developments in crime and Shanghai showed a new situation of yearly decreases in criminal cases. Statistical materials show that in the five years until 1954 the number of cases was decreased by 50 percent from the pre-Liberation figures, and there was a continual decrease, reaching about 70 percent in 1957, 75 percent in 1961 and on the eve of the cultural revolution in 1965 it was about 90 percent lower. These figures include a great decrease in juvenile crime which was impossible in the old Chinese society and is impossible in a capitalist country. A number of well-known foreigners in China understood and personally observed these changes. All were surprised at the success of China's socialist system and the working of a miracle in making such a startling reduction of the criminal elements. Under the socialist system the party and state developed production and solved the old society's problem of large-scale unemployment by having each person contribute his own strength and by creating conditions to benefit mankind. At the same time the heads of households relied on their labor and wisdom to develop production and transform their livelihood, not only ensuring a reliable livelihood but also fulfilling the hopes of a beautiful life in the future. Under such conditions the activities of bandits, robbers, cheats, and gangsters became socially despicable and the people despised their anti-social behavior. All of this gave our struggle against crime and all sorts of other evil activities a very broad social base. As for that very small minority of unreformed evil people which continued to endanger society and the people the agencies of the people's dictatorship attacked them with legal measures, adoped a policy of combined punishment and re-education which gave them a way out and a means of reform which then permitted the city of Shanghai which was polluted with the "ten li of foreign establishments" to accomplish reforms within a reasonable period of time, thus achieving good public security and continual great decrease in the number of crimes.

What is the Message of the Recent Dramatic Increase in Juvenile Delinquency?

During the ten years of upheaval the major crimes were committed by juveniles, thus showing a trend which made people uneasy. A few provinces and cities undertook investigations which clearly show rapid increase of juvenile delinquency, some approximately doubling in the last ten years and others far exceeding this amount. The greatest increase in all crime was in juvenile delinquency, from 20-30 percent in the 50s to about 60 percent at present. Juvenile delinquency is especially high in large cities and this has drawn attention and comments from people here and abroad. Everyone knows that after 1966 our political and economic life underwent an upheaval rarely seen in history. In their attempt to usurp leadership of the party and the state Lin Biao and the "gang of four" confused right and wrong, overturned black and white, destroyed the economy, created chaos, fought battles, overran the legal system, transgressed against human rights, were proud and vain, had enormous special privileges and committed great crimes. The increase in crime and juvenile delinquency in this period cannot be separated from the destruction wrought by Lin Biao and the "gang of four." Therefore, the dramatic increase of juvenile delinquency under the special conditions of the past ten years was a temporary phenomenon created by a special set of conditions and definitely cannot be considered to be a normal pattern or long-term tendency and even less is a regular part of the socialist system. It must also be pointed out that even with the abnormal condition of an approximately ten percent annual increase of juvenile delinquency after 1966 the crime rate was still lower than in the early years of liberation and is even relatively lower than that of a few major capitalist nations. This is seen in a comparison of crime and population figures. In America it is 5.3 percent, England 4.4 percent, West Germany 4.8 percent and Japan 1.1 percent; while in China it is as low as 0.5 per thousand. A comparison of juvenile delinquency statistics from a number of Chinese cities for all youths and young people shows that we are still much lower than capitalist societies.

There is another important and very convincing fact which is that since smashing the "gang of four" crime and juvenile delinquency in China ended its ten-year history of increases. According to statistics from the Central Bureau of Public Security crime began to decline after smashing the "gang of four" in 1977. From 1977 to 1978 the decline was 2.3 percent. However, three years is not enough time to eliminate the disasters and influences caused by ten years of chaos and we cannot hope to be able to make a large and lasting decrease in juvenile delinquency in such a short period of time. In addition, even when all of the causes are completely accounted for there still is the possibility of recurrent outbreaks so we can only work under the watchful eye of the whole party to strengthen the basis of educating and showing all-round concern for young people and handing out severe punishment for the small number of serious crimes. There then ought to be an obvious decline in juvenile delinquency.

An Analysis of the Factors in the Dramatic Increases in Juvenile Delinquency.

According to general reference materials and an analysis of some typical investigations the great majority of crimes are committed by juvenile delinquents and the great majority of these are by young people under age 25 and teenagers under 18, which is the generation of the cultural revolution. During the cultural revolution they were in the growth process from childhood to maturity. In physiological terms this is an extremely rich period of replacing the old with the new and from a social point of view this is a key period in which they respond to the family, friends, relatives, schools and society in starting to form their ideology, viewpoint, ethics character, morals, desires, ideals and will and generally come to understand duty and obligation. It is a period of change in which they turn from parental obedience to their society wherein they learn and practice independence and it also is a period for molding the individual. Just at this time Lin Biao and the "gang of four" carried out the destruction and ruination of the the then maturing generation with a viciousness rarely seen in Chinese history and the factors which most directly affected the younger generation were the following:

First: The Perverse Theory and Acts of "Beat, Smash and Grab" Inculcated the Young Generation with a Kind of Fascist Philosophy.

Lin Biao and the "gang of four" widely promulgated the perverse theory of "beat, smash and grab" with cutting off trousers, smashing things, cutting off hair, claiming to be "cleaning up the filth and muck," establishing their "great merit"; carrying on battles with others claiming "to use words for attack and weapons for defense"; saying that smashing the opposing organization was a "revolutionary activity" and a "worthwhile deed"; beating and kicking people and causing physical harm with the claim that "revolution is an act of violence"; saying that the "good people" beat the "bad people" because they deserve it, and so on. With the encouragement of Lin Biao and the "gang of four" "beating, smashing, stealing and grabbing" became the mark of bravery for an age and people like Wang Hongwen became the heroes of China during the 1960s. There were a number of these desperados and the petty ones became powerful for a while by fishing for gain and purchasing benevolence while the the bigger ones became officials and nobles and were extremely popular for a time. Their reactionary theories and evil examples directly destroyed some of the young people while their influence affected a whole generation of people. They took Wang Hongwen, Chen Ada [7115 7093 1129] and Huang Jinhai [7806 6855 3189] as their models, enjoyed themselves, formed groups and engaged in beating, smashing and other evil behavior while calling this "revolution." Under our socialist conditions they formed a fascist philosophy of force, a kind of reactionary heroism of power. Studies in a number of cities prove that these violent juvenile delinquents generally had a blind faith in "violence" believing that "whoever beats people is revolutionary" and that"whoever has powerful arms is revolutionary." In Tianjin there was one delinquent not yet even 18 years old whose experience was "the more severely I beat people the more others fear me and respect me and the more status I have." With this ideological support he ranged throughout seven wards of Tianjin with a force sometimes reaching over 700 people which committed many crimes.

Second: The Rise of the Evils of Individualism and the Spread of the Ideology of Wanton Personal Benefit

Lin Biao and the "gang of four" were ambitious plotters and to realize their individual ambitions and to enjoy a bourgeois life-style there is no evil thing they would not do. They frequently used the most moving words and the most revolutionaryphrases for concealment and carried out the vilest of deeds. In order to satisy their material desires, no matter whether it was state, collective or individual property theywould either just take them, publicaly steal them or even get them through deception and deceit. In order to realize their individual ambitions they would tell lies, manufacture rumors, deceive and dupe, twist the truth, form groups and gangs, grant positions and petitions, create favorable conditions and just do as they pleased. They advanced such perverse theories as "there is no truth at all to class struggle" and "we must lead the opposition into following the wrong path." Lin Biao had a slogan which read, "without lies no great deeds are accomplished." It was these ideologically corrupt and morally bankrupt brigands who became the models, stalwarts and "heroes" during the period of political chaos. To follow them was to be praised and encouraged and permitted to venture into high places while to oppose them was to invite disaster, suffer criticism and even endanger one's own life. They considered their personal pleasures and liberal expenditures of the people's lifesblood as their glory, proudly fought for power and self-interest, plotted for personal gain, vented their anger without the least bit of shame or fear, ran rampant over socialist morals and the grand revolutionary traditions and created an evil rise of individualism. The experiences of a Shanghai machine plant worker named Wu who has already transformed himself into an progressive young worker are representative of the times. He was not yet 16 when he entered the plant in 1965 and wanted to make progress. During the cultural revolution under the ideological poisons of Lin Biao and the "gang of four" he joined the "rebel brigade" under the "workers general headquarters" and engaged in "beat, smash and grab" activities. After the "victory" he got a motorscooter and thus learned the lessons of the likes of Wang Hongwen and Chen Ada that a "murderous" attitude toward society will provide all one's needs and he followed a life of crime, from breaking into sentry-posts and dining halls to stealing cars and wielding a knife. Youths who recently have embarked on the road to a life of crime will realize that although they have not personally experienced the chaos of the cultural revolution that in terms of ideology and manner they nonetheless are the heirs of the young criminals of the cultural revolution.

Third: The Rampage of Anarchistic Tides of Thought

During the cultural revolution Lin Biao and the "gang of four" usurped government power, wilfully trod upon all morals, ethics, laws and systems, brought absolute chaos to all normal social relationships, made everyone obey them, and bent the truth to serve their own interests. Everywhere they did as they wished without any restraints at all and in defiance of law. Parents could not control children, teachers could not teach children, masters could not lead their disciples and the upper levels could not lead the lower levels. Each person took care of himself and god took care of everyone. Such conditions made heads of households, schools and society powerless to do anything about the bad tendencies and socially abnormal behavior of young people. They watched the young people's declining moral standards, bad behavior and step by step march onto dangerous paths but were unable to apply any of the normal relationships to teach, lead, prevent, divert or warn them. An even more severe problem was the creation of youthful disrespect for the law and other restraints, all authority was bad, none was wanted, it could be resisted, destruction was looked upon as a pleasure and the error of opposing the normal order was seen as brave, heroic behavior. They felt that because they were young and of good status they were entirely beyond the law, so they frequently broke the law to test it, all the while clearly aware of the illegality of their acts yet taking the chance and as a consequence committed serious crimes.

Fourth: Economic Destruction Resulted in Much Youthful Unemployment and Waiting for Employment.

During the ten years of chaos the national economy stagnated yet the schools annually cast several million more young people into society. Except for a small percentage of those who were qualified for further study, every year large numbers were unable to find employment and formed an unoccupied contingent awaiting employment. This was a great problem. They had abundant energy but no work. They gradually grew older but had no income. Tney wanted to study but had no opportunity or wanted to continue their education but lacked the necesssry foundation and confidence. They wanted a future but didn't know what would be the right future and so some of them worried and wondered while others became violent and destructive and began to live a life of evil. It is understood that among the Shanghai juvenile delinquents there were ten percent either out of work or awaiting employment. Statistics from some places show that one third of the juvenile delinquents were unemployed or were awaiting employment.

China is a highly populated and economically backward nation. Under the socialist system we had pretty much solved the employment problems. In the last ten years the economic destruction caused by Lin Biao and the "gang of four" resulted in a large number of idle labor forces, actually a condition of unemployment. The only difference from capitalism was that for the majority of people their parents had secure employment so that there were no great hardships. Nonetheless the nation had a large number of youths awaiting employment and this was an urgent problem requiring prompt solution. Studies in some provinces and cities show that in areas where there were relatively more youths awaiting employment, when this problem was handled the juvenile delinquency problem showed marked decreases. A study of 12,000 unemployed youths in Wuhan showed that before employment arrangements were made there were 215 criminals and that this dropped to 17 criminals after employment was arranged. In Suzhou the problem of youths awaiting employment was not severe and 13 of 15 gangs were broken up producing a 64.3 percent decrease in juvenile crime. This shows the importance of youth employment in solving the problem of juvenile delinquency.

A study of those who left the Shanghai youth training institute between 1972 and 1979 shows that those who left with employment were one third less likely to become involved in serious crimes. This clearly shows the great difference of having employment after training. After Yang Xincai left the youth institute of the south ward of Shanghai he was determined to correct his mistakes. However, this was in 1968 and he was met with contempt, coldness and derision. The political confusion was accompanied by economic decline so that Yang Xincai could not find work and had to endure both cold and hunger. In 1971 he managed to enter a neighborhood production group, but just at that time the "leftist" policies of the "gang of four" resulted in his not receiving one bit of compensation for his year of work. Society could provide no solutions so Yang Xincai again embarked upon a life of crime. If the "gang of four" had not been smashed it is unthinkable that Yang Xincai could ever have become a participant in the new long march of Shanghai light industry.

The destruction wrought by Lin Biao and the "gang of four" also is behind many other reasons for the increase in juvenile delinquency, such as the closing of schools which resulted in youthful ignorance and stupidity. Widespread harm of cadres and intellectuals resulted in many broken families. There also was the reactionary theory of blood lineage.

Fifth: Inappropriate Family Influence and Parental Teachings

The family is the kernel of society and family influences and parental teachings play an important role in the maturation process. There is much proof that where the family structure is good, the relationships warm and intimate and where the parents place strict restraints and have proper supervision over their children there is little juvenile delinquency and social order is maintained. During the rampages of the "gang of four" the great majority of children were well behaved. This is because the great majority of parents had not forgotten their social responsibilities. According to the same principle we can see that to a great extent juvenile delinquency is related to family influences especially that of the parents. Although the blame cannot be absolutely be placed on the parents nonetheless the majority of parents cannot deny their responsibility. Statistics from a number of areas show that about 20 percent of the current juvenile delinquency is due to family causes.

Of the family influences which cause juvenile delinquency the main one is inappropriate parental teachings. According to statistics from some Shanghai work-study schools 75 percent of juvenile crimes are related to parental teachings and supervision. Where parental teaching and supervision are inappropriate this is demonstrated in two extremes. In one extreme there is an excess of indulgence, yielding to shortcomings,and overprotection. From childhood they become habituated to greed, self-indulgence and doing whatever they please and thus become "little dictators" in the home. As they grow older their thinking does not undergo any criticism and their desires increasingly grow until the family is no longer able to satisfy them. Still they lack the means of self-control and progress from being a "little dictator in the home to being a "big wheel" in the neighborhood and finally becoming a juvenile delinquent. In a Beijing work-study school class of 20 people two were eldest children and 14 were "old troublemakers," a total of 80 percent. The other extreme of family upbringing is to beat,curse, force and starve the children. The parents feel that "a heavy cudgel produces good children" with results opposite of those desired, causing an opposition between parents and children and eliminating all feelings from the family relationship. In some families the maltreatment of the children made them run away from home to make their own way and leading them to a life of crime. According to statistics from 101 juvenile delinquents in prison, 26 of them were from homes with the above conditions.

China has a huge working force and in most families both parents work so it easily happens that because of work and available energies the scientific education and strict supervision of the children are neglected. In addition, the state encourages planned parenthood to control population increases so there are more and more only children. In some day schools fully half the children are only children and this shows that concern over livelihood exceeds concern over ideology, morals and ethics. Some parents mistakenly believe that to give a child adequate food and clothing discharges their responsibility and this is a problem deserving much attention. Parental teaching plays an important role in child rearing. Some comrades say that the parents are the first teachers, the most enduring teachers and the teachers who best understand their "students." Therefore, parents ought to look upon education of their children as a respected service to the state and society, as an undeniable social obligation which requires the proper arrangement of time and energies, the study of correct methods of child raising, a coordination of effort with the schools and society and a strengthening of correct child education and supervision.

Sixth: The Special Effect of Art and Literature on the Maturation of Young People

A special characteristic of young people is that the speed of their physical and biological development has outstripped their intellectual development and their imagistic thought is more powerful than their logical thought. Literature, art, drama, movies, television and fiction are of special influence and use in approaching this characteristic of the young mind. Good works are capable of leading and stimulating young people to make a revolutionary struggle for high ideals. Bad works can directly influence young people into harmful behavior. There was one young girl who originally was well behaved but then she later saw movies, television and plays and learned of such things as makeup, style, love, dancing, drinking and pleasures. She took her role models from foreign films and chased after a western lifestyle, finally embarking on a path of crime and counterrevolution. Therefore, because of this special influence, literature and propaganda must consider the social results and benefit the healthy development of young people. This point is not ours alone but is common to the world at large.

In order to minimize the inroads of such harmful and corrupt ideology, and this is an even more important point, there must be powerful advocacy of healthy and beneficial amusements and physical activities, an abundance of extra-curricular activities for young people, provision of the maximum possible number of youth activity areas, a broadening of their vision and a nurturing of broad interests, hobbies and skills to lead their abundant youthful energies into areas which benefit their healthy maturation and benefit society.

In addition, smoking, gambling and drinking by the juvenile delinquents are habits which directly lead young people to crime. Studies in some areas show that of juveniles convicted of crimes 100 percent smoke, 90 percent gamble and 50 percent drink. The lewd, corrupt and vicious activities of some people began with drinking, gambling and smoking or from an addiction to smoking and drinking. Some people commit crimes because of gambling losses or to get gambling money and others steal money to buy cigarettes or simply steal cigarettes. After some juvenile delinquents have been reformed they sum up the lesson of their own experiences saying, "It started with poor study and was made final with a cigarette." Therefore, the cultivation of avoidance of smoking, gambling and drinking among young people is an important task in preventing lewdness and corruption.

The Basic Step Toward Preventing and Reducing Juvenile Delinquency is Overall Supervision.

Juvenile delinquency is a complex social problem which touches every corner of society. The prevention and reduction of juvenile delinquency is a long-term strategic duty. Therefore, it will not do to leave the solution of this problem to any one department or small group of persons. We must depend on involvement of the entire party, coordination of all sides, overall implementation, attention to details and complete use of the superiority of the socialist system. Economics, politics, administration, education, morals and law must all protect, cultivate and mold our youth. The five factors of family, schools, neighborhoods, factories and the government can form a fixed, cooperating entity, perhaps in the form of "overall supervision." This will be beneficial in vigorously protecting and ensuring the healthy development of our young people.

The enactment of a youth protection law would benefit the enforcement of some "overall supervision" measures with the strength of the law and they would be strongly carried out by government agencies. The focus of the youth protection law is to protect youth. There should be clearly written regulations stipulating the responsibilities and duties for all departments, groups and individuals to follow in protecting, nurturing and educating young people, and there also should be regulations for severe punishment for the poisoning or harm of young people. This will protect the healthy development of our young people.

UNIVERSITY, MIDDLE SCHOOL TEACHERS TO TEACH IN TIBET

Shanghai University Teachers

Shanghai WEN HUI BAO in Chinese 23 Aug 80 p 1

[Article: "Shanghai University Teachers Going To Help in Tibet Arrive Safely in Nyingchi"]

[Text] Special correspondent Chou Bingquan [07193521 2938] reports that the university teachers from Shanghai, who were going to take teaching positions at the Tibet Medical College, yesterday arrived in Nyingchi County, which is over 430 km from Lhasa and the location of the Tibet Medical College. The university teachers from Zhejiang who will help Tibet arrived together with them. The group of university teachers left Shanghai on 4 November and arrived in two groups on 16 November and 18 November in Lhasa. Because most of them are middle-aged teachers and are in the high plains for the first time, some were seriously affected by the high mountains. However, after a brief rest in Lhasa they were back to normal. Early on the morning of 20 November they left Lhasa for the 2-day drive on high mountain roads. They crossed the Mila Mountains, which are over 5,000 meters high, and on 21 November safely arrived at Tibet Medical College, which is located in one of the famous forest zones of the Tibet Autonomous Region, over 2,000 meters above sea level where the air is good.

'One-on-One' Tutoring System

Beijing GUANGMING RIBAO in Chinese 21 Sep 80 p 1

[Article: "Chinese and Tibetan Middle School Teachers in Lhasa Start 'One-on-One" Tutoring System"]

[Text] Recently, the Bureau of Culture and Education in Lhasa, Tibet Autonomous Region, decided to start a "one-on-one" tutoring system among Chinese and Tibetan middle school teachers.

Teachers helping Tibet who are working in Lhasa have more teaching experience and a high level of teaching ability. In order to fully develop this skill and have them train a group of teachers of the Tibetan nationality to have a high level of teaching ability during the time they are in Tibet, the Lhasa Municipal Bureau of Culture and Education decided to organize Chinese and Tibetan teachers in middle schools to begin "one-on-one" tutoring. To this end, they have done the following:

1. On the basis of voluntary sign-up and organizational principles, Chinese and Tibetan teachers of the same grade level and discipline were organized into pairs to carry out the tutoring through specific teaching activities.

2. In terms of form and content, Chinese and Tibetan teachers together studied and discussed the teaching aim of each section of the teaching materials, the points of emphasis and difficulty, the arrangement of classtime, teaching method and problems that should be noted in teaching. Then the Tibetan teachers wrote out lesson plans and the Chinese teachers corrected them, and finally they settled on a teaching plan together.

3. Middle schools will make this activity part of the normal teaching plan, and teachers who are carrying more than a normal load will be given appropriate help by the Bureau of Culture and Education.

4. The Bureau of Culture and Education will conduct regular inspections of this activity in middle schools, and will start assessments and competitions to commend and reward teachers whose teaching attitude is conscientious and who have evident results.

Middle School Teachers

Beijing GUANGMING RIBAO in Chinese 21 Sep 80 p 1

[Article: "More Than 500 Middle School Teachers From the Interior Head for Tibet To Take Up Teaching Posts"]

[Text] To further develop education in Tibet, recently another group of over 500 middle school teachers from the interior of China went to Tibet to assume teaching positions.

These middle school teachers from Sichuan, Jiangsu, Henan, Hunan, Hubei, Shandong, Liaoning and Shanghai are the fourth group of teachers who have gone to help Tibet in accordance with the directive of the Central Committee. The more than 1,100 teachers from these 8 provincial and municipal units who have in the past been sent to help out Tibet, in their work assumed responsibility for a large part of the teaching in middle schools which is emphasized by Tibet, and they have been the mainstay force in middle school education in Tibet.

After the Central Committee issued its directive on work in Tibet, the above mentioned eight provincial and municipal units' concerned sections considered teachers' work to help Tibet even more seriously. Ali District, where the conditions are very difficult and where there have never been any teachers to help Tibet, now has 45 teachers sent from Henan.

MINORITY STUDENTS FROM XINJIANG PASS COLLEGE ENTRANCE EXAMS

Beijing GUANGMING RIBAO in Chinese 25 Sep 80 p 1

[Article: "Over 2,000 Minority Students From Xinjiang Pass College Entrance Examinations"]

[Text] This year 2,134 children of minorities in the Xinjiang-Uighur Autonomous Region passed the entrance examinations for college. This is the largest number of Xinjiang minority children to pass since the higher education examinations were reinstated nationally.

New students from the 11 minorities of Uighur, Kazakh, Mongol, Tibetan, Uzbek, Tajik, Kirghiz, Daghor, Tatar, Sibo and Russian constituted over 52 percent of the new students enrolled in institutions of higher education in Xinjiang. New students from other national minorities were also enrolled. Thus, minorities in Xinjiang have their own university students.

In addition, over 340 minority children from Xinjiang this year passed entrance examinations for universities in the interior. Malati [7456 2139 2251], a student of Kazakh nationality from the First Middle School of Red Flag Commune in Jeminay County and Paerhati Kuerban [1584 1422 0761 2251 1655 1422 3803], a student of the Uighur nationality from the Third Middle School in Kaxgar took the examinations in their native languages and earned scores of 455 and 380, respectively, and became the first of the minority students in the physics and literature examinations and have both been enrolled in the Central Nationalities College. Mulati [2606 2139 2251], a Uighur middle school student from Urumchi, and Zainure [0375 0505 3583], a Kazakh middle school student from the Akesu District, took the examination in Chinese with scores of 358 physics) and 354 (literature) and have been enrolled in the China University of Science and Technology and Beijing University, respectively.

BRIEFS

MINORITY STUDENT TRAINING--Quangxi-Zhuang Autonomour Region has adopted special measures to train minority students. Now, concerned sections of the autonomous regions have recruited from the border and mountain areas 400 minority students to attend 5 middle schools with good foundations, 300 minority students to attend minority classes at 4 middle level hygiene schools. In addition, 200 minority students have been recruited for preparatory classes at Guangxi Nationality College. While they are studying, these minority students will all receive stipends, texts, teaching materials and clothing and mosquito netting and other necessities provided by the people's government. At the same time, concerned sections of the autonomous region have decided that minority students in country seat middle schools in eight minority autonomous counties in the region will have restored the stipends and other considerations they enjoyed before the Great Cultural Revolution. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

ARAB SUMMIT TO TAKE PLACE ON 25 NOVEMBER

Summit Will Open 25 November

OW201004 Beijing XINHUA in English 0939 GMT 20 Nov 80

[Text] Amman, 20 Nov (XINHUA)--The 11th Arab Summit Conference, scheduled to begin here next Tuesday, will be held as planned, declared Jordan's Foreign Minister Marwan al-Qasim in a statement issued at the end of the meeting of a seven-member committee of Arab foreign ministers last night.

Al-Qasim who is also chairman of the preparatory committee, said the seven-member committee would draft a "working programme" which would serve as a "continuation and affirmation" of the basic principles and resolutions adopted at the Baghdad and Tunis summits in 1978 and 1979. He said this draft would also "take into consideration developing some of these principles for the sake of national interests and in line with changing conditions."

Al-Qasim expressed satisfaction with the "successful" work of the seven-member committee made up of representatives from Jordan, Syria, Iraq, Algeria, Saudi Arabia, Kuwait and the Palestine Liberation Organisation.

The main draft recommendations to be submitted to the foreign ministers conference deal with a comprehensive strategy for confronting the Zionist enemy in the next phase. The foreign ministers are expected to approve the recommendations and submit them to the summit convening in Amman's Royal Cultural Centre on 25 November.

Taking Place on Schedule

OW230813 Beijing XINHUA in English 0803 GMT 23 Nov 80

[Text] Amman, 22 Nov (XINHUA)--The 11th Arab Summit Conference will take place here on 25 November as scheduled, declared the Arab foreign ministers conference which closed here today.

Syrian Foreign Minister 'Abd al-Halim Khaddam walked out of the closing session after it rejected a Syrian proposal for a postponement of the summit. He told reporters before leaving for Damascus that his country would not attend the summit.

Foreign minister of South Yemen Salim Salih told XINHUA this morning, "We take a common stand with the steadfastness countries." So far there was no immediate confirmation of the position of Libya and the Palestine Liberation Organization.

Jordanian foreign minister and chairman of the conference Marwan al-Qasim stressed in his closing speech the importance of Arab unity and Arab united stand. He said, "Our people will not allow themselves to fall into the whirlpool of split again." "We will continue the process of Arab unity at all costs" and "strictly adhere to national principles."

Secretary-general of the Arab League Chadli Klibi also spoke at the closing session.

Three documents were adopted by all the foreign ministers including that of Syria at yesterday's closed door meeting. They are the joint Arab action programme, the Arab economic strategy and amendments to the Arab League charter. The documents will be submitted to the summit for discussion and approval.

CANADIAN PREMIER MEETS ARAB LEADERS

OW250732 Beijing XINHUA in English 0700 GMT 25 Nov 80

[Text] Ottawa, 24 Nov (XINHUA)--Canadian Prime Minister Pierre Elliott Trudeau flew back here tonight after his nine-day official visit to Saudi Arabia, the Yemen Arab Republic, Egypt, the Federal Republic of Germany and France.

Trudeau's trip was said to have centered on the north-south dialogue, international economic problems, the Middle East crisis and preparations for the seven-nation summit of major industrialized countries in Ottawa next July.

It was reported that during his official 3-day visit to Saudi Arabia, the Canadian prime minister had a series of meetings with Saudi Oil Minister Shaykh Ahmad Yamani, Planning Minister Shaykh Hisham Nazir and Finance Minister Shaykh Muhammad al-Khayl, Mad al-Khail, mainly to discuss cooperation in the petroleum field.

Trudeau had a one-hour-and-half talk with Egyptian President Anwar al-Sadat last Saturday. After the meeting, President al-Sadat said Canada and Prime Minister Trudeau have "a very important role to play" in the Middle East peace process. Briefing reporters, Trudeau said Canada will continue to oppose Israeli settlement of the West Bank and the annexation of Jerusalem, and to support a UN call for withdrawal from the occupied territories. "We are convinced that peace cannot come without a solution to the Palestinian problem, and that solution includes a territorial arrangement, especially the West Bank and Gaza," he noted.

OMANI-BUILT DHOW SETS SAIL FOR VOYAGE TO CHINA

OW231556 Beijing XINHUA in English 1515 GMT 23 Nov 80

[Text] Beijing, 23 Nov (XINHUA)--The Omani dhow "Sohar," today left the naval base in Muscat, on a modern Sinbad voyage to China, according to a report from Muscat.

Omani Minister of National Heritage and Culture H.H. Faysal ibn 'Ali ibn Faysal al Bu Sa'id presided over the seeing-off ceremony.

At the ceremony, both Minister Al Bu Sa'id and Chinese Deputy Minister of Culture Situ Huimin praised the development of friendship between the two countries and wished the "Sohar" success.

A Chinese Government delegation headed by Deputy Minister Situ Huimin arrived in Muscat yesterday specially for the occasion.

Present on the occasion were personal advisor to His Majesty Qabus ibn Sa'id al Bu Sa'id and Governor of Muscat H.H. Thuwaini ibn Shihab, Vice-Prime Ministers Fahar ibn Taymur al Bu Sa'id and Fahd ibn Mahmud al Bu Sa'id, members of the royal family, ministers and diplomatic envoys here.

Chinese Ambassador Yuan Lulin was also present on the occasion.

The "Sohar" spread sail to follow the travels of Sinbad, the famour navigator of more than 1,000 years ago, on a 6,000-mile journey to China. The replica of the Sinbad voyage sponsored by Sultan Qabus ibn Sa'id al Bu Sa'id ahd his government is a historic exchange of culture between Oman and China.

This Sinbad voyage is also part of the celebrations of the 10th anniversary of Oman's national day.

The dhow was made of special timber from the Malabar coast of India. It is 87.6 feet long and 21 feet wide, and has a crew of 20.

PAKISTAN SUPPORTS UN RESOLUTION ON AFGHANISTAN

OW210258 Beijing XINHUA in English 0219 GMT 21 Nov 80

[Text] United Nations, 20 Nov (XINHUA)--Pakistan was gratified with the response of the international community to the Afghanistan crisis, said Pakistani Foreign Minister Agha Shahi at a press conference here this afternoon, commenting on the just-adopted UN resolution on Afghanistan.

The UN General Assembly this morning adopted, by an overwhelming vote of 111 to 22, a resolution calling for the immediate withdrawal of the foreign troops from Afghanistan. The resolution was sponsored by Pakistan and 41 other nations.

Shahi said, "The vote speaks for itself. The international community has, of course, decisively and emphatically expressed its will concerning the Soviet military intervention in Afghanistan."

"It has done so by calling for the immediate withdrawal of Soviet military forces from Afghanistan, and respect for the right of the people of Afghanistan to independence, sovereignty, territorial integrity and non-aligned status," he added.

He declared that Pakistan attached great importance to the essentially constructive nature of the resolution.

UK SPOKESMAN ON DEFENSE POLICY

OW250746 Beijing XINHUA in English 0723 GMT 25 Nov 80

[Text] London, 24 Nov (XINHUA)--The Atlantic Alliance and the European Community are the bases of Britain's defence policy and a credible defence is the only guarantee of its security.

These remarks were made here today by Sir Ian Gilmour, Lord Privy Seal and government spokesman on foreign affairs in the House of Commons during a parliamentary debate on defence and foreign affairs.

He said the government had to operate in the real world and the Atlantic Alliance and the European Community were the indispensible framework within which successive governments had organized defence and promotion of the country's national interests. "We have no doubt about their value and we shall work to strengthen them," he stressed.

He regarded it a fundamental duty for Britain to take, together with its allies, necessary measures to maintain a credible defence. There was no need to speculate why the Soviet Union had built up military strength far in excess of its own defence requirements--its "aggressive and subversive" policies could not be ignored," he added.

Challenging the opposition Labour Party to clarify its defence policies, he said that the Labour Party's stand of giving up nuclear weapons and sending cruise missiles back to America did not provide a basis for a defence policy in the 1980s. Now was not the time to retreat into a shell. British interests demanded Britain should be a respected and reliable ally, strong enough to help, he stated.

The conservative government, he declared, remains deeply committed to pursuing arms control. But this could not be negotiated from weakness. The government believed that adequate strength was indispensible to survival. Sir Ian Gilmour once again denounced the Soviet invasion of Afghanistan. He called for the withdrawal of Soviet troops and a return of Afghanistan's non-aligned status.

He also warned the Soviet Union to keep out of Polish affairs. "The Polish people must be allowed to work out their own destiny," he pointed out.

CSO: 4020

BRITAIN REDUCES MINIMUM LENDING RATE

OW251328 Beijing XINHUA in English 1304 GMT 25 Nov 80

[Text] London, 24 Nov (XINHUA)--The British Government today reduced the minimum lending rate (MLR) from 16 percent to 14 percent and cut the next year's public spending by more than one billion pounds, announced Sir Geoffrey Howe, chancellor of the Exchequer, in the House of Commons today.

The 2 percent reduction in MLR came after an unprecedented outburst of resentment from the Confederation of British Industry (CBI), an organization of the country's industrialists, who complained that the near-record interest rate was crippling industry and aggravating recession. CBI leaders met Prime Minister Mrs Thatcher not long ago, urging her to change the government's economic policies.

The conservative government raised MLR to a record level of 17 percent last November. It was lowered to 16 percent last July, but it was still regarded as too high and has brought damaging effects to the country's industrial production and trade. The purpose of the 2 percent reduction in MLR is to get the government's economic strategy back on course, the chancellor of the Excheque added.

Sir Geoffrey admitted that both government borrowing and the growth in money supply would be greater this year than expected. It was against this background that the government had to make further cuts in public spending next year so as to meet its monetary targets.

This is the fifth time this government has cut public spending since it took office in May last year. The new cuts, totalling more than one billion sterling, include 200 million pounds less to be spent on defence. This means that defence expenditure is now expected to grow by some 2.5 percent both this year and the next, slightly lower than the 3 percent target as NATO has required its member states to achieve. The other cuts are likely to fall on housing, education and local services.

The new economic measures of the government were violently attacked by the Labour opposition in parliament today. Denis Healey, finance spokesman of the shadow cabinet, said that the government was driving the country further into recession.

CSO: 4020

MRS THATCHER REJECTS UNILATERAL DISARMAMENT

OW210756 Beijing XINHUA in English 0739 GMT 21 Nov 80

[Text] London, 20 Nov (XINHUA)--British Prime Minister Mrs Thatcher today denounced the stand for unilateral disarmament as dangerous and reiterated that her government would maintain Britain's contribution to NATO despite economic difficulties.

She sneered at those who think that mere eloquence or earnestness or example will win concessions or respect from the Russians. "They will not. Such delusions are dangerous," she pointed out.

Replying in the House of Commons debate after the queen had opened the new session of parliament, Mrs Thatcher said: "If we disarm unilaterally or renege on our defence commitments, the security of the West as a whole would be undermined. We should be powerless to resist pressure in time of peace and virtually defenceless in time of war."

She declared that the government would stick to its decisions on the question of nuclear weapons. Though anxious to reach agreement on arms control measures, it intended to approach any necessary negotiations as an equal partner, not as a supplicant, she said.

The prime minister made it clear that despite the economic difficulties, her government would achieve or come very close to the target of three percent rise in defence spending in each of its first 2 years in office and it would continue to increase defence expenditure in the coming years. She asked those who considered this as too ambitious "to look again at the growth in the Warsaw Pact's military expenditure in the last decade and ponder the Soviet invasion of Afghanistan."

Underlying her view that the security of Europe was indissoluble from that of North America, Mrs Thatcher welcomed U.S. President-elect Reagan's statement that he attached the highest priority to the maintenance of a confident and powerful alliance.

The prime minister also stressed once again the importance of Britain staying in the European community. She said: "If this country walked out of Europe, its trade, of which more than 40 percent was with other members of the community, would suffer, its economy would be damaged, and its international effectiveness would be diminished."

CSO: 4020

PURGES CARRIED OUT IN TURKISH GOVERNMENT

OW241240 Beijing XINHUA in English 1212 GMT 24 Nov 80

[Text] Ankara, 24 Nov (XINHUA)--One hundred and sixty-nine civil servants in various departments of the Turkish Government have been dismissed and 20 others transferred to posts outside Ankara, according to press reports here today, quoting an announcement of the Ankara Martial Law Command.

The announcement said that the employees involved had "supported or engaged in illegal acts and made use of state resources in such acts."

This is the first purge in government departments following the 12 September military takeover in Turkey.

According to the weekly "BRIEFING" published here today, prime minister of the new Turkish Government Bulent Ulusu had instructed all government departments to examine the files of all extremists, especially those suspected of having played a key role as planners in acts of political violence.

The weekly reported, "Along with this 'cleaning operation,' there will be major reshuffles at the top echelons of several state economic enterprises and state-controlled companies."

The weekly also said, "Personnel re-organization is not confined to home only. There will also be a reshuffle of Turkey's representatives abroad. Diplomats, press attaches, commercial counsellors who have been identified with this or that extremist cause will be replaced by non-politicised and more able men and women."

AUSTRALIA'S STREET COMPLETES PHILIPPINES VISIT

OW181536 Beijing XINHUA in English 1513 GMT 18 Nov 80

[Text] Manila, 18 Nov (XINHUA)--Australian Foreign Minister Anthony Street said here this afternoon that his current visit to the ASEAN countries, less than 2 weeks after his taking over the post, "indicates the high priority Australia places on its relations with the countries of ASEAN."

Speaking to newsmen at the airport before his departure for Thailand, Street said there is a consensus on the Indo-Chinese question between Australia and the ASEAN "because the United Nations resolution which was sponsored by the ASEAN countries was also co-sponsored by Australia. So there is a very high degree of common interest there." He added: "Australia was going to act in consultation and in concert with the ASEAN countries."

He reiterated that Australia's derecognition of the Democratic Kampuchean Government "in no circumstances indicates a move on Australia's intention to recognize the Heng Samrin regime. That was not our intention, not at all."

Asked about Australia's stand with the Manila Pact, he said: "The Manila Pact remains. It is still valid. As I understand, SEATO has been dissolved but this does not invalidate the Manila Pact."

Street arrived here on 15 November after visits to Malaysia and Indonesia. During his stay here, he called on President Marcos and met with some ministers and high-ranking officials of the government. He said that their discussions covered a variety of topics including the situation in Indo-China, bilateral trade and the Australian development assistance program in the country. "Australia and the Philippines shared a common concern for the economic progress, stability and security of the Southeast Asian region," he said, adding that through the visit he had been encouraged to find that Australia's relations with the Philippines were "soundly based, in good shape and moving ahead in most fields."

After meeting Street, President Marcos expressed satisfaction over the growth of closer relations between ASEAN and Australia. "Personally, I am very happy about the developments in the last few years as relations between ASEAN and Australia have moved forward for our mutual benefit," he said.

AUSTRALIAN FOREIGN MINISTER TOURS THAI-KAMPUCHEAN BORDER

OW201916 Beijing XINHUA in English 1910 GMT 20 Nov 80

[Text] Bangkok, 20 Nov (XINHUA)--Australia "would want to act in concert with our ASEAN friends" and to "maintain as close as possible contact with Thailand" in carrying out the UN resolution on Kampuchea, stated Anthony Austin Street, the newly-appointed foreign minister of Australia, at the airport here today after an official visit to Thailand.

He said that "Australia was the co-sponsor with ASEAN in the UN resolution" and that he had been "most impressed by the substantial efforts being made by the ASEAN countries in putting the resolution into practice."

He told newsmen that he had full discussions with Thai Foreign Minister Sitthi Sawetsila over the realm of activities for the next step following the passing of the UN resolution on Kampuchea. They also touched on world affairs and bilateral cooperation.

When asked by XINHUA about his impressions on his Thai-Kampuchean border inspection, the foreign minister said: "My first impression is the great personal sufferings in the hardships of the Kampuchean refugees for a long period. Secondly, I have been deeply impressed by the big contributions made by the Thai Government in dealing with the problem. Thirdly, a good job has been done by the international and volunteer agencies for the refugees."

Upon his arrival in Bangkok from Manila on 18 November, Street spoke about his two main purposes of the visit to ASEAN countries: "The first is to indicate the importance which Australia attaches to the relations with ASEAN nations. The second is to get to know my counterparts in ASEAN countries and to seek their views and perceptions of the issues facing the region, the ASEAN countries in particular."

This is his first official trip abroad as foreign minister since he assumed office following the Australian elections last month.

BEIJING COMMEMORATES BIRTH CENTENARIES OF ROMANIAN LITERARY FIGURES

OW201937 Beijing XINHUA in English 1924 GMT 20 Nov 80

[Text] Beijing, 20 Nov (XINHUA)--The birth centenaries of the great Romanian writer, Mihail Sadoveanu, and Romanian poet, Tudor Arghezi were commemorated at a rally attended by people from all walks of life here today.

Following the liberation of Romania in 1944 both Mihail Sadoveanu was honoured with state prize and Tudor Arghezi the title of "Socialist Labour Hero."

During today's rally two eminent Chinese writers gave accounts of the work of the Romanian cultural giants.

Chinese writer Chen Huangmei pointed out that in a literary career spanning half a century Sadoveanu had created a heritage of over 120 works for later generations.

Sadoveanu's works, Chen Huangmei said, both reflected the sufferings of the exploited and oppressed people, and eulogized the natural senery and industrious and brave people of Romania. "Mihail Sadoveanu will always be remembered with love and praise by the people," Chen Huangmei declared.

Chinese poet Zang Kejia referred to the numerous satires and political essays assailing the reactionary ruling class written by Tudor Arghezi. In particular, following Romania's liberation in 1944, he had published two poems: "1907" eulogizing the peasant uprising in Romania in 1907, and "Song in Praise of Man" extolling man's love of labour and his wisdom.

Zang Kejia noted that Arghezi had written 76 volumes of poems and prose as well as translations.

Mr Romulus Ioan Budura, the Romanian minister-counsellor, told the rally that the commemoration of the two great Romanian writers was being held as the Romanian prime minister was about to pay an official visit to China. Today's commemoration, he said, deepened the mutual understanding and respect of the peoples of the two countries for each other.

The commemoration was jointly sponsored by the Federation of Literary and Art Circles of China, the Chinese Writers Association, the China-Romania Friendship Association and the Chinese People's Association for Friendship with Foreign Countries.

Chu Tunan, vice-president of the Chinese People's Association for Friendship with Foreign Countries, and the Romanian ambassador, Mr Florea Dumitrescu, were present on the occasion.

YUGOSLAV FOREIGN MINISTER VISITS BULGARIA

OW210901 Beijing XINHUA in English 0745 GMT 21 Nov 80

[Text] Sofia, 20 Nov (XINHUA)--Yugoslav Federal Secretary of Foreign Affairs Josip Vrhovec paid a friendly and official visit to Bulgaria from 17 to 20 November, according to the Bulgarian Telegraph Agency.

During his stay here J. Vrhovec had talks with Bulgarian Foreign Minister Petur Mladenov on bilateral relations and international situations.

A joint communique issued at the end of his visit says that the two sides are willing to further expand and strengthen cooperation in the domains of politics, economy, press, culture, science, education and tourism. Residents in border areas are encouraged to enhance cooperation and contact, because "such cooperation is in the interest of closer relations between the two countries," the communique says.

It says that the two sides expounded their stands on outstanding issues in their bilateral relations and expressed readiness to continue constructive dialogues to seek means to resolve them.

During discussion of international problems, the joint communique says, the two sides maintained that good neighbourly and cooperative ties among the Balkan countries are in the long-term interest of all countries in the region. The governments of the two countries will contribute to the development of bilateral and multilateral cooperation among states in the region.

BRIEFS

BRITISH PERGAMON PRESS--Beijing, 15 Nov (XINHUA)--An exhibition of scientific and technical books and journals published by the British Pergamon Press opened at the China Art Gallery here this afternoon. The exhibition is sponsored by the China National Publications Import Corporation. The Pergamon Press is one of the world's leading scientific, technical and educational publishers. The exhibition has on display 1,100 titles and journals published by the press. They cover engineering and materials science, energy sources and technology, life sciences, medical sciences, agriculture, physical sciences, chemistry and chemical engineering, physics, mathematics, earth and environmental sciences, social and behavioural sciences, psychology, economics and management, education and language and other titles of general interest. After the exhibition ends in Beijing on 24 November it will be shown in Wuhan, Chengdu, Changsha and Lanzhou. [Text] [OW161938 Beijing XINHUA in English 1617 GMT 15 Nov 80]

THEATER TROUPE'S RETURN--Beijing, 15 Nov (XINHUA)--Friendship and knowledge were the two most valuable results scored by the Beijing People's Art Theatre during its 2-month performance tour of Europe. So said Sia Chun, leader of the tour, and Yu Shizhi, who starred in Lao She's play "Tea House" during an interview with XINHUA here today. The theatre group returned from Europe Thursday afternoon. Both Xia Chun and Yu Shizhi expressed the hope that the national theatre Manhamme and Comediere France would take part in the celebration of the 30th anniversary of the funding of the Beijing People's Art Theatre in China in 1982. During their 50-day European tour with Lao She's play "Tea House," the theatre visited 15 cities in the above three countries where they gave a total of 25 performances. Xia Chun said that modern drama had become a new channel for cultural exchange between China and other countries. He said he would ask the Ministry of Culture to send more drama troupes abroad to promote cultural exchange with still more countries. [Beijing XINHUA in English 1835 GMT 15 Nov 80]

ITALIAN FILM 'MARCO POLO'--Venice, 14 Nov (XINHUA)--The production of the full-length film "Marco Polo" started here, the native place of the mediaeval Italian emissery of goodwill to China, today. Head of the Chinese movie delegation and well-known director Xie Tieli attended the inaugural ceremony and told the correspondents, "The Chinese and Italian peoples have long established close and friendly relations." He described Marco Polo as the pioneer of friendly contacts between the two peoples and stressed the importance of producing this film. At a reception yesterday, the mayor of Venice, Mario Rigo, hailed the friendship between the Chinese and Italian peoples. He said that he was proud of the production of a film on Marco Polo, forerunner of the Venetian people. He expressed the hope that the friendship between Italy and China as established by Marco Polo will gain new strength. The film is produced by Station Number One of the Italian Radio-Television Corporation and an Italian movie company with the cooperation of China, the United States and Japan. HERBAL MEDICINE MEETING--Tianjin, 9 Nov (XINHUA)--A 5-day inter-regional meeting sponsored by the World Health Organization (WHO) to discuss the standardization and use of medicinal plants closed here yesterday, after adopting a proposal to the WHO on that question. Fifteen papers were read at the meeting. Professor Xiao Peigen from the Institute of Pharmocology of the Chinese Academy of Medical Science reported on China's experience in the use of herbal medicine. After comparing the pharmacopoeias of three countries, Professor Lou Zhicen submitted to the meeting a new scheme for controlling the quality of herbal medicine. Swiss representative O. Sticher made a proposal on how to promote and organize further research in herbal medicine. During their stay in Tianjin, representatives from 14 countries visited an institute of pharmocology, a hospital and a herbal medicine workship. They will make a tour of Beijing from 9 to 11 November. [Beijing XINHUA in English 1201 GMT 9 Nov 80]

ACROBATS' NEW YORK FINALE--New York, 17 Nov (XINHUA)--The Guangdong Acrobatic Troupe of China concluded its performance tour of New York and left here for Rochester today. The 14 shows of the Chinese troupe, which ran from 4 to 16 November at New York's magnificent Radio City Music Hall, attracted nearly 50,000 spectators. Newspapers here described the performance of the Chinese artists as "fantastic, magic and wonderful." The Guangdong Acrobatic Troupe arrived here on 3 November. It will visit Pittsburg, Dayton, San Francisco and Long Beach (California) before going home. [Text] [Beijing XINHUA in English 0715 GMT 17 Nov 80]

USSR TO COMPENSATE CANADA--Ottawa, 22 Nov (XINHUA)--The Soviet Union will pay Canada 3 million Canadian dollars for damage caused by the crash of a Soviet satellite over the northwest territories in 1978, announced Canadian External Affairs Minister Marc Macguigan here yesterday. The agreement must be approved by both governments, but this was considered a formality, he said. The nuclear-powered Soviet satellite Cosmos 954 crashed over the northwest territories on 24 January 1978. The total cost for cleaning up the radioactive debris has been estimated at 14-million Canadian dollars. Canada has submitted a bill to the Soviet authorities claiming 6 million Canadian dollars for damages and costs. [Text] [OW070742 Beijing XINHUA in English 0721 GMT 23 Nov 80]

WESTERN NATIONS' STEEL OUTPUT DROPS--Tokyo, 25 Nov (XINHUA)--Gross steel output by the Western countries from January to September this year stood at 354 million tons, down 6.5 percent from the same period of last year. Yearly output is expected to slump by 7.2 percent, according to statistics compiled by the Japanese Federation of Steel Makers. The output of the United States in the said period totalled 73.7 million tons, a 22.6 percent decrease as compared with the period of last year. The yearly output is estimated at 96 million tons, lower than Japan's for the first time. The poorest performance was reported in the nine European Common Market nations this year. Their yearly output is expected to reach only 128 million tons, down 8.3 percent from last year's figure. This year's output for other Western nations except Spain will reduce by 1.2 percent to 33.3 million tons. [Text] [OW250725 Beijing XINHUA in English 0713 GMT 25 Nov 80]

WEST INCREASES NAVAL PRESENCE--Canberra, 19 Nov (XINHUA)--The United States, France and Britain have reinforced their naval presence in the northwest Indian Ocean in readiness to break any blockade of the Strait of Hormuz, the gateway to the oil-rich Persian Gulf, an Australian correspondent reported in the newspaper "AGE" today. The correspondent, Michael Richardson, who had visited Oman recently wrote that in the past month France had sent a missile-armed frigate, a corvette and four minesweepers to join the 12 French warships already in the area. A flotilla of six ships will take over from four British naval vessels at present stationed off the coast of Oman, he added. Richardson said that the U.S. has about 35 ships in, or close to, the Persian Gulf, including two aircraft carriers with minesweeping helicopters and jet fighters, and several missile-armed cruisers. He revealed that both Britain and the United States have recently negotiated agreements with Oman to resupply their Indian Ocean fleets from Omani ports and airbases. QUEEN ELIZABETH II VISITS EEC--Brussels, 24 Nov (XINHUA)--Queen Elizabeth II of the United Kingdom and Duke of Edinburgh visited the European Community Commission today. This is the first visit of the British queen to the commission since the United Kingdom joined the European communities 8 years ago. The queen was warmly welcomed by Mr R. Jenkins, president of the commission. In a speech in reply to the warm welcome expressed by Mr Jenkins, the queen said: "The foundation of the community will surely prove to be a turning point in the history of our continent." She added that "coming together in the way has given countries a weight in the world." [As received] And she wished the community a further enlargement. Newspapers here pointed out that the British queen's visit has a positive significance in enlisting greater support for British membership of the community. In the views of observers here, the present British Government would like to see a more active role of the community in world affairs, and of the NATO European members in strengthening that organisation's political and military influence. Symbolic of this attitude, the queen will also take time off to visit NATO headquarters tomorrow. Queen Elizabeth II and her party arrived here yesterday to pay a private visit to Belgium to mark the country's 150th anniversary. [Text] [OW250118 Beijing XINHUA in English 0103 GMT 25 Nov 80]

QUEEN ELIZABETH REAFFIRMS COMMITMENT--London, 20 Nov (XINHUA)--The British Government attaches great importance to defence and contributing fully to the North Atlantic Alliance as it believes that the best hope of lasting peace lies the effective maintenance of Western security, Queen Elizabeth II declared here today. Addressing the opening meeting of the Parliament, the queen said that Britain will continue to press for the complete withdrawal of Soviet troops from Afghanistan and for a political settlement acceptable to the Afghan people. It will also seek more stable East-West relations. It views with great concern the conflict between Iran and Iraq and will continue to work with other governments for an end of the hostilities. The queen reaffirms Britain's strong commitment to the European Community. It looks forward to the accession of Greece on 1 January next year and the prospects of further enlargement, she said. On domestic issues, she said, "The need to bring down the rate of inflation and create conditions for a sustainable growth of output and employment remains the prime concern of my government." The queen promised help for the unemployed, which has reached the record high of over 2 million. She said that the government "will proceed urgently with an expanded programme of employment and training measures for the unemployed, particularly the young." [Text] [OW202012 Beijing XINHUA in English 2001 GMT 20 Nov 80]

U.S.-EUROPEAN RELATIONS--Paris, 24 Nov (XINHUA)--The United States and Europe "should understand each other and follow a policy of solidarity and consultation," said French Foreign Minister Jean Francois-Poncet over the French television TF1 today. He said that after the investiture of President Ronald Reagan, "a stronger America, more assured of itself, will therefore become a stronger ally for us and treat Europe as an equal partner." The French foreign minister expressed satisfaction over the good French-German relations. "No one would doubt that the construction of Europe is first of all founded on this tandem," he said. On the situation in Poland, he said that "France desires to help Poland." He called for "helping the Poles to resolve by their own means a very serious crisis." [Text] [OW251302 Beijing XINHUA in English 1246 GMT 25 Nov 80]

DETENTE SEEN AS DECOY--Brussels, 24 Nov (XINHUA)--"It is not the Madrid Conference that changed our views. We always, and particularly now, maintain that detente is a decoy," wrote the Belgian paper "LA DERNIERE HEURE" in an article today. The article pointed out that "the Soviet Union can put its signatures on anything, since its signature is always meaningless." "When people are talking a great deal about detente, half of Europe is kept under bondage, the Red Army is carrying out a genocide in Afghanistan, the Cubans are running amuck in black Africa and Soviet missiles are trained on our cities, while we are incapable of organizing an effective counterattack," the article said. The author of the article also noted that "if Europe is far-sighted and conscious of the importance of its own security, it then should discard the nonsensical talk about detente but instead work, through the Atlantic Alliance, for organizing its own strength so as to be on guard against Soviet imperialism." [Text] [OW241851 Beijing XINHUA in English 1830 GMT 24 Nov 80]

AEGEAN NAVAL EXERCISE HELD--Athens, 24 Nov (XINHUA)--Naval forces from Greece, France and Italy began their joint naval exercise in the Aegean Sea midnight yesterday. Commanded by the Greek fleet Rear Admiral Deyannis, the large-scale exercise is participated in by Greek submarines, naval helicopters, fleet cooperation aircraft, auxiliary rocket launches, air force planes, together with air and naval units from France and Italy. The aim of the exercise is said to be to train personnel in various types of naval operations and to further develop cooperation among allied forces. As part of the exercise, naval units of France and Italy will visit Milos and Kavalla, Greece. [Text] [OW241512 Beijing XINHUA in English 1500 GMT 24 Nov 80]

ALBANIA, GREECE DISCUSS RELATIONS--Athens, 20 Nov (XINHUA)--The visiting Albanian minister of foreign trade, Nedin Hoxha, conferred with Greek Minister of Commerce Kalantzakos yesterday on the development of bilateral economic relations and trade. They discussed the abolition of the present "clearing" system of exchanges by 1 January 1981, dictated by Greece's entry into the EEC. By that time the accounts will be settled and all transactions will be conducted in free currency. The two ministers noted the considerable increases in the bilateral trade and affirmed the possibilities for further development and diversification of trade. The trade between Greece and Albania is expected to reach 60 million U.S. dollars. The two ministers also signed a protocol for regular meetings between the officials of the two governments at least once a year to review progress in bilateral economic relations and discuss ways of advancing them. [Text] [OW201801 Beijing XINHUA in English 1658 GMT 20 Nov 80]

LATIN AMERICAN-U.S. RELATIONS--Bogota, 20 Nov (XINHUA)--"Latin America should take the initiative and present a common position to the new administration of President-elect Ronald Reagan," Carlos Alzamora, permanent secretary of the Latin American Economic System (SELA), said here yesterday. He pointed out that a consultative meeting, now under preparation by SELA, on economic relations with the United States was important, because this would be the first time that Latin America puts forward a common proposal on its own initiative. Alzamora made the remarks at the end of his 2-day official visit to Colombia. He said that Latin America should let its voice be heard in multilateral dialogues, so as to enjoy the right of airing its own views and critical opinions. This entails political support from all governments, he added. [Text] [OW211654 Beijing XINHUA in English 1633 GMT 21 Nov 80]

SOVIET BASES CONCERN JAPAN--Tokyo, 22 Nov (XINHUA)--Japanese Defence Agency disclosed yesterday that the Soviet Union has so strengthened its military bases in Vietnam as to make them fit for its use for a long time to come. A wharf has been built in Cam Ranh Bay to accommodate nuclear submarines and facilities installed to increase the ability of providing supplies for warships. This poses a new threat to Japan, the Defence Agency said. Reporting this, the Japanese newspaper SANKEI SHIMBUN said today that this is the first time Defence Agency officials have stated that a wharf has been built for nuclear submarines in Cam Ranh Bay. The new wharf, Defence Agency sources believed, will make an important base for nuclear submarines of the Soviet Pacific fleet in their activities in the southwestern and central Pacific. Defence Agency sources also revealed that Da Nang has been expanded to become an electronic intelligence base capable of intercepting radio traffic over the entire South China Sea and keeping close watch on the movements of the Subic-based U.S. seventh fleet. The paper said that since the South China Sea is the artery of Japan's maritime transport, the presence of Soviet "home ports" in the region and the frequenting of them by Soviet surface and submarine vessels pose a new threat to Japan. EXPLOSION VICTIMS RECEIVE RELIEF--Bangkok, 18 Nov (XINHUA)--Government relief is being given to victims of the explosion in the anti-tank rocket factory here last Sunday, according to press reports. The Thai army headquarters set up a relief center immediately after the explosion to provide shelter and relief for victims. They were given money, food, clothes and other daily necessities. Thai Prime Minister Prem Tinsulanon yesterday presided at a memorial service for those killed in the explosion. After attending a religious ceremony for servicemen killed in the explosion, Thai deputy prime minister and supreme commander of the armed forces General Soem Na Nakhon told newsmen yesterday that Sunday's explosion would not reduce alertness in the defence of the border and the government was going to build a new munition factory outside the city of Bangkok. SRV SEIZES KAMPUCHEAN PADDY--Beijing, 25 Nov (XINHUA)--The Hanoi authorities recently sent several batches of Vietnamese to seize paddy from Kampucheans in Takeo and Kompong Cham Provinces, Radio Democratic Kampuchea broadcast today. On 7 November, the radio said, Vietnamese in five trucks crossed the border into Rumdeng commune in Kirivong district of Takeo Province. Using sickles and a harvester, these intruders gathered and loaded all the paddy on the trucks while many Vietnamese soldiers stood sentry to ward off the indignant Kampucheans.

The radio also reported that on 5 November Kampucheans in Taluong village of Memot district, Kompong Cham Province, were forced by Vietnamese soldiers to move to places around Vietnamese strongholds. No sooner had they left their homes than their paddy in the field was looted by the invaders. [Text] [OW250742 Beijing XINHUA in English 0710 GMT 25 Nov 80]

KAMPUCHEAN DELEGATION ENDS VISIT--Madrid, 24 Nov (XINHUA)--The Democratic Kampuchean delegation left Barcelona for Paris Sunday after a week-long friendship visit to Spain. The delegation was headed by Thiounn Mumm, president of the National Committee of Sciences and Technics. During its stay here, the delegation met the president of the Spanish Senate, the presidents of the committees of external affairs of both houses and the mayor of Madrid. The Committee of External Affairs of the Senate held a special news briefing, inviting the delegation to give a talk on the Kampuchean people's struggle against Vietnamese aggression and the situation in the whole of Indochina. The Kampuchean guests also met leaders of major Spanish political parties and other people of all circles and spoke on various occasions about the situation in Kampuchea. They said the Vietnamese invaders, through the puppet regime they imposed on Kampuchea, enslave the people there, endangering the national identity and culture. They stressed the Vietnamese invasion of Kampuchea serves the interest of Soviet expansionism in Southeast Asia. They hoped to receive broader international aid in their resistance to the Vietnamese aggressors. [Text] [OW250852 Beijing XINHUA in English 0834 GMT 25 Nov 80]

KAMPUCHEA FORCES ATTACK SRV STRONGHOLDS--Bangkok, 22 Nov (XINHUA)--In the last 2 days, Kampuchean armed forces launched a big assault on Vietnamese strongholds and transport lines in western Kampuchean border areas. The press here reported that at about five o'clock yesterday morning nearly 1,000 Democratic Kampuchean troops mounted a fierce attack on Vietnamese strongholds at Nimit village on Highway 5 and at places 5 to 6 kilometres east of Poipet and north of Phnom Mak Heun, to prevent the transport of Vietnamese weapons and ammunition to the areas bordering Thailand. During the 5-hour long battle, the Vietnamese used 130 mm cannons, 106 mm mortars and 107 mm rockets. The Kampuchean forces hit back heroically. On the previous day Democratic Kampuchean forces raided a Vietnamese stronghold in Kampuchea opposite Nong Ian village in Thailand's Aranya Prathet district. Bangkok newspapers believed that this was the fiercest battle fought by the Democratic Kampuchean forces since the advent of dry season. [Text] [OW221519 Beijing XINHUA in English 1500 GMT 22 Nov 80]

KAMPUCHEAN GUERRILLAS ATTACK SRV STRONGHOLDS--Beijing, 22 Nov (XINHUA)--Kampuchean guerrillas attacked two Vietnamese strongholds in Andeng Teuk and Kirivong Hill, Koh Kong Province, on 15 November and wiped out about 100 Vietnamese aggressors and destroyed three barracks, according to Radio Democratic Kampuchea today. On 10 November, they assaulted Vietnamese positions in Prek Prasap district of Kratie Province and Pailin area of Battambang Province, killing or wounding a number of enemy troops. [Text] [OW220727 Beijing XINHUA in English 0719 GMT 22 Nov 80]

CHINESE ENSEMBLE PERFORMS IN ROMANIA--Bucharest, 20 Nov (XINHUA)--The Chinese National Song and Dance Ensemble gave its first performance in Romania at the Republic Palace this evening immediately after its arrival here. The ensemble came on the eve of Romanian Prime Minister Ilie Verdet's visit to China. The performance, given by singers and dancers from nine nationalities in China, was enjoyed by 3,000 spectators. Among the dignitaries present was Suzana Gadea, alternate member of the Executive Political Committee of the Romanian Communist Party and chairman of the council of socialist culture and education. Before coming here the ensemble had toured Yugoslavia and Malta. It will visit Romanian provinces. [Text] [OW210256 Beijing XINHUA in English 0237 GMT 21 Nov 80]

SIAD COMMENTS ON U.S. BASES--Kuwait, 24 Nov (XINHUA)--Somali President Mohamed Siad Barre said: "Somalia had agreed to grant military facilities to the U.S. because the military presence of the Soviet Union in the area has been growing increasingly," according to a report from Abu Dhabi. In an interview with the Abu Dhabi paper "AL-ITTIHAD" published today, the president said: "It is necessary for the national security and interest of Somalia to take this step because in reality another superpower, the Soviet Union, exists and possesses military bases in some African and Arab countries." Referring to the Middle East crisis, the president said: "Israel must withdraw from all occupied Arab land including Jerusalem so that the legitimate right of the Palestinian people could be guaranteed." President Siad paid an official visit to the United Arab Emirates on 22 and 23 November. [Text] [OW250738 Beijing XINHUA in English 0704 GMT 25 Nov 80]

MAJLIS SPEAKER'S REMARKS ON HOSTAGES--Algiers, 20 November (XINHUA)--The American acceptance "in principle" of Iran's conditions was not enough to secure the release of the 52 American hostages in Iran, speaker of the Iranian Majlis Hashemi Rafsanjani said at a press conference here yesterday. During his 3-day visit to Algeria, Rafsanjani held talks with president of the national assembly Rabah Bitat, President Chadli Bendjedid and Prime Minister Mohamed Ahmed Abdelghani. Rafsanjani left here today for Libya. He will also visit Syria and Lebanon. His visit was to explain Iran's position on its war with Iraq, he said. [Text] [OW210847 Beijing XINHUA in English 0753 GMT 21 Nov 80]

IRANIAN PRESIDENT ADDRESSES RALLY--Tehran, 19 Nov (XINHUA)--Iranian President Abolhasan Bani-Sadr today warned against daggering the Iranian army in its back and urged to let the army fight. He was addressing a mass rally here marking the death of the 7th Century martyrdom of Imam al-Husayn. He urged the people not to believe the propaganda that the ground force had done nothing. He criticized some people for being engaged in the destruction of the army's morale. The president said that some people were planning to stage a by-election of the parliament when the nation was fighting a war. He stressed that the Iranian army was fighting under very difficult conditions. It got weapons neither from the United States nor from the Soviet Union. He said that during the war, the Iranians turned out enough weapons. Bani-Sadr vowed to carry the Persian Gulf war to a "decisive victory." He told the rally that the Iraqi president's peace offer was unacceptable. [Text] [OW191842 Beijing XINHUA in English 1831 GMT 19 Nov 80]

IRAN, IRAQ URGED TO CEASE-FIRE--Peshawar, 20 Nov (XINHUA)--A spokesman of the Islamic Alliance for Liberation of Afghanistan today appealed to Iran and Iraq to cease fire so as to strengthen the struggle against Soviet aggression against Afghanistan. In an interview with XINHUA in Peshawar today, the spokesman said that the war between Iran and Iraq, two Muslim countries, is most unfortunate because it weakens the unity of the Muslim countries and is detrimental to their common cause. He added that the war has in fact benefited the Russians for it has diverted attention of the people of the world from the Afghanistan issue and thus glossed over the crimes the Soviet aggressors committed in Afghanistan. He expressed the hope that the war would come to an end soon and the unity of the Muslim countries would be enhanced. [Text] [OW201744 Beijing XINHUA in English 1701 GMT 20 Nov 80]

PAKISTAN COMMITTED TO NORMALIZATION--New Delhi, 18 Nov (XINHUA)--Pakistan President Ziaul Haq in his letter to Indian Prime Minister Indira Gandhi reiterated Pakistan's commitment to carry forward the process of normalisation of Indo-Pakistani relations and to create conditions in which the process could be sustained, according to today's "Hindustan times." The letter was delivered to Prime Minister Indira Gandhi here today by Pakistani Ambassador Abdul Sattar. President Zia's letter also stressed that both countries should not allow avoidable issues to vitiate the atmosphere. Indian Ambassador Natwar Singh has reportedly held series of meetings in Islamabad over the last 2 months with President Zia to assess the various issues affecting the normalisation process. [Text] [OW191222 Beijing XINHUA in English 1214 GMT 19 Nov 80]

ALGERIA'S INTERMEDIARIES RETURN HOME--Algiers, 24 Nov (XINHUA)--An Algerian delegation which returned here yesterday from Tehran after delivering the U.S. response to Iran's conditions for the release of the American hostages, reported to Foreign Minister Mohamed Ben Yahia today on Iranian official reaction. Tehran Radio yesterday quoted a responsible source at the prime minister's office as saying that "the American response to the Iranian conditions approved by the Islamic consultative parliament is not explicit. Iran, on its part, demands a more explicit American response through the Algerian Government as an intermediary." [Text] [OW250750 Beijing XINHUA in English 0719 GMT 25 Nov 80]

DEVELOPING LITERATURE, ARTS TO SERVE FOUR MODERNIZATIONS URGED

Taiyuan FENSHUI in Chinese No 5, 15 May 80 pp 2-8

[Article by Ma Feng [7456 3536]: "Let Us Continue To Liberate Our Thinking [and Cause] Literature and the Arts To Flourish, in the Service of Building the Four Modernizations --Summary of a Report Given at the 4th Conference of Shanxi Province Literature and Arts Workers"]

[Text] Following the successful convening of the Fourth National Conference of Literature and Arts Workers, the Fourth Conference of Shanxi Province Literature and Arts Workers solemnly opened today, the first spring day of the 1980's. It has been nearly 17 years since the last provincial writers and artists' conference, and all of 30 years since the first provincial writers and artists' conference. A total of 1,168 representatives attended this conference, with more participants and on a greater scale than either the first writers and artists' conference convened in December, 1949 or the second writers and artists' conference held in August, 1956. This is a manifestation of the flourishing and development of the ranks of writers and artists of our province [Shanxi]. Our [veritable] army in support of literature and art all happily gathering under one roof to discuss together the great matter of the battleline for literature and art, in the second year of realizing the shift in emphasis in all party work, in the midst of the victorious advance of all the nation's people towards the four modernizations, and at the start of a newly-developed campaign for socialist literature and art, is a matter for great rejoicing. This distinguished gathering is an occasion for carrying on with what was accomplished in the past and inspiring what is to come after, and possesses important historical significance.

The Party's 3rd and 4th Plenary Sessions of the 11th Central Committee designated a correct political, ideological and organizational line for us. The 5th Session of the Party's 11th Central Committee has pointed out for us the great significance of being steadfast in supporting the party's leadership, improving the party's leadership, and heightening the party's fighting capacity. The second meeting of the Fifth National People's Congress, as well as Comrade Ye Jianying's speech at the mass rally celebrating the 30th anniversary of the founding of the nation [the PRC], summed up the past for us, clearly delineated the boundaries, and pointed out the direction in which we are to advance in the future. The Fourth National Representatives' Conference of Literature and Arts Workers convened last year, and in particular the congratulatory speech by Comrade Deng Xiacping and the report given by Comrade Zhou Yang, reviewed 30 years of battle progress in artistic and literary work, proposed our glorious task in literary and artistic work for the new period, and proclaimed the beginning of a newly-developed campaign for socialist literature and art. The report entitled "The Present Situation and the Present Task" given by Comrade Deng Xiaoping on January 16 of this year, and the speech made this February by Comrade Hu Yaobang at the colloquium on playwriting, elucidated many great questions regarding literary and artistic work in the past, and also raised high hopes for the nation's writers and artists. All of these review past history on our behalf, look toward the future, sum up our experience, determine what plan we shall follow, and create the best conditions for us. Our present writers and artists' conference, then, is being held under the most excellent circumstances.

The main themes of our present conference are: implementing the spirit of the Fourth National Conference of Literature and Arts Workers and, especially, the spirit of Comrade Deng Xiaoping's congratulatory speech and Comrade Hu Yaobang's speech; steadfastly maintaining the principle that practice is the only standard for testing truth; closely tying in [with the foregoing] the realities of literary and artistic work in our province; reviewing the path literary and artistic work in our province has taken over the past 30 years and, in particular, summing up the new accomplishments we have achieved over the past 3 years; researching how literature and the arts can serve the realization of the four modernizations and, in order to cultivate the new socialist man, raise the people's ideological plane, enrich the people's cultural life, build a high level of socialist spirit and civilization, and make the contribution that one ought to make.

In order to fulfill this important historical mission, we hope to be able to make this conference into a vibrant and lively meeting at which we will continue to liberate our thinking, democracy will be fully promoted, and everyone will feel completely at ease; make it into a meeting at which the excellent traditions of the party will be advanced, truth will be sought from facts, our experience will be summed up, and that will be brave in criticism and self-criticism; and make it into a meeting [characterized by] unity and unanimity, at which all are of one heart and one mind, advancing towards a new era of the flourishing of socialist literature and art. Below, I will discuss some views regarding literary and artistic work in our province from the three aspects of "a historical review," "3 years of bumper crop," and "the glorious task," and submit them for the representatives to discuss.

A Historical Review

In the 30 years since the nation was founded, our literary and artistic work has traveled an arduous and winding road. We have achieved great accomplishments, there have also been setbacks and lessons learned, and in the course of our sruggles rich experience, both positive and negative, has accumulated. To conscientiously sum up these experiences is advantageous for our progress in exploring, and getting a firm grasp of, rules for the development of a socialist literature and art, and for our doing better work in order to meet the needs of the new period for literary and artistic work.

Our province's first conference of literature and arts workers convened in December, 1949, was a great gathering of forces of writers and artists from each and every liberated area, under the new historical conditions of our party seizing political power throughout the country and shifting from a battle environment into one of peace and construction, and from the countryside into the cities. The new era has presented literature and arts workers with a new topic for study: our literature and art has shifted from serving the new democratic revolution to serving the socialist revolution and socialist construction; the object of our service is also broader and more wideranging than previously. The broad mass of literature and arts workers, having been put to this new test, and having adapted to this great transformation, are making a great effort to link with the masses of the new era and enable literature and the arts to advance along the same road as socialism. Over the past 17 years, we have carried on with the glorious traditions of the party's literary and artistic work, persevered in the direction of having literature and art serve the workers, peasants and soldiers, and carried out many new explorations and efforts, causing the ideology of literature and the arts to adapt to the economic base of socialism. We have created a large number of works extensively and deeply reflecting the rich and varied life and struggles of the masses in the socialist period, in order to satisfy the daily-growing needs of the cultural life of the masses and promote the flourishing and development of the enterprise of socialism, and [we have] made our proper contribution.

Naturally, in the course of 17 years, our literary and artistic work had shortcomings and mistakes, and some of the mistakes were even serious ones. The production of these mistakes was mainly due to the influence of the "left." They were made during three periods: the struggle against the rightist faction in 1957; the movement against rightist tendencies in 1959; and the criticism directed against "the theory of portraying middle characters" and the rectification of literary and artistic workstyles in 1964. On each of these three occasions many authors and works were erroneously criticized, and even subjected to unwarranted organizational discipline. However, the critical movements of 1959 and 1964 still did not go beyond the sphere of the internal contradictions among the people, and still did not, because of criticizing certain questions or certain works in an author's creative ideology, negate an author and all of his creative accomplishments. But, with the period in which Lin Biao and the "gang of four" were on the rampage, the entire literary and art world suffered an unprecedented disaster.

Looking back over the history of the past 27 years (aside from the 10 years of disaster created by Lin Biao and the "gang of four"), although during the 17 years preceding the Great Cultural Revolution there was a lot of interference from the "left," nevertheless the literary and artistic line that we put into effect was fundamentally correct, the achievements of literary and artistic work are everywhere to be seen, and the broad masses of literature and arts workers have made a very great contribution.

Of course, our road has not been level, the lessons we have had to learn have been very deepgoing and, moreover, we have had to pay a price in blood [for what we have learned]. The 10-year disaster of Lin Biao and the "gang of four," as well as the shortcomings and mistakes in our work during the 17 years preceding the Great Cultural Revolution, have caused us to learn a great many things from painful experience, and we have had to absorb many lessons, which can be summed up in the following points: First, in the ideological struggle over literature and art, the dividing line between political questions and literary and artistic right and wrong was obliterated, confusing two essentially different contradictions and ruining the implementation of the guiding principle of "double-hundred policy"; second, in literary and artistic creative work the limitations were too rigid, and the interference too much, violating the rules of literary and artistic creation; third, in literary and artistic criticism the moral tone taken was too high, and the punishments too many, which stifled democracy in literature and art.

If we want to persevere in the guiding principle of the "double-hundred policy," we must respect the rules, and develop democracy in, literature and art; these then, are the lessons of experience that we have gained from our historical review.

Three Years of Bumper Crop

In the 3 years since the "gang of four" was smashed, and in particular since the Third Plenary Session of the 11th Central Committee, profound changes have occurred in the face of literary and artistic work. The spirit of the third plenary session and its discussion of the problem of standards for truth heralded a great movement for the liberation of thinking. This liberation in thinking promoted the flourishing development of literature and the arts, and enabled the disaster area of the world of literature and art to change all at once into a bumper crop area. It was this way throughout the whole country, and also in our Shanxi Province. The party Central Committee highly appraised the contributions made by the broad mass of writers and artists since the smashing of the "gang of four," and considered that the literary and artistic world "is one of the most accomplished departments." That was a great encouragement for us.

Over the last 3 years we have brought order out of chaos, criticized the notion of a "dictatorship of a black line in literature and art" and all kinds of erroneous theories of Lin Biao and the "gang of four," and on a series of fundamental questions regarding guiding principles, lines and policies in literary and artistic work have driven away layer after layer of obscuring mist created by them, and returned to the correct path. Under the leadership of our provincial committee, combined with leading cultural administrative departments, we have done a great deal of work on implementing the party's policies and rectifying the many unjust, false, and mistaken charges. In 1978, we rehabilitated Comrades Zhao Shuli and Zhao Yuanlong, one after the other, effecting their thorough exoneration of the unjust charge relating to [the work] "Three Climb Peach Mountain."

At the same time as implementing [the party's new] policies on behalf of the harmed comrades, we also paid close attention to implementing the party's policies with regard to the works themselves, and also clarified a number of theoretical questions that had become confused. In the first part of December, 1978, the editorial department of FENSHUI convened a theoretical discussion meeting at which it was proposed, earlier than in the rest of the country, that the notion of "middle-of-the-road personages" needed to be overturned, and it was affirmed that the successive creative conferences definitely were not "black," and that there is nothing wrong with the idea of describing "middle-of-the-road characters," which enables characters to be more diversified. This was a great advance in our bringing order out of chaos theoretically.

In October, 1979 the editorial department of FENSHUI published an article jointly with the "Jiaochengshan" supplement of the SHANXI RIBAO, deeply criticizing [the periodical] SUMMARY, summing up our experience, and implementing the party's policies on behalf of the works of Comrades Gao Muhong, Yao Qingmiao, Sun Qian, Li Gubei, Tang Renjun, Li Suwei and Han Wenzhou of our province, which had been wrongly criticized.

Over the past 3 years, all associations, all areas, and municipal cultural federations have all done a great deal of work towards causing the enterprise of literature and art in our province to flourish. I feel that the most important accomplishment has been, following the shift in emphasis in all party work in adapting to the needs of building the four modernizations, we have begun to shift the emphasis in our work onto the building up of literature and the arts; that is, we must produce more works, and come up with more talent.

On the literary side, over the past 3 years there have appeared a number of rather good works--short novels like "Sowing at Dingling," "Spring Cowherd," "The Autobiographical Sketch of Practicality Fighting Practicality," "The Lucky Old Man," "Spring Wheat," "Lao Erhei Gets Divorced," etc, which deeply reflect the great mass of peasants' criticism of the trend towards extreme leftist thinking, the keen struggle with the "gang of four," as well as all kinds of contradictions in society that occurred during those disastrous years and months. [Works like] "Maples," "My Two Daughters," "'Roar That Breaks Heaven' Kills a Chicken," and "Reunion Diary" reflected the great trauma inflicted by Lin Biao and the "gang of four" on the lives and spirits of the people. Although these works are full of bitterness, blood and tears, indignation and sorrow, nevertheless they are not negative, and what they convey to people is awakening, thoughtfulness, and enmity for the "gang of four." [Works like] "Black Peonies," "Struggle," "In Car [Automobile No 48," "Old Kui Goes to the City," "The New House," and "Locks" [of a canal] described advanced characters who had gone ahead on the new long march; exposed and criticized bureaucratism, thinking that favors special privileges, and other corrupt practices and obstacles on the road to the four modernizations, boldly, forcefully, and fully striking home at the corrupt practices of the times, doing exactly what the masses approve of. Others, like "Big Car Wang Zhong," depicting the lives of workers, and "Country Diary" and "The Old Secretary," describing intellectuals and cadres, featured new breakthroughs in the portrayal of characters and the display of technique. Long novels like "The Chief Engineer and His Daughter," "Flames of War at Longgang," and "The Longshan Guerrilla Detachment" carried out valuable explorations into the diversification of subject matter and characters. These works' subject matter is extensive, and their characters diversified; in style they are either incisive, pungent, and forceful, or full of wit and humor; whether in form they are great works on a huge scale, or short and meaningful, all are filled with the intense spirit of the times and the strong flavor of life, present problems of actual life that have a pressing need for solution, express the mood and demands, the will and wishes of the broad mass of people, and elicited a strong response from them.

In the creation of poems and songs there has also been a new harvest. Over the past 3 years, there have appeared a number of poems by old and new poets in praise of the older generation, criticizing the "gang of four," describing the new long march, and reflecting the intense feeling and turbulence of life; such as the poetry collections "Red Sun in the Heart," "Flowers Offered to Zhou Enlai," "In Praise of Chairman Hua," as well as [the poems] "Written on the Most Tragic Day," "Peng Zongtu," "Ah, the Party, My Mother," "Tree of Longing," "Song of Truth," "Long Night, and the Sound of Horse's Hooves," and "Peace Flower Flood." After the smashing of the "gang of four," the poets of our province also published several poetry collections, like "Song in the Heart," "Chairman Hua Was in Luliang That Year," "Glorious Mount Luliang," and "Golden Mountains and Rivers."

In the areas of essays, journalistic writing, and writing for children there also appeared a number of good works approved by the masses; such as essays "Early Spring Season," "Remembering Ancient Arts," "Ode to the Silkworm Country," "A Martyr's Wish," and "Visiting Ding Ling Atop Laoding Shan"; journalistic articles such as "A New Branch of Buds Opens," "Precious Explorations," "A Heavy Responsibility on One's Shoulders," "Offering," "Sons and Daughters Coming From Taiwan," and "Case No 001"; and children's literature such as the middle-length novel "Ah---," and the short novel "Books."

On the drama side, great progress has been made over the past 3 years; there has been unprecedented activity both in the creation of new dramas and in performances, and many new plays appeared that were warmly received by the masses, the best of which were presented in the performances given at the provincial celebrations of the 30th anniversary of the founding of the nation held in June and July of last year. Of the presentation performances' 19 pieces, 13 dealt with the subject matter of real life and revolutionary history. The stage plays "Spirit of the Yellow River" and "No Way of Saying," the opera "The Unicorn-bone Bed," the popular Shanxi drama "Red Girl," the Meihu opera "Clouds Part, Round Moon," the Northern Shaanxi dramatic singing "Spring Wind Willows" and "Xu Fan Pavilion," as well as the Peking opera "Pearl Extracted From Raw Silk" are all new plays, and were all extremely successful both in their choice of subject matter, the depicting of character, their artistic conception, and in performance. Among them, the outstanding plays "Red Girl," "Spirit of the Yellow River," and "The Unicorn-bone Bed" all went to Peking and were performed as part of the celebrations for the 30th anniversary of the founding of the nation, and all won both creative and performance awards; the play "No Way of Saying" of our province's theatrical group also went to Peking and was performed, and was enthusiastically admired both by the literary and artistic world of the capital, and by the masses.

In the creation of motion pictures, we also achieved new accomplishments. "The Newly Arrived County Committee Secretary" (the same work as "Tear-masses") was one of the more outstanding of the films depicting life in the countryside that have appeared throughout the country since the smashing of the "gang of four," and it was considered important and well reviewed by all quarters.

In music, dance, fine arts, art songs, and photography, a lot of good works have also made their appearance over the last 3 years. As for music, in chorus and solo songs there are "I Hang a Wreath for Premier Zhou," and "In Praise of Chairman Hua"; in instrumental music there are "City's Edge Mountain," a solo for the bahu, and "Educating the New People Under the Big Willow Tree," a solo for bamboo flute. Of children's songs, "The Little Needle Shines Brightly" won the 1979 national young people's award for excellence in musical performance. In dance, the six dance solos "Startling Thunder," "Cherry Blossoms Send Friendship," "Spring Has Arrived," "Morning Drums," "The Angel Scatters Flowers," and "Mulan Follows the Army," as well as "The Woman Miner" and "One Grain of Food; One Heart" are all part of the new harvest of works created for the dance in recent years. In the fine arts, [there have been] the traditional-style paintings "The Noble Spirit Now Prevailing Has Been Passed on From Antiquity" and "The Examination"; the prints "Changjiang River Scene," and "Spring Light," and the cartoons "The Rubber Quota," "Meeting of Sisters," and "Intertwining Branches of Heroes"; among them, "The Examination" won second prize at the national fine arts exhibition held in celebration of the 30th anniversary of the founding of the nation, and "Meeting of Sisters" won the 1979 award for excellence in satire and humor. Scientific and general art works, like the propaganda painting "Vying With Each Other for Influential Connections," and the gouache paintings "Skillfully Eliminating the Mole-Crickets" and "Mechanized Raising of Chickens" all won prizes at the national exhibition of scientific and general art works. In art songs, there were pieces like the shulaibao "Talking," the clapper-ballad "Arguing About the Quota," the solo dialogue "Uncle Suer," the guci "The Owl Goes to Court," the Shandong clapper-ballad "Zhao Dalei Catches a Ghost," and the Taiyuan "Inviting a Guest." In photography, there were "Meticulous in Details," "Harnessing the Yellow River," "This Year the Hemp along the Lu River Is Good," "Harvest of Silkworm Cocoons," "Making New Paddy Fields," "Companions," and "Autumn Colors at Taihang Mountain"; of which "Meticulous in Details" won second prize at the national photographic exhibition in celebration of the 30th anniversary of the founding of the nation.

In the publishing of literary and artistic books and periodicals, new accomplishments have also been made over the past 3 years. The circulation of FENSHUI and SHANXI MASS LITERATURE AND ART has everywhere increased, and they have had a definite influence nationwide. The circulation of FENSHUI in particular fell to just above 20,000 for a time during the period when the "four pests" were on the rampage. After the smashing of the "gang of four," the periodical's quality has continuously risen, and it has been highly regarded by readers all over the country; at present its circulation has risen to nearly 150,000 copies, and it is already being distributed abroad. SONGS OF SHANXI, TAOYUAN LITERATURE AND ART, YUNGANG LITERATURE AND ART, as well as other literary and artistic periodicals put out by various local and municipal cultural associations have been published one after the other, becoming an important front for uniting and cultivating authors; the supplements of the SHANXI RIBAO and the TAIYUAN RIBAO have become more vivid and lively; literary and artistic programs on radio and television are becoming richer and more varied daily, and have all been welcomed by the broad masses; our provincial people's publishing house, with the cooperation of the various cultural associations, has published an anthology of Shanxi literary and artistic works covering the past 30 years--a 9-volume set covering 8 varieties of literature and art; 10 middle-length and long novels, and other literature and art books, making progress with enriching the cultural life of the people.

Literary and artistic theory and criticism are also becoming more active every day. Many theoretical workers do not care to appease the higher levels, do not follow the books only, do not want to keep up with the current tide or fashion only and are able to make a rather realistic and scientific analysis of authors and works, are bold in proposing their own, differing viewpoints regarding some theoretical questions, and have produced a number of rather high-quality articles.

In short, over the past 3 years the accomplishments in literary and artistic work have been immense in both the works and talent produced.

The Glorious Task

Our country has already entered a new historical period. The party Central Committee has clearly proposed the tasks for literature and the arts in this new period. These are: "Our literature and art should reflect the people's great struggle to advance towards socialist modernization, reflect our country's broad actuality and rich history, help the people to recognize and overcome the difficulties and obstacles on the road to advancement, and inspire their trust and their will to struggle. Whether with respect to satisfying the manifold needs of the people's mental lives, cultivating the new socialist man, or heightening the ideology of the whole society; culture, the moral level, and literary and artistic work all bear an important responsibility that cannot be taken on by other departments." This was the fundamental direction for the development of literature and the arts in the new period which the party has clearly pointed out for us, and is also the common program of action of the broad masses of literature and arts workers.

In order to fulfill the glorious task that the new period presents us writers and artists with, first it is necessary to go through a study, discussion, and inquiry of a number of theoretical questions in literary and artistic work at present, in order to direct our literature and art workers onward along the correct path.

First, the problem of liberating our thinking. What, after all, is to be considered liberating one's thinking? Is it going too far to liberate one's thinking? In our opinion, liberated thinking is to be understood in direct opposition to having a restriction on one's thinking. The Third Plenary Session of the 11th Central Committee proposed a liberation in thinking as being in direct opposition to the mental shackles and modern-day superstitions created by Lin Biao and the "gang of four." What is called a liberation in thinking indicates an understanding, under the direction of Marxism, that employs the ideological line of dialectical materialism, [is armed with the] weapon of [the principle that] practice is the only standard for testing truth, breaks down the restrictions of force of habit and subjective bias, studies new situations, solves new problems, and seeks to gain an understanding of things that is consistent with objective laws. To express it in one sentence, being in favor of a liberation in thinking is being in favor of seeking truth from facts; in order to liberate our thinking we must combine the brave revolutionary spirit of breaking through forbidden areas with the spirit of seeking truth. In the problem of liberating our thinking, it is necessary to oppose two erroneous tendencies that appear to be diametrically opposed but which in reality both interfere with the liberation of thinking. One is thinking that is still in an ossified or semi-ossified condition, which carries out all kinds of criticism and creates all kinds of resistance to a liberation in thinking, but which in reality has no real understanding at all of the precise connotation of a liberation in thinking, or it's important meaning. The other is considering a liberation of thinking to be the galloping at will of the individual's subjective will and wishes, without any standard or limit at all, to the extent that [the important thing becomes] who is the most bold, who exposes the most of the dark side of things, and who points out the most defects, without due regard for the benefit of the party and the people, without regarding the social influence of a work, and ignoring the aesthetic principles of art, so that one can write anything one wants any way one wants; it is hard to draw a clear line between this kind of "liberation of thinking" and anarchy and extreme individualism. Therefore, since we want to be brave in liberating our thinking, it is also necessary to be brave in throwing out all erroneous thinking that runs counter to Marxism-Leninism; since we want to be brave in liberating our thinking, we must also be brave in resisting all erroneous thinking. Only in this way can we enable the liberation of our thinking to proceed along the correct path.

Literature and art are a kind of creative mental labor. We must sharply bring to light new changes and new patterns in the contradictions in society in the new era, portray new characters that are representative of the new age, and create a new socialist literature and art in service of the four modernizations; if our thinking is not liberated, how can we accomplish this by sticking to conventions and following the beaten path? Only if we liberate our thinking can we gain an accurate understanding of the continually changing objective realities, and only then can we arrive at an objective portrayal of them in our literary and artistic works. Therefore, in order to cause literary and artistic creative work to flourish, we must be in favor of continuing the liberation of thinking. This point is definite, and cannot be changed. Secondly, [there is] the question of literature and the arts serving the four modernizations. The realization of the socialist four modernizations with one mind and with one heart will decide the great enterprise of our ancestral nation's prospects and fate for a thousand years, and is the greatest advantage, wish, and hope of the people. For literature and art to depict the building of the four modernizations, to depict the people's brave advance towards the four modernizations, to express the revolutionary ideals and scientific attitudes of our age, to have lofty sentiments and creative capacity, for those creating the enterprise of the four modernizations to have a broad outlook and a spirit of seeking truth, and a brand-new ideological face for the masses; and to inspire the will to struggle of the broad mass of workers, peasants, soldiers and intellectuals; are the responsibilities of the entire body of literature and arts workers--responsibilities too great to be expressed in words. In the new historical period, literary and artistic work is in the service of the dictatorship of the proletariat; that is, it must serve the most great political task and most great political objective of building the four modernizations. Of course, literature and art's service on behalf of the four modernizations is certainly not limited to the creation of works that depict the process of the four modernizations; works that expose the pernicious influence and criminal actions of the "gang of four," or that expose bureaucratism, thinking that favors special privileges, as well as social problems and social phenomena such as anarchism, individualism, etc--works that remove obstacles and clear the road for the four modernizations--can also in the same way serve the four modernizations. Literature and art's service of the four modernizations is also not limited merely to subject matter that directly depicts the process of the four modernizations or that clears the road for the four modernizations; all works that can enable people to obtain education and enlightenment, to derive entertainment and the enjoyment of beauty, can in the same way serve the four modernizations. Because literature and art's service of the four modernizations is actually service of the great mass of the people who are engaged in the building of the four modernizations, and the people's need for cultural life has many aspects to it. [Whether a work be] on a grand or minute scale, in a serious or jocular vein, emotional or philosophical, as long as it is a work that can enable people to be affected, to obtain some educational value, and to absorb trust and force, then it is what the people need. For this reason, literature and art's road for serving the four modernizations is very broad.

Thirdly, in the case of literary and artistic creation one must consider the social result. Literary and artistic work is a kind of social activity on the part of the author; as soon as a work appears, then it will of necessity produce a definite social influence, which is its social result. In his report "The Situation and Task at Present," Comrade Deng Xiaoping pointed out: Literature and art cannot possibly be separated from politics. Any progressive, revolutionary literature and arts worker cannot but consider a work's influence, and the advantage of the people, the nation, and the party. Regarding its effect upon the people, literary and artistic work has a particularly great influence upon the direction of the thinking of the young, and has a very great influence upon the stability and unity of society. All comrades in the literary and artistic world must frequently and self-consciously, placing greatest emphasis upon the [political] situation as a whole, struggle unstintingly to raise the social enlightenment of the people, particularly of the younger generation.

Literature and art constitute a particuar ideology that has a hidden, unseen effect upon people; good works can lead people upwards positively, and bad works can also have a negative influence. This, then, requires that our authors and artists keep their own responsibility firmly in mind at all times, consider the influence of their works upon the people, and energetically strive to offer them the best and most nourishing mental food.

Literature and art must depict the essential character and main trends of our age; that is, they must treat our party accurately, treat our socialist system accurately, treat the masses accurately, treat our soldiers accurately, and treat Marxism-Leninism and Mao Zedong Thought accurately; they must depict our country's society in the process of realizing a victorious forward development, and present the many, many new things and characters that spring up on all fronts. Of course, our age is also one in which old is being replaced by new, and the old is being eliminated in order to make way for the new. In the life of our socialist society, brilliant, beautiful things exist, and dark, ugly things also exist, yet, comparatively, the former far outweigh the latter in occupying a major, leading position, deciding society's forward direction. We must extol and sing the praises of brilliant and excellent things among the people, so that the more people may imitate them; at the same time one must also expose dark and ugly things, dissect them, and criticize them so that people may be on the alert for them, clearly mark them off, and work hard to overcome them. This is socialist literature and art's effect of unifying the people, educating the people, and remaking society, and is the identity of authenticity and tendentiousness in the work as the author depicts life truly, which includes the author's [political] standpoint and aesthetic attitude. Mr Lu Xun, in speaking of the social function of literature and art, said: "Literature and art are the flames given off by the spirit of the nation's people, and at the same time they are also the lamplights directing the spirit of the nation's people on their forward path." For this reason our authors, whatever the subject matter they write about, must all manifest in their own works the advanced thinking that is representative of the progressive currents of the age, enabling literature and art to become "lamplights" to lead the people onward. Fourthly, there is the question of originality in literature and art. Comrade Zhou Enlai, in summing up the creative experience of socialist literature and art, emphatically pointed out: "Literature and art generally must have a spirit of originality." The particular characteristic that distinguishes artistic production from all other forms of material production is its originality. Only when literary and artistic creation brings originality into full play can works of real artistic value be produced; if there is no originality, and no unique artistic conception, then it is absolutely impossible to make the work have any artistic charm. All excellent works generally possess originality. What the expressions "adopting an original approach," "having a unique style," "breaking new ground," and "being unconventional" are talking about is originality. This kind of originality must not only have a new aspect stylistically, its content must also have new ideas, the two forming a perfect unity before it can have a long artistic life or possess the artistic charm necessary to move people. Therefore, originality is also a sign of a work's maturity.

During the period that the "four pests" were on the rampage, owing to their manufacture of a whole set of models for literary and artistic creation, works were created with a voiceless, faceless uniformity. Their pernicious influence was extremely broad, and has not been completely eradicated even to this day. There are certain authors who do not themselves take source materials and dig up themes from life, or employ their own unique artistic conceptions to engage in creative work, but always tread in the footprints of others, and when they see that a certain kind of work is in fashion for a time, they go after it like a flock of ducks and take pains to imitate it as closely as possible, often with ludicrous results; this way of doing things is completely in violation of the principles of artistic creation, there is no enterprise whatever in it, and it is most intolerable. The lack of originality in literary and artistic works is one of the main causes of the tendency to engage in creative work according to set formulas. Therefore, if we do not pay attention to the question of originality, it will be fundamentally impossible for us to raise our level of literary and artistic creation to new heights. No accomplished writer or artist ever follows the paths of convention or imitation. They always show craftsmanship and originality, and in their own works open up a completely new area of artistic operation, enabling their readers to gain new ideological nourishment and new artistic enjoyment from them. This clearly indicates that originality, as far as literary and artistic creation is concerned, is not something one can either have or not have, but is indispensable at any time and under any circumstances; this is a rule of art that does not admit of being overlooked.

Fifth, there is the question of going deep into life and remaking [people's] view of the world. We all know that literature and art are the reflection of the life of society; it is taking the whole of life and making it one's subject for description. Therefore, an author must on all occasions go deeply into life, be loyal to life, and write about what he himself is most familiar with, or has been most deeply affected by--things that have been given a lot of thought. Of course, if authors are not familiar with certain subject matter that is important and needed by the people, then we must direct and help them to become familiar with it. Comrade Ba Jin said: "A work must go up; [i.e., increase people's awareness] an author must go down" [to research his subject matter]. This was very well put. If one does not go deeply into life, then how can one depict life properly? The reason some of our literary and artistic works have become so uniform and without originality, with many characters seeming like those we have seen before, and many works that seem to have come out of the same mold--although there is some connection with the degree of the authors' capacity for artistic expression, nevertheless the most important reason is still an author's own lack of having been uniquely and deeply affected by life. And so, he can only be affected by things that other people have already been affected by long ago, and see things that have already been seen by others. In this way, it is impossible to write works of any value. Our literature and arts workers provide spiritual food for the people, and are the engineers of the soul for the human race. However, in order to educate the people, it is necessary first to be educated oneself; in order to give people nourishment, it is necessary first to absorb nourishment oneself. In a word, one must strengthen the remaking of one's world view. For this, it is necessary for us to exert ourselves to study Marxism-Leninism and Mao Zedong Thought, and it is necessary for us to absorb rich nourishment from the mass of the people. The people are the mother of literature and arts workers. The people need art, but art needs the people even more. This relationship definitely cannot be reversed.

In order to fulfill the glorious task that the new era has endowed us literature and arts workers with, we must become more active, work hard, produce more works, produce more talent, and have outstanding accomplishments in order to greet the party's 12th People's Congress, and to celebrate the 60th anniversary of the founding of the party.

First of all, we must actively develop all kinds of literary and artistic creation, and raise our ideological and artistic level. After this writers and artists conference, we hope that our writers and artists will plunge themselves into the seething currents of life, absorb the richest artistic source materials, employ our many and varied artistic methods to depict the course of the struggle to build the socialist modernizations, reflect the magnificent picture of the new long march, portray the artistic subject of advanced characters occupying the front ranks of our age, present and solve the new problems that the people and the age are urgently concerned with, and inspire the mass of the people in their continuous advance in the struggle to build the four modernizations. We must also more forcefully and more thoroughly expose the antirevolutionary crimes of Lin Biao and the "gang of four," eliminate the pernicious influence of their extreme leftism, and enable our socialist enterprise to continue the advance along the party's correct political and ideological line. Regarding this kind of work, however, people are no longer satisfied with stopping at an ordinary castigation and exposure of the crimes of Lin Biao and the "gang of four." What they need are more deepgoing, more condensed works on a higher artistic level; works that offer a penetrating analysis of the historical conditions and social origins that produced these catastrophes; they should also have works that enable people to see life's prospects, are helpful in healing old wounds, and that give people beautiful hopes. They also need works that proceed from a wish to benefit the entire party and the people of the entire nation; expose and criticise bad bureaucratic practices, the feudal concept of special privileges, the narrow viewpoint of small producers, conservative thinking and all old consciousness of sticking to a beaten path, and old habits; criticize the bourgeois, petty-bourgeois, and anarchistic thinking that is blocking the road to society's advancement; and help the mass of the people to understand life, remake their lives, and eliminate the obstacles on the road to the four modernizations. Our literature and arts workers should also portray the heroic and outstanding achievements of the older generation of proletarian revolutionaries and revolutionary martyrs, use revolutionary traditions to educate the people, particularly the young, cultivate their socialist virtues and character, and help them to grow up strong. We must also describe all kinds of other historical and actual subject matter, depict the varied lives of ancient and modern people, including their labor, struggles, and vicissitudes of life, in order to satisfy the mass of the people's many-sided need for cultural life.

Secondly, we must persevere in literature and art's direction of serving the workers, peasants, and soldiers, and actively develop mass cultural activities, causing socialist literature and art to progress further towards becoming universal. Peasants occupy the vast majority of the population of our province. So mass culture in this case means mainly life in the socialist countryside. Of course, our province is also an industrial base area centered on the production of coal, and there are also a rather large number of workers. Therefore, we definitely must place importance on cultural activities for the mass of workers and peasants. Each one of us literature and arts workers must not forget the mass of workers and peasants occupying 90 percent of the population; they are the main force army for the realization of the four modernizations, and our literature and art is first of all to serve them. Therefore, all professional cultural organizations, large and small cultural centers, as well as the departments of motion pictures and the publishing and distribution of books, must all direct themselves toward the fundamental levels of society, and adopt realistic, effective measures to enrich the masses' cultural life. At the same time, we must actively foster the masses' free-time cultural activities in order to satisfy the local masses' need for cultural life.

Thirdly, we must augment our work on the aspects of theoretical research, literary and artistic criticism, and continuing our literary and artistic legacy. At present, we must place particular importance on research into the history of local Shanxi literature and art and the works of various authors; for example, research into literature and art in the several revolutionary base areas in Shanxi, the history of local Shanxi traditional drama and famous performing artists like Ding Guoxian, as well as their representative repertoires, research into ancient Shanxi writers and artists, research into famous writers such as Zhao Shuli, and so forth. We must continue to invigorate literary criticism, and study the great theoretical questions in literature and art at present in order to direct and promote the development of creative work. Associations having the right prerequisites, or all local and municipal cultural federations must all set up their own theoretical study groups or study rooms, cultivate theoretical talent, and gradually set up a theoretical system for their own category of art.

We must place importance on the work of continuing our literary and artistic legacy, and collecting materials. Our province's legacy in the art of traditional drama is particularly rich; we definitely must do all we possibly can to continue with it. We must continue to collect and collate folk literature, folk music, folk dances and works of folk art, publish materials on research into folk literature and folk arts, and augment theoretical research into folk literature and arts.

Fourth, the discovery and cultivation of talent is a great matter possessing strategic significance for the flourishing development of the enterprise of literature and art. All cultural associations and all local and municipal cultural federations must make every possible effort, in cooperation with leading cultural administrative departments, to cultivate all kinds of literary and artistic talent in order gradually to change and overcome the present serious phenomenon in the world of literature and art of there being a temporary shortage of new talent and a lack of people to continue [the kind of work others have been doing], or of people's talents being submerged. Every association should continue to do a good job of conducting all types of lecture and study meetings and reading classes in order to enhance the cultivation of young writers and artists. We must encourage the taking on of pupils by old writers and artists so that they may pass on their art to others and cultivate the talent that is to arise after them. We must continue to conduct awards activities for all varieties of literary and artistic works and performances. Next year is the 60th anniversary of the founding of the party, and I suggest that all associations in a planned way hold a number of awards activities or literary and artistic competitions in order to discover excellent works and outstanding talents.

In order to fulfill the glorious task bestowed upon us literature and arts workers by the new age, we must progress with augmenting the work of literary and artistic associations. Literary and artistic associations are subordinate to people's organizations. The main tasks are unifying the broad mass of literature and arts workers, producing works, and producing talent. In our work, we must extensively adopt the method of social activities, implement democratic principles, truly depict the unified nature of the people, and strictly avoid oversimplified and rigid administrative methods. We must, under the leadership of the various local party committees, in coordination with leading local cultural administrative departments, on our own initiative, actively and creatively develop our work, causing it to be vital, vivid, and most successful.

Comrades! The 1980's will be an era full of light and hope, an era of decisive significance for the realization of the four modernizations, and will also be an era in which we literature and arts workers will bring our talents into full play, and will accomplish much. The broad mass of literature and arts workers of our province, having passed through a long period of struggle, storms and severe trials, warmly love the party, socialism, and the people; and we are full of confidence in our undertaking. If only we proceed along the same path with the party, and along the same path with the people of the entire province, crossing over together in the same boat with one mind and one heart, using all of our intelligence and skill, and all of our heart's blood and energy, then we will definitely surpass our province's present literary and artistic level, create outstanding literary and artistic works and performing arts worthy of the great people of our nation and of the great age we have entered, produce a whole new period of great literary masters and outstanding artists, add new treasures to our national treasury of literature and art, write a new page in literary and artistic history, and make a new contribution towards raising the scientific and cultural level of all of the people, developing a noble, rich, and variegated cultural life, and building a civilization with a high degree of socialist spirit.

The party's 5th Plenary Session of the 11th Central Committee recently held calls on all party members, together with all of the people in the country, to rally closely around the party Central Committee, all be of one heart, work intensely, and create outstanding accomplishments on all fronts with which to greet the holding of the party's 12th session. To translate the call of the 5th plenary Central Committee meeting into real actions on the part of each one of us literature and arts workers is the hope of this conference, and of all of the people of the province for us.

There is a poem by Xin Qiji, entitled "Han Palace Spring," the first line of which is "Spring has returned." Indeed it has; the first spring day of the 1980's has already arrived. The fine spring day for the blossoming of a hundred flowers and the great flourishing of literature and arts has also arrived. Let all of us in this great cultural army of ours join hands, unite our hearts and, rising to meet the glorious spring sunlight, stride forward towards new heights in literature and the arts!

NOT EMPLOYING TALENTED PEOPLE PROPERLY SAID INTOLERABLE

Guangzhou GUANGZHOU RIBAO in Chinese 28 Aug 80 p 3

[Article by Fang Ge [2455 2047]: "Talented People Are Definitely Not Private Property"]

[Text] Since the smashing of the "gang of four" much talent which had been buried has "broken cover" and moves about freely, showing what it can do in a variety of fields. Here lies the hope of the four modernizations.

Yet in the excitement and happiness, it cannot be said there is no anxiety. Because in the matter of talent, things cannot be just as people would want, and there are still a great many "covers." The leadership of some units has drawn a firm line and looks on their jurisdiction as an independent kingdom and the talent in the units under them as private property, using a variety of excuses to keep talented people whose training is not being used in the right way from returning to their fields, and this is one of these "covers."

The press has exposed many cases like this recently. For example, an assistant researcher who has spent many years in research on the origin of life still works on a citrus farm, which is irrelevant to his specialization. When another unit asked that he be transferred because they had accepted a scientific research task and urgently needed someone with his kind of specialty the answer they got was: "Because of the needs here we cannot agree to the transfer." A technician who had pursued basic scientific research in metal physics for many years was assigned to work on computer hardware maintenance and daily generator room duty. Another unit needed someone with his talents to participate in "photosynthesis research" which is one of the 14 key national research topics. He himself had repeatedly asked to return to his own field, but his unit blocked his request and would not let him go. It is said that in Guangzhou there are still over 1,000 specialists who are covered with this kind of "cover," not using what they have learned and not being employed where they would do the most good. They have fields but cannot go into them, they are heroes with no place to display their abilities. Those units who are thirsty for capable people can only "hope for talent and sigh."

Those who are leaders of units do not want to let the talented people "get away," hoping that if they have a group of talented people together the work will be done well, and that frame of mind is understandable. But from the point of view of the interests of the entire nation, these leaders should be subjected to criticism. Because these leaders are thinking only of the little part they control and have completely forgotten about the larger part of the four modernizations. In feudal and capitalist societies where the means of production are dominated by landlords and capitalists, talented people also become their private property and can be locked up and even sold at a high price. We are a socialist country. All spiritual and material wealth is created by the people and publically owned by all the people. Talented people are also trained by the nation and the people and similarly belong to the nation and the people, so by rights they should be assigned and distributed by the nation. That way of doing things which shifts one's troubles onto others, only permitted transfers in and not allowing transfers out, runs counter to the guiding principles of socialism.

Perhaps these leaders of units can explain away that the reason they did not let the talented people go was because of the needs of the work. It may be a little excessive to say that this is entirely without reason. As far as talented people are concerned, it is always better to have them be without, and to have one more than to have one less. For example, if you make an agricultural machinery specialist tend cattle, he will be able to do a good job of raising them, or if you let a high energy physics researcher take the responsibility for teaching middle school physics classes, he will also be able to perform the task. The question is, where to put that one talented person so that he can make the most of his abilities and create greater wealth for mankind. In this regard, by all means we do not want to be shortsighted and by trying to save a little, lose a lot. If Pingyuan Jun [1627 0626 0689] of Zhao in the Warring States Period had not chosen Mao Sui [3029 6659] as part of his entourage on his embassy to Chu, Mao Sui would not have been able to render meritorious service to his country and would have continued to be just an obscure hanger-on. If in the beginning, the middle school where Chen Jingrun [7115 2529 3387] taught had blocked him and not let him go, I think that he would never have been able to become the world-famous educator that he is today. For a talented person to make the most of his abilities, of course is related to the subjective efforts of the talented person himself, but the objective conditions are also very important. People often say that good steel should be used for knife blades, and by the same logic we should place talented people in suitable positions and let them fully give free play to their abilities and aspirations.

Suppressing talented people is absolutely intolerable. We hope that those comrades who abandon public issues for personal reasons will stand a little taller and look a little farther and take the initiative to remove the "covers" and let the many talented people show themselves and develop great plans for realizing the four modernizations.

PARTY AND STATE

RECTIFICATION, REFORM, KEEPING IN TOUCH WITH REALITY URGED

Guangzhou GUANGZHOU RIBAO in Chinese 25 Aug 80 p 1

[Article by Huang Jinrui [7806 6855 3843], Mai Huafang [7796 5478 5364] and Ma Liduan [7456 0448 4551]: "Through Study of the 'Guiding Principles' the Members of the Guangzhou Enamel Plant Party Committee Leadership Self-consciously Accept the Supervision of the Masses and, Keeping in Touch With Reality, Carry Out Rectification and Reform"]

[Text] To carry out thoroughly the spirit of the Fifth Plenary Session of the Party Central Committee, the party committee of the Guangzhou Enamel Plant in mid-May began to carry out party member education through study of "On Certain Principles of Political Life Within the Party" and the revised draft of the party constitution. In addition, maintaining close ties with actuality they carried out rectification and reform with emphasis on resolving some questions in the livelihood of the masses, and not preliminary results.

Focusing on problems which exist within the party, the party committee of this plant had party members attend party classes, organized discussions and conducted an open book examination with regard to the nature of the party, party democratic centralism, party discipline, the party's excellent traditions and work style, and the vanguard model role of communists.

They organized party members to get in close touch with reality, and review the ideological confusion which was created by the 10-year catastrophe, summarized the lessons of experience looking for gaps in comparison with the "Guiding Principles" and began criticism and self-criticism.

In educating the party members, the members of the party leadership made full use of the excellent tradition of accepting the supervision of the masses and took the initiative to listen to the views of party members and the masses. The nine party branches in the plant separately convened personnel forums which began criticism of problems in the leadership work of the party committee. Under their prodding, party members and leadership cadres at plant and shop levels and party members generally began to investigate the conduct of party line, direction and policy, to investigate party training, the organizational discipline, mass viewpoint, and the activity of advanced role models, and carried out rectification and reform.

They conscientiously studied the views of the masses to distinguish their importance and urgency. Those things that could be handled right away were attended to immediately; those that could not be resolved for the time being, were resolved by stages, with emphasis on several items which were related to the livelihood of the masses.

First of all was improving the working conditions of the masses. In some shops, broken and completed enamel products were piled so high that the workers had to use a floor-standing fan to lower the temperature, but the fan was constantly blowing over the piles of broken and completed pieces, so to protect the pieces, the workers often didn't turn on the fan, preferring the higher temperatures in order to maintain production. In the past, the workers had come up with many ideas, but the situation still wasn't resolved. This time, the members of the plant's party committee changed their work style. They carried out an inspection of the site, added 30 fans and did a good job of lowering the temperature and preventing heatstroke. They also rebuilt the production passage so that the working conditions for the workers would be improved.

Next, they improved health protection work. They adopted some effective measures with regard to the workers' diet, environmental hygiene inside the plant, and reduction of dust pollution. For many years they had been unable to resolve the problem of a ditch at the plant which they could not get the polluted water out of and which stank to high heaven. This time, they improved the smelly ditch and also rebuilt the waste buckets in the toilets, improving environmental hygiene. In addition, they added clinics for female workers, improved leadership of the workers' dining halls, improved meals, and each time the temperature goes over 35 degrees, they increase the supply of cool foods to the workers.

Next, they helped the masses make good arrangements for their families and avoided the fear of problems at home. They strengthened leadership of basic construction, getting a grip on construction of dormitories for workers, and will strive to build over 4,000 square meters of housing by the middle of next year. They will improve managerial and educational work in day care centers and kindergartens, and increase child care strength to raise the quality of health care and education work for children and infants. In addition, they made suitable arrangements for jobs for the children of employees, took hold of the work of dealing with intellectual youth returned from the countryside and retired workers and staff members, and will actively help staff and workers resolve the actual problems of their domestic lives.

In addition, the plant also strengthened leadership of after work education of staff and workers, to help the workers improve culture and science and technological knowledge, they operated afterwork classes in drafting, calculating with an abacus, mathematics, and enamel technology, to supply the conditions for workers to study culture and technology.

RAPPROCHEMENT BETWEEN CHINA, THE WEST DISCUSSED

Neuilly Cedex DEFENSE INTERARMEES in French No 52, Oct 80, p 3

[Editorial by G. de Briganti: "China and the West"]

[Text] Ever since the death of Chairman Mao and, above all, after the famous "gang of four" disappeared from the Chinese political stage, the Chinese leadership, now more pragmatic, have not concealed their wish to achieve a rapprochement with the Western world which they consider China's natural ally because of a common hostility toward "Soviet hegemonism."

This wish for a rapprochement between China and the West was manifested, first of all, through timid approaches in matters of international politics. Subsequently it was concretized through the establishment of diplomatic relations with a number of Western countries. Currently, it is pursued through commercial and cultural exchanges of rising importance.

Nevertheless, an area remains where exchanges have still not exceeded a very modest level. Naturally, this applies to armaments. In effect, what has been written notwithstanding, sales of military equipment or of equipment with military application concluded in the past few years have applied only to helicopters (MBB Bo-105 and SA-362 Dauphin 2). This has been due to a number of reasons two of which are of overwhelming importance:

China's monetary reserves are insufficient to allow the financing of all the modernization programs which its government would like to undertake. The modernizing of the armed forces is the last of the "Four Modernizations." Available funds are allocated, first of all, for the agricultural and industrial sectors. China would have no difficulty to borrow on the international money market to finance its technological purchases. However, the Chinese leaders are unwilling to contract debts particularly considering the size of the interest they would have to pay. Therefore, we can reveal that negotiations for the purchase of British Harrier ADAC/V were dropped by China because of the high cost of such aircraft;

Despite the speed with which the rapprochement between China and the Western world has taken place or, perhaps, because of that speed itself, the Western countries are showing a reticence in supplying that country with modern military equipment, fearing an eventual and just as speedy Chinese turnaround which, encouraged by a new leadership, could return China to its position of 20 years ago.

Nevertheless, a slight change is being noted in the Western position, that of the United States in particular, which authorized, quite recently, the sale of C-130 Hercules and CH 47 helicopters to China. Furthermore, the American government has granted 400 export licenses for China covering military or paramilitary equipment.

This slow development does not suit the Chinese leadership. All the high officials with whom I spoke in China emphasized the contradiction they see in American policy (this occurred in August, before the decisions I mentioned were made). Actually, the Chinese are astonished by the fact that despite their clear desire for a rapprochement and even though they consider themselves as of now the allies of the Western world, the Americans are still classifying China as belonging to the "Group Y" countries (communist countries) to whom any sale of military ordnance is forbidden in principle. This contradiction, even though contradicted by the facts, is exasperating to the Chinese leaders who would like the Western world to publicly acknowledge China as one of its allies with all that this involves on the official and administrative levels. This desire to be acknowledged as full allies was repeated to me a number of time insistently and emphatically, and it is quite plausible that such a recognition of China's new status would be followed by an increase in arms purchases by the People's Republic. The Chinese leaders would be encouraged in their policy of rapprochement. Their positions would be strengthened and they would no longer have the impression of facing the uncertainty of the Western world which, while opening its political arms to China, has kept its reserve in an area which Mao's successors consider as the most important: defense in the broad meaning of the term.

MILITARY AND PUBLIC SECURITY

UNDERGROUND SHELTERS, CIVIL DEFENSE

Neuilly Cedex DEFENSE INTERARMEES in French No 52, Oct 80 p 19

[Article: "Underground Shelters and Civil Defense"]

[Text] Being essentially defensive, Chinese military doctrine ascribes very great importance to civil defense, whose achievements greatly exceed anything accomplished by the Western countries. In this case, following the writings of Mao Zedong ("Dig Deep Galleries"), the Chinese leaders have assigned two distinct roles to underground construction: the evacuation of civilian populations and support of fighting units which, should China be occupied, would set up a real armed resistance force extensively using the underground shelters and communications tunnels, as was the case during the "war of resistance against Japan."

During our trip to China we had the opportunity to see a big underground shelter south of Tian'anmian Square in Beijing. Its main purpose was to insure the protection of the civilian population. Each Beijing district--a district is an administrative unit within a ward--has an underground shelter generally built by its residents; these shelters are connected with a network of tunnels reaching even the most outlying suburbs from the center of the city, allowing the underground evacuation of the district population. The shelter we visited was built between 1969 and 1979 as a result of the border incidents with the USSR. Its building was in accordance with the Maoist doctrine according to which the people were to build a "big underground wall." It consists of three levels respectively located at a depth of 4, 8 and 15 meters. The access ways are on the first level (armored doors, guard premises, etc.) allowing the entry of 10,000 people. A series of armored doors and camouflaged stairways lead to the second level where the "life" areas are located (dormitories, assembly hall, armory, kitchens, etc.), and the "technical" areas (electric power and air conditioning systems), as well as access to tunnels leading to the surrounding shelters. The third level reached through two stairways, equally protected by armored doors, contains a series of 10 rooms which could be converted into infirmaries for the eventual treatment of casualties which could not be handled by the outpatient clinic or the infirmary on the second level.

All in all, the shelter totals about 3,000 meters of tunnels and some 30 access ways, virtually one for each two surface stores. It also has two independent wells and food reserves sufficient for some 500 people for over one month. If necessary, frequent exercises have confirmed that the 10,000 people assigned to this shelter could enter it in 5 to 6 minutes.

This shelter, like others in Beijing's underground, are guarded by some 30 people among its potential users, taking turns, maintaining it, among other tasks, in a proper functional condition.

This sight strikes the imagination, for the shelter is reached through a clothing store in which part of the floor silently slides behind a sales counter, opening to the first of a long series of stairways. If, as the Chinese authorities claim, each district has such a shelter, the population of a city the size of Beijing (several million people) could be evacuated in no more than a few hours. Should this be the case China has the first, and perhaps the only, general civil defense system in the world.

BEIJING GARRISON'S THIRD INFANTRY DIVISION

Neuilly Cedex DEFENSE INTERARMEES in French No 52, Oct 80 pp 12-19

[Article by Special Correspondent Giovanni de Griganti: "The Third Infantry Division of Beijing's Garrison"]

> [Text] The following article is one of a series of reports on the Chinese Armed Forces written as the result of a visit which Giovanni de Griganti paid last August on the invitation of China's Ministry of Defense. Other articles dealing with aeronautics (the 38th Air Division of the Chinese Airforce) and industrial aspects (China's aerospace industry) will be published in the months to follow.

"It is beautiful but it is not war." This famous saying expresses in the best possible way the initial impression made by visiting a unit of China's ground forces. Personally, this was my case as a result of the visit I paid to the Third Infantry Division of Beijing's garrison. However, since other Western observers, whom I was able to question, had paid similar visits, had had a similar reaction.

The Third Infantry Division is part of the Battle Corps of the ground forces (see below). Because of this its level of training and its equipment are superior to those of other units. Assigned to protect Beijing, one could logically assume that it is a question of a particularly well trained unit and that, since it is displayed to foreign visitors, it would be one of the best units of China's army.

The visit begins with a long briefing on the history of the division and its most famous companies, one of which was created in 1928, at the beginning of the establishment of the Red Army. The Third Division has successively taken part in five "counter encirclements" mounted by the Kuomintang, and in guerrilla campaigns from the Jiang Shi revolutionary base. It has taken part in 1,600 fights in the course of the "war of resistance against Japan" (World War II), during which it was attached to the newly organized Fourth Army. The division "destroyed" 40,000 Japanese during that time. Between 1945 and 1947 it participated in seven campaigns in the course of which its troops killed 70,000 Japanese (at that time the division numbered no more than 5,000-10,000 men). Assigned to Korea, the Third Infantry Division took part in 55 battles together with the North Korean army, in the course of which it killed 10,000 enemies.

For some 20 years it has been part of one of the army corps protecting Beijing.

Like all Chinese military units, the Third Division has, in fact, three main missions, of which the military one is not the most important. In effect, it is in charge of "combat" in wartime. However, in peacetime it has the "work" and "production" missions. In accordance with party policy, it implements the three democracies (political, military and economic).

These three missions should be explained in greater detail. The military mission is to watch out for any enemy and be always vigilant in the face of the internal enemy (careerists and counterrevolutionaries) as well as foreign enemies.

The "work" mission involves the concept of propaganda and civic and political training which the division cadres give to the civilian population with which they are in contact and to the draftees who, after their military service, must, themselves, be able to go on doing propaganda work for the good of the party.

The third "production" mission means that each military unit must appreciably participate in the country's economic life. It is thus that each unit has its agricultural production unit (with its own fields, hog and livestock farms, etc.), or an industrial production unit: the Third Division, for example, operates a plant for the production of pharmaceuticals, most of which are exported to the United States and to Hong Kong. Still within the framework of its "production" mission, the division takes part in public works: some of its latest achievements are the building of two reservoirs and participation in the building of Mao's mausoleum and of the people's congress building, both located in Beijing's Tian'anmian Square.

The three democracies are a totally unusual aspect of the life of a military unit. Generally speaking, political democracy means that any "fighter" (soldier) or "commander" (officer) may participate in political discussions and express his views; economic democracy means that anyone could participate in determining the level of agricultural and industrial output and its marketing aspects. It is undeniable, however, that the strangest of them is military democracy. Thus, according to this democracy, any military action, at whatever level, is preceded by a discussion in the course of which the rank and file and the officers may suggest the means they prefer in carrying out a mission. Discipline takes over only as a result of such a discussion and it is only then that the final decision, taken by the highest rank officer, is implemented. Even though tempting it might be on the conceptual level, such as system necessarily raises important questions in practical terms, for a preliminary discussion necessarily takes a great deal of time and contributes to the deterioration of disciplinary structures even though, according to my observations, Chinese military discipline appears to be very strict.

Nevertheless, this military democracy has its limits, for a doctrinary tactic which is taught to the officers applies to the Chinese units. Nevertheless, according to the officers I talked to, discussions provide better operational flexibility.

The Third Division has two other missions performed in times of peace: The strengthening of the "militancy for the defense of the fatherland and the Four Modernizations," as well as the training of the people's militia of surrounding villages and communes.

Organization and Personnel

As all other infantry divisions of the Battle Corps, the Third Infantry Division, whose command post is some 60 kilometers northwest of Beijing, totals about 13,000 men. It consists of three infantry regiments (11th, 12th and 13th), an armored regiment, a field artillery regiment, a surface-air artillery regiment, and a division reconnaissance company. Even though no specific information was provided, one could nevertheless assume the existence of specialized companies within basic division-level elements.

The infantry regiment consists of 2,000 men. It is divided into four battalions of four companies each and has five specialized companies, totaling 21 companies. The four infantry battalions have no means of transport of their own: The trucks which move the troops are part of the transport company which is under the direct command of regimental headquarters. The four other basic companies include a fire support company with three batteries of two antitank 85 mm guns each, a machine gun company (armed with 12.7 mm machine guns), a headquarters company and service personnel and a medical company (staffed mainly by women).

It is of interest to note that the entire shared armament of the infantry companies totals only four submachine guns (7.62 mm) and 17 antitank rocket launchers type 69 (RPG-7).

The armored regiment consists of 1,000 men. No specifications were provided as to its organization. However, it has 80 T-59 medium tanks (Chinese copy of the T-54), some of which are equipped with infrared night driving systems.

No specifications were provided on the organization of the field or antiaircraft artillery regiments. I saw no antiaircraft weapons. It seems likely, however, that this unit is equipped with some 100 pieces of different calibers, ranging from twin-barrel 14.5 mm antiaircraft machine guns to 100 mm antiaircraft guns. Some of these weapons may be controlled by radar. However, no antiaircraft missile is currently used on the divisional level. The field artillery regiments are equipped mainly with Type 54 122 mm howitzers, a Chinese copy of the Soviet M-30, as well as a small 12-barrel 109 mm rocket launcher mounted on a two-wheel carriage. In all likelihood the artillery pieces are towed by trucks, as the Chinese Army is equipped with no more than a few tracked tractors.

Demonstration of the Reconnaissance Company

During my visit to the Third Infantry Division I witnessed a demonstration by the divisional reconnaissance company which numbers 100 "troops and commanders." This demonstration included climbing the front of a building erected on the sports grounds of the divisional command post. It used primitive tools such as grappling irons, ropes and long bamboo sticks. Another demonstration included grenade hurling in the course of which the infantrymen showed great precision skill in hitting their target (a circle two meters in diameter) a few dozen meters away. The average throw covered a distance of 60 to 80 meters. Part of the company demonstrated a kind of obstacle course which included, in particular, hurdling on the run a wall over two meters high; another group within the company showed different close combat techniques: how to neutralize a sentry, bayonet fighting, etc. The personnel displayed remarkable dexterity and their physical condition was unquestionably excellent. However, their movements on the terrain resembled more a well-directed choreography rather than military procedure. Actually, one shudders at the thought that such trained and clearly dedicated troops may eventually face an enemy equipped with modern weapons of whose effectiveness these same soldiers are certainly unaware.

This was followed by an inspection of the barracks of that company. Compared with Western barracks, the Chinese soldiers' lodgings display Spartan poverty. The building I visited had, at one end, a hall used as a "social center" as well as a classroom for political education courses. The walls were decorated by drawings and maps tracing the history of the company and a panel of "heroes" to be emulated by the soldiers, along with another panel displaying a diagram of the company's agricultural output. A walkway in the center gave access to a dormitory: three small offices were located on the left while the armory was on the right (with AK-47 folding assault rifles, submachine guns and four pistols) and a premise where the personal items of the soldiers, together with their winter uniforms, were arranged in small containers. The dormitory itself consisted of bunk beds made of wooden planks on which covers and pillows were carefully folded. No personal item, even a book or a pack of cigarettes, could be seen. The dormitory was empty with the exception of a small group of soldiers who were studying for their political education course provided by a young lieutenant who, as deputy company commander, was also its political commissar.

As we already mentioned, the Third Infantry Division has a small pharmaceutical plant, operating on an entirely independent basis, staffed by draftees and personnel wives. Founded in 1971, today the plant employs 130 people and manufactures seven different pharmaceuticals. Its 1979 output totaled 35 tons, rutin accounting for 30 of them.

Like all Chinese military units, the Third Infantry Division must procure some of its own food. To this effect it has an agricultural unit and a big farm and a workshop for the manufacturing of cheese and soybean curds. It is interesting to note that in accordance with the principle of "economic democracy," the division could sell or trade its farm produce on the free markets of the civilian economy.

Two principal observations are possible as a result of such a short visit as mine was. On the one hand, in accordance with the precepts of Mao Zedong, the Chinese army units play a role which goes far beyond their simple military mission. The army is both a propaganda element and a tool for national reconstruction, and its personnel--far too numerous in terms of merely a hypothetical battle--play a substantial role in the country's economic life and represent a manpower reserve which could lend a hand to the civilian populations at all times. On the other hand, one is impressed by the dedication of the troops: Far from requestioning their role or usefulness, the Chinese military seem to believe in the importance of the mission they have been entrusted by the party and dedicate themselves to its implementation. Despite Spartan living conditions, the troops seem to have a very strong morale and it is quite conceivable that they would never refuse the order to do battle in any tactical situation.

The Chinese Land Forces

In terms of size, the Chinese land forces, numbering some 3.6 million men, are the largest in the world. From the administrative viewpoint, China's territory is divided into 11 military regions each of which is subdivided into two or three military districts. Whereas in peacetime the military regions play no more than an administrative and territorial role, in wartime each of them would be a front simply by assuming command over all units normally stationed on their territory.

From the functional viewpoint there are two types of units: the main forces (the Battle Corps) which may be engaged in any part of the territory, and the regional forces (or local forces) in charge of the territorial defense of the military regions to which they are effected.

The Battle Corps consists of the best equipped units. It is estimated at some basic 40 army corps (each one consisting of three infantry divisions) to which are added 12 armored divisions, 3 airborne divisions (kept in reserve) and special troops: artillery (about 20 divisions), antiaircraft artillery (also 20 divisions), engineers, railroad engineers, and communications units (estimated at totaling no less than 11 specialized regiments). All armor and the great majority of heavy weapons are concentrated within the units of the Battle Corps which represents a kind of mobile reserve which could be sent as support of any military region. The local forces, which consist of less well equipped regular units (no more than a few older tanks, lighter artillery pieces, and virtually no motorized transport facilities) are essentially in charge of defending a limited area together with the people's militia and the paramilitary forces. The border defense and internal defense units are part of the local forces.

The people's militia is added to these two categories of regular "forces." It consists of the armed militia (seven million) and urban militia (several million). The other paramilitary forces are also added to the regular forces.

The Main Forces

The overwhelming majority of the some 40 army corps which account for the main forces are deployed in Manchuria and the military regions of Shenyang, Beijing and Nanking; others, whose specific number is unknown, are deployed in the southern part of the country, facing Vietnam.

There are two types of army corps: those belonging to category A are better equipped, having heavy armaments and greater transport facilities and are generally motorized; the B category army corps consists essentially of lighter units and are better adapted to infantry combat in more rugged areas.

A typical army corps numbers close to [illegible]0,000 men. It includes three infantry divisions, one field artillery regiment, one antiaircraft artillery regiment, one armored regiment, one reconnaissance battalion, one battalion of engineers, one communications battalion, one chemical warfare battalion (mainly defensive) and a headquarters regiment. In the first part of this article we described the breakdown of the infantry division. That of the armored division is quite similar, with the difference that the three infantry regiments and the armored regiment have been replaced by three armored regiments and a single infantry regiment which is, however, either mechanized or at least fully motorized.

The motorizing of the units is, in fact, one of the main problems facing the general staff of the People's Liberation Army. Actually, infantry accounts for the overwhelming majority of units (the Battle Corps, for example, has 115 infantry divisions and only 12 armored divisions). Despite the obvious concern for modernization, at the present time the infantry units are still very poor in transport; an infantry division, for example, has no more than some 350 trucks. This essentially stems from the fact that the new leadership has not as yet made up its mind as to whether to abandon the Maoist doctrine of a people's war which, stipulating that any attacker would be eventually "drowned" in the infantry and militia masses, ascribed no important role whatever to motorized and mechanized forces. This may seem strange in a country where the truck is the most common means of transportation.

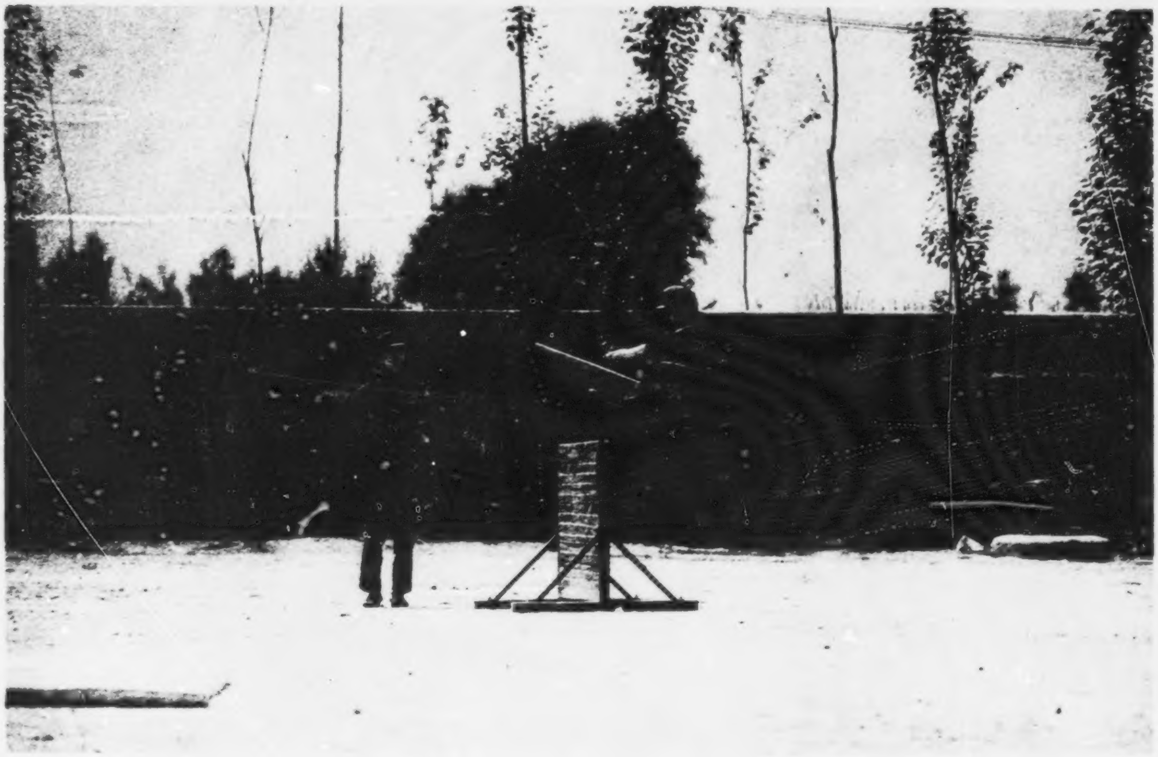
According to Western estimates the people's liberation army has no more than some 11,000 tanks, mainly of the Type 59 (T-54 Soviet) and T-60 and T-62 (both extrapolations of the Soviet PT-76), and about 3,000 VTT, Type 63; the latter are essentially part of the armored divisions within which one of the three battalions of the infantry regiment would be entirely mechanized. Most of the artillery is towed and consists essentially of Soviet guns (122 mm, 130 mm and 152 mm); the antitank artillery units are equally equipped with Soviet design pieces. There are very few self-propelling guns, most of which are antitank fighters (SU-76, SU-85 and SU-100) rather than artillery guns. According to some sources, however, the Chinese have developed a self-propelling gun which would combine a 122 mm field gun with the hull and chassis of the Type 63 VTT. However, this piece has no turret.

Generally speaking, the armament and equipment of the Chinese units are copies of the arms supplied by the USSR before 1960. Therefore, they are far below the performance of Western modern arms. It is certain, however, that the Chinese units are perfectly able to use them quite effectively.

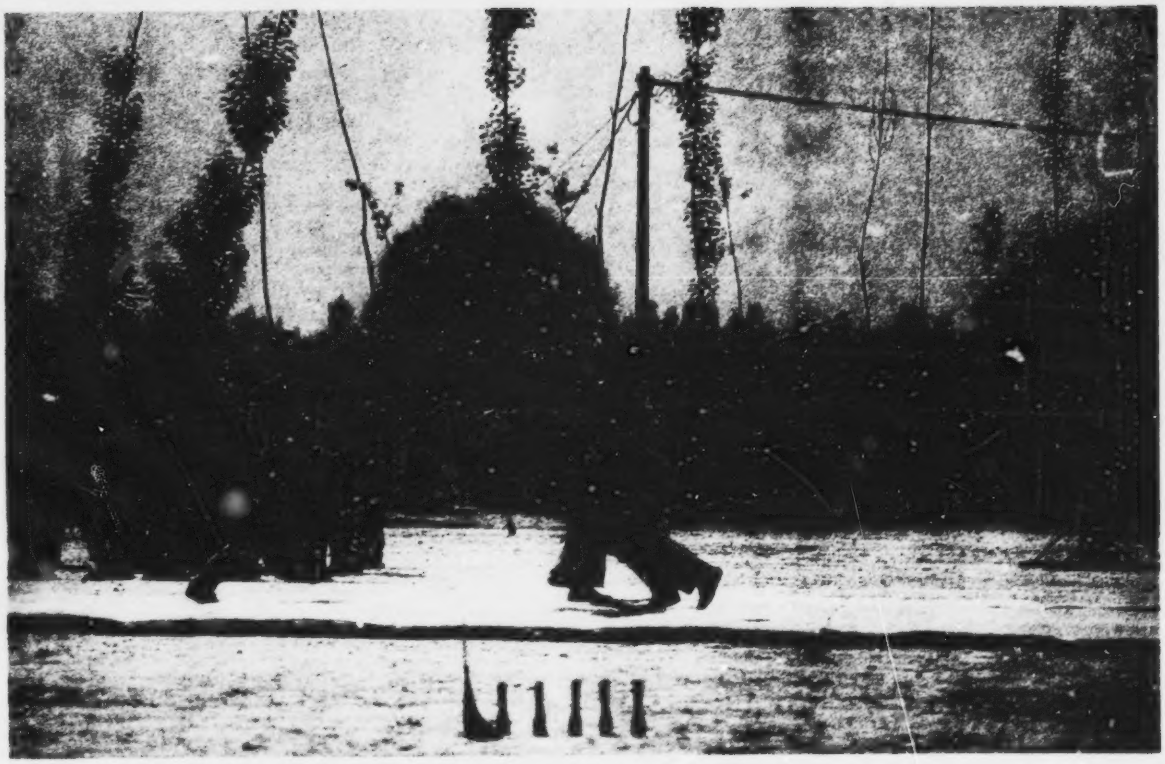
In addition to the motorization problem, the people's liberation army has two major weaknesses today in the antitank and antiaircraft areas. Most of its antitank elements consist of towed 85 mm guns and even though according to some sources China has purchased HOT and MILAN missiles, it seems that no antitank missile is currently in service. On the level of the infantry units the main antitank weapon is the Soviet RPG-7 rocket launcher which, however, is equipped with a Chinese charge of superior performance. We also note the availability of a very large number of recoilless guns of different calibers. However, it is unlikely that such armaments would be able to stop or, even less so, to destroy modern tanks.

A similar situation prevails in the area of antiaircraft armaments. The people's liberation army has no ground-air missile which would provide close unit protection or self-propelling antiaircraft guns with the exception of a few T-34 equipped with a 37 mm double-barrel. Basically antiaircraft defense is provided by the towed guns of several calibers with no radar fire control, however.

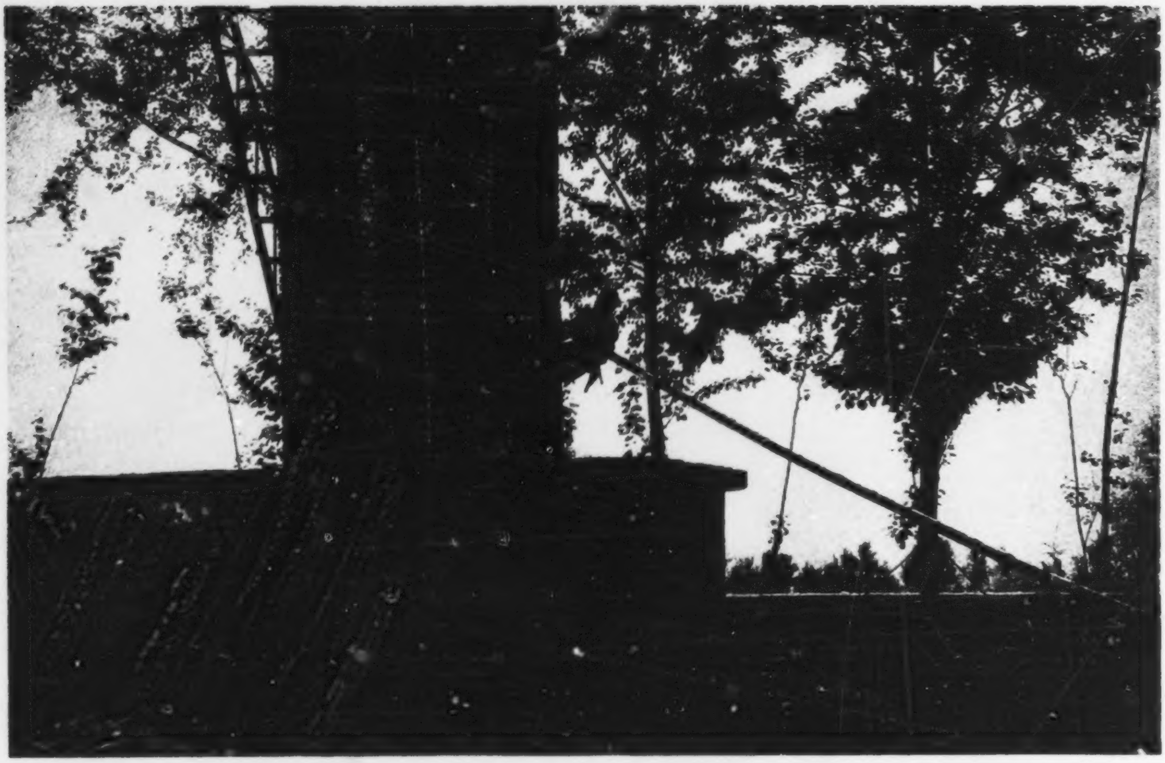
Nevertheless, the fact that an antiaircraft artillery unit is present at all levels, ranging from the army corps to the regiment, clearly proves that this is a problem of concern to the people's liberation army general staff and that it is certain that this area will be one of the first to be modernized when finally China begins to purchase Western armaments of modern design.



Soldier from the divisional reconnaissance company crossing an obstacle. The Chinese soldiers seem to be in excellent physical shape and possess almost theatrical agility.



Close combat seems to be of very great importance in the Chinese army and even today bayonet fighting and hand-to-hand combat are important features in troop training.

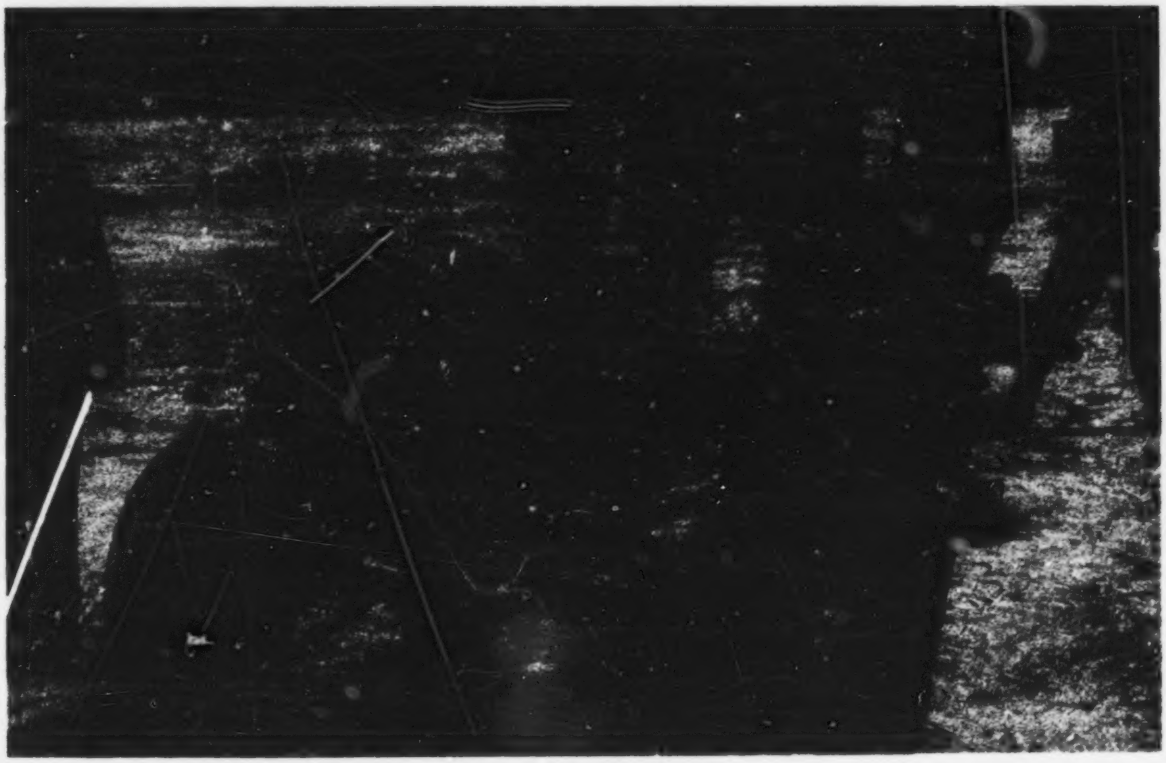


There are several ways to enter a building, using ropes, grappling irons, or, simply, the drainpipes. The photograph shows a solider "walking" on the wall leaning on a long bamboo stick pushed by several of his colleagues. Regardless of the method used, the soldiers of the reconnaissance company were able to reach the "roof" in no more than a few seconds.

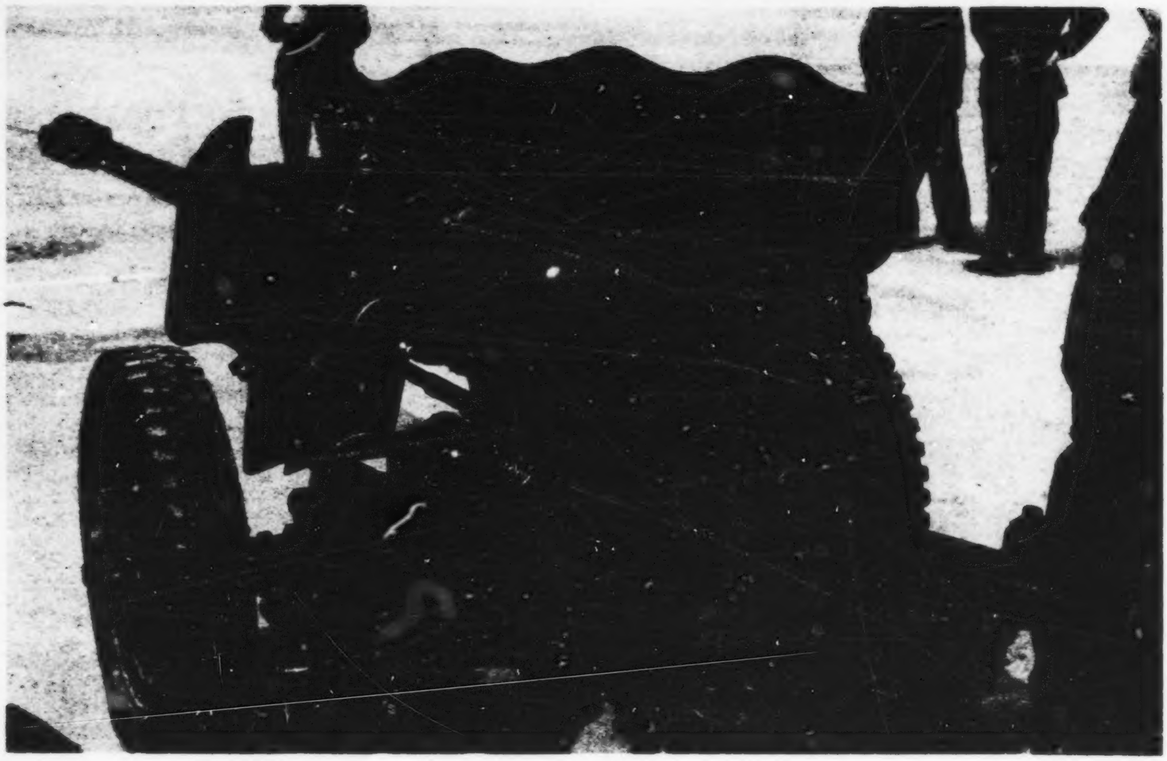
The standard Chinese army tank is the Type 59, armed with a 100 mm cannon, derived from the Soviet T-54. It has an infrared night vision system of Chinese manufacturing and three machine guns: one on the turret, the second coaxial and the third firing from the front. Another photograph of the same tank may be found on the back of the cover.

Grenade throwing is also part of the Chinese soldiers' training, even though virtually all armed forces are now using rifle-launched grenades. In the course of the demonstration we attended most throwers reached their target over 70 meters distant.

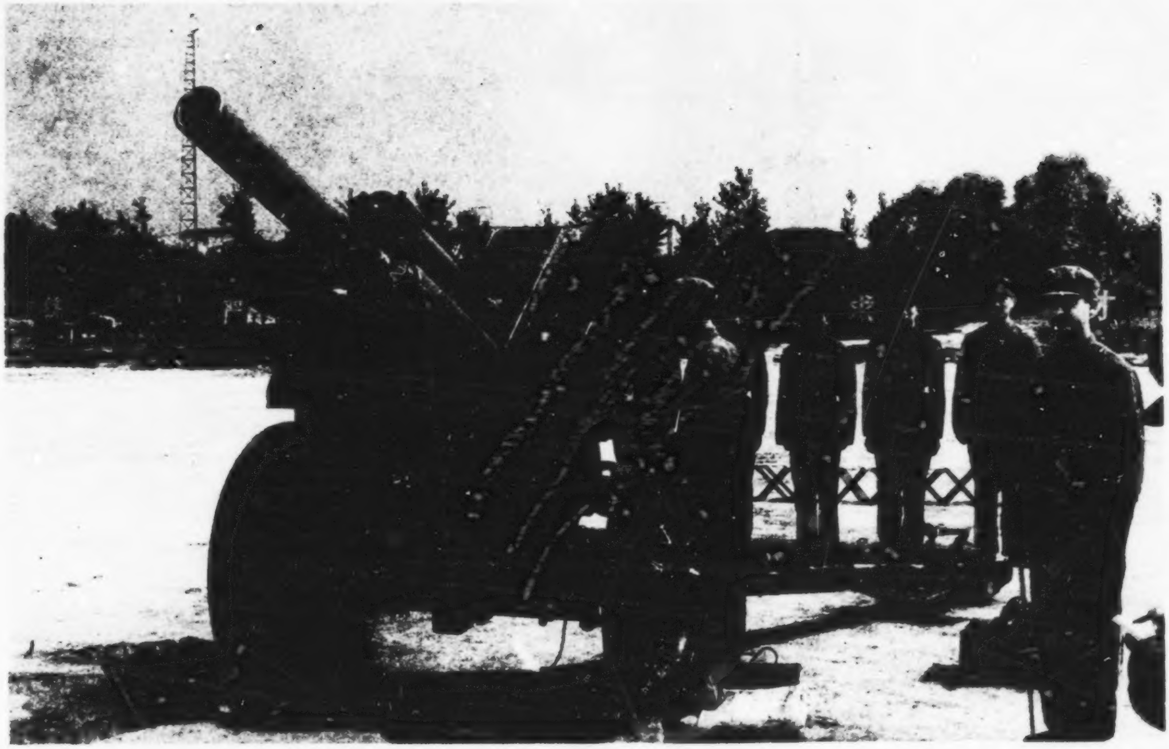
The standard artillery piece of field artillery units is the Type 54 122 mm howitzer. Developed on the basis of the Soviet M-30, the initial speed of the howitzer is 519 meters per second.



The field artillery units are also equipped with the towed Type 63, 109 mm rocket launchers. Mainly used for saturation fire, the rocket launcher weighs 616 kilograms in battery and could fire its 12 rockets in 7 seconds. It has an 8,000 meter range. As one may see, its design is rather primitive.



For their antitank defense the infantry regiments have a battery of six towed 85 mm Type 56 cannons with a maximum range of 9,050 meters. We were told that a well trained crew could maintain a fire pace of 15 to 20 shots per minute. However, the figure seems rather high particularly in the case of a manually reloaded weapon. The photograph clearly shows the sighting mechanism.



Another angle of the Type 54 howitzer in battery in front of its seven-man crew. Compared with the Soviet howitzer, from which it was developed, the Type 54 has a bigger shield, solid tires and a different aiming mechanism. All in all, the Chinese ground equipment seems to include numerous improvements compared with the original Soviet equipment.

'BA YI RADIO' RAPS INDICTMENT AGAINST FORMER PLA LEADERS

OW251049 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 24 Nov 80

[Text] There is a great discrepancy between the indictment brought against former important leaders and the decision adopted by the enlarged session of the CCP Central Committee's military commission. The decision says that acts that were performed on orders from the CCP Central Committee's military commission, Chairman Mao, Premier Zhou or Marshal Ye should not be cited as evidence of a crime by the prosecution. The indictment, which includes a list of charges of this nature, opposes the opinion of most people, reflects the feudal fascist and patriarchal practice of exaggerating criminal liability, and is indeed regretable.

Reports by the investigatory group on the special case in March 1979 and July 1980 have already explicitly pointed out that many charges against former important PLA leaders--Lin Biao, Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Jiang Tengjiao--are inconsistent with the facts. During the pretrial by the special procuratorate under the Supreme People's Procuratorate to verify the evidence, it was discovered that many charges could not be substantiated with convincing evidence and that some evidence was legally invalid. Oddly enough, probably out of the fear that this so-called evidence might be overturned, a certain person published the evidence in inner-circle documents and newspapers in an attempt to present prejudiced views before the start of the trial.

At the Party Central Committee's plenary sessions, Comrade Deng Xiaoping has repudiated all the statements and actions by Chairman Mao, the gang of four, Kang Sheng and Wang Dongxing. However, the frameups, wrong sentences and unjust verdicts they concocted against large numbers of PLA leaders and cadres under the pretext of Lin Biao's incident have not been redressed. Even the "outline of 'Project 571,'" which was incoherent and ludicrous in language and deliberately fabricated, has also been cited as criminal evidence.

After the Lin Biao incident occured, Chairman Mao personally said in front of Premier Zhou, Kang Sheng, Jiang Qing and others: "Huang Yongsheng and Qiu Huizuo did not necessarily oppose me. It is possible that they were tricked." Later on, to usurp army leadership, the gang of four and Kang Sheng fabricated various charges against many army leaders. In fact, the counterrevolutionary charges against them on trying to assassinate Chairman Mao, inciting armed rebellion, staging the armed coup d'etat and others were all meticulously concocted by the gang of four, Kang Sheng and that two-faced dealer in power at that time.

So long as we have decided to affix responsibility for the crimes, we must respect the evidence and facts and, based on objective circumstances at that time and taking into consideration the fact that the armymen were merely executing orders, reasonably and justly handle problems involving former important PLA leaders. We should not allow a certain person, or persons, to influence the normal work of a trial.

SOCIOLOGICAL, EDUCATION AND CULTURE

DISCUSSION OF POPULATION PROBLEMS, SOLUTIONS

Shanghai FUDAN XUEBAO [FUDAN JOURNAL] in Chinese No 4, Jul 80 pp 11-14

[Article by Wu Peidan [0702 5952 0030], Rui Pinxuan [5360 0756 6513] and Zheng Guizhen [6774 2710 3791]: "A Discussion of China's Current Population Problem and the Ways of Solution"]

[Text] The population problem is exceedingly complex and impinges upon many areas: from an economic point of view it involves the problem of employment and the people's consumer standard; from a sociological point of view it involves the problems of marriage, housing, education and aging; and from the view of population reproduction it involves the problems of pregnancy, death and eugenics.

The Seriousness of Our Current Population Problem

The development of the population problem is proportional to our economic development. As producers people require that society provide them with adequate means of production for their use and as consumers they require that society provide them with ever more clothing, food, housing, implements and other livelihood materials to satisfy consumer needs. So if the population grows too fast and exceeds the development of the national economy there then will be employment problems and food and clothing problems as well. If the population grows too slowly the labor force will be insufficient and this will influence the pace of production developments, which also does not benefit economic development.

In the present stage our population problems are quite severe, mainly in the contradiction between too rapid a population increase and the development of the national economy, as is shown in the three following aspects:

First, there is our incomplete labor employment. Because of too rapid population growth new additions to the means of production are unable to satisfy the requirements of the new additions to the labor force, which has produced an excessively large labor force and the consequent problem of youths awaiting employment. The special features of our employment situation are a large base, rapid growth and a youthful age structure. Before 1975 the birth rate was over thirty per thousand and in 1963 it was forty per thousand, which produced the population explosion from the 5.4 hundred million persons of the early Liberation period to the over 9.7 hundred million persons of 1978, an average increase of 20 million per year, and of these about 4 million persons were urban youth. Although the birth rate has declined to 18 per thousand in recent years, yet about 18 million people are born each year and 80 percent of these are country people. The cities must arrange education and employment for 3.6 million youths each year. Every year our fixed assets increase by about 20 billion yuan and at present each worker's equipment value is calculated at 10,000 yuan so that at most the economy can absorb 2 million new workers each year and there still are 1 million awaiting employment. The yearly additions to the number of people awaiting employment makes the present labor employment problem especially acute.

The problem of excessive labor forces in the countryside is demonstrated in the incomplete use of the labor force and low labor productivity. In the 1960s China had 1.6 billion mu of cultivated land and a farm labor force of 200 million. The present acerage of cultivated land has shrunk to 1.5 billion mu but the farm labor force has increased to 300 million, so the number of mu of cultivated land per farm worker has dropped from 8 mu to 5 mu. Compared with the 13 mu per farm worker rate found in Japan this is a very low rate. Following the gradual implementation of agricultural modernization there will be an even greater excess labor force in the countryside. Because the great majority of the rural labor forces are situated in the countryside and have such simple tools and equipment the conditions do not attract as much attention as that of those awaiting employment in the urban areas.

Second, the low level of consumer standards. After post-Liberation developments in the national economy, although the national average per capita income gradually rose (US$28 in 1950, US$49 in 1957, US$78 in 1965, US$95 in 1970, US$139 in 1976 and US$183 in 1978), because of rapid population increases the people's consumer standard remained quite low. In terms of foodgrains, China's total production is the highest in the world, but using 1976 population figures there was 614 jin for each Chinese while there was 2,750 jin for each American This is because our population is four times greater.

An excessive population also causes many problems in housing and public facilities. In the early Liberation period each person had an average of 4.5 square meters of living space, and according to a 1978 national survey of 190 cities each person had an average of 3.6 square meters which not only is much lower than that of developed countries but also is 0.9 square meters lower than in the early Liberation period. Rapid population growth produces such clearcut contradictions as housing shortages, crowded transportation and insufficient hospital sickbeds.

Third, a contradiction between the labor force quality and the four modernizations. In terms of present-day world economic development speed in scientific and technological developments and improved management standards are important conditions for rapid economic development. However, Chinese population growth is too rapid and the consumer burden too heavy, so that the country lacks the financial and material strength to develop cultural and educational activities. After Liberation our population was 600 million people and rough calculations put national and collective consumption at 400 billion yuan and family expenses at 930 billion yuan for a total of 1.3 trillion yuan. The new production was mostly consumed by the new additions to the population which severely affected economic development and development of other areas. This was especially so in the slower developments in education which cannot keep pace with the needs of the four modernizations. In 1977 only 6 people out of a thousand attended college, which not only is far behind the developed nations but even lower than India. There are only 500 plus colleges for our population of 900 million people and only 0.5 percent of the population attends college. Only 22 percent of the population attends middle school. How can such conditions suit the needs of the four modernizations?

The Causes Which Produced Our Population Problems

There are both subjective and objective causes for our current population problems and the three main causes are as follows:

First, the main reason for our population problems is a low level of economic development. A low level of economic development on the one hand results in low consumer standards, employment problems, housing shortages and so on, and on the other hand it can cause rapid population growth. Because of backward economic conditions there is a relatively large amount of handicraft labor and a low degree of mechanization. Under conditions of low technological standards there is a direct proportion between product quantity and the amount invested in labor, and production developments primarily depend on the efforts of the labor force. Our 1976 foodgrain production was 200 billion jin higher than in 1957 and this was mostly because our rural labor force increased from 200 million to 300 million people. Under conditions of low labor productivity and low standards of mechanization there is a proportional relationship between the workers' benefits and their labor output. This is especially true in the countryside where if a family has a large labor force then income distribution will then be large, and this then is the economic source of the high birth rate.

Second, because of the onesidedness on our popularization of population theory and population policy for a time population development in China was in a state of anarchy and there was no implementation of planned parenthood. For a long time there was a lot of metaphysics in the popularization of population theory, a mistaken belief that continual population growth was a rule of socialist population theory, a partial view of people only as producers as though people could exist without need for the consumption of materials, thus making an absolute rule that having a large population is a good thing and simply denying that socialist China had a population problem. Criticism of the population theory of Malthus did not stop at condemnation of its reactionary qualities but always hung on the question of few or many people and anyone who advocated any controls of population growth was branded as a malthusian, so the population problem then became another "taboo." Under the leadership of such mistaken ideology our population developed with two high peaks in the 50s and 60s, producing a 30 year net population gain of 4.3 hundred million and creating great difficulties in socio-economics and the people's livelihood.

Because of the mistaken understanding of population theory the concrete steps taken under population policies actually served to bring about population increases. For a long time the countryside did not use age but rather used head counts to apportion food rations and living quarters and in the cities the housing was also apportioned on a population basis, the greater the population the greater the distribution. The staff and worker living subsidies were given to those with more children and was a kind of economic obstacle. The "iron rice bowl" policy in labor management also was a policy which encouraged increased population growth. The Chinese household was no longer a production unit but it still was a consumer unit and the amount of family income determined the consumer standard and as the children matured and entered the work force it was the same as an "iron rice bowl." The "iron rice bowl" system had many faults and few benefits as it robbed youth of an enterprising attitude and lowered the labor productivity rate. It enveloped the whole nation, was all too thoroughing and added to the state's burdens by creating excessive labor forces and adding to the number of people awaiting employment.

Third, during the changes in the process of population reproduction there was no control over increases in the growth rate so this created rapid population increases and the production of material goods could not keep up. From the viewpoint of population reproduction, old China had a high birth rate, high death rate and a low natural growth rate. After Liberation the people's livelihood improved, there were developments in health protection, the death rate for the old society declined from 28 per thousand to 6 or 7 per thousand, the population reproduction changed to a high birth rate, low death rate and high rate of natural growth. This sort of population condition is a transitory one. From now on developments in production forces, improvement of scientific and cultural standards, improvement of the labor production rate and the spread of planned parenthood will gradually produce a low birth rate, a low death rate and a low rate of natural increase. This is a slow process because population reproduction is cyclical in nature. In the past we had imcomplete understanding of the rules for this and because our population theory was partial the first process of change could not control the birth rate in time, with the result that the people born in the 50s and 60s have for the past 10 years and will for the next 10 years be entering the age of marriage and parenthood at the rate of ten million couples per year, so if each couple produces one child there will be a yearly increase of 10 million people, especially in the countryside where 80 percent of our population resides with low living standards, low levels of science and culture, low child-raising expenses, the added burden of feudal ideology which values sons and slights daughters and where the birth rate is much higher than in the cities. In Shanghai for example, the birth rate declined from 34 per thousand in 1964 to 12.9 per thousand in 1978. But the suburbs and urban areas are vastly different as in the city the average birth rate declined to 8.3 per thousand while the surburbs were 18.3 per thousand, the latter 1.2 times greater than the former.

In short, we must have complete understanding of our population problems before we can suggest concrete measures to solve these problems.

The Path toward Solution of Our Population Problems

The paths toward solution of the population problems and elimination of the causes which produced the population problems are closely related. To solve our population problems we must proceed from our actual conditions, operate according to objective laws, grasp the two kinds of production together so that the production forces will have their places and the people's material and cultural lives will continuously improve. The solution of our population problems must proceed from several aspects:

First, we must operate according to objective laws and the basic path toward solution of our population problems is to vigorously develop our social production forces.

Marxism tells us that production determines circulation, distribution and consumption. Unless production makes great increases rapid improvements in the people's material and cultural livelihood is but empty talk. Vigorous development of production not only creates even more social products to improve the people's standard of living, moreover, if production develops rapidly then the production departments and its endeavors will develop rapidly and more labor forces will be needed, which will create conditions for labor employment. Based on our particular conditions of a large population with a poor foundation, carrying out modernization requires continual improvement of the labor production rate and complete utilization of the manpower resources. The backbone of all this is modernization of large-scale enterprises with simultaneous construction of low investment, rapid yield middle and small-scale enterprises. In carrying out modernization bigger is not necessarily better. According to our national situation unification of large, middle and small scale construction will benefit rapid production development, will support more people and will employ more people. Agricultural development, in addition to implementing agricultural modernization to greatly increase the agricultural productivity rate, must also carry out an overall plan for developing agriculture, forestry, animal husbandry, sideline occupations and fishing in order to gradually transform the internal structure. China has 4.3 billion mu of pasturage and over 100 million mu of fresh water hatcheries, so if we make good use of our pasturage and fish farms this not only will develop agricultural production but moreover can change the situation of "Chinese people eating only grains," increase proteins, change the diet of the broad people and improve the people's standard of health. At the same time the countryside will carry out overall planning to unify management of mountains, water, fields and forests and develop diversified management of integrated complexes. This will thoroughly change the backwards conditions in agriculture and will simultaneously make full and reasonable use of the excess rural labor forces.

Next, we must adjust the structure of the ownership system to transform past policies which emphasized the whole people, slighted the collectives and attacked the individual; transform the conditions of "iron rice bowls" and "eating from the common pot"; permit the simultaneous existence of a whole people ownership system, a collective ownership system, whole people and collective combined management, city and countryside petty businessmen and an individual ownership system and make full use of them in socialist construction. At present no matter whether we see it as developing production to satisfy the people's needs or see it as making arrangements for employing the labor force, in any case we must energetically develop the people's livelihood in every way to achieve the collective employment (including foodstuffs, services and maintainence) necessary for economic development.

Second, a major path toward solving our population problems is strict control over population increases.

To solve population problems while greatly increasing social production we must firmly grasp the production of humanity itself. The emphasis in limiting population figures should be placed on lowering the rate of natural population increases. We know that the size and speed of accumulation are to a great extent limited by the scope and speed of population increases. Therefore, controlling population figures by lowering the rate of natural increase can accelerate capital accumulation. According to our current consumer standards, for each one per thousand drop in the birth rate there is an annual savings of over 2 billion yuan in expenses. If by 1985 we can implement the plan to lower the population increase rate below 5 per thousand then the annual natural increase of 12 million will be lowered to just over 5 million. This will then lessen the severity of the next great population peak so there will be 30 million fewer births in the six year period and a savings of over 70 billion yuan in expenses. It will take about 10 billion yuan for the nation's staff and workers to generally receive a one grade raise in pay, so this 70 billion yuan can give the nation's staff and workers seven pay raises and the people's living standards can have a much greater improvement. If this 70 billion yuan is invested in light industry at an annual capital accumulation rate of 0.52 percent per yuan per annum then the first year will show an accumulation of 3.64 billion yuan, re-investment of this and the original investment will total 10.64 billion yuan and the third year it will total 23.1728 billion yuan. If this is used to improve mass livelihood the additions to national accumulation will then have an enormous impact on the four modernizations!

In order to lower the natural increase rate there must be mass mobilization and enlightened implementation of planned parenthood to make the people realize that it is an expression of human progress. At the same time effective economic measures must be taken, which is to say that we must use measures which suit our present national economic conditions to formulate practical and effective methods of limiting population increases including both legal and economic measures to encourage parents to have only one child by providing only children with free tuition in primary and middle school, free medical care and provide for childless old people by gradually increasing social security. The distribution of grain rations, private plots and residential plots should be reformed into a system of distribution by population, However, according to our present-day labor employment conditions and the benefits for the education and raising of only children it is not suitable to adopt a policy of preferred employment for only children. As for those who blindly have repeated births there should be criticisms and economic restrictions and limitations (though it is not appropriate to withhold grain rations from those who do not register the birth of a child). In this way ideology will take command and rewards and punishments will be clear, so that birth controls can be attained and the goal of limiting the population will be reached. This will bring about a rapid decrease in the rate of the natural population increase. The general implementation of planned parenthood throughout all of society to bring about harmony between population development and developments in the production of material goods can only be accomplished under the conditions of the socialist ownership system. The pre-socialist society definitely could not exercise such broad legal implementation and still give protection to all the people.

Third, another device is frontier immigration to reclaim wasteland.

"Immigration to reclaim wasteland" has a long history in China. According to imcomplete historical materials there have been over 1,000 rather large-scale "immigration for land reclamation" projects from the Han to Qing dynasties, among them 337 civilian settlements, 667 "military settlements" and 157 "commercial settlements." In Sichuan during the "five barbarian tribes desolate China" period, the "Five Dynasties and Ten Kingdoms" period and the latter Ming and early Qing periods large groups of central plains people went to Sichuan to reclaim land and settle down. These "border area reclamation" projects had a great impact on the development of our national economy.

We now have a massive population but there is an extremely imbalanced distribution of our population and labor force. The great majority are concentrated in a few provinces along the southeastern seaboard. These provinces occupy 40 percent of the nation's land but have over 95 percent of the total population. The population density in Jiangsu province is 580 people per square kilometer. In Shanghai city (not including Minxing and Wusong) there are 41,000 people per square kilometer, with 17 neighborhoods having population densities exceeding 100,000 people. In Shandong the density is 477 people and in Henan 467 people. In Nei Mongol and Xizang there are less than 2 people per square kilometer, 5 in Qinghai and 8 in Xinjiang. Besides this, there is a rather sparse population in a few provinces in the Northeast and Northwest. These places not only have large areas awaiting land reclamation and development of agriculture, forestry and animal husbandry they also have many valuable mineral resources. These areas are suitable for organizing land reclamation by people from densely populated areas.

ARGUMENTS AGAINST ONE-CHILD FAMILY REFUTED

Imbalance Between Sexes

Beijing GUANGMING RIBAO in Chinese 27 Sep 80 p 1

[Article: One-Child Couples Will Not Bring Imbalance Between Sexes"]

[Text] According to reporter Wang Lihua [3769 546] 5478], the Tianjin Family Planning Department considers as entirely groundless the popular belief that "the practice of having one child per family will result in an imbalance between the sexes."

The department pointed out that there has been a proper balance between the sexes in Tianjin for the past 30 years. In 1963, when the birthrate was at its highest, the ratio between the sexes was 106 to 100 out of 244,000 registered birth, whereas in 1976, when the birthrate was at its lowest, the ratio was 105 to 100 out of 89,000 births registered. Although the difference in the number of births for the two years exceeded 150,000, the ratio between the sexes remained basically the same.

As regards the ratio between the sexes in the different age groups among the population in Tianjin, the ratio between the sexes of new-born babies in 1979 was 107 to 100. The ratio between the sexes in the 1-16 age group was 105 to 100. The ratio in the 17-30 age group was 101 to 100. The ratio in the 31-60 age group was 104 to 100, while the ratio in the over 61 age group was 99.6 to 100. These figures indicate that the ratio between the sexes remains essentially constant for all age groups and that there is no basis to the popular belief that "members of the female sex will outnumber the male." Only in the over 61 age group do members of the female sex hold a slight edge over the male. That is due to the fact that women usually live longer than men. This difference is more pronounced in the higher age brackets. All of the 6 people over 100 in Tianjin last year were women.

According to a survey conducted in Tianjin, the order of pregnancy has no bearing on the sexes of the babies. In 1979, out of 8,419 births registered in the city and certain districts and communes in the outlying counties, the ratio between the sexes was 103 to 100 for first-born and second-born babies and 105 to 100 for third-born babies.

Aging Population

Hangzhou ZHEJIANG RIBAO in Chinese 4 Oct 80 p 4

[Article: "One-Child Families Will Not Result in Aging Population"]

[Text] We recently interviewed Comrade Tien Xueyuan [3944 7185 0626] of the Economic Research Department of the Chinese Academy of Social Sciences to discuss such questions as to whether or not the promotion of the one child per couple concept would lead to an "aging" population. Comrade Tien Xueyuan has been engaged in demographic research for many years. He is chairman of the Beijing Demographic Society and also a founding member of the Preparatory Committee of the China Demographic Society. He made a special trip from Beijing to attend the inauguration of the Zhejiang Demographic Society. He graciously responded to the questions we put to him and offered some valuable opinions.

We first asked for his views on the basis of his research as to whether the one child per couple concept would lead to an "aging" population. He first pointed out that by the so-called "aging" population is meant the preponderance of those over the age of 65 in terms of the total population. At the present time, the aged constitute about 6 percent of the world population. In some advanced countries, those over the age of 65 constitute over 10 percent of the population. In Western and Northern Europe, the ratio is 14 percent, much higher than the figure for the entire world. It may be said that the population of those countries and areas is "aging." What is the situation in our country? On the basis of a sample survey conducted in 1978, those over the age of 65 constituted 4.8 percent of the total population. This figure is not only much lower than the figure for the advanced countries, but is also lower than the average for the entire world. On the basis of the average birthrate for a population not exceeding 12 billion (that is, half of the women have one child and the other half have two), those over the age of 65 will constitute 8.3 percent of the total population by the year 2000. Given the same average birthrate, those over the age of 65 will constitute only 16.2 percent of the total population by the year 2020, a figure which approximates that for East Germany, which has a comparatively pronounced "aging" population. It may be seen, therefore, that we will not be confronted with the problem of an "aging" population during the present century. The problem, in fact, will not reach serious proportions for the first 20 years of the 21st century. However, so long as the birthrate continues to fall and the average life span continues to climb, the number of elderly people may be expected to rise correspondingly. In any case, the pace of the "aging" trend can be gauged by the projected size of the population, and the "aging" trend can be put under certain limits by an adjustment of the average birthrate. This problem should cause no alarm at the present time.

Now, as to whether or not the promotion of the one child per couple concept will lead to a shortage or depletion of labor resources, it is the opinion of Tien Xueyuan that, in the first place, the present figure for our labor resources totalling over 500 million is equivalent to the combined total for the entire first and second worlds and that, from what we see of the economic development in foreign countries, we do not require further labor resources for our modernization developments. In the second place, because our population has a large base, we have a large number of women of child-bearing age as well as new-born babies. Furthermore, the age of our population is comparatively young. In 1979, those under the age of 14 constituted 38.6 percent of the entire population, or over 13 percent higher than that for the advanced countries. These people will gradually be absorbed into the labor force within the next 20 years, and the size of the labor force will continue to grow in the next half century. Judging from the projected increase in the number of births for the present century, those who are old enough to fill the labor market will have exceeded 770 million by the end of the present century. The figure will have reached its peak of 790 million by 2012. From 2014, the figure will start to show a decline, but it will not drop to the present level of 500 million until 2041. For this reason, the problem of labor shortage will not arise for at least another 60 years.

We then posed the question--if each couple were to produce only one child and if, later on, an only child were to marry another only child--whether that would lead to a situation where we would have four old people, two people of working age and one child, and whether a "4, 2, 1" situation would emerge when the labor force would be taxed to the full and even over-taxed. His reply was that while the "4, 2, 1" situation may well arise in a particular family in a particular year, it will not apply to society as a whole, especially in view of the size of our population. He pointed out that there are millions and tens of millions of people in each of the age groups ranging from zero to 70 and 80, that there is a span of close to 50 years between 16 or 17-year-olds and those over 60, that there is a span of only 15 or 16 years for minors, and that the span is not long for those over 65. He explained that, unlike an individual family whose members belong to only a few age groups over the span of 20-odd years, the "4, 2, 1" situation is not likely to arise.

Because our labor force will continue to grow for a comparatively long period of time, the average index for the amount of support which each worker has to set aside for the aged and the minors will not be inordinately high. The present average index for each worker is 0.94, that is, an average of less than one person. On the assumption that the average birthrate will not push the population beyond the 12 billion mark, the index for each worker will have dropped to close to the lowest point of 0.47 by the year 2000. That is because, while those over the age of 65 will have increased from the present 49 million to close to 94 million, an increase of some 45 million, the minors under the age of 14 will have dropped from the present figure of some 320 million to 230 million, a decrease of some 90 million. By offsetting one figure from the other, it may be seen that there will be 45 million fewer dependents. Adding to that the fact that the labor force will have increased by 208 million, it may be seen that the index will show a sharp decline. Although the index will rise after the year 2000, it will not reach the present index of 0.93 until the year 1235. By that time, there is no doubt that the rate of productivity will have registered a sharp rise, thus greatly enhancing the ability of workers to support their dependents. At the same time, the total population will have dropped slightly below the present level. As the new-borns gradually reach the age of productive labor, the tendency for the index to rise will have been curbed, so that the situation of workers being "over-burdened" will not arise.

MARRIAGE LAWS URGED FOR PROTECTING HEALTH OF NATION

Beijing BEIJING WANBAO in Chinese 17 Sep 80 p 2

[Article by Wu Min [0702 249C] of the Chinese Academy of Medical Sciences: "Studies in Eugenics: The Hope of Every Parent"]

[Text] The science of eugenics was originally concerned with the breeding of intelligent, healthy and good-looking children. That is the hope of practically every parent. There are two schools of thought in the science of eugenics. One school is of the opinion that, with the development of science and civilization, those who suffer from physical defects and who were formerly destined to be eliminated have managed not only to survive, but also to mate and to beget children, thus contributing to the deterioration of the hereditary traits. For this reason, it is suggested that effort should be made to reduce the number of physical and mental defectives and so to reduce the burden on the family and society. This school of eugenics may be called defeatist, negative or preventive eugenics. The other school of eugenics holds the view that, by taking advantage of developments in science and civilization, it is possible to overcome nature, to effectively improve the hereditary traits of future generations, and to speed up the evolution of mankind in a more ideal fashion so that there will be more and more intelligent, healthy and good-looking human beings. This school of eugenics may be called true eugenics or positive eugenics or evolutionary eugenics. These two main schools are complementary and have the same general objective.

There was a time when eugenics was banned in our country. It was considered reactionary and unscientific. No study of it was made for almost 30 years. It was not until recently that the urgency of the problem aroused the attention of various quarters and of the central leadership itself. With a population of 10 billion, China has a sizable number of defectives. It is estimated that there are as many as 30 million mental defectives (including idiots, imbeciles, the slow witted). The main reason that we have a relatively large incidence of latent hereditary diseases is that we have no laws against marriages between close relatives. In the villages in remote mountainous areas, the rate of imbecility is 1-2 percent and as high as 12 percent of the local population. It is estimated that there are 2 million such people in the entire nation. At the same time, with the advance in medical and health services, many of those with physical defects, such as those suffering from congenital heart diseases, who stood little chance of being cured in the past, have been successfully treated. That, however, has not changed their hereditary traits. The probability of their children being born with the same hereditary diseases is 10 times more than that of children born of normal parents, so that the number of people with hereditary diseases continues to climb. In addition, such factors as mothers taking the wrong medicine during pregnancy, the contracting of infectious diseases, malnutrition and difficult births are all capable of contributing to the mental retardation or deformity of the unborn child. Postnatal factors also play a contributing role. For instance, if a child is denied proper care after birth, or if he is deprived of adequate nutrition or external stimuli to promote intellectual growth at the most crucial developmental period of the cerebrum, he is liable to suffer from retardation and damage to his intellectual development. The number of mental defectives due to the prenatal and postnatal factors described above may exceed 30 million. they represent an enormous economic loss, a tremendous burden to the nation and untold anguish to the family.

To deal with the situation prevailing in our nation, it is a matter of urgency that we establish certain scientifically enforceable laws such as the marriage law, the eugenics law or the family planning law which would make it illegal for people suffering from certain diseases to marry or to have children. At the same time, we should step up our educational publicity campaign to persuade the young of the merits of marrying and having children at a later age, and of the need to acquire adequate scientific knowledge. In view of the relationship between congenital imbecility and the mother's age, it is best for women to have babies between the ages of 25 and 30.

In short, the quality and quantity of the population is a major problem affecting the future generation. On the one hand, we must launch an effective publicity campaign to limit the size of the population. On the other, we must organize the necessary personnel to engage in scientific research in order to improve the quality of the population from the genetic, medical, social, religious, ethical and economic points of view.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

'BEIJING RADIO' REPORTER'S FEATURE ON VISIT TO PAKISTAN

OW291715 Beijing Domestic Service in Mandarin 1100 GMT 26 Nov 80

[Newsletter from station reporter (Yang Zhengquan): "The Days in Pakistan"]

[Excerpts] The Chinese radio and television reporters' group began its trip to Pakistan on 14 October. During the month-long visit, this reporter was favorably impressed with the majestic view of Pakistan's mountains and rivers, its ancient and modern cities, its age-old cultue and, in particular, its industrious, brave, warm and friendly people.

Traveling from north to south and from west to east throughout Pakistan, this reporter could see that the diligent and hardworking Pakistani people are building their motherland in a peaceful way. However, quite clear about the threats to their country imposed by foreign aggressors, they are also maintaining vigilance at all times and ready to defend their motherland. This is one of the central topics which the Pakistani friends used to discuss with this reporter whenever they spent sometime together. The seriousness of this matter could be more keenly felt by the reporter during his visit to Peshawar and Quetta.

Large numbers of Afghan refugees poured into the city of Peshawar everyday. Refugee camps have been set up around the city. This naturally reminded everybody of the disasters brought to a nation due to the Soviet invasion of Afghanistan.

On 23 October, this reporter left Peshawar for Khyber Pass in the border area between Pakistan and Afghanistan.

According to the Pakistani friends, many friendly envoys in history came to and left Pakistan through this pass. However, there were also many military operations at this place. In ancient times, the Aryans invaded India through the Khyber Pass. Later, the Persian, Greek and Tartarian armies invaded the Indus Valley also through this pass. The troops of Greece's Alexander the Great set out for their southward expedition to the Indian Ocean also from this place.

While the bus traveled between steep cliffs and under overhanging rocks, this reporter thought that the strategic Khyber Pass has attracted even more attention from the whole world ever since the Soviet invasion of Afghanistan.

There is speculation in the international circles that it is very likely that the Soviet Union might pass through this strategic pass to gain control of important strategic positions and then proceed south toward the Indian Ocean so as to carry out its southward strategy. This was also a dream of the old tsars for many years. In view of past history, Pakistan would be the first to bear brunt of Soviet aggression.

As told by the Pakistani friends, foreign aircraft often cross the border and intrude into Pakistan's airspace. The sound of firing guns and canons can often be heard at the Khyber Pass from the opposite side.

The Pakistani friends told this reporter: The Pakistani people always pay attention to actions. China has always stood on our side and supported us even during our most difficult times. The friendship between the peoples of our two countries is founded on a common basis and has been tested by time. The Chinese people are our most reliable friends. Irrespective of the constant changes in the political situation in both countries, our friendship continues to grow.

BRIEFS

SAUDI ARABIA NAVAL BASE--Beijing, November 25 (XINHUA)--King Khalid of Saudi Arabia inaugurated a new naval base at Jubail on its gulf coast yesterday, according to Western News Agency reports. The base, claimed to be the biggest in the region, was built by a South Korean company at a cost of 534 million U.S. dollars. It was completed in four years under the supervision of the U.S. Army Corp of Engineers. Commander of the base Badr Saleh al Saleh said in a speech that its forces would sweep waterways leading to Saudi ports, patrol territorial waters, safeguard Saudi economic life and ensure the safety of ships plying the kingdom's gulf coast. The base has repair workshops, a dock and synchronized cranes and other facilities. [Text] [OW251242 Beijing XINHUA in English 1237 GMT 25 Nov 80]

EGYPTIAN-U.S. RELATIONS--Cairo, November 25 (XINHUA)--Egyptian President Anwar al-Sadat has said that the relationship between his country and the United States is strategic and based on equal footing. In an interview with the West German weekly DER SPIEGEL published by the Egyptian paper AL-AHRAM today, the president reaffirmed that Egypt is ready to supply the United States and other Western countries with facilities to safeguard the interests of the Arab countries in the Gulf area and those of the United States. But Egypt is against providing military bases, he added. He pointed out, "The Soviet Union is now making attempts to infiltrate into the Middle East and the U.S.A. should adopt a firm policy." On the Palestine problem, Al-Sadat said that the problem is the essence of any peaceful settlement. He said that the problem can be solved in stages during which agreement can be reached on autonomy for the West Bank of the Jordan River and the Gaza Strip. The president declared previously that he differed with U.S. president-elect Ronald Reagan on whether to give Jordan's King Husayn a key role in the Middle East peace talks at this time. In another interview with the U.S. papers DAILY HERALD and SOUTH MISSISSIPPI, Al-Sadat warned that the U.S. would lose Egypt if the U.S. president-elect is going to adopt a hard line toward it. [Text] [OW251522 Beijing XINHUA in English 1507 GMT 25 Nov 80]

NEPAL PEACE PROPOSAL--Kathmandu, November 25 (XINHUA)--A total of 20 countries or regions in Asia and Europe have expressed support for Nepal's proposal that the country be declared a zone of peace. The proposal was made by King Birendra in February 1975. It is aimed at maintaining Nepal's national sovereignty and creating a peaceful and stable situation for national development. The proposal was first supported by China, Pakistan, Bangladesh, the Democratic People's Republic of Korea, Sri Lanka and Burma. It has also ASEAN backing. At a time when peace and stability in South and West Asian countries are being threatened by the Soviet Union, Nepal's proposal has been gaining wider support. Yugoslavia, Britain and Belgium extended their support to the proposal when King Birendra visited these countries recently. The government of the Sultanate of Oman has also recently announced its support to the proposal. [Text] [OW251218 Beijing XINHUA in English 1210 GMT 25 Nov 80]

SOVIET ACTION IN AFGHANISTAN--Islamabad, November 25 (XINHUA)--Pakistani writers appealed to intellectuals all over the world to raise their voice against the Soviet Union's "naked aggression" against Afghanistan and to bring the Afghan people's goal of liberation nearer. In an unanimously-adopted resolution, the All-Pakistan Writers Conference which started here today condemned the Soviet invasion of Afghanistan, expressed its sympathy with the Afghan people and assured them full support. The resolution said a true writer could not befriend the forces using military power to take away the freedom of other nations. It added that the Pakistani writers had always taken an impartial stand on national and foreign problems and raised their voice against all colonial forces. [Text] [OW260842 Beijing XINHUA in English 0814 GMT 26 Nov 80]

AFGHAN RESOLUTION DISCUSSED--Washington, November 24 (XINHUA)--The resounding call of the United Nations General Assembly for the Soviet Union to withdraw its forces from Afghanistan is a "clear diplomatic blow to Moscow," says an editorial in THE SUN of Baltimore today. But, the editorial notes, the Soviet Union is bent on "strengthening its geo-strategic positions in a very vital but unstable region" despite international outrage against its invasion. It points to Soviet military action which "includes destruction of food and water supplies throughout the countryside that could be used to feed insurgent forces." The editorial maintains that given Moscow's entrenched position, with some 85,000 troops, in Afghanistan, it is hardly likely that it will heed the United Nations' call. "The Russians have not yet succeeded in their historic goal to gain a warm water port," it says, but with the invasion of Afghanistan, "there can be no denying that they are a stepstone away from that dream." The editorial says that "having reminded Islamic and African nations of its determination to trample on Third World as well as East European nations, Moscow could have miscalculated. Third World nations, which Moscow has been assiduously courting, are now on guard that they too could be victims in the Soviets' geo-strategic advance." [Text] [OW251214 Beijing XINHUA in English 1203 GMT 25 Nov 80]

UN ENVOY ON IRAN-IRAQ--United Nations, November 26 (XINHUA)--U.S. Secretary-General Kurt Waldheim's special envoy Olof Palme said today upon his return from his trip to Iran and Iraq that he had achieved pre-set objectives and known better about the views of the warring parties. Mr. Olof Palme, former prime minister of Sweden, undertook his mission to the Gulf area a week ago and returned to New York to report to the secretary-general yesterday. Briefing the press on his trip this afternoon, Palme said he had fulfilled his goals for the first stage to get ideas from both parties and he would follow the development of the situation there closely and then decide on the time to take the second trip. He expected it would take place some weeks later. Mr. Palme said an agreement in principle had been reached with regard to the free passage of 63 trapped ships in the Shatt-al-'Arab. The ships could come out only by hoisting the Red-Cross flag when practical arrangements were made. Iraq has now controlled the Shatt-al-'Arab and claimed its sovereignty. Palme said that Iraq opposed to the passage of ships by hoisting the U.N. flag for fear that the waterway would be internationalized. [Text] [OW270220 Beijing XINHUA in English 0207 GMT 27 Nov 80]

EGYPTIAN FILM WEEK--Beijing, 22 Nov (XINHUA)--An Egyptian film week opened at a ceremony held in the Capital Theatre here this afternoon. The week is sponsored by the Chinese Ministry of Culture under the Sino-Egyptian cultural agreement. During the week which will last from 23 to 29 November 3 Egyptian colour feature films will be shown concurrently in Beijing, Nanjing and Chengdu. They are "Descending to Abyss," "Cafe Karnak" and "Conquerer of Darkness." Members of the Egyptian film delegation participating in the week attended the ceremony. Head of the delegation Atef Salem made a speech conveying the friendly sentiments of the Egyptian people and artists to Chinese spectators. Director of the Cinema Bureau of the Chinese Ministry of Culture Chen Bo also spoke. After the ceremony, the best prize-winning film in Egypt, "Descending to Abyss," was shown. [Text] [Beijing XINHUA in English 1551 GMT 22 Nov 80 OW]

ARAB SUMMIT CONFERENCE ENDS--Amman, November 27 (XINHUA)--The 11th Arab Summit Conference concluded here this afternoon with emphasis on closer economic cooperation and unified political action against Israel. Kings, heads of state and government or their representatives from fifteen Arab countries attended the three-day summit. Syria, Algeria, South Yemen, Libya, Lebanon and the Palestine Liberation Organization boycotted the conference. The Arab leaders reached agreement on subjects discussed at the summit, including a five billion dollar-fund for development in the Arab world in the coming decade and a unified programme of Arab political action against Israel. A final declaration of the summit deplored the absence of the six Arab League members and called upon them to abide by the resolutions adopted at the summit. [Text] [OW271517 Beijing XINHUA in English 1501 GMT 27 Nov 80]

INDIAN OCEAN NAVAL PRESENCE--Beijing, 25 Nov (XINHUA)--News from Washington: John Tower, who will soon become chairman of the U.S. Senate Military Affairs Committee, demanded at a meeting on 24 November that a permanent U.S. carrier task force be stationed in the Indian Ocean to protect the petroleum shipping route from the Persian Gulf. This Republican senator said: "At present there is a possibility that this economic lifeline may be cut off by the Soviet Union. Neither we nor our allies can do anything about it." Tower said: Rebuilding the navy including the addition of two more carrier task forces ought to be a matter of priority for the Reagan administration. He warned: "If we do not act fast, we will have no power to implement a reliable nuclear strategy in less than 3 years." He also demanded improving land-based U.S. missiles and developing and producing sub-launched Trident II guided missiles and new strategic bombers. [Text] [OW290500 Beijing XINHUA Domestic Service in Chinese 1139 GMT 25 Nov 80]

POLISH CULTURAL MEETING--Warsaw, 17 Nov (XINHUA)--The Central Committee of the Polish United Workers'Party (PZPR) on 17 November summoned personages of the country's cultural circles to a meeting in Warsaw to discuss the pressing problems in domestic cultural life. J. Waszczuk, candidate member of the PZPR Central Committee's Political Bureau and secretary of Chancery of the Secretariat, delivered a speech on the party's cultural policy at the meeting. He said that the purpose of the PZPR's cultural policy is to satisfy to the maximum extent the cultural needs of the people. "We believe," he said, "this purpose can be achieved by showing constant concern for creative writing circles and by adopting the policy of protecting the various academic schools and branches that are conducive to development of art and cultural life." Commenting on the PZPR's cultural work, he said: "I accept the keen criticisms for the many distortions and mistakes in our commitments to cultural life, but I can hardly agree to the repeated overall negation of Poland's cultural activities over the past decades." At the meeting, a number of personages from the literary and art circles urged the PZPR to limit its cultural protection policy to appropriating cultural funds and suggested that the creative writing circles be given "complete autonomy" in dealing with ideological and art questions in the country's cultural life. Many literary and art workers called for immediate efforts to dismiss from the party those who are morally decadent, speculating and those whose ideology is incompatible to that of the party so that the PZPR can restore its prestige. [Text] [OW210943 Beijing XINHUA Domestic Service in Chinese 1219 GMT 18 Nov 80]

POLISH GOVERNOR ELECTED--Warsaw, 16 Nov (XINHUA)--The Legnica Provincial People's Council of Poland on 15 November rejected a candidate for the governor of Legnica Province nominated by Premier Jozef Pinkowski of the Polish Government, and recommended a cadre who has many years of practical work experience and enjoys popular confidence among the people as a candidate for provincial governor. According to PAP reports, since Ryszard Romaniewicz, former governor of Legnica Province, was elected first secretary of the Legnica Provincial Committee of the Polish United Workers' Party not too long ago, the provincial people's council on 15 November called a special meeting to discuss the candidates nominated for provincial governor. Through secret ballot, the meeting rejected a candidate nominated by the premier of the Polish Government and named its own candidate for provincial governor--(Yang Ma-qie-ye-wei-qi) [2254 7456 0434 5102 4850 1142], manager in charge of investment of the (Lubin) [4151 6333] Mining and Metallurgical Joint Corporation. All representatives attending the special session unanimously held that having devoted himself to develop copper mining for a long time, (Yang Ma-qie-ye-wei-qi) enjoys universal respect and trust among the broad masses of staff workers and workers, and that he will do a better job than others in developing the social economy of Legnica Province. Legnica Province is the center of Poland's copper mining industry through which 90 percent of Poland's copper is extracted and processed. JIANG QING'S TRIAL ANALYZED

HK110610 Hong Kong WEN WEI PAO in Chinese 8 Nov 80 p 3

[Special feature by Chen Ping [7115 1627]: "What Happens If Jiang Qing Does Not Acknowledge Her Guilt?"]

[Text] Foreign news agency dispatches have alleged that because Jiang Qing has refused to acknowledge her guilt and has remained uncooperative, the date of her trial will be deferred.

Beijing circles have discounted this view, pointing out that Jiang Qing's attitude to the acknowledgement of her guilt will not affect the trial date.

All those who have committed crimes always hope to get around them so they can escape criminal responsibility. Regardless of whether or not Jiang Qing has already acknowledged her guilt or has already cooperated with the public security personnel and particularly with the staff of the procuratorate, and even if she does not admit her guilt in the future, the trial date will be unaffected. If criminals who deny the charges against them can defer the trial dates, they will in fact sway judicial proceedings. Under these circumstances, will cases not be postponed indefinitely and will criminals not escape criminal sanctions? In such a case, what after all is the law for?

Public security departments which completed their investigations into the cases involving Jiang Qing and others handed over the files in September to the special procuratorate of the Supreme People's Procuratorate for examination. After taking over the cases, the special procuratorate must find out the incriminating facts according to Article 100 of the Law of Criminal Procedure, as well as determine whether the particulars set forth are clearly stated, whether the evidence presented is positive and adequate and whether the nature of offense and the definition of charges are correct. In addition, it must make sure that all offenses and all criminally responsible people are accounted for. Furthermore, it must investigate portions of the case for which the defendant should not be held criminally responsible. Since the cases involving Jiang Qing and others are quite serious and complicated and since the charges against them amount to as many as 60, it will take a long time to examine a vast number of related files, evidence and written statements.

As the Jiang Qing case is a major case in the restructuring of our country's legal system, the special procuratorate has adopted a cautious attitude. According to the existing legal system, the questions of political work and line are not liable to criminal prosecution and only violations of the law are subject to criminal prosecution. During the 10 years of the Cultural Revolution, Jiang Qing and others were responsible for a great many evil deeds, some relating to political work and line and some being violations of criminal law. Distinguishing one from the other is an arduous and time-consuming task. As a rule, the questions of political work and line should be handled by party and government organs, while criminal problems should be disposed of by judicial organizations.

What constitutes a violation of criminal law? Only violators of the criminal code commit the offense. The criminal law stipulates that "counterrevolutionary offenses" include "plotting to subvert the government and split the country," "organizing and directing counterrevolutionary cliques," "inciting the masses to resist and sabotage the implementation of the laws of the land" and "harboring counterrevolutionary motives in looting state archives or public property and in carrying out sabotage activities."

Included in the "offenses of violating citizens' personal rights and democratic rights" are "killing people," "forcing confessions by torture," "beating, smashing and looting," "slandering the masses and cadres," "illegally detaining others," "illegally searching people and houses," "fabricating facts and slandering others by means of big-character posters," and so forth.

"State functionaries causing losses to the state by neglecting their duties," "sheltering criminals and abusing judgment," and so forth constitute "offenses of negligence of duty."

When judicial organs handle cases, they act according to the law and not on the basis of political criteria. Whoever violates the punitive code will be charged with criminal responsibility. The duty of the special procuratorate is to examine and to determine whether the charges brought by the prosecution are supported by concrete evidence, and whether the definition of the offenses conforms to legal provisions.

Even if Jiang Qing categorically denies her guilt, she cannot obstruct Article 35 of the Law of Criminal Procedure relating to the conduct of criminal prosecution which stipulates that "in handling all cases it is necessary to pay attention to evidence and not to verbal statements. If the defendant's statement is not supported by evidence, he should not be convicted and punished. A defendant can be found guilty and punished if he makes no statement but the evidence presented is against him."

If Jiang Qing does not acknowledge her guilt in the future, it will be of little importance. As long as the evidence against her is overwhelming, she can be convicted. The special procuratorate has already examined all evidence and is positive that she and others have violated the criminal law. Thus these people will be prosecuted according to the law.

If during the trial Jiang Qing raises questions of political work and line in order to entangle the real issues, this will be considered to be of no relevance at all from a legal point of view. When the special court is in session, it will stop her and will concentrate on her criminal offenses instead of permitting her to drift to minor issues. Article 115 of the Law of Criminal Procedure stipulates that "the presiding judge should stop questions raised if he considers them to be irrelevant to the case in point." Article 119 also stipulates that "the presiding judge should caution and stop the litigating parties when they violate court proceedings when the court is in session. The parties involved should be asked to leave the court, and in serious cases their criminal responsibility should be determined according to the law." In the court, Jiang Qing must follow legal proceedings when she speaks and when witnesses are cross-examined or defended. If she violates court proceedings and plays tricks, the presiding judge will stop her. If this fails, she will be asked to leave the court pending resumption of hearings.

TRIAL OF JIANG QING, HUANG YONGSHENG, OTHERS TELEVISED

HK271442 [Editorial Report] Beijing Domestic Television Service in Mandarin at 1130 GMT on 26 November after its regular newscast, broadcast a recorded 38-minute report on the trial under the title: "Special Reports on the Trial of the Case Against the Lin Biao and Jiang Qing Counterrevolutionary Cliques."

The first segment, under the sub-title "The First Tribunal Continues--Jiang Qing Tried," opens with a shot of special court president Jiang Hua declaring the court in session on the morning of 26 November. This scene is followed by shots of Jiang Qing being escorted into the courtroom by two armed women bailiffs and led to the dock. She is clad in a dark blue tunic and her hair is neatly combed. She shows no sign of weakness or illness and is seen walking with a firm, steady gait. Her face appears calm and emotionless. The following exchange of questions and answers ensues between chief judge Zeng Hanzhou and Jiang Qing:

Zeng: Defendant Jiang Qing, I put this question to you: Was it you who sent for Wang Hongwen, Zhang Chunqiao and Yao Wenyuan on the evening of 17 October 1974 to go to No 10 building, Diaoyutai?

Jiang (promptly): No.

Zeng: What? No?

Jiang: (throwing her head back slightly and glancing briefly at the ceiling): I do not know.

Zeng: So, you do not know. (pause) What did you four talk about together?

Jiang (answering slowly): I do not know what happened at the beginning, so how do I know what was talked about?

Zeng: Record in the file that defendant Jiang Qing denied these facts!

The next brief cut shows Wang Hongwen being summoned to court to testify. He says that before going to Changsha, he was with Jiang Qing, Zhang Chunqiao and Yao Wenyuan when they conspired to frame Deng Xiaoping. During this time Jiang Qing is sitting in the dock with her head held erect, staring at the ceiling.

The next witness to testify is Wang Haiyong, who says: "Jiang Qing, Wang Hongwen, Zhang Chunqiao and Yao Wenyuan asked me and Comrade Tang Wensheng to report to Chairman Mao on their behalf when we accompanied foreign visitors on a trip to Changsha to meet the chairman. Jiang also said slanderously that that comrade in the State Council regularly used the excuse of work to engage in liaison. She said that the premier was busy in the hospital but that he was not recuperating. She said Comrade Xiaoping, the premier and Marshal Ye were always together. She said the premier was the boss behind the scenes." During this testimony the camera gives several closeup cuts showing Jiang Qing blinking her eyes constantly and appearing to listen attentively to what is being said.

Tang Wensheng, the next witness, is then shown standing behind the same wooden stand some 10 feet to Jiang Qing's left. He gives the following testimony: "After committing the blunder, they then tried to make use of us to inform on [Deng and Zhou] to the chairman. So we said: Since you have already told the chairman and the chairman has given his instructions, there is no need for us to say anything further. We turned them down. Realizing our position on the matter, Wang, Zhang and Yao did not say anything more. However, Jiang Qing repeatedly insisted that we report to the chairman. We resolutely refused to do this." Jiang Qing listens to this attentively with her head tilted to one side.

After Tang's testimony Zeng declares: "The evidence shown and testimonies presented and defendant Wang Hongwen's cross-examination are plentiful and sufficient evidence. I hereby declare that the court has completed examination of this point." The last shot of this 5-minute segment is a long shot of Jiang Qing being escorted out of the court as Zeng says: "Court adjourned!"

The second segment, which carries no title, begins with a long shot of the bench of the second tribunal which is in session in the afternoon of the same day. Special court president Jiang Hua declares: "Now the session of the second tribunal continues: Summon defendant Jiang Tengjiao to court!" Upon arriving at the dock Jiang is asked by the judge whether he met Zhou Yuchi on 7 September 1971, to which he answers yes. After this exchange, another defendant (Gu Tongzhou) is brought to the court for questioning. The 3-minute film ends at this point without showing the questioning. An announcer says that this session of the court has investigated facts about the charges made in the indictment drawn up by the special procuratorate that Jiang Tengjiao had attended several secret meetings called by Lin Biao's son, Lin Liguo, and Zhou Yuchi between 8 and 11 September 1971, which plotted to assassinate Mao and stage and armed counterrevolutionary coup d'etat.

The third segment, which carries the title "Jiang Tengjiao, Huang Yongshen, and Li Zuopeng Tried on 25 November," beings with shots showing a judge questioning Jiang Tengjiao on a secret meeting called by Lin Liguo in Shanghai on 31 March 1971, and attended by Jiang Tengjiao, Wang Weiguo, Chen Liyun and Zhou Jianping, to discuss matters concerning the organization of a command team for the armed coup d'etat.

After an unidentified man on the bench reads a deposition given by defendant Chen Liyun on 14 July 1980 concerning the secret meeting, Zhou Jianping is summoned to court to testify on the same matter. The next shot shows the same unidentified man reading a page from an undated diary of defendant Cheng Hongzhen and the latter's testimony given on 22 August 1979--both of which concern the secret meeting. This is followed by shots of several pages from the "Outline of 'Project 571'" which shows that Jiang Tengjiao was a member of the command team of the coup.

The next defendant summoned to testify is Li Weixin, who says it was Lin Liguo who suggested the drafting of the "Outline of 'Project 571'" as a plan for the armed coup d'etat. The coup d'etat was necessary because a "peaceful transition" of power to Lin Biao would take 5 or 6 years and Lin might not remain in his position of power that long.

The following shots show Huang Yongsheng testifying in court that he notified Ye Qun by telephone on 6 September 1971 of the contents of Mao's conversation about Lin Biao, which Huang had heard from Li Zuopeng. This conversation, Huang admits, gave rise to the serious consequence of Lin Biao deciding to murder Mao. The court then produces fragments of a small piece of paper with some missing parts, which is said to be "Lin Biao's order for the counter-revolutionary coup d'etat." The court says this order was carried by Zhou Yuchi, Yu Xinye and Li Weixin when they fled in a helicopter, and it was torn up by Zhou after the helicopter made a forced landing. However, according to (Wang Fei), (Hu Ping) and Li Weixin, the order stated: "Hope you will act according to the order transmitted by comrades Liguo and Yuchi. Signed Lin Biao, 8 September."

After this statement Huang is led away and Li Zuopeng is brought in to testify. He admits that upon his return to Beijing from Wuhan on 6 September 1971, he revealed to Huang Yongsheng the contents of Mao's confidential conversation which he had learned about from Liu Feng. At this point special court vice president Wu Xiuquan declares that facts surrounding the leak of the contents of Mao's confidential conversation by Liu Feng through Li Zuopeng and Huang Yongsheng to Ye Qun are established. The film finally ends with Wu's words: "Take Li Zuopeng away!" This last segment of today's report is 30 minutes long.

PARTY AND STATE

PUNISHMENT OF 'GANG OF FOUR' DISCUSSED

HK110448 Hong Kong TA KUNG PAO in Chinese 9 Nov 80 p 1

[Special feature by Chen Lin [7115 2651]: "Will the 'Gang of Four' Be Given Capital Punishment?"]

[Text] Reports from various quarters show that the long-awaited public trial of the 10 chief culprits of the Lin Biao and the Jiang Qing groups is close at hand. This is heartening news for everyone!

In the modern history of China, the two counterrevolutionary groups represented by Lin Biao and Jiang Qing brought China inestimable damage, judging from the extent of the catastrophe they caused and the wide-ranging and pervasive aftereffects of the poison they spread. In the 10 catastrophic years, they wielded the big stick of "class struggle" and "overall dictatorship," attacking everything and turning everything upside down. They concocted large numbers of frameups, persecuting thousands upon thousands of good people to death and implicating over a hundred million people throughout the country. A respectable socialist new China was "plunged into bloody terror." The socialist economic foundation that the people had worked hard to build up was brought to the brink of collapse. The greatest pity is that all these crimes were committed in the name of "a most revolutionary cause."

According to a report submitted to the NPC Standing Committee on 27 September by Huang Huoqing, procurator general of the Supreme People's Procuratorate, included in the indictment against the 10 principal criminals of the Lin Biao and Jiang Qing counterrevolutionary groups are the following four charges: 1) Instigating and plotting the overthrow of the proletarian dictatorship; 2) Slandering and persecuting party and state leaders and usurping party and state power; 3) Persecuting and suppressing the masses [illegible] cadres and people and practicing fascist dictatorship; 4) Plotting to murder Chairman Mao and instigating a counterrevolutionary armed coup. This may be taken to mean that the coming trial will involve only their counterrevolutionary crimes and not the mistakes in their work, including those concerning the line. This is understandable, because the former are problems between ourselves and the enemy and the latter are contradictions among the people. Some people believe that such a distinction is made between the two to avoid involving others. This is a misinterpretation. China has traditionally persisted in correctly distinguishing and handling two different types of contradictions. Concerning contradictions among the people, including serious mistakes about the line, which cause the revolutionary enterprise great damage, the guideline of "learning from past mistakes to avoid future ones and curing the sickness to save the patient" has been adopted. Problems that exist between the enemy and ourselves, or offenders against the criminal code have been dealt with according to the law. The two must not be confused. Lin Biao, Jiang Qing and the like got involved with "mountains of debts in blood" and an endless list of crimes. Just by holding them responsible for their crimes, we have reason enough to mete out capital punishment.

In his report to the NPC Standing Committee, procurator general of the Supreme People's Court Huang Huoqing also said that the Lin Biao and the Jiang Qing counterrevolutionary groups would be treated as the same case in prosecution but tried in separate courts. It is likely that the 10 defendants will be first brought to the same court and then tried separately. At the end of the trial, sentences will be pronounced in the same court. Why are the Lin Biao and the Jiang Qing groups treated as the same case in prosecution? All those who know about the conditions of the "Great Cultural Revolution" in China know that these two counterrevolutionary groups acted in collusion and used each other. Their criminal activities were interwoven and inseparably linked. On the eve of the "Cultural Revolution," these two big culprits cooperated in concocting the "notes on an army literary and art work forum." These were the signal for the start of the "Cultural Revolution." After the start of the "Cultural Revolution," Lin Biao built Jiang up as a so-called "standard bearer." Jiang Qing on the other hand praised Lin Biao for "raising the banner highest" and boosted him so that he made it as deputy marshal. In September 1971 when Lin Biao rebelled against the state and plunged to his death in an escape, the "gang of four," in a sudden about face, styled itself as an anti-Lin Biao "hero." Now the truth has come out. It turned out that they were birds of a feather. It naturally follows that they should be tried at the same time.

People note with joy that everything from the investigation and pretrial of the 10 chief culprits to the prosecution of them has been strictly guided by the law. This is a symbol of China heading from individual rule to a system of laws and from chaos to strict enforcement of the law. Though the towering crimes of the two counterrevolutionary groups represented by Lin Biao and Jiang Qing have long been known throughout the world, the judicial organ in China is still taking a stern and prudent attitude toward this important case. It is reported that adequate investigations and studies have been made in the process of observation, pretrial and prosecution. Emphasis has been placed on evidence. Oral statements are not accepted readily. Everything is based on facts and the law is taken as the yardstick or guide in all matters. The prosecution brought by the special procurators' office of the Supreme People's Procuratorate against the 10 chief culprits of the Lin Biao and Jiang Qing groups is based on firsthand data and material evidence, such as documents, letters, diaries, notes, recorded speeches, tape recordings, and so forth. Confronted with evidence, no matter how cunning and crafty, the "10 evildoers" cannot avoid accepting responsibility for their crimes. Some people worry that Jiang Qing and company may pass the buck and categorically deny their crimes. We need not worry about this. The criminal code of China says: "If the accused does not plead guilty, he can be convicted and punished in light of sufficient concrete evidence." Therefore, if the above is the case, the administration of justice by the court will not be the least affected.

As an ancient saying goes, as you make your bed so you must lie in it. It is not that the culprits have escaped suffering for what they did. It is only that the time is not ripe. Once the opportunity comes, they will be made to pay for all their misdeeds. Now the occasion for jubilation has come. The 10 chief culprits who deserve more than death will soon be given an historic trial. People believe that the Lin Biao and Jiang Qing groups represent the most serious case in history. Since a public trial is being held, justice should be upheld and punishment meted out according to the law. If capital punishment is not imposed on these flagitious villains, how can we do justice to the world and pacify the indignation of the people? We believe that the special court entrusted with this weighty mission will not fall short of the expectations of the people and will dare to uphold the dignity of the law and render a fair judgment.

EXECUTION OF CHIEF CRIMINALS OF GANG URGED

HK260236 Hong Kong TA KUNG PAO in Chinese 24 Nov 80 p 3

["Political Talk" column by Shih Chun-yu: "How Can Jiang Qing Be Treated Leniently"]

[Text] The trial of the 10 wicked criminals has already begun in the two courts. Their ugly faces are now revealed to the people of China and throughout the world through television. The preliminary impression people generally get is: although the 10 criminals are guilty of the most vicious crimes and have been in custody for many years, judging from their physique and spirit, they have obviously received relatively good treatment. This is entirely different from the situation when this group of demons were in power, when people were wilfully arrested, cruelly tortured and ruthlessly murdered. This is evidence that China's rule of law has proceeded on the right track.

Nevertheless, the people feel very indignant about the ugly performances of the "gang of four" and especially Jiang Qing and Zhang Chunqiao. When Jiang Qing was escorted to the court, she put on an act. She still assumed her special status and seemed to feel secure in the knowledge that she had strong backing. Zhang Chunqiao behaved literally like a hoodlum. With his collar open and loose, he had a sullen countenance as though nothing could be done to him. They were feeling complacent a bit too early.

According to the indictment promulgated by the procuratorate, and in the light of the state's criminal law, the "gang of four" ought to be sentenced to death and executed immediately. As far as those criminals who are still alive are concerned, Jiang Qing is one who has brought the greatest calamities on the Chinese people. Hundreds of thousands of people were killed, hundreds of millions of people suffered grave disasters, the national economy was brought to the verge of collapse, social customs and morals were seriously damaged, the younger generation was forced out of school to become hatchetmen.... If such a very vicious ringleader is not executed, how can we talk about the rule of law and democracy, how can the people's indignation be calmed and how can the injustice done by them be redressed? China had a very hard time ending the period of lawlessness. So how can it possibly fall back to the old days of the great calamities done to the country and the people amid this great trial of historical significance conducted by the [words indistinct]

As far as people overseas are concerned, if Jiang Qing is not sentenced to death and executed immediately, it is quite unlikely that the view of the tens of millions of overseas Chinese and Hong Kong and Macao compatriots toward China as well as the cooperation between China and foreign countries in the course of the four modernizations, will be unaffected. At present, it has been generally held that over the 4 years after the smashing of the "gang of four," beginning roughly from 2 years after they were smashed, the country has gradually forged ahead on the road of healthy development. In common with their compatriots in China, China's overseas children all hope that China will continue to forge ahead along this road. If Jiang Qing is not executed, a shadow will be cast over this prospect and people cannot help worrying about it.

Cooperation between China and foreign countries in the four modernizations depends on China's stability and prosperity. If Jiang Qing is not executed, that would mean that there might be some vacillations in China's political future. If the case is not handled properly, it is not totally inconceivable that problems might arise. This will probably affect the cooperative actions between China and foreign countries in economic construction. In addition, foreign countries would probably feel skeptical over China's slogan of building a modern and highly democratic and civilized country.

According to the development of the trial over the past few days and the extensive opinion both in China and overseas, it seems that no special personal status will constitute any obstacle to the decision on a verdict in a significant case like this. In common with the people throughout the country, the Hong Kong and Macao compatriots earnestly hope that Jiang Qing will be sentenced to death and executed according to law. As for Zhang Chunqiao, the dog's-head officer, he in particular should be immediately executed just like those rabid dogs in Hong Kong have been shot in the past few days.

TRIAL POSTPONEMENT, OTHER ISSUES DISCUSSED

HK210612 Hong Kong TUNG HSIANG in Chinese No 26, 16 Nov 80 pp 4-7

[Article by Chu Chung-yi [7263 6850 0308]: "Inside Information on the Postponement of the Great Beijing Trial"]

[Excerpts] A date has been set at last for the long-awaited historic Beijing trial. People can see on TV how the 10 chief culprits of the Lin Biao and Jiang Qing cliques who wrought havoc in China for 10 years will be brought to justice of law. This will be quite a delightful event. The nearer the date of trial draws near, the more excited and more nervous the people of Beijing will become. The are waiting and waiting....

The Key Lies With the Bill of Indictment

Since the NPC Standing Committee officially decided in early September to organize a special procuratorate and a special court to investigate and try the case of the Lin Biao and Jiang Qing counterrevolutionary cliques, the date of trial has been postponed time and again. The trial was at first set to take place in early October and then postponed to late October. Even Peng Zhen, chairman of the Commission of Legal Affairs, told some foreign friends that the date would be around "end of this month (October) and beginning of next month." The decision on the trial was also delayed from early to the middle (and even the end) of November. What has happened?

I have learned from a friend in Beijing that the key lies with the bill of indictment. The Ministry of Public Security submitted the investigatory report on the case to the special prosecuratorate in September, citing 60 counts of charges and making some comments. After receiving the report, the special prosecuratorate, acting on the principle of "trying the culprits' crimes and not their errors related to political line," examined each of the charges and drafted the indictment. That gave rise to some problems.

It Is Difficult To Distinguish Between Errors and Crimes

For example, the first three of the four grave crimes which Jiang Qing and the other nine culprits were guilty of were: 1) sedition and conspiracy to overthrow the political power of proletarian dictatorship; 2) frame-up and persecution of party and state leaders and usurpation of party leadership and state power; and 3) exercise of a fascist dictatorship over the cadres and the masses of the people. Jiang Qing and Lin Biao together cooked up the "outline" of the forum on literature and art and fabricated the theory of dictatorship of a sinister line in literature and art, which brought about the persecution, suppression and death of thousands of literary and art workers. Was this an error related to the political line or a crime? How should this be convincingly defined as an error or a crime?

What was still more important, the Lin Biao and Jiang Qing cliques perpetrated crimes in the name of Mao Zedong's instructions. What should be done to completely separate Mao Zedong from Lin Biao and Jiang Qing so that Jiang Qing would not shift the responsibility onto Mao Zedong in the course of the prosecution. This was a difficult problem.

Therefore, over the past [figure indistinct] months, the "legal advisers" of the special prosecuratorate racked their brains day and night to write an appropriate bill of indictment.

Jiang Qing Calls Herself 'A Dog'

Foreign correspondents in Beijing were impatient after seeing that the trial had been postponed time and again. There was much speculation among them. They held that the repeated postponements of the trial were caused by Jiang Qing's obstinacy and refusal to admit her guilt. It was true that this shrew Jiang Qing adopted an abominable attitude. She once said that she was a dog, warning others not to "beat a dog to bully its masters." She also threatened to disclose inside information on the top-level CCP leaders if she was tried in court. Besides Jiang Qing, those adopting an abominable attitude included Zhang Chunqiao, Yao Wenyuan, Chen Boda and Huang Yongsheng. Wang Hongwen behaved better. However, the attitude of the culprits did not institute the cause of postponement of the trial. Furthermore, the special court had announced that the judgment would base on evidence and not on the culprits' statements.

It was not strange that this speculation was rife among the foreign correspondents. They deduced a conclusion from the method of work usually adopted by the CCP in the past. However, the CCP now stresses working according to law and matches its deeds with its words. That is why the foreign correspondents' speculation has gone wrong.

This historic trial has further enlivened the political atmosphere in Beijing. After the "Bohai No 2 incident," the third session of the Fifth NPC has consolidated the spirit of opposing bureaucracy and promoting democracy. As a result, the atmosphere in Beijing has become much more refreshing and invigorating. The coverings on the nude parts of the "Paean of Life" wall pictures in the international airport building have been removed, and there seems to be no objection. RENMIN RIBAO has carried articles discussing problems of "democracy under centralized guidance," thereby broadening people's scope of vision and bringing new hope of transforming the administrative structure. In the literary and art circles, a heated debate on "improving the party's leadership over literature and art" is under way. This debate will surely add life to China's literary arena.

CSO: 4005

OPENING OF LIN, JIANG CLIQUES' TRIAL REPORTED

OW210925 Beijing XINHUA Domestic Service in Chinese 1620 GMT 20 Nov 80

[XINHUA special feature: "Scenes at the Defendants' Dock"]

[Text] Beijing, 20 Nov (XINHUA)--This reporter witnessed the escorting of the 10 principal defendants in the case of the "Lin Biao and Jiang Qing counterrevolutionary cliques" to the defendants' dock.

This reporter, seated at the public gallery assigned by the special court, had a very clear view of the row of grayish iron railings that were about 1 meter away from the court's rostrum on which a wooden plate with the words "the defendants" on it stood.

After the ringing of the court bell at 1500 sharp Beijing time, all lights were turned on in the courtroom. Sitting at the center of the rostrum, Jiang Hua, president of the special court, ordered that the 10 principal defendants be brought in for questioning. Immediately, all cameras, tape recorders and television and movie film cameras spontaneously turned to a side door of the court and were ready to record a scene for which the people had waited a long time.

Under the escort of two blue-clad female bailiffs, Jiang Qing--the careerist who had always dreamed of becoming an "empress"--entered the courtroom. She wore a black coat and black cotton-padded flannel shoes today. Her hair was well-groomed and shiny as usual, and a pair of wide-rimmed dark glasses was on the bridge of her nose. She still retained her customary affected manner in her every movement. With everyone's eyes fixed on her, Jiang Qing, exhibiting a bit of her acting technique she learned during her movie actress days, deliberately held her head high and walked slowly. This only made others feel like vomiting. Her seat was in a central aisle of the dock. While the "indictment" was read, Jiang Qing, to hide her bitter anxiety, sometimes shook her head and sometimes glanced right and left. Ten days earlier, when a court messenger asked her to sign a receipt for a copy of the "indictment" that was delivered to her, Jiang Qing deliberately affected a sneer but at the same time could not manage to write the correct date on the receipt. Only after the messenger repeatedly pointed out the mistake to her did she suddenly realize and correct it.

Zhang Chunqiao, a very crafty person during the 10-year upheaval, sat in the courtroom with his head tilted to one side--sometimes to the right and at other times to the left. With his lips puckered and with his eyes looking sideways, he never set his head straight throughout the court session and still looked like an "arch-careerist" as described by the masses of the people. Seated in the dock on the far left, he leaned against the back of a chair on many occasions and looked stiff. He wore a thin, Chinese-style cotton-padded jacket with the collar open wide. His face shone with perspiration.

Sitting in one of the defendants' docks, Yao Wenyuan looked rigid, wearing a long face and staring blankly at the rostrum in front of him with a heavy heart throughout the session. Sources at the special court said he had been in good health, having a good appetite and sleeping soundly until he received the copy of the indictment 10 days ago. Then he began to lose much of his appetite and found it difficult to sleep at night. His blood pressure also went up by 10-20 millimeters. When the court session adjourned, he deliberately looked up to puff himself up. His posture disgusted those in the courtroom.

Wang Hongwen, the "armed struggle commander" in Shanghai who attained the highest level in one step, appeared wan and sallow, obviously thinner than before. He sat there motionless and depressed, blinking his eyes all the time. He looked shorter than in the days before his arrest.

Huang Yongsheng looked older than the other defendants. He shuffled to the seat assigned him by a bailiff and appeared expressionless and quiet, pretending that he was unperturbed. In the serene atmosphere of justice pervading the court, he bent back against a chair. His face looked like that of a collapsing clay figure.

Chen Boda, whose face was covered with deep sorrow; Li Zuopeng, whose face appeared to be somber; the dejected Wu Faxian; the motionless and expressionless Qiu Huizuo; and the fierce Jiang Tengjiao were also escorted to the defendants' docks.

At 1520, Huang Huoqing, chief of the special procuratorate, began to read the "indictment" through a microphone, thus starting the trial of these counterrevolutionary cliques by the 1 billion Chinese people.

[Beijing Domestic Service in Mandarin at 2230 GMT on 20 November broadcasts a 6-minute report on the publication by the 20 November RENMIN RIBAO of two feature articles by RENMIN RIBAO and XINHUA reporters on the opening of the trial. The Beijing Domestic report is identical to the above XINHUA report except for the following variation:

Paragraph seven, from line three reads in the Beijing Domestic version /motionless and depressed. After reading the copy of the indictment a few days ago, Wang Hongwen, "the then commander of rebels," told judges that all the offenses cited in the indictment are facts. He said he has no need for a defense lawyer. [new paragraph] Huang Yongsheng looked/ supplying variant passage.]

CSO: 4005

BACKGROUND TO 'GANG OF FOUR'S' DEFENSE LAWYER GIVEN

HK060512 Hong Kong TA KUNG PAO Weekly Supplement in English 6-12 Nov 80 p 3

[Text] There are reports that the defense lawyer appointed by the "gang of four" is Ma Rongjie, editor of LAW STUDIES, a monthly published by the Institute of Law Research in Beijing.

A son of a ranking officer serving under the governor of Yunnan Province before liberation, Ma was a graduate of the Beijing Institute of Law and Political Science in 1954. Never one to make the highest grades while in college, Ma is best remembered by his classmates as a brilliant orator, but whose sharp tongue was not the sort that won him a great many friends.

Ma was assigned to work at the Beijing Municipal Court upon graduation when, to his dismay, he was denied the position of either judge or judicial officer because of his parentage. Since his uncles had also served as officers in the army of the former Yunnan governor, Ma was forced to live with the discriminating stigma of 'dubious political background' for the next twenty years.

Shortly after the promulgation of the PRC's first constitution in 1954, Ma was transferred and became a full time lawyer in the newly set up consultant department on legal affairs in the municipal government where very quickly he proved his competence in acting for defendants before the bar.

Two court cases in the fifties, in which Ma acted as defense lawyer, brought him to public notice. One was the arrest and prosecution of the country's biggest counterfeiter, Li Wanming, whose dramatic contempt of the law eventually prompted the famous writer Lao She to write a play. The other was a case in which Ma successfully argued to mitigate a harsh sentence by identifying the offence as a civil instead of a criminal one. Impressed by his competence, some Japanese legal experts who attended the trial invited him to visit Japan, a kind offer, but one with which he was not able to comply at the time.

As a defense lawyer, Ma is said to be an expert in acting on behalf of defendants with 'reactionary' family background.

It is regarded as a miracle that despite his own family background and nonconformist tendencies, Ma emerged safe from the anti-rightist campaign in 1957.

A professor of his had invited some alumni of the Beijing Institute of Law and Political Science to a feast and had a picture taken of the group afterwards. Ma, for some reason, was unable to attend which, luckily for him, saved his day because before long the professor and all his guests at the feast were singled out as rightists. Since then Ma also bore the title of a rightist who escaped through the net.

Like others of his background, Ma was 'struggled against' and his home was ransacked on countless occasions during the Cultural Revolution. The latter period of the 10 years saw him working in a factory. His former organization refused to accept him even after the fall of the "gang of four."

In the 2 or 3 years he has been editor of LAW STUDIES, Ma has turned out many articles advocating the institution of lawyers in China as well as others concerning the defendant or his lawyer in contesting a case. One of his better known articles, which appeared in the GUANGMING RIBAO early last year, dealt with the utter illegality of the trial of Zhang Zhixin, the woman who was persecuted to death by surrogates of the "gang of four" in northeast China.

Observers point out that it takes a man of great courage and humanitarian principles to act as defense lawyer for the "gang of four." Jiang Qing is reported to have grumbled that she did not believe that anyone could seriously defend her at the trial and that she didn't believe in the present legal setup in China anyway. But for better or worse, she and her gang will have to put up with Ma Rongjie, a man who has every reason to dislike her, to say the least, a competent defense lawyer, and an ex-rightist who narrowly escaped the net, so to speak.

CSO: 4020

BACKGROUND ON CHANGSHA INCIDENT PROVIDED

OW271655 Beijing XINHUA in English 1633 GMT 27 Nov 80

[Text] Beijing, November 27 (XINHUA)--Wang Hongwen has confessed in the special court that the purpose of his going to Changsha in October 1974 to see Chairman Mao and making false charges against Zhou Enlai and Deng Xiaoping was to prevent Deng Xiaoping from becoming first vice-premier.

This frame-up was hatched by the "gang of four" and the special court has tried Wang Hongwen, Yao Wenyuan, Jiang Qing and Zhang Chunqiao separately on this since November 24.

The incident took place when preparations were being made for the convocation of the Fourth National People's Congress, which would erect the N.P.C. Standing Committee and decide on the appointments of leading members of the State Council.

At the time, Chairman Mao Zedong, Premier Zhou Enlai and chairman of the N.P.C. Standing Committee Zhu De were advanced in age, and Premier Zhou was ill and in hospital. The nomination of the first vice-premier, who was to take charge of government work, was an issue of vital importance to the future of China and was therefore of concern to the people across the country.

The "gang of four," who had long casted their greedy eyes on supreme party leadership and state power, thought that their opportunity had come. Zhang Chunqiao spread rumours that someone had proposed him as a candidate for the post of first vice-premier.

Chairman Mao had considered this question. On October 4, he asked a staff member to make a telephone call from Changsha, capital of Hunan Province, to Wang Hongwen, telling him that Chairman Mao intended to recommend Deng Xiaoping as first vice-premier. Wang Hongwen was then in charge on the day-to-day work of the Political Bureau of the party Central Committee.

After receiving the call, Wang Hongwen neither reported it to Premier Zhou Enlai promptly nor conveyed it to the Political Bureau. Instead, he told it to Jiang Qing, Zhang Chunqiao and Yao Wenyuan on the same day.

Trying to prevent Deng Xiaoping from becoming first vice-premier, the gang launched an attack on him at a meeting of the Political Bureau on October 17. The pretext they used for the attack was an event involving a freighter named "Feng Qing," a 10,000-ton class vessel built in Shanghai.

Taking advantage of its first successful voyage to and back from Europe, the gang and their followers in Shanghai attacked Deng Xiaoping for having suggested purchasing a number of ships from abroad and accused him of preaching "slavish comprador philosophy" and "national betrayal."

Jiang Qing's attack at Deng Xiaoping on the issue at the Political Bureau meeting was rebuffed by Deng Xiaoping right on the spot.

Immediately after the meeting, Jiang Qing called Zhang Chunqiao, Yao Wenyuan and Wang Hongwen together to discuss counter-measures. She said: "This shows Deng Xiaoping's opposition to the Great Cultural Revolution."

After the secret discussion, the "gang of four" decided, without telling the Political Bureau, to send Wang Hongwen to Changsha to make a false charge before Chairman Mao Zedong against Zhou Enlai and Deng Xiaoping. According to Wang Hongwen's confession, it was Jiang Qing who urged him to go there before Deng Xiaoping went there to see Chairman Mao in company with foreign guests.

The testimony given by Zhang Yufeng, a staff member who was present during Wang Hongwen's conversation with Chairman Mao, which was read out in court, quoted Wang Hongwen as saying to Chairman Mao: "The atmosphere in Beijing now is very much like that of the Lushan meeting"; "although the premier is ill and hospitalized, he is busy summoning people for talks far into the night... Deng Xiaoping, Ye Jianying and Li Xiannian are frequent visitors." Wang Hongwen was also quoted as saying, "Their frequent contacts at this time have something to do with the appointments to be made at the Fourth National People's Congress." The implication of Wang Hongwen's remarks was that Zhou Enlai and Deng Xiaopoing were engaged in actitivies to usurp power as Lin Biao had done during the Lushan meeting of 1970 (the second plenary session of the Ninth C.P.C. Central Committee).

Zhang Yufeng's testimony added: "Chairman Mao told Wang Hongwen that he should, after getting back, consult the premier and Comrade Jianying more often."

After returning to Beijing, however, Wang Hongwen did not implement Chairman Mao's instruction, but again joined Jiang Qing, Zhang Chunqiao and Yao Wenyuan in their conspiratorial activities.

PARTY AND STATE

HONG KONG PAPER COMMENTS ON REFORMING PRC, PART I

HK111326 Hong Kong WEN WEI PO in Chinese 9 Nov 80 p 3

[Article by Lin Hsin-tao: "Supreme, Paramount Power--How the NPC Can Be Really Worthy of Its Name, Part I"]

[Text] How to build the NPC into the highest organ of power worthy of its name is a question widely discussed in Chinese newspaper lately.

This question was actually one of the most important subjects raised during the third plenary session of the Fifth NPC in its attempt to reform the leadership structure.

Since 1954, the Chinese constitution has affirmed that the NPC is the highest organ of state power. The present [word indistinct] also has such a stipulation. However, in the past 20 years or so, China's NPC had never really played the role of the highest organ of power in actual political life. During the 10 years of turmoil, the NPC became inactive and naturally was unable to play its role. But even during the time when the NPC was functioning normally, the NPC did not play its role as the highest organ of state power.

There are many reasons for the NPC's being unworthy of its name. First, let us look at the structure of the NPC itself.

The constitution has stipulated that the NPC is the highest organ of state power, yet in reality, its functions have best taken over by the CCP. During the late 1950's, there were people who raised questions about the fusion of party and government. But they were attacked and criticized. Later, the slogan of "strengthening the centralized leadership of the party" became more and more prominent, and no one dared mention that the NPC was the highest organ of state power. The revised 1975 constitution even stipulated that: "The NPC is the highest organ of state power under the leadership of the CCP." This is erroneous both from the point of view of legality and logic--if it is "the highest," why is it still being led? This position of being the "highest yet not high enough" if difficult to understand. When the constitution was again revised in 1978, the words "under the leadership of the CCP" were deleted. This revision conforms with legal principles.

However, there are still some provisions in the constitution which run counter to the definition of the "highest organ of state power." For example, the present constitution stipulates that the NPC "decides on the choice of the premier of the State Council upon the recommendation of the Central Committee of the Communist Party of China"and that "the chairman of the Central Committee of the Communist Party of China commands the armed forces of the People's Republic of China." Some people in legal circles in Beijing have already questioned these two provisions.

Due to the fusion of party and government, in people's minds and in reality, the CCP Central Committee has the final say on important matters of the state. The NPC only conducts routine "discussion," after which motions are "unanimously approved." It is not surprising that some people say that the NPC is an organ of empty talk which merely "gives suggestions."

If the constitutional provision on the NPC as the "highest organ of state power" is strictly observed, then, the separation of functions between the NPC and the CCP should be as follows: The leadership of the party should pertain only to political leadership and guidance in strategy and not a hierarchical relationship between these two organs. In terms of legal status, the NPC should be the only highest organ of state power. There should be no parallel organs, much less any organ which is above it and leads it. The Central Committee of the CCP could only suggest to the NPC and should have no right to order the NPC around. Decisions of the Central Committee of the CCP should only be considered to be suggestions to the NPC. It is only after the deliberation and approval of the NPC that the decisions of the CCP would become the decisions of the highest organ of state power and take effect legally. The powers of the NPC can roughly be divided into the following four categories: 1) legislation; 2) decisionmaking; 3) appointment and dismissal, and 4) supervision.

If we review past practices in China, using the constitutional provisions on the nature and powers of the NPC as a yardstick, we can conclude that those practices all infringed on the powers of the NPC.

During the third plenary session of the Fifth NPC, deputies pointed out that although the economy was beginning to be emancipated, politics had not been emancipated. This refers to the fact that the reform of the Chinese leadership structure had not been started yet.

The NPC should not be a "political ornament" or a nominal entity. The constitution stipulates that state power belongs to the people. The realization of this provision has to be done by the exercise of the people's power through the NPC and people's congresses at various levels. If the NPC and people's congresses at all levels cannot play their roles as the highest organ of state power and local organs of power, then the term "people's republic" will be meaningless.

How do we make the NPC worthy of its name? Deputies to the NPC have expressed many views. Chen Yi's son, Chen Haosu, even presented a draft resolution which was more than 10,000 characters. Summing up their views and those presented in related articles recently published in Chinese newspapers and magazines, the focus of the discussion is on the composition of the NPC and of the Standing Committee of the NPC.

What are the measures to be taken to change the NPC from a "rubber stamp" and "organ of idle talk" to a strong work organ?

TRANSFER OF XI ZHONGXUN, ARRIVAL OF REN ZHONGYI DISCUSSED

HK251430 Hong Kong WEN WEI PO in Chinese 23 Nov 80 p 1

[Special feature by Tsao Min-chih [2580 2404 0037]: "Xi Zhongxun Is Transferred North and Ren Zhongyi Comes South"]

[Text] During my short stay in Guangzhou, I was in time to catch the change in the leadership structures of Guangdong and Guangzhou: Xi Zhongxun, [word indistinct] first secretary of the Guangdong Provincial CCP Committee and governor of Guangdong Province, and Yang Shangkun, concurrently second secretary of the Guangdong Provincial CCP Committee and first secretary of the Guangzhou CCP Committee, were transferred back to the CCP Central Committee, and their posts were filled respectively by Ren Zhongyi and Liang Lingguang.

Looking Forward to Ren and Liang Developing the Situation in Guangdong

In Guangdong both the official quarters and the public are paying great attention to this transfer and there have been discussions. The interest and discussions all boil down to a single point: "Is there any hope for developing the situation of Guangdong in the future?"

Why do people express this kind of hope? To understand this, we must turn back the clock and proceed from the time when Xi Zhongxun arrived in Guangdong to take office 3 years ago.

It was then just after the smashing of the "gang of four" and the popular feeling in Guangdong was for order. The arrival of a senior cadre with ability who had been exonerated after 14 years of unjust treatment and who had been given the important task of taking charge of the south could not but arouse the expectations of the people. Therefore, stories of him "making incognito visits" in the manner of ancient classical literature and about him standing in line to buy fish, queuing up for buses, personally observing the harmful effects of backdoor deals and experiencing the taste of poor service were passed from mouth to mouth in Guangzhou Municipality. Behind this build up was naturally the hopes of the people. They hoped that he could get rid of the longstanding malpractices, rectify the maxims for government officials, push the economy of Guangdong forward and improve the life of the people.

However, when Xi Zhongxun came to the south, he was all alone except for a personal secretary. Therefore, people predicted: "It will be difficult for him to accomplish anything." Has this prediction now come to pass?

Xi Zhongxun's Achievements in the Last Three Years

At a farewell reception Xi Zhongxun modestly made a self-criticism. He made an excuse for the popular common saying of "become accustomed to," which was in fact a comment on his 3 years of achievements, and said that the comment was quite to the point as he had indeed "become accustomed to" conditions in Guangdong. Some people also held that he had "feigned ignorance," but he instead considered that defeigning ignorance" was an art of leadership that could not be underestimated.

However, unlike in the past, changes have also taken place in Guangdong in the last 3 years. In the implementation of policies alone, numerous false charges, wrong sentences and framed up cases have been rehabilitated and righteousness has been promoted. Yin Linping, the present secretary of the provincial party committee, is a typical example of local cadres who have staged a comeback as a result of Xi Zhongxun's recommendation. After more than 20 years, the old case of "local chauvinism" fabricated in the early 1950's has also been initially cleared by Xi Zhongxun. Li Yizhe, sentenced as a counterrevolutionary for his "big-character poster," has also been exonerated by Xi Zhongxun and is now safe and sound. Xi Zhongxun is also responsible for the removal of Jiao Linyi, the opening of the rural market, the stimulation of urban and rural goods by means of price negotiations and the setting up of special economic zones in Guangdong. Although he has seldom visited the countryside, the Guangdong Provincial CCP Committee and the Guangzhou Municipal CCP Committee have done all they could in the preliminary implementation of the agricultural policies of the CCP Central Committee.

Three years are naturally a short time, and we must not be too harsh on the good man. However, because of the heavy responsibility entrusted to him by the CCP Central Committee, the high hopes cherished by the CCP Central Committee, the great power given him by the CCP Central Committee and the favorable local conditions, the fact that Xi Zhongxun has not been able to give a good account of himself or to take bigger strides because of various difficulties is a bit of a disappointment.

Yang Shangkun Did Not 'Take Leave Suddenly'

Yang Shangkun's coming and going also accompanied by public sentiments and comments. He only stayed in Guangzhou for a short time and it was very difficult for him to have an outstanding performance right away. When he first arrived, he concentrated on the reorganization of the leading bodies and proceeded with the rectification of the workstyle of the party. By holding major mobilization meetings and minor report and admonishment meetings, he succeeded for a time in invigorating the municipal party committee system which had stagnated for more than 10 years. Because of the adoption of an open door policy externally, official and commercial contacts became more frequent. As a result, some of the people accepted bribes from foreign businessmen and even a certain secretary of the municipal party committee was involved. Yang Shangkun was determined to put a stop to this. Consequently, this secretary was criticized in a circular. This was the first time a senior cadre of Guangzhou had been criticized in the last 30 years. However, Yang Shangkun could not always keep watch in Guangzhou. As the itinerary of his visit abroad was arranged well before hand, he had to lead a municipal delegation on a visit to Fukuoka, Japan. Subsequently he also arranged for Guangzhou and the U.S. city of Los Angeles to become sister cities. Had it not been for the cancellation of the agreement as a result of the hanging of Kuomintang flags by Los Angeles on the double tenth, he was also expected to visit the United States.

Yang Shangkun's transfer to the Central Committee was under consideration in September and formally announced at the NPC in the latter part of October. He will be leaving soon. Some people have used "take leave suddenly" as an antithetical couplet to "become accustomed to." However, contrary to the standard practice of "a new official applies strict measures," Yang Shangkun has stepped up the rectification of the workstyle of the party before his departure. He has the assistance of an elder sister with a glorious history in the long march working in the discipline inspection committee under the Guangzhou Municipal CCP Committee. This elder sister has honest and upright ways and a sense of righeousness. She has exposed the illegal import of scores of sedans by Du Zhenxiang, a secretary of the municipal party committee, and made the malpractices of senior cadres including deputy secretary general Li Jianguo of the municipal party committee a target of public criticism. Wang Qingping, the Wang Hongwen-type secretary of the party committee of the Baiyunshan farm who got his start from beating people, smashing things and looting, has been dismissed and the scandal of the director of postal and telecommunications who tried to cover up his wife's smuggling has also been brought into the open. Other more serious cases are still under investigation. It seems that Yang Shangkun is playing the role of a vanguard for Liang Lingguang so that the latter may carry on the work boldly. To restore order in Guangzhou, we must first rectify the workstyle of the party and proceed with getting rid of feudal privileges before we can reverse the stagnated situation hindering the four modernizations.

Why Lin and Jiang Had Such Deep Affection for Guangdong

Frankly speaking, from the comments of the people I have contact with, "developing the situation" referred to the situation of opposing feudal privileges and reorganizing the leading bodies at various levels. When the Lin Biao counterrevolutionary clique was planning their coup d'etat, did they not reckon on feeling south to Guangzhou in case of defeat and setting up another bogus Central Committee in Guangzhou to contend with the Central Committee in Beijing? Did not the counterrevolutionary clique of the "gang of four" collude with such armymen as Huang Yongsheng and Ding Sheng to stage an armed rebellion? Did not Jiang Qing go to Guangzhou several times to play the conquette? Both Huang and Ding were stationed in Guangdong. Therefore, the general opinion is, if Guangdong and Guangzhou did not possess the climate, soil and condition suitable to Lin Biao for engaging in counterrevolutionary usurpation of party and state power, he never would have made the plan to flee south to Guangzhou. Actually, Lin Liguo, the son of Lin Biao, had set up a huge intelligence organization in the northern suburb of Guangzhou and imported an enormous amount of sophisticated espionage equipment from Hong Kong. Even the acoustic set for playing the soft music Jiang Qing enjoyed was presented to her through Yu Bo from Guangzhou!

A single falling leaf foretells the coming of autumn. The fact that Wang Qingping, the Wang Hongwen-type character of the Baiyunshan farm, could still lord over the people for so many years after the smashing of the Lin Biao and Jiang Qing counterrevolutionary cliques is enough to prove that the statement of "such people are still around and unreconciled to their defeat" is no fallacy. In a place the size of Guangdong, there are still many Wang Hongwen-type people hiding under various disguises. The eyes of the masses are bright. They had pinned their hopes on Xi Zhongxun and Yang Shangkun to develop the situation, and now, they are pinning their hopes on Ren Zhongyi.

Ren Zhongyi's Distinguishing Feature Is Emancipating the Minds

Ren Zhongyi is from Liaoning and he has never had any contact with the south before. Although he received his instruction at a difficult time, he came to the south after all. In introducing him to the cadres of the province, Xi Zhongxun said: Guangdong is the gateway of the south and occupies an important position. Ren Zhongyi has the distinguishing feature of emancipating the minds and being familiar with economic work. His appointment by the CCP Central Committee to lead the work of Guangdong is welcomed. Although these words are spoken out of politeness, they nevertheless fit Ren Zhongyi's personality.

Emancipating the minds is definitely the distinguishing feature of Ren Zhongyi. When Liaoning was under the feudal fascist domination of Mao Yuanxin, the lackey of the "gang of four," he was ordered to restore order in Liaoning in exactly the same manner as the sending of Zhao Ziyang to clear up the messy situation in Sichuan. The moment he arrived in Liaoning, the first order he issued was to send all those who joined the party overnight, who rose meteorically to high leadership posts by means of rocket, plane of faction or by means of flattery and toadying during the 10 years of the "Cultural Revolution" back to their original units to work pending investigation and disposal. On the other hand, he sent people to invite back with great fanfare all the former cadres who had been sent to prison or to rural areas for reform through labor, who had been left to idle away at home and those who had gone to the hospital as a result of their ordeals. At the same time, he announced the all-round opening of the rural market to help revive the rural economy.

In this way, the urban and rural areas of Liaoning were filled with jubilation and vigor. "Restoring order out of chaos" was no longer an abstract phrase but had the power of a thunderbolt, and the situation in Liaoning was completely transformed.

Is this the "developing the situation" the people of Guangdong are hoping for? Ren Zhongyi has arrived. We might as well wait and see whether or not he has brought this discretionary power with him.

TRANSFORMING WORK OF BACKWARD PARTY BRANCHES

Haikou HAINAN RIBAO in Chinese 21 Aug 80 p 3

[Article by Chan Zhanran [7115 2770 3544], Huang Zifeng [7806 5417 6912] and Lin Shaoxiang [2651 4801 4382], Organization Department, Ward's Party Committee: "A Discussion of the Problem of Transforming the Work of Backward Party Branches"]

[Text] As seen from the summary result of work inspection of rural party branches conducted previously in our ward, party branches considered backward are not few in number, about 20 percent of the total. This is a problem not to be neglected. Party organizations at all levels should earnestly strengthen the leadership, doing well the transforming work.

Each party branch has its own concrete causes for so-called backwardness. Generally speaking, however, the main manifestations are: 1) The core of leadership has not been formed, and the organization is lax. Some of the leaders have low ideological awareness, lack the sense of political responsibility and enthusiasm for revolutionary causes, and do not do their work. Some of them have very serious clan and factional thinking, and members of the group do not unite. Some major members practice "what I say goes," engage in paternalism, and do not carry out the principle of democratic centralism. 2) Party members play a poor exemplary role. In these units, many party members are unqualified, and some even lag behind the masses. Some party members have a very slight party concept, do not participate in party activities, are afraid of hardship and weariness, do not like to shoulder heavy burdens, and do not like to be cadres. Some of them take lead to gather together to gamble and go in for feudal, superstitious activities, etc. 3) The sense of morals is low, and the evil atmosphere keeps rising. Ideology, work, and public security are in a chaotic condition. 4) Production has lagged behind for a long time, collective income is scanty, and the living standards of commune members are low. The existence of these problems seriously restrained these party branches from playing their proper roles.

The main causes for the above problems are first, that the impact of various political movements in the past has dampened the enthusiasm of cadres. Although the absolute majority of cadres at the basic level who were hurt have been rehabilitated, there are still many units who have not done enough ideological work for them. And they themselves do not have the breadth of mind which Communist Party members should have. The result is that resentment has not vanished from them even up to the present, and they do not want to be cadres at the basic level again. The second cause is that collective production has developed slowly, and the fac of poverty and backwardness has not changed very much. Party members and cadres lack the confidence and courage to lead the masses to persist in taking the socialist road. According to an investigation conducted in a backward rural party branch in Chengmai County, in the over 20 years since collectivization, production conditions of the brigade have hardly changed. Although grain production has increased, the rate of population growth was much faster than the rate of development of production, with the result that the distribution level was lower than that in 1957. Party members reflected: "After working for more than 20 years, we still looked the same. How can we lead the commune members to go on like this?" The third cause is that party members do not understand the lines, guiding principles, and policies of the Party Central Committee, and some even show aversion, resistance, and negative feelings toward them, and have given up leadership of the political and ideological work of the masses and collective production. They do not lead what they should lead, and do not stop what they should stop. The bad trends will spread unchecked.

In sum, in order to reform backward party branches, a large amount of work must be done. Basically, however, in curing poverty and working for richness, it is necessary to strengthen party members' political and ideological work, to enhance the party spirit, and to improve the fighting capacity of party branches. From the results of our investigation, it can be seen that, in the process of grasping the work of backward party branches, we must take care to guard against two trends. One is to guard against impetuosity. To attempt to go in for a political movement of correcting a group of people, replacing a group of people, and dismissing a group of people, as was done in the past, in order to solve the problem of backward party branches is not feasible and is also harmful. The second is to guard against pessimistic attitudes. It is also wrong to think that nothing can be done in grasping backward party branches, to lack confidence and let things drift. The right attitude is to earnestly strengthen the leadership, not to be eager to get quick results, not to be pessimistic and not to feel hopeless, firmly doing well the transforming work of backward party branches.

Judging from the present conditions, in order to reform backward party branches, it is necessary to grasp well the work in the following four aspects: First, study both the "guiding principles" and the revised edition of the party constitution, further correct the political line and ideological line of leading members of party branches and the multitude of party members, and unite the thinking of all the party members with the spirit of the third, fourth and fifth Plenums of the 11th Party Central Committee so as to maintain consistency with the Party Central Committee. Second, uphold correct production policies, take measures according to circumstances, expand strong points and avoid shortcomings, and cure poverty and work for richness. It is necessary to further implement the rural economic policy, carry out the production responsibility system, and to fully arouse the enthusiasm of the broad masses of the people. Third, strengthen organizational construction, carry out political and ideological work for leading members earnestly and well, and educate them to concentrate on leading the masses to cure poverty and work for richness. At the same time, they should be assisted in improving their talent, really doing well in forming the core of leadership and fully developing the stronghold role of party branches. Fourth, perfect the "three meetings and one class" system, strengthen the conducting of regular ideological education work for party members, and fully develop the exemplary vanguard role of party members. Practice shows that those who have insisted on doing things in this way gained relatively greater results. For instance, the party branch of Ho Le Brigade of Ho Le Commune in Wanning County was at first a relatively backward unit. Since the third Plenum of the 11th Party Central Committee, with the assistance of the commune's party committee, the brigade's party branch linked thinking with practical work, adopted the form of conducting party training classes and "three meetings and one class," organized party members to study in earnest the spirit of the third, fourth and fifth Plenums of the 11th Party Central Committee, criticized the extreme left line, summarized experiences and lessons, constantly solved problems existing among party members, strengthened the confidence and determination of the "squad members" of the party branch and the multitude of party members to lead the masses to engage in the four modernizations. The "squad members" united and engaged in struggle, and most of the 36 party members worked actively, with the result that collective production has developed rapidly. This party branch has now become one of the better branches in the entire commune.

PROBLEM OF UNQUALIFIED COMMUNIST PARTY MEMBERS RAISED

Haikou HAINAN RIBAO in Chinese 21 Aug 80 p 3

[Article by Yi Xiang [2496 6763]: "We Must Solve Two Ideological Problems"]

[Text] In discussing how to be a qualified Communist Party member, some party members do not consider whether one is qualified or not as important. One said: "Many party members at present are unqualified, so what is there to fear if one is unqualified oneself." They use the fact that others are unqualified to excuse the fact that they are unqualified, thus relaxing the severe requirements made of them. This is an ideological problem that must be given attention and solved at present. Within our party, there really are some party members who are unqualified or very unqualified, cannot play the proper role of Communist Party members, have even forgotten the title of a Communist Party member by mingling with the non-party masses, and are even inferior to the masses in certain aspects, thus greatly affecting the party's prestige and fighting capacity. Precisely for this reason, we are now particularly emphasizing the solving of the problem of how to be a qualified party member. Since we are willing to join the Communist Party and now also think that we are unqualified, can we say, "It does not matter to be unqualified?" Furthermore, through learning and education, those originally unqualified party members are now making up their minds to endeavor to become qualified Communist Party members. If we still use the old standards to judge other persons, cannot see the new changes of the multitude of party members, and still continue to be unqualified party members, won't we lag behind?

The second one said: "Now many leading cadres are unqualified, what is wrong if one is unqualified oneself?" On the pretext, "I will do what the leadership does," they did not make strict demands on themselves according to the standards for party members specified in the revised edition of the party constitution and the "guiding principles." This is also an ideological problem that must be solved at present. We should recognize that the work style of certain leading cadres really does pose problems, and that they have not set an example to the masses of party members. It is correct that the masses want leading cadres to make strict demands on themselves, playing an exemplary role everywhere and by wanting themselves to be qualified first. However, to be a qualified Communist Party member is a matter concerning the whole party and every party member. Both leading cadres and ordinary party members should solve this problem in earnest. Even to those party members who are qualified at present, if they do not endeavor to meet the demands of the new period and the new tasks, the problem of becoming unqualified can be raised. If we want the leading cadres to be "qualified," but consider ourselves to be "outsiders who criticize others," then when we see that certain leading cadres are unqualified, we will think that it does not matter whether we ourselves are qualified or not. In this way, not only is it not helpful to our own improvement, but it will turn the idea that each party member is required to be a qualified party member into idle talk. The correct attitude is not to look only at leading cadres, but to start working from oneself and to start from now so that each party member will determine whether he is qualified according to the standards for party members specified in the revised edition of the party constitution and the requirements of the "guiding principles," and conscientiously make himself a qualified Communist Party member.

'HSIN WAN PAO' INTERVIEWS LEGALISTS ON UPCOMING TRIAL

HK191030 Hong Kong HSIN WAN PAO in Chinese 18 Nov 80 p 1

[Dispatch from Beijing: "Beijing Legal Authorities Answer Relevant Questions"]

[Text] This reporter has interviewed legal authorities in Beijing on the trial of the counterrevolutionary clique of Lin Biao and Jiang Qing. The interview is as follows:

Question: This trial has become the focal point of world attention and many foreigners would like to attend it. What is the point of forbidding foreigners to attend the trial?

Answer: What is the point of allowing foreigners to attend the trial? It is not a must for Chinese people to invite foreigners to attend their trials, not to mention such a serious case which is conducted in a Special Court and involves a great number of state secrets. Do you think we can let foreigners attend the trial?

Question: We heard that the number of people attending the trial has been limited to 800. If it is an open trial, what is the point of restricting the number of people?

Answer: The Special Court has approved the number of people attending the trial to be more than 800. These 800 or more people will attend the trial in either the number one or number two court, that is to say, there will be more than 400 people in each court. After World War II, only some 200 people were allowed to attend the war criminal trials in Tokyo. We now allow more than 400 to do so, in fact double the number in Tokyo. In addition to this, the people who will be attending the trial are representative figures from various sectors representing the broad masses.

Question: Everybody is saying that in order to insure the course of justice, victims should not be appointed judges. Why do you appoint Jiang Hua, Wu Xiuquan and others, who suffered persecution by Lin Biao and the "gang of four," as judges?

Answer: The "Great Cultural Revolution" was a catastrophe for all of China. Did any one of our people manage to escape from the direct or indirect persecution of Lin Biao and the "gang of four?" If all who suffered from persecution had to evade judicial responsibility, Jiang Qing would have to try herself or be tried by Lin Biao's haunting ghost.

Question: Some people who are familiar with European and American laws are now saying that the prosecution's indictment "usurping the party and state" is not correct. How can usurping the party and usurping the state be counted as one crime?

Answer: China has her own laws and we are conducting the trial in accordance with Chinese laws. We regard "usurping the party and state" as one crime. People outside China simply do not understand China's situation. In China, the CCP is the ruling party. People can never usurp the state if they do not usurp the party first. That is why usurping the party is always connnected with usurping the state.

BRIEFS

SHANGHAI COUNTY SECRETARY MEETING--The Shanghai municipal conference of suburban county CCP committee secretaries was held on 26 November to study rural work during this winter and next spring. Chen Yi, deputy secretary of the municipal CCP committee, attended and addressed the conference on 28 November. He called on leading cadres at all levels in suburban Shanghai to carry on the party's fine tradition of conducting political and ideological work, to lead rural commune members to correctly understand and carry out the party's rural policies, to take action to solve new problems according to circumstances to arouse enthusiasm among peasants, to pay attention to their material interests and to further promote the excellent situation that had emerged in rural areas since the convocation of the 3d plenary session of the 11th CCP Central Committee. [Shanghai City Service in Mandarin 1130 GMT 28 Nov 80 OW]

XINJIANG 'GANG' CRIMES' EXHIBITION--Sponsored by the Xinjiang regional nationalities committee, a touring exhibition of satirical drawings about crimes committed by the Lin Biao and Jiang Qing counterrevolutionary cliques in undermining national unity was held in six autonomous prefectures, four autonomous counties and seven cities and counties of the Xinjiang region between September and October this year. On display were some 90 drawings which aimed at helping the masses of cadres and workers of various nationalities better understand the policies on nationalities and at exposing the crimes against various nationalities committed by these two counterrevolutionary cliques. [Urumqi Xinjiang Regional Service in Mandarin 1300 GMT 23 Nov 80 OW]

TIANJIN CPPCC MEETING--The Tianjin Municipal CPPCC Committee held its third enlarged Standing Committee meeting 24-27 November to discuss the draft plan for Tianjin municipal construction for the year 2000 and the draft plan for helping Tianjin recover from earthquake damages and rebuilding Tianjin in the 1981-1983 period. The meeting held that these draft plans are fundamentally sound. It pointed out that legislative work should be strengthened in municipal construction to guarantee the fulfillment of these plans. [Tianjin City Service in Mandarin 0030 GMT 28 Nov 80 SK]

HEILONGJIANG MUNICIPALITY CONGRESS--At the recent first session of the eighth Mudanjiang Municipal People's Congress, (Ba Hui) was elected chairman of the Standing Committee of the municipal people's congress; (Zhang Kexiao), mayor of Mudanjiang Municipality; (Su Jinhuan), president of the municipal people's court; and (Zhang Wenyan), chief procurator of the municipal people's procuratorate. MORE FUNDS FOR EDUCATION ALLOCATED

Xinjiang Pastoral Areas

Beijing GUANGMING RIBAO in Chinese 26 Sep 80 p 1

[Text] (XINHUA Urumqi 25 Sep) It is reported that the state has recently earmarked more than 14 million yuan to support developing educational undertakings for minority nationalities in the agricultural and pastoral areas of Xinjiang.

A total of 21 counties of the Xinjiang Uygur Autonomous Region are entirely pastoral areas, while 16 others are partly agricultural and partly pastoral. Nationalities such as the Kazak, the Mongol, the Kirgiz, the Tajik, and the Uygur are engaged in stock raising. Most of the pastoral areas are borderlands. Herdsmen are scattered to pasture. It is difficult for school-age children to attend school. It is very necessary to set up boarding schools for them. During the Great Cultural Revolution, owing to the fact that the "horseback elementary school" and the "mobile elementary school" were unilaterally emphasized, this caused the shut down of many of the original boarding schools. In the past few years, more than 70 boarding schools including both middle and elementary schools have been either reinstated or set up. At present, measures are being taken by departments concerned in Xinjiang to gradually resolve problems of teachers and school buildings required to develop middle and elementary schools in the pastoral areas.

Fujian Province

Beijing GUANGMING RIBAO in Chinese 26 Sep 80 p 1

[Text] (XINHUA Fuzhou 25 Sep) Fujian Province recently allocated 22 million yuan as additional funds for education from local revenues to supplement funds urgently needed by universities and middle schools for school building construction and equipment purchasing. This money will also be used to help outlay a part of the educational funds needed for middle and elementary schools.

Prefectures (municipalities) and counties throughout the province generally allocate a portion of their contingencies as funds for education.

Since the smashing of the "gang of four," funds for educational undertakings have increased every year. After the budget was increased this year, educational funds for the entire province is 17.5 percent over that of last year.

Sichuan Province

Beijing GUANGMING RIBAO in Chinese 26 Sep 80 p 1

[Text] The people's government of Sichuan Province in order to help consolidate and develop the plants and farms run by middle and elementary schools has allocated 2 million yuan from local revenues for middle and elementary schools all over the province to develop work-study programs.

The educational administrative department of this province has the funds distributed mainly to the school-run plants and farms. These are either embarking in the correct direction and on the right path, have better products both in quality and quantity, and have an open channel from production to marketing but are short of production capital, or they are badly in need of revolving funds to tap potentials, to innovate and transform. Garze and Aba, the two Tibetan autonomous prefectures also received appropriate preferential treatment when funds were allocated because, beginning from this year, they have reformed their financial administrative systems by putting into practice the completing of a job in line with a budget.

The people's governments of some municipalities, prefectures, and autonomous prefectures of Sichuan also allocated funds from their respective local revenues to local educational administrative departments as revolving funds for middle and elementary schools to carry out work-study programs. By the end of August, out of the 18 municipalities, prefectures and autonomous prefectures of this province, people's governments of seven of them including Daxian, Mianyang, Chengdu, Liangshan, Dukou, Aba, and Wanxian have allocated a total of 1,590,000 yuan from their local revenues as revolving funds for carrying out the work-study programs.

IMPROVEMENTS MADE IN HOHHOT MONGOLIAN SCHOOL

Beijing GUANGMING RIBAO in Chinese 7 Oct 80 p 1

[Article by Jin Shusheng [6855 3219 3932]: "Improvements Noted at the Hohhot Mongolian School"]

[Text] (XINHUA, Hohhot, 6 Oct) Teachers of various nationalities of the Hohhot Mongolian School are making joint efforts with all their hearts and their might to improve national education in a united and cooperative manner. Improvements have been noted at this school.

The Hohhot Mongolian School is a school with a 10-year integrated education system. Lessons are given in the Mongolian language in this school. The 143 teaching and administrative personnel of this school consist of four nationalities including Mongolian, Han, Man, and Daur. During the 10-year period of turmoil, relations between nationalities within this school were sabotaged. In the past 3 years, teachers of various nationalities were organized by the school party branch to learn the party's nationality policy, to eliminate the pernicious influence of the ultra left line of Lin Biao and the "gang of four" on the nationality issue, to lead everybody to take the interests of the whole into account, to look forward, and to unite as one to run the school well so that they can make contributions to cultivating the new generation. A favorable atmosphere has since been created throughout the school in a manner whereby teachers of various nationalities help and learn from each other in work and care for each other in daily life. Principal Meng Ke [1322 0344] is a Mongolian. He and Wei Qingmei [7614 1987 2734], a Han teacher, are neighbors. These two families, one of which is a Mongolian and the other a Han, frequently visit and care for each other and are as dear to each other as members of one family. When Zhang Suzhen [1728 4790 3791], a woman teacher of Han nationality, was hospitalized earlier, teachers of both the Mongolian and Han nationalities treated her as if she were their blood sister. They visited her at the hospital to take every care of her and the school offered her financial aid. After she recovered, she excitedly said that the Mongols and the Hans are of one family and that she would not have recovered so quickly without the care taken by comrades of various nationalities.

Both the Mongolian and the Chinese language are used in giving lessons at this school. Each teaching and study group is equipped with both Mongolian and Chinese speaking personnel. The Han and Mongolian teachers who work on the same course usually prepare teaching materials and study together in order to do a good job in teaching students. Liu Jingzhi [0495 2417 0037] who is a second year senior middle school history teacher of Han nationality has much experience in teaching. Bao Siqin [7637 2448 3830] who is another history teacher of the Mongolian nationality comes to him to learn from him. They assiduously study teaching materials side by side and learn from and help each other. Teacher Bao usually manages to find time to attend teacher Liu's classes. Teacher Liu also helps Teacher Bao patiently solve questions encountered by him in teaching. Most of the students at this school are Mongolian children. The Han teachers, in order to adapt themselves to work, also take the initiative to learn the Mongolian language. Owing to the concerted efforts of teachers of various nationalities, this school has made steady improvements. At present, students of various nationalities pay attention to culture, observe discipline, and are fond of labor, all of which have become the order of the day. A total of 40 senior middle school students first graduated from this school last summer and 32 of them were admitted to universities.

BRIEFS

TAXI DRIVERS REWARDED--Beijing, November 29 (XINHUA)--Two Beijing taxi drivers were rewarded today for their bravery in catching the mentally-ill Chinese man who stabbed two foreigners on November 17 in front of the Nationalities Hotel in downtown Beijing. The two men are Liu Yuan, 50, and Chang Jun, 21, of the Capital Taxi Company. Each of them was given 200 yuan and a certificate of merit at a ceremony sponsored by the Beijing Municipal Public Security Bureau and the No 1 Service Bureau, which caters for foreign visitors' needs. Liu said: "Many foreign friends have come to China to help our socialist construction. It is our duty to protect them." Chang said: "My first thought at the time was not to let the man escape." Five others, who helped capture the assailant and take the wounded to hospital were also praised and received 50 yuan each. The two men who were knifed are Keith John Henley and Walter James Howarth, who were members of an Australian business mission. The were not seriously hurt and have returned to Australia. The City Public Security Bureau held a meeting yesterday to honor 49 policemen and five police units who have rendered outstanding service in maintaining public order. BEIJING WRITERS' TEAHOUSE RESTORATION--Beijing, 20 Nov (XINHUA)--The Writers' Literary and Art Teahouse which had been suspended for a decade, was formally restored in Beijing on 20 November. More than 300 noted writers and literary workers in the Chinese capital gathered there to freely discuss their writing experiences. Organized and established by the Chinese Writers Association, the teahouse will provide writers and literary and art workers with a place to meet and discuss their common problems. They will meet in the teahouse on the 5th and 20th of each month. [Beijing XINHUA Domestic Service in Chinese 1506 GMT 20 Nov 80 OW]

SHANDONG CULTURAL CENTERS--The Shandong provincial work conference on holding cultural activities for the masses was held in Yantai Municipality 7-13 November. Twelve cultural units introduced their experience in this regard. The conference called for establishing cultural centers, including theaters, libraries, exhibition halls and gymnasiums at communes and townships and to improve and readjust the provincial, prefectural and municipal art galleries and county and district cultural halls to enliven the cultural lives of peasants.[Jinan Shandong Provincial Service in Mandarin 2300 GMT 27 Nov 80 SK]

YOUTH LEAGUE WORK--Beijing, November 27 (XINHUA)--The Chinese Communist Youth League should be the Communist Party's "assistant" on the one hand, and the "representative" of China's youth on the other, a former Youth League secretary said in an interview carried in today's CHINA YOUTH NEWS. Liang Buting, now first party secretary of Qinghai Province in northwest China, said there must be a proper balance between these two functions. He said the Youth League should speak for the young and meet their needs, and the party should give the Youth League more independence in deciding its own work. The Youth League must work for the interests of the youth, and not be an organization of "young bureaucrats," he said. Liang Buting, secretary of the Youth League in the 1950's, also praised today's young Chinese, saying the majority are patriotic, have faith in socialism and want to work for modernization. Young people are natural supporters of democracy, he said, full of new ideas, imaginative and seeking change. In his view, it will benefit both the society and the young people themselves to let them speak out. The Youth League should try to guide young people, not order them about, Liang Buting said. Young people can learn through their own experiences to distinguish right from wrong, he said. [Text] [OW271234 Beijing XINHUA in English 1221 GMT 27 Nov 80]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

USSR BUYS HUGE QUANTITIES OF AGRICULTURAL PRODUCTS

OW260625 Beijing Domestic Service in Chinese 1608 GMT 24 Nov 80

[Text] Beijing, 24 Nov (XINHUA)--The Soviet crop failures and the U.S. grain embargo against the Soviet Union have forced the USSR to buy large amounts of agricultural and pastoral products on world markets, according to Western news agencies.

According to AFP on 23 November, in the first 6 months this year, the amount of Soviet grain purchases from some EEC countries is more than three times its total grain purchases in 1979. In January-May 1980, it bought up to 130,000 tons of butter. Furthermore, the Soviet Union made a request to the Commission of the European Common Market to buy 100,000 tons of butter and 15,000 tons of cream in 1981. It is reported that the European Common Market controls the amount of butter exports to the Soviet Union. However, butter in small packets are not subjected to export inspection. As a result, the Soviet Union evaded the control by buying butter in small packets. Thus it bought as much as 43,000 tons of butter.

According to REUTER, "Soviet grain output dropped by 20 percent this year." "It is facing the most serious feed crisis since 1975-1976. It is short approximately 11 million tons of feed." This has forced Moscow to seek rapeseed on various world markets so as to mix it with grains for use as feed, while looking everywhere for vegetable oils for domestic use.

It is reported that the Soviet Union bought 1.54 million tons of grain from the United States in 1979, and 520,000 tons of tapioca from Thailand since the beginning of this year. The Soviet Union has begun to buy on a large-scale rapeseed and vegetable oil from Argentina, the Philippines and Indonesia.

The Soviet sugar harvest is normally the world's largest. But because of the drop in beet output, Soviet sugar output this year is expected to fall some 6 million tons short of consumption. Thus the Soviet Union has hurriedly bought sugar on international markets. Reportedly, merely from the EEC, the Soviet Union has bought 380,000 tons of sugar in the first half of this year and another 3.5 million tons in the second half of this year.

Such large-scale purchasing of agricultural and pastoral products by the Soviet Union have made prices of several agricultural and pastoral products rise sharply and created nervous international markets. Quoting London dealers, REUTER reports: As a result of large Soviet purchases, sugar rose to around 400 pounds sterling a ton, a rise of 33 percent compared with September's price. "Soviet buying has also caused a flurry on rapeseed markets pushing up rapeseed prices in Chicago and London." The report on huge Soviet purchases of vegetable oils "has led to nervous selling and boosted prices in European vegetable oil centers."

POLAND'S JAGIELSKI URGES WORKERS TO OBSERVE DISCIPLINE

OW222130 Beijing XINHUA Domestic Service in Chinese 1725 GMT 21 Nov 80

[Text] Warsaw, 21 Nov (XINHUA)--In his report to the parliament on 20 November, Polish Vice Premier Jagielski referred to the implementation of the agreement signed between the government and the workers. He said: "During the past few months, not only was the right to strike used, but it was abused on more than one occasion." He urged the workers to strengthen discipline and to work hard in view of the circumstances where the state financial resources have been used to an undue extent.

Commenting on the agreement reached between the government and the representatives of workers in coastal areas, Jagielski held that signing such an agreement is "a way to benefit the working class and the people, the party and the people's political power as well as socialism" and represents "a victory for the realistic trend in the party."

He admitted that "a number of obstacles were encountered" in implementing the agreement. According to him, "distrust of the authorities' sincerity" has appeared or is appearing on certain links of the "solidarity" trade union, and the workers have put forward "demands that are not based on careful consideration" and "that depart from everyday reality." He said that beginning January 1981 the government will appropriate 110 billion zlotys to raise the wages of 12 million workers. In the present extremely difficult economic situation, he added, demands for excessive wages and welfare benefits will "constitute a genuine threat" to the economy and social life, prolong the state of instability, aggravate the social tension and be detrimental to the survival of the nation.

Jagielski said that some people "purposely and stubbornly maintain their negative attitude in an effort to weaken the foundation for our nation's survival and security," and that "we cannot ignore them, but should wage a political struggle against them."

Touching on the current situation, he pointed out: "We are confronted with serious threats. Our economy is experiencing extreme difficulty, and numerous problems exist here and there." He said that at present the most important task of the Polish Government is to "take coordinated action with those people whose aim is not against socialism but for socialism, not to weaken people's Poland but to make it healthy and strong and who want reform." He said that he would continue to have dialogues and cooperate with the "solidarity" trade union and urged the workers to strengthen their labor discipline and to raise their productivity.

KANIA DISCUSSES LABOR MOVEMENT IN POLAND

OW261519 Beijing XINHUA in English 1500 GMT 26 Nov 80

[Text] Warsaw, November 25 (XINHUA)--Stanislaw Kania, first secretary of the Polish United Workers' Party Central Committee, said today: "We worry about the means of strike, particularly in such sector as the railway. Strikes could jeopardize the normal rhythm of the state life and our promises made to our allies."

Speaking to the representatives of the Polish Consultative Committee of Trade Unions, he noted that at present there existed numerous worrisome phenonema in the country. "Anarchism, economic disorder and arrests--all these have made us feel uneasy," he added.

Dwelling on the current situation of the Polish trade union movement, Kania said that the party is concerned over the ideological unity of the trade union movement and regards it as a major component of socialist democracy. However, the split of the workers' movement "is an unfavourable and yet an objective fact."

He stressed that Poland "requires a strong trade union movement," and the party would like to hear the voice of the movement and "agrees that trade unions will be expanded as a militant and staunch representative and defender of the interests of the working class if need be."

Yesterday, 3,000 trade union representatives from all parts of the country met here to discuss the domestic situation and the tasks of the labour movement. Polish Premier Josef Pinkowski was present and spoke at the meeting upon invitation.

Albin Szyszka, president of the Consultative Committee of Trade Unions, delivered a report on its work at the meeting. He proposed to open cooperation and dialogue between the representatives of the trade unions and the independent and self-governing "solidarity" trade unions. He requested state and economic administrative leaders to treat all trade unions equally. The premier said the government accepted the request in principle.

A resolution on the requests and tasks of the trade unions was adopted at the meeting.

There are now 23 trade unions throughout the country directly under the Central Council of Trade Unions. Since last August, independent and self-governing "solidarity" trade unions have been established all over the country while trade unions have been breaking away from the Central Council of Trade Unions to undergo "self-renewal." At present, the "solidarity" trade unions coexist with the trade unions.

KANIA GIVES REPORT OF PZPR PLENUM IN WARSAW

OW021712 Beijing XINHUA in English 1656 GMT 2 Dec 80

[Text] Warsaw, December 1 (XINHUA)--Stanislaw Kania, first secretary of the Central Committee of the Polish United Workers' Party, said today that "the political situation in Poland is exceptionally complicated and fraught with great danger and that the country is still in a critical state."

He made these remarks while delivering a report to the 7th plenary session of the 8th Party Central Committee.

In his report entitled "The Party's Tasks for Socialist Renovation of Social Life," Kania pointed out that this year has been a very poor harvest; industrial production losing its regular tempo; difficulties in energy; export sectors failing to fulfill their plans; and the supplies in markets going from bad to worse.

He attributed these difficulties, to a considerable extent, to a series of workers' strikes, social disorder and a lack of discipline in factories.

Dealing with the measures taken by the party and the government in a bid to reverse this situation, Kania said that politically the party has adopted a policy of carrying forward democracy and conducting renovation and a line to implement the restoration of confidence of the working class and achieve an understanding with society. Economically, a new agricultural policy has been worked out, investment plans modified and principles for distributing national income altered. Workers' wages have been increased and a five-day work week put into practice. Organizationally, the party's working style and methods have been rectified, office terms for leaders limited and concurrent posts by party and government leaders eliminated. More than 500 leaders at various levels have been relieved of their posts in the past two months. Quite a few party and political activists have been rehabilitated while some corrupt officials and bureaucrats have been expelled from the party.

He said that the situation in Poland has caused anxiety and unease among other fraternal parties. This is understandable, for Poland is a particularly important member in the international community, he added. However, Kania declared, the line of renovation is irreversible and the line of restoring the confidence of the working class and achieving an understanding with society is unshakable.

On the trade union problem, Kania stated that extremely important changes have emerged in both the social and political life of Poland. Professional trade unions have set new working methods and the newly-emerging trade union--"Solidarity"--has achieved broad progress and won a legitimate place. But certain people in "Solidarity" have gone beyond their function, he pointed out.

He said: "Some organizations and individuals with connections to foreign imperialist centers for destructive activities and who harbour designs against socialism and the people's power have wormed their way into certain organs of the 'Solidarity' trade union and conducted pernicious instigation and fierce class struggle. They intend to undermine and ultimately disrupt the socialist state system of Poland. They are contriving anti-socialism and counter-revolutionary plots."

As for the future of the Polish nation, Kania pointed out, an immediate end should be put to the destructive activities which would result in a weakening of the people's regime.

Referring to the democratic renovation of inner party life, he noted that when taking actions, the Polish party should oppose ideological capitulation and sabotage to the fighting capacity of the party and at the same time oppose the phenomena of a too conservative ideological stand which fails to understand new conditions and requirements.

Kania said that the party should not be reduced to a club for endless quarrels nor should it be only a group of sympathizers. Inner party democracy, he stressed, is the crux of social democracy as well as for the other various sectors of social and political life. In correcting past mistakes, he said, it is imperative to prevent the broadening of the scope of criticism which could lead to a denial of past achievements; when looking into responsibilities, attention should be paid to differentiating political responsibilities from legal ones, he concluded.

SCHMIDT, THATCHER HOLD TALKS IN BONN 18 NOVEMBER

OW181658 Beijing XINHUA in English 1644 GMT 18 Nov 80

[Text] November 17 (XINHUA)--West German Chancellor Helmut Schmidt and the visiting British Prime Minister Margaret Thatcher told a press conference here today that they support closer cooperations among West European countries and better collaboration between Western Europe and the United States.

Prime Minister Thatcher arrived here last night to have regular bilateral consultations with the chancellor.

The two heads of government discussed economic problems, and the balance of payments deficits in particular which affect the majority of the countries. They exchanged views on East-West relations and specifically the situation in Poland, Afghanistan, Persian Gulf area, southern Africa, the Middle East and the EEC. They emphasized the identity of their views on the major issues they discussed.

Mrs. Thatcher said at the press conference that current international crisis necessitated efforts to safeguard areas of stability in the world. The European Economic Community, she pointed out, is one of the most important stabilizing factors in world politics, and the cooperation between the United States and Europe is playing a similar stabilizing role. She said that Europe must enhance its unity in order to cooperate with the United States better.

Thatcher also said that Britain was totally committed to Europe and to the EEC which, she stressed, in addition to playing a stabilizing role politically, had brought much economic benefit to Britain.

Schmidt said that Bonn and London looked forward with confidence to continuing cooperation with the United States. He noted that U.S. president-elect Ronald Reagan had on many occasions stressed his determination to cooperate with Europe. He expressed the hope for "a renewal of American leadership" under Reagan.

Talks were also held between West German Foreign Minister Hans-Dietrich Genscher and his British counterpart Lord Carrington who accompanied Mrs. Thatcher during the visit.

Before her departure for home this afternoon, Mrs. Thatcher was received by President Karl Castens.

SCHMIDT REAFFIRMS FRG FOREIGN POLICY STANDS

OW251818 Beijing XINHUA in English 1619 GMT 25 Nov 80

[Text] Bonn, November 24 (XINHUA)--West German Chancellor Helmut Schmidt declared here today that the coalition government of the Social Democratic Party and the Free Democratic Party will continue to pursue the present domestic and foreign policies.

Without a balance of power, he said, there will not be any secured place in this world. West Germany can only obtain its security by identifying itself with NATO. The core of NATO is the partnership with the United States, the chancellor stated.

Schmidt made the remarks in his first government statement to the Ninth Bundestag since he was reelected chancellor.

He maintained, "A precondition for peace is balance, but it is not enough. Thus peace must be secured by a policy of arms limitation and cooperation." "We wish a long-term cooperation with the Soviet Union," he added. But he pointed out that "because of events in Afghanistan, detente became more difficult and less secure."

"We condemn the Soviet Union for its continuous armed intervention in Afghanistan and call for an unconditional, complete withdrawal of all foreign troops," he declared.

He stressed that for West Germany, the European Economic Community is an indispensable base for peace and progress as it serves the interests of balance. Since a united Europe is the target of the policy of West Germany, he said, maintenance and expansion of the European Community remains a central task of that policy.

On the events in Poland, he said "We do not interfere. But, if we try to help them out of their economic crisis in accordance with the wishes of the Polish leadership, then, nobody should be allowed to accuse us of interference."

Referring to the relationship with the German Democratic Republic, he expressed willingness to continue its cooperation and develop relations between the two countries.

Schmidt in his statement said his government wishes to broaden its relations with China. He also expressed willingness to strengthen its economic cooperation with Third World countries on the basis of equality, and further increase its development aid to them.

On domestic issues, he said West Germany will try to reach the target set by NATO in increasing the annual defense spending by 3 percent in real terms. In the economic field, he admitted that West Germany would not be able to get away from the effects of the Western world's economic recessions and phenomena such as production drops and unemployment increase are likely to happen for a time.

He conceded in the statement that in the years ahead West Germany will face difficulties both in international politics and national economy.

ITALIAN INTERIOR MINISTER RESIGNS

OW271958 Beijing XINHUA in English 1856 GMT 27 Nov 80

[Text] Rome, November 26 (XINHUA)--Italian Interior Minister Virgilio Rognoni tendered his resignation early this morning while the intense rescue operations for the quake victims are underway. But his resignation was rejected by Prime Minister Arnaldo Forlani.

Rognoni, in charge of supervising relief operations, submitted his resignation to the prime minister four hours after President Sandro Pertini bitterly criticized the government for its slow and inadequate response to last Sunday's earthquake.

Rejecting Rognoni's resignation, Forlani in his letter said "In exercising its collective responsibility, the government has done and is doing all it could to cope with the calamity." To accept Rognoni's resignation would mean to add more difficulties to the people, he said.

President Pertini in a televised speech last night said that essential supplies had not reached the devastated areas even 48 hours after the earthquake struck and the rescue centre failed to function at all. "There have been grave shortcomings, and those who have failed must be punished," he warned.

He recalled the earthquake in Belice, Sicily, 13 years ago. He said after that earthquake, the government had allocated funds to rehouse the quake victims but they are still living in temporary huts. "Where did the money go that was given? Who speculated on that catastrophe?" he asked.

According to reports, the discontent of the survivors in the quake-hit areas over the slow relief operations was voiced over and over again to the president and the opposition parties also blamed the government for the difficulties and problems in its rescue efforts.

A cabinet meeting, held last night to discuss the contingency relief plan, decided to appropriate, from the state budget, a sum of 1,200 billion liras as the relief funds for the earthquake victims in southern Italy and to take a series of tax-relief and tax-free measures in the quake-stricken areas.

In the past few days, people all over Italy have taken an active part in the relief operations as many young people, organized into various voluntary rescue teams, have rushed to the disaster areas and the trade union organisations, news media and other social organisations collected donations for the quake victims.

According to reports, there are still difficulties in the disaster areas due to various reasons. Many victims including old, sick and babies still have no shelters and have to stay in the open despite of extreme cold, and many corpses are yet to be dug out of the rubble and the medical situation was also a very serious problem.

Local press reports today put the death toll of the quake at 3,100, with 2,000 missing and 200,000 homeless.

PREMIER SUZUKI REELECTED PRESIDENT OF LDP

OW270802 Beijing XINHUA in English 0748 GMT 27 Nov 80

[Text] Tokyo, November 27 (XINHUA)--Japanese Prime Minister Zenko Suzuki was reelected president of the Liberal Democratic Party (LDP) for a tenure of two years at an extraordinary party congress today.

Suzuki succeeded Masayoshi Ohira as LDP president following Ohira's death last July. During the primary, Suzuki was nominated the only candidate for the party's presidency and therefore his reelection was assured.

Addressing the congress, Suzuki said: "We shall usher in a new era of the 21st century after 20 years and we shall be confronted with many new problems which await solution." He said that the establishment of political morality, financial reform, administrative restructuring, tackling with a society with a large proportion of aged people and general security system "constitute not only immediate policy issues but also problems of top priority that should be solved definitively in the advance towards the 21st century."

A declaration passed at the congress says: "The internal and external situation has changed drastically as a result of the Soviet armed involvement in Afghanistan and its military buildup on the northern territories." It pledged LDP's positive contribution to safeguarding world peace by following a multilateral foreign policy for the guarantee of comprehensive security.

The extraordinary congress was also convened to observe the 25th founding anniversary of the party. Eiichi Nishimura resigned as the party's vice-president. The post will be dropped for the time being.

UN SECRETARY GENERAL DISCUSSES NAMIBIAN RESOLUTIONS

OW270431 Beijing XINHUA in English 0218 GMT 27 Nov 80

[Text] United Nations, November 26 (XINHUA)--The United Nations has indicated that South Africa is willing to accept a proposal to hold a preliminary meeting in search of a cease-fire and a solution to the question of Namibia, according to a report of the U.N. secretary-general concerning the implementation of security council resolutions 435 and 439 on the question of Namibia.

The proposed meeting is scheduled to take place between January 7 and 14, 1981. If the meeting succeeds, South Africa would agree to a cease-fire sometime in March. A United Nations peacekeeping force would then patrol a demilitarized zone on either side of the Namibian-Angolan border. The election of an assembly to write a constitution for an independent Namibia would take place in October or soon thereafter.

This plan was laid out in a six-page report of the secretary-general to the Security Council. The report summarized the outcome of the U.N. mission to Pretoria last month led by Brian Urquhart, under-secretary-general for special political affairs.

The report said: "It is of vital importance that the independence of Namibia should be achieved in 1981, in accordance with Security Council Resolution 435. In order to achieve this aim a date for the cease-fire and a start of implementation should be set in the early part of 1981."

It said: "A means of facilitating agreement and of creating the necessary climate of confidence and understanding would be a pre-implementation multiparty meeting in which the parties concerned in the envisaged election would be included. There is general agreement that this meeting should be held under the auspices of the secretary-general of the United Nations."

INDONESIAN, INDIAN PRESIDENTS CALL FOR UNITY OF NONALINED

OW021846 Beijing XINHUA in English 1836 GMT 2 Dec 80

[Text] Beijing, December 2 (XINHUA)--The presidents of Indonesia and India yesterday called for closer unity of the non-aligned movement and adherence to the movement's original aim, according to Western news agency reports from New Delhi.

Speaking at a banquet given by Indian President N. Sanjiva Reddy in his honour, Indonesian President Suharto said that Indonesia was "concerned over the rift within the (non-aligned) movement due to pressures to drag non-aligned countries into one of the world's superpower's sphere of influence." He said India and Indonesia should work "shoulder to shoulder, adhering strictly to the original spirit of non-alignment." "If we fall into the trap of any superpower," he said, "then non-alignment has no further significance." Suharto also criticized "an extremely dangerous trend" in the world today that "takes the form of, for instance, military intervention against another country."

In his speech, President Reddy said: "It should be our common endeavour to restore to the movement its original content and sweep so that it could address itself to the basic issues of peace and progress of mankind."

Dealing with tensions in West and Southeast Asia, he said: "The dangers to international peace and stability have acquired wider and more menacing dimensions with the increasing tempo of rivalry and confrontation indulged in by the big powers in various regions of the world."

President Suharto arrived in India yesterday after his visit to Pakistan.

FRENCH, FRG OFFICIALS CONCERNED OVER CRISES

OW031548 Beijing XINHUA in English 1513 GMT 3 Dec 80

[Text] Paris, December 2 (XINHUA)--The Soviet intervention in Afghanistan has greatly affected the climate of international relations and the world is faced with many menaces, stated Pierre Bernard-Reymond, secretary of state of the French Foreign Ministry, here this afternoon.

Speaking to the ongoing session of the Western European Union Assembly, he reaffirmed that France refuses to accept the Soviet intervention in Afghanistan as a fait accompli. "Only one political settlement can restore peace in the area, which includes the withdrawal of foreign troops and the restoration of the Afghan people's sovereignty over independence, neutrality and non-alignment," he added.

"In the face of the renewed tension in the world, France holds fast to its security policy," he pointed out. "France will maintain its means of independence by continuing its efforts for a stronger, diversified and modern defence." His country would take an active part in any initiatives which favour peaceful solutions to different conflicts in the world, he stressed.

France appealed to Iran and Iraq to end their war and settle their dispute through negotiations, he said.

West German Minister of State for Foreign Affairs Mrs. Hamm-Brucher also spoke at this morning's session. Referring to the Soviet aggression against Afghanistan, the conflict between Iraq and Iran and the latest developments in Poland, she said, "Some international developments are bound to fill us with deep concern for the future." "The world is faced with serious challenges and dangers."

"The Federal Republic of Germany is carrying its full share of the measures adopted by the alliance with a view to strengthening the Western defence capability following the Soviet intervention in Afghanistan," she said.

JAPANESE, CHINESE OFFICIALS HOLD TALKS

Opening Session

OW040017 Tokyo KYODO in English 0005 GMT 4 Dec 80

[Text] Beijing Dec 4 KYODO--Both Japan and China revealed their strong concern over the international situation and expressed caution over the influence of the Soviet Union at the opening session yesterday of the first Sino-Japanese ministerial conference.

Discussions at the meeting, lasting some four hours and 10 minutes, centered on the international situation and bilateral economic problems.

Foreign Minister Masayoshi Ito, who is leading the Japanese delegation to the meeting, said the Kampuchea issue, the Indochinese refugee problem and the Soviet invasion of Afghanistan were factors for the present instability in the international situation.

"We are faced with the task of how to overcome these problems," he said.

Chinese Vice Premier and Foreign Minister Huang Hua also commented on the international situation and claimed the Soviet Union was advancing into Asia and Afghanistan.

On the Kampuchea problem, Huang said it is difficult for China to agree to the facts established by the "aggressors."

He thus indicated China's strong position of not agreeing to a political solution of the Kampuchea problem.

Foreign Minister Huang criticized the Soviet Union by name while Foreign Minister Ito indicated strong caution toward the Soviet Union without naming it but by taking up the Kampuchea and Afghanistan problems.

At the meeting, the Japanese called for early conclusion of a bilateral taxation treaty and an investment guarantee agreement.

It also indicated readiness to extend economic cooperation for construction of port and transportation facilities and other projects.

Chinese Vice Premier Yao Yilin revealed that China plans to conduct a review on all large-scale projects inducted from foreign countries, including those on which work already is being conducted.

He said this is because of the need to make adjustments to the country's economy.

Yao said past developments in the agricultural and light industries have been insufficient, resulting in obstructing the people's economy as a whole.

He added there is need to seek after truth based on facts.

The vice premier believed that China's economy will be able to make progress through adjustments although economic growth next year may slow down.

On the country's economy this year, he expressed the hope that economic growth of 8 percent will be secured with light industries expanding 15 percent even under energy restrictions.

The ministerial meeting, the first of the kind held between Japan and China, is being attended by Foreign Minister Ito and five other cabinet ministers from the Japanese side. China is represented by Vice Premier Gu Mu and other ministers concerned.

After the first-day meeting, the Japanese and Chinese participants attended a banquet hosted by Vice Premier Gu.

Gu stressed in a speech at the banquet that Japan and China have common interests when regarded from a long range point of view although their social systems differ.

He noted that political, economic, scientific and cultural ties were developing between the two countries following the normalization of diplomatic relations and conclusion of the peace treaty.

The vice premier expressed the hope that Japan and China, by exchanging views on important international problems, will be able to contribute to the stabilization of the world, especially of the Asia-Pacific area.

Foreign Minister Ito said it is important for the leaders of the two countries to exchange frank views and promote mutual understanding.

Individual meetings between ministers of the two countries were scheduled to be held at the Great Hall of the People Thursday.

Foreign Minister Ito will meet with his Chinese counterpart Huang Hua and exchange views on the Kampuchea and other problems while Finance Minister Michio Watanabe and other economic ministers are expected to discuss economic cooperation and other bilateral issues with Chinese officials.

Kampuchea Discussed

OW040347 Tokyo KYODO in English 0330 GMT 4 Dec 80

[Text] Beijing Dec 4 KYODO--Japanese Foreign Minister Masayoshi Ito expressed the hope Thursday that the Kampuchea problem be settled at an early date but Chinese Vice Premier and Foreign Minister Huang Hua expressed a pessimistic view on the matter.

Ito and Huang met at the Great Hall of the People as part of the counterpart meetings between Japanese and Chinese cabinet ministers attending the three-day Sino-Japanese ministerial conference which opened here Wednesday.

The two exchanged frank views on the international situation and bilateral issues.

Ito proposed that the second ministerial conference be held in Tokyo next year.

Although details of the meeting were not known immediately, the two foreign ministers were believed to have discussed the situation in Southeast Asia, in general, the Korean Peninsula and the Middle East also.

Ito told Huang there was need to settle the Kampuchea problem at an early date and reiterated the strong desire of Japan that an early solution to the matter be realized.

But the Chinese foreign minister is reported to have told Ito that China has no confidence for an early settlement and pointed to the difficult nature of the problem.

Finance Minister Michio Watanabe, in his meeting with Vice Premier Gu Mu who is also chairman of the State Capital Construction Commission, said that Japan hoped China will supply sufficient information on the country's economic adjustment measures in order to facilitate economic cooperation.

Gu told Watanabe that Sino-Japanese cooperation in respect to energy and mineral resources development will be of benefit to both countries and added China wanted to learn from Japan's experiences.

Toshio Komoto, director general of the Economic Planning Agency, told Vice Premier Yao Yilin who is also chairman of the State Planning Commission, he hoped China will successfully carry out its modernization programs.

He noted that although the economic structure in Japan and China differs, both countries were aiming at improving the people's livelihood.

Rokusuke Tanaka, minister of international trade and industry, met with Vice Premier Yu Qiuli, chairman of the State Energy Commission who did not attend the plenary session on Wednesday.

He sounded out Yu on outlook for production of oil and coal in China and formally proposed the conclusion of an investment guarantee agreement.

Takao Kameoka, minister of agriculture, forestry and fisheries, discussed agricultural development plans of China with Du Runsheng, vice chairman of the State Agricultural Commission, while Transport Minister Masajuro Shiokawa exchanged views with Railways Minister Guo Weicheng on technological cooperation in railways and port projects and on opening regular cargoliner service between the two countries.

The six Japanese cabinet ministers were scheduled to pay courtesy calls on Deputy Chairman Deng Xiaoping and Premier Zhao Ziyang later Thursday.

Ito, Huang Hua Talk

OW041135 Tokyo KYODO in English 1115 GMT 4 Dec 80

[Text] Beijing Dec 4 KYODO--Japanese Foreign Minister Masayoshi Ito and Chinese Foreign Minister Huang Hua failed to find a common position on the Kampuchea issue during their talks in the Great Hall of the People Thursday.

Huang repeated China's position that the withdrawal of Vietnamese troops from Kampuchea must come before a political settlement of the issue can be discussed.

Huang said that the Kampuchean and Afghan problems should be viewed in the same context, suggesting that both are what should be blamed on the Soviet world strategy. He strongly warned against an easy-going compromise in these issues, Japanese officials said.

Huang's statement came in response to Ito's request for China to take a more flexible stand on the Kampuchean issue.

Quoting from an Aesop's fables story of stripping a traveler of his cloak with sunshine, Ito stressed the need to have Vietnam as a discussion partner at an international conference on the Kampuchean issue, the officials said.

Ito and Huang met alone as part of the current first Sino-Japanese ministerial meeting. Their discussions also covered the Polish situation, the Iran-Iraq war, and the Sino-American relations as well, the officials said.

Huang admitted that there exist some problems within Democratic Kampuchea (the so-called Pol Pot regime) itself, saying that China finds it not easy to get along with Democratic Kampuchea, according to the officials.

They took this as indicating that China keeps a certain distance from the purged Kampuchean regime vying with the Vietnamese-backed Heng Samrin regime.

Huang also said China is not opposed to a plan for a coalition united front in Kampuchea, including former head of state Prince Norodom Sihanouk and Son Sann, one-time Kampuchean prime minister and now a guerrilla leader of the Khmer liberation.

Still, China opposes the exclusion of Democratic Kampuchea from such a united front, Huang told Ito. In reality, Democratic Kampuchea is the only principal force which can resist the Vietnamese, Huang said, according to the officials.

This may be regarded as Peking's objection to a plan to form an "alternative" Kampuchean force against the Vietnamese without the participation of the Pol Pot regime, though China seemed to be paying some consideration to the current moves by the Association of Southeast Asian Nations (ASEAN) members to expedite the formation of a "third force" in Kampuchea, Japanese officials said.

Huang said the Chinese view on the Soviet Union is gaining support internationally.

A tough approach toward the Afghan and Kampuchean issues is vital to prevent the Soviet Union from venturing into other areas of the world, Huang told Ito.

Huang said China did not think there would be a major disturbance on the Korean Peninsula.

Huang said China would continue efforts to promote its relations with the ASEAN.

Touching on the Sino-American relations, he said the U.S. Taiwan relations act is an American internal affair and that it never affects the basic relations between China and the United States. The Sino-American relations must be developed on the basis of the Shanghai joint communique, he stressed, according to the officials.

Huang also gave his "personal" view on the Polish situation. He said the current situation in Poland is very delicate and he highly rated that both the Polish Government and workers are keeping their self-control while closely watching the Soviet reaction, the officials said.

Huang expressed fear that, if the Kremlin judges the Polish situation as a disadvantage to its own world strategy, the Soviets might interfere in the Polish affair. But, even in such a case, the Soviets would find it more difficult to do so now than in the 1968 Czechoslovakia incident, Huang said.

Ito and Huang agreed in principle that Japanese Prime Minister Zenko Suzuki will visit China and Chinese Premier Zhao Ziyang and party secretary general Hu Yaobang will visit Japan.

Ito proposed an early conclusion of a double taxation treaty, an investment guarantee agreement and a treaty on migratory birds between Japan and China.

The Japanese minister asked China for cooperation in locating those Japanese who had been left orphans in China during and after the war.

Ito also said Japan hopes to hold bilateral consultations at the level of high ranking government officials in Beijing next March or April.

COMMUNIQUE ON SUHARTO VISIT TO PAKISTAN

OW011534 Beijing XINHUA in English 1523 GMT 1 Dec 80

[Text] Islamabad, December 1 (XINHUA)--Pakistani's President Ziaul Haq and Indonesian President Suharto emphasized the "imperative need for a withdrawal of all foreign forces from Afghanistan and Kampuchea to enable the Afghan and Kampuchean peoples to exercise their inalienable right to determine their own destiny free from outside intervention, interference or coercion," according to Pakistan-Indonesia joint communique issued here today at the end of President Suharto's visit to Pakistan.

The communique says that the two leaders called for "concerted efforts by all concerned to find early solutions to both the problems of Afghanistan and Kampuchea in accordance with the relevant resolutions adopted by the Islamic conference and the United Nations General Assembly."

The communique says that the president of Pakistan affirmed his country's support for the ASEAN proposal to establish a zone of peace, freedom and neutrality in Southeast Asia while the Indonesian President expressed his appreciation of Pakistan's positive contribution to neighbourly relations and lasting peace in South Asia.

The two heads of state also pledged their full cooperation to the non-aligned movement's efforts to protect and promote the true spirit of non-alignment.

The communique says that "the two sides reviewed the international economic situation and re-affirmed their resolve to work together with other Third World countries for the establishment of a new international economic order based on justice and equity." The two sides expressed their conviction that "a just and lasting peace in the Middle East cannot be achieved without the Israeli withdrawal from all the occupied territories," and "the restoration of the inalienable rights of the Palestinian people, including their right to establish an independent state in their home-land under the leadership of the sole representative of the Palestinian people--the Palestine Liberation Organisation."

It says that both sides renewed their appeal to Iran and Iraq to bring this fratricidal war to an immediate end.

The leaders of the two countries also had a wide-ranging exchange of view on international issues of mutual interest and reached like-minded views.

The Indonesian president left Karachi for New Delhi this morning.

SALVADORAN FRONT FORMS NEW LEADERSHIP

OW301845 Beijing XINHUA in English 1829 GMT 30 Nov 80

[Text] Beijing, November 30 (XINHUA)--The Salvadoran Revolutionary Democratic Front (FDR) announced yesterday that it had formed a new leadership to take the place of the six former leaders kidnapped and murdered on November 27, according to a report from San Salvador.

The FDR consists of eighteen anti-government organisations. Its new general secretary is Carlos Gomez of the Popular Liberation Movement and its executive committee is made up of Gomez, Eduardo Calles of the Independent Movement of Salvadoran Professionals and Technicians, Manuel Quintanilla of the Nationalist Democratic Union and Marcos Portillo of the Popular Revolutionary Group and a representative of the National Revolutionary Movement, whom has yet to be appointed by the movement.

The FDR also announced on the same day that the funeral of the six murdered leaders would be held on December 3 with three-day mourning.

The new leadership issued a communique saying that the murderers of their former leaders "will be punished without fail."

The Christian Democratic Party, the only political party participating in the junta, declared in a communique that the enemy of the government tried to discredit and denigrate the government in every possible way. It demanded that the junta take just and strong measures at once to deal with the "para-military organization" active in the country.

Jose Morales Erlich, Christian Democratic Party member of the junta, said that the junta had ordered the arrest, trial and conviction of "the ultra-rightist and other extremist assassin groups which are out to disrupt the stability of the country."

Salvadoran archbishopric issued a statement yesterday denouncing the various cases of murder.

The murder of the six FDR leaders has had repercussions abroad. U.S. ambassador to El Salvador Robert White warned that the murder is "another step towards anarchy and a civil war." The Nicaraguan Government of National Reconstruction and the Sandinist National Liberation Front pointed out that the murder was a conspiracy aimed at "thwarting the Salvadoran people's struggle." Ecuadoran

Foreign Ministry issued a communique condemning the case of violence. The Panamanian Council of Solidarity with the Salvadoran people called a rally to protest against the murder of the six. The Socialist International also issued a press communique denouncing the murder.

Tension is now mounting in that Central American country with more cases of violence reported in a number of cities after the bodies of the six were found. Shops were closed yesterday in practically all cities with security forces patrolling the deserted streets.

REPORT ON VISIT TO ROMANIA

OW262221 Beijing XINHUA Domestic Service in Chinese 0758 GMT 26 Nov 80

[Newsletter from Romania: "What Was Seen and Heard in (Braila) County"]

[Excerpts] Bucharest, 26 Nov (XINHUA)--In the early part of last October, we visited (Braila) County in the southeastern part of Romania. The county is located in Romania's (Bolegan) Plain, with the Danube River rolling rapidly on its east side. In the past 10 years its total agricultural output value has increased by 68 percent, with average total yearly agricultural output value reaching 4 billion leu (Romanian currency) and average total yearly grain output reaching over 1 million dun.

From 1968 to 1970, 6,000 hectares of paddy fields were developed to control the saline and alkaline land in the 25-kilometer-long area from the lower reaches of the Danube River's tributary (Koermocuyi) River to the banks of the Danube River, where a state-run agricultural enterprise engaged exclusively in planting paddies and a paddy research center were established.

After nearly 10 years of practice, it was proved that the above measures were effective. With the planting of paddies and the irrigation of from 20,000 to 22,000 cubic meters of water per hectare of land, the saline and alkaline content of the soil decreased by 60 to 80 percent. Currently 25 percent of the improved soil can be sown to wheat, sunflower, soybean and other crops interchangeably. The per-hectare paddy output increased from 1,000 kilograms in the first few years to 4,000 kilograms or 6,000 kilograms.

Another method to transform saline and alkaline soil is building fish ponds. Some 1,000 hectares of fish ponds have been built now in the (Mokexineini) District in the northern part of the country, and 300 dun of fish have been caught this year. The place will be developed into an agricultural and fishery base.

YUGOSLAVIAN PRESIDENT INTERVIEWED BY 'TANJUG'

OW291343 Beijing XINHUA in English 1224 GMT 29 Nov 80

[Text] Belgrade, November 28 (XINHUA)--Cvijetin Mujatovic, president of the presidency of Yugoslavia, gave an interview to TANJUG on the domestic and international situation on the eve of the Yugoslav national day which falls on November 29, according to TANJUG.

Mijatovic said that the working people of Yugoslavia firmly believe in the road they are following and they have weathered many trials in the course of three and a half decades of free development in Yugoslavia and overcome pressure of all sorts from various sides.

Socialist self-management, Mijatovic said, is the country's greatest revolutionary domestic achievement since it enlarges real democratic human rights and freedom.

Mijatovic also drew attention to the difficulties Yugoslavia is facing now.

On non-aligned movement, Mijatovic said that the non-aligned policy "in today's unstable and increasingly divided and threatened world" opened up prospects for surmounting differences and preserving peace. "The principles and goals of this policy are also becoming closer to those countries which are formally within military and political alliances." Non-alignment is being perceived as a reliable mainstay and symbol of independence.

He said that the differences and conflicts between some non-aligned countries stem either from the effects of a colonial past or are caused by relations between the blocs and big powers. The big powers are "increasingly recognizing the policy of non-alignment as a factor in international relations." But at the same time, they are stepping up their interference in the movement, primarily in the affairs and policies of certain non-aligned countries.

All this, he said, indicates that the non-aligned movement is passing through difficult trials. It is particularly important to understand that conflicts among non-aligned countries represent a great danger.

Mijatovic expressed the hope that Iraq and Iran, with whom Yugoslavia maintains friendly relations, will succeed in finding a peaceful settlement of their conflict and discontinue armed activity "under conditions acceptable to both sides, i.e., withdrawal of original positions and opening of negotiations."

SITUATION IN PREELECTION PORTUGAL SURVEYED

OW282003 Beijing XINHUA in English 1942 GMT 28 Nov 80

[Text] Lisbon, November 28 (XINHUA correspondent Wang Zhigen)--As the election campaign for the presidency enters its crucial stage, the capital is now a scene of hustle and bustle. In the streets, big photos of candidates have been put up on walls. Campaign cars with loud speakers are rumbling past, making deafening noise.

The second presidential election after the collapse of the dictatorial rule will be held on December 7. According to regulations, the election campaign should be conducted from November 22 to December 5. But in fact, candidates of various parties started canvassing as early as six months ago.

Running for the presidency are five military men and two civilians, including President Ramalho Eanes and General Soares Carneiro.

A complicated situation has arisen since the very beginning of the campaign due to a great change in the lineup.

It was recalled that in the first presidential elections held on June 27, 1976, following the overthrow of the dictatorial rule, Antonio Ramalho Eanes, then the army chief of staff, was elected president by an overwhelming majority of 61.59 per cent of the votes due to his outstanding role in smashing a pro-Soviet coup d'etat in the army on November 25, 1975. In that election, he got the support of the Portuguese Socialist Party, the Social Democratic Party and the Party of the Democratic and Social Centre, but was opposed by the Communist Party of Portugal.

However, in the present campaign, both the Social Democratic Party and the Party of the Democratic and Social Centre are opposing Eanes' reelection and instead put up their own candidates to challenge him. Eanes is accused of making concessions and compromises to the community [as received] party of Portugal and obstructing the reformative measures taken by the former democratic alliance government after he became president.

On the other hand, the communist party, which vehemently attacked Eanes four years ago, declared several times that its candidate would withdraw from the contest so as to support Eanes.

Who will have the chance to be the 15th president of Portugal? According to the recent four public polls, President Eanes is now holding a safe lead in the race, followed by Carneiro. It is therefore believed that a sharp contest is obviously to be between the two generals.

On domestic affairs, both Eanes and Carneiro stand for economic development and respect for the pluralistic democracy and popular freedom, while externally, they both support Portugal's entry into the European community, its commitment to the NATO and stand for developing ties with its former colonies.

However, the two do have obvious differences in both the domestic and foreign policies. For example, Eanes emphasizes on respect for the present constitution and a nation-wide harmony as well, while Carneiro insists in revising the constitution so as to write off those clauses which "are incompatible with the western democracy" and opposes nationalisation, agrarian reform and agreement with the communists. In foreign affairs, Eanes stresses on diversified diplomacy and stands for development of relations with eastern European countries and a negotiated settlement of disputes, while Carneiro emphasizes on the steady swing to Western democracy and condemns Soviet expansionism and capitulation to the Soviet Union.

With the polling date approaching, the contest between the two sides has become sharper and sharper. As president in office, Eanes has his advantages. But Carneiro, without the advantage of being in office, has tried to make use of the discontents of the electorate with the present situation in the country to attack Eanes' failures; while Eanes, on his part, has taken a strictly defensive strategy and tried to wait for a right opportunity to launch a counterstroke against his challenger. He has tried not to make lengthy talks during the campaign so as to avert any possible indiscreet remarks. While boasting about the achievements in his official career, he has deliberately avoided any direct attack on his political opponents in order to show his largemindedness.

It is generally maintained that during the election campaign the two generals are evenly matched for the time being. It is also widely believed that neither of them could win more than 50 percent of the votes in the first round of voting. That "who will enter the magnificent presidential palace" will therefore be determined in the second round of voting, which will take place on December 21.

'XINHUA' CITES 'KCNA' ON CARRILLO RALLY SPEECH

OW291548 Beijing XINHUA in English 1521 GMT 29 Nov 80

[Text] Pyongyang, November 29 (XINHUA)--The Workers' Party of Korea and the Spanish Communist Party "are deeply concerned for the tension and disputes caused in the world today by the imperialist policy and the dangerous expansionist manoeuvres," said Santiago Carrillo, visiting general secretary of the Spanish Communist Party and head of the party's delegation, at a welcome meeting here yesterday, according to KCNA report today.

He added that "to prevent World War III is one of the basic tasks facing all the peoples and to carry out this task we must struggle to form a broad peace front."

He held that "the programme for founding the Democratic Confederal Republic of Koryo which was adopted at the Sixth Congress of the Workers' Party of Korea will help achieve the country's reunification, the ardent desire of the entire Korean people, and make the great Korean people play a bigger role in the global arena."

He stressed: "Our two parties are upholding the principle of independence. You call this the chuche idea. We are struggling for a new unity of the international communist movement and working-class movement based on independence and non-interference in other's internal affairs, for cooperation among all the anti-imperialist forces and democratic and progressive forces, for defence of peace and for the independence of people and the cause of communism."

So Yun-sok, alternate member of the Political Bureau of the Central Committee of the WPK and chief secretary of the Pyongyang Municipal Committee of the party, made a welcome speech at the mass meeting. Referring to the international situation, he said that the present international situation has become very complicated and tense because of the imperialists' manoeuvres of aggression and war for maintaining and expanding their spheres of domination.

Among those present at the meeting were Kim Il-song, general secretary of the Central Committee of the Workers' Party of Korea.

A KCNA report said yesterday that talks were held between the Spanish Communist Party delegation headed by Santiago Carrillo and a Korean Workers' Party delegation headed by Kim Il-song on November 26 and 27 in Pyongyang.

SWEDISH OFFICIALS REPUDIATE SOVIET NUCLEAR BLACKMAIL

OW221615 Beijing XINHUA in English 1506 GMT 22 Nov 80

[Text] Stockholm, November 21 (XINHUA)--A high official in the Swedish Foreign Ministry has repudiated a recent Soviet nuclear blackmail to north European countries as an example of "superpower shameless impudence and extreme disrespect for Sweden's neutrality," the daily EXPRESSEN reported yesterday.

The nuclear blackmail was issued by the Soviet APN news service commentator Ilya Baranikas in an article published in the Swedish daily DAGENS NYHETER on November 11. The Soviet commentator said that in case the NATO launches a nuclear missile or cruise missile against the Soviet Union through the Swedish air space, the Soviet Union will certainly take counter-action before the missile crossed the border. A Soviet air defence unit "can react in a flash with an anti-missile missile that might cause a nuclear explosion over the territory of the north European country concerned," he added in a threatening tone. The article then asked Sweden to "take sensible steps" to prevent European missiles or other new arms from being deployed on its territory.

The Soviet blackmail, it was learned, has aroused "indignation" in the Swedish Foreign Ministry and the general staff of national defence.

A Foreign Ministry official said that Baranikas' article was obviously "an effort to coerce Sweden into joining the anti-NATO ranks," the DAGENS NYHETER reported on November 20. An editorial of the paper on November 13 pointed out that it was conceivable that Baranikas' article was written either with the consent of the Soviet leadership or under their inspiration. The Soviet threat was "unacceptable," the editorial declared.

An army general wrote in the same paper on November 18 that as a matter of fact, Baranikas had nakedly raised before Sweden "the threat of occupation by the East." Therefore, the army general stressed, it is necessary for Sweden to maintain a powerful defence in face of such threat.

KING HUSAYN ADDRESSES ARAB SUMMIT CLOSING SESSION

OW271830 Beijing XINHUA in English 1625 GMT 27 Nov 80

[Text] Amman, November 27 (XINHUA)—The three-day 11th Arab summit conference ended here this afternoon after adopting a "final declaration" and a number of other important resolutions.

President of the conference King Husayn of Jordan declared in a speech at the closing session, "the meeting has given expression to the spirit of Arab unity. It has worked out a pan-Arab strategy and agreed not to wage wars among the Arab brothers and not to use Arab weapons to fight any Arab country on any pretext."

"We have called on all our nations far-sighted forces to work for the settlement of Arab differences in any place and stop confrontation by violence as such confrontation will only benefit our nations enemies who are watching us covetously. We hold that all the differences among the Arabs can be solved through peaceful means."

He deeply deplored the absence of some members of the Arab League, particularly the Palestine Liberation Organization, from the summit. "The historic meeting is aimed at showing support for the rights of Palestine," he said.

"What is comforting to the Arab nation, the Palestinian people in particular," he added, "is the fact that we have all adopted a national stand and adhere to the national commitment to the Palestinian cause. We are all opposed to the attempt to control the will of Palestine as the Palestine Liberation Organization is the sole legitimate representative of the Palestinian people."

He continued to say, "We are all for making Arab Lebanon a unified, free and independent country."

The summit agreed on an Iraqi-sponsored plan for a decade of Arab joint development aimed at reducing economic disparities among the different regions of the Arab nation and increasing per capita income. For this purpose, the summit approved a five billion-dollar fund for development which would facilitate the financing of the economic projects in the less developed Arab countries. The financing will be in the form of loans to be repaid over a period of 20 years at one per cent interest with a 10-year grace period.

An Arab fund for African technical assistance was established at the summit. Saudi Arabia, Iraq, the United Arab Emirates and Kuwait contributed five million dollars each to the fund.

The summit also approved a programme of Arab political action against Israel which was submitted to the summit after it was approved by the Arab foreign ministers conference here earlier this month. During the foreign ministers conference, all Arab countries, including those which boycotted the summit, participated in its preparation and approved the programme.

The Arab leaders also approved of holding annual summits. They agreed to hold emergency meetings if the need arises.

ARAB SUMMIT ADOPTS FINAL DECLARATION

OW280304 Beijing XINHUA in English 0253 GMT 28 Nov 80

[Text] Amman, November 27 (XINHUA)--The 11th Arab summit which ended here this afternoon adopted its final declaration.

Excerpts from the declaration follow:

The Arab leaders affirmed their adherence to the resolutions of the Baghdad and Tunis summits, especially those concerning the Palestine cause.

The conference decided to sever all relations with any country that recognizes Jerusalem as the capital of Israel or moves its embassy there.

The Arab leaders affirmed their support for the Palestine Liberation Organization (PLO) as the sole legitimate representative of the Palestinian people. They also affirmed their support for the independence of the PLO and the freedom of its will. The conference also hailed the steadfastness of the Palestinian people in the occupied land and their valiant struggle against Israeli occupation.

The Arab leaders reaffirmed their refusal of the Camp David accords and affirmed their determination to strengthen the measures of boycotting the Egyptian regime in accordance with the Baghdad and Tunis resolutions.

The conference expressed utmost concern at the existing conflict between Iraq and Iran, and called on the two parties concerned to cease fire immediately and resolve the conflict by peaceful means. The conference supports the legitimate rights of Iraq to its land and waters and welcomes Iraq's response to the international appeals for a cease-fire and the settlement of the conflict through negotiations. The conference calls on Iran to respond to this stand.

The conference condemned the unabated Israeli aggression on Lebanon and also reaffirmed the Tunis resolutions for the reconstruction of Lebanon.

The conference stressed the need for strengthening relations with the Islamic countries and the Islamic conference organization, and reinforcing the role of the non-aligned movement. The conference also stressed the need for strengthening ties with the Organization of African Unity and supporting the just struggle of the African people against racial discrimination and foreign interference.

The conference also affirmed the determination of the Arab states to pursue the Arab-European dialogue in the service of common interests.

It also stressed the need to gain the support of the socialist countries for the Arab rights.

The conference condemned the continued U.S. support of Israel and its hostile attitude towards the PLO.

The conference discussed the economic and social challenges facing the Arab nation and endorsed the document of the joint Arab economic action strategy.

The conference endorsed the decade of joint Arab development, the unified agreement for Arab investment in the region and the national economic action charter.

BANI-SADR REVIEWS WAR, DOMESTIC SITUATION

OW031630 Beijing XINHUA in English 1620 GMT 3 Dec 80

[Text] Tehran, December 3 (XINHUA)--Iranian President and commander-in-chief Bani-Sadr declared here this noon at a press conference that "we have started the second stage (of war) aimed at driving the Iraqi troops out of Iran's territory." "We can say for sure we are to gain the final victory," he added

The president reiterated that Iran will continually follow a "neither West, nor East" foreign policy, diminish dependence on other countries and obtain Iran's real independence.

Referring to the present domestic situation, he said the foreign powers are trying to create an unstable and conflicting situation in Iran in order to make Iran powerless in the second stage of the war. He named those, whether in favour of or against him, as conspirators if they engaged in any divisive activities. He urged Iranian clergymen and intellectuals to cooperate in the course for a progressive society.

Bani-Sadr met Iranian leader Khomeyni earlier this morning. After the meeting, the president told PARS News Agency that various national affairs and the current situation on the war fronts were discussed. Khomeyni stressed the need for unity, coordination, understanding and cooperation, and provided guidance on the current affairs of the country, particularly the economic situation.

PLO CALLS FOR SANCTIONS AGAINST ISRAEL

OW020220 Beijing XINHUA in English 0147 GMT 2 Dec 80

[Text] United Nations, December 1 (XINHUA)--Faruq Qaddumi, observer from the PLO, called for the imposition of sanctions on Israel in a strongly-worded statement to the U.N. General Assembly as it moved to consider the Palestine problem today.

Qaddumi said the call for the imposition of sanctions on Israel was made out of concern for the principles of the U.N. Charter and for punishing the convict who repeated daily his lack of respect for the U.N. organization.

A resolution imposing sanctions against Israel, he stated, would enhance the prestige of the United Nations and would activate its needed role in the international arena.

Qaddumi also demanded that the credentials of the Israeli delegation should be rejected until Israel complied with the whole of the international community.

Qaddumi severely criticised the United States for its support to Israel, saying that the continued obstruction by the United States of the role of the United Nations constituted a danger to all, including the people of the United States itself. It was time, he said, for the United States to shoulder its responsibility towards the United Nations, its charter and resolutions, as well as towards the cause of a just peace.

While expressing his appreciation for Western Europe's recognition of the PLO and the inalienable rights of the Palestinian people, Qaddumi urged Western Europe to go beyond the mere statement of positions, wishes, and called for a just political solution.

Qaddumi emphasized that there was only one road to peace in the Middle East, namely the resolution of the question of Palestine.

The Palestinian rights committee and Syria today joined the PLO in calling for the imposition of sanctions against Israel if it continued to defy the U.N. resolutions on Palestinian rights. They reiterated that any settlement in that area must include the total withdrawal of Israel from occupied Arab territories and the full recognition of Palestinian rights.

PLO APPEALS TO AMERICANS FOR SUPPORT

OW290344 Beijing XINHUA in English 0254 GMT 29 Nov 80

[Text] Washington, November 28 (XINHUA)--The Washington office of the Palestine Liberation Organization (P.L.O.) today appealed to the American public and all its organizations to help the Palestinian people achieve freedom and peace and to assist them to return to their homeland and exercise full self-determination and national independence.

Dr. H. Husayni, information officer of the P.L.O. Washington office made this appeal at a press conference at the National Press Club here on the eve of the International Day of Solidarity With the People of Palestine.

The appeal says: "The Palestinians, a nation of four million, have not had a moment of peace since November 29, 1947. Their human and civil rights have been brutally violated in the Israeli occupied territories, their school children shot in the streets by Israeli soldiers and tortured in Israeli prisons; their refugee camps savagely bombed in south Lebanon and hundreds of innocent civilians killed or injured. While the international community through numerous U.N. resolutions has condemned these Israeli acts of aggression and called for the establishment of a Palestinian independent state based on the right of the Palestinian people to self-determination and the right to return to their homeland, Israel continued to defy the international community and to use the most sophisticated American weapons to carry further attacks in southern Lebanon."

Dr. Husayni stressed the need for a just and lasting peace and said peace will not be realised unless the Palestinian people achieve their national rights, the right to self-determination, the right to independence and the right to return to their homeland. He said the American Government should do something about the recent shootings of Palestinian schoolchildren in the Israeli occupied West Bank by the Israeli Army with weapons supplied by the American Government.

IRAN-IRAQ PEACE EFFORTS REVIEWED

OW291430 Beijing XINHUA in English 1215 GMT 29 Nov 80

["Roundup: International Mediation of Iran-Iraq War in Difficulty"--XINHUA headline]

[Text] Baghdad, November 28 (XINHUA)--International efforts to mediate the Iran-Iraq war are continuing. But in the face of the great differences on the conditions for a ceasefire set by the two countries as well as other complicated demands, the mediation attempts are meeting with many difficulties.

The U.N. Secretary General Waldheim's special envoy Olaf Palme recently held talks on the ceasefire with the Iranian and Iraqi leaders in Tehran and Baghdad respectively. Upon his arrival in New York, Palme announced that the anticipated first step objective for his peace mission in Iraq and Iran has been reached.

It was disclosed that both Iraq and Iran have agreed in principle to allow the over 60 merchant ships anchored at Shatt-al-'Arab to depart. There was no other reported progress from Palme's trip. As to the future of his mission, Palme said in New York that he would probably make another mediation tour to Tehran and Baghdad within a few weeks.

Diplomatic sources here are not optimistic over the possibility of ending the war within a short period of time. They believe that from now until February or March of next year, the battlefront will be locked in a seesaw struggle.

People here noted that even during Palme's trip, Iran and Iraq continued to accuse the other while inflicting great damage to each other on the battlefields. The resulting losses to the two countries' economies are staggering.

The Iraqi oil city of Kirkuk was bombed by Iranian aircraft not long ago just after the pumping of crude oil for the Iraq-Turkey oil pipeline from Kirkuk to the Turkish Mediterranean port of Yumurtalik was started up. The attack was reportedly the most devartating since the war began with nine petroleum depositories and two filling stations totally destroyed in the attack.

Since the outbreak of the conflict and up until November 10, 31 Iranian petroleum enterprises have been blown up, according to statistics issued by the Iraqi paper AL THAWRAH in November 15.

World public opinion has been urging a ceasefire between Iraq and Iran with no superpower interference in order to realize peace in the Gulf region. The Saudi Arabian foreign minister recently expressed the hope that the war between the two states end as soon as possible. Many other countries and organizations have also put forward various kinds of proposals including the suggestion that both sides hold negotiations based on the boundary agreement reached in Algiers in 1975.

At present, the crux of the matter is to discover under what conditions the ceasefire can be achieved and peace restored. The two warring nations should realise that they are expected to adopt a realistic and careful attitude and set the restoration of peace and security in the region by settling these disputes left over by history.

LONDON MEETING HITS USSR INVASION OF AFGHANISTAN

OW290936 Beijing XINHUA in English 0755 GMT 29 Nov 80

[Text] London, November 28 (XINHUA)--The Soviet Union was denounced at a public meeting here today for its invasion of Afghanistan.

The meeting, sponsored by the revolutionary Communist League of Britain and Bangladesh Workers' Association, called on the people of the world to stand square behind the Afghan people and do everything they can to support them.

One of the speakers at the meeting pointed out that the Afghan people, together with the people of Kampuchea, stand in the forefront of the struggle against Soviet imperialism, which seeks to dominate the entire world.

"The Soviet invasion," he said, "serves not only to prop up the puppet regime and oppress the people of Afghanistan, not only to plunder the natural gas of Afghanistan, but forms part of its relentless drive towards access to the Middle East region and the vital sea lanes and warm water ports in that region. The invasion therefore represents a further attempt of the Soviet Union to outflank the United States and Western Europe which is a crucial part of their strategy of marching towards world domination."

Denouncing the Soviet troops for massacring Afghan people by all brutal means including napalm flames and gas poisoning, other speakers pointed out that this could not but make the Afghan people more determined and united against the common enemy.

The meeting was rounded off with songs denouncing Soviet social-imperialism and supporting the people of Kampuchea and Afghanistan.

PAKISTAN, INDONESIA LEADERS HIT SOVIET INTERVENTION

OW291313 Beijing XINHUA in English 1230 GMT 29 Nov 80

[Text] Islamabad, November 29 (XINHUA)--President Suharto of Indonesia and President Mohammad Ziaul Haq of Pakistan last night expressed their concern over the military intervention by a major power against another country and the hostilities between Iraq and Iran.

Speaking at a state banquet held for President Suharto in Lahore, President Ziaul Haq said that Pakistan wanted peace in the world in general and in this region in particular. It is therefore natural that Pakistan "felt deeply concerned over the unfortunate developments which had disturbed peace of our continent."

He said "In our neighbourhood, Afghanistan, an Islamic and non-aligned country, had been subjected to a massive military intervention. On the other hand, in Indonesia's neighbourhood, Kampuchea, also a non-aligned country, had been invaded by a strong neighbour. In both Afghanistan and Kampuchea basic human rights including the right to self-determination had been violated."

President Suharto said that the rivalry and the struggle for influence in some parts of the world quite often implicated other regions or countries as well. The recent developments were threatening world peace because an external power had embarked upon armed intervention against another country.

President Suharto arrived in Lahore yesterday on a four-day state visit to Pakistan at the invitation of President Ziaul Haq.

AFGHAN WINTER WARFARE ANALYZED

OW290124 Beijing XINHUA in English 0103 GMT 29 Nov 80

["Feature: 'Afghanistan's Winter Battlefield Analyzed'"--XINHUA headline]

[Text] Islamabad, November 28 (XINHUA correspondent)--The advent of bitter winter on the misery-ridden Afghanistan will certainly bring more difficulties to the freedom fighters in their military operations but will not slacken their strike at the Soviet occupation troops, leading members of Afghan resistance movements told XINHUA correspondents in Peshawar.

However, there is going to be a grim struggle against the Soviet aggressor troops which are also reinforcing themselves, they noted.

Afghanistan is a landlocked country with highland and mountains covering four-fifths of its area which are snowcapped in winter. But the same weather conditions, the resistance leaders analysed, could mean differently to the Soviet aggressor troops and the freedom fighters. While they are better equipped with cold-breaking materials, the biting cold will still impede the movement of their tanks and aircraft, particularly that of their gunships, which are the worst threat to the freedom fighters. The morale of Soviet troops is expected to sink further in the cold winter. As for the freedom fighters, although they can live under the open sky in the mountains in summer, they, however, must find a place to live in today. In addition, their winter clothes and quilts are not adequate. But thanks to the Afghan people's support, many of their problems could be solved, unlike the Soviet troops whose supplies have to be shipped from home several thousand miles away. As the freedom fighters are lightly-equipped and waging a guerrilla warfare, it is unlikely that their operations will be seriously affected by the winter.

A number of resistance leaders also gave us an account of possible Soviet operation plans for the winter: one, concentrate their forces to defend major cities, airfields and bases; two, safeguard the security and smooth traffic of main communication lines; three, launch attacks on selected areas under the control of freedom fighters and try their utmost to cut off the contacts between guerrillas in the various parts of the country. It is in the context of these plans that the Soviet troops have recently launched their fourth offensive in the Panjsher Valley, a strategic point 150 kilometers northeast of Kabul, where they have heavily bombarded the zone of Kandahar and Herat, the second and third largest cities of the country. Besides, the Soviet military authorities are trying to reorganize the Afghan Government Army which has been heavily impaired and use it as their cat's paw. For this reason, the Karmal regime has been stepping up the recruitment.

But Afghan freedom fighters have continued their attacks in various parts of the country since the winter set in. In Panjsher area, freedom fighters had occupied the nearby military base of Jabul Saraj. As the Soviet troops unleashed a large-scale attack on the valley, they met with strong resistance. Highway transportation is being frequently cut off by the guerrillas. In Kabul, firewood was primarily supplied from Paktia Province. However, no firewood has been brought there since November 8, boosting firewood prices in Kabul nearly ten-fold as much as before.

Afghan freedom fighters are now facing the test of a second winter. Younus Khalis, president of the Afghan Islamic Party, Khalis group, told XINHUA: "We weathered the storm of the first winter and we gained experiences. The Soviet troops are having more difficulties than we do. We will continue our fight this winter to win greater victory."

BRIEFS

SOVIET COMMANDER VISITS BULGARIA--Sofia, November 26 (XINHUA)--A Soviet Government military delegation headed by commander-in-chief of the navy S. G. Gorshkov paid an eight-day visit to Bulgaria ending today. During his stay in Bulgaria, Gorshkov had a series of talks with Bulgarian Defence Minister D. Dzhurov and was received by Todov Zhivkov, first secretary of the Bulgarian Communist Party and chairman of the State Council, and Stanko Todorov, chairman of the Council of Ministers. [Text] [OW270433 Beijing XINHUA in English 0233 GMT 27 Nov 80]

JAPAN APPROVES DEFENSE LAWS--Tokyo, November 28 (XINHUA)--The Upper House of the Japanese Diet approved today three defense-related laws under which the measures in preparation for the enhancement of the self-defense forces will be put into practice. Under the laws, the number of officers of the maritime and air self-defense forces will increase by 2,331 while that of reserve officers of the ground self-defense force by 2,000. The total number of officers of the three self-defense forces will be 270,184. [Text] [OW281228 Beijing XINHUA in English 1212 GMT 28 Nov 80]

CUBAN EXPANSIONISM--Beijing, November 19 (XINHUA)--Jamaica believes Cuban expansionism will continue "through its role as a proxy for the Soviet Union," said Prime Minister Edward Seaga in an interview published in the November 24 issue of the U.S. TIME magazine. "The Cubans set up Jamaica as their espionage center of the Caribbean so they could have easier access to subversives on other islands, who could come here to deal with them rather than going to Havana and risking exposure," he recalled. "How can you normalize relations with a country acting like that?" He told the weekly: "If Castro wants to be accepted in this region, then he must be able to prove his credentials by not exporting revolution or ideology." [Text] [OW190722 Beijing XINHUA in English 0708 GMT 19 Nov 80]

CUBAN POLICY DENOUNCED--Panama City, November 24 (XINHUA)--Cuban penetration into Central America constitutes a threat to Costa Rica, said Costa Rican President Rodrigo Carazo Odio in a statement published by the paper LA PRENSA today. He made the remarks after a regional seminar on refugees opened in San Jose, capital of Costa Rica. President Carazo pointed out that Costa Rica had been faced with a direct threat from Somoza and reacted to his regime accordingly, and now faced with a direct threat from Castro, the country would do the same. "Castro and Somoza are men of a kind, both are tyrants, no matter what political banners they are flaunting," he added. He also pointed to the fact that Cuba is carrying out the mission entrusted by the Soviet Union in Angola and Africa as a whole and other parts of the world.

On the issue of Cuban refugees in Costa Rica, President Carazo said that we can neither sink them into the seas, nor say to them that they had better seek another planet to live on. [Text] [OW252337 Beijing XINHUA in English 1504 GMT 25 Nov 80]

ALBANIAN-YUGOSLAVIAN RELATIONS--Tirana, November 25 (XINHUA)--The relations between Albania and Yugoslavia have been further improved since the beginning of this year. An Albanian Government trade delegation visited Yugoslavia last July. The two countries signed a goods exchange agreement for 1981-1985. It was reported that trade between the two countries in the next five years is expected to reach 720 million U.S. dollars, an increase of 150 per cent over the current five-year period. The exchanges in culture, education and sports have become more frequent. For the first time in many years, the minister of education and culture of Albania visited Kosovo, Yugoslavia, and exchanged views with local leaders on closer cooperation in science, culture, education and archaeology. However, Albania has not ceased attacking Yugoslavia in the ideological field. A recent article published by an Albanian paper said that "The fierce ideological and political struggle" against Yugoslavia will continue. [Text] [OW260230 Beijing XINHUA in English 0200 GMT 26 Nov 80]

AUSTRALIAN POLICIES--Canberra, November 25 (XINHUA)--Governor-General of the Commonwealth of Australia Zelman Cowen said today that the Australian Government "is very conscious of the need for a strong and united western stance towards the Soviet Union and to this end it will work to maintain its already strong ties with its traditional allies, and in particular with the United States." Outlining the government's policies at the 32d parliament, he said, "In the present state of international tension, my government is mindful that its first responsibility is the nation's security and it has taken appropriate steps to enhance Australia's defence preparedness. The 1980-1981 budget provides for a real increase in defence spending of about seven per cent." At home, he said, "A primary objective of the government will be to continue the fight against inflation." The government's economic strategy is designed "to restore economic stability and improve growth within a medium term framework," he added. He pledged that "during 1981 my government will take action to place increased emphasis on employment training schemes," stating that "it is not only an economic problem but a social one." On the whole, Cowen said, the government would "maintain the basic thrust of the policies which have been followed over the past five years." INDIAN OCEAN CONFERENCE--United Nations, November 25 (XINHUA)--The U.N. General Assembly First Committee (political and security) approved a draft resolution this morning requesting the ad hoc committee on the Indian Ocean to continue its preparations for the convening of a 1981 conference on the Indian Ocean at Colombo. The resolution says the General Assembly would renew the mandate of the ad hoc committee and request it to continue its efforts to harmonize views on issues relating to the convening of the conference and to achieve the objectives of the declaration of the Indian Ocean as a zone of peace. The committee would also be asked to finalize preparations for the conference and hold two preparatory sessions. [Text] [OW260750 Beijing XINHUA in English 0735 GMT 26 Nov 80]

FRANCE, MADAGASCAR ON ISLANDS--United Nations, November 25 (XINHUA)--The U.N. General Assembly's special political committee adopted a draft resolution this morning urging France and Madagascar to negotiate a settlement to the dispute over the sovereignty of the Malagasy Islands of Glorieuses, Juan de Nova, Europa and Bassas da India. The four tiny islands, ranging in size from 4 to 30 square kilometres, are located in the Indian Ocean between Madagascar and Mozambique. Madagascar maintains that the islands are natural dependencies of Madagascar prior to its independence on the grounds that the international law provides that geographical proximity gives a neighbouring state a natural right of sovereignty. But, France holds that in accordance with the international law it took possession of the islands during the last century when they were uninhabited and had no master. The General Assembly took a decision at its 34th session, in which it invited France "to initiate negotiations without further delay with the government of Madagascar for the reintegration of the abovementioned islands which were arbitrarily separated from Madagascar." The draft resolution was approved by a recorded vote of 83 to 13. China voted for it. It would be submitted to the General Assembly for adoption. [Text] [OW260136 Beijing XINHUA in English 0114 GMT 26 Nov 80]

JAPANESE DRAMA TROUPE--Tianjin, 24 Nov (XINHUA)--The play "Qu Yuan," written by noted Chinese poet and playwright Guo Moruo, was staged here tonight for the first time by Japanese dramatist Chojuro Kawasaki, as a gesture of promoting Sino-Japanese friendship. Mr Kawasaki not only directed the play but also starred as Qu Yuan. Despite his advance age of 78, he has undertaken the work because he takes it as the climax of his stage career and a contribution to Japan-China friendship. He is an old friend of the Chinese people and visited China several times in the past. The 39-member Japanese troupe will give 2 performances here, another 2 in Nanjing and 3 in Beijing. Qu Yuan was a patriotic Chinese poet who lived during the warring states period about 2,300 years ago. Saddened by the plight of his country at the hands of foreign schemers, he drowned himself in the Milo River. Guo Moruo wrote the play in 1942 at the time of Japanese aggression, to rouse the people's patriotism. Guo Moruo, was also a Marxist historian. DINOSAUR EXHIBITION IN JAPAN--Beijing, 24 Nov (XINHUA)--China's first large-scale exhibition of paleovertebrates ever given abroad is to be held in Japan at the latter hafl of 1981. A protocol on holding the exhibition was signed here today between the Chinese Academy of Sciences and the Japan-China Cultural Exchange Association and Japanese paper ASAHI SHIMBUN. The opening of the exhibition is scheduled for 6 July 1981 in Tokyo and later it will also be held in Osaka, and Fukuoka. Among the 369 exhibits on display will be paleovertebrates that existed in China 4 hundred million years ago. They consist of primitive fish, paleoamphibians and paleoreptiles. Rare items such as a 22-metre long sauropoda mamenchisaurus, a hadrosaurus-tsiatsaosaurus, and ithyothosaur found in the Himalayas will also be shown. The protocol was signed by Yu Wen, secretary-general of the Chinese Academy of Sciences and by Miyagwa Torao, director of the Japan-China Cultural Exchange Association, and Taro Sakazaki, director of cultural affairs of

ASAHI SHIMBUN, Zhou Peiyuan, vice-president of the Chinese Academy of Sciences was present at the signing ceremony. [Text] [Beijing XINHUA in English 1502 GMT 24 Nov 80 OW]

UPPER VOLTA CALMS--Beijing, November 27 (XINHUA)--Normal order has been restored in the capital of Ougadougou and other major cities of Upper Volta after a military coup on November 25, according to Western news agency reports. People in the capital went about their business as usual. Tele-communication links with the outside world were working. But the airports were closed. A dusk-to-dawn curfew was in force. The country's former President Sangoule Lamizana who was ousted in the military coup, former president of the National Assembly Gerard Kango Ouedraogo and former chief of staff of the armed forces Jean Bila Zagre have been confined in a military camp near the capital. The military committee for national rehabilitation and progress, the new junta ruling the country, said in a communique issued on November 25 that individual and collective liberties such as freedom of the press, association, labor movements and religious faith would be guaranteed, without doing harm to the public order and security. Upper Volta would respect all the international accords concluded by the deposed regime and would neither intervene in the internal affairs of other countries nor allow the other countries to intervene in its affairs, the communique said. [Text] [OW271212 Beijing XINHUA in English 1201 GMT 27 Nov 80]

UPPER VOLTA MILITARY COMMITTEE--Beijing, November 28 (XINHUA)--A 31-member military committee for national rehabilitation and progress has been formed in Upper Volta, broadcast Upper Volta Radio yesterday, according to reports reaching here. The military committee, headed by former Foreign Minister Saye Zerbo, includes other four former ministers who served under the ousted President Sangoule Lamizana prior to 1978, when the country returned to civilian rule. They are Gabriel Some, former minister of the interior and security, Felix Tiemtarboum, former minister of youth and sports, Mamadou Sanfo, former minister of finance and Hounsouho Bambara, former minister of information. Saye Zerbo said that the duties of the military committee would be defined at a later date. An 11-member steering committee within the military committee was also appointed to direct events. The coup leaders also appointed ten officials to deal with day to day matters of the ministries until a new government has been formed. [Text] [OW280804 Beijing XINHUA in English 0739 GMT 28 Nov 80]

POLISH OFFICIAL EXPELLED--Warsaw, November 26 (XINHUA)--Jerzy Olszewski, former Polish minister of foreign trade and maritime economy, has been expelled from the Polish United Workers' Party, the party's organ TRYBUNA LUDU reported. Jerzy Olszewski, who had been removed from his post not long ago, was charged by the control committee under the party's Central Committee of taking irresponsible economic decisions to benefit foreign traders. He was also convicted of showing favoritism towards former head of the Mine Export and Import Corporation K. Tyranski, who is on trial here because of embezzling over one million U.S. dollars. Since the party's 6th plenary session on October 4, 67 party members, 51 of them top officials, have been expelled from and 79 punished within the party for abuse of trust and corruption. It was reported that 902 persons were expelled from the party in the third quarter of this year. [Text] [OW270432 Beijing XINHUA in English 0228 GMT 27 Nov 80] production, fulfilled its plan on November 25. It is expected to overfulfill its output quota by 4,500 million lei by the end of this year. So far, the five-year plan has been fulfilled in the departments of machine-tool, light, and building material industries. [Text] [OW281234 Beijing XINHUA in English 1220 GMT 28 Nov 80]

SHANGHAI CHILEAN EXHIBITION--A Chilean pictorial and handicraft exhibition opened at the Shanghai art museum on 15 November to mark the 10th anniversary of the establishment of diplomatic ties between China and Chile. Speaking at the opening ceremony were (Shen Youjian), deputy director of the municipal cultural bureau, and (Carlos), first secretary of the Chilean Embassy in China. [Shanghai City Service in Mandarin 1130 GMT 15 Nov 80 OW]

NEW CANADIAN AMBASSADOR--Beijing, 14 Nov (XINHUA)--Canada's new ambassador to China, Michel Gauvin, presented his credentials to Tan Zhenlin, vice-chairman of the Standing Committee of the National People's Congress, this morning. Ambassador Gauvin arrived here on 5 November. Chinese vice-minister of foreign affairs Zhang Wenjin was present. [Text] [OW171623 Beijing XINHUA in English 0738 GMT 14 Nov 80 OW]

CISM DELEGATION OF PLA--Beijing, 17 Nov (XINHUA)--A sports delegation of the Chinese People's Liberation Army left here today for the 35th General Assembly of the International Military Sports Council (CISM) to be held in Venezuela from 21 to 30 November. The 5-member delegation is led by Han Fundong, director of the sports committee of the Chinese PLA. The delegation was invited by the Venezuelan Ministry of Defense. The 34th General Assembly was held in Beijing in January this year. China joined the CISM in 1979.[Text] [Beijing XINHUA in English 0730 GMT 17 Nov 80 OW]

BELGIAN DYNASTY DAY--Beijing, November 15 (XINHUA)--Roger Denorme, the Belgian ambassador to China, gave a reception here today on the occasion of Belgium's dynasty day. Among the guests were Chinese Minister of Posts and Telecommunications Wang Zigang, Vice-Minister of Foreign Affairs Han Kehua and leading members of other organizations concerned. Diplomatic envoys of various countries were also present. [Text] [Beijing XINHUA in English 0725 GMT 15 Nov 80 OW]

AID TO SEYCHELLES--Victoria, 21 Nov (AFP)--A team of Chinese specialists has come to the Seychelles to prepare for the start of China's biggest aid project in the Indian Ocean republic--construction of a new high school. The specialists are making arrangements for the arrival of Chinese workers who will begin building the school early in 1981. Construction materials are on their way from China. The new school, to be built on the archipelago's main island of Mahe, will cater for more than 600 students. The cost of more than 6 million dollars will be met through a low-interest loan from China. [Text] [Paris AFP in English 0929 GMT 21 Nov 80 OW]

POLISH WORKERS REACH ACCORD--Warsaw, November 26 (XINHUA)--The Polish Transport Ministry and railway workers affiliated with the Independent "Solidarity" Trade Union reached agreement on ways of allocating a pay raise early this morning, after five-day negotiations in Wroclaw, thus putting an end to the nation-wide warning strikes, according to the Polish News Agency PAP today. The Transport Ministry finally accepted the allocation arrangements agreed earlier between his ministry and railway workers affiliated with the Independent "Solidarity" Trade Union Federation. Representative of railway workers Wlodzimierz Badelek announced that they have accepted the minister's decision and cancelled the nation-wide strike scheduled for November 26. [Text] [OW261708 Beijing XINHUA in English 1635 GMT 26 Nov 80]

PROTEST STRIKE--Warsaw, November 27 (XINHUA)--The regional Independent "Solidarity" Trade Union in the Mazowsze area called off the protest strike after Jan Narozniak, a printer of the union, and Piotr Sapelo, an employee in the state prosecutors office, were released early this morning. The two men were set free on bail by Stefan Bratkowski, president of the Polish journalists association. They were accused of illegal reproduction of state secret documents. The arrests triggered a widespread protest wave throughout the country. The presidium of the regional union and the national consultative committee of the "solidarity" issued separate statements demanding the freedom of the arrested. The Ursus Tractor Factory near Warsaw and 15 other enterprises throughout the country staged warning strikes. Faced with the danger of worsening of the situation, the provincial prosecutor cancelled the original detention decision at a late hour yesterday. [Text] [OW272001 Beijing XINHUA in English 1927 GMT 27 Nov 80]

SYMPATHY TO ITALIANS--Beijing, November 26 (XINHUA)--The Chinese Red Cross Society today sent a telegram to the Italian Red Cross Society expressing sympathy and solicitude for the Italian earthquake victims. The telegram said, "We are shocked to learn that a strong earthquake had hit the southern part of your country. The Chinese Red Cross Society expresses deep solicitude and heartfelt sympathy to your society and through you to all victims of the afflicted areas. We hope the afflicted people will quickly overcome difficulties, rebuild their homeland soon and return to normal life." [Text] [OW261718 Beijing XINHUA in English 1652 GMT 26 Nov 80]

ROMANIAN 5-YEAR PLAN--Bucharest, November 27 (XINHUA)--Industrial output quotas for the current five-year plan (1976-1980) have been fulfilled ahead of schedule by November 26 in 33 out of 39 Romanian counties and in Bucharest. Bucharest, which ranks first in industrial production among the 39 counties and one city, fulfilled its five-year plan on September 19, 103 days ahead of schedule, and its above-plan output for the year is valued at 40,000 million lei. Brasov County, which stands next to Bucharest in industrial output, fulfilled the five-year plan early this month. Its output for the rest of the year is estimated at 15,000 million lei. Ninety per cent of the increase in production was achieved through higher labour efficiency. Over 3,000 tons of metals, 40,000 tons of standard fuels, 3,000 tons of petroleum and diesel oil and 20 million cubic metres of natural gas have been saved this year. Galati County, which comes first in steel

PAINTINGS EXHIBITION IN MALTA--Valletta, 20 Nov (XINHUA)--A 15-day exhibition of 29 traditional Chinese paintings closed here today. Visitors showed deep interest in the Chinese art with an expression and technique all its own. The paintings are by such noted painters as Chi Baishi, Xu Beihong, Huang Zhou and He Xiangning. They were a gift from the Chinese People's Association for Friendship With Foreign Countries for the Malta-China Friendship Society. They were all sold to the viewers. Among those present at the opening ceremony were Calcidon Agius, speaker of the House of Representatives, and Agatha Barbara, minister of labour, culture and welfare. [Text] [Beijing XINHUA in English 1656 GMT 20 Nov 80 OW]

'CHINA WEEK' IN AUSTRIA--Vienna, 22 Nov (XINHUA)--A "China Week" of seven exhibitions on China's paper-cut, pottery and porcelain carvings, children's paintings, spring festival pictures and ink and wash in Austria's northern city of Linz closed today. The history of the relations between Austria and China which dated back 400 years was represented in photographs, relics and documents on display. China music evenings and report meetings on China's culture were also held. Despite the end of the week, the exhibitions will remain open till 7 December and more report meetings will be held. The "China Week" was the 21st of such "week" introducing foreign culture held in Linz annually and the first on the culture of a non-European country. [Text] [Beijing XINHUA in English 1640 GMT 22 Nov 80 OW]

FRG UNIONISTS' DELEGATION--Beijing, 20 Nov (XINHUA)--A delegation from the metal workers' union of the Federal Republic of Germany met here today with Ni Zhifu, president of the All-China Federation of Trade Unions. The visiting group is led by the union's first president Eugen Loderer. Ni Zhifu briefed the guests on China's reform of its political and economic institutions and work by the trade unions of China. Both sides hoped that the friendly relations between workers of the two countries and their trade unions would continue to develop. The West German guests arrived here on 17 November at the invitation of the All-China Federation of Trade Unions. Since their arrival they have met with the Chinese minister of the Metallurgical Industry, Tang Ke. They will leave here shortly on a visit to southern China. [Text] [Beijing XINHUA in English 1901 GMT 20 Nov 80 OW]

SWEDISH ACADEMIC EXCHANGE AGREEMENT--Beijing, 24 Nov (XINHUA)--The Chinese Academy of Social Sciences and the Stockholm University of Sweden signed an agreement on academic exchanges here today. Hu Qiaomu, president of the academy and Staffan Helmfrid, president of the Stockholm University, signed the agreement. Hu Qiaomu said, "we have just accomplished something of great significance. It will lay a good foundation for the cooperation between scientists of China and Sweden for many years to come." Mr Staffan Helmfrid, who led the Stockholm University delegation to China, said "our university is the first one in Sweden to sign an academic exchange agreement with the Chinese Academy of Social Sciences. The agreement will promote cooperation and exchanges between the scientists of the two countries." In the evening Zhang Youyu, vice-president of the academy gave a banquet in honor of the Swedish guests. Swedish ambassador to China Sten Sundfeldt attended the signing ceremony and the banquet. The delegation arrived here on 22 November. [Text] [Beijing XINHUA in English 1623 GMT 24 Nov 80 OW]

GREEK DEFENSE SPENDING--Athens, November 27 (XINHUA)--Greece will spend 1.9 billion U.S. dollars in defence next year, up 16.7 per cent from 1980, Greek Finance Minister Miltiades Evert said in parliament last night. Submitting the 1981 state budget to parliament for ratification, he said, the defence expenditure will account for 22 per cent of total 10.1 billion U.S. dollars in the new budget. The government will spend more money in education and social welfare. The Greek parliament will debate the budget December 19-22. [Text] [OW271604 Beijing XINHUA in English 1516 GMT 27 Nov 80]

U.S.-NIGERIAN ECONOMIC TIES--Lagos, December 3 (XINHUA)--A science and technology cooperation agreement has been signed and a pact on environmental protection is under negotiation between Nigeria and the United States, according to a broadcast of the Federal Radio Corporation of Nigeria this afternoon. Minister of State in the Foreign Ministry Patrick Bolokor told the Nigerian-American Chamber of Commerce that the two countries had begun negotiations on a draft bilateral trade agreement, the radio reports. During the negotiations, the United States recognized Nigeria's main objective to diversify its economy and consequently its foreign trade. According to the minister, crude oil accounts for about 90 per cent of Nigeria's exports to the United States while imports from the U.S. consist mainly of consumer goods. [Text] [OW040248 Beijing XINHUA in English 0234 GMT 4 Dec 80]

U.S. PRESENCE IN MIDEAST--Aden, November 30 (XINHUA)--'Ali Nasir, Muhammad al-Hasani, president of the Presidium of the Supreme People's Council and prime minister of Democratic Yemen, yesterday evening called on the working people to strengthen supervision and management in economic affairs and oppose extravagance and waste. In a nationwide address over radio and television to mark the 13th anniversary of independence, Al-Hasani said that there in the country had been slackness in work, negligence of duty and bribery. "Severe penalty must be imposed on those sabotaging the economy," he stressed. Speaking of the international situation, Al-Hasani condemned the United States for its military presence in the Gulf, the Indian Ocean and the Horn of Africa; he praised the "socialist countries headed by the Soviet Union" for their "disinterested assistance" rendered to Democratic Yemen. Foundation stone laying and inauguration ceremonies for some projects were held in the country today to mark the occasion. [Text] [OW010811 Beijing XINHUA in English 0730 GMT 1 Dec 80]

SOVIET POLISH INVASION--London, December 3 (XINHUA)--The European Economic Community would take political and economic measures against the Soviet Union if it invaded Poland, British Prime Minister Mrs. Thatcher warned today. The invasion would also mean the end of detente and the scrapping of the Madrid summit conference on European security, she told the House of Commons when reporting on results of the latest European Economic Community summit. The prime minister received warm support on the issue from the opposition Labour Party leader Michael Foot, who said that any attempt to interfere with the rights of the people of Poland "would be a tragedy and a crime against the whole world. Nobody would be in any doubt about the serious consequences if those rights were to be breached." In a separate report to a parliamentary foreign affairs committee, foreign secretary Lord Carrington said that Soviet intervention in Poland would be "much more serious" than previous action in Afghanistan or in Czechoslovakia in 1968, and it could result in economic sanctions by the West, the collapse of the Madrid conference and the end of all talks on disarmament. [Text] [OW040832 Beijing XINHUA in English 0709 GMT 4 Dec 80]

NATO-TURKISH TALKS--Ankara, December 3 (XINHUA)--Chairman of NATO military committee Admiral Robert Falls had talks here yesterday with Turkish head of state General Kenan Evren on Turkey-NATO relations in the military field. Falls arrived here on December 1 for an official visit and left for Brussels this morning. The Turkish daily HURRIYET reports today that Falls and Evren had discussed the current situation in the Middle East, such as the continuation of the Iran-Iraq war and the new tension on the Syrian-Jordanian borders following the massing of troops. They also, the report adds, examined the recent warning by a Soviet leader that any aggression against Syria would be resisted by Soviet forces and exchanged views on taking actions from the angle that development outside the NATC duties should not be looked upon with folded arms. [Text] [OW040256 Beijing XINHUA in English 0232 GMT 4 Dec 80]

SOVIETS CRITICIZED--Paris, December 3 (XINHUA)--"The Soviet invasion of Afghanistan, and subversive activities in Africa along with the stationing there of some 40,000 troops from Eastern Europe and Cuba have gravely damaged detente," said Jean Lecanuet, president of the French Foreign Affairs Commission of the Senate yesterday during the Senate's discussion of the defence budget. He stressed that "the Soviet Union has no hesitation in carrying out activities of intimidation in Europe just as she launched a campaign of intimidation against the plan of developing the neutron bomb and the deployment of the new American missiles." He also listed a lot of facts to show that detente is only a strategic technique for the Soviet Union. "The detente can only be established on the basis of equal forces." But, the equal military forces have been compromised by the military development of the Soviet Union, he noted. "With the transformation of the navy and the potential of its long-distance air transport, the Soviet Union will probably push its presence and intimidation in all regions of the world," he pointed out. He is of the opinion that detente needs a situation of equilibrium, adding "the gravity of the international situation does not allow for any impasse in the defence field." [Text] [OW031722 Beijing XINHUA in English 1652 GMT 3 Dec 80]

AUSTRALIA ON POLAND--Canberra, December 4 (XINHUA)--The Soviet ambassador to Australia Sudarikov was summoned to the Australian Foreign Affairs Department last night and told of Australia's concern about the rising tension in Poland, THE AGE reported today. Australian officials told Sudarikov that Australia did not consider the Soviet Union had an automatic right to intervene in any country whether it was in its "sphere of influence" or not. The officials said that the Polish Government should be allowed to solve its own problems in its own way. [Text] [OW040836 Beijing XINHUA in English 0726 GMT 4 Dec 80]

YUGOSLAVIAN-HUNGARIAN OFFICIALS MEET--Belgrade, December 3 (XINHUA)--President of the Federal Executive Council Veselin Djuranovic and member of the presidency of the Socialist Federal Republic of Yugoslavia Petar Stambolic met Hungarian Foreign Minister Puja Frigyes today. During the talks the two sides expressed satisfaction with the development of relations between the two countries and decided to further strengthen cooperation in various fields, especially in economics. The two sides exchanged views on current international issues. The Hungarian minister arrived here yesterday for a two day visit. [Text] [OW040210 Beijing XINHUA in English 0204 GMT 4 Dec 80]

ECONOMIC MEETING WITH JAPAN--Beijing Dec 4 KYODO--Yao Yilin, vice premier in charge of the State Economic Planning Commission, said Thursday that China's economic adjustment measures may be carried out until 1983, two years longer than expected. Yao, in his meeting with Toshio Komoto, director general of the Japanese Economic Planning Agency, said that he doubts a proportional development of the agricultural, light and heavy industries would progress sufficiently by 1981 as he hoped. [Text] [OW041212 Tokyo KYODO in English 0738 GMT 4 Dec 80]

SIBERIAN DEVELOPMENT--Tokyo, December 2 (XINHUA)--Japan and the Soviet Union have failed to reach agreement in their recent talks on terms of an additional Japanese loan to the Soviet Union for the development of forest resources in Siberia and coking coal in South Yakutia, TOKYO SHIMBUN reports today. The two sides differed in the annual interest rates of the loan in the 8-day talks which started here on November 20. Soviet representative had already left for home. Talks on the Japan-USSR cooperation for the development of Siberia had been suspended after Japan joined the United States in imposing economic sanctions on the Soviet Union because of its invasion of Afghanistan. However, Japan excluded the above mentioned two projects from the sanctions not long ago and the talks resumed. It was said that the talks would continue after U.S. president-elect Ronald Reagan formally takes office next January. [Text] [OW020838 Beijing XINHUA in English 0706 GMT 2 Dec 80]

KAMPUCHEAN GUERRILLAS ATTACK--Beijing, November 30 (XINHUA)--Kampuchean guerrillas wiped out many Vietnamese aggressors in a series of attacks over the past week in different parts of Koh Kong Province, southwest Kampuchea, Radio Democratic Kampuchea reported today. On November 21 and 22, the guerrillas killed 15 Vietnamese soldiers and wounded 17 others in a number of clashes in the Pras Delta and outer Koh Kong. On November 23, the guerrillas killed 21 and wounded 14 Vietnamese aggressors in Chiphat and Chikha villages. On the same day, guerrilla forces mounted simultaneous attacks on the Vietnamese aggressors stationed in Dei Kraham and O Tach along the Me Tuk River, wiping out 35 Vietnamese troops, injuring 15 others and destroying five barracks. The next day, Kampuchean guerrillas ambushed a Vietnamese contingent manoevring at the foot of the Kot Russei Mountain. Nine Vietnamese soldiers were killed and another 14 wounded during the encounter. Later more Vietnamese soldiers were killed when they touched off mines in flight. On the same day, guerrillas in Thma Sar District ambushed a group of Vietnamese troops on a road and killed 23 Vietnamese aggressors on the spot. On November 26, guerrillas in the Peat Mountain in southern Koh Kong Province intercepted a company of Vietnamese troops, killing 17 of them, wounding 23 others and capturing a quantity of arms and ammunition. [Text] [OW300854 Beijing XINHUA in English 0808 GMT 30 Nov 80]

KAMPUCHEANS ATTACK VIETNAMESE--Beijing, November 29 (XINHUA)--Guerrilla units of Democratic Kampuchea attacked Vietnamese troops guarding an oil refinery and a brewery in the city of Kompong Som on November 23, killing 13 of them, wounding 18 others and destroying three fortifications, Radio Democratic Kampuchea reported. The guerrillas killed or injured 52 more Vietnamese troops and destroyed nine wagons when they attacked Kompong Som's railway station the following day. Kompong Som, the country's sole modern deep-water port city 230 kilometres southwest of Phnom Penh, is capable of berthing 40,000-ton freighters. It is connected with Phnom Penh by railway and highway number 4. The radio said that the Democratic Kampuchean National Army and guerrillas wiped out more than one hundred Vietnamese troops during their attacks on Vietnamese strongholds around the district town of Samlot and Chambak in Battambang Province from November 23 to 25 [Text] [OW290957 Beijing XINHUA in English 0720 GMT 29 Nov 80]

POLISH SITUATION VIEWED--Canberra, December 1 (XINHUA)--"While representatives of all the governments of Europe, Canada and the United States sit around a table in Madrid and discuss whether detente is still alive, the Russians are indicating that if it's not dead, then at the very least, it is dying," said an article carried by THE HERALD of Melbourne today. Author of the article Michael Gawenda wrote from London, "NATO security chiefs have reported unusual army manoeuvres by Soviet troops stationed on Poland's border with East Germany." "The Russian newspaper PRAVDA published a map which showed how the Soviet Union's railway links with East Germany and Czechoslovakia run through Poland," the article went on, adding that "under the map, the newspaper warned that any stoppage of the Polish railways would be 'a direct security threat to the Soviet Union.'" "These are ominous signs for the Polish people and indeed the whole world," it said. The article pointed out that "a nation whose resistance movement fought against the Nazis like no other resistance movement will almost certainly fight if the Russian tanks do roll in." "It is probably this knowledge which has stayed the hands of the potential invaders until now," it added. [Text] [OW011518 Beijing XINHUA in English 1506 GMT 1 Dec 80]

PHILIPPINES, NEW ZEALAND VENTURE--Manila, December 2 (XINHUA)--A Philippine-New Zealand joint venture was formed yesterday to provide engineering, technical and related scientific services in the development of Philippine geothermal resources. The formation of the firm, the Geothermal Technology Corporation of the Philippine National Oil Company (PNOC), was announced by President Marcos and New Zealand Prime Minister Robert Muldoon who is now in the Philippines. The corporation will be owned 70 per cent by the PNOC and 30 per cent by a New Zealand firm (Kington Reynolds Thom Allardice) which is currently developing New Zealand geothermal resources through an aid program provided by the government. New Zealand is reportedly among the world's most advanced in geothermal power production and the leading authority in geothermal exploration and development, while the Philippines is attaching much importance to develop its geothermal energy to cope with its needs. Muldoon arrived here last Sunday to preside over a special committee created by the International Monetary Fund to discuss the issue of Palestinian Liberation Organisation representation in the body. [Text] [OW020850 Beijing XINHUA in English 0702 GMT 2 Dec 80]

KAMPUCHEAN 'PATRIOTS' TRIED--Beijing, December 1 (XINHUA)--The Vietnamese-installed regime in Phnom Penh has recently brought on trial a group of Kampuchean patriots who oppose Vietnam and the Heng Samrin regime, according to a report from Phnom Penh. The report said that "14 Khmers were sentenced to prison terms of between two and 20 years." They were leaders and members of the "nationalist organization" which maintain close contacts with Democratic Kampuchea and other anti-Vietnamese forces and have been working for the "downfall of the Heng Samrin regime" since the Vietnamese occupation of Phnom Penh. [Text] [OW011557 Beijing XINHUA in English 1533 GMT 1 Dec 80]

INDOCHINESE REFUGEES--Beijing, December 1 (XINHUA)--A United Nations high commissioner for refugees spokesman said recently that about 9,000 Indochinese refugees arrived in Southeast Asian countries in November, according to an AP report. Among the refugees, 6,000 were Vietnamese boat people and the rest Laotians who waded across the Mekong River. [Text] [OW011236 Beijing XINHUA in English 1224 GMT 1 Dec 80]

SOVIET THREAT--Tokyo, November 30 (XINHUA)--To cope with the threat from the Soviet Union, particularly its rapid military build-up is a common problem for Japan and Western countries which calls for a close alliance of Japan, the United States and Europe. This was contained in a major report at a seminar sponsored mainly by the Japanese Democratic Socialist Party recently. The report under the title, "The Promotion of a Peace Strategy and the Guarantee of Security of Japan" said to this end Japan was particularly in need of cooperation with other countries in the political and economic fields. It said Japan-USSR relations could be improved, but Japan should be consistent in her stand on pending issues including the territory issue. It added that for the sake of stability in East Asia, Japan should cooperate with China in its efforts to modernize its economy. The report called for a new Japanese defence program, arguing that the present program is based on the theory of "non-existence of threats." It said for a comprehensive security for Japan, measures should be taken to ensure the security of sea lanes in addition to the protection of Japan proper. [Text] [OW300904 Beijing XINHUA in English 0804 GMT 30 Nov 80]

LATIN AMERICAN ENERGY MINISTERS--Bogota, November 29 (XINHUA)--Energy ministers of Latin-American countries have decided to work out a plan on cooperation in technology and finance in a bid to rally themselves to solve the energy problem in the region. The decision was made at the 11th meeting of the energy ministers held here on November 28 and 29. The meeting was sponsored by the Latin-American Energy Organization (OLADE) and attended by energy, mining or oil ministers from 20 countries, or by their representatives.

The participating ministers believed that the meeting of interests of oil-producing and oil-consuming countries in Latin America would not only enable the region to offset the pressure from world market in terms of price and supply but also consolidate the sovereign right of the region over its energy which is of strategic significance in the economic field. The representatives also demanded that the Latin-American Energy Organization become an advisory body in the field of energy for the Latin American group in the U.N. The meeting expressed its support for Ecuador and Costa Rica in their measures to protect their natural resources and condemned the U.S. for the suspension of tuna import from the two countries. During the meeting, the Latin-American Energy Organization signed agreements on the use of terrestrial heat and the construction of small hydropower stations separately with Colombia, Honduras and Cuba. [Text] [OW301303 Beijing XINHUA in English 1245 GMT 30 Nov 80]

OAS GENERAL ASSEMBLY--Beijing, November 28 (XINHUA)--The tenth general assembly meeting of the Organization of American States closed in Washington yesterday, according to a Washington report. The meeting, which opened on November 19, was reported to have extended more than ten hours owing to a heated dispute over human rights between the U.S. and other countries. At a discussion of the political and juridical committee under the general assembly, the delegates of Argentina, Uruguay and other countries voiced strong objection to a resolution on human rights in Latin America based on a report by the Inter-American Commission on human rights. The United States insisted that Argentina be condemned by name in the resolution for its "violation of human rights." Argentina threatened to withdraw from the OAS if it is mentioned by name in the resolution. To break the stalemate, Venezuela put forward a conciliatory draft resolution specifying no member states on the problem of human rights. The resolution, based on the Venezuelan draft, was passed yesterday after arduous consultations. [Text] [OW281238 Beijing XINHUA in English 1209 GMT 28 Nov 80]

CHINESE ATTEND CYCLING MEETING--Geneva, November 28 (XINHUA)--The representatives of the Chinese Cycling Association based in Beijing and the Chinese Taipei Cycling Association attended the general assembly of the International Cyclists' Union (ICU) held here today. The Chinese Cycling Association was represented by its secretary-general, Wei Jizhong, while two of his compatriots from Taiwan attended today's meeting in the name of the "Chinese Taipei Cycling Association." During intervals of the meeting, Wei Jizhong had a friendly conversation with the two representatives of the Chinese Taipei Cycling Association. The ICU is composed of two international cycling organizations--the International Amateur Cycling Federation (IACF) and the International Professional Cycling Federation. Both the Chinese Cycling Association and the Chinese Taipei Cycling Association are members of the IACF. At a general assembly held in Maastricht, the Netherlands, in August last year, the IACF adopted a resolution on the restoration of the legitimate rights of the Chinese Cycling Association. According to this resolution, the cycling association based in Taipei can participate in the IACF under the name of the "Chinese Taipei Cycling Association." Today's ICU General Assembly, represented by 49 member associations, discussed the working report of the union's secretary-general, financial affairs and the agenda for next year's competitions. It also revised the ICU constitution and the rules of the world cycling championships. [Text] [OW290342 Beijing XINHUA in English 0259 GMT 29 Nov 80]

MAYOTTE SOVEREIGNTY--United Nations, November 28 (XINHUA)--The U.N. General Assembly passed a resolution this morning reaffirming the sovereignty of the Comoros over the island of Mayotte and urging the French and Comorian governments to continue their efforts to seek a just solution. The resolution was adopted by a recorded vote of 100 to 1. France voted against it. Addressing the general assembly this morning, Ali Mroudjae, minister for foreign affairs and co-operation of the Comoros, said that the state of the Comoros which had been admitted to the United Nations was comprised of four islands: Anjouan, Grande-Comore, Mayotte and Moheli. The unity of these islands had never before been questioned and had been recognized by the highest French authorities, he added. France opposed the resolution on the ground that the people of Mayotte had refused to be part of the Republic of the Comoros and decided to remain in the French Republic. But its representative said that France would continue to be prepared to seek grounds for understanding with the Comoros. [Text] [OW291004 Beijing XINHUA in English 0717 GMT 29 Nov 80]

THAI HEALTH DELEGATION HONORED--Beijing, November 29 (XINHUA)--Qian Xinzhong, Chinese minister of public health, gave a banquet here this evening in honour of a Thai public health delegation headed by Thongyot Chittawira, minister of public health. The delegation arrived here this morning on a friendly visit at the invitation of the Chinese Ministry of Public Health. Proposing toasts at the banquet, Qian Xinzhong and Thongyot warmly praised the traditional friendship between the Chinese and Thai peoples. They expressed the desire for growing contacts and cooperation between the two countries in the medical and public health fields. Present at the banquet were Yang Shoushan, Chinese vice-minister of public health, and Sakon Wannaphrik, Thai ambassador to China. [Text] [OW291532 Beijing XINHUA in English 1519 GMT 29 Nov 80]

SENEGAL DENOUNCES USSR--Rabat, November 28 (XINHUA)--West African countries need mutual military assistance to deal with external subversion, said Senegalese President Leopold-Sedar Senghor in an interview with AL-MAGHRIB. In the interview published by the journal today, he said: "If any member of the economic community of West Africa asks for military assistance from us, we shall provide the assistance if we deem it necessary." President Senghor denounced the military presence of the Soviet Union and its partners as threatening the security of African countries. He said: "70,000 Cuban, East German and Soviet troops are stationed in Africa today." "France can play an important role in maintaining security of African countries. In fact, France has played such a role," he added. [Text] [OW281608 Beijing XINHUA in English 1523 GMT 28 Nov 80]

U.S. AID TO LIBERIA--Monrovia, November 30 (XINHUA)--The U.S. Government is to give more aid to Liberia which is facing serious financial difficulties, said visiting U.S. assistant secretary of state for African affairs Richard Moose here today. Moose was on a 24-hour visit to the country, his fourth since the April 12 coup. Liberian head of state Samuel K. Doe cancelled his visit to Libya due today, in order to meet the U.S. assistant secretary. Moose told the newsmen at the airport when he arrived that although the discussions between him and the Liberian leader would involve a lot of things, there would be some more American money coming to Liberia. He disclosed that the American banks were also involved in a move to help stabilize the Liberian economy. [Text] [OW010138 Beijing XINHUA in English 0132 GMT 1 Dec 80]

SALVADORANS KIDNAPPED--Beijing, November 27 (XINHUA)--Enrique Alvarez, general secretary of the Democratic Revolutionary Front and some other leaders of anti-government organizations were kidnapped today by an armed band of about 200, according to a report from San Salvador. Witnesses said that at about 11 o'clock this morning, the gunmen, arriving in several vehicles, surrounded the San Jose High School in the capital where Enrique Alvarez and other opposition leaders were having a meeting. They dragged away some of the leaders and threw them into a vehicle. The kidnappers were in army uniforms or plainclothes and looked like "members of the security forces," the witnesses said. Also taken away were Juan Chacon, general secretary of the Popular Revolutionary Bloc, Leoncio Pichinte, secretary general of the February 28 Popular League, Manuel Franco, leader of the National Democratic Union and Humberto Mendoza of the Popular Revolutionary Movement. Some said that the kidnappers were from some rightest organizations while others believed that they acted under government orders. But Minister of Defense Jose Guillermo Garcia denied the charge. Meanwhile, it is reported that government troops are continuing to mop out anti-government guerrillas. An official announcement said more than 300 guerrillas have accepted an amnesty and surrendered to the government. [Text] [OW281524 Beijing XINHUA in English 1505 GMT 28 Nov 80]

SOMALIA CONDEMNS ETHIOPIA--Mogadishu, November 28 (XINHUA)--The Somali Defense Ministry said yesterday in a communique that four Ethiopian war-planes raided the Adado District of Galgudud region of Somalia at 10:45 in the morning, resulting in 31 persons killed, 39 injured, and houses and other properties destroyed. According to another communique issued by the ministry, Ethiopian war-planes on November 25 raided the town of Galkayo, the capital of Mudug Region. The raid also carried out by four Ethiopian aircraft caused damages to civilian dwellings and property, the communique said. The communique noted that air defense units of the Somali National Army have courageously countered the air raid. [Text] [OW281532 Beijing XINHUA in English 1509 GMT 28 Nov 80]

ANGOLA-CONGO COMMUNIQUE--Brazzaville, November 28 (XINHUA)--An Angolan delegation led by Lucio Lara, member of the Political Bureau of MPLA-Party of Labour, visited the Congo on November 26 and 27 and had talks with high-ranking Congolese officials on defence and security of the two countries. A final communique on the talks issued by Agence Congolaise d'Information today says that the two sides thoroughly examined the questions concerning defence and security and pledged to continue their cooperation in these fields. The two sides expressed support for the U.N. resolution on the immediate independence of Namibia and reiterated "their indefectible solidarity with the South West Africa People's Organization, the sole legitimate representative of the Namibian people." The two sides also reaffirmed their support for the South African people in their struggle against the apartheid system. The communique adds that the two sides "expressed deep concern over the armed conflict between Iran and Iraq and hoped that the two brother countries will quickly meet with each other to solve the conflict through negotiation." Lucio Lara was twice received by Congolese President Sassou-Nguesso during his stay here. [Text] [OW281704 Beijing XINHUA in English 1633 GMT 28 Nov 80]

EL SALVADOR OPPOSITION LEADERS KILLED--Beijing, November 28 (XINHUA)--Six leaders of the Salvadoran Revolutionary Democratic Front (FDR) abducted yesterday morning were found shot dead last night in a suburb of San Salvador, police said today, according to a report from San Salvador, capital of the country. Among the killed were Juan Chacon, secretaty-general of the People's Revolutionary Bloc and Humberto Mendoza, a leading member of the Popular Liberation Movement. A so-called "anti-communist brigade General Maxiliano Hernandez Martinez" issued a communique saying that the six persons were executed by the organization. NORTHERN ISALNDS RESOLUTION--Tokyo, November 28 (XINHUA)--The House of Representatives of Japan's Diet this afternoon passed a "resolution on promoting the settlement of the northern territories issue." The House of Councillors had passed the resolution earlier. The resolution said that an early return of the northern territoties is the desire and demand of the whole Japanese nation. The government has begun organizing various activities for promoting the return of the northern territories. The government has repeatedly demanded that the Soviet Government dismantle the military installations on the northern territories. The resolution noted that to seek an early return of the northern territories, a peace treaty between Japan and the Soviet Union should be concluded, so that stable and peaceful relations can be established between the two countries. [Text] [OW281646 Beijing XINHUA in English 1636 GMT 28 Nov 80]

CEAUSESCU ON PALESTINE--Bucharest, November 29 (XINHUA)--Romanian President Nicolae Ceausescu proposed that an international conference on Palestine be convened to create new conditions and new bases for talks on the Middle East. The Romanian leader said in a cable to Ruediger von Wechmar, president of the 35th U.N. General Assembly and Kurt Waldheim, secretary-general of the United Nations, on the occasion of the international day of solidarity with the Palestinian people that the proposed conference would be presided over by the United Nations and attended by all sides involved in the conflict including the Palestine Liberation Organization (PLO), the legitimate representative of the Palestinian people as well as some other countries which could make positive contribution to the peaceful settlement of the Middle East problem. He reiterated his country and people's firm support to the just struggle of the Palestinian people for the establishment of their state and for their legitimate rights to develop freely and independently. The president added Romania would do its best to help achieve a just and lasting solution of the Middle East problem, all-round peace in this region and the materialization of the legitimate rights of the Palestinian people. [Text] [OW291524 Beijing XINHUA in English 1515 GMT 29 Nov 80]

POLISH UPRISING ANNIVERSARY--Warsaw, November 29 (XINHUA)--Commemorations were held here and in the rest of the country to mark the 150th anniversary of the November 1830 uprising today. Many Warsaw citizens and members of social organizations flocked in snow to the downtown victory square and laid flowers before the tomb of the unknown soldier. A guard of honour formed by Polish servicemen in historical army uniforms saluted those who had sacrificed their lives in the uprising. The uprising which took place in November, 1830 was a mass armed uprising of the Poles against the rule of the Russian tsar and for national freedom and independence. Defeated after a year of hard struggle, it has great significance in Polish history and was commemorated every year. Polish historians held a special seminar this year for the occasion and an exhibition was held by the Warsaw Historical Museum and the Polish Army Museum where large numbers of relics and pictures including thousands of relics collected by a historian throughout his life were on display. Plays on the uprising were performed in theatres, commemorative stamps issued, commentaries and reports concerning the event released by the press, and the broadcasting and T.V. stations. Similar commemorative activities were reported to have taken place in different parts of the country. [Text] [OW301312 Beijing XINHUA in English 1205 GMT 30 Nov 80]

POLISH STUDENTS END STRIKE--Warsaw, November 29 (XINHUA)--Warsaw University students ended their strike and the occupation of a university building last night. Some 220 members of the Independent Student Association of the university announced a strike and occupied a building on the morning of November 27. The strikers demanded the release of two Lublin University students who had been arrested because of their anti-Soviet speech, revision of the organic law for students and the release of political prisoners. Janusz Gorski, Polish minister of science, higher education and technology, held talks with the striking students yesterday afternoon. The two sides signed a new organic law. A spokesman of the Independent Student Association told a press conference today: "We have decided to respond to the call of Lech Walesa, chairman of the Consultative Committee of the "Solidarity" Trade Union, and called off the strike in view of the critical domestic situation despite the fact that we have not achieved the aim of our strike." [Text] [OW301255 Beijing XINHUA in English 1218 GMT 30 Nov 80]

POLISH SABOTAGE WARNING--Warsaw, November 30 (XINHUA)--The "Solidarity" Trade Union in Mazowsze in a statement yesterday called on its regional branches to launch a level-headed and firm boycott against any attempt to sabotage the normal operation of the trade unions and plants. According to a PAP report, installations in the Polish-Fiat car factory in Warsaw were sabotaged at mid-night yesterday. Six electronic consoles were damaged, stopping work for about six hours on an automatic assembly line. The statement stressed the need to maintain stability and keep work in order so as to recover the economy. The statement also urged vigilance against rumour-mongering and called for unmasking the adventurists under the cloaks of "solidarity" trade unionists. [Text] [OW301516 Beijing XINHUA in English 1510 GMT 30 Nov 80]

POLISH DOMESTIC, WORLD AFFAIRS--Warsaw, November 30 (XINHUA)--Polish Independent Trade Union leader Lech Walesa told workers today that strike is the last means, and it is not proper to use this means at present. The president of the National Consultative Committee of the Independent and Self-governing "Solidarity" Trade Unions was speaking to representatives from factories of Konin Province, central Poland. He said that under the circumstances of deepening domestic crises and tense international relations, "everyone of us is first of all a Pole, and then a member of the 'solidarity' trade union." He said that Poland badly needs a "national concord" today, "so let us join our efforts to strive for a beautiful future." "We must work for the interests of the labouring people and for justice and reformation, but we must constantly serve the interests of the country," he added. The union leader has stressed time and again in his addresses to workers in Gdansk and Warsaw the seriousness of the current domestic and international situation. He said that they are facing "a threat of tanks and rockets," and they may "lose everything" if they are not careful. He called on the workers "not to forget Poland's national interests." [Text] [OW010854 Beijing XINHUA in English 0711 GMT 1 Dec 80]

UK ECONOMIC POLICIES--London, November 29 (XINHUA)--An estimated 50,000 people demonstrated today in the port city of Liverpool, northwest England, against the government's economic policies and, in particular, the high level of unemployment. The demonstration was organized by the opposition Labour Party, which has recently intensified its attack on the conservative government both in parliament and in the labour movement. Unemployment has become one of the government's biggest problems. According to official figures, the total number of people out of work now is over 2.16 million, or 8.9 per cent of the work force, the highest since the depression years of the 1930s. Among adults, the seasonally adjusted rate of unemployment is up to 8.4 per cent, compared with only 5.3 per cent a year ago. [Text] [OW300930 Beijing XINHUA in English 0705 GMT 30 Nov 80]

CZECHOSLOVAKIAN PREMIER IN ROMANIA--Bucharest, November 22 (XINHUA)--Lubomir Strougal, premier of Czechoslovakia, paid a friendly and working visit to Romania on November 21 and 22, according to the Romanian press agency. Nicolae Ceausescu, general secretary of the Romanian Communist Party and president of Romania, met Strougal today. A joint communique, made public at the end of Strougal's visit, pointed out that Strougal and Romanian Prime Minister Ilie Verdet in their talks discussed bilateral relations and exchanged views on the international issues. The joint communique said that the total value of exchange of goods between the two countries in the next five years (1981-1985) is expected to increase by 63 per cent over the present five-year period (1976-1980). The two sides will increase cooperation in machine building, electrical engineering, electronics, chemical industry, consumer goods and agriculture. [Text] [OW230008 Beijing XINHUA in English 0757 GMT 23 Nov 80]

POLISH AGRICULTURAL PROBLEMS--Warsaw, November 21 (XINHUA)--A two-day Polish parliamentary session ended today with Poland's critical agricultural situation as the main topic. Opening the discussion on the food situation, Polish Agricultural Minister Leon Klonica said the Polish farmers would receive higher prices for meat and milk as an incentive to increase production. However he reaffirmed that meat rationing will soon be implemented. He also announced increases in the prices to be paid to farmers for produce. The agricultural minister stressed the gravity of this year's food situation. The grain harvest was 3.2 million tonnes below target, the potato crop 18 million tonnes below and sugar beets, 6.6 million tonnes below. On the first day of the session, Polish Deputy Prime Minister Mieczyslaw Jagielski reported to the parliament on the status of the implementation of the agreements signed with workers in the wake of the strike. He said that while "progress has been observed in the rapprochements between the aspirations of the party and governmental authorities and those of the working people ... we shall also wage a political struggle against those forces which base themselves on negation and strive to weaken the foundations of our national existence." Polish Prime Minister Josef Pinkowski made a report at the session today on domestic political and economic situation and proposed a reshuffling of the government. [Text] [OW221306 Beijing XINHUA in English 1249 GMT 22 Nov 80]

POLAND NAMES CATHOLIC OFFICIAL--Warsaw, November 21 (XINHUA)--Poland's parliament named Jerzy Ozdowski, a 55-year-old economics professor, as a deputy premier today. He was appointed deputy premier with responsibility for family and social affairs and becomes the first Roman Catholic to hold such a high government position in the People's Republic of Poland. The parliament approved the removal of four ministers. Jerzy Brzostek, deputy mayor of Warsaw, was named as construction minister. Deputy labor minister Janusz Obodowski was elevated to minister while Stanislaw Ciosek was approved as minister without portfolio in charge of labor relations. The health minister's post was left vacant. Vice minister of health Tadeusz Szelachowski was named acting chief of the ministry. [Text] [OW221557 Beijing XINHUA in English 1518 GMT 22 Nov 80]

EUROPEAN, SUPERPOWERS FUTURE--Brussels, November 22 (XINHUA)--Western Europe "should and is able to have a say about their own destiny" and the situation "is not condemned to evolving solely in the direction carved out by the Soviet Union" said Professor Thierry de Montbrial, director of the "French Institute of International Relations," here recently. In a speech to a meeting of the "Royal Institute of International Relations of Brussels" held under the title "The Future of Europe and the Superpowers," the French professor pointed out that Europeans should fulfil their obligations in defense and the neutralist tendencies which have cropped up in recent years, notably over the deployment of theatre nuclear force, should be corrected. There should be less "verbalism," but more independent actions for the Europeans in external relations, he noted. He also said that the Europeans should not limit themselves to voicing comments and views on events, they should play a greater role in the economic, historical and cultural fields. [Text] [OW221902 Beijing XINHUA in English 1845 GMT 22 Nov 80]

ITALIAN ESPIONAGE CASE--Rome, November 23 (XINHUA)--An espionage case of selling blueprints of an advanced military radar to the East was recently uncovered in Italy, according to press reports here today. When two members of an espionage organization, mainly composed of technicians of the

"Selenia" Corporation, a military electronics industrial company of Italy, handed over the blueprints to a buyer at a hotel here, they were caught in the act by Italian military security personnel. Other criminals were also arrested. [Text] [OW231542 Beijing XINHUA in English 1519 GMT 23 Nov 80]

MILITARY EXERCISES--Canberra, November 22 (XINHUA)--A series of joint military exercises by Australia, Malaysia, New Zealand, Singapore and the United Kingdom, including a land force mock warfare in Australia in mid-1981, has been proposed, according to a spokesman of the Australian Defence Department. The proposals were worked out by service planners from the five countries at a 3-day meeting ending here yesterday. The meeting was called in accordance with an agreement among the five countries on multinational war games. The recommendations included those for joint air exercises in the Malaysian-Singaporean area, and a joint maritime exercise in the waters of the same area in mid-1981 when planned ship visits to these two countries are made. [Text] [OW221308 Beijing XINHUA in English 1243 GMT 22 Nov 80]

INDONESIAN OFFICIAL IN THAILAND--Bangkok, November 22 (XINHUA)--Indonesian Foreign Minister Mochtar Kusummatmaja left here for Singapore this morning after a two-day visit to Thailand. He had two hours of talks with his Thai counterpart Sitthi Sawetsila yesterday on ASEAN's next move following the U.N. victory on the Kampuchean problem. He was also briefed by Sitthi on the results of Thai Prime Minister's China visit late last month and a trip by Thai Deputy Foreign Minister Arun Phanuphong to the Soviet Union and other European countries. After the talks, Mochtar told correspondents that their discussion was very fruitful. ASEAN was still firm in its proposal on the Kampuchean issue despite claims by Hanoi that the ASEAN proposal constitutes an interference in Kampuchea's internal affairs. ASEAN must keep up its efforts to get Vietnam to abide by the U.N. resolution on the Kampuchean problem. But so far there had not been indication that Vietnam would attend the ASEAN-proposed international conference on Kampuchea, he said. He denied a press report that Indonesian President Suharto planned to visit Hanoi in the near future. [Text] [OW221300 Beijing XINHUA in English 1246 GMT 22 Nov 80]

INDONESIAN DEVELOPMENT POLICY--Hong Kong, November 22 (XINHUA)--Indonesian President Suharto yesterday stressed that Indonesia's development should be based on the nation's own abilities which would phase by phase release it from dependence on foreign aid, according to a report from Jakarta. Addressing the closing ceremony of the veteran legion's plenary session in the State Palace, President Suharto pointed out that "it is still our determination to remain free both politically and economically." Indonesia still accepts foreign aid, and has even invited foreign investors to participate in its development plans, and has adopted foreign technology. "This doesn't necessarily mean that we depend totally upon foreign economic power," the president added. "What we have done so far, is moving steadily, stage by stage, so we will be able to stand on our own feet." He pointed out that the most important thing is to have a strong will to develop the country based on our own ideas and according to our own direction. He said that despite the progress made in the programmes for self-sufficiency in food and cloth, Indonesia still faces many problems. "We still face housing problems, we should meet the increasing demand for health facilities, we should deal with the education problems of our children and we even have to make available millions of job opportunities in the future," Suharto said. [Text] [OW221212 Beijing XINHUA in English 1202 GMT 22 Nov 80]

SRV TROOPS IN KAMPUCHEA--Beijing, November 23 (XINHUA)--Sri Lanka and Singapore shared the view that Vietnamese troops must withdraw completely from Kampuchea, according to a report from Singapore today. Speaking to newsmen before leaving for home after a week-long visit to Singapore today, Sri Lanka Deputy Foreign Minister Tyronne Fernando said: "We take a very firm stand and will not change our view on the Kampuchean situation." Expressing his country's stand, he reaffirmed: "We will not accept any regime that violates the non-aligned movement's policy." Sri Lanka also took the same stand as Singapore on the question of Soviet aggression and occupation of Afghanistan, he added. Turning to bilateral ties, Fernando said that more than 20 Singapore companies are now operating in Sri Lanka. He expressed confidence that more investors will be coming to his country in the near future. [Text] [OW230734 Beijing XINHUA in English 0711 GMT 23 Nov 80]

INTERNATIONAL COMMODITY AGREEMENT--Hong Kong, November 24 (XINHUA)--The International Rubber Agreement (INRA) headquarters will be established in Kuala Lumpur, capital of Malaysia, according to Malaysian press reports recently. The decision was made in Geneva on November 21 at the first conference of the International Natural Rubber Council. Wong Kam Choon, deputy secretary general of Malaysian Ministry of Prime Industries, was elected president of the council. Malaysian Minister of Prime Industries Paul Leong Khee Seong in a message on November 21 said that since this is the first time that the headquarters of an international commodity will be set up in a developing country, this is a victory not only for his country but also for natural rubber producing and developing countries. [Text] [OW240907 Beijing XINHUA in English 0850 GMT 24 Nov 80]

PORTUGAL FIGHTS SOVIET EXPANSION--Lisbon, November 17 (XINHUA)--Portugal in the coming year will maintain its position of combating Soviet expansionism on the side of its friendly ally the United States, Vice-Prime Minister and Foreign Minister Diogo Freitas do Amaral declared in a nationwide televised speech here this evening. Portugal is not equidistant from the United States and the Soviet Union, he added. The Soviet armed intervention in Afghanistan, he went on to say, "is more than a war episode on the international stage. It constitutes a new, unprecedented political reality in our times--the use of Soviet armed forces outright beyond the Warsaw Pact group." The intervention has posed a menace to an area which is vital to the survival of the West, he noted. Referring to the war between Iraq and Iran, he expressed fear that it could provide an opportunity for the Soviet Union to control the Hormuz Straits. Portugal remains neutral in the conflict between the two countries, he declared. [Text] [OW181234 Beijing XINHUA in English 1224 GMT 18 Nov 80]

IRANIAN DELEGATION IN PAKISTAN--Islamabad, December 3 (XINHUA)--An Iranian parliamentary delegation and Pakistani Foreign Minister Agha Shahi discussed here yesterday the Islamic countries' efforts to stop the hostilities between Iran and Iraq and to find a settlement to it based on the principle of justice. The two-member Iranian delegation led by Hujjatul Islam Imami Kashani, chairman of the Islamic preaching committee of the Iranian parliament, has come to Pakistan after visiting India and Bangladesh. Imami Kashani told the press here today that he was satisfied with the talks he had held with the Pakistani foreign minister. He said that Iran will not negotiate with Iraq as long as there is one single Iraqi soldier on Iranian territory. [Text] [OW031722 Beijing XINHUA in English 1640 GMT 3 Dec 80]

SOVIET-SYRIAN TREATY--Damascus, December 3 (XINHUA)--The Soviet-Syrian friendship and cooperation treaty went into effect yesterday, according to press communiques simultaneously issued in Damascus and Moscow last night. Soviet first vice-president of the Supreme Soviet Vasiliy Kuznetsov arrived here on December 1 specially for the exchange of the instruments of ratification of the treaty signed by Brezhnev and Syrian President Hafiz al-Asad in Moscow on October 8. Observers here believed that the treaty will strengthen the Soviet Union's presence in Syria. According to the "Tishrin," Syrian President Al-Asad had a talk with Kuznetsov last night on the Middle East and international situation. They reached like-minded views on a number of problems including the war between Iran and Iraq. [Text] [OW031542 Beijing XINHUA in English 1522 GMT 3 Dec 80]

U.S. OFFICIAL IN ALGERIA--Algiers, December 3 (XINHUA)--U.S. Deputy Secretary of State Warren Christopher flew to Washington tonight after handing the Algerian intermediaries a message in reply to the conditions set by the Iranian Majlis for freeing the 52 American hostages. Prior to his departure, Christopher and his delegation held talks with Foreign Minister Mohamed Ben Yahia and other Algerian officials. They gave the Algerians a detailed and documented explanation. An Algerian delegation will leave for Tehran tonight to deliver the U.S. reply to the Iranian Government. [Text] [OW040833 Beijing XINHUA in English 0715 GMT 4 Dec 80]

MUSIC ENSEMBLE IN CAIRO--Cairo, December 1 (XINHUA)--China's Oriental Song and Dance ensemble tonight gave its last performance at the Serwich Theatre here to the warm welcome of the Egyptian audience. Five performances were given by the ensemble from November 28 to December 1. Among the audience were Egyptian Minister of State for Foreign Affairs Butrus Ghali, first under-secretary Fu'ad al-'Urabi and under-secretary Ahaf al-Shaq of the Culture Ministry. Both Chinese and Egyptian songs and dances, performed by the Chinese artists, were praised by the Egyptian audience, and videotaped by the television. The Chinese artists also learned Egyptian dances and learned to play Egyptian musical instruments from their Egyptian colleagues. China's Oriental Song and Dance ensemble arrived here on November 19 after giving performances in Alexandria. The ensemble will leave for the Sudan on December 5. [Text] [OW020854 Beijing XINHUA in English 0810 GMT 2 Dec 80]

USSR-SYRIAN TALKS--Damascus, December 2 (XINHUA)--Syrian Premier 'Abd Ar-Ra'uf al-Kasm and the Soviet first vice-president of the Supreme Soviet Vasily Kuznetsov had a talk last night on the general situation in the Middle East and a number of events that occurred in the area, according to the Syrian News Agency. The two sides also discussed the international situation, especially the latest developments in the United States and in the Middle and Near East. Kuznetsov arrived here yesterday afternoon. During his three-day visit to Syria, the two sides will exchange the instruments of ratification of the Soviet-Syrian friendship and cooperation treaty signed in Moscow on October 8. According to observers here, Kuznetsov's visit takes place at a time when tension grows over a military build-up on both sides of the Syrian-Jordanian border following the 11th Arab summit in Amman. [Text] [OW021522 Beijing XINHUA in English 1503 GMT 2 Dec 80]

AL-SADAT MEETS U.S. CONGRESSMEN--Cairo, December 2 (XINHUA)--Egyptian President Anwar al-Sadat yesterday expressed the hope that U.S. president-elect Ronald Reagan would play a more effective role in the Middle East peace process, AL-AHRAM reported today. In his talks with a visiting U.S.congressmen delegation here, Al-Sadat also said that he hoped a tripartite summit between Menahem Begin, Reagan and himself would be held next spring. Al-Sadat asserted that he would not give, under any circumstances, the Americans any bases in Sinai, however, he explained, "if the United States asks for help in the form of temporary facilities, it is O.K. because we are friends." Al-Sadat believed that the future of the West Bank should be determined by the people of Palestine there and if they want a confederation with Jordan it is up to them. On the Lebanon problem, Al-Sadat said that the solution to it lies in the withdrawal of Syria from Lebanon, so that the Lebanese can determine their own destiny. In another interview, with the French magazine LUI, Al-Sadat said that Reagan could not change anything in the peace process now, because the Egyptians and Israelis had decided in Camp David not to resort to war again. He explained it is possible that amendments would be made to the two Camp David accords, but they should not change anything essential. [Text] [OW021308 Beijing XINHUA in English 1256 GMT 2 Dec 80]

IRAQ URGES ARAB SUPPORT--Baghdad, December 2 (XINHUA)--Iraqi President Saddam Husayn today called on the Third World people and all honest people in the world to support the Palestinian Arab people and all other people suffering from oppression. The president made the appeal in a message to the chairman of the UN committee on the exercise of the inalienable rights of the Palestinian Arab people on the occasion of the international day for solidarity with the Palestinian people. He said that the heroic struggle of the Palestinian Arab people and the whole Arab nation against Zionist occupation had drawn attention of the world to the catastrophe suffered by these people. He accused the United States of aiding the "usurpist Zionist entity." [Text] [OW030250 Beijing XINHUA in English 0240 GMT 3 Dec 80]

CHRISTOPHER MESSAGE TO IRAN--Algiers, December 2 (XINHUA)--A U.S. Government delegation headed by Deputy Secretary of State Warren Christopher arrived here this morning with the U.S. response to terms set by the Iranian parliament for freeing the 52 American hostages. The first U.S. delegation came to Algiers on November 10. The delegation is bringing the U.S. clarification of its reply to Iran's demands conveyed by the Algerian intermediaries to the U.S. State Department on November 25. Algeria is serving as an intermediary in the hostage negotiations between Iran and the United States. [Text] [OW021848 Beijing XINHUA in English 1841 GMT 2 Dec 80]

ISLAMIC CONFERENCE--Paris, November 27 (XINHUA)--"We do not recognize the Kabul government and Afghanistan's seat at the Islamic conference remains vacant," said Habib Chatti, secretary-general of the Organization of the Islamic Conference here today. Speaking at a press luncheon, Habib Chatti stressed that the meeting of the heads of state and government of the Organization of the Islamic Conference to be held in Saudi Arabia next January 24 will reiterate their stand of non-recognition of the Kabul regime. He noted: "The Soviet Union remains intransigent and accepts neither compromise nor dialogue." "When he made contact with the Soviet Union, it demanded the recognition of the Kabul government. To this day we have not been able to negotiate directly with the Soviet Union because we do not recognize that government. We consider the Kabul government illegitimate because it was formed after the entry of Soviet troops into Afghanistan and is propped up thanks to the presence of foreign troops," he said. Referring to the Iraq-Iran war, the secretary-general said that the Islamic conference is the best place for mediation between the two Islamic countries. He is prepared to go to Iran and Iraq again if "there is a gleam of hope for a cease-fire," he said. [Text] [OW281224 Beijing XINHUA in English 1214 GMT 28 Nov 80]

BANGLADESH SUPPORTS PALESTINIANS--Dacca, November 30 (XINHUA)--President Ziaur Rahman reiterated Bangladesh's total support for the Palestinian peoples in exercise of their inalienable rights and stressed the need for a just and lasting peace in the Middle East, Radio Bangladesh reported this morning. In a message to Yasir 'Arafat, chairman of the Palestine Liberation Organisation, on the occasion of the international day of solidarity with the Palestinian people, Rahman said that no solution can be envisaged if the inalienable rights of the Palestine people to return to their homeland, to self-determination, independence and territorial sovereignty are not restored. [Text] [OW300830 Beijing XINHUA in English 0815 GMT 30 Nov 80]

SRI LANKA SUPPORTS PALESTINIANS--Colombo, November 30 (XINHUA)--President J. R. Jayewardene yesterday reiterated Sri Lanka's full support for the Palestinian people in their struggle for their inalienable rights to return to their homeland, the paper WEEKEND reported today. The president made this declaration in a Palestine day message read out by deputy foreign minister Tyronne Fernando at a special seminar held here yesterday. Speaking at the seminar which was organised by the Sri Lanka Committee for Solidarity with Palestine, Fernando said the government politically and diplomatically recognises the rights of the Palestinian people and has extended its full support to Palestine at all international fora. Sri Lanka has worked hard for the acceptance of the Palestine Liberation Organisation in the process of settling the Palestine issue, he said. The deputy minister also condemned Israeli "occupation and policy of annexation." [Text] [OW300901 Beijing XINHUA in English 0801 GMT 30 Nov 80]

PAKISTANI-INDIAN RELATIONS--Islamabad, November 21 (XINHUA)--Pakistan President Mohammad Ziaul Haq said that every effort would be made to maintain peace and harmonious relations between Pakistan and India. He arrived at the Quetta Airport today for a four-day visit in Baluchistan Province. Replying to a question by a newsman about a London newspaper report that India was preparing for having another round of war with Pakistan, the president said that it was one of the statements of an Indian political leader Dr. Subramanian Swamy. However, he said that it would be his earnest endeavour to have cordial relations with India. Asked about the reported threat to Pakistan by Babrak Karmal, head of the puppet regime in Afghanistan, on his return from the Soviet Union, the president said that no power on earth could harm Pakistan and there should be no cause for any anxiety among the people so long as they remained united. Never before the nation was so united as it was today, he added. [Text] [OW211945 Beijing XINHUA in English 1938 GMT 21 Nov 80]

USSR INVASION CONDEMNED--Stockholm, November 22 (XINHUA)--An exiled former Afghan senior official said Afghanistan today has become an entirely paralyzed country, DAGENS NYHETER reported today. Shirin Gul Sherdel, who asked for political asylum last April when attending the U.N. telecommunication conference in Kalmar, Sweden, told the paper that in Afghanistan communication was at a standstill, schools and universities were closed and trade and agriculture stagnant. Shell fragments could be seen everywhere and people were fleeing the country in groups. The power struggle within the Afghan ruling party had paralyzed government activities, he disclosed. With numerous defections, the Afghan army had hardly any combat capability and found it difficult to get new recruits. The conscription age was recently reduced from 22 to 21. The central government was unable to exercise control over the provinces, he added. Sherdel had eye-witnessed how Soviet troops looted the department where he had worked and destroyed the documents there. He said the Soviet invasion of Afghanistan was only a step in the Soviet effort to gain access to the warm water ports in the Indian Ocean. He demanded the immediate withdrawal of the Soviet troops from his country. [Text] [OW231258 Beijing XINHUA in English 1238 GMT 23 Nov 80]

INDEPENDENT TRADE UNION--Warsaw, 19 Nov (XINHUA)--The National Consultative Committee of the Polish Independent and Self-governing "Solidarity" Trade Union held a meeting in Szczecin on 19 November to discuss the domestic situation and the independent trade union's action program, election and other organizational work. According to a PAP report, Walesa pointed out when meeting with local workers' representatives that the new trade union's most important task was to perfect its organizational work. He stressed that in the present situation it was imperative to further stabilize the people's livelihood. [Text] [OW220515 Beijing XINHUA Domestic Service in Chinese 0757 GMT 20 Nov 80]

POLISH AGRICULTURAL PRICES--Warsaw, 20 Nov (XINHUA)--The Polish Government recently decided to raise the purchase prices for farm and animal husbandry products so as to arouse the peasants' enthusiasm for production and to help solve the increasing difficulty in market supply. According to a resolution of the Council of Ministers, the per-kg purchase price will be raised by 25 percent for milk and beef cattle, 16 percent for hogs and 21 percent for poultry, effective 21 November 1980. Effective 1 July 1981, there will be a rise in the purchase prices for farm products. The purchase price for each quintal of grain will be raised by 33 percent. In addition, the government decided to raise the sales price for highly concentrated animal feed, effective 21 November 1980. The sale price for ordinary animal feed will also be raised when the resolution of adjusting the grain purchase price becomes effective next year. Sources said that because of the higher purchase prices of farm and animal husbandry products, the net income of the Polish peasants is expected to increase by 33.4 billion zlotys (approximately US$1.1 billion) in 1981. [Text] [OW221717 Beijing XINHUA Domestic Service in Chinese 1211 GMT 21 Nov 80]

CZECHOSLOVAKIAN TRAVEL TO POLAND--Prague, 21 Nov (XINHUA)--The Czechoslovak State Bank has announced a regulation that effective 20 November, Czechoslovak citizens traveling to Poland who have bought Polish currency at the bank are eligible again for such purchase only after a period of no less than 90 days, according to a Czechoslovak News Agency report. Since the signing of an agreement between Czechoslovakia and Poland in July 1977 to facilitate travel by citizens of both countries, Czechoslovak citizens could buy Polish currency from state banks at any time. The regulation in fact has imposed restrictions on Czechoslovak citizens' travel to Poland. According to the same report, this regulation does not apply to citizens traveling to Poland for urgent matters who need special consideration. The report adds that Poland has adopted similar measures for its citizens' travel to Czechoslovakia. [Text] [Beijing XINHUA Domestic Service in Chinese 1522 GMT 21 Nov 80 OW]

MOSCOW RADIO IMITATES BBC--A XINHUA report from London says that according to British press and radio broadcasts, the Soviet radio station, in recent propaganda broadcasts to foreign countries, has imitated the British radio and conducted a war of propaganda to mislead the audience. The report says: In its broadcasts to certain areas of the world, particularly to East Africa, Moscow Radio has vigorously imitated the BBC's broadcasts to foreign countries. Moscow Radio has begun its broadcasts with the sound of the chime and uses frequencies similar to British ones. To mislead the audience, Moscow Radio has intentionally not announced its station name prior to its news broadcast. The report says: The Soviet authorities have also plotted to mislead the domestic audience. The Soviet Union has been denounced by justice-upholding countries and public opinion the world over for its support of Vietnam's invasion and occupations of Kampuchea and particularly its armed invasion of Afghanistan. To cover up this predicament, the Soviet Government has vigorously interfered in foreign radio stations' Russian-language broadcasts so as to prevent the Soviet people from knowing the facts. INSIDE LOOK AT CULTURAL REVOLUTION STRUGGLE CONTINUED

Hong Kong ZHENG MING in Chinese Nos 34, 36, 1 Aug, 1 Oct 80

[Political report by Ji Xichen [4764 1585 2525]: "The Beginning and End of the 'Adverse February Current of 1967'"; originally carried in SHI DAI DI BAO GAO [Reportage of the Times] No 1, 1980. First three parts published in JPRS 76237, 15 August 1980, No 105 of this series, pp 17-58]

[Part IV, No 34, 1 Aug 80 pp 76-77]

[Text] Besieged Zhou Enlai Suffering Another Heart Attack

In the morning of 27 August, Comrade Zhou Enlai, who had been working continuously for 18 hours, was besieged again by another batch of people and hence suffered one more heart attack. But these people would not listen to admonition, declaring that they would stop Comrade Chen Yi's car and insist on having an impact on him. Comrade Zhou Enlai very angrily warned them:

"If anybody tries to stop Comrade Chen Yi's car, I am going to thrust myself forward immediately; if you want to rush today, I am definitely going to be present and stand at the entrance of the Great Hall, and let you trample over me!"

Concerning this power seizure at the Foreign Ministry, Comrade Mao Zedong pointed out at one time in June 1972 in a conversation with foreign guests:

"The Foreign Ministry was subject to power-seizure by the 'leftists.' For one month and a half, power was not in our hands but in the hands of those 'leftists.' These so-called 'leftists' were actually counterrevolutionaries!"

Comrade Zhou Enlai and Comrade Chen Yi were revolutionaries of the older generation close to Chairman Mao at the time. When Chairman Mao received foreign guests, the two of them always participated. Taking advantage of such opportunities at the reception of foreign guests, Comrade Zhou Enlai and Comrade Chen Yi made direct briefings to Chairman Mao on certain actual situations. Toward this, Lin Biao, Jiang Qing, and their ilk held utmost hatred and also great fears; hence, they plotted in every way to overthrow comrades Zhou Enlai and Chen Yi in a vain attempt to upstage Chairman Mao, realize power seizure, and "manhandle the Emperor in order to boss over the princes" [like in the olden days].

Liu Xiang Slaps Tan Zhenlin

On 19 August, a criticism and struggle meeting against Comrade Tan Zhenlin was convened at the National People's Congress Auditorium." At this meeting, Comrade Zhou Enlai repeatedly emphasized struggle by reasoning and not by force in order to protect Comrade Tan Zhenlin. During the meeting, Comrade Zhou Enlai temporarily left the Hall; the female minister the "gang of four" placed at the Ministry of Public Health actually shamelessly took this opportunity to rush onto the stage and slapped Comrade Tan Zhenlin's face a couple of times.

Then, immediately, three husky fellows jumped onto the stage, lifted Comrade Tan Zhenlin off his feet, rained a whirl of fists and kicks on him, and knocked him on the floor and trampled on his back a couple of times.

Against this erroneous method, Comrade Li Xiannian protested on the spot: "Premier Zhou had an understanding with you well in advance, that you may criticize but not struggle by force! If you handle things this way, I must withdraw from this meeting place."

On 7 September 1967, part of the revolutionary teachers and students at the Beijing Normal University convened a meeting to expose and criticize the criminal conduct of Tan Houlan [6223 0624 5695] concerning his opposition to Premier Zhou and several vice premiers, and his opposition to the party and sabotage of the army. This revolutionary action was subject to suppression by Jiang Qing and her ilk, who regarded this "7 September Incident" as a counterrevolutionary political incident designed to reverse the verdict for the "Adverse February Current" and thereby persecuted more than 100 teachers, students and cadres.

Jiang Qing Declares Tan Zhenlin To Be a "Great Renegade"

March and April 1968 constituted what Chen Boda described as "the 5th round of the decisive battle" in the fight against the "Adverse February Current." At the great rally of 100,000 people on 27 March, Jiang Qing alleged criminal conduct groundlessly by declaring Comrade Tan Zhenlin as a "great renegade." At the same time, she announced that Yang Chengwu [2799 2052 2976], Fu Chongbi [0265 1504 4310], and others attempted to reverse the verdict for the "Adverse February Current" and hence dismissed them from their posts; she also arrested Comrade Yu Lijin [0151 4539 6855], appointed Huang Yongsheng as Chief of Staff, and further consolidated the power they had seized.

In the nationwide fight against the "Adverse February Current," from the central to the local levels of government, they seized power at each level and grabbed and struggled against people at each level; they set up kangaroo courts, conducted savage trials, resorted unrestrainedly to beating, smashing and looting, and continued to carry out acts of the like for more than 3 years. In this way, they succeeded in basically overthrowing the old cadres in the national arena through this fight against the "Adverse February Current," and thereby realized power-seizure in the whole country!

"A Strong Wind Reveals the Strength of Grass, a Time of Lawlessness Makes a Forthright Person Recognizable"

"A strong wind reveals the strength of grass, a time of lawlessness makes a forthright person recognizable. How can a temerarious fellow discern justice? A wise man is bound to cherish benevolence." These are the four stanzas written by Emperor Taizong of the Tang Dynasty in his poem "Granted to Xiao Yu [5618 3846]." In the stormy weather while Lin Biao and the "gang of four" held sway and in those turbulent days of "lawlessness," revolutionaries of the older generation and a large contingent of old cadres all went through a stern test.

The Six Including Ye Jianying and Others Were Criticized and Struggled Against

At the 12th Plenum of the 8th Party Central Committee in October 1968, Lin Biao and his underlings plotted commando raids; they separated the six old comrades excluding Comrade Tan Zhenlin, set up a special group around each one of them, besieged them, criticized them and struggled against them ceaselessly, and indulged in obtaining confessions by compulsion in order to give themselves credence.

Comrade Nie Rongzhen once went to some of the Political Bureau members to exchange opinions on their work; Lin Biao and the "gang of four" and their underlings immediately framed them as an "anti-Party clique" and proceeded to keep them under surveillance. Someone even presented the recording of Comrade Nie Rongzhen's activities while he was under surveillance and forced him to acknowledge them. Comrade Nie Rongzhen severely denounced such a fascist crime on the spot:

"Can we members of the Political Bureau not have any communication at all? Can we not discuss any problems with one another? Then, what democracy is there left in the party? What is this you are practicing? It is espionage!"

Comrades Ye Jianying, Nie Rongzhen, Chen Yi, Xu Xiangqian, Li Xiannian, and Li Fuchun would attend meetings every day while they were sick; sometimes even their request for a leave of absence to write their "self-examination" was turned down. These vice premiers and old teachers who were thus harassed to the point of exhaustion could only lie down on the sofas for some rest during the intermission between meetings. When they could not seize any problems with the old teachers at a certain meeting, they simply groundlessly accused comrades Ye Jianying and Nie Rongzhen as the dark back-of-the-scene perpetrators of the so-called "Yang Yufu [2799 0151 0265] Incident."

Mao Zedong Raised the Siege for Nie Rongzhen

Comrade Nie Rongzhen went to ask Lin Biao: What was the matter?

Lin Biao cunningly argued: Nobody was named.

Comrade Nie Rongzhen retorted angrily:

"It is worse when you refrain from naming anyone rather than naming someone. I'd rather face a revealed gun than become the target of a concealed arrow!"

Later on, when Comrade Mao Zedong received certain representatives of the masses, he said to Comrade Nie Rongzhen in front of Lin Biao:

"You don't need to shoulder the burden. The behind-the-scene perpetrators do not include you; the first of them is myself, the second is Lin Biao...."

At the conclusion of the 12th Plenum of the 8th Party Central Committee, Lin Biao and the "gang of Four," in order to continue to persecute the old teachers, again fabricated lies and planted a hidden plot by suddenly issuing a "bulletin" of a meeting that was also ready concluded for several days.

This "bulletin" not only framed the wife of Comrade Xu Xiangqian and the wife of Comrade Nie Rongzhen as "renegade, spy," but also purposely revealed the incident that, in mid-April 1948, when Comrade Mao Zedong advanced from the Shanxi-Suiyuan border area to the Shanxi-Chahar border area temporarily stayed at the military district headquarters in Chennan Manor, Fuping County, his station was subject to strafing and bombing by Kuomintang planes.

They put two events together, purposely fabricated a pretext to frame Comrades Xu Xiangqian and Nie Rongzhen, who were commanding the war effort at the front at the time, in a vain attempt to attach the label of conniving with the enemy on them to put them to death.

Nie Rongzhen Defended Mao Zedong

Chennan Manor was where the headquarters of the Shanxi-Chahar-Hebei military district was situated at the time. When commanding officer Nie Rongzhen of this military district heard the news about Chairman Mao's impending arrival, he immediately gathered the personnel concerned and personally deployed and arranged Chairman Mao's security and sentry work and room and board facilities.

General Nie vacated the two-room suite he himself was occupying, had it repaired, and let Chairman Mao stay in there, while he himself moved into another room right next to Chairman Mao's suite. He carefully examined the table, chairs, bed and furnishings of the like in Chairman Mao's suite, and then asked a comrade with a tall physique to sit in the lounge to test it; realizing that it was not sturdy enough, he then had his own lounge placed in its stead in Chairman Mao's suite. In order to protect him against the attack by enemy planes, he also organized people to dig a shelter at the foot of the hill not far behind the suite.

Before Chairman Mao even entered the area under the jurisdiction of the Shanxi-Chahar-Hebei military district, General Nie already dispatched sentry cadres to take a company of guards to meet and protect him at a distance. After Chairman Mao's arrival at the Chennan Manor, General Nie again made concrete arrangements and personal inspection of the security and sentry work for Chairman Mao. General Nie often accompanied Chairman Mao to take a walk outside, and sometimes he went to inspect the situation of the on-going security and sentry work personally even in the middle of the night.

In one morning, an enemy plane sneaked into the air space above the station on a reconnaissance mission; then two other planes also followed. When General Nie heard the droning planes, he determined that the enemy planes were going to come to bomb the area. Sure enough, the two planes that flew over later started to cruise around above the Chennan Manor. Because he worked all night, Chairman Mao did not go to bed until dawn and therefore was not yet up. General Nie woke up Chairman Mao in a hurry, saying:

"The enemy planes are about to bomb us, please enter the shelter at once!"

Then, he immediately went to inspect the shelter and the sentry situation there. Seeing that Chairman Mao was still not there when he emerged from the shelter, General Nie again rushed back to Chairman Mao's suite to urge him to hurry up. Chairman Mao observed gallantly:

"What is there to be afraid of? At most, some pieces of steel will be thrown down; we can just use them to hammer into a few hoes to reclaim land somewhere."

At this moment, the enemy planes flew lower and lower, and the situation was extremely urgent. Said General Nie:

"This won't do. The entire party and the entire army obey you, but right now you have to listen to me."

After finishing what he had to say, he immediately ordered the sentry personnel and, together with he himself and Comrade Zhao Erlu]6392 3643 7120], moved quickly to put Chairman Mao on a stretcher and take him to the shelter. And as soon as he was sent into the shelter, several loud bangs were heard, and black smoke rushed skyward.

[Part V, No 36, 1 Oct 80 pp 68-71]

[Text] Jiang Qing Frames Nie Rongzhen

During this bombing, the enemy planes dropped five bombs altogether, of which two fell and exploded only a few scores of meters away from where Chairman Mao's suite stood. The windows of the house were all blown off, and furniture in the rooms were shaken into a topsy-turvy condition; the thermos bottle on the table fell on the ground and broke into pieces. When people on the scene witnessed this situation, they all hailed with relief:

"Why, if not because of General Nie's alert determination and instant order, it would have been really dangerous for Chairman Mao this time!"

Concerning this bombing by the enemy planes, it was later found out from an inspection of the files of the enemy and puppet authorities after Datong and Baoding were liberated that the culprit who originated this sortie was a traitor in the commanding headquarters. Since the evidence was authentic and verified, and the confession was made without any mincing of any words after a formal trial, the traitor, under such circumstances, was eventually executed. At the time of the bombing, it was clear that Comrade Nie was the one who did his utmost to protect Comrade Mao Zedong and who thus made a meritorious contribution to the party and the people. Jiang Qing was also at Chennan Manor at the time and was aware of the entire situation. Yet, shortly after the conclusion of the Twelfth Plenum of the 8th Party Committee, it was alleged with a bloody smear in the bulletin that included Jiang Qing's statement that Comrade Nie wanted to execute the culprit only to shut his mouth, thus heartlessly framing Comrade Nie Rongzhen for a premeditated attempt on Comrade Mao Zedong's life. This was venomous to the extreme!

Xu Xiangqian's House Was Ransacked Three Times

Comrade Xu Xiangqian has had his house ransacked three time at different times. Comrade Ye Jianying especially telephoned him and enthusiastically invited him to stay at his place. At the time, the documents, letters, and even battlefield diaries in Xu's house were all taken away; but they caught not even a single rice stalk. What did they see? They saw a loyal and sincere Communist warrior and his selfless fighting in a life of several decades in the military ranks. Comrade Xu Xiangqian, along with his comrades-in-arms and countless martyrs, has colored the war banners red with his very own fresh blood. He said:

"We have constantly flirted with death in following Chairman Mao in a revolution of several decades, and we have also made not a few mistakes. But we are loyal and dedicated to the party and to the revolution without any cringing conscience!"

General Xu's hair is grey-white, but his spirit is vigorous; a light of excitement shines in his eyes, and his voice is loud and clear.

"This is not a personal question. This is a struggle relating to the destiny of the party and the state. As the ones who have fought all their lives for the party, can we allow them to ruin the party? When we see that they have sabotaged the cause of the party to such a degree, can we refrain from feeling resentful? Can we help wanting to rise and get on with the struggle?

When we spoke of the "bulletin" by which Jiang Qing framed him, General Xu waved his arms energetically while his two hands gesticulated by now pulling together and then thrusting apart in front of him, angrily saying:

"They slandered us for wanting to stage a coup, wantonly alleging that the coup was scheduled in July, August, or September.... All these lies were meant to have us overthrown, so that obstacles in their way to usurping the party and seizing power would be removed."

Li Xiannian Was Slandered as a "Great Ringleader of the Renegades"

Comrade Li Xiannian, who had during the war years persevered in armed struggle for long period of time in the Dabie Mountain region and the central plain areas, was given the order in 1946 by the central authorities to march northward to break the siege. Lin Biao and the "gang of four" actually fabricated the rumors that he was a "great ringleader of the renegades." This was immeidately refuted with vigor by Comrades Wang Zhen [3769 7201], Wang Shusheng [3769 2885 5116], and others who had participated in leading the march to break the siege. Using a large number of sure proofs and evidence, they denounced the framing attempt and protected Comrade Li Xiannian. Bringing out the conference minutes concerning the battle to break the siege at the time, Comrades Wang Zhen and others said:

"All of these were a history personally experienced by us; how can we allow them to be turned upside down?!"

The people in the Dabie Mountain region still remember vividly that, during the great flood-like movement of the revolution, it was comrades like Dong Biwu, Chen Tanqiu and others who spread the embers of the revolution in the eastern Hubei areas, and it was comrades like Cao Xuekai [2580 1331 2818], Wu Huansheng [0702 3562 3932], Wang Shusheng and others who lighted up the storches of uprising in Huangan and Macheng. In the midst of those burning struggles, there was a young carpenter who laid down the big saw in his hand and picked up a weapon and lunged into the ocean of revolutionary war. This youth was none other than Comrade Li Xiannian.

The Red Guards and the guerrilla bands grew into the heroic Red Army. Comrade Li Xiannian served as a regiment political commissar in the Red Army. And when he became a division political commissar in the Red Army, he was but 20 years old.

Later, the Red 4th Field Army shifted from the Dabie Mountain to the Daba Mountain and opened up the Sichuan-Shaanxi Soviet District. On the Long March, he, as the army political commissar of a principal Army, led his troops to carry on the bitter struggle west of the Yellow River; their ammunitions were exhausted and their provisions low, but they had to break through the snowy and icy terrain of the Qilian Mountain region. During the War of Resistance Against Japan and wars of liberation, he again led his troops to spearhead the march through the central plains and fought between the Changjiang River and its tributaries and the great lakes.

Such a heroic warrior should actually be slandered by the Lin Biao gang as a "great ringleader of the renegades," how can one help feeling resentful?!

Jiang Qing Frames Ye Jianying and Resorts to a Coup

The Lin Biao gang looked upon a Comrade Ye Jianying dedicated to the cause of liberation of the Chinese people as an insurmountable obstacle in their attempt to usurp the party and seize power, and hence plotted in every way to have him overthrown. At one meeting of the Central Committee, renegade Jinag Qing suddenly took the plunge and slandered Comrade Ye Jianying as "wanting to stage a coup!"

That adviser, "theoretical authority," immediately followed with: "I also have some opinion about Xu Xiangqian and Chen Yi!" She thereby also slandered these old teachers for wanting to "stage a coup."

Comrade Ye Jianying retorted on the spot:

I have followed Chairman Mao in this revolution for several decades; whether it was during the Long March, or at Yanan, whether in the planning and directing of the whole Army in battle, or in the various struggles over the line since the liberation, I have always faithfully carried out Chairman Mao's directives and persisted in standing on the side of Chairman Mao, defended Chairman Mao's revolutionary line and protected Chairman Mao's security!"

Comrade Ye Jianying is heroically dedicated to the Communist cause. During the first revolutionary civil war, he actively joined the fighting in the Northern Expedition. At the perilous point of defeat in the wake of the Great Revolution, it was the three of them, he and Comrades Ye Ting and He Long, who plotted the march on Nanchang in a small boat on the Boyang Lake at the foot of the Lushan Mountain.

In the flame of the uprising at Guangzhou, he held high the red banner and, along with comrades like Zhang Tailei and Ye Ting, led the struggle that helped establish the Guangzhou Commune. In the fight to explore and set up the base at Jinggang Mountain, he directed the battle and signed the Red Army's battle orders.

In the world-renowned Long March, He courageously struggled against Zhang Guotao's splittist line, reporting in time Zhang Guotao's sinister activities to Comrade Mao Zedong, Comrade Zhou Enlai; he thus successfully defended the party and the revolution.

During the Xian Incident, he nad Comrade Zhou Enlai both joined the Xian talks and forced Chaing Kai-shek to accept a moratorium on the civil war and the conditions for joint resistance against Japan.

At Yanan during the periods of the war of resistance against Japan and the war of liberation, he helped Chairman Mao and Commander-in-Chief Zhu De to direct the fighting of the whole Army. All this is going to shine in the pages of history forever.

Ye Jianying's Five Children Are Detained

Against this general with such meritorious contributions to the motherland, the Lin Biao gang also raised their vicious hand. Shortly after the aforesaid meeting, they openly violated the discipline of the party and the laws of the state by despatching a bunch of people to ransack Comrade Ye Jianying's house and also dig up the floor to see if there were any weapons or a radio station.

On 2 April 1967, Ji Bengyu gave a speech; that very afternoon, there appeared on the streets of Beijing great posters such as "Down with Ye Jianying," "Down with the Reactionary Line Backed by a Gun," "Cut Off the Black Hand Ye Jianying Is Stretching into the Literary and Art Circles," etc. A "Grab-Ye Liaison Station" was set up at the Central Institute of Drama; it arrested Comrade Ye Jianying's five children and their relatives and governesses at different points and detained them respectively from 1 to 4 or 5 years.

The 9th Congress of the Party manipulated by Lin Biao and the "gang of four" became their stage from where to make their moves to usurp the party, seize power, and oppose the older generation of proletarian revolutionaries. At the Congress, Comrade Zhu De and Comrade Dong Biwu also became objects of their open criticism and struggle apart from the original vice premiers and vice chairmen of the Military Commission already subject to such criticism and struggle.

Zhu De and Others Were Subject to Criticism and Struggle During the "9th Congress"

One afternoon, the secretary of Comrade Li Fuchun suddenly received a telephone call from the diehard crony of Lin Biao, Huang Yongsheng, who declared to him an imperative edict:

"Imperative edict: Zhu De, Dong Biwu, Li Fuchun,Nie Rongzhen, Chen Yi, Ye Jianying, Li Xiannian, and Xu Xiangqian must honestly relate their criminal conduct against the party. "

Comrade secretary turned over the recorded telephone message to Comrade Li Fuchun. Comrade Li Fuchun took one contemptuous look and evinced a cold smile, and then he angrily threw the slip on the ground and said to the secretary:

"Don't pay attention to him!"

During the '9th Congress," comrades like Zhu De, Dong Biwu, Li Fuchun and Chen Yi were again subject to criticism, struggle, and beseige.

Chen Yi Held "Quotations" in a Wrong Way and Was Subjected to Prolonged Criticism and Struggle

One time, Comrade Chen Yi attended a group meeting in East China and he happened to hold the "Quotations" upside down. They immediately seized this minor incident to exert their pernicious counterrevolutionary authority and struggled against Comrade Chen Yi for a long while, shouting frantically: Do you still want to oppose Chairman Mao, to oppose Mao Zedong Thought?

Comrade Chen Yi answered humorously:

"When Comrade Zhu De and I went to the Jinggaug Mountain to follow Chairman Mao in the revolution, I hardly knew where were many of you present today!"

This sharp statement flew across the hall like a shining sword, frightening all the flock of chirping "political sparrows" into not knowing what to say. They could only put up a false front and cried in a droning voice:

"You are still not honest, not honest!"

Comrade Chen Yi was an honest man, a man who was most accustomed to speaking the truth in the world. In those very days when the "gang of four" held the sway, several provincal Party committee secretaries came to Comrade Chen Yi's house. The old General Chen celebrated the unexpected reunion of former comrades-in-arms, saying:

"Come on, this might be our last reunion!"

"Isn't this too pessimistic?" asked someone.

The old General Chen sighed a long sigh, shaking his head:

"It is very hard to say!"

After saying this, he burst into tears....

One comrade said nothing; he picked up a brush and wrote the two words: "Forceful Pine!"

> A thick layer of snow lies on top of the evergreen pine;
> The evergreen pine is both erect and straight.
> If you wish to know how tall and clean the pine is,
> Wait until the snow melts away.

It was like the evergreen pine which withstands frost and snow that the older generation of revolutionaries resisted the strong gale and torrential downpour of Lin Biao and the "gang of four" with their lofty revolutionary spirit.

The Old Generals Were Dispersed to All Parts of the Country

When Comrade Mao Zedong saw the "bulletin" about the ransacking of Comrade Xu Xiangqian's house, he immediately put down instructions on the "bulletin," pointing out that good relations must be worked out with respect to all the old comrades who participated in the so-called "Adverse February Current" and their family members.

These instructions were passed on to counterrevolutionary double-dealer Lin Biao. Lin Biao, on his part, put up a front by writing alongside those instructions the comments "I agree with the Chairman's instructions," "no new obstacles should be created," on the one hand; on the other hand, he secretly instigated a bunch of his cronies to carry forward persecution of the older generation of revolutionaries even more fiercely.

Lin Biao and his gang, in order to speed up their planned usurpation of the Party and power seizure, took war preparations as a pretext, hoodwinked Chairman Mao and Premier Zhou, and privately signed the so-called "Order No 1" to have old revolutionaries residing in Beijing suddenly dispersed all to other parts of the country.

Thus, through this so-called dispersion, Lin Biao and his gang proceeded to separate the old teachers and keep them under surveillance, so that they "became surrounded and awaited extermination." Comrade Xi Xiangqian arrived in Kaifeng; Comrade Ye Jianying arrived in Hunan; Comrade Li Fuchun arrived in Guangzhou; Comrade Tan Zhenlin arrived in Guilin. These old teachers so subjected to criticism and struggle were, along with members of their families, old and young, thus scattered in different locations and prevented from communicating with one another. By way of a special design, Comrade Nie Rongzhen's wife was arranged to engage herself in labor at a May 7th school in the prairie in Jilin near its border.

Chen Yi Conducted Investigation and Study at the Basic Level in Shijiazhuang

In the days when the seven vice premiers and vice chairmen of the Military Commission were thus subject to such an impact and criticism and struggle at different times, while they were physically detained and spiritually tortured, they continued to have boundless hope and confidence in the party and the people and were fraught with a heightened fighting spirit.

After Comrade Chen Yi arrived in Shijiazhuang in Hebei Province, he regularly went down deep in the factories to station himself at these local points and conduct investigation and study at the basic level. When new rumors threatened him, he dismissed them with a smile, observing unconcernedly: a good man is not afraid of others speaking ill of him; a good man cannot be turned into a bad man this way, nor a bad man into a good man!

At that time, major domestic and international matters were almost entirely under the care of, and handled by, the esteemed Premier Zhou. From night to dawn, from sunrise to dusk, he looked after the motherland's problems on various fronts. From the necessities of life such as cooking oil, rice, fuel and salt, to the artificial satellites that roamed the universe, from the hilltop fortresses of the minority nationalities to the vast ranks of the millions upon millions of people in the cities and the countryside, everything was in his care at all times!

Premier Zhou's physique became skinny and weak. One day, an offspring of a martyr came to see the Premier, and he asked the Premier to take care of his health for the sake of the people of the whole country. Upon hearing this, the Premier halted his steps in the yard at dusk and, his eyes flickering under the two thick eyebrows, affectionately looked at this comrade, observing with provoked emotions:

"During the Cultural Revolution, I followed only these words: Carry out my duties faithfully until I die!"

Carry out my duties faithfully until I die! Such was the lofty character demonstrated by the older generation of proletarian revolutionaries in the storm of struggle against Lin Biao and the "gang of four." They were above-board and frank, selfless and fearless, and they have set up brilliant examples for us!

Mao Carried Out Rectification for the "Adverse February Current" after Lin Biao's Death

History is an impersonal judge. The clowns who acted against history could not escape the punishment of history. On "13 September" 1971, Lin Biao's counterrevolutionary armed coup thoroughly failed, and he was ultimately thrown to his death in the desert of Undur Khan in Mongolia.On 14 November, Comrade Mao Zedong received those personnel who participated in the forum of the Changdu region. Comrade Zhou Enlai and Comrade Ye Jianying were present at the reception. When Comrade Ye Jianying stepped in the meeting hall, Comrade Mao Zedong told everyone:

"You should no longer talk about his 'Adverse February Current'; what was the nature of the 'Adverse February Current'? They were dealing with Lin Biao, Chen Boda, and Wang Guanqi [3769 7070 2058]."

Comrade Mao Zedong also said many times thereafter:

"This matter is now cleared away; don't talk about the 'Adverse February Current' again."

This is to say, Comrade Mao Zedong at that time already personally reversed the verdict for the 'Adverse February Current' and carried out its rectification. Comrade Mao Zedong's words revealed the historical truth and reflected the wishes of the people.

Comrade Ye Jianying went to the hospital to see the seriously sick Comrade Chen Yi, and told him the good news about Comrade Mao Zedong's rectification of the case of the "Adverse February Current."

Chen Yi Heard the Good News at His Sick Bed

Comrade Ye Jianying walked before the sick bed in slight steps. He bent down with grief, his hands caressing the comrade-in-arms who had fought with him shoulder-to shoulder for several decades, and said with a loud,trembling voice, as if he was afraid that it would not be heard:

"General Chen, General Chen! Chairman Mao said we are not going to talk about the 'Adverse February Current' any more!"

As he was saying this, his head bowed down, and his tears flew to his cheeks....

As General Chen heard his calls, he suddenly woke up from his woozy state of mind; a hardly detectable smile rose on his pale face. General Chen seemed to have many things to say, but he was too weak to say them.

"............"

General Chen opened his mouth slightly, his lips trembled, and he started to utter some stuttering words:

"The Party Central Committee.... the Red Army...."

"Charge forward to overcome the enemy...."

This Communist warrior who fought heroically during the so-called 'Adverse February Current' was deprived of his life by cancer on 6 January 1972.

In October 1976, the Party Central Committee headed by Comrade Hua Guofeng smashed the "gang of four" with one stroke, returned to order from disorder, and hence once more reversed this history which had been turned upside down.

At the Third Plenum of the 11th Party Central Committee and the Central Work Conference in 1978, Comrade Hua Guofeng again solemnly declared on behalf of the Party Central Committee: All those comrades who were wronged because of the "Adverse February Current" would have their reputation restored; all those comrades who were implicated and punished would also have their cases rectified.

The historical truth became clear to the whole world. The wise decision of the Party Central Committee cleared away the sinister fog and revealed once more the brilliance and dignity of history; it was upheld and welcomed by the people of the whole country! Across the sacred land, the mountains are dancing and the multitudes are rejoicing!

JILIN AIR FORCE COMMISSAR--Changchun, 27 Nov (XINHUA)--Zhao Bingyao [6392 3521 5069], political commissar of a certain flight division of the PLA air force, has given 63 lectures on the current situation and the party's line, principles and policies to the troops in the past year. Some cadres and fighters from rural areas did not quite understand the policies on setting up various forms of production responsibility system in the rural areas and on allowing some people to become well-to-do first. After listening to Zhao Bingyao's lectures, they have come to understand these policies better. [Beijing XINHUA Domestic Service in Chinese 0230 GMT 27 Nov 80 OW]

SHANGHAI DEMOBILIZED SERVICEMEN--Work on the placement of demobilized servicemen for 1981 will begin mid-December 1980. Shanghai Municipality on 28 November called a meeting to discuss how to help demobilized servicemen settle down, urging the people's governments at all levels and departments concerned in the vicinity of Shanghai to render vigorous support for this task. The meeting called on all communes and brigades to make arrangements for the placement of demobilized servicemen who have families in the suburban areas. Vice Mayor Wang Jian attended the meeting and delivered a speech. [Shanghai City Service in Mandarin 2300 GMT 28 Nov 80 OW]

YOUNG CADRES SELECTED FOR LEADERSHIP TRAINING

Beijing GUANGMING RIBAO in Chinese 21 Oct 80 p 1

[XINHUASHE Report: "Fifth Ministry of Machine Building Selects Large Number of Young Cadres for Leadership Training"]

[Text] The Fifth Ministry of Machine Building recently selected a large number of young cadres to leadership positions in various units of the enterprises under the ministry and has been quite effective in accomplishing this task among the departments and commissions of the State Council.

Most of the enterprises under this ministry have shown a visible change in leadership. First, the leadership is younger. Formerly, the average age for plant (office) level cadres was 53. The average age of new cadres is 5 years younger. The newly selected chief engineers are only 44 years on the average. This injects youth into the "old group" and the "sick group" and makes them a young and energetic "strong group." Second, the professional and educational level is raised. Formerly, only 24 percent of the cadres had middle school or higher educational training. Now 84 percent of new plant-level cadres have a middle school or higher education. Newly appointed chief engineers and deputy chief engineers are all college and technical school graduates.

The experiences of the Fifth Ministry of Machine Building in selecting young cadres are: 1. Leading cadres of the ministry have dealt with the problem in person. Starting in April of this year, nine leading cadres of the ministry led five working groups to more than 100 units in enterprises under the ministry in the southwest, south-central, northwest, northeast, and north and engaged in investigation for 3 months. They studied the cadres and became familiar with the situation. Discarding erroneous concepts, they discovered a large number of persons with excellent talent. Combining their personal experiences with the opinions of party secretaries at different levels and the masses, they selected more than 140 young plant (office) level cadres (including chief engineers) and nearly 80 deputy chief engineers, more than 260 reserve cadres, and 110 backbone technicians. 2. Spread propaganda concerning the urgency of selecting young cadres, correctly establish a standard for selecting cadres, and break the feudal concept of the superiority of experience and generation and the thinking whereby knowledge and professional talents are slighted. 3. Discover talents from production and study activities. Change the workstyle of digging in the files and summoning the personnel department to make reports. Instead, emphasis is to be put on learning from the cadres in the production department and reviewing the performance of cadres in production, research and study. 4. Follow the mass line and combine the upper with the lower in various forms of conferences, individual conversations, and opinion polls. Select young cadres whom the people regard as suitable. 5. Combine selection, placement, and adjustment. In selecting young cadres, suitable arrangements are made for old cadres of advanced years and poor health, and adjustments are made for cadres ill fit for their positions.

A total of 450 plant-level cadres and young reserve cadres of the Fifth Ministry of Machine Building recently entered cadre training classes sponsored by five higher educational institutions.

This measure is designed to raise the professional level of cadres in enterprises and to meet the needs of the four modernizations. During their training at Beijing College of Engineering, Huadong College of Engineering, Sian College of Engineering, Shenyang College of Engineering, and Changchun College of Optical and Precision Machines, the cadre-students will acquire a knowledge of modern scientific technology such as applied mathmatics, computer science, theory of automatic control, systems engineering, and industrial management. They will study for 1 or 2 years. Those with a high-school education will, after training, attain the level of college graduates. Those who graduated from college some time ago will increase their knowledge and ability after a year of training.

TIBETAN CADRES SELECTED TO LEADING POSTS IN GANSU

Beijing GUANGMING RIBAO in Chinese 13 Oct 80 p 1

[News report by Gu Yunggau [7357 3056 7559]: "Counties in Gannan Tibetan Autonomous Prefecture of Gansu Elect Tibetan Professional Cadres to Leading Posts"]

[Text] Party and government leaders of the Gannan Tibetan Autonomous Prefecture are actively discovering and selecting to leading party and government posts in the counties professional cadres who are of monority nationality, in an effort to bring minority nationalities and professionalism to the cadres. Since June, the prefecture has selected 42 middle-aged and young professional cadres, most of whom are Tibetans. The percentage of minority nationality cadres has changed from 34.7 to 52.3 percent, creating a more favorable condition for carrying out the party's policy of self-government in nationality regions.

In the first half of this year, seven agricultural and pastoral counties of this autonomous prefecture submitted names of 37 cadres who needed to be approved by the party cadres at the prefectural level. Among those cadres, few were Tibetans and even fewer were professional personnel. Party and government leaders studied the problem and regarded this situation as being unsuitable for the needs of the four modernizations in the locality. To enable the nationalities to practice their right of self-government, it is necessary to purge the remaining evils and influence of Lin Biao and the "gang of four," who denied the special characteristics of nationality districts, and actively discover professional cadres who are of minority nationality. Therefore, they went down to the agricultural and pastoral districts of the counties to engage in propaganda on the significance of selecting [minority] nationality professional cadres and to mobilize the [minority] nationality cadres and masses to recommend candidates. They investigated individual cases. After the work had been underway for some time, seven counties of the prefecture selected 42 middle-aged and young professional cadres of minority nationality. Approved by the upper level, they joined the leadership ranks of party and government in the counties.

Among the newly selected leading cadres of Gannan Prefecture, many are Tibetan cadres familiar with the characteristics and customs of the local nationality, professionally knowledgeable, young and energetic. Kung Zhaofang [1313 3564 5364], age 38, graduated from Gansu Normal University in 1967 and worked for 8 years in the educational department in Xiahe County of Gannan. Having become party secretary for Qingsui commune in the county, he dealt with educational problems by mobilizing schoolage children to attend school. He also worked on production and took the lead in scientific cultivation according to the conditions of the locality. In order to help changing the backwardness of two teams known for their poverty, he studied agricultural techniques and took key measures--for example in fertilizers and seeds, to increase production. He improved the life of the masses and was praised by the local masses. Now he serves as deputy party secretary of Xiahe County. A young Tibetan woman, Dan Zhicao [3927 4249 5335], who is only 28 years old, studied at Northwest Nationality College and Gansu Normal University. After graduation, she served as general cadre in the commune. Enthusiastic about work, feisty and righteous, she was able to communicate with the masses. She now serves as deputy party secretary of Tewo County.

SHANGHAI EDUCATION WORKERS ON ENROLLMENT SYSTEM

OW021044 Shanghai City Service in Mandarin 2300 GMT 1 Dec 80

[Text] According to a report by the Shanghai branch of XINHUA News Agency, in a recent discussion of the reform of the current enrollment system and method used by schools of higher learning, education workers at some schools of higher learning in this city maintained that it is highly unreasonable that one's fate is determined by a piece of examination paper being turned in and that this method affects to a certain degree the principle of enrolling only those who are outstanding and brings definite difficulty for universities trying to raise the quality of their education.

To improve the current enrollment system, they proposed: schools of higher learning should have more enrollment powers. Enrollment should not be handled by the government instead of the schools. The schools should have the right to select and enroll the students they need according to student academic credits and specialized abilities and have the right to refuse to accept the students whose total credits are satisfactory but whose performances in the examinations on their specialized subjects are relatively poor. In enrolling students, it is essential to base enrollments on scores in examinations from schools of higher learning and on a review of middle school performance. The present enrollment system deals only with scores on examinations, thus turning the principle of enrolling only those who are outstanding into that of enrolling according to scores.

If it is possible, we should give as much respect as possible to student preferences. It would be best if students were allowed to fill in their preferences after they take the examinations.

HAINAN CONFERENCE ON BROADCASTING

HK290621 Haikou Hainan Island Service in Mandarin 0330 GMT 28 Nov 80

[Text] A recent Hainan regional conference on broadcasting emphatically demanded that all county and municipal broadcasting stations persistently follow their own path, bring into play the superior features of broadcasting, and strive to do well in putting out their own programs of all kinds, to insure that radio propaganda can better serve the four modernizations.

This meeting was held to implement the spirit of the 10th national broadcasting work conference. Present were responsible persons and editors of the broadcasting stations of the Hainan Li-Mao Autonomous Prefecture, Haikou Municipality and all counties throughout the island. After listening to a report conveying the spirit of the national broadcasting work conference and reading about the experiences of many broadcasting stations throughout the country in successfully putting out their own programs, the participants explored the questions of how to follow their own path, bring into play the superior features of broadcasting, and organize their own programs of all kinds. They also exchanged experiences and voiced many valuable opinions.

The meeting pointed out: In common with wireless broadcasting and television, wired broadcasting must follow its own path, bring its superior features into play and put out its own unique programs that are welcomed by the masses in order to attain its own social status and enjoy development prospects. The meeting demanded that each broadcasting station put out a number of news, literature and art, general knowledge, and service programs. This should be done under the direct leadership of the local party committees and in light of the station's capabilities. Particular attention must be paid to successfully organizing local news broadcasts. In this way the station will become one of the centers of news and public opinion in its municipality or county.

The meeting also looked into the question of launching cooperation and stipulated tasks for each station in submitting scripts to the Hainan broadcasting station. The meeting also studied the question of television construction in Hainan.

XIZANG BROADCASTING WORK CONFERENCE OPENS IN LHASA

OW032157 Lhasa Xizang Regional Service in Mandarin 1130 GMT 3 Dec 80

[Text] The Xizang Autonomous Region opened its second broadcasting work conference in Lhasa on 1 December, according to a report by the staff of this station.

The main task of the conference is to study and discuss how to coordinate the region's broadcasting propaganda work with its current effort to curb poverty and bring prosperity to Xizang by upholding the party's general line and central task for the new period and by closely integrating broadcasting propaganda work with the region's actual conditions. How to present better broadcasting programs that have a local flavor and will attract the masses will be a subject of discussion. The conferees will also study and discuss how to give play to the special characteristics of broadcasting and television transmissions, exploit their strong points and avoid their weaknesses so that they can better serve our drive to build a united, prosperous, civilized new Xizang. The expansion and management of the region's broadcasting facilities, especially the broadcasting networks in Xizang's rural and pastoral areas, will also be discussed in order to give full play to the role of broadcasting and television stations in propaganda and education.

Participating in the conference are responsible persons of the propaganda departments under various prefectural and municipal party committees, representatives of the relay and broadcasting stations, leading members of the Xizang Broadcasting Bureau and various regional departments concerned as well as reporters.

NANJING WRITER-ARTIST CONGRESS--The Fourth Nanjing Municipal Congress of Writers and Artists was held from 28 November to 2 December. Through democratic election, Comrade (Tian Wu) was elected chairman of the Fourth Committee of Nanjing Municipal Federation of Literacy and Art Circles. Associations of writers, dramatists, artists, musicians and dancers, photographers and calligraphers were established at the congress. Some 300 representatives heard an important speech delivered by Comrade Chu Jiang on behalf of the Nanjing Municipal Party and Revolutionary Committees. The congress adopted a resolution calling on Nanjing's writers and artists to emancipate their minds and create more and better works for the masses. [Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 2 Dec 80 OW]

SHANGHAI CYL COLLEGE CLASS--The college-level class of Shanghai CYL School, the first of its kind in China, was officially opened at a ceremony held in Shanghai today. The ceremony was attended by Han Ying, first secretary of the CYL Central Committee and head of the central CYL school; Zhong Min, secretary of Shanghai party committee; and leading comrades of Shanghai CYL committee. They extended warm greetings to 126 students who will reach college level after 2 years of study. After graduation, they will be assigned as full-time CYL cadres in middle schools. Speaking at the ceremony, Han Ying encouraged the students to strive to become ideologically red and professionally expert through study at the college-level class. [Shanghai City Service in Mandarin 1130 GMT 2 Dec 80 OW]

SHANGHAI WELFARE MEETING--The Shanghai Civil Affairs Bureau called a meeting on urban social welfare work on 27 November. Over the past year, Shanghai's nine districts and four countries have set up 63 welfare units and provided welfare benefits to 2,470 persons. These welfare units include 57 welfare factories to settle blind, deaf-mute, disabled and other needy people. In addition, five homes for the aged and helpless and an institute for mentally retarded children have been set up. [Shanghai City Service in Mandarin 1130 GMT 27 Nov 80 OW]

JILIN TECHNICAL SCHOOL--Zhenlai County in Jilin Province has enacted marked changes in the structure of secondary education since the beginning of 1980. Its principle is to popularize primary schools, strengthen middle schools and reduce the number of high schools. The 16 high schools in rural areas have been merged into 3. A technical school and another six vocational courses have been instituted with the help of labor, industrial, commercial and education departments. Of the middle school graduates, only 40 percent entered high schools; 22 percent entered technical schools. [Changchun Jilin Provincial Service in Mandarin 2200 GMT 18 Nov 80 SK]

ZHEJIANG MEETING ON DICTIONARY--The compilation of China's largest Chinese language dictionary is under way. The committee for compiling the dictionary held its second meeting in Hangzhou 19-25 November to discuss ways to speed up work compiling the dictionary. The compilation of this huge dictionary, with more than 300,000 entries and 40 million characters, started in 1975 with Premier Zhou Enlai's approval. More than 400 language experts are participating in the compilation. [OW011337 Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 29 Nov 80 OW]

'RENMIN RIBAO' DISCUSSES PARLIAMENTARY SYSTEM

HK040812 Beijing RENMIN RIBAO in Chinese 2 Dec 80 p 5

[Article by Wu Daying [0702 1129 5391]: "Supervision of Governments by Parliaments in Various Countries"]

[Text] In various countries today, the work of their parliaments is to make laws and adopt the state's budget (state budgeting is also legal work but it has its own characteristics). At the same time, the parliament has the right to supervise the government. Supervising the government is a very important role played by the parliament. If the parliament does not play this role, the laws it makes will become empty talk and the government will abuse its power, act arbitrarily and have its own way.

There are three ways in which the parliament supervises the government.

1. It raises questions. According to the constitution of Yugoslavia, each delegate of the two chambers of the Federal Assembly has the right to question the federal executive council and the leading federal administrative organs, to ask these chambers to demand reports from these organs on their work, and to request special assistance in exercising his functions and powers. In France a meeting is held every week especially for members of the parliament to raise questions, which are to be answered by government officials. Members of the parliament may raise questions verbally or in writing and debate on the government's policies and statements. However, they may raise questions only in their capacity as members of the parliament and may not raise questions in the form of resolutions, and these questions are not to be put to the vote. The ministers concerned should answer these questions within 1 month. In Japan it is laid down in the rules of the Diet that when a member of the Diet wants to raise a question, he must submit a written statement on the main points of his question to the speaker of the house who, if he agrees, will forward the statement to the cabinet. The cabinet must give an answer within 7 days after receiving the statement. In Britain, according to the rules of the parliament, every day from Monday to Thursday when the parliament is in session, an hour's time is set aside for secretaries of state to answer questions raised by members of the parliament.

2. The parliament may put forward a no confidence motion. In a country which has a cabinet system, the parliament may put forward a no confidence motion if it disagrees with the policies and measures adopted by the government. When the no confidence motion is carried, the government must resign as a whole or ask the

state leader to dissolve the parliament and form a new one, which will decide whether the government should resign. For example, according to the provisions of France's constitution, after discussing the matter at a cabinet meeting, the premier should report to the National Assembly and assume responsibility for the government's administrative program or a general policy adopted by the government. The National Assembly may impeach the government and ascertain that the responsibility lies with the government. If the National Assembly adopts the no confidence motion and succeeds in impeaching the government, the premier must submit resignation of the government to the republic's president. When the government clashes with the National Assembly, the president may, after consulting the premier and the presidents of the Senate and the National Assembly, announce dissolution of the National Assembly and form a new National Assembly. According to Japan's constitution, if the cabinet does not dissolve the House of Representatives within 10 days after the House of Representatives adopts a no confidence motion or vetoes a confidence motion, the cabinet must resign as a whole.

3. The parliament investigates the activities of government organizations. This investigation does not have judicial characteristics in some countries. For example, when making investigations according to law, the working organizations and the joint working organizations of the two chambers of the Yugoslav Federal Assembly may ask for information, data and documents from the state organs, self-government bodies and working communities in order to accomplish their tasks. However, these organizations do not function as detective and judicial organs. In some other countries, the investigations conducted by the legislative organs have the nature of the powers of a judicial organ. For example, according to Italy's constitution, the two houses of parliament may conduct investigations concerning public interests. To achieve this end, these two houses may appoint commissions of their members according to the proportion of membership held by various political parties. These investigatory commissions have the powers of a judicial organ when they make investigations and studies. As another example, in the Federal Republic of Germany, the federal parliament has the right to form investigatory commissions to collect necessary evidence either openly or secretly. To produce evidence, an investigatory commission may exercise power according to some regulations for criminal lawsuits. The law courts and the administrative organs have the duty to give the investigatory commission legal and administrative assistance. The resolution adopted by the investigatory commission is exempted from examination by the law court. However, the law court is free to assess and judge the facts discovered by the investigatory commission.

Although the parliament may supervise the government in these three ways, it sometimes fails to play its entire supervisory role. However, the parliament doubtlessly may check on government activities. In fact this makes it possible to avoid overconcentration of power and to prevent the government from arrogating all authority to itself and having its own way.

'RENMIN RIBAO' COMMENTS ON FUNCTIONS OF BICAMERAL SYSTEM

HK040821 Beijing RENMIN RIBAO in Chinese 2 Dec 80 p 5

[Article by Zhou Xinming [0719 2450 6900]: "Some Facts About the Bicameral System of Bourgeois Parliaments"]

[Text] Historically, the bicameral system originated in Britain. Later, it gradually spread to various major capitalist countries and became the most common organizational parliamentary structure in capitalist countries. Subsequently, legal circles in Western capitalist countries have spoken very highly of the bicameral system. Famous British bourgeois jurist John Bright said that the bicameral system as an organizational form is "universal and eternal." British jurist Sir Henry James Sumner Maine said that almost always, any form of a second chamber is better than none at all. The reason why people place their hopes on the second chamber is not for it to become "an infallible rival to the first chamber, but for it to become an extra safeguard." Walter Bagehot believed that "it is very useful to regard the second chamber as a legislative organ for examining errors and for leisurely deliberation."

Bourgeois jurists believe that the bicameral system has at least three advantages:

1. The two chambers act as a check and a balance to each other. Montesqieu strongly believed in this proposition. He believed that "to prevent the abuse of power, power must be restrained by power." ("The Spirit of Law," Vol 1, p 154) He commended Britain for having "a legislative organ with two chambers which act as a check and a balance to each other through their power of dissent." (ibid pp 163-164) To him, inasmuch as each has the power to act as a check, the two chambers of the legislative organ are able to restrain each other. This view exemplifies the famous theory of checks and balances. Other scholars believe that the bicameral system could resolve conflicts between the executive and legislative branches. That is, when conflicts occur, one chamber of the bicameral legislative acts as the arbitrator. It does not only mediate, but could also play a decisive role. Leon Duguit, in his famous work "On Constitution," said that the rationale behind having two chambers was one chamber represented individuals while the other represented social or professional groups. The two chambers respectively accomodated various social forces. Thus, they serve as a buffer to enable various forces controlling the society to adjust to each other. If one force was growing too rapidly, it could be slowed down; and if another force had been growing too slowly, its pace could be accelerated.

2. The bicameral system could prevent hasty legislation. Some jurists are of the opinion that under a unicameral system, a bill only has to pass through the deliberation of one organ. Thus, it is naturally less thoroughly examined than one that has to pass the deliberation of two chambers. They believe that the second chamber's concurrence with a bill passed by the first chamber enhances the stability of law, and that the stability of law guarantees social stability. On the other hand, if one chamber disagrees with the other, it could restrain the other chamber. Mutual faultfinding between the two chambers forces the legislators to take a prudent approach.

3. It accomodates special interests and is able to recruit experts. Some scholars proposed that if one chamber represents public opinion, the other chamber should represent experts with practical experience. If one chamber is the chamber of the people, the other chamber should be the chamber of the statesmen. They believe that particularly in a federal state, there must be a chamber representing the whole country which represents the people by ratio of population and another chamber representing the federated states, regardless of their size and with equal representative rights for each state. If there is no second chamber which represents the special interests of individual states, then the federal system will be undermined in practice. They also feel that in a country, there are usually people who are particularly competent in public affairs but who, due to various reasons, could not campaign for a public position. Moreover, there are usually not many experts in parliament, and even if there are, they are usually preoccupied with political campaigns, leaving no time to conduct thorough studies on legislation concerning various economic and social problems. Thus, a second chamber must be established in order to recruit experts who are knowledgeable and who have practical experience to undertake studies on various problems.

With regard to the above advantages of the bicameral system, some bourgeois scholars hold different views. Their main point is that having a bicameral system is tantamount to recognizing two sovereigns in a state. They said: "If the second chamber differs with the first chamber, it becomes a harmful obstacle, while if it agrees with the first chamber, it becomes an unnecessary nuisance." In short, they deny the need for check and balance between the two chambers of parliament. Yet, although some people oppose the bicameral system for various reasons, looking at it from experience, the bicameral system has become the most popular system among the major capitalist countries. In French history, more than 10 constitutions were promulgated in a span of a century, but the unicameral system was adopted only twice (in 1791 and 1848). During the "republican" period, Britain also adopted the unicameral system for a while, but the abolished House of Lords was revived shortly after. Although there were no nobles in the United States, during the constitutional convention in 1781, all the participants, with the exception of Franklin, supported the adoption of a bicameral system. We all know that the Yugoslav Federal Assembly also has two chambers. The assembly is composed of the Federal Chamber and the Chamber of Nationalities (also called the Chamber of Republics and Provinces).

Bourgeois bicameral parliaments have a history of at least 700 years since the first British "parliament" appeared during the 13th century. During all these years, although some countries had adopted the unicameral at one time or another, in the end, they all adopted the bicameral system.

TWO FOREIGNERS STABBED IN BEIJING BY MENTAL PATIENT

OW191230 Beijing XINHUA in English 1220 GMT 19 Nov 80

[Text] Beijing, 19 Nov (XINHUA)--Two members of an Australian business mission, who were knifed by a young Chinese man in Beijing on Monday, are recovering well and are expected to leave the hospital in a few days, a surgeon at the Capital Hospital said today.

They are Walter James Howarth, 46, technical director of the Australian Mineral Development Laboratory (AMDEL), and Keith John Henley, 40, manager of the Geological Division of AMDEL. Mr Henley is British. The two men are part of a delegation here to discuss ore processing.

The assailant, He Lianyong, 26, is a schizophrenic, say psychiatrists at Beijing's Anding Psychiatric Hospital, where his illness was diagnosed in 1975.

The attack took place at about 4:30 on Monday afternoon when Mr Howarth and Mr Henley were waiting for their car outside the Nationalities Hotel in central Beijing.

The young man attacked them from behind, first stabbing Mr Howarth in the head and then stabbing Mr Henley twice in the head. He tried to flee but was caught and overpowered by two taxi drivers.

The injured men were taken to a nearby hospital for first-aid treatment and then transferred to the Capital Hospital where they were admitted. Mr Howarth was suffering from a scalp wound 6 cm long and Mr Henley had received scalp wounds 2 cm and 9 cm long.

Su Changbao, a surgeon at the Capital Hospital, said today the wounds were not infected and "if things go on smoothly they will be discharged in a few days, after the stitches have been removed."

Beijing Municipal People's Government said today it is to call for discussions on the control of mentally ill people. The assailant has been working at the Beijing February Seventh Rolling Stock Plant, despite his previous history.

The psychiatrists from Anding Hospital, who were present when He Lianyong was questioned by the police, said his behaviour indicates he is still suffering from schizophrenia.

HONG KONG PAPER REPORTS INDICTMENT OF GANG OF FOUR, ASSOCIATES

HK191022 Hong Kong TA KUNG PAO in Chinese 19 Nov 80 pp 1, 2

[Special dispatch by TA KUNG PAO contributing reporter Chun Tsu from Beijing on 18 November: "Scenes of the 10 Accused Receiving Their Indictment Were Filmed--Jiang Qing Wanted Someone to Speak for Her; While Zhang Chunqiao 'Refused to be Indicted'"]

[Text] Eight days ago, the 10 accused including Jiang Qing received their indictment from the Special Procuratorial Office. They each showed different expressions and gave different reactions.

The indictment was sent to the 10 accused in the Qingcheng prison on 10 November. The whole process was filmed by the central television station on the spot. According to a friend who has seen part of the film, the 10 accused were escorted one by one by bailiff into an office to receive their indictment. Two office desks were placed at one end of the office and two clerks from the Special Procuratorial Office were sitting behind the two desks. The accused were brought before the two clerks and either stood or sat not far in front of the two desks. Microphones were placed before the clerks and the accused. The clerks first stated that they were sent by the Special Procuratorial Office to deliver the indictment and then announced the decision of the NPC Standing Committee on setting up a special procuratorial office through the Supreme People's Procuratorate and a special court through the Supreme People's Court to try the case concerning the counterrevolutionary cliques of Lin Biao and Jiang Qing. A bailiff then handed the indictment to the accused and the accused signed a receipt on another office desk placed beside the accused. The next step was that the clerks asked the accused whether or not they wanted to commission a defense lawyer. If they wanted a defense lawyer, they could write a letter of commission and it would be delivered by the Special Procuratorial Office on their behalf. Finally, after the clerks announced the regulations of the special court, the accused were escorted back to their cells.

According to informed sources, the first of the accused to be escorted into the office was Wang Hongwen. This man had built himself up through beating, smashing and looting. Though he once usurped a high position in the CCP Central Committee, he had in fact always been a hatchet man whom Jiang Qing could summon anytime she wanted. He is the youngest among the 10 accused and is now 45. He was wearing a faded blue uniform and a cloth cap. The cap was pulled down close to his eyebrows and his face was filled with a gloomy expression. With knitted brows and lowered head, he stood stiffly before the microphone as though he was listening with rapt attention to the clerks reading aloud the relevant documents. When the clerks asked him whether he wanted to commission someone to defend him, he answered no. This man was comparatively willing to confess his crimes during the preliminary trial.

The Literary Prostitute Yao Wenyuan Has Had His Head Shaved; He Looked Disturbed and Kept on Blinking His Eyes

It was Yao Wenyuan after Wang Hongwen. This literary prostitute, whom Jiang Qing called the "golden stick," was a ruffian who killed people with his pen. The articles in the past years which framed up charges against Zhou Enlai, Deng Xiaoping, Wu Han, Zhou Yang and the "three-family village" were all either written or modified and finalized by him. He is now 49 years old. He was wearing a black suit and has had his head shaved. He is fat and stout and there was a beard on his cheeks--it seemed that he had not shaved his beard. His face was filled with a cunning look and he stood there feeling very disturbed, blinking his eyes all the time. When the clerks asked him whether he wanted to commission someone to defend him, he hesitated for a while before he said that he had never thought about the question. He said he had no knowledge of such a thing and that he did not know how his case would be defended. He kept on saying that he should be given time to think it over. This man had a blig tongue before Jiang Qing during the past years; but now he has become very clumsy in expressing himself.

The third one escorted into the office was Zhang Chunqiao. This man had once always wanted to become the premier; and he was a careerist who had constantly borne in mind the thought of changing the dynasty during the cultural revolution. He is now 63 and was wearing a black suit. He was bareheaded and was wearing a pair of spectacles. He looked thin and pallid and wore a long face, with his mouth tightly shut. He stood there silently as though he would not listen to anything. When the clerks asked him whether he wanted to commission a defense lawyer, he went so far as to say that he refused to be indicted.

Jiang Qing Spoke in a Pretentious Manner; Her Neck Was Full of Flaccid Muscles and She Made an Effort to Appear Composed

The last of the "gang of four" escorted into the office was Jiang Qing. This woman, who had dreamed of becoming "empress dowager the second," was still showing her qualities as a female hooligan. She is now 67 years old. She wore a pair of spectacles and a suit of black clothes, with a black cotton shawl on top. Her face and neck were full of flaccid muscles and yet she was standing there trying to look coquettish and pretending as though nothing had happened. When the clerks asked her whether she wanted to commission a defense lawyer, she said with her usual husky voice and a sloppy intonation that she would like someone to speak for her because she was in ill health. She might not be able to speak and would therefore like to have someone speak for her.

Jiang Tengjiao [literally: soaring dragon] Has Become a Feeble Snake; Wu Faxian Appeared With a Dull Look

The fifth one was Jiang Tengjiao. This man is now 61. He is short and has gray hair. He looked very miserable and was wearing a gray uniform. His appearance did not match his name at all. He did not have the appearance of a "valiant military officer." When he was asked the question whether he wanted a lawyer, he said he trusted the court and did not want a defense lawyer.

Next came Wu Faxian. This man once called himself a lackey of Lin Biao; and he lauded his young master Lin Liguo as a "super-genius." The man is short and fat and had a dull look in his eyes. There was a thin patch of grizzled hair at the back of his head; and the flaccid muscles in his neck almost filled up the hollow space between his head and his chest. He is now 65 and he was wearing a coat and a pair of pants of a different color. He stated that he did not need a defense lawyer. He received the indictment and requested to have a copy of the court regulations and took it with him before he was escorted back to his cell.

Huang Yongsheng Requested to be Seated; He Was Dumb as a Wooden Chicken and His Response Was Slow

The seventh one escorted into the office was Qiu Huizuo, former director of the PLA General Logistics Department. During the 10 years of great calamities, the General Logistics Department set up its own private prison and extorted confessions by torture. It had framed up charges against some 400 people. The man is now 66. He is thin and tall and was wearing an old uniform. His face was thin and dry and he just stood there silently with his head half-lowered. He also said that he did not need a defense lawyer.

The eighth one was Huang Yongsheng; This man ranked first among Lin Biao's "four great warrior attendants" (Huang Yongsheng, Wu Faxian, Li Zuopeng and Qiu Huizuo) and was especially fond of and trusted unduly by Lin Biao. He is now 70 and he was wearing a green military uniform. He is tall but was somehow very weak. It was said that he had just recovered from an illness. After standing for a while, he asked for a wooden bench and sat down. He also said that he did not need a defense lawyer. People have seen his photograph arm-in-arm intimately with Ye Qun on the Great Wall. At that time, he was immensely proud; but this time he was dumb as a wooden chicken and was slow in response. When the clerks told him that he might leave, he was nevertheless at a loss and sat there and did not move. It was not until the bailiff urged him that he stood up and was escorted away.

Chen Boda and Li Zuopeng received their indictment in another room. Chen Boda is now 76 and is in fact the oldest among the accused. This man called himself a "petty, ordinary person" during the cultural revolution. He was a queer man. He was short, fat, pale and bareheaded and walked with difficulty. A seat was arranged for him in the room and there was also a small desk. When he was asked whether he wanted to have a defense lawyer, he answered with a shrill voice in Fujian dialect that he had not thought about the question.

There Was a Fierce Look on Li Zuopeng's Face; Zhang Chunqiao Refused to Accept the Indictment

Li Zuopeng was the last one to receive the indictment. He is now 66, tall and was wearing a suit. His hair was dark gray and he looked ugly and ferocious. He knitted his brows throughout and there was a fierce look on his face. As soon as he entered the room, he sat down on the seat and put his hands on the small desk in front of him. He stated that he did not need a defense lawyer. When the clerks read the court regulations to him, he said he could not hear them clearly nor could he remember them. He requested that he be given one copy of all the documents read to him.

Among the 10 accused, only Zhang Chunqiao did not accept the indictment. However, this should not hinder in any way the process of their trial.

The special court has made full preparations for the trial. The trial will be carried out in a balanced way in two courts--each trying five of the accused. During the trial, a large amount of crime evidence will be produced and the relevant witnesses will be called. New uniforms have also been made for the judges, judicial officers and procurators. This is the largest trial since the establishment of New China and it has in fact attracted world attention. From the trial, the people will be able to see true records of the countless crimes committed by the counterrevolutionary clique. At the same time, we hope the special court will pass the proper verdicts on those criminals.

'TA KUNG PAO' SUPPLIES BACKGROUND OF DEFENDANTS IN LIN-JIANG TRIAL

HK190556 Hong Kong TA KUNG PAO in Chinese 19 Nov 80 p 2

[Special dispatch by TA KUNG PAO contributing reporter Chun Tsu: "Before the Trial Opens"]

[Text] Beijing, 18 Nov--All 10 Culprits Detained in Qincheng Prison

The special court of the Supreme People's Court will soon open its trial of the case of the Lin Biao and Jiang Qing counterrevolutionary cliques. Starting on 15 November, XINHUA News Agency has been releasing daily reports on the contents of the indictment. Undoubtedly, this is a sign that the trial is about to open officially.

Those who will appear in court to face trial include Jiang Qing, Zhang Chunqiao and eight other defendants. These 10 defendants have been detained in the Qincheng prison located in the suburb of Beijing all along. Chen Boda has been imprisoned for more than 10 years; Huang Yongsheng, Wu Faxian, Li Zuopeng and Qiu Huizuo have been in prison for more than 9 years; while the "gang of four" have been locked up for more than 4 years.

The "Eminent" Positions of the 16 Principal Culprits

One look at the list of 16 principal culprits in the cliques is enough to terrify people. Among the 16, 13 had been members of the Political Bureau of the Central Committee; 3 had been party vice chairmen, namely: Lin Biao, Kang Sheng and Wang Hongwen; 2 had been Standing Committee members of the Political Bureau of the CCP Central Committee; namely: Zhang Chunqiao and Chen Boda; 1 had been vice chairman of the NPC Standing Committee--Kang Sheng; 2 had been vice premiers of the state council, namely: Zhang Chunqiao and Xie Fuzhi; 1 had been chief of the general staff of the PLA--Huang Yongsheng; 3 had been deputy chiefs of the general staff, namely: Wu Faxian (concurrently commander of the air force, Li Zuopeng (concurrently first political commissar of the navy) and Qiu Huizuo (concurrently director of the General Logistics Department). These people are all traitors who brought great calamity to the country and who had infiltrated the CCP and the Chinese Government for many years.

These people ascended the top level of the organs of power of the party and government during the 10 years of "great cultural revolution." They controlled great power in the party, government, military, fin ancial and cultural sectors and did whatever they pleased in defiance of all laws. At that time, only Premier Zhou Enlai could restrain their evildoings a little within the limits of his ability. This group of people had tried to use the disaster of the "cultural revolution" to "overthrow the regime" in China in order to establish a feudal fascist dynasty and become the emperor or empress and founders of the Lin or Jiang dynasty. The calamity created by these people affected the whole country. Those who were directly or indirectly persecuted by them number almost 100 million. Such a serious calamity can rarely be found in the history of China and of other countries of the world. Therefore, all 1 billion Chinese people are of the opinion that they ought to die. However, the NPC Standing Committee still decided to charge them according to law and subject them to public trial. Furthermore, they will only be made to account for their criminal offenses while the errors they committed in their work and in their line will be dealt with separately. This is an important effort on the part of China to enforce the rule of law.

Among the 16 principal culprits, Kang Sheng and Xie Fuzhi require special mention. The true features of these two persons were only exposed recently. The CCP Central Committee has issued special documents on the crimes of these two. These documents are being circulated among the party members and masses.

The People Are Filled With Righteous Indignation About the Monstrous Crimes of Kang, Xie

The roles of Kang Sheng and Xie Fuzhi in the Lin Biao and Jiang Qing counterrevolutionary cliques was by no means minor. Kang Sheng was the No 1 villainous adviser of this clique [as published]. His position was higher than Zhang Chunqiao. Jiang Qing was under his tutelage during her early years and he had been her principal political patron. This fellow was not only good at manufacturing counterrevolutionary fallacies such as the "criticism of the doctrine of primary of productive forces," the theory that "classes and class struggle still exist in the entire historical period of socialism" and the "determination of class status by political attitude," but also at fabricating false charges, making up false cases and framing good people. Many cases of miscarriage of justice involving a great number of people during the cultural revolution, such as the case of the "New Monggol People's Party," were his masterpieces. On 21 January 1968, he even accused Yunnan Provincial CCP Committee Secretary Zhao Jianmin (incumbent deputy minister of the Third Ministry of Machine Building) of being a traitor in the latter's presence at the Jingxi guesthouse. What evidence did he have? He said, based on his 40 years of revolutionary experience, he had a sensitivity. He then arrested Zhao right then and there. There were numerous similar incidents.

During the period of the "cultural revolution," Xie Fuzhi was a vice premier and concurrently the minister of public security. He had the power of life and death over people. Therefore, he indulged in torturing and interrogation to make people confess and in making up false cases. There had been numerous revolutionary cadres and ordinary people who were framed and killed by the partnership and close collaboration of Kang Sheng and [words indistinct] counterrevolutionary clique. They were only good at framing people and extracting confessions by torture and interrogation and seeking reward and promotion.

These two fellows and their wives (Cao Yiou is a Standing Committee member of the Fifth NPC and has not been removed from that post while Liu Xiangping was once the minister of health) were such good partners. Cao and Liu also made their contributions to the Lin Biao and Jiang Qing counterrevolutionary cliques' framing and persecution of cadres and masses, breaking up and bringing disaster to many families. The broad masses of people and cadres deeply hate these two couples. Kang Sheng and Xie Fuzhi have already been expelled from the party, yet people feel that it is a shame that their crimes have not been completely exposed and criticized. The forthcoming trial will not look into the legal responsibility of their crimes because they have already died. Inasmuch as the criminal law has such a stipulation, the indignant people will have to suppress their fury.

Jiang Tengjiao Was the Commander of the Operation to Assassinate Chairman Mao

The background of another principal culprit, Jiang Tengjiao, is unfamiliar to overseas readers. Who is he? What were his serious crimes that include him in the ranks of the principal culprits? This person was originally the air force political commissar of the PLA Nanjing units and he was one of the principal culprits in the Lin Biao counterrevolutionary clique's conspiracy to assassinate Chairman Mao Zedong. In February 1971, after Lin Biao sent his son Lin Liguo to Shanghai to organize the so-called "joint fleet" and drew up the plan for a counterrevolutionary military coup, the "571 project," Lin Liguo was assigned to go to Shanghai to organize a leading core to implement this coup plot. Jiang Tengjiao was included in that group. In early September 1971, after Lin Biao's counterrevolutionary conspiracy was leaked, Lin Liguo started making detailed plans to assassinate Chairman Mao at a secret base in Beijing. Lin Tengjiao was again appointed the first line commander in the Shanghai area. According to the plans, they intended to seize an opportunity in Suzhou or Shanghai to assassinate Chairman Mao Zedong. Therefore, Jiang Tengjiao was the chief commander of the conspiracy to kill Chairman Mao Zedong. On 11 September 1971, Lin Biao was about to flee southward to Guangzhou and establish another central committee. Jiang Tengjiao was also included in the list of people to be evacuated to the south. Therefore, this person is by no means a minor character in the Lin Biao counterrevolutionary clique. Moreover, he has committed a great crime. It is not surprising that he is named as a principal culprit.

PARTY AND STATE

JIANG QING'S 26 NOVEMBER COURT APPEARANCE

HK290152 Hong Kong TA KUNG PAO in Chinese 28 Nov 80 p 2

[Contributing article by Chen Lin: "Comments on Jiang Qing's 'I Don't Know'"]

[Text] The 26th of November was the seventh day of the trial of the important case involving the Lin-Jiang cliques. It was also the day which attracted people's greatest attention.

Through satellite relay by "TVB" and "RTV," Hong Kong's two television stations, people could see from the special news report of the Beijing Central Television Station that the witch Jiang Qing, who had brought extremely serious calamities to the Chinese people, was still trying to put up a deathbed struggle in the solemn court. She was both ferocious and cunning and gave an extremely ugly performance.

The aim of the trial is to investigate the crimes of the "gang of four" in slandering and persecuting party and state leaders as well as in usurping party and state power. When Zeng Hanzhou, chief judge of the first tribunal of the special court, interrogated the chief criminal Jiang Qing and asked what they had secretly talked about on the evening of 17 October 1974 when she summoned her sworn followers Zhang Chunqiao, Yao Wenyuan and Wang Hongwen to building No 17 at Diaoyutai, the witch first pretended to be calm and flatly denied the event. Next, she acted shamelessly and consecutively answered three times "I don't know." Jiang Qing, who had committed the most vicious crimes, thought that she would be able to escape the net of justice simply by flatly denying everything, and all her crimes seemed to have ceased to exist. This was really too ridiculous.

Jiang Qing's monstrous lies were laid bare in just a few minutes later by the testimony of her confederate and other witnesses. In front of Jiang Qing, her confederate Wang Hongwen testified that on the evening of 17 October 1974, it had been Jiang Qing who summoned Zhang Chunqiao, Yao Wenyuan and Wang Hongwen to building No 17 at Diaoyutai to hold a sinister meeting, who took the lead in plotting to frame up charges against Premier Zhou and Deng Xiaoping, who wanted Wang Hongwen to go to Changsha to see Chairman Mao Zedong and frame up charges against Premier Zhou and Deng Xiaoping as well as conspired to stop Deng Xiaoping from taking up the post of first vice premier.

The testimony by Wang Hairong and Tang Wensheng further exposed that despite the fact the Wang Hongwen was rebuffed in Changsha in their attempt to frame up false charges, the "gang of four" headed by Jiang Qing still did not drop their vicious idea. They had wanted to make use of Wang Hairong and Tang Wensheng in a second attempt to frame up false charges. On 18 October 1974, Jiang Qing summoned Wang Hairong and Tang Wensheng to building No 10 at Diaoyutai, where she unscrupulously slandered that the leaders of the state council "often established ties with each other under the pretext of discussing work." She said that "the premier was very busy even in the hospital and was not really recuperating. Xiaoping, the premier and Marshal Ye were of the same gang and the premier was their boss behind the scene." Jiang Qing also asked the dog-head staff officer Zhang Chunqiao to make a report of the so-called current situation and they compared the Political Bureau meeting on 17 November to the "February counter-current." They would only be satisfied with the down of all the revolutionaries of the older generation. When the demand by the "gang of four" was rejected by Wang Hairong and Tang Wensheng, Jiang Qing still insisted on their reporting to Chairman Mao once more. We can thus see that throughout the vicious conspiratorial activities to usurp party and state power, Jiang Qing was the chief instigator. However, Zhang Chunqiao, Yao Wenyuan and Wang Hongwen can hardly evade their criminal responsibilities--especially Zhang Chunqiao, who had always dreamed about "changing the dynasty."

In the face of the testimony by her confederate and the witnesses, the witch Jiang Qing showed her original colors. She felt as though she was sitting on a bed of nails and was later escorted down the defendant's dock like a stray cur.

The chief judge of the tribunal finally announced that the accused Jiang Qing's refusal to answer questions or denials had been put on record. Nevertheless, with all the reliable exhibits and testimony by the witnesses and her confederate Wang Hongwen in confrontation with the accused, the fact was that there were numerous and ample evidence; and the court had completed its investigation.

People could see from the television that the trial and investigation was very serious and it had upheld the principle of taking both the points of facts and the points of law as the basis. Before the conclusion of the trial of the case, the special court neither found the accused guilty, nor acquitted the accused as not guilty. Jiang Qing's shameless denials were all put on record. However, it does not matter whether the two poisonous snakes Jiang Qing and Zhang Chunqiao were rendered speechless or they made flat denials in the court, the final decisions of the court will not be affected. This is because the Chinese courts attach importance to evidence and not testimony and convict people of their crimes based on facts. It is stipulated in the PRC law of criminal procedures: "Even without the testimony of the accused, the accused may be found guilty and punished according to the criminal law when there are ample, reliable evidence." The fact that Zhang Chunqiao refused to accept a copy of the indictment and that Jiang Qing flatly denied everything has demonstrated that they are a gang of incorrigibly stubborn arch usurpers of state power. They do not have the courage to face the trial by the 900 million people.

Some people are worried that the "gang of four" will be dealt with leniently because Article 9 of the PRC "criminal law" stipulates the principle of giving a "comparatively lenient treatment" when there is a difference between the new and old criminal codes. However, the "criminal law" at the same time specifically stipulates that "those who cause particularly serious harm to the state and the people, and whose crimes are particularly vicious, may be sentenced to death."

The serious harm the "gang of four" has done to the Chinese people and their vicious crimes are all unprecedented; and there is absolutely a legal basis for punishing them by death. There is no such question as having no appropriate law to follow.

The "gang of four" ran amuck for 10 years and committed all manner of crimes. The Chinese people had watched and loathed the towering crimes committed by them. Jiang Qing may say "I don't know" ten thousand times in broad daylight. However, the people throughout the country know very well how they cruelly slaughtered the loyal and innocent people. The quibble and stubborn resistance by Jiang Qing and her clique will only arouse the people's great hatred and speed up their own destruction.

LAW AUTHORITY EXPLAINS FOREIGN EXCLUSION FROM LIN-JIANG TRIAL

HK200138 Hong Kong TA KUNG PAO WEEKLY SUPPLEMENT No 751 in English 20-26 Nov 80 p 1

[Article by Beijing correspondent]

[Text] On 10 November, the 10 members of the Lin Biao and Jiang Qing cliques were served the bill of indictment and asked if they wanted defense lawyers. The event took place in the town of Qincheng, about 50 km north of Beijing, where the 10 were held in custody. Their reactions:

Wang Hongwen, 45, dressed in faded blue cotton uniform and with a cap pulled down to his eyebrows, said simply 'no', meaning he doesn't need a defense lawyer.

Yao Wenyuan, in black cotton uniform, bald and unshaven, hesitated before saying he had not given thought to the question, he didn't know anything about court trials or in what way his case could be defended and that he would have to think about the matter.

Zhang Chunqiao, 61, dressed in black cotton uniform, hair shaved, said that he did not accept the indictment.

Jiang Qing, 67, in black cotton uniform, asked someone to speak for her (at the trial) as she was not in good health.

Inside the special court, the national emblem will be hung in the center, according to RENMIN RIBAO. Underneath the emblem will be the bench. The dock with iron railings will be in front of the bench.

The verdict to be passed at the end of the trial will be decided by majority vote among the judges. At least one judge and one defense lawyer are from Taiwan Province, an informed source said. Taiwan is also represented in the public gallery.

In an interview with a law authority by this correspondent, the conversation was as follows:

Question: The trial is a focus of world attention. Why is it that foreigners are not allowed to hear the trial?

Answer: Why should they be? A Chinese trial does not have to be heard by foreigners, especially if the case is a major one tried by a special court and the vast amount of state secrets involved. Will it do to have foreigners present?

Question: I understand that the public gallery is limited to 800 people. Why should there be this limitation if the trial is a public one?

Answer: The special court allows not more than 900 people in the public gallery. Some 400 odd people will hear the trial in each of the first and second tribunals. The post war trial of war criminals in Tokyo only allowed 200 odd people in the public gallery. Our allowance of 400 odd people is twice as many as the Tokyo trial. And don't forget those who sit in the public gallery will be representatives of all sections of the population.

Question: Doubts have been expressed abroad regarding the judicial fairness of appointing victimized persons as judge, in any case, such appointments should be avoided. Why were Jiang Hua and Wu Xiuquan who were persecuted by Lin Biao and the gang of four appointed president and vice president of the special court?

Answer: The cultural revolution was a disaster in China in which no one was directly or indirectly unhurt by Lin Biao and the gang of four. To try to avoid people who were hurt (to be court presidents) would be tantamount to asking Jiang Qing to pass judgment on herself or asking the ghost of Lin Biao to pass judgment on Jiang Qing.

Question: People familiar with English and American laws have doubts about the phrasing of "usurping the party and state." They don't think usurping the party and the state should be mentioned in the same breath and raised in the same charge.

Answer: China has her own laws. We can only judge the case on the basis of Chinese laws. This is why usurping the party and the state are mentioned in the same breath. People outside do not understand the conditions that exist in China. In China, the communist party is the party in power. It would be impossible to usurp the state without usurping the party. It is absolutely necessary to first usurp the party before usurping the state. The two are linked together.

GUANGZHOU PEOPLE CALL FOR JIANG QING'S DEATH

HK011140 Hong Kong WEN WEI PO in Chinese 30 Nov 80 p 1

[Newsletter from Guangzhou by correspondent Lan Ching-Chung: "Everyone in Guangzhou Says Jiang Qing Must be Put to Death"]

[Text] In the past few days, people throughout Guangzhou have been greatly agitated by the unskillful performances of Jiang Qing and Zhang Chunqiao at court and said that: "It is necessary to kill Jiang Qing in order to please the people," and "the people will not be pacified if Jiang and Zhang are not put to death." A person of the law circles said: The attitude of a criminal, who deserves death penalty, in pleading guilty has an effect on whether the sentence will be suspended or not.

In the wake of the progress of the trial, the people who had suffered during the 10-year catastrophe were greatly annoyed by the shameless acts of these major culprits. An observant person of the upper levels has once made a clear analysis and believes that Jiang Qing would not be put to death immediately. The grounds supporting his analysis were: the crimes which Jiang Qing committed certainly deserve the death penalty. However, China still has more work to do in order to eliminate all historical shadows. Jiang Qing had usurped a high position and had a thousand and one links. Can the country deal with all this at one time? Currently, when he saw the arrogant performance of Jiang Qing and heard her "I don't know," he could not help asking himself: What is the point of keeping Jiang Qing alive?

This reporter heard from a person of the Beijing film circles say that: One day, when a photographer of the Central Newsreels and Documentary Films Production, who always shot documentary films inside the Zhongnanhai, was shooting pictures at Jiang Qing's pre-trial, smiling and grimacing, Jiang Qing greeted him: "Xiao X, have received a recent promotion assignment? If not, I can recommend you to XXX (note: responsible person of the Central Newsreels and Documentary Production)." This "fantastic story" left us not knowing whether to laugh or cry. Meanwhile, it reminded us of the posturing of Jiang Qing in front of the cameras at the court. A person of the literary and art circles profoundly said: Jiang Qing was still in her sweet dream of being the empress when she stepped into the historical court. Did she only want to arouse public indignation? In the statements of the Lin Biao clique concerning the "571" coup d'etat conspiracy, it was said that: "Lin Biao has occupied a superior position where state power is concerned." This is of course a miscalculation by an ambitious man. But today Jiang Qing is still alive and can we deny the fact that Jiang Qing is still ambitious? The counterrevolutionary cliques of Lin and Jiang had been painstakingly going about their business for more than 10 years before they were imprisoned for 4 years. How could she not but make use of a few shoots to "cast amorous farewell glances" to the spirit of the counterrevolutionary forces? He sighed and continued: When history sounded the death knell of the counterrevolutionary cliques of Lin and Jiang, it, in the meantime, sounded to us the alarm of "be thorough in exterminating evil."

Lin Biao wanted to set up another central committee in Guangzhou in accordance with his plot, ajd Jiang Qing had directed her dream of "empress of the red capital" in Guangzhou as well. Their evil sabotaged the country, and they persecuted the people during the 10-year catastrophe, and thousands and millions of Guangdong families also lived in hardship. However, justice has a long arm. The people have always been waiting to see the end of Jiang Qing's gang. People were happy when they heard of the trial of the 10 culprits. Since the trial was televised, a "full house" was found in every house where there was a television set, some people even watched from the windows outside the houses. There were only a few people on the streets around half past seven, and not many people went for the late show at the cinemas. On 25 November, Jiang Qing had been scheduled to be brought to trial at the court (later changed to 26 November), people thought they could watch it on the television. Thus, the cinemas became even emptier. Taking only the news cinema into account, the number of spectators was reduced by more than 400. Many young people also gave up their dates. In the past few days, rumors of "Jiang Qing should be put to death" were heard everywhere. A military officer of the Guangzhou PLA unit told this reporter that: The PLA unit watched the trial of Jiang Qing on the television on 26 November and became very furious. Many of them held that: Jiang Qing has committed such serious crimes, and yet she is still so arrogant. The people will only be pleased when she is sentenced to death.

This reporter talked with a dependent of a person who had been cruelly prosecuted during the great cultural revolution and asked about her feelings. She straightforwardly said: This is an unprecedented case of sabotaging the country and persecuting the people in history. If the major culprits are not sentenced to death and serious hidden dangers are not eliminated, we will be ashamed to pray to the spirits of the deceased and we will be unable to pacify the hatred of millions of millions of dependents of the deceased. Honestly speaking: "I won't feel good at heart either."

People are anticipating the death of Jiang Qing.

'RENMIN RIBAO' ON GANG'S PLOTTING, WANG'S CHANGSHA TRIP

HK280930 Beijing RENMIN RIBAO in Chinese 27 Nov 80 p 7

[Article by RENMIN RIBAO reporter Ji Xichen [4764 1585 2525], Lin Gang [2651 6921] and Lu Nan [7627 0539]: "Circumstances Surrounding the False Accusations in Changsha--First in a Series of Sidelights on the First Tribunal of the Special Court"]

[Text] Conspiracy, conspiracy... During the "great cultural revolution," the Lin Biao and Jiang Qing counterrevolutionary cliques cooked up one conspiracy after another.

The false accusations made in Changsha was one among the "gang of four's" many conspiracies.

On 24 and 26 November 1980, the first tribunal opened hearing on this conspiracy.

Jiang Qing Was the Mastermind

At 0900 on 26 November, defendant Jiang Qing was brought to the courtroom by two female bailiffs.

Sitting in the dock, Jiang Qing's actions were clumsy and her face was expressionless. It seems that she has not awakened from her dream of becoming an empress.

The chief prosecutor Zeng Hanzhou asked her: I ask you this question: Is it not true that on the night of 17 October 1974, you called Zhang Chunqiao, Yao Wenyuan and Wang Hongwen to a meeting in building No 17 of Diaoyutai to draw up secret plans? What did the four of you plot?

Jiang Qing denied: I do not know.

The chief prosecutor asked: Was Wang Hongwen's second trip to Changsha part of your plot?

Jiang Qing shook her head and did not answer.

The chief prosecutor announced: Defendant Jiang Qing denies the facts established by the indictment. This will be put on record.

At 0915, Wang Hongwen was called to court to testify. He repeated all the facts that he confessed during the court hearing of 24 November and made some additional remarks. Wang Hongwen said that he volunteered to go to Changsha and Jiang Qing immediately agreed, saying that if he was going, he should go early, preferably before Chairman Mao met with foreign guests.

During the court hearing of 24 November, Wang Hongwen testified that on 4 October 1974, it was Zhang Yufeng who told him over the telephone that Chairman Mao Zedong had nominated Comrade Deng Xiaoping to be the first vice premier of the State Council. At that time, Wang Hongwen made a record of that phone call.

The staff of the court showed the record on a slide. It reads:

Comrade Zhang Yufeng called: The leader said that 3,000 characters would be long enough for the report on the work of the government. He also said how many vice premiers should there be and who should be first premier. (Deng)

The chief prosecutor asked: What was your motive in going to Changsha to make accusations?

Wang Hongwen answered: To prevent Deng Xiaoping from becoming the first vice premier.

On the 24th, Yao Wenyuan admitted in court that he had said that the atmosphere at that time "had the smell of Lushan conference." He testified that the "accusations in Changsha" were Jiang Qing's idea.

How did the "gang of four" carry on their conspiratorial activities to charge Premier Zhou with false accusations and stop Comrade Deng Xiaoping from becoming the first vice premier?

The Villain Flew South

At around 0900 on 18 October 1974, a silver-colored special plane took off from Beijing, aboard this plane was Wang Hongwen, who had usurped the position of vice chairman of the Party Central Committee. Without the knowledge of Premier Zhou and other Political Bureau members, he secretly left Beijing in order to see Chairman Mao before he received foreign guests, for the purpose of making false accusations against Premier Zhou and Vice Premier Deng Xiaoping.

The false accusations fabricated by Jiang Qing and her clique started from the counterrevolutionary farce they cooked up--the incident of the vessel "Fengqing."

Right after May Day in 1974, the first Fengqing vessel built in our country sailed from Shanghai to Europe, carrying with it the great expectations of the motherland. The trip to Europe and back covered a distance of 32,000 nautical miles and lasted for 150 days. The ship returned to Shanghai before the national day.

This was on the eve of the opening of the Fourth NPC, a time when the "gang of four" was most heavily involved in the conspiratorial activities to form a "cabinet." When they learned that a deputy political commissar of Fengqing once made unfavorable remarks against the "gang of four," they intentionally tried to exaggerate the matter, aiming to use it to persecute Premier Zhou Enlai and Vice Premier Deng Xiaoping.

On 14 October, the Jiang Qing clique repeatedly wrote comments on a document on the question of Fengqing. Jiang Qing questioned belligerently: "Is the Ministry of Communications a ministry under the leadership of Chairman Mao and the Party Central Committee?" She clamored that in the Ministry of Communications "the comprador bourgeois class dictates over us."

Wang Hongwen, Zhang Chunqiao and Yao Wenyuan also fired a barrage of epithets like "slavish comprador philosophy," "national betrayal" and "imitation foreign devil" to make oblique accusations against that deputy political commissar and slander him as an "alien class element who infiltrated the ranks of the revolution" and a "representative of the comprador bourgeois class" who "stood for a revisionist line." They also clamored for dragging out his backstage supporter.

On the night of 17 October 1974, the Political Bureau of the Central Committee held a meeting. Jiang Qing took this opportunity to create an incident and provoke conflict. She handed out reading materials on the Fengqing and questioned Comrade Deng Xiaoping about his opinions.

Comrade Deng Xiaoping said: I have read these materials and made comments these materials must still be investigated.

Jiang Qing pressed Comrade Deng Xiaoping further on his attitude toward the criticism of "slavish comprador philosophy"--whether he approved or disapproved of such criticism.

Comrade Deng Xiaoping pointedly rebuffed Jiang Qing. He said: How can we cooperate in a Political Bureau like this? Why do you force your views on others? Is it always necessary to write an opinion which agrees with yours?

After the meeting adjourned and Comrade Deng Xiaoping left, Zhang Chunqiao, who loved to fan up intrigue, immediately made a provocative remark, saying that "Deng Xiaoping has come out again."

Four People Conspire

After the Political Bureau meeting ended, the "gang of four" returned to Diaoyutai. On that same evening, Jiang Qing told Wang Hongwen, Zhang Chunqiao and Yao Wenyuan to "get together" at the building No 17 which was occupied by her, so that they could analyze and discuss the causes of Comrade Deng Xiaoping's quarrel with Jiang Qing at the Political Bureau meeting.

Jiang Qing said: Deng Xiaoping complained because he was not happy with and angry about the great cultural revolution. He was against the great cultural revolution.

Zhang Chunqiao said: Deng Xiaoping's loss of temper probably had to do with the nomination of the general chief of staff when the subject of the 4th NPC was being discussed. This was a great outburst on his part. He also said: I had expected something to happen and now it did.

Wang Hongwen said: Deng Xiaoping was unhappy with and angry about the great cultural revolution. He refused to support what is new.

Yao Wenyuan also gave his own views at this get-together.

In his diary on 18 October, Yao Wenyuan wrote:

"The situation of struggle has suddenly changed. At the end of yesterday's meeting, Comrade Deng Xiaoping rose to his feet scolding Comrade Jiang Qing....There was something smacking of the Lushan conference. The development of things is independent of one's own will...."

After Jiang Qing and others made their plot, Wang Hongwen suggested that he go to Changsha. Jiang Qing supported it. The second day, he took a special plane to Changsha.

At around 1400 on 18 October, Chairman Mao received Wang Hongwen. Present at that time was Comrade Zhang Yufeng. In an affidavit dated 18 July 1980, she wrote:

"Wang Hongwen first inquired about Chairman Mao's health and then said: Beijing now has much of the atmosphere that smacks of the Lushan conference. I have now come to Hunan, leaving the premier and the other comrades of the Political Bureau in the dark. It was decided at a meeting attended by Chunqiao, Jiang Qing, Wenyuan and me last night that I should come and brief you. The premier is still convalescing. With your approval, I immediately started on my way. In doing so, I am taking a risk.

"Wang Hongwen also said: At the Political Bureau meeting, Jiang Qing and Comrade Deng Xiaoping argued about this matter and quarreled bitterly. He repeated what Jiang Qing and Comrade Xiaoping had said at that time. Wang also said: It seems that Deng is still promoting the policy that considers it better to buy than to build ships, better to hire than to buy ships. He also hinted that such a great outburst on Deng's part had to do with the recent selection of a general chief of staff.

"Continuing, Wang Hongwen said: Though the premier is now ill and in the hospital, the people are talking with him late into the night. Almost every day someone calls. Among those comrades who often go to see the premier are Xiaoping, Jianying and Xiannian. He also said: The frequent appearance of these people has to do with lining up personnel for the 4th NPC.

"Wang Hongwen also praised Zhang Chunqiao, Yao Wenyuan and Jiang Qing before Chairman Mao....

"After the talk, Wang Hongwen said: I must make it back to Beijing today as the several of them are waiting for the chairman's advice.

"The chairman said: Well, after this trip, you must see more of the premier and Comrade Jianying. Don't get involved with Jiang Qing. You must keep watch on her."

The court secretary read out excerpts from Zhang Yufeng's testimony.

What Is in the Mind of a Venomous Snake

The "gang of four" slandered and persecuted Zhou Enlai, vice chairman of the CCP Central Committee and premier of the State Council.

In November 1973 before the convening of the 4th NPC, Jiang Qing at an enlarged Political Bureau meeting found an excuse to maliciously attack Premier Zhou. She slanderously charged that he "could not wait to be the chairman's replacement."

On 9 December 1973, after Chairman Mao received the Nepalese king at Zhongnanhai, he said, with Jiang Qing's attack against Premier Zhou in mind: "It is not the premier but she (meaning Jiang Qing) who could not wait."

At noon on the same day that Wang Hongwen flew southward to Changsha, Jiang Qing sent for Wang Hairong and Tang Wensheng to come to the building No 17 of Diaoyutai--the two who were due to leave for Changsha for an interview.

Jiang Qing said: The chairman will shortly go abroad to meet with foreigners. You two must also help him. So I have sent for hou to discuss an important matter. She also asked them to report it to the chairman.

Jiang Qing said: At a Political Bureau discussion on the problem of the Fengqing on the evening of the 17th, Comrade Xiaoping slipped away after quarreling with her, thus interrupting the Political Bureau meeting. Jiang Qing also said that the leading comrades of the State Council often used business as an excuse to get together. The premier has also gotten very busy in his hospital and was not actually recuperating.

Jiang Qing said: Comrade Xiaoping, the premier and Marshal Ye always band together, with the premier pulling the wires behind.

Jiang Qing and company also slanderously accused Zhou Enlai, Deng Xiaoping and others of carrying out activities to usurp power the way Lin Biao did in 1970. She said the nonsense that Beijing now had much of the atmosphere smacking of the Lushan conference.

In an affidavit given on 27 June 1980, defendant Wang Hongwen wrote:

"The aim was to discredit Comrade Deng Xiaoping before Chairman Mao, so that he could no longer remain in office and, still less, as the first vice premier.... The trip to Changsha to make an accusation...was chiefly a case of a villain trying to get the upper hand by complaining first--a villain seizing an opportunity when Comrade Deng Xiaoping was busy accompanying foreign guests. The aim was to make Chairman Mao know the so-called 'truth' of the quarrel, or the so-called problem involving Comrade Deng Xiaoping....It was actually an intrigue to vilify and victimize Comrade Deng Xiaoping...."

Jiang Qing Is Still Making Trouble

Wang Hongwen returned to Beijing that afternoon.

When he was in Changsha, Wang Hongwen promised Chairman Mao to act according to his directives. However, when he returned to Beijing, he went immediately to Diaoyutai to report his Changsha trip to Jiang Qing, Zhang Chunqiao and Yao Wenyuan instead of going to see Comrades Zhou Enlai and Ye Jianying.

On the night of the 18th, the four people once again met at building No 17 of Diaoyutai. They also called Wang Hairong and Tang Wensheng to the meeting. The two interpreted and took minutes when Chairman Mao talked with foreign guests.

On 26 November, Wang Hairong and Tang Wensheng also appeared in court as witnesses.

Wang Hairong said that when she arrived at building No 17, Zhang Chunqiao, Yao Wenyuan and Wang Hongwen had already arrived. At the meeting, Jiang Qing asked Zhang Chunqiao to brief them on the question of the so-called situation. Zhang Chunqiao talked about the deficits in China's revenue and expenditure and in foreign trade after the campaign to criticize Lin Biao and Confucius. He attributed this to the worship and blind faith in foreign things by the leading comrades in the State Council. He even went so far as comparing the meeting of the Party's Political Bureau on the 17th with the "adverse February current."

Jiang Qing wanted Wang Hairong and Tang Wensheng to go to Changsha to frame Deng Xiaoping again. In the talk, it was revealed that Wang Hongwen had already seen the chairman, and that Chairman Mao asked him to unite with Comrade Deng Xiaoping because the latter was good at fighting.

On the next day, Wang Hairong and Tang Wensheng reported to Premier Zhou Enlai who was then in the hospital on what Jiang Qing had told them. The premier said that the four had planned to attack Comrade Deng Xiaoping. They had attacked Comrade Deng Xiaoping on many occasions and the latter had long been tolerant toward them.

On 20 October, after Chairman Mao had met with foreign guests, Wang Hairong and Tang Wensheng reported to him on their talk with the premier. On hearing the report, Chairman Mao said angrily: The Fengqing question is a minor one. Moreover, Comrades Li Xiannian and Ji Dengkui are solving it. Yet, Jiang Qing is still making trouble.

The chairman also suggested that Comrade Deng Xiaoping be appointed the party's vice chairman, the first vice premier, the vice chairman of the military commission of the CCP Central Committee and concurrently chief of the general staff. The chairman highly commended Comrade Deng Xiaoping. He was diametrically opposed to Jiang Qing and asked Wang Hairong and Tang Wensheng to tell Wang Hongwen, Zhang Chinqiao and Yao Wenyuan not to follow Jiang Qing in making criticism.

However, the "gang of four," who had been blinded by lust for gain, would not stop. They continued to attack Deng Xiaoping in an even more frenzied manner.

On 2 March 1976, at a meeting with the leaders of some provinces and autonomous areas, Jiang Qing spoke incoherently and tried her best to spread rumors and sling mud. She said: "Deng Xiaoping is the general manager of the rumor company....he incites one against the other and engages in rumormongering and mudslinging. He is an out-and-out counterrevolutionary doubledealer and exposes even faster than Lin Biao....As I have mentioned before, we must get together and fight against Deng Xiaoping. He has sold fuel to those big capitalist countries which we ourselves lack. So I say he is a comprador capitalist, and represents the interests of the comprador-landlord class. There is an international capitalist agent in China and his name is Deng Xiaoping. Is it not correct to call him a traitor?...."

Not long afterwards, on 26 April 1976, Jiang Qing wrote a letter to Chairman Mao Zedong to frame Deng Xiaoping: "I think Deng Xiaoping and others have resorted to the tricks of Liu Shaoqi and Lin Biao....I wonder whether they are even worse than Lin Biao. It is said that there are some similarities and dissimilarities between the activities of their large fleets and small ones. Their small fleets are worse than the large ones."

At the end of the letter, she said: "Eat well, sleep well and fight to win another even greater victory."

Whom did Jiang Qing and company want to fight against? Only against Comrade Deng Xiaoping? No. They were fighting against the 900 million people throughout China.

The people are victorious in this fight. The "gang of four" was escorted into the people's court.

PARTY AND STATE

FRAME-UP OF HE LONG DISCUSSED

HK020650 Hong Kong WEN WEI PO in Chinese 1 Dec 80 p 2

[Long-distance call from correspondent in Beijing: "Inside Story of the 'February Mutiny' Revealed"]

[Text] "BEIJING WANBAO" carried the story of the "February Mutiny" on 30 November, revealing an unjust case. The story was revealed in the special report entitled "Trial of the Treacherous Court Officials" written by a "BEIJING WANBAO" correspondent after an interview with the wife of He Long, Xue Ming. The following is an abstract of the article:

When the reporter came into Xue Ming's sitting room, he saw several sheets of paper hanging on the wall on which there was a poem written by Xu Fanting, a hero in the war of resistance against Japan. The poem read: "He is similar to Zhao Yun in obedience and loyalty to the country; yet his resolution and vividness are more prominent. The heroic spirit of Comrade He Long is beyond compare with that of General Li Mu and Lian Po."

Xue Ming said to the reporter: "The law is promoting righteousness for the people today. I have kept two things concealed in my heart since Comrade He Long was persecuted. I can tell you now. The first thing is the so-called 'February Mutiny.'"

Kang Sheng Made Irresponsible Remarks and Spread Rumors

Xue Ming said: "Around July 1967, the 'February Mutiny' created a scandal in Beijing and in other big cities in the country. The true story is that in the spring of 1966, a certain regiment was posted to the Beijing Wei Shu district to be in charge of militia training and so on. They borrowed premises from the University of Beijing and the Chinese People's University because there was not enough room for accommodations. Certain individuals put up big character posters which 'suspected a mutiny.' Realizing an opportunity, Kang Sheng then slandered He Long and Peng Zzen for 'mobilizing the army at their personal command and promoting the February Mutiny' at the mass meeting of the Beijing Teachers University and at the meeting of the Central Revolutionary Group. He also spread the following libel: 'He Long personally mobilized the army and built a blockhouse in the suburbs of Beijing. He organized the coup d'etat forces in Tiyukou in accordance with his plot.' In April 1968, Kang Sheng spread a more horrible libel. He told the personnel engaged in the examination of the case: 'He Long has issued guns and cannons to the sports committee. The cannons are placed in Shishahai, aiming directly at Zhongnanhai.... He has issued more than 700 guns to his men at one time.' However, as a matter of fact, there was only a small number of guns used especially for military exercises issued to the men and there were no cannons at all."

He Long Knew Nothing About This Till His Death

"In fact, these slanderous remarks would have been clarified if the people in charge had carried out investigations. However, Comrade He Long, being a member of the Political Bureau as well as vice premier and vice chairman of the military commission, knew not a word of the 'February Mutiny' till the day he died. No one ever came to him about this."

Xue Ming sighed and said: "'He Long died because someone was spreading slander against him behind his back.' Another thing that I would like to reveal is the story that He Long received representative of the Kuomintang Xiong Gongqing. At that time, He Long let Xiong come into the Red Army because he wanted to find out the enemy's targets and intentions. On the other hand, He Long, Guang Xiangying and Xia Xi of the Central Subbureau for West Hubei and Hunan had submitted reports to the central organ before and after this incident. A couple of decades later this incident became He Long's crime of 'turning traitor and going over to the enemy.'"

Wong Yongsheng Said the Last Word

Xue Ming said: "As far as I know, those engaged in the examination of this case had come across these reports when they read over the file. However, they had to work in accordance with the instructions from the higher level. They convicted He Long of the 'crime' first and then began to look for evidence. They did not consider what was right or wrong. They concealed the unfavorable evidence and pretended that they had never heard of it before. We had written some articles of appeal when we were imprisoned. However, we heard that Wong Yongsheng said the last word and all became invalid. In addition to this, Kang Sheng ordered others to torture us and let us die quietly."

Xue Ming said: "Today, we have a relatively complete set of lawful procedures. We persist in regarding facts as truth and the law as the criterion. Whether you deny or pretend to be deaf and dumb, you can never escape from the punishment deserved once you are proved guilty. On 21 November, when I listened to the indictment read by the chief judge, I remembered He Long's words: 'There are treacherous court officials in the party. If we let them continue creating chaos, the results will be dreadful to contemplate. But I believe that they will come to no good end.' What Comrade He Long had predicted has come true. At last we see the end of the counterrevolutionary cliques of Lin Biao and Jiang Qing. I could not sleep that night not for any other reason than that I was so happy."

The Whole Class Supervises an Old Woman

Xue Ming also talked about her suffering during the great cultural revolution. She said that she was sent to a party school in the hilly areas of Guizhou after He Long had been isolated. She was punished to do heavy work there and was supervised by a whole class of people. Nobody knew who she was except that she was a secret old woman. Thanks to the concern of Premier Zhou, she returned to Beijing after Lin Biao's counterrevolutionary coup d'etat had been smashed.

'DILEMMA' OF GAO GANG EXAMINED

HK211132 Hong Kong CHENG MING No 37 in Chinese 1 Nov 80 pp 18-19

[Article by Tu Feng: "Can the Gao Gang Dilemma Be Resolved?"]

[Text] I have read an article by Mr Miao Shuo entitled "Has the Gao Gang Question Been Put on the Agenda?" in Number 35 of "CHENG MING." The Gao Gang question is indeed a mystery. Will this question be put on the agenda? Mr Miao added a question mark to the title of his article. Recently, I have had a chance to meet two people who have close contacts with Gao Gang's family. They have provided me with a great deal of precious information. Perhaps this information can answer the question raised by Mr Miao.

A Recent Directive Issued by Deng Xiaoping

Deng Xiaoping has recently issued a directive concerning the question of Gao Gang. It contains two ideas: 1. From now on, we should refrain from mentioning Mao Zedong's way of life and his political tricks. 2. The way in which Gao Gang and Rao Shushi were treated was not too harsh.

Judging from these two ideas, the question of Gao Gang will not be put on the agenda and will be left unsettled.

What is the nature of the Gao Gang and Rao Shushi incident? The account given by Mr Miao is basically correct. Gao Gang was a victim of Mao Zedong's political tricks. The tragedy was caused by Mao Zedong's attempt to get rid of Liu Shaoqi and Zhou Enlai.

Gao Gang Trumpeted the "Party of the Army Theory"

In the summer of 1953, the CCP held a conference on financial and economic work. On 10 September, it held a conference on organizational work. During these conferences, Gao Gang conducted many activities, the most important one being the advocation of the "party of the army theory." He said that the CCP could be divided into two, one being the "party of the bases and the army," the other being the "party of the white area." He stressed: "The party was created by the army." This implied that "the party of the white area" was unimportant. Whom did the so-called "party of the white area" represent? Obviously, it represented Liu Shaoqi.

Gao Gang conducted such activities not only because he had long term conflicts with Liu Shaoqi, but mainly because he was incited to do them by Mao Zedong.

Gao Gang was rather displeased by Liu Shaoqi's being the number two man of the CCP. He wrote to Mao Zedong, demanding that Liu Shaoqi's post be held by different people by turns. At the same time, he revealed that when Mao Zedong attended the Chongqing negotiations in 1945, Liu Shaoqi put forth the slogan of the new period of peace and democracy and planned to reorganize the PLA.

Mao Zedong Hints to Gao Gang That He May Secretly Organize a Cabinet

Mao Zedong grasped the conflict between Liu Shaoqi and Gao Gang and took advantage of this opportunity to achieve his personal aims. He talked to Gao Gang and expressed his dissatisfaction with the "cabinet" of Liu Shaoqi and Zhou Enlai, giving Gao Gang a chance to approach some people to secretly form a cabinet so as to replace Liu Shaoqi and Zhou Enlai.

Deng Xiaoping's Attitude

Mao Zedong's suggestion fit in exactly with Gao Gang's wishes. He approached some leaders of the major CCP regions--Peng Dehuai of the northwest, Deng Xiaoping of the southwest, Rao Shushi of East China and Lin Biao of Central China--in an effort to form a new cabinet. Deng Xiaoping did not approve of what Gao Gang was doing and he told Mao Zedong about this.

On hearing what Deng Xiaoping said, Mao Zedong immediately pretended that he was also displeased with Gao Gang. He asked Deng Xiaoping to advise Rao Shushi, Peng Dehuai and Lin Biao not to follow Gao Gang. Since Deng Xiaoping was not aware of the truth at that time, he did what Mao Zedong told him to do. All of them, except Rao Shushi, accepted Deng Xiaoping's advise and rejected Gao Gang's proposal.

Under these circumstances and after serious consideration, Mao Zedong decided to sacrifice Gao Gang.

Mao Zedong Absents Himself From the Fourth Plenary Session of the Seventh CCP Central Committee

At a meeting of the Political Bureau of the Central Committee on 24 December 1953, Mao Zedong suddenly raised the question of "underground headquarters." He then suggested that the Fourth Plenary Session of the Seventh CCP Central Committee be held in Beijing in February 1954. In order to avoid direct confrontation with Gao Gang, he found a pretext and absented himself from the meeting which he had proposed. Liu Shaoqi, Gao Gang's opponent, presided at the meeting. The relevant CCP documents recorded: "The Fourth Plenary Session of the Seventh Central Committee was held in Beijing from 6 to 10 February 1954. Present at the meeting were 35 CCP Central Committee members and 26 alternate CCP Central Committee members. Moreover, 52 leading cadres of the party, government, army and people's organizations attended the meeting as observers. Comrade Liu Shaoqi, vice chairman of the CCP Central Committee, presided at the meeting. Comrade Mao Zedong did not attend this meeting because he was not in Beijing." This meeting formally raised the question of the "alliance of Gao Gang and Rao Shushi." It revealed and criticized the antiparty alliance of Gao Gang and Rao Shushi who schemed to split the party. It also ordered them to confess their antiparty crimes. The meeting adopted the "resolution on strengthening party unity" proposed by Comrade Mao Zedong. The so-called "strengthening party unity" implied that Gao Gang was engaged in activities to split the party. In fact, who was the person hiding behind the scenes, drawing in one faction, hitting out at another and taking advantage of their conflicts to attack his opponents? Most party members did not know this because they were kept in the dark.

The "Forums" on the Question of Gao Gang and Rao Shushi

Of course, Gao Gang and Rao Shushi were dissatisfied with the resolution adopted by the Fourth Plenary Session of the Seventh Central Committee. They refused to "plead guilty." Therefore, Mao Zedong asked Zhou Enlai to chair a forum on the question of Gao Gang on October 1954. At the same time, he asked Deng Xiaoping, Chen Yun and Tan Zhenlin to chair a forum on the question of Rao Shushi. He asked them to continue to reveal and criticize Gao Gang and Rao Shushi at these two forums. Under such great pressure, Gao Gang eventually committed suicide.

From 21 to 31 March 1955, Mao Zedong complacently presided at the national conference of the CCP in Beijing. He made the opening speech and the conclusion at this conference. Deng Xiaoping delivered the report on the antiparty alliance of Gao Gang and Rao Shushi. The conference adopted the resolution concerning the antiparty alliance of Gao Gang and Rao Shushi and decided to expel them from the party and dismiss them from their posts within the party and outside it. This conference also adopted two resolutions, one concerning the draft of the first 5-year plan for the development of the national economy (Chen Yun made the report on this plan). Another was on the establishment of central and local party's control committees. It established a central control commission headed by Dong Biwu.

When handling the case of Gao Gang and Rao Shushi, Mao Zedong craftily drew in Liu Shaoqi and attacked Gao Gang. Who could have imagined that a similar tragedy would happen to Liu Shaoqi several years later. Moreover, the tragedy was a more terrible one.

It was a common occurrence in the history of the CCP that Mao Zedong played political tricks. However, in the current campaign to criticize Mao Zedong, his reputation is still preserved to a certain extent. Thus, not many vile activities of this kind have been mentioned.

The Marriage Between Gao Gang and Li Liqun

In his directives, Deng Xiaoping mentioned that Gao Gang had not been treated too harshly at that time. This probably implied that Gao Gang had committed suicide and that he had not been as ill-treated as Liu Shaoqi, Peng Dehuai and some others during the "cultural revolution." This, things had not been too bad for him.

In fact, since the Gao Gang incident, his family members' circumstances have not been too bad.

Gao Gang's wife was Li Liqun. Of course, she was not his first wife. His first wife was a woman with bound feet in a Shaanxi village. Li Liqun joined the revolution when she was very young. She worked as a library assistant in Yanan.

She was very beautiful and Gao Gang fell in love with her at first sight. However, Li Liqun was too young to understand his desire at that time. Gao Gang's subordinates understood it perfectly well. They often invited her to Gao Gang's house. One night when Li Liqun visited Gao Gang, he did not allow her to go home. Soon afterwards, Li Liqun married Gao Gang when she was only 16 years old.

The couple had five children, two boys and three girls. The eldest one was a boy called Gao Xuan. The second, third and fourth were girls called Yan Yan, An An and Bin Bin. Yan Yan and An An were born in Yanan. The youngest one was a boy. He was conceived after Gao Gang's grave incident and was born in 1955. The character of this youngest son was obviously different from that of his brother and sisters. He was weak and fond of crying. This was allegedly due to the poor "prenatal education" he had received. Because of this, Li Liqun often complained to her good friends about Gao Gang: "When he knew he was going to commit suicide, why did he make me pregnant?"

After Gao Gang's grave incident, the organization department talked many times to Li Liqun, asking her to reveal and account for Gao Gang's crimes. In fact, Li Liqun knew very little about her husband's political activities. She was previously deputy chief (of the training bureau of the labor department). After Gao Gang's grave incident, Li Liqun was demoted one grade to the post of section chief. The reason for this was that she had been promoted too rapidly due to her relations with Gao Gang and she was put back to the position she deserved. Before the "cultural revolution," she worked in the education department.

The State Gives a Living Allowance to Gao Gang's Children

After Gao Gang committed suicide, Li Liqun and her children moved to a residence at Al Dasitiaokuan Street, Xinjiekou, Beijing. It was a dormitory of the organization department and was a good residence. It was a Chinese-style compound with houses around a courtyard, five big rooms facing the north, rooms in the east and west wings and a row of rooms facing the south for the workers. Gao Gang's family used to have many guards and attendants. After his death, they only kept two servants. One was a watchman called Lao Li, Gao Gang's previous groom who worked under him for a long time. The other was a cook.

The state has provided Gao Gang's children with living allowances of 50 yuan each, which is not a small amount in China where wages are low. Compared with other CCP high-ranking cadres attacked during the "cultural revolution," Gao Gang's family members have not been treated too badly. Thus, things "have not been too bad" for them.

PARTY AND STATE

'GONGREN RIBAO' CARRIES LIU'S CHILDREN'S MEMOIRS

OW060216 Tokyo KYODO in English 0142 GMT 6 Dec 80

[Text] Beijing, 6 Dec (KYODO)--Three children of the late head of state Liu Shaoqi have implicitly criticized the late Chairman Mao Zedong in their memoirs of their father.

The memoirs, written by Liu's daughters Pingping and Tingting and his son Yuan, were carried by the WORKERS DAILY, an organ paper of the All-China Federation of Trade Unions, on Friday.

In the memoirs, Liu's children implicitly accused Mao of having fueled the anti-Liu campaign.

The memoirs covered incidents in detail from the first appearance of an anti-Liu wall poster in 1966 to the virtual confinement of Liu by the Red Guards in 1967.

The WORKERS DAILY will carry a sequel of the children's memoirs.

The anti-Liu storm spread nationwide immediately after the press media reported the first wall poster against Liu, the memoirs said. The poster was written by Nie Yuanzi, then lecturer on philosophy at Beijing University, and others.

Chairman Mao highly praised the anti-Liu wall poster as "the first Marxist-Leninist poster in China."

One of the major charges against Liu had been his dispatch of officials to Beijing University and two other places in 1966 to quell the Red Guards campaign.

The memoirs, however, said Chairman Mao himself had approved the dispatch of the officials. At the time, Liu tried rather to persuade the citizens demanding the dispatch of the officials not to take hasty action, the memoirs said.

At the time of the Red Guards campaign, Liu repeatedly telephoned Chairman Mao, then staying in Hangzhou, Zhejiang Province, and sought Mao's instruction, the memoirs said. But Mao gave no clear instruction, it said. Finally, Liu and Deng Xiaoping, then party secretary general, flew to Hangzhou to seek Mao's instruction, but Mao ignored their request, entrusting the handling of the campaign to Liu and Deng, the memoirs said.

PANCHEN LAMA'S MARRIAGE, SITUATION IN XIZANG

HK210410 Hong Kong CHEN MING No 37 in Chinese 1 Nov 80 pp 22-24

[Article by Hsiao Cheng: "The Panchen Lama's Marriage and the Situation in Xizang"]

[Text] The Panchen Lama's Formal Marriage

The Panchen Lama was formally married recently.

How is it that the living Buddha has gotten married? This is indeed incredible. However, it is a fact that has occurred in 1980.

Who is his wife? She is the granddaughter of Dong Qiwu, a KMT general who defected to the communists. The matchmakers of this marriage were two drivers.

Once when the Panchen Lama and Dong Qiwu were attending a meeting in a conference room, their drivers chatted outside the room. In their conversation, the Panchen Lama's driver unintentionally mentioned that the Panchen Lama had been very lonely. On hearing this, Dong Qiwu's driver felt sympathy for him. He had a very fantastic idea--to act as a matchmaker for the Panchen Lama. The other driver also agreed to help enthusiastically.

At that time, Dong Qiwu's divorced daughter was living with his family. She had two unmarried daughters: The elder one was about 24 to 25 and the younger about 21.

After a discussion, the two drivers agreed to introduce Dong Qiwu's elder granddaughter to the Panchen Lama.

The driver told the Panchen Lama about this idea. The latter happily agreed. The two drivers then made arrangements for the Panchen Lama to meet Dong Qiwu's granddaughter.

The two sisters both appeared at the meeting. Although the drivers intended to introduce the elder sister to the Panchen Lama, he took a fancy to the younger one.

As there was sign of a positive outcome, the grandfather Dong Qiwu voiced his objections. Later, a high-ranking official talked to him and changed his mind.

400,000 Yuan as Cash Gift for Betrothal

Not long afterwards, the Panchen Lama was formally married. It was said that he gave the bride 400,000 yuan as cash gift for betrothal.

Being a living Buddha, the Panchen Lama is very rich. A drawer in his room is filled with 10-yuan notes. Before the 1964 incident, he had a "Panchen Affairs Office" at Beichang Street, Beijing. On religious occasions, many Tibetans and Lamaism believers paid homage to him and had him touch their heads as a sign of blessing. At the same time, they donated a lot of money. This is one of the sources of the Panchen Lama's income. After the 1964 incident, he was put under house arrest in a red western-style house on the (Dongzongbu) alley of Beijing (originally Li Jishen's house). He could walk about under the inspection of guards. During the cultural revolution, he was put in Qincheng prison. Of course, his properties were either confiscated or frozen at that time. When he was released from prison, he got back his savings. That is why he could offer 400,000 yuan as cash gift to his bride.

Before the marriage, the Panchen Lama's wife was an unemployed youth. After the marriage, she has appeared in public as the Panchen Lama's secretary.

The Panchen Lama and Martin Luther

There has been another marriage like the Panchen Lama's. Pagbalha Geleg Namgyai, the number one living Buddha of Qamdo has also married. Both marriages have aroused some people's comments. A lama's marriage is a challenge to Buddhism--the tradition of Lamaism. In fact, religion is similar to all other things in the world. It undergoes development and changes. In the past, Christian priests were not allowed to get married. But Martin Luther carried out religious reforms and established a new religion, which allowed the priests to get married. The new religion stood up to Catholics as an equal. The writer of this article dare not make any improper comment on whether the Panchen Lama wanted to be a Buddhist "Martin Luther." However, it seems that his decision to get married is irreproachable.

The Background of Which Yang Jinren Is Appointed Vice Premier

During the recent NPC, the Panchen Lama made some mild criticisms on CCP policies. He said: "Local organs at all levels should allow the minority nationalities to be their own masters...instead of making them 'puppets' controlled by others." He added: "The masses in Xizang said: 'The Tibetan cadres are the masters while the Han cadres make the decisions.' The Han language is used in most documents of the leading organs. Although the basic-level cadres and masses do not understand the Han language, they are not allowed to use the Tibetan language. In evaluating cadres, recruiting workers and admitting students, the level of the Tibetan language is not taken into consideration. However good one's Tibetan language is, one is still regarded as 'illiterate.' As a result, many people are unwilling to learn the Tibetan language, which is declining fast. No respect has been shown for the customs and habits of the Tibetan nationality. For example, the national costumes have been criticized as black clothes. Another for example, the brocade stole, which the Tibetans often use as a gift to show respect and as a symbol of nobility and purity, has been arbitrarily regarded as white and not revolutionary and has thus been banned."

Over the past 30 years, many problems have arisen from the CCP's policies toward national minority regions. Because of this, many knotty problems which put the CCP in a difficult position have occurred in Xizang and Xinjiang. In order to rapidly solve these problems, Yang Jingren, the minister of the State Nationalities Affairs Commission, has been appointed a vice premier.

After the peaceful liberation of Xizang, some Han cadres were sent to Xizang. When the rebellion was suppressed and democratic reformation was carried out in 1958, more Han cadres were sent to Xizang. They took up various important posts in the leading groups. Most of these Han cadres cherished high hopes, voluntarily gave up their comfortable lives and went to Xizang. However, due to erroneous policies, their dedication did not yield good results. Although Xizang has made some improvements and developments in production in comparison with the preliberation period, it is still very poor and backward. This was particularly true during the cultural revolution when Ren Rong was the leader of Xizang. He vigorously pushed the ultraleftist line and led Xizang into greater poverty. For example, he tried to get rid of small merchants and hawkers and ordered the Tibetans to grow high-yield winter wheat instead of barley. However, the Tibetans were not used to eating winter wheat. Nor were they good at growing it. Moreover, the Xizang plateau was not suitable for growing wheat. As a result, there was a poor harvest which ended in famine. Some people even went to Sichuan and some other places to beg for food.

Quantitative changes can develop into qualitative changes. However, people always treat quantitative changes lightly. They always think that nothing will go wrong. When they discover that qualitative changes have taken place, it is "too late." The many years of poverty and backwardness in Xizang and various ultraleftist policies have sown seeds of national and religious antagonism in the course of quantitative changes. When the Dalai Lama's delegation visited Xizang last year, the seeds suddenly germinated.

The Shock Caused by Dalai Lama

Last year, the Dalai Lama sent a delegation to negotiate with the CCP. The delegation included his brother, brother-in-law and secretaries. They visited Lhasa, Qamdo and Gannan. They were received with a display of unprecedented fervor wherever they went. Tens of thousands of "emancipated serfs" voluntarily gathered at (Luobulinka) in Lhasa to welcome their previous owners. They even put out their tongues at the delegation as the "untouchables" had done in the past whenever they met nobles. In Gannan, the party and CYL cadres also rushed to welcome the Dalai Lama's delegation along with the masses.

This display by the Tibetans greatly shocked the CCP cadres: has their work (including ideological work) been a complete failure? Why do the emancipated serfs so fervently welcome their previous owners who had suppressed and exploited them in the past? And why are they willing to behave as the "untouchables?"

In fact, this is not difficult to explain. On the one hand, Xizang has so long been backward that many people are still keeping to their ignorant habits. On the other hand, the many years of poverty has caused them to be disappointed with their "liberators."

Hu Yaobang's Tour of Xizang

The disturbance caused by the Dalai Lama's delegation greatly concerned the CCP Central Committee. Yang Jingren, minister of the State Nationalities Affairs Commission personally toured Xizang to understand the situation and listen to public opinion. After hearing his report, the Central Committee felt the seriousness of the state of affairs. Thus, it sent Hu Yaobang, CCP general secretary, to do something about the situation.

On 22 May, Hu Yaobang, Wan Li, Ngapoi Ngawang-Jigmi, Yang Jingren and Zhao Zhenqing went to Xizang. In order to foster a closer relationship between the Han and Tibetan nationalities and between the people and cadres, Hu Yaobang deliberately took a "minibus" (similar to 14-seat bus) instead of a car. Since he could not adapt himself to the plateau, he suffered from mountain sickness. However, he still hurried from one place to another.

On behalf of the Central Committee, Hu Yaobang announced the following "six major things" to be done: 1) full play must be given to the right of national regional autonomy; 2) the policy of recuperation should be carried out to reduce the burden of the masses; 3) specific and flexible policies suitable to the conditions in Xizang should be carried out in all fields of economic work; 4) the funds allocated by the state to Xizang should be used to boost agricultural production and animal husbandry, and to raise the living standard of the Tibetan people; 5) culture, education and science in Xizang should be energetically revived and developed; and 6) the party's policy on cadres of minority people origin must be correctly carried out.

Many cadres in Xizang (including Tibetan CCP cadres) do not have a good understanding of these six tasks. They think that the policies have been changed too rapidly. However, the Central Committee thinks that this change is inevitable.

Some cadres also have misgivings regarding the return of the Dalai Lama. Some people asked: "If the Dalai Lama and his men who are in exile return, the more than 20,000 professionals among them will take up most of the key technical posts. What will happen if they try to restore capitalism?" Hu Yaobang answered humorously: "If advanced capitalism is achieved in Xizang, we will be the ones benefiting."

What Is the Most Difficult Problem?

The most difficult problem for the CCP is the question of cadres in Xizang.

One of the six things to be done well by the CCP is "full-time Tibetan cadres should make up more than two-thirds of the total number of government functionaries in Xizang within the next 2 or 3 years.... It is glorious for the Han cadres to leave after accomplishing their historical task."

Why should the Han cadres withdraw so rapidly and completely?

Most cadres went to Xizang in the 1950's because they responded to the party's call and were imbued with revolutionary ideals. They have lived in Xizang for more than 20 years and most of them suffer from mountain sickness. Women cannot give birth to children in the plateau. Moreover, many people died during the Xizang rebellion. Some of them were oppressed in different ways during the cultural revolution and no one cared for them. Some of them have given their youth, health and even lives and have grown old. They should retire and go back to their native places. Yet, who will succeed them? Although some other Han cadres have gone to Xizang to provide help, they are different from those who went there in the 1950's. In view of the small number of volunteers and in order to encourage people to go to Xizang, the Central Committee stipulated: by going to Xizang, those who have not been admitted to the party will be admitted into it; they will be promoted by two grades and will be able to return to the interior of China within 3 years. When this stipulation was put into practice, a number of cadres went to Xizang. As they were not prepared to settle down there and as they were not able to familiarize themselves with the local conditions within the 3-year tenure of office, they did not have great success in their work. In addition, when cadres who went to Xizang in the 1950's compared themselves to the newcomers, they felt that the government had been unfair. Thus, they could not keep their minds on their work.

Therefore, the question of cadres in Xizang is the most difficult problem for the CCP. The CCP has no alternative but to withdraw the Han cadres and energetically train Tibetan cadres. It has now been stipulated that all Han cadres, except soldiers, can be transferred to the interior of the country.

However, such rapid reshuffle has also caused a real problem in Xizang. The Tibetan cadres are worried about whether they can shoulder such heavy loads by themselves. If a small number of the Han cadres are asked to stay behind to provide help, no one will be willing to do so. Up to now, there is still no miraculous cure for this problem.

In fact, the CCP has been supplying subsidies to Xizang since its liberation. However, a difference will soon emerge. In the past, Xizang was managed by the Han cadres and in the future it will be managed by the Tibetans themselves. Due to the erroneous line and policies, Xizang became very poor over the past 20 years. This was the main cause of the recent minor disturbance. No one can accurately forecast what will happen. However, the CCP is trying its best to remedy its past mistakes. The recent promotion of Yang Jingren to the post of vice premier of the state council and the 1-month theatrical festival of minority nationalities which was unprecedented in scale and put on in Beijing demonstrate the CCP's determination to do a good job in the national minority regions.

'WANBAO' URGES MASS RECOMMENDATION OF TALENT

HK220526 Beijing WANBAO in Chinese 5 Nov 80 p 1

[Article by the editorial board: "The Masses Know How to Recognize Real Talent"]

[Text] Over 1,100 years have elapsed since Han Yu moaned: "The existence of winged steeds in the world was unknown until the appearance of Bo Le, who knew how to judge horses."

Indeed, there has been no lack of stories in history about "Bo Les" discovering "winged steeds." Look, Xiao He discovered Han Xin; Liu Bei discovered Zhu Geliang; Li Shimin discovered Wei Zheng; Zhu Yuanzhang discovered Liu Ji; Guang Xu discovered Tan Sitong. These "winged steeds" did something for "Bo Les." However, with just one "Bo Le" looking for talent, there are bound to be limitations to the effort. It often happens that real talent has not been recognized while the one chosen as a talent proves to be the wrong choice. Zhu Geliang's assigning Ma Su to defend Jieting and Guang Xu's selecting Yuan Shikai with his military power to support "the reform movement of 1898" may be cited as historical lessons.

Therefore, we must review today what Han Yu said: "Alas, is there really no winged steed? Or is it really because people know little about horses?"

Winged steeds do exist. It depends on whether people can recognize them. How can we judge like Bo Le, who had an eye for the right horse? First, we must overcome several obstacles that block our "vision:" 1) rating or ranking people according to seniority--in selecting cadres, we first check whether the prospective candidate's length of service is long enough and whether he is now in a high or low rank; 2) staying in the rut--we dare not promote intellectuals as cadres, erroneously thinking that we can put our hearts at ease only with leading cadres selected from among worker-peasant cadres and political work cadres; 3) failure to take ability and political integrity into consideration and to pay attention to one's real talents. Meanwhile, we also tend to get confused about "political integrity." Saying yes to everything and taking one's cue from the leadership is equated with "political integrity." A display of genuine knowledge, or a show of courage in pointing out what is wrong with work and making suggestions is equated with lack of "political integrity." 4) A disposition to regard anything short of perfection as unacceptable--we never forget general mistakes committed by one in the past. We take note of only his past records and his family background and pay no attention to what his future performance is likely to be, and especially what is his present performance. Second, we must not rely solely on leading cadres at a given level to be "Bo Les." Nor must we rely only on organization or personnel departments to be "Bo Les." Instead we must let the masses and the leadership, and the organization and personnel departments all act as "Bo Les" at the same time. To switch from letting a small number of people act as "Bo Les" to letting the masses and the leadership play the role together helps the leadership's judgment in selecting talent and helps to remove ideological obstacles in promoting talented people. Thus, such defects as listening only to one side, making the wrong choice, being jealous of talented people, and so on and so forth that are likely to appear in selecting talent can be corrected. Those "winged steeds" that combine ability and political integrity can also be given a chance to show their full powers.

Therefore, we are all for the method of selecting talent on the recommendation of the masses and with the approval of the higher authorities, as adopted by the Beijing Aviation College.

'WANBAO' URGES ACTION TO PROMOTE TALENTED PEOPLE

HK220538 Beijing WANBAO in Chinese 7 Nov 80 p 1

[Article by editorial board: "We Cannot Just Sit and Discourse on Theory"]

[Text] For the sake of our dear motherland, and to accomplish the four modernizations as soon as possible, we must be bold in promoting to leading positions capable talented people and middle-aged and young cadres who are in the prime of life. This is a general principle acknowledged by all.

The Party Central Committee has reiterated this general principle to everybody, in particular to the lower levels. However, there is very little response from the lower level, and nothing has yet been done. We can only see people discoursing on theory at various meetings. It is just like holding arrows and appreciating them, saying "fine arrows, beautiful arrows," without putting them to the bowstring and shooting them.

Theories are not to be discoursed on without putting them into practice. The Party Central Committee has clearly stipulated the principle and policy. What we have to do is to carry them out.

Arrows are to be shot. However, first of all, we have to aim at our "targets." Only after the "target" is set can we shoot the arrow at it, and only then can the capable people excel themselves and be promoted to high positions.

This has reminded us of two examples from ancient times on how talented people were discovered, recommended and employed.

Xiao He, the renowned minister of the Western Han Dynasty, was acquainted with Han Xin who was well versed in both polite letters and martial arts. In his contacts with Han, he found that he could be a talented general and recommended him to Liu Bang. However, Liu Bang did not employ him. Han Xin had no alternative but to go elsewhere. When Xiao He learnt of this, he was so anxious that disregarding his old age, he travelled many miles in the moonlight to bring back Han Xin.

The second example comes from the Eastern Han Dynasty. When Xu Shu was the adviser to Liu Bei, Cao Cao acquired him as an adviser by trickery. Liu Bei cried when he said farewell to Xu Shu. He stared into the distance in tears. However, his view was blocked by the woods. Liu Bei pointed at the woods with his whip and said, "I want to cut down all these trees." When his followers asked him why, he said: These trees blocked my view of the departing Xu Shu. Suddenly, Xu Shu rode back and recommended Zhuge Liang to Liu Bei. Xu Shu said: If you could have Zhuge Liang, it is like Wen Wang of the Zhou Dynasty having the service of Jiang Ziya, and Liu Bang having the services of Zhang Liang. Guan Zhong of the state of Qi in the spring and autumn period and Le Yi of the state of Yan in the period of the warring states were incomparable to Zhuge Liang. This led to the story of Liu Bei visiting the thatched hut three times to solicit the service of the talented Zhuge Liang.

These instances of Xiao He chasing Han Xin under the moonlight, Liu Bei seeing Xu Shu off in tears, Xu Shu riding back to recommend Zhuge Liang and Liu Bei visiting the thatched hut three times to solicit the service of Zhuge Liang showed how anxious they were in recommending the talented people. There are numerous stories in Chinese history concerning the admiration and promotion of talented people to maintain stability and run the country.

However, why are the leading cadres still discoursing on theories in the face of so many outstanding talented people? Why should it take so long for them to promote and employ the talented? Why should we put up so many obstacles to obstruct ourselves?

In developing the four modernizations, can we stroll along at a casual pace?

Today, if we still merely discourse on theories, that will be very bad.

GUANGZHOU CONTROVERSY OVER HONG KONG TELEVISION

HK211322 Hong Kong TUNG HSIANG No 26 in Chinese 16 Nov 80 pp 21-22

[Article by I Ming: "Debate in Guangzhou: What Attitude to Take Toward Hong Kong Television"]

[Text] On 26 May of this year, the Guangdong Provincial Revolutionary Committee issued a circular prohibiting the watching of Hong Kong television. After the ban was issued, many "fishbone antennas" erected for the purpose of receiving Hong Kong television broadcasts were ordered to be removed. However, there is still quite a number of people who watch in secret. People are debating on the merits of this ban.

Last month this controversy over Hong Kong television finally came out into the open in the newspapers.

The debate started with an article in the 8 June issue of YANGCHENG WANBAO entitled "'Hong Kong Television' and Others" signed by Shun Zhi. This article said that Hong Kong television "is nothing but commercials propagandizing the 'pleasure-seeking mentality' of that 'dazzling world' and various 'farces' about the bourgeois philosophy of cheating and outwitting others," while television series "are nothing but fantastic films about swordsmen and martial arts, suspense or horror films about murders and detectives and vulgar erotic films.

On 7 October, YANGCHENG WANBAO carried another article by Huang Shushen, expressing dissenting views on Shun Zhi's opinion and the ban on viewing Hong Kong television.

The article cited a middle-aged man living in the special zone, who often had the opportunity to watch Hong Kong television, as saying: "There are both serious and nonsensical programs on Hong Kong television. Some inspire people to understand life while some pollute the mind with decadent ideas." "Hong Kong news programs are fast, concise and natural. There are also reports which expose the short-comings of Hong Kong society." The author criticized Shun Zhi's article by saying: "In our literary criticism and propaganda work, there is indeed an erroneous tendency toward oversimplification, speaking in terms of absolutes and bias. Conclusions are too inflexible and rigid with no analysis and no room for argument. They make the readers confused, unsure and unable to distinguish good from bad and true from false. This is worrying. Comrade Shun Zhi's article also has these defects."

The author asked the following question: "Hong Kong television did a live coverage of a performance by the Guangdong Academy of Cantonese Opera; in its reports on the Third Plenary Session of the Fifth NPC, it expressed a certain wish for the achievement of the motherland's 'four modernizations;' it has condemned and attacked the darker side of Hong Kong society--could you call all this a 'cancerous toxin to the mind' which 'corrodes' and 'pollutes'? Is this not too much of an over-simplified and arbitrary conclusion?"

The author holds that although there is rubbish and poisonous weeds on Hong Kong television, there are also quite a number of wholesome, serious and even outstanding works.

Based on this view, the author presented a dissenting opinion on the ban on Hong Kong television. He said that it is strange and perplexing, and of course unconvincing, that some foreign books and magazines and television programs dealing with science, practical knowledge and others can be imported and published, while programs on Hong Kong television are only supposed to be totally negated and people are only supposed to "know its 'defects'."

He believes that according to Marxist principles, we must analyze, differentiate, criticize and appropriate for our own use things belonging to the realm of human culture, and must not adopt the policy of hostility, fear and prohibition. Hong Kong television is a kind of culture. The same policy must apply. If we are not supposed to indiscriminately boycott and prohibit negative things, then we should all the more adopt the policy of studying, investigating and differentiating, propagating the good and eliminating the bad and praising the good and rectifying the evil with regard to Hong Kong television, which contains both good and bad elements. We must not think of the masses as being like "a dou" [infant name of Liu Shan (207-271), last emperor of Shu Han, known for his lack of ability and weakness of character] nor must be think that socialism is that fragile. We must never forget this in our discussions on questions of culture.

It is a bit surprising that YANGCHENG WANBAO printed this article. Apart from the surprise, this also makes one happy: the discussion of political affairs has really become an actual right of the people.

After 10 days, Shun Zhi published another article in YANGCHENG WANBAO refuting Huang Shushen's article.

The article admitted that it was wrong to negate certain "good things" in Hong Kong television which ought to be affirmed, but he stressed that although there are some wholesome and desirable things in Hong Kong television, on the whole, it is full of decadent, vulgar, erotic and fantastic negative things. It transmits bourgeois thinking and sentiments, advocates the bourgeois lifestyle and instills a bourgeois outlook on life into people's minds. All this has a subtle corrosive effect on people. The article also cited Hong Kong newspaper reviews of various television programs saying that Hong Kong television is full of violent scenes and portrayals of underworld activities. Even the Hong Kong audience is strongly critical of its contents.

Shun Zhi still insisted that in dealing with the spread of evil winds and noxious influences, apart from enforcing a strict ban, much work also has to be done, the most important of which is to conduct ideological education among the masses. He censured Huang Shushen, saying: "To firmly resist the corrosion of bourgeois thinking" is a great task. It is a new and important task for Guangdong which is presently implementing "special policies and flexible measures." What must our literary criticism circles do? I think that rather than boasting that we are "not that fragile," as certain comrades do, we had better do some work in eliminating pollution, such as conducting ideological education on resisting corrosion among the masses and creating public opinion against corrosion, in order to make everyone consciously stop watching Hong Kong television programs.

It seems that both Shun Zhi's and Huang Shushen's articles have a tendency to seize on the minor errors of the other for lengthy attack. However, the two have one thing in common, that is, neither one claims that everything on Hong Kong television is good or that it has more "rights" than "wrongs." The only difference between the two is that one believes that a "ban" must be adopted to deal with the "wrongs" while the other feels that the "ban" is improper.

Even the Hong Kong audience would agree that there are bad elements in Hong Kong television. However, is a "ban" the way to solve the problem? Some of our friends in Guangzhou started watching Hong Kong television in secret only after the government's clampdown. They said they wanted to see why the government is so scared of Hong Kong television. I believe that those who proclaimed the ban would never have thought that the ban could have such contrary effects.

Can "bourgeois things" really be banned? Most people in Guangzhou have relatives and friends in Hong Kong. Everyday, there are many overseas Chinese and Hong Kong and Macao compatriots going to Guangzhou. Are we to ban these "people who are not living in socialism," whose words and deeds propagate "bourgeois things," from going back to China? Are we to stop correspondence between Guangzhou and Hong Kong? Is it not contradictory to say that we must study the strong and weak points of capitalism to use them as a guide for the building of modernization and yet ban people from having contact with capitalist things?

I admire one statement by Shun Zhi. He said that we must educate people to consciously stop viewing Hong Kong television. However, the ban is now in force. The act of viewing itself is a violation of the law. There is no need to talk about conscious or unconscious.

This author thinks that the Guangdong authorities should rescind the ban on watching Hong Kong television programs. At the same time they should strengthen criticism work, discussing and analyzing with the audience how to sort out the wheat from the chaff in order to make people really "benefit" from watching Hong Kong television. On the other hand, the authorities should run their own socialist television stations well, bring into play the superiority of socialism in fair competition and win the support of the audience. Otherwise, the trend of watching Hong Kong television cannot be stopped by administrative orders.

HISTORCIAL SOURCE MATERIAL CONFERENCE VIEWS PROBLEMS

OW302202 Beijing Xinhua Domestic Service in Chinese 1147 GMT 29 Nov 80

[Excerpts] Beijing, 29 Nov (XINHUA)--The Third National Conference on Literary and Historical Source Materal Work opened on 26 November. It was attended by nearly 200 literary and historical source material research workers from 29 provinces, municipalities and autonomous regions throughout the country as well as from all democratic parties and the All-China Federation of Industry and Commerce.

All the participants proposed that all leadership levels, the CPPCC committees at all levels and the departments concerned should attach importance to doing a good job in safekeeping literary and historical source materials. They held that many people of the older generation keep abundant literary and historical source materials in their minds, but since they are old and ill, an urgent task is to put these source materials in to safekeeping.

During the discussion, many representatives held: with the passing of time and as a result of the persecution by the counterrevolutionary cliques of Lin Biao and Jiang Qing, many people of the older generation have passed away. Someone who had personally experienced the 1898 reform movement cannot be found any longer and those who had actually participated in the 1911 revolution can be counted on one hand. Veteran comrades of the early period of the founding of our party are also very few and those who are still alive are mostly over 70 and ill. Materials lost with the death of some comrades cannot be retrieved. If the materials kept by those who are still alive are not collected and put in safekeeping, the resulting loss can never be made up.

The representatives held: Since the downfall of the "gang of four," particularly after the convocation of the Third Plenary Session of the 11th CCP Central Committee, we have made progress in literary and historical source material work. The lively political situation of stability and unity and the implementation of all the party's policies have all contributed to laying a good foundation for and creating favorable conditions for the work of putting literary and historical source materials in safekeeping. It is not only necessary but also possible to carry out this work well.

After returning to Beijing, Mao convened a meeting in July 1966 and criticized Liu and Deng, it said.

In August of the same year, Chairman Mao issued an order "to fight against the commanders" and Liu dropped from the second to the eighth party ranking after the decision to name Marshal Lin Biao as a successor to Mao, the memoirs said.

While under growing criticism, Liu repeatedly said that, though he and Mao differed in opinions in some routine tasks, he had not been against the Mao line under any circumstances, the memoirs said.

When Liu was called by Mao to the Great Hall of the People in January 1967, Liu said he would step down as the head of state and appealed for the release of many accused officials, it said. But Chairman Mao did not reply to Liu's appeal and merely puffed tobacco, the memoirs said.

The current special trial of Mao's widow Jiang Qing, the late Marshal Lin Biao and their followers has taken up mainly charges on their persecution of Liu. The indictment papers, however, do not refer to the responsibility of Mao himself.

ARTICLE ON EVILS OF IN-LAWS

HK060227 Shanghai WEN HUI BAO in Chinese 17 Nov 80 p 3

[Article by Meng Chu [1322 2906]: "The Evil Caused by Women and Imperial In-Laws in Feudal China Times"]

[Text] Through the ages, men of insight were strongly against and detested the interference of empresses and imperial in-laws in politics. The official histories, biographies of empresses and imperial concubines and the "histories of emperor in-laws" were full of "records of the devastation done to the state by those evil women and the evil deeds and upheavals caused by imperial in-laws" ["The History of Late Han, Biographies of Empresses Book 1"]. There were "critiques" and "eulogies" to analyse the calamities they had caused; what they had done was, in fact, clear to all wise emperors and capable ministers. For example: Emperors Gaodi and Guangwu Di of the Han Dynasty established systems when they ascended the throne in order to curb the political interference of imperial in-laws. Emperors Kangxi, Yongzheng, and Qianlong of the Qing Dynasty wrote brilliant and wise tracts to list and stress the maladies that resulted from empress dowagers governing the nation as regents. Gu Yong of the Han Dynasty presented a petition to Emperor Yuan Di, which said: "Give the relatives of the imperial concubines as much money as they want, but never allow them to interfere in state affairs. Keep yourself away from the relatives of the empress and allow no power to them and their cliques." ("Biographies of Gu Yong and Du Ye in the History of Han Dynasty") Yao Chong, the renowned minister who helped Emperor Xuan Zong of the Tang Dynasty to revive the Kai Yuan regime, also submitted an appeal to the emperor on 10 government orders and regulations at the time. Of his 10 prohibitions 2 stated that the empress should not govern the nation as a regent, and 6 stated that imperial in-laws must not hold government posts in the key organs. They held that dictatorship by empresses, concubines and imperial in-laws was closely related to the rise of decline and peace or chaos of a dynasty and they took the warning from history. The warning from history indeed teaches posterity something important, and a summation of it is necessary.

I

Empresses mean empress dowagers, empresses or beloved imperials concubines. According to the records of the biographies of empresses and imperial concubines in official histories, and the "history of imperial in-laws," imperial in-laws were relatives of the court who had different surnames. Most of them were the relatives of the empresses and imperial concubines. The families of the married imperial princesses were included as well. In the imperial court, the imperial in-laws, and the guest advisers, government officials and their associates attached themselves to the imperial in-laws and formed a strong political power. Such power was called the clique of the in-laws. It was also named the clique of the empress because it was directly attached to the empresses and the imperial concubines.

In ancient China, there were two ways, the official and the unofficial, to become government officials, to seize political power and enter the central organs. The official way was appointment by recommendation or through civil service examinations, or promotion to central organs on account of meritorious service, outstanding administration, ability and political integrity. In the unofficial way, the imperial in-laws were conferred noble ranks and became government officials merely because they were relatives of the empresses or imperial concubines. If a girl won the favor of the emperor, she would be made an empress or imperial concubine. Then, her family would be ennobled and members of her family such as her father, brothers and nephews would immediately enjoy a meteoric rise, become nobles and hold influential posts in the government; they were involved in decision-making in state affairs. For example, during the reign of Emperor Wudi of the Han Dynasty, an ordinary woman surnamed Wang won the emperor's favor and was made empress dowager, whereupon her mother was conferred the title of supreme ruler of Pingyuan, her brother Tianfen was made the Marquis of Wuan, minister of military affairs and prime minister, another brother Sheng was made the Marquis of Zhou Yang, and the daughter she had by her former husband was made the supreme ruler of Xiu Cheng. Another example happened during the reign of Emperor Zuanzong. Yang Guozhong, who was an ignorant and incompetent Philistine rascal, became prime minister and held scores of posts at the same time just because his cousin Yang Guifei won the favor of the emperor, and the whole family became renowned and influential. Originally the feudal system attached great importance to family status, personal background and status. However, when it came to the in-laws, they became nobles merely because they were relatives of the empresses or concubines. This is indeed ironic: the in-law clique was authorized great power in state affairs and formed a special structure in the feudal system.

The participation of the empresses and imperial concubines in state affairs, and the involvement of the in-laws in politics later led to usurpation of the throne and dictatorship by the in-law cliques. This was so called dictatorship by empresses, imperial concubines and in-laws. Liang Qichao analysed the specific conditions that produced such dictatorship. He held: the emperor was either too young and inexperienced, or no longer interested in politics, or too submissive and weak, or too violent, or too extreme. As a result he lost power. This is indeed a sound analysis. We can again group the emperors under two major categories: the first group composes those who were stupid, libidinous or tyrand, and granted power to the empress and imperial concubines and acted in collusion with each other; or else the empress or the imperial concubines made use of the emperor's favor to seduce him by their charm and thus manipulated power for personal ends. Examples can be found in the dictatorship of the imperial concubines Yang and Jia in the Western Jin Dynasty, and the favorite concubine of Emperor Gaozong of the Tang Dynasty, Wu Zetian. Emperor Zhongzong entrusted Empress Wei and woman official Shang Guan to handle state affairs. Emperor Xuan Zong was infatuated by imperial concubine Yang. The other group is composed of emperors who were both young and submissive, thus the empress dowager seized the opportunity to govern the nation as regent, and the power fell into the hands of women. Examples can be found in the Eastern Han Dynasty when six empresses, Dou, Deng, Yan, Liang, Dou and He governed the nation as regents; and in the Qing Dynasty, dowager Cixi held court from behind the screen and monopolized power. There was a traditional idea in ancient China: "Hens cannot crow at dawn, if they do so, it will be the end of everything." The real meaning is to forbid women from interfering in government and political affairs. Such a traditional idea is obviously erroneous today. However, it was not unreasonable to say that in ancient times. At that time, women were deprived of the right to receive education, and even if they were nobles like empresses or imperial concubines, they were ignorant and ill-informed and did not possess any actual ability to govern the nation, because they lived a secluded life in the court. Therefore, in feudal society all so-called virtuous women abode by the teaching not to interfere in state affairs. Emperor Taizong of the Tang Dynasty once discussed nation affairs with Empress Zhengsun. The empress said, "Is it possible that if women participate in national affairs it will cause great troubles to the state?" Emperor Taizong insisted that she should expound her ideas, but the empress just refused to answer. When the empress dowagers governed the nation as regents or women monopolized power and practiced dictatorship over the country, they would not personally appear in the imperial court, instead they entrusted the power to some eunchs of powerful government officials just as empress dowager Sixi of the Qing Dynasty did. Some of them "entrusted the power to their own cliques," ("The History of the Jin Dynasty: Biography of Jia Chong") or "entrusted state affairs to their maiden families," ("The History of the Han Dynasty: Biographies of Gu Yong and Du Ye") and the in-laws monopolized power and practiced dictatorship over the state. Thus, women could extend their power with the help of the in-laws while the in-laws themselves played up to people of power and influence for they had the power delivered them by the empresses and imperial concubines. With the power and influence of the empresses and imperial concubines, the in-laws were able to usurp power, their acts were closely related to an empress's participation in national affairs. In-law politics was a form of court politics that resulted from the emperor's favor toward women and the dowager's participation in nation affairs. Let's put it this way: in-law politics was an extended form of women usurping power. Women won the favor of the emperor because of their beauty, while men became nobles because their relatives were in the court. The formation of petticoat relations of cliques and gangs and the nature of imperial court politics made the dictatorship of empresses and imperial concubines extremely corrosive, and this led to great calamities in the feudal dynasty and to the common people. Therefore, traditional historians named the usurpation of power by empresses and in-laws as evils caused by women and emperor in-laws.

II

There are several regular phenomena in the course of the formation and the development of empress and in-law politics:

First: emperors were but political puppets of the empresses and imperial concubines and in-laws who monopolized power.

The imperial court was the center of feudal power. Under normal circumstances, the emperor was the representative of the power center. Once the power was monopolized by the empresses, imperial concubines and the in-laws, most probably the emperors became political puppets.

If the empresses and imperial concubines and in-laws could interfere in the imperial power when the emperor was young and capable, most of them manipulated the emperor by some evil means. For example Tian Fen and Dou Ying attacked each other because they had empress dowagers Wang and Dou to back them up, and so the imperial court was split into two factions. Emperor Wu of the Han Dynasty was so angry that he wanted to kill both Tian and Dou, however, he was prevented by empress dowager Wang. At that time, empress dowager Dou was dead. The emperor thus killed Dou Ying and Guan Fu in order to put an end to the matter. In other cases, if the emperors were stupid and libidinous even though adult, "after they had intimate relations with women, they would agree to whatever their beloved said; if the women's beauty won the favor of the emperors, they could get everything they wanted." ("The New History of the Tang Dynasty: Biographies of Empresses and Imperial Concubines Book 1") Naturally, the emperor was nothing but the puppet of his beloved empress and imperial concubines. For example, Emperor Gaozong of the Tang Dynasty lost his power because he "indulged himself in sex in disregard his greying hair." ("The New History of the Tang Dynasty: Biography of Emperor Gaozong") Hence, Wu Zetian seized the opportunity to "have the emperor in her power and monopolized power for herself to govern the state." ("The Eulogies" in "The New History of the Tang Dynasty: Biographies of the Empresses and Imperial Concubines") Under the reign of Emperor Chengdi of the Jin Dynasty, Empress Yu governed the nation as regent, and thus executed Sima Zong, prince of Nandun. When the emperor expressed his doubts over the charges against the prince of Nandun, his mother Empress Yu hit his head with an ivory ruler in front of others and said, "Why should you say such a thing?" The timid Emperor Chengdi was stupefied. ("The Study Notes" of Wang Yinglin Vol 13) According to the record of "The History of the Jin Dynasty: Biography of Emperor Weidi," when Emperor Weidi heard the croaks of toads in the garden of Hualin, he asked his followers, "Who is making that noise, is it official or private?" When the country was in upheaval, the common people starved to death. However, Emperor Weidi was surprised to learn about this and said, "Why don't they eat pork porridge?" When such an idiot emperor fell into the hands of Jia Nanfeng who monpolized power to herself and was extremely cruel and despotic, he could only be a puppet. As for Emperors Shangdi, Andi, Shaodi, Shundi, Zhongdi, Zhidi, Huandi, and Lingdi, all of them succeeded to the throne when they were ignorant and young, so naturally, the imperial power fell into the hand of the empress dowagers.

Feudal politicians and historians drew conclusions from these examples. They held: "If the empress dowagers participated in state affairs, they would disrupt the imperial court." ("The History of the Han Dynasty: Biographies of Gui, the Xias, Hou, Jing, Yi and Li") "If the in-laws were too dominating and monopolized all power for themselves, there would be no discrimination between emperors and ministers." ("The Chronological History of Cima Guang, Vol 25")

Second: leading to the decline of the feudal dynasties.

In feudal dynasties, the imperial court succumbed to interference by various political forces even if the emperors and prime ministers were capable. The dictatorship of empresses and in-laws was a disruptive interference. When empresses usurped power and in-laws practiced tyranny, the dynasty was destined to decline.

In a revival period, during the reign of Emperors Zhaodi and Xuandi in the Han Dynasty, at first Emperor Xuandi could be considered wise and capable, however, he entrusted his in-laws Shi Gao and Xiao Wang to administer the nation before he died. After then, beginning with Emperor Yuandi of the Western Han Dynasty, "the state was ruled either by eunuchs or in-laws." ("The History of Ancient China" by Xia Zengyou") During the reign of Emperors Yuandi, Chengdi, Aidi and Pingdi, the Wang, Fu and Deng in-laws practiced dictatorship over the state in succession. Consequently, the power of the state sharply declined, and the dynasty collapsed after setbacks. Although Emperor Guangwu of the Eastern Han Dynasty was able to revive the country and there was a period of good order during the reign of Emperors Ming Di and Zheng Di. Ever since the Dou in-laws usurped power during the reign of Emperor He Di, empress dowager Deng ruled over the imperial court throughout the reign of Emperor Shang Di and An Di; she was in command of everything. "During the 10 years when the empress dowager held court, the state never had enough funds." ("The Study Notes of the Chronological History of Sima Guang"--Wang Fuzhi Vol 7) The latter empresses "all manipulated the state affairs from behind the screen and entrusted their father and brothers to administer the state affairs. They preferred having child emperors so that they could extend their influence in state affairs, and persecuted the capable so that they would be able to rule over the imperial court." ("The History of the Late Han Dynasty: Biography of the Empresses and Imperial Concubines" Book 1) Protracted dictatorship by in-laws corrupted the political scene of the Eastern Han Dynasty; "there was no peaceful day," and "the state was subjugated." ("Study Notes of the Chronological History by Sima Guang" Vol 7)

Emperor Xuanzong of the Tang Dynasty ruined the period of orderly peace during the reign of Kai Yuan, for he indulged himself in his love of imperial concubine Yang. This is a typical example illustrating how in-law politics could lead to the decline of a dynasty. When Emperor Xuanzong of the Tang Dynasty put down the rebellion of the Empress Wei Di's clique, the Tang Dynasty was revived. On his succession to the throne, he appointed Yao Chong and Song Jing as prime ministers. Every family was well-fed and well-clothed and the country was so prosperous that it was known as "the golden age of Kai Yuan." However, later he spoilt himself by indulging in love for concubine Yang and other beauties, and forgot about state affairs. He appointed the treacherous Li Linpu and the foclish Yang Guozhong as prime ministers, and this led to the rebellion of An Lushan and Shi Siming, after which the Tang Dynasty declined.

Third: when the interference of empresses and the in-laws came to a climax, there was a change of dynasty.

Change of dynasties happened many times over 2,000 years and there were numerous reasons for the changes. One of them was the dictatorship of the empresses and imperial concubines and in-laws. Their dictatorship corrupted the imperial court and the government got into a chaotic state. The country was then poor and weak and was in so difficult a situation that it declined. Similar examples could be found in the decline of the Eastern Han and the Western Jin dynasties. Some dynasties were subjugated directly by in-laws; for instance, Han Dynasty was conquered by Wang Mang and Wu Zetian changed the Tang Dunasty into the Zhou Dynasty.

The change of dynasty was not necessarily a bad thing. For example Liu Bang conquered the Qin Dynasty and established the Han Dynasty, and Zhu Yuanzheng drove out the Mongolians of the Yuan Dynasty and established the Ming Dynasty. They drove the evils away on behalf of the people, which was a righteous and correct deed. The Li family conquered the brutal Sui Dynasty and established the Tang

Dynasty, and the Zhao family put an end to the upheavals of the five dynasties and established the Song Dynasty. Emperor Taizong of the Tang Dynasty and Emperor Taizu of the Song Dynasty brought peace and prosperity to the people. However, the empresses and imperial concubines and the in-laws monopolized power to usurp the dynasty by means of conspiracies. They were brutal and cruel, and entrusted their cliques to manage state affairs. They did not trust and appoint capable men to attain to the state affairs. They even slaughtered the honest and the weak and exploited the common people by cruel means. There was no peace for the people. The usurpation of power by Wang Mang in the Western Han Dynasty was the product of in-law politics. Historians called that the usurpation of the Han Dynasty by Wang Mang. Wang Mang was "extremely vicious and committed monstrous crimes by persecuting the innocents." ("The History of the Han Dynasty: Biography of Wang Mang," The eulogy) What Wang Mang had done did not push history forward, but instead pulled it backward. Wu Zetian was a typical example of empress dictatorship. Although she scored some achievements during her reign, she established her dynasty by force. "Thousands and millions were slaughtered and the whole country was smothered with blood and terror." ("The New History of the Tang Dynasty: Biographies of the Empresses and Imperial Concubines") We can never approve of her cruelty.

Fourth: no in-laws who monopolized power to themselves could escape from the fate of ruining themselves and exterminating the whole family.

The imperial in-laws were a political clique backed up by the empresses and imperial concubines. They could not stand on their own and possessed no actual power. Empresses and imperial concubines were the wives and concubines of the emperors; they themselves did not possess legal power, but had to be backed up by their emperors, and used the name of the imperial power to extend their influence. The empresses, imperial concubines and in-laws cliques were the appendages of the imperial power. Their fates could either be like Wang Mang and Wu Zetian, who took over the dynasty and established a new one; or they would be executed by the royal family and replaced by another political clique. History has clearly illustrated how a family was honored because one of the members won the favor of the emperor, but it also tells how the family was exterminated when one lost power. Once there was a new emperor, the old empress dowager had nobody to turn to, she would then lose her power or be killed, and the in-law clique would then also lose their supporters. Ever since the in-laws monopolized power and exervised tyranny, "the common people were discontented and complaints were heard everywhere." (The History of the Late Han Dynasty: Biographies of Ligu and Dugen") "The whole country suffered." ("The History of the Late Han Dynasty: Biographies of Feng, Cen and Jia") Thus the common people would seize the chance to drive the in-laws away. Usurpation of power by empresses in feudal society was illegal. The in-law dictatorship had no political or social foundations, so they were very often easily demolished. Dictatorship by in-laws could never escape the destiny of ruining themselves and exterminating their families. The numerous notorious in-law cliques in the Eastern Han Dynasty were executed as the empress dowagers who backed them up died. Some were even executed when they were still in power, such as the Jia and Yang families in the Western Jin Dynasty, the imperial concubine Yang, and the Wu and Wei families in the Tang Dynasty. The eulogy of "The History of the Han Dynasty: Biographies of the In-Laws" said: In the prosperous years of the Han Dynasty, between the period when the Lus usurped power and the usurpation of the dynasty by Wang Mang, "only four families, namely those of the empress dowagers of Emperors Wendi, Jindi and Wudi and Empress Qiongcheng could preserve their status and maintain their families. As for the prince's concubine Shi, Empress Wang Dao and Xu Gongai, they were all killed; their families were maintained since they relied on the deceased emperors and they dared not play tyranny. The rest were either exterminated or exiled." This was shown to be a regular phenomenon.

III

The historical figures of empresses, imperial concubines and in-laws in Chinese history were not all evil. Some of them did score some achievements and we should not condemn all of them. We must analyse them specifically. For example, the Empress Lu of the Han Dynasty closely followed the policies of the deceased emperor and governed the country by doing nothing that went against nature. The in-laws Wei Qing and Huo Qubing drove out the barbarian Xiongnu in the north, and Huo Guang assisted in the administration to restore prosperity during the reign of Emperors Zhaodi and Xuandi. Empress Zhengsun of Emperor Taizong of the Tang Dynasty opposed empresses, imperial concubines and in-laws interfering in state affairs. Empress Ma of Emperor Taizhu of the Ming Dynasty would not persecute people who rendered oustanding services. Some empresses, imperial concubines and in-laws made contributions to history, however, we cannot just cite those examples to affirm that interference by empresses, imperial concubines and in-laws in state affairs was good, just as we cannot cite a few outstanding figures in the feudal society as a basis for affirming the feudal system; the feudal system still has to be criticized. As a political system that was strongly tinted with palace chambers and as the appendage of the imperial power, the interference by the empresses, imperial concubines and the in-laws in politics had its special rotten, conspiratorial and cruel nature.

Rotten nature: the appointment of the capable to the court could overcome and restrain the rotten nature of the feudal system to a certain degree, so there could be enlightened politics. However, if the in-law clique interfered in state affairs because of their relations with the empresses, imperial concubines and in-laws and ruled over the country, naturally they would establish their own clique and form their own gangs to back up themselves and discriminate against the capable. For example during the reign of Emperor Yuandi of the Han Dynasty, Shi Gao assisted in state affairs, "he appointed and employed only his own advisers and friends, and relatives of his maidservants." During the reign of Emperor Aidi, the Fus were in power, "the virtuous and the capable were slandered, the ministers were falsely charged, and many outstanding people could not maintain their positions." ("The History of the Han Dynasty: Biographies of Kuang, Zhang, Kong and Ma") More absurb still, the lovers of the empresses were appointed to important positions in the imperial court. Wu Zetian made her lover Xue Huiyi the commander-in-chief of the troops. The women official Shangguan openly asked for employment in the imperial court for her lover. This was indeed rotten. These corrupt in-laws who gained power because of their relations with the empresses or imperial concubines lived in an extremely luxurious and extravagant way when they were in power, savagely oppressed the people, sold government positions to earn money for themselves, and openly accepted bribes and gifts. Thus there was no justice in society, for people were accustomed to ask for a favor to get themselves to the imperial court. Xiao Wang said to Emperor Yuandi: "When the in-laws were in power, most of them were extremely luxurious and libidinous." ("The History of the Han Dynasty: Biography of Xiao Wang") This is in fact a very good summation of a regular phenomenon.

Conspiratorial nature: the politics of the imperial court was conspiratorial politics. Most of the activities were carried out in forbidden palaces and behind bamboo screens. Entry to the palace was strictly forbidden and its ways were very secretive, thus conspiracy had its way in the palace. When there was a change of royal family, the conspiratorial nature of the empresses, imperial concubines and in-law dictatorship was particularly obvious. For example: when Emperor Zhongzong of the Tang Dynasty was poisoned and died suddenly, Empress Wei blocked the passage of information, "kept the secret and did not declare the death of the emperor." ("The History of the Tang Dynasty: Biography of Empresses and Imperial Concubines" Book 1) During the period that she "kept the secret and not declare the death of the emperor," she deployed forces to be stationed in and guard the capital, she fabricated a posthumous edict and put the crown prince on the throne so that it would be perfectly justifiable for her to "govern the nation as a regent." The empresses and in-laws placed spies and agents throughout the country to extend their power. Wu Zetian openly asked for secret information, Empress Jia ordered "her trusted followers to dress in civilian clothes and gather information outside the imperial court." ("The History of the Jin Dynasty: Biography of Zheng Hua") Empress dowager Cixi controlled Emperor Guangxu by placing spies around him so that "whenever the emperor summoned an interview with his ministers, the empress dowager ordered eunuchs to eavesdrop behind the screens." ("The Examination of the Qing Dynasty") Thus, the 1898 reform movement was sabotaged.

Cruel nature: the murders done out of jealousy in the palace were indeed cruel and savage. Jia Nanfeng once stabbed the pregnant concubine of the crown prince in the stomach, and the fetus fell to the ground at the blade of the spear. A cruel empress would kill anyone who challenged her position even if it was her own son. For example the empress dowager of the late Wei Dynasty poisoned her own son Emperor Mingdi and practiced tyranny. Wu Zetian was notorious for her cruelty. To usurp power and win the favor of the emperor, she even strangled her own daughter. When Empress Wang and the prince's concubine Xiao were dethroned and consigned to limbo, she still would not let them go. They were both flogged 200 times with a stick and their limbs were broken. She threw them upside down into barrels and gave orders to "intoxicate the bones of the two women." A few days later, Wang and Xiao died. The empresses and imperial concubines even used the same crule means to slaughter the ministers. As a matter of fact, most of the cruel officials were found during the reign of Empress Wu in the Tang Dynasty. She connived at the cruel officials Zhou Xing and Lai Junchen in framing false charges and throwing many people into prison, and everyday many people were put to death. Tens and hundreds of ministers were "lined up and slaughtered like sheep and pigs." Furthermore, she dispatched attorney generals to the prefectures of Jiang Nan and central Guizhou, and "killed all the officials banished from the court and those in exile, as if they had not killed enough." ("Notes on the Studies of the 22 History Books" Vol 17 by Zhao Yi) Even her own son Li Hong, Li Xian, her grandsons and son-in-laws were persecuted, she was extremely cruel.

In a word, the politics of the Chinese patriarchal, feudal autocratic society was corrupt and rotten, conspiratorial and cruel in nature. Generally speaking, the periods of dictatorship by empresses, imperial concubines and the in-laws were the darkest periods, which thoroughly exposed the rotten, conspiratorial and cruel nature of the feudal autocratic society.

Interference by empresses, imperial concubines and in-laws in politics had long coexisted with the feudal autocratic system from the Qin Dynasty till the end of the Qing Dynasty some 2,000 years later. It was one of the characteristics of the Chinese feudal autocratic system. Although precautions were taken against their interference in many dynasties, their influence was still there. Although empresses, imperial concubines and in-laws were killed, another group would crop up. Just like terminal-stage cancer, they spread so fast that there was no permanent cure for them. This has shown that unless the feudal autocratic system was uprooted and the monarchy abolished, the empresses, imperial concubines and in-law dictatorships would be revived in a new guise, stir up great troubles and bring about great calamities. All this has given us a lesson on the evils brought about by the empresses, imperial concubines and in-laws. We must seriously guard against them.

FORUM ON 'IDEALIST' PHILOSOPHY CLOSES IN ZHEJIANG

OW021422 Hangzhou Zhejiang Provincial Service in Mandarin 1100 GMT 2 Dec 80

[Text] According to a station report, the forum on the idealist philosophy of the Song and Ming Dynasties, jointly sponsored by the east China chapter of the China Society of the History of Philosophy and the Provincial Social Sciences Institute closed in Hangzhou after a week in session. This was the first forum on the idealist philosophy of the Song and Ming Dynasties since the founding of the nation.

(Feng Xi), director of the east China branch of the China Society of the History of Philosophy, delivered a speech at the forum. He pointed out: The idealist philosophy of the Song and Ming Dynasties is of particular importance to east China. (Chen Bingqing), deputy director of the Propaganda Department under the provincial CCP Committee, also delivered a speech at the forum. Attending the forum were more than 180 people including professors and specialists from east China, Beijing and various provinces and municipalities, members of various philosophy research institutes and foreign scholars. Theses with a total of 500,000 words were submitted to the forum. (Qiu Hansheng) and (Deng Anmin), and others also spoke at the forum.

They all believed: The school of idealist philosophy of the Song and Ming Dynasties ruled the later stage of China's feudal society for as long as 700 years. The current study of the idealist philosophy of the Song and Ming Dynasties is of great significance in inheriting cultural legacies with a critical attitude and in eliminating the pernicious influence of feudal ideas. The specialists and researchers also studied Zhu Xi's thought and its role in history and Wang Yangming's theory on innate knowledge as well as methods on how to study the idealist philosophy of the Song and Ming Dynasties.

The book entitled: "The Study of Wang Yangming's Thinking" by (Shen Shanghong) and (Wang Fengqing) is a provincial academic achievement in studying the idealist philosophy of the Song and Ming Dynasties. Specialists and scholars attending the forum praised this book highly.

The idealist philosophy of the Song and Ming Dynasties also has deep influence abroad. Japanese scholar (Sukeo Fukizawa) and historian (Akira Ken) have each described how the idealist philosophy of the Song and Ming Dynasties is being studied in Japan, Europe and the United States.

PARTY AND STATE

PEASANTS URGED TO PROMOTE COLLECTIVE, SIDELINE PRODUCTION

Beijing RENMIN RIBAO in Chinese 10 Oct 80 p 2

[Article by Da Fengquan [6671 7685 0356]: "Let the Spring Breeze Blow"]

[Text] "Boundless grasses over the plain come and go with every season; wildfire never quite consumes them; they are tall once more in the spring wind." This well-known poem by Bai Juyi of the Tang Dynasty, which extols the physical capacity of wild grasses to survive any hardships and which revive with the advent of every spring season following wintry hibernation, reminds me of the household sideline production in rural villages, which like the grasses in the plain, revives again in the spring wind and rain following a wildfire.

The commune household sideline production was once condemned as the "capitalist tail" and was therefore restricted and banned in our country. Today, as a necessary complement to the socialist economy, it is permitted to exist and grow again. This is a very significant change that has taken place in the rural economy in the wake of the criticism of the ultraleft line. I am delighted to see that the ending of that wildfire across the land has brought to life those "lush grasses" in our vast countryside.

In recent years, the rural household sideline production has resumed and developed as a result of the development of the collective production. Nevertheless, we must also be aware that no effective measures have been taken by some localities to encourage and support the development of the household sideline production. Although slogans have been issued to promote it, substantial aid and guidance are nowhere in sight. Authorities concerned are still indifferent to the development of this production. What worries commune members most is their action to restrict it in various crafty ways. As a result, the enthusiasm generated by the party's policy has been suppressed, causing damage to the development of the household sideline production. This fact shows that mere slogans without action will get nowhere, the leave-it-alone attitude must be discarded, and urgent measures must be taken to encourage and support the development of the household sideline production. It appears that the move to annihilate the wildfire must be followed by actions to breathe new life into sideline production. The key to success in bringing about this change lies in the ability of leading groups at all levels to overcome apprehension resulting from the development of the household sideline production. Why should they look forward to this development with apprehension?

It was reported that if commune members are given a free hand to develop sideline production, it may tamper with the development of the collective production and tarnish the superiority of the collective economy. Actually, this worry is not justified. For example, Changsha Commune of Kai County in Sichuan Province has scored a dual success in developing collective production on the one hand and sideline production on the other. Changsha Commune, a well-known orange and tangerine producing center, attributed this success to its new policy of helping commune members develop collective and sideline production simultaneously. To boast sideline production, it has provided them with seedlings of perennial crops, assisted them in growing fruit trees, set aside special plots for growing feed crops, set time for them to work on sideline production, and supplied them with fertilizer at reasonable prices. In this way, commune members have been encouraged to raise more pigs and produce more oranges and tangerines. An increase in the output of pigs has made more organic manure available for growing crops, thus effectively resolving contradictions resulting from acute competition between collectives and individual commune members and between crop growers and fruit plantation owners for manure. Furthermore, the per-unit grain output has also increased considerably. In 1979, this commune's total grain output was 42 percent more than in 1976; per-capita income from collective production and from growing oranges and tangerines and raising pigs increased by 112 and 48 yuan respectively.

With this rising income, commune members are now all smiles, and are more willing than ever to promote agricultural production, thus giving new impetus to the collective economy. Facts show that rural economy is an integrated economic system; the development of commune household sideline production is dependent on the growth of the collective economy, while the former can give strong support to the latter. The two are interconnected. If they are handled properly, they can become more and more mutually supportive and more forward to complement each other. Changsha Commune's comrades have displayed courage to develop the collective economy on the one hand, and have taken effective measures to encourage and support commune members to develop household sideline production on the other. Their successful experiences in this field deserve our promotion, and their spirit of seeking truth from facts merits our commendation.

PARTY AND STATE

PRC'S NEW ECONOMIC POLICY BRINGS HOPES TO NORTH SHAANXI

Beijing RENMIN RIBAO in Chinese 10 Oct 80 p 2

[Newsletter by RENMIN RIBAO correspondent He Jiazheng [0149 0502 2973]: "The Confidence and Hope of Peasants in North Shaanxi"]

[Text] Whenever I went in north Shaanxi, I felt that this loess plateau plagued by poverty for years is undergoing changes as a result of the implementation of the policies for the countryside. Although such changes are not too astonishing and north Shaanxi is still confronted with numerous difficulties, it can be said that this famous pocket of poverty has found a direction in which it can move forward, and look to the future with hopes.

A Bright Future

At one end of a trubulent river, I climbed a denuded mountain. Soon I saw a few shabby caves sheltering a number of households which make up the Qudai Brigade, known for its poverty in Yanan Municipality. I sighed in seeing such an impoverished place surrounded by denuded cliffs. Soon I was surrounded by many smiling faces and was told that "we are now eager to work; as long as the present government policies continue in effect, good days are sure to come a few years from now."

Why were people living in such a hopeless place so optimistic? The reason is that these impoverished souls have seen a ray of hope through the implementation of the party's present policies. The trip also took me to many other poor villages similar to Qudai. Typical is the Sunjiahe Brigade of Zichang County where the residents were also very poor, partly subsisting on food grains and partly on wild vegetables. Each adult could earn 0.3 or 0.5 yuan daily. Over the years, over 40 residents had to leave their homes, and eked out a living somewhere else. Last year, the brigade was hit by another prolonged drought. Despite this, 38 of them returned home last spring, saying that as long as the present policies continue in force, they could expect better days to come and were looking forward to the future with hopes. Old man Chen Yuru [7115 3768 1172] cheerfully told me: Since the work teams were disbanded, private plots were returned to their original owners, and commune members were permitted to raise their own pigs and cattle, they now knew what is in store for them in the future. They said that they will have no trouble making ends meet this year, will be able to pay off their old debts next year and build new homes for themselves the year after.

A Turning Point

This loess plateau is dotted by yellowish clay dunes everywhere. Is there any hope for development at this plateau plagued by drought and poor soils even after the economic policy is liberalized? Pressed for an answer to this question, a comrade in north Shaanxi said to me: There are soils everywhere in this vast and sparsely populated land. We can grow crops, plant trees, and grazing grass and raise cattle and sheep out there. There is a great economical potential to be tapped. The simultaneous development of agriculture, forestry, animal husbandry, and sideline production in north Shaanxi is very hopeful, if we can utilize this land to the best advantage and do everything in a manner appropriate to the local conditions.

While in north Shaanxi, I found that many units have played an exemplary role in improving their economic well-being, and in bringing new hopes to this region. For example, Liulin Brigade of Yanan Municipality has stepped up the farm capital construction in an effort to increase the per-unit output and lay a groundwork for retiring certain low yielding fields and for transforming them into forest and pastoral areas for growing grazing grass and trees and for developing sideline production. Last year, it grossed over 380,000 yuan, a third of which came from sideline production; its per-capita income, public savings, and grain reserves were 181 yuan, 700,000 yuan and 240,000 jin, respectively. It has established a film projection team and opened a close-circuit television room and built and put into operation cooperative medical service centers and schools. For years, under the influence of the ultraleft line, north Shaanxi had adopted the same national pattern of the economic development without taking into account the local conditions, which differ in many ways from the rest of the country. In this way, it was prevented from demonstrating its own prowess to develop the economy. Since 1978, a tax cut approved by the state for north Shaanxi has enabled it to develop agriculture, forestry and animal husbandry simultaneously. This year, Zichang and Mizhi counties have been successful in growing grazing grass in 80,000 mu of land and 70,000 mu of land respectively, thanks to that tax cut. On the basis of suggestions from various sources, the Shaanxi Provincial Party and the North Shaanxi Capital Construction Committee have proposed to "develop agriculture, forestry and animal husbandry simultaneously, and to gradually retire certain low-yielding fields and concentrate on growing crops in high-yielding land." This economic policy has been endorsed by the masses.

Seek Truth From Facts

Many communes and brigades in north Shaanxi have instituted some new systems suitable to the local conditons on the basis of the documents issued by the central authorities. A typical example is the Mengjiaping Brigade in Mizhi County, a brigade which has 16 households and 310 mu of farmland. For years, it had failed to increase production, causing the masses there economic difficulties. Since 1979, radical changes have taken place in that brigade as a result of the implementation of two agricultural documents issued by the central authorities and the adoption of the system of division of responsibility for production as suggested by its party branch secretary Meng Shiming [1322 1102 2494]. Pointing at their newly purchased bicycles and sewing machines, commune members cheerfully said: "We never dreamed that good days could come so soon." How could north Shaanxi make such a remarkable progress? They attributed this success mainly to local basic level cadres' persistent efforts to seek truth from facts and take actual conditions into account.

A radical change has also taken place in the way of thinking amont the many basic level cadres in north Shaanxi, who have displayed courage to seek truth from facts. Comrades in Yanan Municipality said: In the past, "units at lower levels often exaggerated their achievements in reports to their higher authorities, which often assigned them production quotas unlikely to be fulfilled." Under the influence of the political movement, instances of insubordination never occurred to the bureaucracy there. Today, this malpractice is gone. Statistical figures on achievements in farm capital construction and in growing trees and grazing grass included in a report to the higher authorities last year have been verified by facts. This change in the way of thinking has proven e-sential to success in agricultural production.

Hope

North Shaanxi has taken an initial step for changes. Nevertheless, it still faces many practical difficulties that need to be overcome. It still faces shortages of food grains. Although north Shaanxi can count on the state for a supply of food grains, in the long run, it must rely on its own efforts to solve such shortages. Comardes of some communes and brigades have suggested that the following measures be taken to improve the economy of north Shaanxi:

First, it is necessary to concentrate efforts on growing crops in high yielding fields, to promote farm capital consturction and scientific farming as a step in raising the per-unit output. Careful and active consideration must be given to retiring certain low-yielding fields; edible oil and meat should be considered as euqally important as grains.

Second, some ways must be found to alleviate the shortages of funds. Although the state has given strong financial support to north Shaanxi, thus, far, almost no funds have been eramarked for developing forestry and animal husbandry. Comrades there hope that the state will delegate to north Shaanxi greater power to use its funds for developing that loess plateau.

Third, commercial circulation needs to be imporved. For example, when two communes in Yanan wanted to sell their surplus grain to the state as a result of bumper harvests last year, they were inexplicably rejected by a food department. Some brigades were not paid the right prices for surplus grains sold to the state. Last year, some 300,000 or 400,000 jin of apples in Fengzhuang commune could not be shipped out of the area because of lack of transportation. Some agricultural products which were accepted by food departments yesterday might be rejected today. The masses there said: "We are still in the dark as to what the state really wants." The cadres and people in north Shaanxi earnestly hope that service of this kind can be strengthened so that north Shaanxi can take a giant step forward in production.

BA YI RADIO COMMENTS ON PLA CADRES AND TRIALS

PLA Men Unhappy About Trial

OW291611 BA YI Radio in Mandarin to China 1400 GMT 28 Nov 80

[Text] Judging by reports on ideological trends received by the General Political Department, the vast numbers of commanders and fighters are very skeptical and unhappy about the trial of five former principal leaders of the PLA. Some comrades are of the opinion that denying the right of the former principal leaders of the PLA to cite relevant important documents and records of conversations for their own defense cannot be regarded as legal.

An example is the indictment of Wu Faxian on charges that acting on Lin Biao's instructions he appointed Lin Liguo deputy director of the general office and deputy chief of operations of the air force headquarters. Wu Faxian admitted this. But, at a preliminary hearing, he pointed out that the appointment was made according to Chairman Mao's instruction and that Lin Biao merely passed on Chairman Mao's order. Therefore, Wu Faxian asked the court to make public during his trial the instructions of Chairman Mao and Premier Zhou on Lin Liguo's assignment, which are on file at the air force headquarters. Wu Faxian has the right to defend himself with these documents. However, the second tribunal refused to look into these documents, saying that it was meaningless to examine the words and deeds of people already dead and that Wu Faxian should be held fully responsible for Lin Liguo's assignment to the important positions. In no way can the second tribunal's action be regarded as objective and fair.

Many take exception to the indictment of Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Jiang Tengjiao as principal culprits, equating them with Jiang Qing and company. Particularly unhappy about this are those comrades who worked together with Huang, Qiu, Li and Jiang during the cultural revolution and understood them. It is only natural, for as the court is trying our army's former principal leaders on charges that they engaged in so-called counterrevolutionary criminal activities, a certain person, with motives that cannot bear the light of day, can now accuse cadres at any level, who were under their commands, of having directly participated in counterrevolutionary criminal activities. And the formal decision of the Supreme People's Procuratorate--that, besides the 10 principal culprits, the other accomplices involved in the case will be tried separately according to the circumstances and that public prosecution against them will be instituted with the Supreme People's Court, local people's courts and military courts--has caused even greater agitation among the vast numbers of military cadres. The decision has in effect given the power to a certain person to punish at will any cadre involved in the cultural revolution who were under the commands of the five leaders.

However, it is not fair to blame all the cadres of the PLA for carrying out the "three support's and two military's" tasks. The army's involvement in the cultural revolution and intervention in party and government work was entirely based on orders of the chairman of the military commission. Therefore, the responsibility should be borne completely by the supreme commander. Certainly the responsibility for the crime should not be passed on to our army's cadres at various levels. It is even more wrong to use the law as a means to get even with personal enemies and vent personal spite.

However, a certain person is ignoring the facts and willfully exaggerating the issue of so-called Lin Biao's sworn followers hiding in the army. For example, not long ago Vice Chairman Deng said: because some cadres have not thoroughly resolved the problem of their feelings for the Lin Biao clique and are ideologically tied in a hundred and one ways with Lin Biao and company, a new wave of ideological confusion has emerged in the army. It is imperative to continue to eliminate the pernicious influence of Lin Biao in the army.

Moreover, a certain person has also spread rumors and slanders with ulterior motive, alleging that the time bomb which exploded in the Beijing railway station not long ago was (?secretly) brought to the railway station by some cadres of Beijing PLA units, that it was originally intended to be placed on Vice Chairman Deng's special train in a plot to assassinate Comrade Deng Xiaoping, and so on and so forth.

A certain person is trying to use such sinister methods to create a tense atmosphere, while our army's former principal leaders are on trial, to stir up people's dissatisfaction and hostility toward the army in order to apply greater pressure on the army and strike blows at those army cadres whom he does not like. In short, in its history of over 50 years, the army has never been suppressed, (?despised), persecuted and attacked as it is today. Therefore, the extremely demoralized state today of our army's commanders and fighters, especially cadres at the middle and upper levels, is by no means accidental.

Cadres Retiring Under Protest

OW020213 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 1 Dec 80

[Text] In his speech at a recent enlarged meeting of the CCP Central Committee's military commission, Comrade Deng Xiaoping pointed out: I have been told that a number of veteran army comrades have recently retired in order to relinquish their posts in favor of those better qualified. This is a good thing to which we should give wide publicity.

However, we should view this "good thing" from two aspects: as far as those who wish to drive all army veteran cadres out of office are concerned, the more they retire or leave their posts, the better. For those people, it would be ideal if all army veteran cadres retire or leave their posts.

However, viewing from the other aspect, as Comrades Huang Kecheng, Xiao Hua and Zhang Tingfa have said, it cannot be regarded as a "good thing" when veteran army cadres are retiring or leaving their posts one after another at a time when Huang Yongsheng, Wu Faxian, Li Zuopeng, Qiu Huizuo and Jiang Tengjiao are being tried and other defendants interrogated. This view is entirely correct.

Huang Huoqing announced that, except for the principal defendants, other offenders will be tried separately. After proceedings were instituted against offenders before the supreme people's courts, local courts and military tribunals, especially after the special court regain trying the principal defendants, those who are not eligible for retirement or who did not plan to retire for a few years began submitting their requests for retirement. In less than a month, many cadres at the corps and division levels alone have retired--81 from the Guangzhou PLA units, 79 from the Nanjing PLA units, 76 from the Shenyang PLA units, 64 from the Kunming PLA units, 91 from the Beijing PLA units and 24 from the Xinjiang PLA units. This situation in various services is similar.

It cannot but be noted that, except for a small number of the above veteran comrades who are indeed old and infirm and whose abilities have fallen short of the requirements for army work, most of them have retired or left their posts mainly for the following two reasons:

1. They are greatly dissatisfied with the present trial because the truth and the then objective circumstances have not been considered, and criminal liability has been exaggerated. They have retired to protest the trial.

2. When the 10 principal defendats are sentenced, military tribunals will start investigating and trying thousands of army cadres. A preliminary estimate shows that the army cadres directly or indirectly implicated number as many as over 13,000. In addition, those whose crimes are not serious enough to be tried will be dealt with in the 3-year process of purifying the party, which will begin next year.

All this has naturally caused fears among our army cadres, especially among those at the middle and higher levels. Therefore, old cadres want to retire or leave their posts earlier than planned in order to escape from increasing mental pressure. Other cadres can only wish that that person on the military commission of the CCP Central Committee will retire earlier through implementation of the party Central Committee's decision to abolish the system of lifelong tenure of office for leading cadres. In this way, the CCP Central Committee and its military commission will be able to adopt a correct policy in solving questions left over from history.

Tolin Biao Conspiracy Trials

OW040324 (Clanestine) BA YI Radio in Mandarin to China 1400 GMT 3 Dec 80

[Text] The PLA units under all military regions have already started preparations for trying other criminals in the case of the so-called Lin Biao and Jiang Qing counterrevolutionary cliques. That is to say, they have started carrying out the decision by the Supreme People's Procuratorate to hold trials according to varying conditions for criminals other than the 10 principal culprits, and to respectively institute proceedings against them at the Supreme People's Court, local people's courts and (?military tribunals.)

Moreover, Vice Chairman Deng recently said: affectionally, some cadres at PLA units have not yet made a clear break with the Lin Biao clique; ideologically, they still maintain close links with the clique. We should eliminate the pernicious influence left by Lin Biao at PLA units.

These remarks of Deng are precisely an instruction requiring PLA units to conduct a new purge among their cadres. This sort of political persecution has caused great uneasiness and misgivings among the broad masses of cadres in our army. In view of endless quibbling over this question by certain people at the central authorities, comrades one after another made requests for retirement and demobilization.

In addition, according to classified reports received by the PLA general staff department and the party military commission, cadres in some military regions and at PLA units stationed at border provinces made excuses to leave their units, disappear or desert their duties since they fear being implicated during the trials. Among these cases the most serious one involves a stealthy escape from the country that occurred with the coastal defense force in the Shandong peninsula. Late at night, bearing arms and driving three motorboats, seven cadres of the force fled from Shibao to the high seas. Two of them went to South Korea for shelter, and the whereabouts of the other five is still unknown. According to relevant reports by the coastal defense force, the seven cadres always actively took part in the tasks of three support's and two military's given to the PLA during the cultural revolution. Since the trial of the Lin Biao incident started in the capital, they have been sternly criticized at the force, and the materials regarding their trials were delivered to a military tribunal.

With respect to an incident at the Guanzhou PLA units, its scale and impact far exceed those of the incident of the fleeing abroad of the coastal defense force members; 480 cadres and fighters bore arms and ammunition and fled to Guangxi's Shiwan Dashan Mountain. This serious mutiny is the 2d of its kind over the past 30 years since the founding of our people's republic. One major cause of the incident is that some people charged many cadres at the units with being culprits in connection with Huang Yongsheng's conspiracy to stage an armed coup d'etat.

Large numbers of troops have now been mustered to encircle and suppress the cadres and fighters scattered on the Shiwan Dashan Mountain. However, their greatest crime is their taking flight when they feared being implicated in the trials. Judging from any aspect, it is improper to resort to force or make merciless suppression in handling incidents of troops.

PRC NATIONAL MEETING DISCUSSES PEASANT EDUCATION

OW010801 Beijing XINHUA in English 0720 GMT 1 Dec 80

[Text] Beijing, 1 Dec (XINHUA)--Eighteen million Chinese peasants are studying in various kinds of spare-time cultural and technical classes, and interest in education of this kind is growing.

At a recent national meeting on peasant education, participants discussed how to provide peasants with more channels to raise their educational and technical level to meet the needs of the country's agricultural modernization. They stressed popularization of agro-technical knowledge, in addition to the general knowledge and literacy classes offered in the past.

Spare-time cultural and technical classes are now set up by the three levels of rural collective--the people's communes, production brigades and teams. The more advanced county run agro-technical schools offer two or three-year courses of study which include Chinese language, mathematics, agricultural technique and agricultural machinery, health and medicine and accounting. Often technical centers and regular secondary schools provide the teaching staff. Sometimes short-term training classes are given according to farming seasons.

In addition, secondary schools at the countryside have also begun adding agro-technical classes to the curriculum.

'XINHUA' CARRIES PRC EDUCATIONAL NEWS IN BRIEF

OW021224 Beijing XINHUA in English 1209 GMT 2 Dec 80

[Text] Beijing, 2 Dec (XINHUA)--More than 1,100 students have been enrolled in the just-resumed correspondence college of the People's University of China which is to begin 13 December after nearly 15 years of suspension.

Mostly factory and office workers under 35, they will study in the four disciplines of industrial management, commercial economy, Chinese literature and journalism respectively, each for 3 years.

* * *

A night college of law has been set up in Beijing with a first enrollment of 150 students. The students will in 4 years study 21 compulsory courses as required in full-time law faculty.

The college is jointly run by the Beijing Municipal Judicial Bureau and the Beijing branch of the Jiushan Society with the assistance of the law faculty of Beijing University.

* * *

Music will again be included in the curriculum of the middle schools in east China's Anhui Province. This was decided upon at a recent meeting called by the Provincial Education Department.

Music lessons in China's schools were arbitrarily stopped in mid-1966. They were resumed in the past few years first in primary schools and some middle schools in major cities.

* * *

The "GUANGMING DAILY" carries a reader's letter urging the addition of calligraphy lessons in middle and primary schools. The hand-writing of many of our young people, including middle school graduates, is very poor, the letter complains, because they did not have proper guidance and regular training at school.

CSO: 4020

YOUTH MUST FACE HISTORICAL TASK

OW061221 Beijing XINHUA in English 1206 GMT 6 Dec 80

[Text] Beijing, 6 Dec (XINHUA)--A "CHINA YOUTH NEWS" editorial urges the country's young generation to fulfill the task that history entrusts to them with the same dedication as their predecessors in the Chinese Youth Movement showed in their times.

"Each generation has its particular work to do. For the present young generation, their task is to achieve the four modernisations and build socialism in China," the editorial says.

Honoring the two anniversaries of the student movements of 9 December 1935 and 1 December 1945, led by the Chinese Communist Party in the Kuomintang-controlled areas to resist imperialist aggression and oppose Kuomintang reaction, the editorial points out that these struggles lighted the fire of patriotism and dedication in tens of thousands of young people, who went to the battlefield to fight for national independence and liberation.

New China has ended once for all the social system of exploitation, established the socialist system of public ownership, and built up considerable material strength for socialist construction. It is true that due to a number of reasons the superiority of the socialist system has not yet been fully developed, but we have laid the basis for further advance, says the editorial.

Now with the party's decisions on reforming the economic system, government management and cadres system and reforming party leadership, a new current has appeared that is rallying all forces to work for the modernisation program, strengthen democracy and legal system, and revive and promote the fine tradition of the party. "This is an unconquerable current which reflects the will of the party as well as the desire of the youth," the editorial stresses. To carry out the party decisions on reform, supervision and support from the people are essential. The youth should be an active force in this. Any attempt to depart from party leadership while pursuing democracy and freedom can only fall into destructive acts, as the chaotic decade had shown.

China is facing a turning point of the new superseding the old, the editorial says. Setbacks of the past have caused losses, but they will lend lessons to future success. Everybody realizes that hard work is needed. Only irresponsible persons are demanding that a solution to all problems be found overnight.

The national paper places great hope on the young people and urges them to play a positive role in developing the country's economy, carrying out reforms, and helping the party and government to do away with bureaucracy and bad styles of work.

HEILONGJIANG CANVASSES FOLK SONGS OF MINORITIES

OW070239 Beijing XINHUA in English 0230 GMT 7 Dec 80

[Text] Harbin, 7 Dec (XINHUA)--Heilongjiang Province in northeast China is systematically collecting ballads and folk songs of the nine minority nationalities living in the province, reflecting a new nationwide interest in studying and preserving minority cultures.

A team of specialists travelled around fishing villages of the Hezhe people. With a population of more than 800, the Hezhe is one of the smallest minority groups in China. They are fishermen or hunters living in compact communities in two people's communes on the Heilongjiang River and in another commune on the Wusuli River. They sing folk songs at festival times, and the older generation passes on ballads to youngsters which incorporate singing, dialogue and commentary. The Hezhe nationality has no written language.

The team recorded five Hezhe narrative ballads and more than ten folk songs, and also discovered that the Hezhe were using a primitive kind of mouth organ, a small fish-shaped instrument made of steel bands which gives both merry and deep tones.

The team included representatives from the Literature Institute under the Chinese Academy of Social Sciences, the Heilongjiang branch of the China Society for the Study of Folk Literature and Art and the Heilongjiang branch of the Chinese Musicians Association.

More teams will be going to other minority areas.

PRC HISTORICAL DATA COMMITTEE MEETS

OW081256 Beijing XINHUA in English 1241 GMT 8 Dec 80

[Text] Beijing, 8 Dec (XINHUA)--The Third Conference of China's National Historical Data Research Committee has called on people of all walks of life--particularly old people--to write about their recollections of important events that have occurred in China since the reform movement of 1898.

The committee, which operates under the Chinese People's Political Consultative Committee (CPPCC), ended its conference over the weekend.

The conference agreed that historical events should be viewed against as wide a social background as possible.

Some members mentioned specifically the value of contributions from intellectuals, former capitalists and businessmen, leaders of China's many nationalities, religious leaders and Chinese people now living overseas.

Some members of the meeting spoke of a pressing need to record the recollections of old people before they are lost for ever.

The Data Research Committee is composed of veterans of China's revolutionary movement, members of the Chinese Communist Party and of China's democratic political parties.

Fifty-five volumes of such data were published between 1959 and 1966.

ANHUI CATHOLIC ASSOCIATION HOLDS MEETING, ELECTS OFFICIALS

OW042122 Hefei Anhui Provincial Service in Mandarin 1100 GMT 4 Dec 80

[Text] The Anhui Provincial Catholic Patriotic Association recently held the second meeting of its representatives in Hefei municipality, according to a report by the staff of this station.

Beaming with joy, Catholic bishops, fathers, clergymen, sisters and representatives of Catholic believers, 43 people altogether came from all parts of the province and discussed the independence of Catholicism and how to rely on its own efforts to run Catholic churches in the province.

The meeting called on the Catholic elders and fellow believers throughout Anhui to continuously advance the spirit of patriotism; to persist in the principle of maintaining independence, keeping the initiative in one's own hands and relying on one's own efforts to run churches; and to take the road of loving their country and their religion. Efforts should be made to help the government implement the policy of religious freedom; to adhere to the policies, laws and decrees of the state consciously; to uphold stability and unity; and to guard against a few bad elements' illegal use of religions to start rumors, deceive the masses, sow discord and create a split among the general public.

The meeting elected the second committee of the Anhui Provincial Catholic Patriotic Association and the Provincial Catholic Affairs Committee. (Zhou Yuzai) was elected chairman of the Provincial Catholic Patriotic Association and chairman of the Provincial Catholic Affairs Committee. (Lu Yusheng), (Wang Dai), (Bai Zhaosheng) and (Lu Yungfei) were elected vice chairmen of the Provincial Catholic Patriotic Association with (Bai Zhaosheng) as concurrent secretary general. (Wang Dai), (Cheng Biyao) and (Yang Ti) were elected vice chairmen of the Provincial Catholic Affairs Committee, and (Fang Antong) was elected secretary general of the committee.

ANHUI CHRISTIANS HOLD MEETING, INAUGURATE ASSOCIATION

OW042231 Hefei Anhui Provincial Service in Mandarin 1100 GMT 4 Dec 80

[Text] According to a report by this station's staff, the Second Provincial Meeting of Christians in Anhui was held recently in Hefei municipality. Fifty-five godmothers, godchildren and representatives of Christians from all parts of the province happily gathered under the same roof. They discussed in earnest the Christian church's current pressing tasks, adopted a revised charter of the Anhui Provincial Christian "(Sanzi)" Patriotic Movement Committee and elected the second committee of the Provincial Christian "(Sanzi)" Patriotic Movement.

The Anhui Provincial Christian Association was inaugurated at the meeting, and the participants adopted the association's constitution.

(Pan Junxiang) was elected chairman of the Provincial Christian "(Sanzi)" Patriotic Movement Committee and president of the Provincial Christian Association. (Dan Puan) and (Cai Chongfen) were elected vice chairmen of the Provincial Christian "(Sanzi)" Patriotic Movement Committee with (Xu Fumin) as the committee's secretary general. (Fan Minzuo) and (Cai Chongfen) were elected vice presidents of the Provincial Christian Association with (Xu Fumin) as the association's executive secretary.

The meeting urged Christians throughout the province to unite as one; to adhere persistently to the principle of relying on their own efforts in administering and supporting Christian church affairs and in preaching Christian teachings; to join the people of the country in working with one heart and one mind; and to make still greater contributions to achieving the country's four modernizations, realizing the return of Taiwan to the motherland, combating hegemonism and safeguarding world peace.

'WANBAO' STRESSES IMPORTANCE OF EXPERTS

HK220531 Beijing WANBAO in Chinese 6 Nov 80 p 1

[Article by editorial board: "The Four Modernizations Need Experts"]

[Text] In a certain period of time in the past, some comrades were proud to be "uncouth fellows." In fact, they misunderstood the meaning of "uncouth fellows."

So-called "uncouth fellows" refer to people who have low cultural level and no professional knowledge. At the time of liberation, many illiterates existed in our distressed motherland and this was the hallmark of backwardness created by the semifeudal and semicolonial society. Therefore, there was no reason for people to be proud of having no culture and no professional knowledge.

Some other comrades posed as "uncouth fellows" and equated "uncouth fellows" with the revolutionary history of fighting north and south on many fronts. The comrades who rendered meritorious military service in founding the new China should be respected by all people. However, not all revolutionaries who gained battle achievements were "uncouth fellows." Many leading comrades of our party and army have very high cultural level and are statesmen, strategists, philosophers, economists, jurists and at the same time poets and educationists. Many comrades who were promoted from the grassroots might have had a low cultural level originally but, after they were trained and educated by the party and studied hard by themselves, attained certain cultural and professional levels. In the war of liberation, if the cadres of our party were not expert in waging war and doing mass work, could they have won war?

Since the founding of the new China, the problem is that as we have shifted the focal point of work to economic construction, many leading cadres who cannot rely on their original knowledge must study new topics. Our party has therefore proposed that we should be good at study and become experts in our own work. Thirty years have elapsed. Many comrades have become experts but some comrades still lack rudimentary knowledge. What shall we do? It is impossible for us to pose as "uncouth fellows." There are two methods: 1) except for the old and weak, all young and energetic people must be determined to study and become experts in a given time; 2) we must be determined to promote to leading cadres those who are red and expert and have both ability and political integrity so that the experts can lead the experts.

The four modernizations need expert staff and workers, and need the leadership of experts even more.

BRIEFS

NEI MONGGOL RELIGIOUS ACTIVITY--The Hohhot Municipal Buddhist Administrative Committee held a religious ritual 2 December in Hohhot municipality to celebrate the 623d birthday of the founder of Lamaism. Such religious activities had been banned since 1962 and were restored after the state's policies on nationalities and religions were implemented. Thousands of religious figures recited and chanted scriptures at the ritual. Among them were E-Qi-Er-Hu-Ya-Ke-Tu, vice chairman of the Standing Committee of the Nei Monggol Regional People's Congress, and responsible persons from Islamic, Catholic and Christian organizations. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

REFORMS BADLY NEEDED IN MILITIA TRAINING

Fewer 'Evaluations'

Haerbin HEILONGJIANG RIBAO in Chinese 28 Sep 80 p 3

[Article by Shan Chengxiang [0830 2052 4382] and Zhang Jiming [1728 4949 2494]: "Reform Needed in Method of Evaluating Militia Training"]

[Text] When we visited several factories to inspect militia antiaircraft training we heard some comments on the method of evaluating militia training. After an investigation, we were appalled by what we discovered.

Taking the Dong An Machine Factory as an example, we learned that 624 members of the militia in that unit had been evaluated last year by the provincial, municipal, and district authorities no fewer than 21 times on antiaircraft practice, infantry marksmanship, handgrenade throwing, military tactics, and communications, etc. Although fewer evaluations have been conducted this year, members of the militia had been evaluated 10 times up to August.

The frequency of evaluating the training of the militia by the authorities in the past few years has had certain adverse effects on the work being done on the lower levels. It has not only reduced the productivity of the units concerned and the income of the participants, but is has also encouraged falsification and formalism. It has tied down members of the armed units and left them little time for the solution of problems on the grassroots level.

It is our opinion, first of all, that authorities at the various levels should change their style of work, that they should go deeply into the grassroots in helping grassroot units and militia companies to master basic military tactics and techniques under actual combat conditions, and that they should overcome their habit of sitting in the office thinking up plans and fanciful ideas and relying solely on evaluations as a means of gaining an understanding of the effectiveness of the training. Secondly, militia training should be evaluated by the responsible authorities at one certain level instead of by all the different levels. Evaluations should be undertaken where necessary and eliminated where not. In other words, the method of evaluation should be reformed. Aside from the antiaircraft and heavy artillery units which require the evaluation of higher authorities under a unified system, a uniform system of training and evaluation on the local level should be adopted to reduce the time spent on evaluations and the unnecessary waste of manpower and materials.

Better Training Programs

Haerbin HEILONGJIANG RIBAO in Chinese 17 Oct 80 p 3

[Article by Wang Tzuping [3769 1311 1627]: "Reforms Should Be Made in Militia Training"]

[Text] It is our understanding that the daily activities of not a few members of militia units are confined to the same old routine. Aside from group training, target practice and handgrenade throwing, few other courses are being offered. Even within the same old routine, there has been no change in training methods for a number of years. For this reason, some members of the militia have lost interest in the military exercises. This should furnish food for serious thought on the part of those who are engaged in work with the militia.

To keep pace with the continuing development of the four modernizations, there is need for major reform, not only with regard to organization but also in such areas as training policy, the training program, and methods used in militia training. If we are to continue to use established methods and to go round and round in a circle like an aged donkey turning a mill, we will fail to cope with the new developing situation.

What should we do? Nothing will suffice except to introduce reforms. In bringing about reforms, it is necessary to make a study of potential new developments in a future was so that we may come to know our own position as well as that of the enemy in order to ensure our victory. What new situations are likely to develop in a future war in the sky and on the ground, in our offense and in our defense, in the cities and in the villages? Those of us who are engaged in militia training must have in our minds a plan to cope with whatever situation may develop. Only thus can we come to realize what militia training should entail. Otherwise, we will be firing empty shells.

In bringing about reforms, it is also necessary for us to have an understanding of the thinking of the militia members. We should realize that the shifting of emphasis in the work of the party and the changes in many major policies have raised a number of questions that weigh on the minds of the militia members. Many of these questions are resolved satisfactorily, they will affect not only the personal welfare of members of the militia, but also their training program and their productivity. This is a problem that should not be ignored.

In introducing reforms, it is further necessary to take heed of the special characteristics of the militia. Our entire militia is comprised of young people. That means that in studying and formulating plans for their training and their activities, we must make sure that these plans are in tune with the characteristics of young people. Only then can we achieve the objectives of militia training and ensure the development of organized training and the productive potential of the militia.

In any case, reforms in militia training work cannot be avoided. Those of our comrades who are engaged in work with the militia should come to terms with realities and endeavor to raise our work with the militia to a new and higher level in this new era.

GENG BIAO ON INDOCHINA SITUATION PRIOR TO SINO-VIETNAMESE CONFLICT

Taipei CHUNG-KUNG YEN-CHIU [STUDIES ON CHINESE COMMUNISM] in Chinese Vol 14 No 10, 15 Oct 80 pp 141-162

[Introducing a Document: "Chinese Communist Party Central Political Bureau Member Comrade Geng Giao's 'Report on the Situation in the Indochinese Peninsula,' 16 January 1979"]

[Text] Introducing a Document

"Report on the Situation in the Indochinese Peninsula" is an internal report given on 16 January 1979 by Geng Biao, "Chinese Communist Party [CCP] Central Political Bureau member, Chinese Communist Party Central Military Commission Secretary-General." The original text of the "Report" published in this journal here is the text originally transcribed from a recording cassette by the "International Liaison Department of the CCP Central Committee."

It has been almost 2 years since the "Report" was first given. During these 2 years, the Indochinese Peninsula and related international situation have both undergone new changes; but this does not affect the important referential value of this "Report" as a document to the study of Communist China and related questions.

As can be seen from its content, Geng Biao's "Report" was closely related to the Sino-Vietnamese border war that occurred in February 1979. This war was another important border war involving the use of large military forces since the mid-1950's and more than 10 years since Communist China concluded its border with India. The year 1979 was a time of continued escalation of the internal political power struggles of the Chinese Communist Party after the death of Mao Zedong and the collapse of the "gang of four," a time when the internal situation of the Chinese Communist Party was facing disintegration and ramification and when all troubles seemed to have broken loose. Why did the Chinese Communists carry out a border war involving large military forces and great costs against "socialist" Vietnam at this time? What was the Chinese Communists' estimation of the international situation, especially the Indochinese situation, at the time? And what were the task and goal of the Chinese Communist war against Vietnam, and the policy arrangements in the domestic and external aspects?... There are fairly reliable (because they come from internal report) data revealing all of these to us in Geng Biao's "Report." Therefore, even though this "Report" has already become dated by two years, it still bears multiple, useful referential value to our study of the on-going development of the Indochinese situation, the present conditions of the relationship between the Chinese Communists and the Vietnamese Communists, between Communist China and Indochina and "the world of the two superpowers," and their application, and questions of the like. This is one of the main reasons why this journal decides to have it published here.

--CHUNG-KUNG YEN-CHIU Editorial Department

Secret

Member of the Political Bureau, CCP Central Committee Comrade Geng Biao's "Report on the Situation in the Indochinese Peninsula,"

16 January 1979

Transcription from Recording Cassette by the International Liaison Department of the CCP Central Committee, printed on 21 January 1979

Comrades:

Phnom Penh fell; Sihanouk and Ieng Sary have arrived in Beijing in succession. The former liaison office of the Kampuchea Unity Government is now again vacated. All this is going to bring to our comrades many problems. Because the situation has changed very rapidly, Chairman Hua, in order to let the Party Central, the Standing Committee of the National People's Congress, the State Council, the Central Military Commission and leading cadres and comrades of their various departments at various levels have a clear understanding, has especially permitted me to represent the Party Central and make a brief report to our comrades on the situation in the Indochinese Peninsula and also to explain preliminarily the Party Central Committee's estimation of the situation and attendant principles and policies in preparation to solve it from now on, so as to avoid the forthcoming possibility of inconsistency and resultant difficulties among us.

My speech today is not going to be issued as the Party Central's formal document to the subordinate departments and units; on a part of its contents, we must do a good job of protecting its secrecy. Apart from communication at concerned departments and units, comrades may also make a summary record of its main spirit and major points. As to how to communicate and communicate to what extent, you will be notified separately.

Up to today, except the two or three provinces which are still being defended by the Government of Democratic Kampuchea, Party and Government organs are making orderly retreat. Vietnamese troops have already reached the Thai border; within less than 10 days, Vietnamese troops may occupy Kampuchea entirely. From the very beginning, Vietnam sent three columns, and then five columns, to march respectively but all converge on Phnom Penh and finally occupy it; now, it has further diverted a part of these troops to form a flank along Route No 5 to coordinate with another contingent advancing along Route No 6 toward Kompong Thom, and continue to press forward the attack toward Pursat, Battambang, and Siem Reap. In order to retard the enemy troops' speed of advance and cover the retreat, the Kampuchean Revolutionary Army has organized a defense line between Kompong and Bang-ko-tai [transliteration] and a second defense line at Siem Reap so as to effectively retard the enemy troops and win some more time. In most of the other areas, active retreat is being undertaken under the condition of offering no defense in order to move to more advantageous terrains. But because the troops of Vietnam have advanced along highway No 6 at a far greater speed than expected and threaten to skirt around to Battambang at any time, the morale of the [Kampuchean] troops became seriously affected, and the defense lines collapsed all of a sudden; more than 7,000 Kampuchean soldiers were killed at different times or captured. Even Comrade Sung Cheng nearly failed to pull out. Later on, Comrade Sung Cheng personally organized the defending battle at Battambang; within 36 hours he organized more than 20 counter charges and succeeded in exterminating completely the 18 tanks and one battalion spearheading the enemy attack. This served at least to win some time, let the Party Central convene an urgent meeting, and stabilize the situation to accomplish the retreat. After completing their shifting operations, Kampuchean forces entered the Dangrek in two contingents to set up base there; another contingent marched northward to guard the rear so as to let the troops and Government personnel concentrated in the area adjoining Battambang and Siem Reap retreat to the Oddar Meanchey base. Before the fall of Sisophon on 13 January, the Kampuchean Government and troops had already completed their strategic retreat, successfully perserving half of the Government organs and resources and two-thirds of the troops. These vital forces will be the capital for counter-attack in the future, and are also the basis for us to declare Democratic Kampuchea to be the only legitimate government today.

Vietnam will discover that what they have gained today is not victory but the beginning of defeat. I would say that Vo Nguyen Giap has become senile, and the head of Van Tien Dung is turning in a whirl, so that even today they still cannot tell whether Kampuchean troops are retreating in defeat or carrying out a strategic shift. From the Vietnamese documents captured at Battambang, it is possible to see that the headquarters of their invading forces is now being really troubled by its inability to find the principal force of the Kampuchean Army. According to intelligence report, the whole invading Vietnamese force includes 14 divisions and 9 mechanized armed units, plus the original Kampuchean rebel forces and one division and two artillery battalions from Laos; these units are now all bogged down, whereas the heroic Kampuchean Revolutionary Army proceeds to launch an action of vehement counter-attack. Life for Vietnam and the puppet National Salvation Front regime simultaneously propped up is not going to be comfortable in the days to come. Why Vietnam did not direct its forces to carry out the invasion last year when Kampuchean-Vietnamese relations were interrupted, but drag until today before getting the action started? The fact is that even before South Vietnam was liberated, Vietnam already harbored a sinister plot; its handful of war fanatics, under the behind-the-scene instigation of their back-stage boss, social imperialism, had already thought of putting a finger in Kampuchea's pie by dragging the latter into the so-called "Indochinese Federation" so as to make it the jumping board and advance base for the social imperialism to realize its worldwide strategic plan and to expand toward the Southeast Asian region. But under the condition of large-scale intervention by American forces in the Vietnam war at the time, South and North Vietnam were hard put in coping with that war and hence had no surplus energy to divert to the question of Kampuchea. Meanwhile, when

Prince Sihanouk was in power, and pursuant to his rejection of American aid in March 1964 and severance of relations with the United States in May 1965, the country's political inclination was still to support and sympathize with Vietnam and to allow North Vietnam to pass through the country in order to transport to South Vietnam the supplies of materials and personnel consigned to the southern liberation movement. Therefore, Prince Sihanouk had granted favors to Vietnam, and Vietnam was in his debt. Yet, the country now is confronted with a return of enmity for its favors, in contrast to his practice of virtue in the face of animosity; perhaps we should say that Sihanouk has made a similar mistake like we did in giving Vietnam too much, so that we are both suffering such a consequence today. To begin with, if the United States did not instigate Lon Nol, Sirimata, to take advantage of Sihanouk's trip abroad to stage a coup and overthrow the monarchical government, the situation would not have been like this today. The Nixon Government of the United States is indirectly responsible for the fact that Kampuchea finds itself in such a situation today. When the coup succeeded and Kampuchea became another kind of state, this Vietnam war very naturally expanded into an Indochina war at large. At this juncture, Vietnam's support for the liberation war led by the Kampuchean National Unity Government was imperative. The reason was very simple: without the support of Kampuchea's Sihanouk Government, Vietnam would have disappeared long ago. Another important reason was that they both could not do without China's aid. In helping Kampuchea at the time, Vietnam was like "Xiang Zhuang [7309 5445] who put up a sword dance with Pei Gong [3099 0361] in his mind," i.e., as it sought on the pretext of carrying out its internationalist duty to bring its expansionist and hegemonist thinking into this just war. At that time, we also sensed that this kind of involving relations was hard to accommodate, and winding up this involvement would be difficult. From what Le Duc Tho said to Premier Penn Nouth of the Kampuchean National Unity Government in Beijing at the end of April 1972, a discerning person would immediately detect something ominous, as he said: "we can drive out Lon Nol for Kampuchea." At the time Penn Nouth replied: "we have nothing; how are we going to return Vietnam's selfless assistance in the future?" Le Duc Tho glaringly said: "it does not matter; what we give you we can also take back by that time." As early as 1971, Chairman Mao had already told Prince Sihanouk: "We must solve our own problems by ourselves; we must have confidence in ourselves. We may accept foreign aid, but cannot depend on it." In 1973, Chairman Mao also told Sihanouk about the fact that Ho Chi Minh once also mentioned to Chairman Mao his intention to set up an "Indochinese Federation," so he asked the Kampuchean leadership not to lose vigilance. After 1974, Vietnam took the opportunity of coordinating with the Kampuchean Liberation Army in carrying out fighting in Kampuchea to foster pro-Vietnam elements in the country, thus sowing the seeds of misfortune. On 15 August 1975, Khieu Samphan came to China; he also discussed in detail this potential problem. Upon the liberation of Phnom Penh in May 1975, at first the Vietnamese troops made some excuses not to leave the country; but because South and North Vietnam were still not unified at that time, and the faction opposed to unification was still very powerful; China, in the meantime, repeatedly applied pressure and supported the new government in Kampuchea, so that Vietnam, while dragging its feet, finally took half a year to complete the withdrawal of its troops. On the other hand, there were too many factions in the military ranks of Kampuchea; at that time, there were already three such factions. One was under the direct control of Pol Pot, Khieu Samphan, and others consisting mainly of Kampuchean workers and peasants; it was the majority faction in the military ranks and also the principal force. Another was a faction of the original royal troops loyal to Sihanouk and the old patriotic officers and soldiers who bolted Lon Nol units to join the liberation war; this part of people was not very numerous, but they were all well trained, all allies of the Communists, and also sympathizers of the revolution. The third was no other than the pro-Vietnam faction, which had not a few members, nor very bad equipment. If these three factions were properly handled when the Kampuchean Army began to consolidate its ranks in 1976, the situation could have been better. But the Kampuchean Communist Party did not follow the correct approach in handling them, thus leading to an expansion of mutual contradictions. In the first place, they failed to treat Sihanouk well, this made the old soldiers recalcitrant; nor did they evince the correct attitude in treating these soldiers, as they did not proceed to transfrom this contingent of old soldiers with rich fighting experience like we did to the troops of Wu Huawen [0702 0553 2429], Dong Qiwu [5516 0366 2976], and others. In certain districts, they did especially badly, as they even treated them and their families as reactionary troops and reactionary families, who were subject to either persecution, or the fate of disbandment and disarmament. This way of doing things inadvertently forced a part of the forces previously in support of the Communist Party to revolt and turn around to merge with those remnant units of Lon Nol who had become bandits in the hills and change into counterrevolutionary armed guerrillas. In handling the pro-Vietnam faction, the commanding officers also failed to make a distinction between the question of stand and the question of ideology, grabbing all at once more than 4,000 of them, who were either put to death or imprisoned; thus everybody felt threatened and ultimately ended up in open revolt. This greatly affected the morale and inclination of those units that were originally loyal to the party.

Strictly speaking, discipline of the Kampuchean Army had been rather lax; stirring up trouble along the Kampuchean border was representative of the blind actions of the units and of their anarchism. In February last year, the Kampuchean forces sought to enforce disciplinary rectification; this was a correct approach. When Song Cheng came to China later, he also indicated that after the disciplinary rectification campaign was completed, Kampuchea would have sufficient confidence to completely eliminate all the pro-Vietnam forces within 6 or 7 months. We believed him and also provided necessary assistance. Little did we imagine that this was not to be the case. These units, which were not good enough to help bring about success, felt compelled by some mere, slight excuses to pull into the hills right away and start their guerrilla activities; this also made our plan and effort to re-establish the Sihanouk regime completely fruitless. At first, contact was also made with the United States on this plan, and they also nodded, indicating that so long as the peaceful situation in Southeast Asia could be maintained to contain the social-imperialist forces of expansion, the Americans would be working even harder than we. So long as we can see this clearly, we need not worry about the Americans not intervening. But now, isn't everything dandy! Phnom Penh is evacuated 7 months earlier; we can only support Sihanouk's accusations at the United Nations in conjunction with the United States, Japan, Britain, France, and members of the Association of Southeast Asian Nations, and try to force Vietnam to withdraw its forces. In reality, however, we have calculated for sure that Vietnam is not going to withdraw its forces; in doing so, we aim merely at winning some more time to re-deploy and wait until the raining season comes before doing anything else.

Vietnam signed a treaty of alliance with the Soviet Union in November; thus the Soviet Union stepped forward from behind the scene to bind Vietnam tightly onto its war chariot and at the same time also back Vietnam up with the same treaty of alliance and hence help aggravate Vietnam's cockiness. Vietnam did the right thing in joining the Council for Mutual Economic Assistance, and thereby gaining a great deal of aid from the Soviet Union; but none of what the Soviet Union could give it could not be enjoyed as food, clothing, or daily amenities. We have had the experience of being short-changed by this "big brother"; how can we fail to know what they sent to Vietnam? The Soviet Union transferred to Vietnam the kind of equipment which cannot be considered very advanced at a price higher than that in the international market; can this type of aid be still called selfless? Perhaps only Heaven knows! Since the Soviet Union sold petroleum to Vietnam at US$13 a barrel, we can most certainly sell it to Kampuchea at US$5 a barrel to test its avaricious appetite and see how it is able to bear it. We can say this: we have been too generous in the past. After losing our large amount of aid and trade exchange with us, Vietnam will lack still more foodgrain and basic daily necessities. In addition, a flood disaster last year caused a loss of 4 million tons of foodgrain harvest; this has further aggravated the country's economic difficulties and accelerated the contradictions between the South and the North. In order to divert the people of Vietnam from the material shortage which has resulted because the present regime leaned to one side and economically depended entirely on the Council for Mutual Economic Assistance, and from the increasingly sharpening contradictions aroused by the Labor Party's forcible enforcement of its production and distribution plans and policies in the new economic zones and by the unreasonable distribution and deployment of power and construction plans and arrangements between the South and the North, the Vietnam Labor Party began, on the one hand, to persecute a large number of southern cadres from September 1977 onwards, passing the so-called "Resolution of the Labor Party Central on Work After the Unification of the South and the North" to exclude, attack, and cruelly struggle against those with different opinions and views and those who had feelings of dissatisfaction toward Vietnam's southern economic policies; on the other hand, it was forced to intensify the engineering of Kampuchean-Vietnamese border conflicts, thus ultimately encroaching upon Kampuchea to divert the people's sight and to molify the various increasingly sharpening contradictions by the act of aggression. This was also a major reason for invading Kampuchea. Another reason was that the Soviet Union and Vietnam have seen how China and Japan signed the Treaty of Peace and Friendship, how Vice Chairman Deng, after visiting members of the Association of Southeast Asian Nations, also visited Japan; in addition, the success of Chairman Hua's visits to Romania and Yugoslavia both directly and indirectly rendered a great blow against social imperialism; such frequent diplomatic activities served to greatly raise China's international prestige and win the sympathy and support of even more countries; in thus reaching mutual understanding, the Western countries have concluded huge trade agreements, scientific and technological cooperation, and even technical exchange and trade on atomic energy, space and electronics; in the military field, similarily, the developed countries of the West are helping us with great interest to work on the modernization of our national defense, and hence upsetting the plot of social imperialism to vainly attempt to isolate, attack, contain and strangle China. Today, we are shifting the focus of our work to economic construction; the four modernizations are being carried out with increasing speed. A powerful China, just like a rising sun, is looming above the horizon with full vigor. But social imperialism is most afraid of the appearance of such a situation; therefore they are bound to play all sorts of tricks in order to interfere and sabotage it. The expelling of Chinese from Vietnam and the invading of Kampuchea, plus the engineering of bloody incidents along the Sino-Vietnamese border, the intention lies also here. On 16 December last year, in particular, China and the United States declared their readiness to establish diplomatic relations on 1 January this year; just this resulted not only in the writing of a new chapter in the history of Sino-American relations but also entirely changed the ratio of the world's forces. Vietnam abandoned all preconditions in an attempt to establish diplomatic relations with the United States, but the U.S.Government paid no attention; instead, it was a China still with the Taiwan problem on hand that first established such relations with the United States. This was a great sarcasm. Therefore, the establishment of Sino-American relations hit the body of the Soviet Union but hurt the heart of Vietnam. These two brothers could not help turning a feeling of shame into anger; in order to save their face, they could only try out their sword on Kmapuchea. Thus occurred the Kampuchean incident. Later, when Le Duan mentioned the situation about his talks with Pol Pot in Phnom Penh, we also frankly pointed out that the Vietnam Labor Party lacked the spirit of treating a brotherly party equally; Pol Pot merely disagreed with the Vietnam Labor Party's thinking about establishing an Indochinese Federation, and there was absolutely no question of opposition to Vietnam. Also, the talks this time were somewhat different in spirit from 1975 when Pol Pot went to Hanoi to participate in the Kampuchean-Vietnamese talks then. At that time, Le Duan himself also indicated that it was still premature then to talk about establishing an Indochinese Federation; the Vietnam Labor Party meant merely to exchange opinion with the Kampuchean Communist Party on the future development of the three Indochinese states, and had no intention of imposing its own opinion upon a brotherly party. Since this was the case, apart from the fact that the demarcation of boundaries between Vietnam and Kampuchea still remained to be solved, no great contradictions actually existed any longer. Since today Le Duan chooses to accuse us in reverse of supporting Kampuchea to oppose Vietnam, we are forced to issue a refutation to such an "improvised" accusation, and at the same time indicate our own attitude:

(1) On the basis of the principle of fraternal relations between our parties, we would absolutely not allow any approach designed by political party to encroach upon the independence of another Communist Party or interfere with the internal affairs of another fraternal party.

(2) We support the Kampuchean Communist Party headed by Pol Pot and the Democratic Kampuchean Government under its leadership.

(3) We oppose any forcible approach to compelling Kampuchea to join any federation of the three Indochinese states.

(4) The Vietnam Workers Party must solve its contradictions with Kampuchea with an egalitarian and sincere attitude.

By the time of the talks between the Chinese and Vietnamese Parties in November 1977, differences between Vietnam and Kampuchea were no longer concealable. Our painstaking intention to endeavor to avoid making such contradictions public since Kampuchea's liberation in 1975 thus finally failed. Therefore, in December the Party Central Committee decided to assist Kampuchea in force so as to equip them with a greater capability to cope with new situations that could occur because a solution through talks proved impossible; we made efforts all around, falling only short of sending troops. When Comrade Wang Dongxing went to visit, the Kampuchean Government actually made such a request; Comrade Su Zhenhua [5685 2182 5478] also made the suggestion to dispatch a detachment of the East China Fleet to Kampuchea to help Kampuchea guard its territorial waters well, or even just to send a fleet there for a visit. Comrade Xu Shiyou also said to let him take some units to Guangxi to manage for a while. But, after prolonged deliberations, the Party Central Committee rejected both Comrade Su Zhenhua's suggestion and disagreed with Comrade Xu Shiyou's opinion, and in the end sent no single soldier. Why?

(1) We are a socialist state; we have never sent any troops, planes, or war vessels to other countries, and we also oppose any other state for doing so. Even though we agree today that the United States should retain certain armed forces in the Asian-Pacific region, we are merely indicating our understanding about the stationing of American troops in Japan, the Philippines, and places of the like; this is absolutely not the same as supporting the long-range stationing of foreign troops in foreign territories, or the establishment of military bases. Our comrades must never think that, since our relations with the United States are now normalized, we can henceforth forget the imperialist and hegemonist essence of the United States. We are very different from the United States. If we should send troops to Kampuchea, not only would we have broken this principle, but what impression would this convey to the countries of Southeast Asia and other countries of the world? Not only the anti-hegemonist united front in unity with the Third World cannot be established, we would also have become a new hegemonist power; there would be no end once this erroneous step is taken.

(2) In the case of most countries of the world today, whether they like the regime led by Pol Pot or not, they still insist on recognizing Democratic Kampuchea and blaming Vietnam for its aggression as well as supporting China's just stand; this is precisely because, very obviously, only Vietnam has troops in Kampuchea. If we had also sent troops there, the situation would have been very different. In the least, Comrade Chen Chu would not have been able to speak in his usual forthright manner at the United Nations; and if there should be the slightest mishandling, he might even have to stand in a defendant's stead. Hence, to be unable to hold one's ground in the international arena is one thing, but, more seriously, Vietnam and its puppets would be able to relish on taking this as a pretext and launch their vicious attack on us in reverse, alleging that we are interfering with the internal affairs of other countries and thereby turning its previous war of aggression around. By that time, it would not be easy even if we wished to extend assistance in force. See what a fine situation it remains today! If we choose to extend whatever assistance we please, we are supporting a just struggle against aggression; this good point is clearly on our side.

(3) In the context of Indochina's geographical environment and various political, economic and ideological backgrounds, plus many other complicated factors, it is impossible to adopt a blitzkrieg in Hitler's style in trying to solve the general situation. The Americans have had a taste of the consequence in this regard; it is possible that their understanding is more profound. To fight a war in Indochina is a laborious but fruitless thing. Vietnam has already stepped into this patch of mud; it is bound to be dragged to collapse. Should we send troops, we would be dragged down too, and it would be very difficult to tell what the final outcome might be. We ourselves already lack sufficient strength to fight such a war of exhaustion, unless we no longer wanted the four modernizations, or if we had the kind of economic conditions and productive power like the United States and Japan. To us, not sending troops today puts us in an advantageous position from whatever angle, and this constitutes also a training for the Kampuchean Communist Party. Our all-out assistance, plus Kampuchea's confidence, determination, and daring and dexterous struggle, would spell nothing but bad luck for Vietnam and the Soviet Union.

(4) If you think that just because Vietnam knew we would not send any troops so it ventured to invade Kampuchea without fear, this is not entirely correct either. Its back-stage boss, the Soviet Union, most certainly hoped that we would send troops

because, to Vietnam, under such circumstances, the place to suffer war devastation would be Kampuchea and not Vietnam, and to the Soviet Union, once you in China should get involved, we in the Soviet Union can both blame you in international public opinion and openly support Vietnam to fight to the end. Vietnam, on its part, also figured that once you get involved, we would also be no longer subject to restriction and seek assistance from both the left and the right, and domestically, too, there would be a pretext for mobilizing more forces to join the war effort. Thus both Vietnam and the Soviet Union have long figured things out: in the short run, they would make it impossible for you to carry out your four modernizations; in the long run, if you Chinese troops should enter into direct conflict with Vietnam and the fire of war thus spread to Vietnam itself, then on the basis of the Soviet-Vietnamese treaty the Soviet Union would have reason to despatch troops from the north to conduct a pincer attack; by that time, even the United States, West Europe and Japan would find it difficult to say whether they were the aggressor or you were the aggressor. Kampuchea is only a small country; its area is but the size of Hubei Province and its population is less than that of Beijing. But the things happening here are so complex, with one easily affecting all of the rest; we must be very careful. If we should once start to fight a big battle with the Soviet Union, the populace would be greatly pleased; but, by that time, what hope is still there for the investments, loans, and assistance to our four modernizations from the United States, Europe, and Japan? This is not a question of whether or not we are afraid, but a question of considering the beneficial or ill consequences. On this question, we can conclude with three points: one, we will not send any troops; two, we will not stop our assistance; and three, we will support [Kampuchea] to the very end.

Although we cannot directly send troops to Kampuchea in support of their war effort, we cannot deny that we still have not a few personnel working Kampuchea today; apart from construction work, a part of them is also helping Kampuchea fight the war. This contingent of personnel numbers about 1,500. When the war situation became urgent in December last year, our Foreign Ministry already notified Ambassador Sun Hao [1327 3185] to ask all the personnel assisting Kampuchea to retreat in separate batches; thus we did not prepare to participate in the fighting. But the situation changed too precipitously; many failed to retreat in time, and they still remain in Kampuchea today. Now they all willingly give up their Chinese citizenship to take on Kampuchean citizenship, and therefore refuse to accept the directive of China's Foreign Ministry to retreat and volunteer to join the struggle against Vietnam and for national salvation. We have no way of stopping them from doing so; nor can this be termed an exportation of revolution. Our principle on this matter is not to encourage, but nor to oppose or stop them; when Kampuchea becomes liberated for the second time, they will still be the sons and daughters of the Kampuchean people and their heroes, who are our relatives but not Chinese. In doing so, they have provided the equivalent of a powerful explanation as to the Vietnamese regime's attempt to confuse right and wrong and turn things upside down by slandering, passing on the rumor and accusation that there are Chinese personnel participating in the fighting.

We already gave permission for representative delegations and groups of the governmental organs of Democratic Kampuchea and their party to set up a temporary government office in Beijing; they are also actively asking Thailand to allow them to set up such an office inside Thai territory or at the border; on this matter Vice Premier Ieng Sary has already put forward a formal request to Premier Kriangsak. Last time, our Vice Chairman Deng also made the following requests to Vice Premier Sunthon Hongladarom of Thailand:

(1) Carry out more effective cooperation with China in order to resist the expansionist forces of the Soviet Union and Vietnam and safeguard the peace and stability of the Southeast Asian region and Asian-Pacific region.

(2) Continue to support the Government of Democratic Kampuchea, recognize its legitimate status, and, on this premise, reject the request of the present puppet regime to take over the country's diplomatic establishment in Thailand and allow [the Government of Democratic Kampuchea] to set up an office at the Thai border, whether public, semi-public, or not public at all.

(3) Continue to provide political asylum to the persecuted Party, political and military personnel and people of the Government of Democratic Kampuchea, and also grant them the right to enter Thai territory and proceed further to China or other areas.

At the same time, Vice Chairman Deng also asked Vice Premier Sunthon to relate to Premier Kriangsak and the Thai Government that the Chinese Government wished the Thai Government would allow the passage of aid materiel to be transported to Kampuchea through Thailand. The fact that the Thai Government still evinces a non-committal attitude on this matter show that it faces its own dilemma, and not wishing to run into direct conflict with Vietnam is the main reason; we can well understand.

However, we must lay bare the facts. We told Sunthon that the relationship between Kampuchea and Thailand, or between Kampuchea and Southeast Asia, is like that between the lips and the teeth; it is impossible to try to keep oneself out of it. We believe Thailand can appreciate this principle from the following three aspects:

(1) To Thailand at present, the greatest threat comes not from Kampuchea but from Vietnam; even if Democratic Kampuchea were not subject to Vietnamese aggression this time, the manpower and material resources of that country still cannot compare to those of Thailand. I remember that when Vice Chairman Deng visited Thailand, he already explained to Premier Kriangsak that Kampuchea had no intention of resorting to expansion but wished only to improve relations between the two countries; on this, China would be in a position to guarantee. In the past, bloody conflicts often occurred along the Kampuchean border; this could only be said to be due to the lax discipline of the Kampuchean troops. For over a year now, the disciplinary rectification work on the part of these troops has been too slow; these conflicts resulted only from problems of hilltop tendencies and blind actions within the Kampuchean units, and they by no means constituted any threat to Thailand.

(2) Thailand understands that Vietnam's next target is no other than Thailand. If Thailand is intelligent enough, it should go all out to support the Government of Democratic Kampuchea to launch guerrilla warfare; not to mention allowing China's aid materiel pass through Thailand, it should itself round up other members of the Association of Southeast Asian Nations, or even the United States and Japan, to carry out the support together. After doing so, Kampuchea's strength for resistance becomes augmented and succeeds in stemming Vietnam's expansionist forces off its door, so that the Kampuchean Revolutionary Army would be guarding Thailand's gate against the enemy: why is this not just fine?

(3) So long as the resistance movement in Kampuchea perseveres for one day, Vietnam would be detained one day, and the time for the realization of an "Indochinese Federation" and the perpetration of a direct threat to Southeast Asia would also be delayed one day. The longer Vietnam is detained, the more its internal forces would become

exhausted, and the more sufficient time would also be won, so that the revolutionary forces inside Vietnam would also grow stronger, and ultimately, like Lenin said, "turn an imperialist war into a civil war," and thereby cause the collapse of the reactionary ruling clique of Vietnam from within. Thus, war causes revolution, and revolution in turn stops war: the possibility for such an outcome is very great. Thailand has the responsibility to create such conditions, and that would also be the best policy for safeguarding Thailand's own security.

At a time like this, the Thai Communist Party really demonstrated an appropriate internationalist spirit. Although its strength is limited, it resolutely dispatched several military units to traverse the long road southward to the Thai-Laotian-Kampuchean border to help in the fighting. In order to avoid running into direct conflict with the Thai military units, some even crossed the area of several hundred li through Laos to help reinforce Kampuchea's force-shifting work. The underground comrades of the Thai Communist Party even risked their lives in doing their best to help Democratic Kampuchea, as they did a good job in carrying out intelligence work in the rear of the enemy. Only in hardship is true affection shown; the performance of the Thai Communists is indeed very moving. In the meantime, seven central responsible comrades and working cadres of the Thai Communist Party Central Committee also organized a delegation; they have already arrived at the Chinese border on the 12th on their way to Kunming, and will reach Beijing in a few days. The main purpose of this delegation is to study with us and the Kampuchean Communist Party the Indochinese situation and define the direction and plans of struggle from now on as well as the details of our aid to them.

Previously, according to our aid-Kampuchea plan, we were going to provide before December last year equipment for three divisions and enough food, medicine and ammunitions for 100,000 troops, and also to guarantee the maintenance of the basic figure of 15 bullets per man for the first line of troops. But we do not share a common border with Kampuchea, and are separated by Vietnam and Laos; in order to provide a large amount of assistance, therefore, even though the sea route can still be used, it is estimated that shortly after the fall of Kampuchea, Soviet and Vietnamese submarines will appear in Kampuchea's territorial sea; if under such circumstances we should use the sea route opposite the converging point of the Thai-Kampuchean borders to enter Kampuchea, we would be committing the error of making ourselves conspicuous targets.

Even if we are not stopped on the sea, our regularity in using such an approach may become easily detected and we would hence be cut off on land later. Although it is difficult to render aid through both sea and land routes, there are still other ways; at least the American naval forces in this region can give some minor assistance, such as watching the Soviet vessels while at the same time communicating with us and telling us the Vietnamese vessels' direction of movement. When Vice Chairman Deng visits the United States at the end of this month, he is going to make this special suggestion to Carter: if the United States can actively participate, that would be most ideal; but even help under cover will still do. Furthermore, the United States has requested that we open up the Shanghai harbor for the 7th fleet to anchor there; as we look at the matter now, will it be more helpful to the stable situation in Southeast Asia if we opened up the Yulin harbor instead? The function of keeping a watch on the Cam Ranh Bay should be at least not amiss. As for Thailand, so long as they can keep an eye open and an eye closed, that would do; let them spar with Vietnam when necessary, there should be no problem here.

Apart from all this, we would have to rely on the north-south land route to extend our aid. In the Vietnam war in the past, there was the Ho Chi Minh Trail which passed through Kampuchea; now we might as well also do a little research and work out some kind of trail to pass through Burma and Thailand. This will mainly depend on the Thai Communists; without them, it will not do. Although from one end to the other, this route stretches some 1,000 kilometers, and there would be difficulties to put through large quantities of aid, at least there won't be any problem in sending through convoys of Sino-Kampuchean personnel, setting up communications depots and liaison lines in the future. The reason the Thai Communist Party despatched a delegation here secretly this time is of course not just to talk about this matter; the Thai Communist Party mainly intends to connect the northern and southern forces together, and take this opportunity to put up an earth-shaking struggle. But the Thai Communist Party itself is subject to powerful pressure from the Vietnamese Communists, and the revisionist elements within its own ranks are also making some moves in an attempt to engage in sectarian and splittist activities. It is therefore forced to come to China, so as we can all sit down and discuss a little; these problems should be soluble. In my own personal opinion, in our effort to help Kampuchea from now on, the Thai Communists, on their part, will play an important role. Therefore, we are trying presently to persuade them, to have them realize that, in the face of a powerful enemy, they should be able to adopt a consistent stand with the Thai Government on the question of coping with Vietnamese hegemonism. We are not, of course, asking them to lay down their arms and go before the Government building in Bangkok to register; but they may well seek to reduce their tendency of running into frontal conflict with the Thai Government to the minimum. In doing so, we can help the Thai Communist Party to preserve its substantive strength on the one hand, and encourage Kriangsak to make up his mind to cooperate with us in helping Kampuchea. If we can round up ASEAN from this, things will be even easier. If we further secure the support of the United States, Japan, Britian and France, Kampuchea's future will become even inestimable. Even if Premier Kriangsak does not agree, it will not matter very much; at least the Thai Communists will be supporting us; it will not be possible for us to let Thailand keep itself intact like a wise man. The situation before us is self-evident: it is impossible for Thailand to stay away from the region's affairs. If you take out a map and look at it, you will immediately know that it would be most convenient for us to go through the territory of Laos in order to open up supplemental transportation routes on land in our effort to aid Kampuchea; the guerrillas in Laos can be just put to the right kind of use in this connection. We need not dwell on this point any further; you will naturally understand.

In the hilly areas of Thailand, Burma and Laos, there is still another force which is most useful, even more useful than the Thai Communists: this is namely the force of the Kuomintang. You should not belittle the contingents the Kuomintang has deployed along these areas; the Burmese Government troops have attempted several times to move them, but each time they ended up with losses plus apology. Nor dared the armed units of the Burmese Communist Party and the Thai Communist Party to touch them. As we figure it, almost 30 years have elapsed; except those two occasions when we exercised our international influence and succeeded in forcing a part of them to be sent back to Taiwan, their basic strength has never been weakened; even today, the Burmese and the Thai Government still adopt a tolerant attitude toward them. The Kuomintang troops' fighting power is not bad; they concentrate on swiping at our rear. If we can convert this force to help us swipe at the rear of Vietnam, the situation will far exceed what the batch of pitiful little fellows of the Thai Communist Party can bring about for us.

The estimate of the present international situation by the Third Plenum of the 11th Party Central Committee is entirely correct. At present, nothing is more important than the rapid establishment in the international arena an international united front centered on opposition to Soviet socialist imperialism. Whether or not we can stop the expansion of the social-imperialist aggressive forces, whether or not we can turn the revolutionary parties of the world back to the correct Marxist-Leninist road and get them united, whether or not we can get the international Communist movement to step on a new journey, whether or not we can help all the enslaved peoples and oppressed nations rid themselves of the shackles binding them, and effectively prevent a new world war from breaking out ahead of time all depend on whether or not we mobilize and organize the people who make up more than 95 percent of the world's population into a vast revolutionary army in opposition to social imperialism. We must unite all forces that can be united in order to isolate and encircle social imperialism, the Soviet Union, and to deter it from taking a single step beyond its prescribed boundary. We have already successfully won the United States over and prevented the under-the-counter bargaining between the United States and the Soviet Union in the two hegemons' preparedness to partition the world. Today, a united front which includes the First World's secondary enemy, U.S. imperialism, and most countries of the Second World and the Third World in opposition to the social-imperialist hegemony is already forged. Today, isolated is no longer China but the trembling new Tsar. At the end of this month, when Vice Chairman Deng goes to the United States to visit, he will more or less work out some clear outline as to the questions how to jointly resist the expansion of forces of the Soviet Union in various parts of the world and how to prevent the Cuba of the East from swashbuckling across the Indochinese Peninsula at random. If there are no great difficulties, and the guerilla fighting in Kampuchea can last until 1981, the situation can then be completely reversed. Our tasks at present are very heavy; not only in the diplomatic arena openly we must exercise our influential power to make through various means countries of the world refuse to recognize the puppet regime supported by Vietnam, but must also intensify our support of the Government of the Revolutionary Army inside Kampuchean territory in order to prevent it from collapse before the appearance of that fine situation. Chairman Hua and Vice Chairman Deng have both represented our party and government to declare to the world our wish to support the resistance effort of the Government of Democratic Kampuchea to the very end; all of us must do a good job in this within the jurisdiction of our respective responsibilities.

As the last point, I would like to talk about our work and tasks from now on. We must unswervingly continue to support the Government of Democratic Kampuchea. This is not only our unshirkable internationalist duty, but also [a task] designed to safeguard peace and stability of our world. If, in the face of diverse challenges of hegemonism, we refrain from delivering powerful counter-blows, we would only boost the cockiness of the reactionaries. No matter how the Kampuchean Communist Party and the Government of Democratic Kampuchea have in the past accommodated this and that kind of shortcomings and mistakes, as a sovereign state it must not allow any regime to take that as a pretext to carry out intervention, subversion, and aggression. The Kampuchean Commust Party is our brotherly party; the people of Kampuchea are friends of the Chinese people. Their struggle is our struggle; their victory is our victory. Just as in the past, when true affection was shown in circumstances of hardship, we shall support them with our greatest determination and strength in their effort to carry forward the movement against Vietnam and for national salvation; no matter how long the time is going to be, how great the price is going to be, we are going to support them to the very end. At the same time, we need to remind the people of the whole world, especially the people of Southeast Asia: Vietnam's aggression against Kampuchea is absolutely not an isolated affair; it is the first step on the part of Soviet social imperialism to instigate Vietnam, this Cuba of the East, to carry out its expansion in Southeast Asia, and an integral part of Soviet social imperialism's worldwide strategic plan. If anyone should continue to indulge in appeasement, continue to placate it by means of detente, then today's Kampuchea will be tomorrow's Southeast Asian and other Asian-Pacific countries, and yesterday's Czechoslovakia would become the reflection of tomorrow's Europe and America. If no sufficient vigilance is aroused on this matter, if the people of the whole world continue to lag in making ideological preparations, a new world war will be inevitable, and will break out ahead of time. Vietnam has been carrying out naked aggression against Kampuchea on the one hand and, on the other hand, engineering one bloody incident after another along the Sino-Vietnamese broder, making troubles, moving demarcation tablets, occupying more than 600 square kilometers of Chinese territory, and repeatedly ignoring our Government's protests. We have already issued statements to let the Vietnamese Government know clearly that our tolerance will have its limit. Comrades, today I represent the Party Central to indicate once again that the attitude we have adopted today is absolutely not any showing of weakness, but an effort to demonstrate limited tolerance according to the principles of rationality, potential benefit, and proper control. When we say we do not want a war today, that does not suggest that we will not fight a war in the future. If we are forced to the point of being able to do nothing else except to take action, then we shall not cringe from going to war and from fighting to win. We have already completed defense arrangements in the southwestern region; then why have we hesitated in taking action? First of all, we must create public opinion, let the governments of all countries of the world see clearly who is the perpetrator of bloody conflicts and who is the aggressor. Through toleration time and again, everybody would see the aggressive face of the Cuba of the East clearly. Only through such an expose can we push Vietnam to the stand of trial before the world, can we educate the people, including the Vietnamese people, can we exalt the morale of the vast ranks of our commanding officers. Justice is already in our hands; the people of the whole world are sympathizing with us and supporting us. When the time comes, we are surely going to be able to exert ourselves all at once and render it a thorough beating. The second point is that we cannot just look at the conflicts in Yunnan and Guangxi; we must see that this is on the surface merely a Sino-Vietnamese contention but in substance really a struggle between social imperialism and socialist China. From now on, we must immediately make ideological preparations and all necessary preparations; since social imperialism dares to start an aggressive war, we must have the determination to fight a boundless great war. Our attitude toward war has always been very clear; that is, first, we don't want it; and second, we are not afraid of it. If a war is imposed forcibly upon us, then we can only cope war with a war. Thirdly, even though we have already done our mobilization work and the morale of our commanding officers at the front is also high, and resolution letters are sent to Beijing like snow flakes, for the sake of blood-and-flesh friendship between the Vietnamese people and the Chinese people, in consideration of the Vietnamese people's interests so that as soon as they have achieved victory in their war against the United States and for national salvation they would not be entrapped in the fire of war again, we still entertain the last bit of hope, a hope that their government can change its ways and stop at the brink. Even though this chance is small, we still need to strive for it. If they still do as they please, and insist on pushing us toward to path of war, then we shall not mind meeting them in war, and drive them out. The Party Central Committee has recently issued a document, calling upon the whole party, the whole army, and the people of the whole country to do a good job in making practical preparations. The whole Party, the whole Army and the people of the whole country must make such preparations in two ways: they must do a good job in managing their economy, and they must be prepared for war. Party organizations at various levels must grasp well economic management and also grasp well military work. We entirely believe that the heroic Kampuchean people and revolutionary forces will be able to overcome the Vietnamese aggressors; we also entirely believe that, so long as the whole Party, the whole army and the people of the whole country unite together, we can both do a good job in our production and drive out all aggressors who dare to come to attack us.

Now, I would also like to take a little time to relate to you on this occasion the Party Central Committee's directive on the question of the establishment of diplomatic relations between China and the United States. On 16 December last year, we and the United States simultaneously announced that the two sides were going to formally establish diplomatic relations on 1 January this year. This not only attracted the attention of all countries of the world, but different viewpoints and reactions also surfaced in different parts of this country. The relevant directive related was already issued on 17 December last year, and I believe everybody has already read it. The Party Central Committee has made it a rule that it must be read at all meetings in order to do a good job in the communication of ideas. I cannot do otherwise. The establishment of Sino-American diplomatic relations is a victory of the proletarian revolutionary line, and another proof of the nature of U.S. imperialism as a paper tiger, and not as an iron board. At present, U.S. imperialism is bogged down in a situation of converging domestic and international difficulties and great discomfiture; so it is easy to be befriended. But you must know that, even though the United States lacks any magnificent political goals, its scientific and technological development, new weaponry and economic resources are still very abundant and advanced. In this regard, it is going to be of great help to us. The establishment of new Sino-American relations can unite the forces of the two countries, and we must at the same time make use of such forces to unite the Third World and to win over the Second World so as to render common blows against the social-imperialist hegemony. This victory helps divide and disintegrate the reactionary clique of international class enemies, win a period of precious time, and win a part of external resources and capital so as to consolidate and develop our national economy and speedily realize our four modernizations. All this is beneficial to the accumulation of our strength, the strengthening of our army construction and national defense construction, the early realization of the motherland's unification, and the struggle for ultimate victory in the future war against aggression. Now I have finished what I wish to say.

PARTY AND STATE

REFORMS NEEDED TO ALTER WIDESPREAD BUREAUCRATIC THINKING

Jinan DAZHONG RIBAO in Chinese 2 Oct 80 p 2

[Article by Zhao Shugan [6392 2885 1626]: "Uphold the Mass Line; Overcome Bureaucracy"]

[Text] In a speech delivered at the Third Plenary Session of the Fifth National People's Congress, Comrade Hua Guofeng put forward an important task: to overcome bureaucracy and improve the work of the government. He solemnly pointed out: "Bureaucracy not only has obstructed economic reform and the progress of construction of the four modernizations, but it has also obstructed all of our work. It has long aroused the strong indignation of the people." At present, the phenomenon of bureaucracy exists extensively in government organizations at all levels. This is indeed a very serioud problem, and now it is the time that this problem must be solved. In order to alter this situation, the most important thing is to carry out a thorough reform of the current political and economic administrative systems. At the same time, feudalism and bourgeois ideology must also be criticized from an ideological point of view, so that a sense of the mass line can be firmly established.

The mass line of the party is the line for the masses to liberate themselves. History is made by the masses. The working class can accomplish its own historical mission only by relying on the strength of its own class and that of the laboring people as a whole. Unlike the political parties of the bourgeoisie, the political party of the working class does not regard the masses as its own instrument, but consciously maintains that it itself is the instrument for the masses to accomplish a specific historical mission in a specific historical era. The reason why it has become an advanced force and plays a significant leading role among the masses is because it is the wholehearted servant of the masses, because it reflects their interests and their will, and because it strives to organize the masses to struggle to fulfill their own interests. It does not possess any power that transcends the masses. The mass line of the party strictly demands us to let the masses liberate themselves. The overall task of the party is to wholeheartedly serve the people. The party's leading role is to correctly point out to the people the direction of struggle and to help them use their own hands to surmount all difficulties to struggle for building our motherland into a modernized great power and for realizing the supreme ideal of manking—a socialist society. The practice of the Chinese revolutionary struggle led by the party has proved: No matter whether it is achieved in the period of democratic revolution or in the period of socialist construction, every great success achieved by us has been the result of relying on the masses and faithfully carrying out the mass line of the party. Following the implementation of the party's general line in the new era and the shift in the focus of party work, it is more than ever necessary to carry out the mass line of the party continuously and conscientiously, in order to unite the people of the whole nation to wage a protracted and tenacious struggle with one heart and one mind.

In practical work, bureaucratic malpractices which run counter to the mass line of the party are a common occurrence. First there are overstaffed and overlapping administrative organizations. There are those persons who enjoy high positions and live in clover, yet are irresponsible and tend to shift responsibilities onto each other. They are not concerned about the well-being of the masses. They remain indifferent toward the opinions and demands of the masses. Second, there are those who are divorced from objective reality or have lost contact with the practice of struggle. When they ponder a question or make a decision for work, they divorce themselves from the masses and from reality. They act blindly by relying only on personal imagination. They carry out instructions from higher levels mechanically, acting in compliance with administrative orders without taking note of the current situation. Third, there are those who work only in a mechanical way without paying attention to actual results. They report the good news but not the bad. They practice fraud and fish for fame and compliments. Fourth, there are those who are busy with official documents and correspondence and indulge in meetings. They are red-tapists and routinists. Fifth, there are those who are strict toward others but broadminded with themselves. They care only about their personal fame, authority, and interests, but are indifferent to the gratitude, resentment, and distresses of the masses. They attach primary importance to factionalism and put party spirit second. Sixth, there are those who take the individual for the collective and the collective for the individual, and also the individual for the masses and the masses for the individual. They exaggerate the role of the individual and abuse their authority. They violate the law and discipline. They retaliate against those who criticize them. The above mentioned are among those who have caused enormous losses to the party and the people.

Bureaucracy is a manifestation of the rule of feudal patriarchism. People who are contaminated by such a style of thinking are basically unaware that they are merely servants of the people, and that they have only the duty to serve the masses but not the right to stand high above them. Of course, they also do not understand that a party and its members are able to point out the correct direction to lead the masses to march forward only through conscientiously accumulating the experience and pooling the wisdom of the masses. The mass line of the party itself requires us to maintain a modest and prudent attitude and to cultivate a style of work in order to enable us to serve the people, consult the masses when matters arise, and share the comforts and hardships of the masses. In order to overcome bureaucracy, we must uphold the mass line of the party, break through outmoded conventions and customs, and reform our regulations and systems by criticizing the residual influence of feudalism and bourgeois ideology so that our work will become more adaptable to the situation and needs in implementing the four modernizations.

IMPORTANCE OF CONSIDERING EVERYONE'S VIEWS STRESSED

Tianjin TIANJIN RIBAO in Chinese 12 Sep 80 p 2

[Article by Lu Man [7120 3355]: "We Must Listen to Different Opinions"]

[Text] Isn't it good to have different opinions in doing a job, holding a meeting, or solving a problem? Some persons feel that in order to do a job smoothly, to hold a meeting successfully, or to solve a problem satisfactorily, it is better to have identical views. It is easy to get bored once there are different opinions.

What is opinion? Opinion is a certain kind of idea and a way of looking at something. In view of the fact that everybody is in a different situation, is at a different ideological level, and looks at a problem from a different angle, it is a normal phenomenon for each one to have a different understanding of things. Different opinions can be discussed or debated, and sometimes they are not totally opposite; thereby we can learn from or help each other to make up each other's deficiencies and draw on collective wisdom to absorb all ideas that are useful.

For instance, speeches made at the recent session of the National People's Congress were realistic and straightforward, sharp and sincere, and appeared to be vigorous and greatly satisfy the people. Indeed, it is necessary to listen to different opinions. To listen to other's views is to see whether their views are better than our own and whether some of their views are acceptable. On the contrary, we may also consider whether our own ideas are well rounded and whether they are correct. Even opposite opinions may sometimes help regain one's own sober thinking and thereby help to prevent us from making mistakes. Of course, wrong opinions may also emerge. However, isn't it good to distinguish clearly between right and wrong through a comparison of that which is correct with that which is mistaken? At present, while we are carrying out the construction of the four modernizations, we face a lot of new problems due to lack of experience. Therefore, we need more than ever to listen to more opinions, to different opinions, and even to opposite opinions. This is extremely advantageous to us to minimize blindness, to maintain sober thinking, and to advance daringly.

The accident of the capsizing of the drilling vessel Bohai No 2 shows that once a person becomes arrogant, it is hard for him to listen to different opinions. If certain leading cadres had listened to different opinions or handled things more carefully, the accident would never have been allowed to happen in the first place. Yet, the result was that "we, the sovereign, have made the decision, and no advice is necessary"; this caused the vessel to capsize and resulted in many casualties. The so-called getting things into a mess by giving wrong orders refers not only to the problem of pretending to know what one really doesn't know, but also to the problem of being blindly self-confident. To forecase high winds is in itself not a sophisticated matter; yet some people want to go so far as to "do things right away" in order to display an unparalleled posture of "I dare to have the final say." Being a leader, it is easy for one to become malfessant or even to commit serious crimes if he becomes arrogant and considers himself always in the right without listening to different opinions.

Haughtiness and bureaucratic airs are the shadows of some leading cadres. It may become even worse if one who is arrogant does not exercise his authority properly. Things that go this way can really be viewed as the rump of a tiger, which makes one fearful to look at, not to mention to touch. A person like this who takes charge of a job or presides over a meeting usually feels that he is 100-percent right and has unanimous support. Prior to holding a meeting, he proposes in advance to prevent differing opinions from arising. This does not mean that he either is or is not willing to accept different opinions, but rather that he is basically not inclined to listen to others, or even to allow others to speak out.

The incident of the capsizing of the drilling vessel Bohai No 2 reflects the fact that some leading cadres treat differing opinions just this way. Wrong decisions made by them are for the purpose of carrying out instructions of higher levels, but suggestions made by lower levels are different. They do not listen in the least to the opinions of persons at lower levels, no matter how good or how realistic these suggestions might be, because what is in their mind is that they are responsible only to higher levels. Judging from this, it is obvious that in order to listen to others' opinions with an open mind, it is necessary to correct the line of thinking, to start off from reality, and to seek truth from facts. This is what makes us responsible to our work, to the people, and to higher levels.

Being good at listening to different opinions is an indication that one is adept in his work, conscientious, and responsible. A segment of the libretto in "15 Guan" which Kuang Zhong sings reads: This pen weighs 1,000 jin. When it falls, it kills two. After having heard a man and a woman who had been sentenced to death crying out about their grievances, he discovered flaws in the case and therefore hesitated to make a court decision. This example can be considered as accepting different opinions even when those who cry out about their grievances are the litigants themselves. If crying out about grievances is considered making trouble and the flaws discovered are set aside, no wonder those two innocent lives were destined to be doomed. In the case of the capsizing of the drilling vessel Bohai No 2, the leading cadre who made the mistake was holding in his hand a pen weighing almost 10,000 jin. How could he do his work in such haste without conscientiously listening to different opinions!

Truths, facts, and lessons all tell us that we must listen to different opinions.

PRACTICE SAID SOLE CRITERION FOR TESTING TRUTH

Beijing ZHEXUE YANJIU [PHILOSOPHICAL RESEARCH] in Chinese No 8, Aug 80 pp 13-16,12

[Article by Ma Ming [7456 7686]: "Neither Aim Nor Benefit Is the Criterion for Testing Truth"]

[Text] How is the problem proposed?

Some comrades say that if we use the success or failure of practice to test the correctness or error of knowledge, what criterion do we use to weigh the success or failure of practice? In fact, there is a criterion for this, and it is the objective of the practice. As Comrade Mao Zedong said, "A communist's every word and action must serve the greatest benefit of the broadest masses of people, and the highest criterion is what is supported by the broadest masses of people." Therefore, the conclusion is that "everything that conforms to the benefit of the people is successful practice, and everything that damages the welfare of the people is failed practice. We must use this criterion to judge the success or failure of our practice, and from this to test the truth or falsity of our knowledge." Some comrades ask, if practice is the criterion, and the welfare of the people is also the standard, how can it be said that we believe the criterion of truth and the political criterion to be completely uniform."

It was in this way that the problem of "people's welfare" as a criterion was raised. Moreover, it was felt that the aim of practice, that is to say, the greatest benefit to the people, can be used not only to judge the success or failure of practice, but to test the truth or falsity of knowledge as well. Some comrades said, "This is the embodiment of the practice criterion." We do not agree with these views. Following is a discussion of some of our simple opinions on this problem.

I. I believe that the foregoing quote from Comrade Mao Zedong is no doubt completely correct, but it is untenable to use that as a basis for proposing a "benefit criterion." It should be clear that when we discuss what is the criterion for examining truth, this is an epistemological question. When Comrade Mao Zedong here speaks of a criterion for examining and discriminating between the words and deeds of our Communist Party members, it is not an epistemological question. Making the criterion Comrade Mao Zedong spoke of into the embodiment of the practice criterion is mixing up two questions of different natures and different categories. There are two points that should be differentiated here. First, examining the correctness or error of a bit of knowledge (the criterion of truth) and judging whether an act (work, practice) is good or bad, or has succeeded or failed, are two questions of different natures. Whether man's knowledge is correct or not can only be examined through social practice; judging whether man's behavior (practice) is right or wrong must be weighed against some different standard, a political criterion, a moral criterion, etc. There is fundamentally no way to make the criterion for judging practice the criterion for examining knowledge. Second, the practice criterion and the political criterion are two different categories and can not be confused with one another. Practice is the only criterion for examining truth, and this is an epistemological category; the criterion proposed by Comrade Mao Zedong for judging the words and deeds of Communist Party members, which is to say whether or not they represented the greatest benefit to the greatest number of people and whether or not they received the support of the broadest masses of people, etc., is a political criterion and belongs to the political category. While discussing the practice criterion of epistemology, we have introduced a political criterion and have stressed only the unanimity of the two, without specifying under what circumstances they are unanimous and under what circumstances they are not unanimous. It is just because of this that some comrades confuse the political criterion with the practice criterion, and confuse questions of the epistemological category with questions of the political category. Thus, not only are we unable to clarify the questions, we are only able to confuse them further.

If we make the criterion proposed by Mao Zedong the standard for examining truth, we can see what an absurd situation it will land us in. First, Mao Zedong said "Every word and act of a Communist Party member must conform to the greatest benefit to the broadest masses of people." Benefits can be distinguished as high or low, big or small, more or less. If this is made the criterion for examining truth, can we say that a large benefit means a large truth and a small benefit means a small truth? Clearly, we cannot say this. Next, Comrade Mao Zedong also said "The highest criterion is what is supported by the broadest masses of people." Could we then say that what most people support is the truth, and what most people do not support is not true, but a fallacy? Of course we cannot say this. If the criterion of truth is whether or not something obtains the support of most of the people, then, as Lenin pointed out, "we can say that the doctrine of the Catholic church is true." ("Selected Works of Lenin," Vol 2, p 122), because Catholicism had the support of most people during a certain period and within a certain area. If obtaining the support of most of the people is made the criterion of truth, then there is no objective truth. From this we see that it is a mistake to confuse two questions of different natures and different categories. If we assume that the political criterion Nao Zedong proposed for judging practice is the criterion for the examination of truth, it is deliberate distortion of Comrade Mao Zedong's original meaning.

II. Practice is the substantive activity of man's purposeful transformation of the objective world. The purpose of practice is of course included among the essential factors of practice. Can we say that the purpose of practice is to provide a criterion for the examination of truth? We cannot. Because purpose is a thing of the subjective category, it cannot be independently made the criterion for the examination of truth, this is clear. However, some comrades suggest that the purpose of practice is a criterion for the success or failure of practice. Since we have also said that our highest purpose is the greatest benefit to the broadest masses of people and that the standard of the people's benefit is unanimous with the standard of practice, then it seems as though the purpose of practice can also become a standard for examining the truth or falsity of knowledge. This makes the question even more confused.

The purpose of practice is a subjective category, but whether or not it correctly represents objective reality can be examined by practice. The success of practice proves the unanimity of our original conception (purpose) with objective reality. If practice fails, it shows that the originally conceived purpose does not conform to reality and is erroneous. Purpose must be examined through practice. But now what is contrarily being said is that the purpose of practice is a criterion for judging the success or failure of practice, and this completely inverts the relationship between subjective and objective. If practice examines purpose and purpose also judges (which is also examining) practice, besides leading us into a circular argument, this cannot advance the question in the slightest.

Some comrades say that since practice includes the purpose of practice, the method, the target, the procedure, the result, and other elements, then practice as a criterion for the examination of truth implies that the included purpose of practice can become the criterion for the examination of truth. There are also some comrades who say that making practice the criterion is the same as making the subjective purpose the criterion for examining truth, and this introduces subjective idealism, which is not clearly differentiated form pragmatism. We feel that although these two viewpoints are proposed from different quarters, they both isolate a single element of practice from the whole process of practice, and so both are erroneous. Practice is a process of subjectively seeing something in the objective, and the various elements of practice are a unified individible whole. Departing from the whole process of practice is departing from the unified whole of practice, and no element of practice can exist independently. Without the process of practice, where would the purpose of practice come from; without the process of practice we could not talk of the results of practice. When practice is made the criterion for examining truth, it should be comprehended as a whole, which is to say as the total of the whole process, and we must not take some one of its elements in isolation to be, singlehandedly, a criterion for the examination of truth. If we depart from the whole process of practice and discuss the purpose of practice independently, there is no purpose for action, so it is a kind of pure subjective fantasy, and this purpose cannot be the purpose of practice, so naturally it cannot be the criterion for the examination of truth. The purpose of practice can only have significance as a part of the whole process of practice, transforming subjective intentions into objective reality. It is through the process of practice and its results that people examine the truth of knowledge. The results of practice are the substantiation and embodiment of purpose. This is an objective material criterion and so is clearly differentiated from pragmatism and other subjective theories of criteria of one sort and another. Practice of course includes a specific purpose, but purpose alone cannot be the criterion for examining truth, the reason being as given here.

Some comrades say that the purpose of Communist Party members is to seek the greatest benefit for the people, and that this is the fundamental point of departure and home base of all of our work, so "people's welfare" is the highest criterion for examining the truth or falsity of our party's policies and theories. We must ask, how then will we know if the party's policies and theories conform to the greatest benefit of the masses? This must still be examined through practice. What is the greates benefit of the people? This is a relatively complex question, including long-term benefit and also including immediate benefit, overall benefit as well as partial benefit. Starting from the purpose of seeking the greatest benefit, how to realize in practical terms the various items of policy and measures cannot be solved simply on the basis of purpose and point of departure, but must be examined through practice to see whether or not they really embody the greatest benefit of the people. Take for example the setting of a production norm. After all, does a 10 percent production increase or a 100 percent (doubling) production increase best conform to the greatest benefit to the masses? If we proceed purely from purpose, there is no doubt that there is greater benefit to a 100 percent increase than in a 10 percent increase in production. However, if the results of practice show that this is a "high norm" divorced from reality, not only will its result not provide people with the greatest benefit, it may even cause great harm. We need only think back to the concept of"running toward communism" of 1958. Wasn't its purpose the benefit of the people? Why then was it not true? Because it was totally divorced from the actual circumstances, practice showed it to be in error. Therefore, when we speak of purpose and benefit to the people apart from reality, not only can it not be a criterion for examining truth, it can easily provide a theoretical basis for erroneous lines of the "left" or right.

III. Some comrades, using the unanimity of truth and the people's benefit as an argument, say that making the "people's benefit" a criterion for examining the truth or falsity of knowledge is just the complementing and particularization of the practice criterion. This formulation cannot be established.

The so-called unanimity of the practice criterion and the political criterion is only accurate within a specific scope. That is, as far as the knowledge and practice of the proletariat and the Communist Party members are concerned, because our party uses Marxism-Leninism and Mao Zedong Thought as a guide and to represent the proletariat and the greatest benefit to the masses of people. The scientific nature and the class nature of Marxism-Leninism are also completely in agreement. Therefore, our party's knowledge of a given affair, and the policies and measures that are adopted, when shown to be correct through examination in practice, are also certainly the best representation of the greatest benefit to the broadest masses of people. Only within these limits, the results of examination in practice and the criterion of the people's welfare, which is to say, the practice criterion and the political criterion, are in complete agreement. However, when we discuss the problem of the criterion of truth, we are not speaking only of the knowledge and practice of Communist Party members, but we include the knowledge and practice of all people. Everyone's knowledge must be subject to examination by practice, and everyone's social practice can become the objective criterion for examining truth. For example, bourgeois knowledge of certain questions of the natural world and human society, when proved correct through examination in practice, should be acknowledged as objective truth in their command of these questions. Then, does this mean that it also conforms to the greatest benefit for the masses of people? Clearly not. Imperialist command of the secrets of rocketry and the atom (the objective truths concerning atomic fission as well as electronic technology, etc), when used to build weapons that will kill people, seek world domination. Can we say that this conforms to the greatest benefit for the greatest number of people? In this, the practice criterion and the political criterion are completely inconsistent. Therefore, either we must not acknowledge imperialism's command of atomic secrets as objective truth (of course this violates common sense), or we must acknowledge that the people's welfare cannot be universally applied as a criterion for examining truth. Our conclusion is that the benefit criterion and the practice criterion are two different criteria, and we cannot simply say that the benefit criterion is the substantiation of the practice criterion, but that the two cannot be confused.

Consequently, some comrades declare that we discuss questions only in the realm of social science, and "how to prove the truths of natural science is not within the scope of our discussions." This kind of limitation is of no help whatsoever. This is because no matter whether it is natural science or social science, the only criterion for examining whether it is true or not is practice. The differences in form between production struggle, class struggle, and scientific experiment do not alter the fact that they are all the essence of man's social practice. The reason some comrades what to make such a delcaration is simply that they feel that the "benefit" criterion does not apply in the realm of natural science because the bourgeoisie can also command the truth of natural science, and that does not represent the benefit of the greatest number of people. Therefore, does the "benefit" criterion hold for the realm of social sciences? We feel that it likewise does not apply. This is because although the bourgeoisie does not have complete command of the ojbective truth of the laws of social development, they can acknowledge and can command some individual, specific, and partial social historical truths. For example, the existence of classes and the mutual struggle between classes was initially proposed by bourgeois historians. If the proletariat can be acknowledged, the bourgeoisie can also be acknowledged, so who does this represent the greatest benefit to, and who is harmed by it? Furthermore, in considering one period after another of China's ancient history, how can we use the criterion of people's welfare to examine whose proposition was true? Therefore, making "benefit" the substantiation of the practice criterion to examine the truth of social science is likewise inapplicable.

Some comrades say that we are only discussing questions of a criterion for whether the party line, policies, and theories are true or false. Can it be that the greatest benefit to the broadest masses of people is not the highest criterion for examining the truth or falsity of the party's line, policies, and theory? Our answer is still a denial. As we have already pointed out, although the practice criterion for examining the truth or falsity of knowledge and the people's benefit criterion are consistent as far as Communist Party members are concerned, this definitely does not mean that we can use the people's benefit criterion as a substitute for the practice criterion. Comrade Mao Zedong said, "People's knowledge, having been tested in practice, can produce a great leap. The significance of this leap will be even greater than that of the leap that preceded it. It is because only by having this leap can we prove the first leap in knowledge, which is that the thinking, theory, policies, plans, methods, etc, obtained from the process of reflection of the objective external world are after all correct and not in error, and except for this there is no other method of examining truth." The people's benefit as a criterion at most proves that party policy is only correct when it conforms to the benefit of the people. Whether or not a specific item of policy conforms to the benefit of the people cannot be examined and proved until it has undergone practice, and only through practice can we prove whether or not party policies are consistent with actual circumstances, whether they conform to (or reflect) the highest benefit to the people. Therefore, in the final analysis, practice is the only criterion for examining whether or not the party line, policies, and theories are correct, and any other criterion proposed is incorrect.

IV. Making the people's welfare a criterion for examining truth is using a subjective criterion as an objective criterion and must lead to a denial of the objectivity of truth, confusing Marxism with pragmatism.

What we call truth is correct knowledge of the essence of the objective world and its regularity. Since the world stands alone outside of man's consciousness, its objective existence does not depend on man's consciousness. Therefore, the content of truth is completely objective and is independent of man's will and benefit. Therefore, it is also called objective truth. Since truth is objective, how can benefit be made the criterion for examining truth? Because benefit is mutually connected with the main body (man or a certain group of men), and furthermore is always inseparable from man's subjective desires. We cannot discuss any benefit apart form this main body of people. In a class society, benefit has a class nature. If we make "people's benefit" the criterion for examining truth, it is a criterion for examining objective truth according to the benefit or harm to the main body, and is substituting a subjective criterion for an objective criterion. Everything that conforms with the benefit of the people is truth, and everything that does not conform with the benefit of the people is falsehood. Isn't this the same as saying that truth cannot exist apart from this main body of people? Is it also the same as saying that there can be no truth that does not depend on the main body or that does not depend on mankind, that there can be no objective truth. Denying the existence of objective truth is unavoidably standing at the side of idealism.

Making "benefit" the criterion for examining truth is precisely a confusion with the pragmatic view of truth. The basic point of the pragmatic view of truth is that truth is usefulness, and "if something is useful, then it is true." It does not recognize the objectivity of the world and its laws, and therefore also denies objective truth. It assumes that truth is only a product of subjective experience, a thing that satisfies man's subjective needs, it is a method devised by man to cope with his environment, and it is a useful tool for man. The pragmatic view of truth is a subjective and idealistic view of truth. It only acknowledges using subjective criteria for examining truth and denies the objectivity of the criterion of truth. If we make the benefit of the main body the criterion for examining truth, even if we imagine this main body to be the proletariat or the masses of people, the result cannot be much different from the conclusions reached by pragmatism.

In summary, practice is the only criterion for the examination of truth, and there can be no other criterion aside from it. If we make the purpose of practice or the benefit of the people the criterion for examining truth, it must lead to the substitution of a subjective criterion for an objective criterion, and it will lead to a denial of the objectivity of truth, and from this, to a confusion of Marxism with the realms of idealism and pragmatism.

PARTY AND STATE

COLUMN ON REEDUCATION IN HISTORICAL MATERIALISM LAUNCHED

Hangzhou ZHEJIANG RIBAO in Chinese 7 Oct 80 p 4

[Article by Wang Jiayang [3769 1367 2254]: "We Must Pay Attention to Propagation of and Education in Historical Materialism"]

[Text] Marxist historical materialism is the world view of the proletariat. Historical materialism affirms that the masses of people are the creators of history and the decisive power in the development of history. A proletarian political party must correctly recognize and deal with the relationships between leadership, political parties, classes, and the masses and must trust the masses, rely on the masses, and faithfully represent the masses' will and desires throughout the course of socialist revolution and socialist construction for the benefit of the broadest masses of people. Since the founding of our country, both positive and negative aspects of practice have proved that when our party's line, guiding principle, policy, and the party's actual work have embodied the welfare and requirements of the broad masses of people and adhered to the basic principles of historical materialism, we have been able to arouse the people, mobilize and organize the masses to struggle for their own benefit, and our affirs thus succeeded and developed. Otherwise, they encountered setback and defeat. After the breakup of the "gang of four," the Party Central Committee reviewed historical experience and promptly proposed shifting the key task of the whole party to economic construction, proposed the grand mission of building our country into a strong, modern socialist nation, and thus completely embodied the fundamental benefit and common desires of the people of the whole country. To realize this glorious and arduous task, we must have favorable conditions in all aspects. Of these, one fundamental condition is that we must trust and rely on the broad masses of people, fully develop socialist democracy, and truly allow the masses of people to be master in their own house in the nation's political life, economic life, social life and such areas, to fully develop the activism, creativity, intelligence and wisdom of the masses. Without this condition, our affairs cannot succeed.

In reviewing the initial period after the founding of the country, our party carried on very wide education in historical materialism among the cadres and the masses. For example, party schools on all levels and cadre schools of all kinds all made this one of their important courses and universally organized the cadres to study the principles of Marxist philosophy and the history of social development: in the rural land reform and the urban democratic reforms, we developed mass education in "Who lives off whom?"etc. This raised the consciousness of the cadres in recognizing that labor had created the world and the truth that the masses are the real heroes, and that the cadres should serve the people, established the viewpoint that we should rely on the masses with all our hearts and souls, developed the excellent tradition of the party's mass line, and all achieved very good results.

However, we should see that after winning victory throughout the country, our party became a governing party. This change in the status of the party held the danger of easily developing subjectivism, bureaucratism, and commandism divorced from the masses, and held the danger of some cadres easily changing from public servants into lords of the people. Beginning in the late 1950's, some cadres in the party really did develop a spirit of arrogance and of claiming credit for themselves, self-worship, and exaggerating the function of the individual, and the development of individuals deciding important questions and other circumstances weakened and damaged the party's system of democratic centralism and principle of collective leadership, socialist democracy failed to develop, and at times there was not even any respect for the welfare of the masses. In 10 years of creating confusion, the Lin Biao-Jiang Qing mob took advantage of the mistakes of the party leadership, advocated a hero view of history, fabricated modern superstition, began a deification movement, and made "loyalty to the leader" the highest political conviction of people throughout the country. On the other hand, they despised the masses and fundamentally did not care whether they lived or died, and they instituted a fascist "overall dictatorship" against the cadres and the masses. As a result, the pernicious influence of feudal autocracy spread unchecked, and the idealistic view of history became rampant. The party's world view was seriously eroded. This pernicious influence was such that it blunted the concern of many of our comrades for historical materialism, even making them forget it. At that time, when there were still irregularities and unhealthy circumstances in our party life and social life, such as bureaucratism, a family-head system, one person having the say, a special privilege mentality and the seeking of privileges, serious waste and loss to the financial resources of the country through blind subjective leadership, as well as no one who was concerned about the production safety or immediate welfare of the masses, etc, which in the final analysis were all inseparable from the deviation from and violation of teh basic principles of historical materialism, deviation from the will of the masses, and the inversion of the relationship between the cadres and the masses. All of the foregoing shows that the implementation of effective propaganda and education in historical materialism for the party members and cadres, carrying on education in serving the people with the whole heart and soul and being a good servant of the people, clearing out the various pernicious influences of historical idealism, clearing away the remnant influences of feudalism, and preventing erosion by bourgeois thinking all have urgent theoretical and practical significance.

Implementation of propagation of and education in historical materialism must be centered on the four modernizations, must maintain the principle of integrating theory with reality, must clearly distinguish between historical materialism and the idealistic view of history through discussions of problems in present-day life, sift out various kinds of foolish notions, encourage reform of the national management system, the administrative agencies work system, and the cadre system, strengthen the system of cadre inspection and oversight, improve party leadership, bring about advances in our work and style, and promote modernization.

In carrying on propagation of and education in historical materialism at the present time, I feel that we must emphasize raising the cadres' recognition of the historical position and historical effect of the masses, set right the positions of the cadres and the masses, and improve the relationships between the cadres and masses that were damaged by the Ling Biao-Jiang Qing mob.

We must firmly establish the viewpoint that "history is the history of the masses." We must really make clear the difference between historical materialism and the idealistic view of history, whether history is after all the history of the masses of people or the history of a few heroes and leaders, whether we will trust in and rely on the masses or have blind faith in ourselves. The history of social development is the history of the development of production, the history of constant development and transformation of social and productive style, and is the history of development of productive force and productive relations, so it cannot but be the history of the producers of the material goods themselves, cannot but be the history of the laboring masses. The masses of people are the creators of society's material wealth and spiritual wealth, and they are the decisive force in transforming society and in moving history forward. In countries where the socialist revolution has achieved victory, the people are the true masters of their country. People being masters in their own house should not be an idle saying, but should be be seen practically as a real practice. The responsibility of the party leadership is to educate and arouse the masses' recognition of their historical position and historical mission, and believe firmly that there never has been any saviour, that they must depend on themselves for their salvation; we must further develop socialist democracy and the legal system to make it possible for the broad masses to exercise their right to manage government affairs, economic affairs, and social affairs effectively. Our economic construction and the various items of work must respect the desires of the broad masses of people, proceed from the immediate and long-term benefit of the masses, uphold the mass line, consult with the masses when matters arise, be concerned with the important questions of vital interest to the masses, and definitely not be settled by the decisions of one man or a few men.

We must firmly establish the view that the cadres are the "public servants" of the masses. The various grades of party cadre must consciously accept the inspection and oversight by the masses, become used to listening to the opinions and criticisms of the masses, and be good servants of the people. Whether the cadres are the servants of the people or the lords of the people standing over their heads is yet another difference between historical materialism and the idealistic view of history. We should not regard the masses as the party's tools, but the party as the tool to be used by the masses in completing the historical tasks of a specific historical period. Therefore, whether a cadre's position is high or low, he should place himself in the midst of the masses, share their comforts and hardships, become one with them, discuss affairs with them on an equal footing, spare no effort on behalf of the people's welfare, and definitely not sit on the backs of the masses, lording it over them and seeking his own benefit. In his speech to the Third Session of the Fifth National People's Congress, Comrade Hua Guofeng pointed out: "The greater a man's power and merit, the greater his political responsibility and moral responsibility to serve as a model for the people, for the workers of the lower ranks, and for the children of the next generation." The thinking and viewponnt that the masses are subjects under one's control, establishing relationships of attaching oneself to some other person, being responsible only to superiors, not being responsible to the masses, regarding anything good done for the people as a "favor" to the people, and feeling that they of course ought to receive "gratitude gifts" from the people, etc., are all manifestations of feudal thinking and bourgeois thinking, and are intolerable to historical materialism.

Third is that we must correctly recognize the effect of the individual on history, apply great efforts to study and do good work. While historical materialism confirms the great effect of the masses of people on history, it does not deny the effect of the individual. The question is to see whether the actions of the individual conform to and reflect the laws of social development at that time, and whether they represent the welfare and demands of the broad masses of people. The appearance of any outstanding person always requires that the people give him space and sunlight before he can flourish and develop. In the long stream of historical development, in the production, work, and struggle of the masses, the people need leaders and choose them to manage things for the people, and seek their own liberation. Often, the leadership is not a single person, but a circle or a large group. After this leadership mounts the stage of history, it must still maintain an intimate relationship with the masses, and not cut off the wisdom and strength that flows from the masses, but develop the outstanding competence of the individual to make his own contribution to the development of history. Leaders like this should naturally enjoy the deepest love and esteem of the masses. In clarifying this question, we must not neglect the responsibilities of the leadership. We must improve and strengthen party leadership, develop the core leadership function of the party organization, develop the role of the party branch as a fighting bastion, and develop the roles of Communist Party members as models of the vanguard. To be a leader, one should apply even more effort to the study of theory, the study of cultural and scientific knowledge, and of professional knowledge, conform to the historical trend of the times and the expectations of the people, and make a positive contribution to the four modernizations.

The initiation of a column on "Carrying On Re-education in Historical Materialism" by the ZHEJIANG RIBAO is a very significant thing. We hope that everyone will actively develop ideas and strive together to make this column a success.

To the Readers:

Communist Party members and revolutionaries should understand the basic common knowledge about historical materialism and respect its basic principles. However, because of the 10 years of chaos caused by the Lin Biao-Jiang Qing mob, people forgot about the basic common knowledge of historical materialism and the idealistic view of history has run rampant. Some people may be able to give a very clear and logical oral recitation of the principles of historical materialism, but their actions are something completely different. In view of these circumstances, we have begun a special column on "Carrying On Re-education in Historical Materialism." Historical materialism is involved in a great many questions, and this column will emphasize the solution of the problems of how to deal with the masses correctly. To this end, we have selected a number of subjects to reflect on and here provide them for everyone's review.

Is it heroes who create history, or is it slaves?

How can we recognize the historical effect of outstanding persons? What is the relationship between proletarian leaders and the masses of people? Should the people be loyal to their leaders, or should the leaders be loyal to the people?

Why must we "apply less propaganda to the individual"? Why must we oppose blind faith in the individual and worship of the individual?

Why do we say that "one person having the say," "the head of household system," bureaucratism, lifetime appointments to cadre leadership, and various kinds of special privilege are all things of the idealistic view of history? How can we overcome these abuses?

If the people are the "masters" and the cadres are the "public servants," why do some cadres invert the relationship between "master" and "public servant"? Where is the reason? What must we do to be able to set the relationship between these two right again? How should we guarantee that the masses of people can fully exercise their democratic rights and develop their role as "master"?

In the new historical period, how can we strengthen the mass viewpoint (including trusting the masses, the viewpoint of liberating oneself, the viewpoint of doing everything for the masses and serving the people with our whole heart and soul, the viewpoint of being responsible to the people in everything, and the viewpoint of learning from the people in everything)? How can we best follow the mass line?

We welcome everyone's enthusiastic efforts to compose articles around these subjects. You can write specialized essays or short peices; you can discuss something learned from experience or write comments on something you have read. There are no requirements for form and no limits on length. Say what's on your mind and everyone freely express his views. Present the facts and reason things out, try to strike home at current abuses, and discuss problems clearly on the basis of a combination of theory and practice.

WRITERS, POLITICIANS URGED TO WORK FOR MODERNIZATION

Tianjin XINGANG in Chinese No 3, Mar 80 pp 79-83, 91

[Article by Guo Fengqi [6753 7685 1477], Fang Bojing [2455 0130 2417], and Fan Hongbing [5400 4767 0365]: "Literary and Art Works Cannot Be Separated From Politics"]

[Text] At present, a debate has taken place over the issue of the relationship between work in the literary and artistic fields and politics, an issue that is now at the heart of the theory of literature and art, the principle of creative writing and literary and artistic reviews. We feel that the proposal "to attach literature and art to politics" is not a scientific approach. But we also want to say that literature and art cannot be, in one way or another, separated from politics, and must go hand in hand with politics.

I

Before proceeding to talk about the relationship between work in the literary and artistic fields and politics, we must first clearly understand what politics and literature and art really mean. According to the basic Marxist viewpoint, both politics and literature and art are part of the superstructure. The superstructure which serves the economic base can be divided into the following two parts: First, the political and legal systems including the army, police and courts; second, sociological ideas, including politics, legal viewpoints, religions, codes of ethics, philosophy and literature and art. Based on this fact, politics refers not only to the political system but also to the political doctrines and viewpoints in the sociological and ideological fields; literature and art are part of the social ideology and a reflection of politics and economics in a specific society. A discussion about the relationship between work in the literary and artistic fields and politics must be accompanied by a discussion about the relationship between literature and art on the one hand and politics on the other.

Marx said that the whole relations of production make up "the socio-economic structure on top of which stands the legal and political aspects of the superstructure, and at the bottom of which is a solid base coupled with a specific social ideology." ("Preface to 'The Criticism of Political Economy'") This indicates that as part of the social ideology, literature and art are in rapport with the specific political system; a specific political system requires a specific form of literature and art that can echo its needs; in the process of developing and formulating its political system, a specific class also needs a specific form of literature and art to create public opinions in favor of such a struggle; as soon as that political system is established, literature and art will be required to play a role in defending, improving and consolidating it.

While maintaining harmonious relations with politics, literature and art are subordinate to the economic base and must echo and serve its needs just as politics does. Nevertheless, the position of literature and art and that of politics in the superstructure are at variance with each other. For example, politics which is the concentrated expression of economics occupies a dominant position in the superstructure and can have greater and more direct impact on the economic base, while literature and art is a reflection of the economic base, playing a role of checks and balances with politics. Normally, they have no direct impact on the economic base but can make their influence felt there through the political channels.

This analysis of the roles of literature and art and politics in the superstructure shows that the relationship of literature and art to politics is not one of servants to their master, although they cannot be separated from each other. The history of the development of literature and art in socialist society powerfully proves that never before have literature and art been separated from politics nor is it likely in the future.

Some comrades have epitomized the relationship of literature and art to politics during the period of the reactionary rule as one of "rivalry." This theory of "rivalry" has been proven theoretically untenable and incorrect by Lu Xun. In a speech delivered by the end of 1927, Lu Xun said: "I always feel that literature and art never stop clashing with politics; originally, literature and art are not opposed to the revolution because they share the same feeling of discontent with the status quo. But politics has the tendency of maintaining the status quo, and therefore is moving in a direction of clash with literature and art, which reflect discontent with the status quo." (Speech to Shanghai Jinan University: "Difference Between Literature and Art and Politics") We understnad that "politics" in that speech by Lu Xun refers to the reactionary political system designed to defend the economic base of the exploiting classes; "literature and art which reflect discontent with the status quo" refers to the revolutionary literature and art aimed at criticizing, exposing and destroying the economic base of the exploiting classes. This form of literature and art which reflects discontent with, exposes and criticizes reality and demands reforms is certainly moving in a direction of clash with the politics of the reactionary classes. At the same time, "that form of literature and art that reflects discontent with the status quo, and the people's interests and aspirations" is in harmony with that kind of politics that is dissatisfied with the status quo, and is in accord with the trend of social development and the political demands of the revolution. Just as Lu Xun said in that same speech: "Politics tends to maintain the status quo in an attempt to turn back the clock, while literature and art play a role in pushing society forward and encouraging it to gradually break with the old order." This is why the progressive and revolutionary form of literature and art has become a thorn in reactionary politicians' flesh and many revolutionary writers and artists not tolerated by politicians have fled their motherland to other countries while others who could not do so have either been banished or even murdered. Under such circumstances, a clash between the progressive form of literature and art and reactionary politics seems unavoidable or a matter of course, just as it has been the case between the reactionary form of literature and art and revolutionary politics. This clash between work in literary and artistic fields and politics differs in essence with the normal relationship between literature and art on the one hand and politics on the other. Normally, the terms "literature and art and politics" refer to literature and art and politics of the same class. That kind of politics often places specific demands on literature and art, inducing them to suit its needs and to move in the same direction of its development. Of course, it is also possible that sometimes they contradict each other. However, when this occurs, politics always takes timely action to bring literature and art into line again with interests represented by politics and into the orbit set by it. A review of the history of feudal society in China shows that reactionary ruling classes of all dynasties had done everything possible to promote such feudal codes of ethics as loyalty, filial piety, chastity and faithfulness in an attempt to preserve the hereditary feudal order and the political system of the landlord class. Consequently, the society was deluged with poems eulogizing "kindness, decency, and tolerance," prose-style articles full of "flatteriers," and plays and novels glorifying the feudal society and disseminating feudal codes of ethics. These literary and art works werw soon tossed to the garbage heap by the people and were shortlived because they were produced to serve the political needs of the reactionary ruling classes in betrayal of the people's interests. There were other literary and art works opposed to feudal politics, works written by ordinary laboring people and by some members of the feudal ruling class who cherished progressive democratic ideas. These works are the democratic cream of our cultural heritage. Although they were once suppressed and stifled by the reactionary ruling class, they have been warmly loved and welcomed by the people from generation to generation. In feudal society, there were two categories of literary works—those opposed to feudal politics and those which cherished feudal politics. The fact that we can see only works opposed to feudal order today does not mean that other category of literary works which occupied a dominant position in feudal society did not exist.

As early as 1913, Lenin pointed out: "In every nation and culture, there are nascent democratic and socialist elements. The reason is that every nation has a vast number of laboring and exploited people who live in poverty and who cherish the democratic and socialist ideological systems. Nevertheless, bourgeois culture also exists in every nation along with sinister and church-state cultures which occupy dominant positions in society." ("Critical Views of National Problems") Judging from this statement by Lenin, we cannot apply the fact of rivalry between progressive works in the literary and artistic fields and reactionary politics as a basis for concluding that literature and art are always at odds with politics. In socialist society, the fact that literature and art are in rapport with politics is clearly more visible. The socialist system is brand-new political system in human history, which "is far superior to the social system of the old society." ("On the Correct Handling of Contradictions Among the People" by Comrade Mao Zedong) The socialist relations of production are based on the system of public ownership of the means of production. In socialist society where the system of the exploitation of man by man and injustice characterized by oppression of man by man have been eliminated, the working people have become masters of their own country with their interests being represented by the socialist political system.

In the final analysis, under the socialist system, the relationship between work in the literary and artistic fields and politics is essentially one between literature and art on the one hand and the people on the other. Their identity with politics means their identity with the people's interests. Alining literature and art with politics means taking into account the people's interests. Socialist literature and art should graphically reflect the people's life and their needs and interests in various stages of history. In doing so, they should not move in a collision course with politics. On the contrary, they should work in close coordination with politics and enhance politics in a significant way. It can be said that in the old society the more a writer dared to clash with the political system, the more praise his works would receive; the opposite is true in socialist society. In socialist society, the more a writer or an artist dares to clash with the political system, the greater his works will harm the people's interests, thus calling their value into question.

True, the socialist system is relatively new to our country. It is only 30 years old, and therefore needs to be further improved in certain respects. In reflecting the real life in socialist society, writers and artists certainly can touch on the dark side of society and condemn the social ills harmful to the people. This can also be called an "interference" in life and politics. This form of "interference" differs in many ways from "clash," which refers to the clash of fundamental interests. By "interference," we mean exposing, criticizing and eliminating the old in the people's interests and further improving our socialist system rather than jeopardizing the political system and shaking it to its foundation. Graphically speaking, we mean "improving the system" rather than "destroying it." Judging from this fact, the theme of "interference in life" contained in literary and art works is in every sense consistent with the aim of politics and the people's interests, and therefore will in no way clash with politics. Writers and artists will go astray if they are encouraged to estrange from politics.

Will literature and art be in danger of reducing to formulas and talks in abstract terms if they are placed in the orbit of politics? In answering this question, we must draw a distinction between politics and some specific political tasks. By politics, we mean a political system which represents the basic interests of a specific class. Although politics may take various forms, it does not refer to any specific political movement, or political slogans and policies. Nor does it mean any simple accumulation of numerous political tasks and political events. All specific political movements, political slogans and policies must undergo changes made necessary by changes in the domestic and international situation; they must be reviewed and revised as a result of practical implementation. We must also be aware that some policies that are correct at one time and place may turn out to be invalid at another time and place; any mistaken assessment of class forces and inaccurate analysis of the situation can also call certain policies into question. But no such problems exist under the socialist system because everyone in socialist society is committed to constantly perfecting and consolidating such a system. By emphasizing that literature and art should not be separated from politics, we mean that literature and art should be adapted to the needs of the socialist system, or at least the political needs of a specific historical stage. During this new historical period, our task is to adapt them to the needs of the four modernizations. In the past, the narrow-minded and one-sided interpretation of the relationship between work in the literary and artistic fields and politics and the lopsided emphasis of the metaphysical aspect of literature and art were determined as factors for causing many problems in the literary and artistic fields. Among them were the problems of how to "portray, paint and sing the central issue," and how to simplify literature and art into formulas and stereotyped forms of writing in abstract terms. It is wrong to say that these problems were caused by the insistence on alining literature and art with politics. As a result of interference and sabotage by Lin Biao and the "gang of four," who pushed the line in literature and art to the extreme in order to serve their self-interest, the relationship between work in the literary and artistic fields and politics became more confused than ever in the people's minds. This is a serious lesson we must draw from the modern history of literature. Today, we must correctly understand and handle the relationship between work in the literary and artistic fields and politics when efforts are made to sum up related experiences and draw lessons from such experiences. We can neither attach literature and art to politics nor allow them to become a tool for any specific political movement, or forums for interpreting certain political slogans and specific policies. We should never permit literature and art to estrange from politics and the socialist system, and to move along a course in violation of the people's interests.

II

After concluding a discussion on the relationship of literature and art to politics and their positions in the superstructure, we feel that every writer has his own political views which more or less will affect his work. This is another reason that literature and art cannot be separated from politics.

As we have mentioned earlier, politics not only refers to the political system but also to the political doctrines and viewpoints in the ideological field. This being the case, how can we relate literature and art to politics in the ideological field? Engels once said: "The development of politics, law, philosophy, religions, literature, and art must be based on the development of economics. They can affect each other as well as the economic base." Politics in Engels' terms refers to the political doctrines and political viewpoints in the ideological field. An observation of the roles of literature, art and politics in the ideological field shows that they are independent and mutually related elements capable of influencing each other. "The ideology of the ruling class is a dominant ideology in every era." ("German Ideology" by Marx and Engels) When this ideology spreads to all walks of life in society, it is bound to have direct or indirect, and considerable impact on literature and art. Under the influence of this ideology, writers and artists may produce works which graphically, directly or indirectly, and implicitly or explicitly reflect their political viewpoints, political ideals and political aspiration.

The effect of politics on literature and art is often reflected in a writer's works and his views of the universe. In class society, every writer has his own class status and political views. A specific school of political thought may lead and influence him to offer his views on reality, to express his feeling about life, and to observe and evaluate problems in his own right. It can also affect his decision as to what to write, what to praise and what to repudiate in real drama. In short, every writer's political views and political inclinations are always reflected in his works. For this reason, writers of different political persuasions always have different feelings and views about life, apply different criteria to evaluate the true, the false, the good, the bad, the beautiful and the ugly, and produce work with different political inclinations. For example, there are two extremely different portrayals of the rickshaw in Lu Xun's novel "A Trivial Thing" and Hu Shi's [5170 6684] poem "A Rickshaw." In other words, extremely different pictures of the same scene are often reflected in works by writers of different political persuasions.

Contradictory world outlooks that exist in a writer can also be vividly reflected in his works. This is another way in which writers' political views can affect their works. There are progressive factors in their world outlooks which lead them to produce advanced works reflecting the true nature of society. There are also backward and reactionary factors in their world outlooks which induce them to present to the public works full of negative and reactionary characters. A typical example is Leo Tolstoy praised by Lenin as "a mirror of the Russian revolution." Contradictions were evident in his political views and political doctrines and were reflected in his works. On the one hand, he bitterly hated Tsarist Russia's tyrannical system, and capitalism characterized by cruelty, and displayed sympathy for the oppressed working people and especially peasants. This progressive way of thinking coupled with outpouring of affection for the oppressed brought him fame as a conscientious realist writer, leading him to present to the world an epic picture of the Russian life and the world's first-rate works exposing the true feature of the reactionary rule. On the other hand, he was a devout Christian, a landlord, and a dawdling and hysteric intellectual in Russia. These backward and reactionary factors in his world outlook sometimes compelled him to depict characters in violation of the principle of realism and to produce works full of characters fanatically promoting the principle of nonviolence as a means to resist evils, and to preach a new religion to lull the masses into sleep. Some people called this "a clash between literature and art on the one hand and politics on the other." On the contrary, we recognize this as a proof that the writers' political beliefs will have profound impact on their works and ways of thinking. It is undeniable that no political tones are present in some literary and artistic works such as watercolors, idyllic poems and songs. Based on this fact, can we say that literature and art have nothing to do with politics, or literature and art can be separated from politics? No. In this connection, we must straighten out the following two points:

First, it is necessary to distinguish literature and art from individual literary and artistic works. Literature and art sometimes can represent a cultural heritage as a whole. One or several literary and artistic works cannot present a panoramic view of literature and art. We must draw a distinction between part and whole and between general and individual works. Individual literary and art works often express their political beliefs either directly or indirectly, either explicitly or implicitly, either blatantly or subtly. Even positive and negative political beliefs can be found in a single literary work. The political tendency of literature and art for a specific period of history cannot be represented by a few individual literary and art works in that specific period. There might be literary and art works whose political tendency is unclear. But this cannot be determined as an indication that literature and art can be estranged from politics. Noting that the history of literature and art as a whole is composed of individual literary and art works, some comrades have asked: Is it fair to say that we cannot use the results from the evaluation of individual literary and art works as a basis for explaining the general tendency of literature and art? True, the entire history of literature and art is composed of countless literary and art works; the general tendency of literature and art for specific period of history can be noted only through an analysis of many individual works. In other words, the general political tendency of literature and art can be make known only as a result of a survey of hundreds of thousands of literary and art works. This political tendency cannot be represented by a few literary and art works. It is ridiculous to use the results from the survey of a few non-political literary and art works as a basis for concluding that literature and art can be separated from politics?

Second, it is also necessary to conduct a detailed analysis of even such non-political literary and art works as watercolors and idyllic poems. As a matter of fact, in the process of producing these works, their authors are often consciously or unconsciously affected by certain political thoughts. Typical are the tapestry "Great Wall" now hung in the United Nations building, and the Chinese painting "Splendor of Landscape." These art works appear to be non-political because they are appreciated not only by the Chinese and foreigners but also by the proletariat and the bourgeoisie as well. Evidently, their authors were not immune to specific political influence when they produced these masterpieces, a process in which themes and subject matters--a reflection of their love for and pride in the scenic splendors of their motherland were selected. Can anyone deny that this demonstration of love for the motherland and people has nothing to do with the specific political faith? Another example are poems by Tao Yuanming [7118 3220 2494] which reflect his political ideals and his discontent with the dark rule of his time. In short, in class society, no one can transcend politics; literature and art cannot be divorced from politics. Lu Xun said it well: "As far as I know, even those poems by the so-called 'hermit-poets' and 'idyllic poets' in ancient times, could not transcend politics, and the worldly affairs. Even poems dealing with the mundane affairs will remind the people of what has happened in this world." ("Mannerism and Literature of Wei and Jin Dynasties and Relationship Between Drugs and Wine")

Facts show that no writers can produce works without political undertones. Aware of this Lenin once taught the writers that socialist literature must be full of socialist ideas and sympathy for the working people. Our party has also called on our writers and artists to diligently study Marxism-Leninism-Mao Zedong Thought, and to apply the scientific Marxist world outlook to know and dramatize life and to correctly reflect and evaluate reality. Only in this way can they advance along the correct socialist course of literature and art.

Nevertheless, politics cannot be put on a par with literature and art. By demanding that literature and art be not divorced from politics, we do not mean that politics can replace literature and art; nor do we mean that a writer's world outlook can take the place of realism in writing. They are all irreplaceable. Art is something unique in the world. Politics also cannot be separated from literature and art. There are also laws governing their development and growth. Literary and artistic works result from performances of creative mental labor. By way of thinking and by graphic method, a writer can create typical and vivid characters and skillfully depict and dramatize life, giving readers an education and inspiration, inspiring the general public to work for the common good. Such literary works have nothing in common with instructions on philosophy offered by schools. Life is the source of raw materials for literary and artistic creations; honesty and faithfulness are the life of art. To a writer and artist, life means everything and anything. They must be true to life, and write what they observe, feel and believe in. They must realistically portray life and vividly dramatize characters according to the law governing the development of art. In class society, politics pervades all aspects of life while in socialist society, the proletarian and socialist political beliefs occupy a dominant position. As long as a writer or an artist can realistically portray social life and firmly take hold of the essence and mainstream of life, he will be able to present to the public a correct attitude toward life and politics in his works. This being the case, every writer can skillfully soft-pedal his political views in a natural way through the depiction of various scenes and acts rather than in an unscrupulous and straightforward way. If a writer proceeds from his political beliefs to plot his story in violation of the law governing the development of art and the socialist principle of literature and art, he can never present to the public any truly good works.

III

Viewed from their social functions, literature and art also cannot be separated from politics.

The Marxist theory of literature and art tells us that literature and art originate from life and can play a great role in enriching life in society; in a nutshell, theirs is a role of education, entertainment, enlightenment and appreciation of beauty. Some works present to readers a truthful picture of social life, giving the people an insight into the social activities of all ages and an opportunity to broaden their knowledge about history and life, thus enabling them to increase their ability to know and observe the world. Through the portrayal of characters and events and interpretation of ideas, some works can help the people distinguish truth, goodness and beauty from falsehood, evils and ugliness respectively, form correct political views, foster lofty ideals and broaden the horizon of knowledge through education. There are other works which provide workers and students with entertainments and sensations of enjoyment and inspire them to take a positive attitude toward life and work. This is why literature and art can be called a kind of spiritual food for people, and writers are regarded as engineers of human souls. These roles played by literature and art can be either reflected in a single work or emphasized in different works. Judging from this fact, literature and art can benefit politics or at least do it no harm. In other words, a literary or artistic work must take into account the people's and party's interests which, in our view, constitute politics.

In his report to the Fourth National Cultural Congress, Comrade Zhou Yang [0719 2254] pointed out: "The aim and political task of our literature and art is to foster socialist new personalities, to raise the moral level of the people, to further perfect socialist society and speed up its development, and to satisfy the growing needs of the people's cultural life." This statement reminds the people of the functions of socialist literature and art and the role they should play in the revolution. We oppose any attempt to interpret the social functions of literature and art in a narrow-minded and mechanical way and to turn them into a purely political teaching and monotonous and stereotyped styles of writing, thus leading the people into a dead alley. We also oppose attempts to steer literature and art away from their intended goals and political aim and to convert them into a profitable business catering to the vulgar interests of the people which bodes ill for society.

For a considerable time to come, the overriding central task facing the people throughout the country is to promote the four modernizations with one mind and one heart; it is also the supreme political task for the present. Comrade Deng Xiaoping said: "Whether or not whatever we do will benefit the goal of the four modernizations should be applied as the most fundamental criterion for evaluating all work and for distinguishing right from wrong." This should also be regarded as the most fundamental criterion for evaluating all literary and art works and for distinguishing right from wrong in this field. We must coordinate literature and art with politics in serving the objective of the four modernizations. Whether a literary and art work is good or bad depends on whether it will enhance or hamper the four modernizations. Instead of shackling the hands and feet of literary and art workers, this demand will stimulate them to take a step forward in emancipating their minds, and in fully and freely pooling their wisdom at the service of the four modernizations. It is gratifying to note that all our writers can now enjoy full freedom in deciding on their themes, in selecting subject matters, in portraying typical characters, and in developing styles of writing for works that benefit the development of the four modernizations. In this connection, the party has unequivocally declared that the question of what to write and how to write should be gradually resolved by the writers themselves through a period of practice and exploration without outside interference. This means that the party now wants to trust writers and artists and pay them due respect and lead them in accordance with the law governing the development of literature and art. The fact that the party wants to trust writers and artists will not result in reducing but increasing their responsibilities, and in placing greater demands on themselves. All conscientious and revolutionary writers and artists must constantly bear in mind their responsibility to society, and must take into account the possible effect of their works on society. They must understand that literary and art works with different political tendencies will have a different effect on society; bad literary and art works will have an adverse effect on society.

During the past few years following the downfall of the "gang of four," many writers and artists have presented to the public a great number of outstanding works which have played a positive role in smashing the mental shackles imposed by Lin Biao and the "gang of four," in eliminating their pernicious influence, in helping the people emancipate their minds, and in inspiring them to march toward the goal of the four modernizations. But is must be pointed out that a few works still merit our attention because of their bad effect on society. Our writers and artists are urged to give due consideration to the overall situation, act in the interests of the people and party, and present to the people the best spiritual food that can help them emancipate their minds, and promote stability and unity of the motherland and the four modernizations program.

SOCIOLOGICAL, EDUCATION AND CULTURE

KANG SHENG'S ROLE IN DESTRUCTION OF EDUCATION REPORTED

Beijing RENMIN JIAOYU [PEOPLE'S EDUCATION] in Chinese No 9, 20 Sep 80 pp 15-18

[Article by Zhang Xuexin [4545 1331 2450] and Huang Zhanpeng [7806 1455 7720]: "How Kang Sheng Undermined Our Country's Education"]

[Text] At Beijing Universtiy on 25 May 1966 Nie Yuanzi [5119 0337 2737] and others displayed a big character poster which trod on history, confused the enemy with ourselves and sounded the drum for the opening of the "historically unprecedented Great Cultural Revolution." The likes of Lin Biao, "the gang of four" and Kang Sheng called this big character poster "The Twentieth Century Manifesto of the Beijing Commune." Not long thereafter Kang Sheng quite openly said, "I myself wrote the draft for that big character poster." History is fond of toying with such schemers. At that time Kang Sheng very openly and shamelessly bragged about his deeds, but they have not become a confession of how he used the battleground of education to lay down his anti-revolutionary plot.

Since Kang Sheng and the rest used the battleground of education to open their attack on the Chinese people and caused them to suffer such a great calamity, then, in order for us to give a true picture of Kang Sheng, it is helpful to expose the criminal way in which he destroyed our nation's education.

(1)

The big character poster of Nie Yuanzi was an anti-revolutionary conspiracy planned by Kang Sheng, Chen Boda and Jiang Qing. At the end of 1965, after Yao Wenyuan's evil writingsPING XINBIAN SHIJU 'HAI RUI BAGUAN' [A NEW CRITIQUE OF THE HISTORICAL DRAMA 'HAI RUI IS DISMISSED FROM OFFICE'] and PING 'SANJIACUN' [A CRITIQUE OF 'THREE FAMILY VILLAGE'] made their appearance, China was then faced with dark storm clouds hovering over the land. On 14 May 1966 the "small theory group" controlled by Chin Boda and Kang Sheng sent some people to Beijing. The pretext was to "carry out an investigation" but the real purpose was to overthrow the party committee and carry out a plot. Kang Sheng incited these people to "start the fires at Beijing University and work on upwards" to "cause a series of disasters." After ten-some days of secret plotting and two revisions of the draft Nie Yuanzi displayed his big character poster on the afternoon of May 25th. On June 1st the Renmin Ribao published this big character poster and with deliberate exaggeration called upon the people to, "decisively, thoroughly, quickly and completely eliminate all ghosts and monsters and all Khrushchev-style anti-revolutionary revisionist elements." Because of this a great disaster then began to descend upon the heads the Chinese people.

If the big character poster of Nie Yuanzi was a "proud creation" planned by Kang Sheng and others in their secret rooms then the speech that Kang Sheng gave at Beijing University two months later was the "shocking undertaking" that shook the foundations. He openly insulted Lu Ping [7120 1627] who was then the president of Beijing University and Secretary of the Party Committee as an "anti-party, anti-socialist scoundrel." Moreover, he took steps to arrange a "struggle against Jian Bozan [5054 0130 6363]," "overthrow bourgeois political power" and later began the so-called "educational reform." The trilogy that Kang Sheng wrote for the cultural revolution consisted of "struggle against evil gains, struggle for political power and undertaking political reform." In an instant the campus of Beijing University was overshadowed by a cloud of fear. Over 260 people were labelled, made to wear dunce hats, paraded through the streets and beaten and sent for supervised labor reform. Over 530 people were illegally stripped of their political rights. They even believed that Beijing University was anti-revolutionary "political showcase" and organized "tours." According to incomplete statistics, in the one month from 29 July to 28 August of 1966, 2.124 million people took this tour. Immediately thereafter the whole nation was engulfed in chaotic criticism, chaotic struggle and chaotic fighting. As soon as any person had been named by Lin Biao, Kang Sheng and Jiang Qing then "no matter who they were, how high their status, or how well qualified" then "they could not escape the flames of the fire." The famous historian Jian Boxan, the party secretary and vice president of Beijing Teachers College Cheng Jinwu [4453 0093 0710], the party secretary of Huadong Teachers College Chang Xiping [1603 3305 5439] and the deputy party secretary of the Zhongnan College of Mining Lin Na [2651 4780] were all named by Kang Sheng, the "gang of four" and the rest and subsequently were hounded to death. After that, Kang Sheng and the rest granted "special privileges" to some of the younger students of Nankai University and five other colleges to carry out a "big roundup" of the so-called "traitors." This one move alone harmed over 5,000 old cadres. The chaos of the cultural revolution continued for the next ten years, but a hint of its basic plan could already be seen in these words and deeds of Kang Sheng. Kang Sheng proved to be a worthy advisor to the theft of party power by Lin Biao and the gang of four. His hands are covered with the blood of the Chinese people!

(2)

Kang Sheng brought harm to the intellectuals by repeatedly saying, "the cultural revolution is a class struggle on the ideological level." (Actually, the harm and repression that Kang Sheng and the rest brought to the intellectuals and other elements of the masses was not limited to the "ideological level" but was an "all-around dictatorship.") With this, he flatly negated Lenin's definition of the division of classes and took over party policy making. In 1950 the Government Administration Council of the Central People's Government clearly ruled that: "the class membership of an intellectual is to be legally determined by his main source of livelihood." Those for whom wages "constitute the total or main source of livelihood are called office workers and office workers are a part of the working class." From the time this policy was issued to just before the cultural revolution our intellectuals followed the socialist path, they made great progress in serving the people and many of them joined the communist party or the youth brigade. Kang Sheng negated all of this with one stroke by irresponsibly saying that the division of classes "must be made according to ideological categories, from the aspect of service to the economic foundation by the superstructure and from political categories." He shamelessly announced that this was a "development" in the theory of the new age. After that, the "gang of four" and their minions labelled all of our intellectuals as "bourgeoise" and lumped them together with landlords, rich peasants, traitors and scoundrels, calling them "nine old stinkers." In this way they exercised "total dictatorship" over the intellectuals. This has both theoretical and historical sources and Kang Sheng is representative of the spread of this reactionary theory.

Kang Sheng has long been an ultra-leftist. In 1958 he said, "it must be clearly understood bourgeois intellectuals are determined by ideology and not by economics," and that "the bourgeoise and the intellectuals both belong to the exploitive classes." He therefore strongly advocated implementation of high pressure policies against the intellectuals. He said, "they are now not sufficiently pressured," "not sufficiently repressed" and "if they are now surrounded on four sides than they ought to be surrounded on eight sides." All the intellectuals whom he considered to be "no good" were to be "treated coldly to teach them a lesson." During the cultural revolution Kang Sheng played the same old tricks. He joined together with Lin Biao and the "gang of four" and reached unprecedented heights of evil.

Why would this gang of conspirators and ambitious people all become such "cruel persecutors" of the intellectual class? The basic reason is that they wished to sweep away all obstacles to their theft of party power and the spread of their ultra-leftist baggage.

There are two facts which support this:

The first is that in 1958 Kang Sheng, Chen Boda and the rest broadly engaged in extreme leftism but this was reproached and resisted by the broad people including the intellectuals. Kang Sheng thereupon said that they were "white flags" and initiated a movement to "uproot the white flags" among the intellectuals. With great venom in his voice said, "use the principle of the 'three head motions.' Just ask them who told you to nod your head. . . you are bourgeois things and the more you do not nod your head the more that we believe that you are. You have the right to shake your head." "It is our hope that you will bow your head, . . . nodding the head is no excuse, you have the right to shake your head, but bowing the head is what we hope for." This high pressure was to carry out extreme leftism.

The second fact is that on the eve of the cultural revolution, after Yao Wenyuan's PING XINBIAN LISHIJU 'HAI RUI BAGUAN' appeared, all of the famous people in China's historical and literary circles were repressed. At a conference, Professor Jian Bozan said, "in all matters one divides into two so how can a comrade write an article that is completely without error;" the writer Wu Han long ago during the War of Resistance participated in the democratic revolution and in ideological cricitism, so to judge a person his individual history must be known;" "if Wu Han is criticized then all progressive intellectuals will become afraid." This move worked against Kang Sheng and Jian Qing and gave them a little trouble in carrying out their political plot. At the beginning of the cultural revolution Kang Sheng announced that Jian Bozan was a "bourgeois 'authority'," and "evil gangster," and a "royalist."

As members of the intellectual class historians advocate accurate writing, writers and artists emphasize being true to life, and news reporters take a mass stance as the "voice of the people." This of course was a thorn in the flesh of those unprincipled ambitious plotters. They thereupon took advantage of their powers, used high pressure tactics, carried out literary inquisitions, or manufactured false cases in order to obtain their secret goals. In the past and in the present throughout all the world this has always been the case. The likes of Lin Biao, the "gang of four" and Kang Sheng with their vain hopes for feudal fascist dictatorship of all China developed this evil political trickery to a degree which startled people.

(3)

Kang Sheng, who was annointed as an "authority on theory" by Lin Biao and the "gang of four," actually never wrote anything worthwhile. His special skill was to alter the works of Marx-Leninism. At the beginning of the cultural revolution he said to a few of those deceived young people, "its all right to be a little more active and a little more 'leftist'." From the very beginning he used his old familiar trickery to set the keynote: the line in education is a "bourgeois educational line implemented by a reactionary dictatorship." Later, Zhang Chunqiao and Yao Wenyuan developed this theory further and cooked up the reactionary "two estimates." They distorted what Marx said about the unity between education and productive labor, abolished intellectual education, trampled on the rules of pedagogy, destroyed all semblance of order in teaching, and claimed that "it is better to be a worker than to be cultured." All of these are revisions of old tunes that Kang Sheng made in carrying out the extreme left line in education.

Let us take a look at some of Kang Sheng's old tunes.

In 1958 the party central issued a directive regarding educational work. Kang Sheng referred to Marx's work Das Kapital, completely distorting what Marx said about child labor and education under the capitalist system and then travelled over the whole country to sell this idea.

Marx wished to protect child workers by "preventing excessive capitalistic exploitation," and "save the next generation by giving them the opportunity to receive a primary school education until their thirteenth birthday and thus wipe out the condition of total ignorance." He loudly called for the passage of laws which would limit the total amount of time a child could work and which would "unite productive labor with intellectual education and physical education," thus developing people with all around training. Marx believed that in terms of complete education for the proletariat it was insufficient to "make primary school education a mandatory prerequisite for physical labor" and that the working class "after winning political power should establish theories and practices that would give industrial arts education its rightful place in the workers' schools." (Das Kapital) In 1893 Engles pointed out that among university students there ought to be "produced just such proletariat mental workers" (emphasis added by this writer). The liberation of the working class "requires doctors, engineers, chemists, agronomists and other specialists. This is because the problem is not simply that of controlling the political machinery but is also that of controlling all social production and what is needed for this is not a loud and clear voice but rather abundant knowledge." (A Speech to the International Socialist Congress of University Students) When the revolutionary leaders speak of education their thoughts are always complete and advanced on everything from the limitation of and interference with capitalist expoitation to the great ideal of educating specialists after the proletariat gains political power. However Kang Sheng paid no attention to time, space or social conditions. He took the idea of student participation in physical labor completely out of context and made it into the only correct policy and meaning of the proletarian reform of education after winning power. On 20 October of 1958 he spoke to the faculty and students of a "Young Pioneer steel plant" in Henan and said, "according to what Marx has said, children can participate in certain physical labor from the age of nine and your work has already proved the truth of this. However, not just nine-year-olds but also seven-year-olds, eight-year-olds and children have the necessary qualities and can be organized for productive labor." He presented the responsible comrade of the Henan Office of Education with a timetable: "the schools are one organizational element of the entire great army of workers," "they can go to class for two hours and work for three hours, work for six hours and go to class for two hours," "those involved in steel work need only work and not go to school." During the First Five Year Plan the state built a number of new middle schools to train the large number of specialists necessary for national construction. Kang Sheng spitefully said, "this is spending money in the wrong place." Such things as physics buildings, chemistry buildings and large libraries "lack a revolutionary atmosphere" and had a "bourgeois appearance." So how are they to be reformed? In one word--labor. Kang Sheng said "its the same way that monkeys became mankind. Monkeys don't know how to work and must learn to do so to become mankind." He ordered the students to get out of the four walls of the classroom." "Go among the fields, to the mountaintops, to the blast furnaces, stop classes and work," "carry dirt, dig mud, build artificial ponds, this is the socialist revolution." He ruled that this was not "rustication, school vacation or voluntary labor," but is a "part of the school plan" and not to do so was to follow the "doctrines" of "bourgeois ideology." He also said that the system of school rules was "chains and fetters" and announced that they were "totally abolished." He claimed that the normal progression of basic education was "doctrinaire," "empty talk," "garbage" and "empty theory" and demanded that students "learn a year's lesson in 15 days," and so on.

During the 1850s Marx was filled with revolutionary enthusiasm and struggled so that child workers whose "bodies were not yet mature and whose limbs were still pliant" might have the right to an education. However, in the fifth and sixth decades of the 20th century the great "authority on theory" Kang Sheng wishes to abolish the schools, replace education with labor, replace teaching with labor and take away the young generation's right to an education. How could there be any similarities between what Kang Sheng has said and the educational ideology of Marx! The "gang of four" became the heirs of Kang Sheng with such nonsense as "digging holes as a profession" and "capturing a captialistroader is worth a grade of A." Under the pretext of "open-door schooling" they drove the students into society to look everywhere for "capitalistroaders" and capture "traitors." They tied very tight bonds between education and their plot to usurp party power. In searching for the source of all these disasters Kang Sheng is found to be the culprit.

(4)

Education is the foundation for the development of science and the train of human talents. The destruction of education naturally obstructs developments in scientific matters, nonetheless Kang Sheng and the rest directly ran rampant through our scientific efforts.

Marx believed that upon entering the age of the steam engine any person who was still hampered by a "handicraft mentality" was "incredibly stupid." When the whole world has entered the age of high scientific and technological developments the "gang of four" still spout such nonsense as, "the more knowledge the more reactionary" and "its better to be an uncultured worker." Doesn't this throw our society back into the age of the cave man! Kang Sheng was the first person to advocate such a perverse theory as this.

One of Kang Sheng's "famous sayings" is that "science is a lot of nonsense." As early as 1958 he used the pretext of "eradicating superstition" to trample on and destroy our nation's scientific efforts.

Science is the crystalization of mankind's knowledge and makes progress on the basis of previous discoveries and inventions. Kang Sheng on the contrary labelled science as being "class oriented" and negated objective rules in order to advance metaphysics and the theory of willed determination. He not only announced that psychology was "pseudo-science," and also said that there was nothing at all to agricultural science except veterinary medicine and the prevention and control of pests and plant disease. He wished to expose the "falseness of the old bourgeois agricultural science and permit farming techniques to reach a new stage of development."

He said, "what is called scientific research is nothing but the courage to manipulate some fundamental facts," "all one needs is the courage as there is no mystery to it." When he heard that the milk cows of an agricultural college were producing 2,000 kilograms per year he issued a "directive" saying, "milk production is too low so you ought to call the cows together and have a meeting to increase production." He ordered that the colleges not have any direct links with the Academy of Sciences as otherwise "there is the danger of being fettered by rules and regulations." He also wanted the Beijing College of Agriculture to determine a student's standing according to the quantity of production, "per mu production of 1,000 jin for a trainee; 10,000 jin for a research student; 30,000 jin for an expert; and 50,000 jin for a doctorate." He said that this was neither pragmatism nor metaphysics but "dialectics." He also spoke to the faculty and students of a college of engineering saying, "there really is nothing at all to the reactor pile, particle accelerator and rockets so there is nothing at all to be afraid of. Just work at it a bit and successful results will soon follow." Regarding the launching of an artificial satellite, he said, "this is really quite simple, in Shanghai a high altitude cannon was shot off so why can't the schools launch a satellite?"

Kang Sheng had a particular hatred for research work in the science of education and used all possible means to destroy and trample it. In 1956 the party central granted permission for the establishment of a central institute for educational scientific research. Not long after this institute was established Kang Sheng criticized it as "feudalistic, bourgeois and revisionist." He advocated "stressing the present and neglecting the past" saying that all foreign, capitalist and ancient teachings were unnecessary. This actually eliminated all of the institute's scientific research in education. He also found a pretext to criticize it for the "three separations" and sent down and scattered the scientific research personnel so that the institute would be unable to carry out its research work. During the ten years of chaos under the domination of Kang Sheng, Chen Boda and the rest, the educational scientific research institute was finally dismembered, all of the researchers were sent to the countryside to receive "reeducation" and their work came to a halt for many years.

During the time of the cultural revolution there was unity between people such as Kang Sheng who believed in "fearful ignorance" and the theory of willed determination and those people with political ambitions to usurp party power. They brought a disaster of unprecedented proportions to our country's scientific efforts. Of the 58 research labs at Qinghua University, except for slight damage to a few research labs, most of them were heavily damaged and over twenty had to be completely rebuilt. The comprehensive hydrology research lab, one of the most advanced in the world, was completely smashed with heavy hammers. At the Fujian Teachers College over 30,000 ore samples were taken to use as road filler. At Jiangxi University over half of the botanical samples were burned and the samples of fish from Poyang Lake were buried in the ground. This was all said to be, "smashing the 'fortified village' of the bourgeoise," "destroying the refuge of the bourgeois intellectuals" and "smashing the revisionists' educational line."

It has been five years since Kang Sheng went to his grave wearing the laurels granted him by the "gang of four" but we can lay our final judgement on the lid of his coffin. History is written by the people and the masses have finally exposed the true face of the conspirator Kang Sheng. This is a great historical victory for dialectics! As Marx said, "history itself is a vehicle of judgement and the proletariat is the operator." (ZAI 'RENMINBAO' CHUANGKAN JINANIANHUISHANGDE YANSHUO.) PROPER EMPLOYMENT OF TALENTED PEOPLE URGED

10-Point Proposal

Beijing RENMIN RIBAO in Chinese 15 Oct 80 p 4

[Article by Zheng Yimin [6774 0001 3046] and Chen Gengzheng [7115 2739 6086]: "A 10-point Proposal for the Mobility of Talented People"]

> [Text] Editorial Comment: After having published in this newspaper articles on broadening all avenues for talented people and for mobility of talented people, we have received many articles and letters from our readers, some of them with proposals for broadening the avenues for talented people and for the mobility of talented people. On the question of how to reform our cadre system in order to give full play to the effective employment of talents of all kinds, we would welcome the active expression of opinions from our readers and their suggestions of ways and means.

At present our country has no overall sound system governing the selection, employment, examination, nurturing, rewarding and punishing, the elimination through competition and similar arrangements applying to our cadres, or a generally adopted method of their assignment and appointment. Methods which determined a man's fate for life with one word, or that were too strict, or controls that were too rigid, often created contradictions between the work requirements and a man's specialities or personal preferences, so that many people of special talent were put to work on what they had not learned or were inhibited for long periods of time. This type of cadre system has become increasingly inappropriate for the requirements of the four modernizations, and must be thoroughly changed. Our present policy of liberalization in the economy, we believe, should be paralleled by a similar liberalization of the minds and a liberalized policy when it comes to the development of talents and intelligence. We must render our system more flexible, increase the diversity of our methods and broaden all avenues. Specialists should be allowed to move about within certain spheres to make up the shortages in our system of employment, to bring into full play the special qualifications of talented people, to make the best possible use of a man's talents and make the best possible use of all available talent. We must help supply each other's needs, adjust surpluses and deficiencies and urge the leadership in all departments and all units to make the best use of talented people and also make rational use of talented people.

For this purpose we set forth in the following a few proposals on the question of greater mobility for talented personnel:

1. If specially qualified technical personnel are employed on work for which they are not trained, if they are overqualified for the work they are doing, if they are inhibited and not used it all or have been inhibited for a lengthy period of time and their original unit will not solve their problem, they may select for themselves a suitable work place or unit to work for. As soon as the unit which they want to work for agrees to take them, they may institute procedure for transfer. The original unit shall support their action and must not cause any hindrances, otherwise the person shall have the right to resign.

2. Units engaged in scientific research, industrial enterprises and departments with certain special requirements may, if such actual need arises in their work, publicly advertise and hire specialists. Anyone thus hired shall be released by the unit where he is presently working without any let or hindrance.

3. Engineers, instructors, research assistants and higher qualified persons, also other specially qualified technical personnel of qualifications similar or higher than those mentioned, may accept concurrent employment in other units and enjoy certain additional remuneration for such work, provided they accomplish the work in their original employment.

4. If the requirements of work make it necessary to obtain special technical personnel on loan, two suitable parties may sign a relevant loan agreement. During the specialist's employment on loan, the unit that uses him on loan shall be responsible for his salary, welfare benefits, etc. Loan agreements may be extended on expiry, or, if the work has been completed in advance of time, may be prematurely ended.

5. As science and technology keep advancing constantly, there should be interflow of scientific information on a broad scale between the sciences, mutual coordination of work, and scientists must be allowed to cut across their professional lines, go beyond their departments and even beyond their localities to freely establish links to pursue the major research of our country. As soon as their schemes shall have been checked and approved by the departments in charge of scientific research, all units shall actively create suitable conditions for their support.

6. Those technical specialists who volunteer to work in hardship areas to help develop the border regions, shall, in political respects, receive honorable recognition by the state and in material respects shall receive liberal wages and benefits; their original units shall support their action. On his transfer, the specialist need not change his residential status or food rationing relations, also need not transfer all his family members with him. If he shall request return to his original unit, that unit shall accept him back. If the work in hand requires it, the border areas may offer, engage or negotiate transfers at high salaries in proportion to the qualifications of the man involved and shall not be limited to the present standards of salaries.

7. Technical specialists who are definitely not equal to the task at which they work, may be subjected to reasonable adjustment. In such adjustments the specialist cannot himself find a suitable unit to work for, he shall follow the adjustment

proposed by his organization. If the specialist does not accept the proposed adjustment, the unit may terminate his employment. This way would prove beneficial for employee mobility and for a replacement of the old by the new.

8. All localities and departments must use talents sparingly, draw up appropriate measures for the protection of talents, such as to actively open up sources for talents from among their own localities or departments. Situations where technical specialists are used on work for which they have not been trained, must be adjusted immediately. There should be concern for technical specialists to have them advance politically, to a-tively create conditions to raise the level of their professional proficiency and to solve the actual difficulties they may experience in their livelihood. Where suitable conditions exist, they may be given "raises in unit rank," bonuses and such other liberal benefits (as soon as the specialist leaves his position, these benefits shall cease).

9. A talent bank shall be established (or a talent exchange center). This talent bank may be set up at the personnel departments. The talent bank shall scientifically "stockpile" various qualified persons by categories and specializations and shall also have to accept applications and recommendations. It shall also advertise employment requests, introduce specialists, etc., so as to link up the various needs in society. Lists, with relevant details on work conditions, concerning technical specialists that are found surplus to requirements or who cannot be easily transferred to some appropriate other position, shall be sent to the talent bank. Cadres that are on such lists shall, during the time that they await reassignment, be carried by their original units on separate records, shall be given appropriate work or shall be trained for higher qualifications; their salary shall be paid as usual and they shall enjoy the usual welfare benefits, but shall not participate in promotions in rank or position, or in assessments for bonus.

10. To give legal protection to all measures that will permit full use of the special qualifications of talented people and to assure rational mobility, a law on personnel matters shall be enacted.

More Proposals

Beijing RENMIN RIBAO in Chinese 15 Oct 80 p 4

[Article by the Preparatory Team for the Research Association for the Study of Talents: "Proposals for Opening Wide All Avenues for Talents"]

[Text] 1. To establish a committee for the examination of talents. On establishing by examination that a certain person has certain special qualifications or achievements, he shall be issued a certificate and personnel departments shall employ him according to his special skill or knowledge. To establish social testing places, to operate once a year and issue certificates, without regard for age, past schooling, profession, etc., to all university graduates, research assistants, engineers and other persons of similar educational level; they shall be accorded equal treatment and equal professional titles. Testing methods shall be: written examination, oral examination, determined subject and self-chosen subject; examination may be extended over a longer period while candidate is on trial employment.

2. To establish a trial employment contract system for technical specialists of a certain field without a fixed work unit, in order to promote a rational mobility for talented persons. On expiry of the contract period the contract may be renewed or the specialist concerned may be hired by another unit.

3. To establish a talent company. Anyone who has some independent achievements to his credit or has some special skill or knowledge and is employed on work not related to his speciality, may arrange his transfer with the help of the talent company. Any unit may approach the talent company for specialists they need to hire. The talent company shall be a permanent service company to regulate supply and demand of specialists; the company shall accept applications, recommendations and advertise talented persons.

4. To establish a scientific publishing company, partly self-supporting and publicly subsidized. All books, articles and other material published by the company shall enjoy legal protection. Research articles and books not accepted for publication by other publishers may be published by this scientific publication company on a partly self-supporting, partly publicly subsidized basis.

5. To establish a foundation which will grant monetary support to talented people. The foundation may accept contributions from people of all walks of life and shall give monetary support to talented persons who have shown achievements in self-study and who have difficulties in their livelihood, and shall grant supplementary support to talents who are engaged in important creative work. In case supplementary support is needed, the person in need of such may himself submit an application; the foundation will examine the application and on approval will issue the grant. The foundation may also acquire accomodations to establish a "think factory" and make these places available to research personnel for temporary use to complete their creative work.

6. To draw up legal provisions for the formation of a science and technology association. This law shall acknowledge and protect research activities that, through examination, have been found to be definitely of research value and which exceed the scope of research organizations of that branch of industry to which the unit in question belongs. Based on relevant legal provisions, such activities shall be afforded support. In organizational respects, conditions shall be created that will allow those in actual charge of certain research activities of great value to select assistants from either inside or outside their own units.

SOCIOLOGICAL, EDUCATION AND CULTURE

OUTRAGE EXPRESSED AT SEIZURE OF LITERARY MAGAZINE

Beijing WENYI BAO [LITERATURE AND ART JOURNAL] in Chinese No 10, 12 Oct 80 p 44

[Article by Lian Zhengxiang [1670 2973 4382] dated 11 September 1980: "Public Security Cadres Unjustly Seized Literary Publication in Violation of the Law"]

[Text] In the afternoon of 29 June 1980, several people were selling the publication MO SHUI [FOAMY WATERS] on the street in front of the Yudong Restaurant in Leshan, Sichuan Province. They were the editors and amateur writers of that publication, selling it personally once every quarter and also listening attentively to their readers' opinions. The Culture and Education Bureau of Leshan District had started the publication last October, receiving support from writers and relevant departments inside and outside the province. Comrade Ai Wu had written an article in which he welcomed the increase in literary magazines in the province and expressed the hope that this "garden" may bring forth more new literary talent. Comrade Wu Boxiao wrote the calligraphic title on its front page. Comrades Ge Baoquan, Lou Shiyi and others published their poetry and songs in the said publication. Due to the strong native flavor of the publication and its vivid and vigorous style, it was widely well received. Readers vied with one another to buy the publication as soon as a new issue appeared.

At a little after 3 o'clock, a man who said he was from the Public Safety Bureau pushed through the crowd, picked up a copy of MO SHUI and leafed through it, then issued an order: "Stop it, stop it, this cannot be sold anymore!" Sellers and buyers were all flabbergasted. The comrade editor asked the retired workers volunteer liaison man to clarify whether the man was really from the Public Safety Bureau (it was found out that he was the deputy chief of the Leshan City Central District Branch Safety Bureau) and also explained: "Ours is a lawful publication, reported to and approved by the Propaganda Department of the Provincial Party Committee." However, the public safety cadre high-handedly declared: "In Leshan only the HONG LESHAN BAO [RED LESHAN] may be read. Nothing else is permitted." (The HONG LESHAN BAO is a newspaper of the "cultural revolution" era. The new official organ of the Leshan Municipal Party Committee is called LESHAN BAO.) The editor asked the deputy station chief to get the relevant documents from the Culture and Education Bureau, but that man refused to go there. Finally, the editor himself got the relevant documents and asked the man to read them. One document, the reply, reference 1980/66, from the Propaganda Department of the Sichuan Provincial Party Committee to the Propaganda Department of Leshan District, reads as follows:

"We agree to the continued publication of your Culture and Education Bureau of the literary publication of general nature called MO SHUI. The publication is to be a quarterly one, of sixteenmo format, 80 pages per issue and 10,000 copies per issue, to be distributed in principle within its local area. Supply of the required paper is to be applied for from the Provincial Bureau for Light Industry."

To everybody's surprise, the said deputy station chief refused to look at the document. He was shamed into anger and reprimandingly said: "Don't you raise an emperor to crush the feudal lords." The editor questioned him whom he meant with "emperor" and "feudal lords." The deputy chief found himself unable to answer and merely came up with something like: "You use the local revolutionary committee to oppose the municipal safety bureau!" The editor felt it not the right thing to go on quarreling publicly on the street and suggested that both parties calmly call on the municipal party committee for guidance and to negotiate a solution. But the deputy chief peremptorily insisted: "I am after all representing the Public Safety Bureau; sales of the books must definitely be stopped!" He then ordered a people's policeman to forcibly remove 191 copies of the MO SHUI and 28 copies of the XING XING [STARS] poetry publication. The masses that looked on asked the editor worriedly: "Are you in trouble with your publications?"

The editorial comrades of the MO SHUI were utterly outraged. The same evening they made representations to the secretary of the municipal party committee. Up to today the deputy chief has not yet admitted his error and returned the publications, so that the problem has not yet found its solution.

RELAXATION OF CONTROL OVER LITERATURE, ART URGED

Beijing RENMIN RIBAO in Chinese 8 Oct 80 p 5

[Article by He Junying [0149 0193 5391], head of Propaganda Department, Laian County Party Committee, Anhui Province: "Give Free Reins to Reforms; Don't Control With a Stranglehold"]

[Text] In improving our guidance or reforms in literature and art, the primary condition is to guide and lead in an emancipation of the mind, to give free rein and courageously support the cultural departments in breaking down the old restrictions and then actively reform.

Our county has a theatrical company, a unit of collective ownership. In the past, in addition to a certain subsidy from the state, it mainly relied on income from its performances. Economically it could not be self-supporting and was regarded as a "burden." The average pay to the performers was in general very low. They had no place to train and also very poor living conditions. The pay was furthermore almost the same for main actors and the others in the general cast, and it mattered little who worked more and who did less. For a long time the enthusiasm of the actors and employees could not be developed. What could be done to make a success of operating this theatrical company at the county level? At one time we placed our hopes on converting the system of collective ownership into one of ownership by the entire people. Last year, under the influence of trials in the nationwide reform of economic management systems and the systems of production responsibility in agriculture, we bagan to realize that in the literary and art teams we also had need to step up the emancipation of minds. In the winter season of last year, we decided to support them on a trial basis when the theatrical group proposed to work in teams and to introduce a system of bonuses. The theatrical group of over 70 members was divided into two teams, and the income of performances was divided up between the group and the teams according to a fixed scale. Within the team the income was divided, and apart from subtracting the performance expenses, the balance was for bonuses to actors and employees and for a reserve fund for the team. In the course of trying out this system, we helped them summarize experiences and to decide on an even more rational ratio of distribution so as to better deal with the related interests of the three parties concerned: the group, the teams and the performers. At the same time we asked the theatrical group to reform their economic administration and at the same time strengthen work in political ideology and professional training so as to raise the quality of their performances. Judging from the practical results during the first half of this year, very conspicuous effects have been achieved by the reform of the administrative system. Due to performances being staged by the teams, there was competition between them. The teams had freedom to choose their own repertoire and also as to what line they wanted to pursue in their performances. The material interests of the individual actors and employees and the economic interests of the team were directly linked, which greatly stirred their enthusiasm and everyone's concern for a higher quality of the performances and for economy in expenditure.

As to setting up programs for performances, it is even less advisable to use administrative measures in guiding such work. Control to the extent of strangulation and overmuch interference are both erroneous methods. In the last 3 years, we have changed our past methods of having the scripts determined by a limited number of leadership people in the relevant department of the provincial party committee and have adopted a method of having leadership, authors and the masses in a triple cooperation jointly adjudge the scripts. In 1978, our county organized the joint writing of 14 short plays by amateur writers and professional writers. After the initial draft was completed, the amateur writers and the professional writers were organized to take over a month's time for a thorough, bit by bit evaluation and revision of the 14 scripts. The amateur writer Wang Ganchen wrote a short play reflecting the trend of reforming management on the trade front. The title of the play was "Effective Reform." During the discussion, a number of comrades felt that this script was interesting, but there were also some comrades who felt that the play, being a play of exposures, should not be performed. We led everybody in a discussion of this question and finally everybody agreed that literary and art works should actively expose the contradictions in life. It was thought that this short play, "Effective Reform," in its criticism of the erroneous experiences of the purchasing agent for live pigs and in describing the man's reform, was written in a vivid and vigorous manner, very apt to bring enlightenment to others. To improve the script even further, we mobilized the theatrical group's producers and performers to take part in the editing, and thus achieved an even better result on the stage. When participating in a stagecraft meet for the Chuzhou area, our group won second prize for new creations. As to the adjusted versions of traditional stage plays, there was controversy among the masses. Apart from listening to the various opinions of the masses, we held a symposium at the theatrical group to evaluate the scripts together with the comrades of the theatrical group and told them our viewpoint as to obviously uncought sections and irrational plots. As regards artistically somewhat uncought sections in the scripts and certain shortcomings in the plots, we did not insist on perfection, but rather allowed the theatrical group to effect themselves revisions and improvements.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

UN DEBATE ON MIDEAST SITUATION ENDS

OW110300 Beijing XINHUA in English 0245 GMT 11 Dec 80

[Text] United Nations, December 10 (XINHUA)--Representatives from Arab and many other countries reiterated that a comprehensive solution to the Middle East question should entail Israeli withdrawal from the occupied Arab lands including Jerusalem and the fulfilment of Palestinian rights, during a three-day debate on the situation in the Middle East which ended today.

Speakers strongly denounced Israel for its intransigent policy of aggression and defiance of the relevant U.N. resolutions since the debate started from December 8.

Adnam Umran, observer of the League of Arab States, charged that "Israel's current position regarding peace and secure borders is in fact, a literate translation of the principles and pronouncements of Nazism."

He added that the time had come to implement the principles of the charter against Israel and to adopt sanctions against it.

Syrian representative Muhammad Mansuri stressed that the city of Jerusalem must be evacuated and returned to Arab sovereignty, and all existing and future settlements must be removed. Any action to annex these lands would be in violation of the U.N. resolutions which call upon Israel to withdraw from the territories.

'Abd al-Majid, representative of Egypt, stated that any settlement must be based on recognition of the rights of the Palestinian people, including their right to determine their own destiny without any foreign interference.

"Peace, if it is to be lasting, must be just and it must be comprehensive," he said. There could not be a partial peace.

The Middle East embodied three diverse religions--Islam, Christianity and Judaism--and the region must accommodate them all, he noted.

Hazim Nusaybah, representative of Jordan reiterated that the Arab countries were determined to continue to support the PLO in its capacity as the sole legitimate representative of the Palestinian people, with a view to restoring all the rights of the Palestinian people, including its right to self-determination and the establishment of an independent state on its national soil.

Niaz A. Naik, representative of Pakistan, pointed out that total withdrawal of Israel from the occupied territories, including the Holy City of Jerusalem, and the fulfilment of the legitimate aspirations of the Palestinian people were the essential prerequisites for a lasting and just settlement of the conflict.

He said, "It must be understood clearly that no partial approach to resolve the Middle East conflict can bring peace to that region. It was precisely for this reason that the Islamic conference as well as the non-aligned meetings have categorically rejected the Camp David agreements."

Paul Peters (Luxembourg), speaking on behalf of EEC, said that the EEC countries did not approve of Israel's settlements policy, and could not accept any change in the status of Jerusalem.

He added, the sovereignty and territorial integrity of Lebanon had to be respected, and that respect was indeed fundamental to the establishment of peace.

GREEK PRIME MINISTER DISCUSSES NATO, EEC

OW130214 Beijing XINHUA in English 0157 GMT 13 Dec 80

[Text] Athens, December 12 (XINHUA)—With Greece's return to NATO's military structure, NATO's unity has been restored and the rift in its south-eastern wing has been closed, said Greek Prime Minister Yeoryios J. Rallis here this afternoon.

Speaking at a lunch of the Foreign Press Association here, he held that Greece's return to NATO's military structure is in the interest of the alliance and more beneficial to the countries in south-eastern Europe. As for Greece itself, he said it has regained the advantages of full participation in terms of supply, training, infrastructure support, etc.

"Another consequence of the return to the military structure of the alliance," he said, "is the prospect of concluding a new agreement for according military facilities to the United States on Greek territory which can only function to serve NATO objectives." "We are aiming for an agreement based widely on defense support and economic and technological cooperation in the field of war industry," he said.

On Greece's entry into the European Common Market, he said it gives the country the pre-requisites and the means to face difficulties of a political and economic nature which are becoming more acute daily.

"Greece's accession was based both on political as well as economic assessments," he explained. "Our accession will create more effective conditions for the safeguarding of Greece's sovereign rights, for consolidating its democratic institutions and for strengthening its international role. As an equal partner in a powerful community, Greece, with a reinforced specific gravity on the international scene, will be better able to withstand possible external pressures," he said.

From an economic point of view, he said, Greece's entry into the EEC will definitely contribute to the structural modernisation of the country's economy and society.

INDIAN SEMINAR DENOUNCES SOVIETS IN AFGHANISTAN

OW061212 Beijing XINHUA in English 1201 GMT 6 Dec 80

[Text] Beijing, 6 Dec (XINHUA)--Participants in a seminar on "Soviet intervention in Afghanistan" yesterday condemned the continued occupation of Afghanistan by the Soviet armed forces and demanded their immediate withdrawal, according to a report from New Delhi quoting the TIMES OF INDIA today.

The seminar was organised by the University Teachers' Council at the arts faculty.

Presiding over the seminar, Mr V. M. Tarkunde, eminent jurist, said that there was absolutely no justification for the Soviet intervention in Afghanistan.

He said that a number of important international principles accepted by the world community had been violated. The Soviets had deprived the Afghans of the right to self-determination and had also brought the superpower rivalry to the doorsteps of India.

Dr Dharmendra Nath Acharya, general secretary of the Friends of Afghanistan Association, said that the Soviet intervention and subsequent occupation of Afghanistan had dealt a severe blow to the non-aligned movement.

He warned the Indian Government of Russian designs on Pakistan. He hoped India and Pakistan "will stand together and face the Russian threat and challenge to the sub-continent."

Another participant said that the Soviet occupation of Afghanistan and its designs on Pakistan posed a grave threat to India.

Mr Said Mohammed Maiwand, a senior official of the planning department of Afghanistan and now a refugee in India, pleaded for more aid to Afghan nationalists fighting for their country's independence. He also wanted the Indian Government to allow Afghan refugees in India (now numbering about 20,000) to receive foreign aid.

AFGHAN LIBERATION FRONT LEADER INTERVIEWED

OW221326 Beijing XINHUA in English 1257 GMT 22 Nov 80

[Text] Peshawar, Pakistan, November 22 (XINHUA)--S. al-Mojaddedi, vice-president of the Islamic Alliance for the Liberation of Afghanistan today appealed to the peace-loving countries, and people of the world to make more efforts to force the Soviet Union to abide by the U.N. resolution on the Afghan issue and to withdraw its troops immediately from Afghanistan.

In an interview with XINHUA in Peshawar today, S. al-Mohaddedi who is also the president of the National Liberation Front of Afghanistan, expressed his gratitude to the people of the world for their support to the Afghan people in their struggle against Russian aggressors, and his appreciation of the U.N. resolution on the Afghan issue adopted with the approval of one hundred and eleven countries. He pointed out that the Soviet Union must be dealt a telling blow before it would agree to withdraw its troops from Afghanistan. He said that the Afghan freedom-fighters will intensify their struggle and keep on attacking the Russian troops. At the same time he expressed his hope that peace-loving countries of the world should put more pressure on the Soviet Union politically and economically until it leaves Afghanistan. He strongly condemned the Russian troops for committing the barbarous crimes every day in Afghanistan. He emphasized that these crimes must be stopped in Afghanistan and that the Russians be taught a good lesson, so that the same crimes will not be committed again in other countries.

CSO: 4020

USSR LOOTING AFGHANISTAN'S MINERAL WEALTH

OW180722 Beijing XINHUA in English 0707 GMT 18 Nov 80

[Text] Beijing, November 18 (XINHUA)--"As a general policy, the Russians are looting our mineral resources, precious stones and even museum pieces," said an Afghan refugee Abdul Latif Aurah, according to reports from Islamabad.

Aurah was an engineer and former department head in the Afghan Ministry of Mines and Industry. He defected last month from Kabul.

Aurah said that Afghan gas, with an annual output of about 3,500 million cubic metres, is used almost exclusively in the Soviet Union. The Soviets import the natural gas from Afghan fields by pipeline. But the Afghan officials are unable to confirm the amount taken because the meter is on the Soviet side of the border. They have a free hand at determining how much they take without any worry of Afghan opposition.

Aurah said that an Afghan government engineer told him that a hill containing an outcrop of rich uranium ore at Khakrez in the province of Kandahar in southern Afghanistan was completely flattened four months ago by the Soviets who shipped the mineral by truck to the Soviet Union.

Aurah also witnessed Soviet troops taking ore containing lapis lazuli, a deep-blue gemstone, from the basement of his ministry. He said that a large amount, totalling 250 metric tons, was removed from a storehouse on the grounds of the former royal residence--the Arg Palace in Kabul. The lapis ore was "very conservatively" valued at 60 million U.S. dollars. A glass container holding one kilogram of uncut emeralds, long publicly displayed at a government showroom was similarly seized by Soviet troops this fall.

Aurah said the precious stones were removed to the Kabul airport and loaded aboard Soviet military transport planes which had earlier brought weapons and ammunition for the Soviet forces.

CSO: 4020

SOVIET AMBASSADOR ATTACKS AUSTRALIAN GOVERNMENT

OW211608 Beijing XINHUA in English 1554 GMT 21 Nov 80

[Text] Canberra, November 21 (XINHUA)--Soviet ambassador to Australia Nikolay Sudarikov broke protocol rules and attacked the Australian Government during his current official visit to Tasmania, Australia's island state at the foot of the mainland, according to press reports here today.

In a "political speech" at a state luncheon given in his honor on November 17, Sudarikov accused the Austalian Government of "slandering" the Soviet Union and of having discriminated against his country and misunderstood its "noble policies" towards Australia. He alleged that in its history, Russia had "never really" invaded anyone else.

On his arrival in Hobart, capital of the island, he was met by a group of protesters from the Soviet-annexed Baltic states. The ambassador called them possibly "miserable people in some respects."

Tasmania's newly-elected independent Senator Brian Harradine asked the foreign minister to caution the Soviet ambassador and tell him that he was abusing his diplomatic privileges. He said the Soviet ambassador's speech at the state luncheon was "an undiplomatic diatribe against Australia."

Senator Harradine also called for an inquiry into Ambassador Sudarikov's background including claims that he had extensive secret police involvement in both the NKVD and the KGB. The senator said that these claims had not been investigated by the government when they were first made last November.

A spokesman for the Tasmanian premier indicated afterwards that the premier had been embarrassed by Sudarikov's speech.

A spokesman for the Australian department of foreign affairs said here yesterday that Sudarikov would not be cautioned, and that the department believed the Australians were capable of judging the merits of Sudarikov's comments.

CSO: 4020

AUSTRALIAN MINISTER DISCUSSES DEFENSE COOPERATION

OW050756 Beijing XINHUA in English 0738 GMT 5 Dec 80

[Text] Canberra, December 5 (XINHUA)--"The government's emphasis on increased defence co-operation with our neighbours is being pursued with vigour and considerable success," Australian Minister for Defence D. J. Killen said yesterday in the House of Representatives.

He said in a statement on defence, "We have made significant innovations to accommodate the priority requirement identified in high level consultations with all concerned--particularly the South East Asian countries--as they continue to build up their defensive capabilities, we are seeking ways of doing more."

He said at the end of October, in Australia over 500 service personnel from 14 nearby countries were attending formal service training courses, undergoing on-the-job training, or studying particular aspects of Australian defence force organisation and procedures. And about 260 Australian servicemen and civilians are presently providing advisory and other practical assistance in many of these countries.

"Military planners from the five powers--Britain, Malaysia, New Zealand, Singapore and Australia--met in Canberra from 19 to 21 November to produce specific recommendations as to develop plans for 1981 exercises," he added.

The minister explained that the multi-national exercises "will supplement but not supersede, bilateral exercises arrangements between the five power partners. They will add to the already extensive bilateral defence activities which Australia undertakes with others in South East Asia and the South West Pacific."

NEWSLETTER ON WRITER'S VISIT TO SOUTHERN IRAN

OW070300 Beijing XINHUA Domestic Service in Chinese 1652 GMT 5 Dec 80

[Newsletter by Xu Boyuan: "A Brief Survey of the Southern Battlefront of Iran"]

[Summary] Tehran, 5 Dec (XINHUA)--"This writer paid a visit to the Ahvaz and Susangerd areas of southern Iran in a large car provided for reporters by the Iranian Ministry of National Guidance 27 November-1 December."

We started from Tehran, the capital, and passedKhorrambabad, seeing no signs of war except for new military trucks delivering ammunition to the front. We were told that Khorrambabad experienced its first air raid since the war on the day before our arrival.

Once we got to the cities of Andimeshk and Dezful, we saw very different scenes. Many buildings had been devastated and yet people were seen walking around in these cities.

"We arrived at Ahvaz the afternoon of 28 November. The city's calmness took us quite by surprise, for the city had suffered from attacks by Iraqi planes, artillery and missiles. Though several buildings had been knocked down, the city seemed to still be in good condition."

I learned from Iranian soldiers back from the front that "Iraqi troops are stationed in areas 20 kilometers to the west and 40 kilometers to the southwest of the city." Once every few days, both sides exchange bombings or shellings. The war seems to be stalemated.

On 29 November, we tried to approach Susangerd city twice from different directions, but we were stopped by Iranian troops, saying that our car was too large a target.

We were told that the Iraqi troops were not far from Susangerd, surrounding the city on several sides.

On the morning of 30 November, we went to Susangerd in a military vehicle admist dense fog. To avoid being spotted, the car traveled at top speed. On our way there, we saw the wrecks of about 10 Iraqi tanks, Iranian tanks and machinegun positions, and several baggage-laden refugees waiting for a bus along the highway.

"When we entered Susangerd, we found the city deserted, a population of 30,000 totally evacuated. No undamaged buildings were to be seen and canned food was scattered in the street. Fallen bricks and charred wood were seen here and there, and we found a burned-out Soviet-made T-62 tank in one street. Fierce street fighting took place in the city once and Iraqi troops once occupied the city. It is reported that two Iraqi infantry battalions are still stationed 2 miles to the south of the city."

The rainy season will soon set in in southern Iran. Since rain does not favor military actions, there will possibly be a period of stalemate. However, there are still no sings of cease-fire.

"On our return to Tehran, I though how nice it would be if one day the clouds over the Gulf were to clear and if the two belligerents would solve their differences through a peaceful settlement. This is not only in the interests of the people of the two countries who are suffering from the wounds of war but also in accordance with the ardent expectation of people of the world."

WESTERN, SOVIET MEDIA ON POLAND CITED

OW061902 Beijing XINHUA in English 1844 GMT 6 Dec 80

["Roundup: Moscow Steps Up Military and Political Pressures on Poland"--XINHUA headline]

[Text] Beijing, 6 Dec (XINHUA)--The Soviet Union has been engaged in frequent military manoeuvres near the Polish border while setting its propaganda machine in motion to issue threats. It has thus strengthened its military and political pressures upon Poland, making the turbulent situation in that country extremely dangerous.

Western press reports said Moscow has been massing more and more troops around Poland. UPI reported on September 20, "Mid-week intelligence reports noted the buildup of Soviet troops along Poland's borders with the Soviet Union and East Germany. There were indications they included additional supply and communication support forces." A December 3 WALL STREET JOURNAL article said, "American intelligence has discovered that the Soviets have activated wartime command and control mechanisms among the Soviet troops normally based in and near Poland." Army units based in the western part of the Soviet Union near Poland have been beefed up and made readier by the retention of reservists who would have been sent home after the major Warsaw Pact exercises held last September, the article added. The West Berlin-based BERLINER MORGEN POST reported in November that the reserve divisions in the western Soviet military regions had been put into "a highly pre-war state" and officers at all levels had been sent to these divisions. "Meanwhile, the leadership of the Soviet army units in Poland has been reinforced," the report added.

It was reported that Soviet officials had informed the United States, Britain and France last weekend that two 50 mm wide strips adjoining the border between Poland and the German Democratic Republic "had been provisionally declared prohibited military zones." "The announcement effectively closed the entire border," the report said.

The BERLINER MORGEN POST of West Berlin reported that all the Soviet western military districts had been announced prohibited zones to military attaches of Western countries in Moscow. Vilnius, an important city in the western part of the Soviet Union, has been closed to foreigners. The city is a railway junction near the eastern Polish border.

Meanwhile, the Soviet propaganda machine has been making threats against Poland. On November 26, TASS quoted a Polish magazine as saying "The (Polish) anti-socialist forces are trying to take advantage of the current crisis to undermine the foundation of the socialist system."

PRAVDA declared in an article on November 28 that anti-socialist forces in Poland have changed their strategy. They tried their utmost to paralyze and undermine the socialist system from within in an attempt to peacefully restore capitalism in Poland. "This demands prompt response," the paper added.

A commentator of the Soviet Central Television Studio said on December 3 in a commentary on the plenary session of the Central Committee of the Polish United Workers' Party: "Those who are hostile to the socialist cause and the people's regime are trying to establish a dual political regime to undermine the basis of the leadership of the United Workers' Party" while "anti-socialist elements" did their utmost to divert the course of the Gdansk agreement reached between the workers' representatives and the government in an attempt to make use of the agreement to achieve political domination.

On November 24, TASS said in a report on the Polish railway workers' strike that the strike was aimed at maintaining tension in Poland. "The solidarity trade union threatened to hold a general strike which will jeopardize the national and defense interests of Poland as well as (Soviet) railway transit in Poland."

A TASS report said that dislocation of railway traffic in Poland would constitute a "direct threat to the Soviet Union's security." It stressed the need of defending the fruits of the Polish revolution.

Commemorating the 250th anniversary of Suvorov's birthday, the Soviet press described this Russian general, an executioner of the Polish people, as "Russia's sword" and a "Russian hero," and stressed the "realistic significance" of Suvorov's concept.

Under the present Polish situation, Moscow's action has aroused international concern. The West views the intensified Soviet military and propaganda pressure on Poland as an ominous sign.

'POLITYKA' CRITICIZES POLISH PARTY LEADERSHIP

OW081212 Beijing XINHUA in English 1201 GMT 8 Dec 80

[Text] Warsaw, December 7 (XINHUA)--Severe criticism of those party leaders who place themselves above the party, the party Central Committee and the whole society, is contained in the latest issue of the weekly POLITYKA.

The article, written by M. Rakowski, member of the Central Committee of the Polish United Workers' Party and editor-in-chief of the weekly, also criticizes the leader system which only allows centralism without democracy.

The article states there have been several crises during the history of people's Poland, and that the new leaders who emerged from each crisis have always sworn to pursue a policy in conformity with the desires and interests of the workers and the entire people. However, after a brief "honeymoon" period and "after reaching a smooth and unworried rule, the system in which the leaders place themselves above the whole party, the Central Committee and the whole society has been automatically put into operation the following day."

The writer holds that the present system of democratic centralism is lopsided and only centralism functioning. [sentence as received] The system, he argues, "actually prevents the cadres from giving clearcut criticisms of the party leadership."

The article also attacks the idea of "respecting" and "be loyal to" the leaders, which has acted like a yoke on the party members.

The article states, "The situation inside the party is a key-link to the ending of the Polish social and economic crises." The writer protests that, to have a good policy is not enough; it is also necessary to have a concrete and clearcut programme of action.

He demands that the party leadership adopt a clear attitude towards the errors of the past ten years and of their own responsibility for those errors. He calls for a struggle against extremism and conservatism, against political adventurism and social demagogy.

POLISH PAPER COMMENTS ON THREAT OF FORCE

OW090715 Beijing XINHUA in English 0707 GMT 9 Dec 80

[Text] Warsaw, December 8 (XINHUA)--The principle of non-use of force or of threat of force in relations between states should be observed and that "each country has the right to solve its own problem," stresses Polish newspaper ZYCIE WARSZAWY in a commentary today.

Under the title "The Equal Status of Poland," the commentary says: "Our immediate neighbours have made different appraisals on the process of changes in the social-economic and political life of the country. We may frankly say that certain doubts or queries that crop up in the minds of some people here and there can be seen as a justifiable concern about the fate of the whole community." However, the commentary continues, "Within the framework of the political order of a socialist society agreed upon by all, every country has the right to solve its own problem, to consider its national characteristics and integrate them with the laws of socialism. Then comes the right of the government to determine its own destiny on the basis of the principle of independence, sovereignty, and non-use of force or of threat of force in state relations."

Referring to the world situation and the fate of the country, the commentary points out: "We are now living at a difficult moment," "the world situation is yet to be saved from conflicts and political crises. A struggle is being waged for a better prospect for detente." Hence, the commentary adds, "the fate of Poland should be determined accordingly in an atmosphere of dialogue and detente." "Without order and stability along the bank of the Vistula River, it is unimaginable to see a peaceful and secured Europe," it stresses.

POLISH COMMENTATOR CALLS FOR POPULAR ALLIANCE

OW081516 Beijing XINHUA in English 1506 GMT 8 Dec 80

[Text] Warsaw, December 7 (XINHUA)--Daniel Passent, noted Polish political commentator, has called for unity and a popular alliance of all the people of the country including trade unionists, communists and Catholics.

In an article entitled "An Opportunity for the Central (Government)" which was carried in the newspaper ZYCIE WARSZAWY yesterday, Passent said: "We are living at a historical moment when we should act not only with determination but also with precaution."

"If the state is to be an arbitrator, it must have the prestige, authority and support. To this end, a new historical compromise is necessary, including a Polish compromise based on an alliance of trade unionists, communists and Catholics. There has been much talk of such an alliance but it has never materialized."

"If the alliance puts forward for itself realistic objectives, it means acting in line with the socialist system and concern on the part of every member of the alliance about a common victory. Only in this context can the alliance continue to exist."

"Only an alliance and the establishment of a center could provide us with a great opportunity."

Passent said: "I believe that today whoever stands for continued confrontation, fighting at all costs and sabotage, and whoever is bent on adventure instead of cooperation, be he a governor or a worker, and be upholding a red flag or a black or white flag, would be an enemy of Polish socialism."

UNITED KINGDOM, IRELAND ISSUE JOINT COMMUNIQUE

OW090235 Beijing XINHUA in English 0221 GMT 9 Dec 80

[Text] London, 8 Dec (XINHUA)--There is a need to seek new ways to bring peace and stability to Northern Ireland and to improve relations between their two countries, agreed British Prime Minister Mrs. Thatcher and her Irish counterpart Charles Haughey after their meeting in Dublin today.

Mrs Thatcher had flown to Dublin for talks because of the mounting tension in Northern Ireland aroused by the hunger strike of ten jailed Republican guerrillas convicted of terrorist acts who are demanding that they be treated as political prisoners. She was accompnied by three senior members of the Cabinet.

A joint communique issued after five hours of talks, which also covered international and EEC issues, states that the two prime ministers agreed that "the economic, social and political interests of the peoples of the United Kingdom and the Republic (of Ireland) are inextricably linked, but that the full development of these links has been put under strain by division and dissent in Northern Ireland."

The communique adds, "In that context they accepted the need to bring forward policies and proposals to achieve peace, reconciliation and stability, and to improve relations between the peoples of the two countries."

It also says that the two prime ministers "have commissioned joint studies, covering a range of issues including new institutional structures, citizenship rights, security matters, economic cooperation and measures to encourage mutual understanding."

The results of these studies will be discussed when the two prime ministers meet in London next year to talk about "the totality of relationships within these islands."

The communique further states that both sides regarded today's talks, which took place in closely guarded Dublin Castle, as extremely constructive and significant. Charles Haughey afterwards told a press conference that he hoped the meeting would make an important contribution to the efforts to get a solution to the problem.

PAKISTANI-SAUDI ARABIAN COMMUNIQUE ISSUED

OW101904 Beijing XINHUA in English 1854 GMT 10 Dec 80

[Text] Islamabad, December 10 (XINHUA)—Pakistan and Saudi Arabia today called upon the Soviet Union to withdraw its troops immediately from Afghanistan.

A joint communique was issued in Lahore today by Pakistan President Mohammad Ziaul Haq and Crown Prince Fahd Ibn 'Abd al-'Aziz of Saudi Arabia at the end of the crown prince's three-day official visit to Pakistan. It says that the two sides reiterated the basic requisites of a political solution of the crisis including the withdrawal of foreign troops from Afghanistan.

The communique states, "The president informed the crown prince that Pakistan is dedicated to the cause of peace in South Asia and is sincerely desirous of improving its relations with India on the basis of the Simla agreement, and is not involved in an arms race, conventional or nuclear, with India or with any other country. In fact, Pakistan would welcome talks with India for mutual assurances in this regard and for consideration of other confidence-building measures."

Crown Prince Fahd expressed his appreciation of Pakistan's contribution to the cause of good-neighbourly relations and durable peace in the region. Both sides reiterated in the communique the importance of making the Indian Ocean a zone of peace.

Believing in that safeguarding the security and stability of the Gulf area is the exclusive responsibility of the Gulf states free from outside interference. They called [on] Iran and Iraq "to cooperate with Islamic and international peace-making moves, end the hostilities and enter into negotiations for a peaceful settlement of their disputes."

They affirmed that a just and lasting peace could not be realized without total Israeli withdrawal from all occupied Arab territories. They strongly condemned Israel's repeated acts of aggression against the sovereignty and territorial integrity of Lebanon.

PRC, JAPAN ISSUE JOINT PRESS STATEMENT AS TALKS END

OW050253 Tokyo KYODO in English 0239 GMT 5 Dec 80

[Text] Beijing Dec 5 KYODO--Japan and China ended their three-day ministerial conference here Friday after issuing a joint press statement calling for further promotion of bilateral relations despite differences in social systems.

The statement, indicating to the world that the two Asian giants have now entered an age of stable relations on a working-level basis, was issued after the holding of the second plenary session of the ministerial conference.

During the session at the Great Hall of the People in Beijing, Japanese and Chinese foreign ministers Masayoshi Ito and Huang Hua exchanged notes in which Japan pledged to extend yen 56 billion in yen credits to China in fiscal 1980.

Chinese Vice Premier Gu Mu, in a closing address at the second session, said the meeting had achieved an unexpectedly good result although it was short.

"Our mutual understandings have even more been promoted through the meeting and there were many points of agreement on friendly cooperation," he said.

But he said there were some points of disagreement due to differences in the circumstances and political systems under which Japan and China operate.

"Disagreement is a normal phenomenon, I believe," the vice premier said.

"I think we could reach complete agreement by the time the fourth ministerial meeting will be held," he added.

Japanese Foreign Minister Ito agreed and said the meeting will play an important role for peace and security in Asia and the world.

Japan sent six cabinet ministers to the conference, the first of the kind since the two countries normalized their relations in 1972.

The Japanese ministers paid courtesy calls Thursday on Vice Chairman Deng Xiaoping and Premier Zhao Ziyang.

The press statement said the ministerial conference discussed the international situation and bilateral relations, including cooperation and exchanges, and economic and fiscal policies of the two nations.

It said frank and serious exchanges of view were made on the Kampuchean problem, indicating the two countries had failed to find a common position on the issue.

The statement said, however, that the two countries would continue their efforts based on their respective position to secure and maintain peace and security in Asia and the world.

At the Ito-Hua meeting Thursday, the Japanese minister stressed the need to have Vietnam as a partner at an international conference on Kampuchea.

But Hua reiterated China's position that Vietnam should withdraw its troops from Kampuchea before a political settlement can be discussed.

The statement said relations between Japan and China have been developing smoothly since they normalized diplomatic ties in 1972.

The two sides reaffirmed that lasting peaceful and cooperative ties between the two countries should be created through increase of exchanges and mutual understanding in spite of differences in social systems, it said.

It said the Japanese delegation explained to China the course of postwar development of Japan, recent economic conditions and policies, fiscal and medium-range economic plan.

The Chinese delegation, the statement said, explained China's economic situation, the current economic readjustment review, policies and future development projects.

It said the two countries would further promote cooperation in developing oil, coal and other energy sources.

The statement said China would comply as much as possible to a Japanese request to increase supplies of energy sources on a long-term basis.

Japan and China agreed to start negotiations for conclusion of a taxation convention and an investment guarantee agreement for smoother economic relations between them, it said.

It said the two countries will endeavor for inauguration of regular cargoliner service on the Japan-China route.

China has pledged further cooperation in efforts to locate parents of Japanese orphans still scattered across the country, the statement said.

It added the next ministerial meeting will be held in Japan and its date will be fixed through diplomatic channels.

Japanese Foreign Minister Ito proposed at the meeting with Hua Thursday that the second meeting be held in Tokyo next year.

MANILA MEETING ON ASIAN MORTALITY TRENDS

OW051214 Beijing XINHUA in English 1201 GMT 5 Dec 80

[Text] Manila, December 5 (XINHUA)--There is a general trend of increase in life span in Asian countries owing to the efforts made in the past years to reduce mortality, according to data provided by the meeting on morality in Asia which ended here today.

By around 1975, the average expectation of life of male citizens in Pakistan, India, Nepal and Indonesia reached 45 to 49 years, Thailand and the Philippines 55 to 59, Sri Lanka 60 to 64, and China, Singapore, Malaysia and Hong Kong area 65 to 69. The country with the highest average expectation of life is Japan, reaching 70 to 74 years in 1975.

By the same time, infant mortality rate in Japan, Singapore and Hong Kong was reduced to 20 per thousand, as against 60 to 80 per thousand in 1950.

In China, infant mortality rate in 1978 in cities was 12 per thousand and that in rural areas 20 to 30 per thousand. The infant death rate before liberation was 120 per thousand in cities and 200 per thousand in the country. In 1978 China's crude death rate was lower than 7 per thousand, as against 25 per thousand before liberation.

The meeting which was held here from December 1 to 5 to study the mortality trends in Asia in the period from 1950 to 1975 was jointly sponsored by the World Health Organization (WHO) and the Economic and Social Commission for Asia and the Pacific (ESCAP). Demographers, epidemiologists, statisticians and public health experts from Asian and Pacific countries attended the meeting and introduced their experience in reducing mortality.

AUSTRALIAN REBEL LEADER IN VANUATU SENTENCED

OW221252 Beijing XINHUA in English 1238 GMT 22 Nov 80

[Text] Canberra, November 22 (XINHUA)--Separatist leader Jimmy Stevens was sentenced to 14.5 years' jail and fined 30,000 Australian dollars by the Vanuatu Supreme Court yesterday for leading a secessionist revolt in that South Pacific archipelago, according to press reports reaching here from Port Vila today.

Jimmy Stevens staged the separatist rebellion when Vanuatu (formerly the New Hebrides) became independent from joint Anglo-French colonial rule on July 30 this year. He was arrested late in August after Vanuatu police and Papua New Guinean troops, sent to help the newly independent nation crush the rebellion according to a decision by the South Pacific forum's meeting last July, overran his jungle headquarters at Vanafo in the hills of Espiritu Santo Island.

He faced 11 charges which included creating an illegal Vemerana provisional government, inciting rebellion, training an army, possessing illegal arms and explosives, and operating a radio transmitter.

During the two-day hearing, Stevens pleaded guilty to leading an insurgency that sought to split the country and prevent the new government there from assuming complete control upon independence.

After the hearing, Stevens told an Australian paper THE AGE that he felt misled by some foreign officials and organizations which had given him financial aid, drafted a constitution and printed passports for his secessionist group.

Stevens was reportedly the last to be tried among the more than 100 people arrested for their part in the rebellion. His right hand man, Timothy Wells, was earlier sentenced to eight years.

GROWING UNEMPLOYMENT REPORTED IN INDIA

OW071536 Beijing XINHUA in English 1522 GMT 7 Dec 80

[Text] Beijing, December 7 (XINHUA)--The number of job-seekers totalled 15.1 million by June 30 this year, 21.8 per cent higher than 15 months ago, disclosed Indian Deputy Labour Minister Katta Reddy in a written reply to the Lower House on December 3, according to a report from New Delhi.

This shows a sharp deterioration of unemployment situation in that country. According to official statistics, the number of the underemployed rose from 4.2 million at the end of 1971 to 14.3 million at the end of last year, an average annual increase of 1.28 million.

The unemployment of the educated is likewise a prominent social problem in India. They stood at 7.296 million at the end of last June, or 48 per cent of the total job seekers. It was also reported that only 400,000 out of the over half a million university or college graduates in the country could get work each year.

The previous Indian governments gave the pride of place to the removal of unemployment by listing this task as their principle objective. Among a series of measures, they stressed development of labour intensive private small enterprises. However, as the low economy growth rate of 3.3 per cent coincides with a high population growth rate of 2.2 per cent, unemployment is still on an upward trend and has become a social problem to solve difficult. INDUSTRIAL MINISTERS MEETING ENDS IN DACCA

OW052004 Beijing XINHUA in English 1952 GMT 5 Dec 80

[Text] Dacca, December 5 (XINHUA)—The four-day solidarity meeting of ministers of industry of developing countries which concluded here today pledged to render technical and other assistance to Bangladesh.

A recommendation issued here this afternoon said that the meeting was of the view that the fostering of solidarity among the developing countries and the building up of their collective self-reliance have acquired a new meaning and topical significance for achieving progress in the establishment of a new international economic order and for their accelerated development.

It said that representatives of the 20 participating countries voiced their solidarity with Bangladesh. It was agreed that the modalities and mechanisms for the cooperation would be of a flexible nature so as to yield optimum results and that all appropriate follow-up actions would be undertaken.

The recommendation said that the meeting will mark the beginning of numerous programmes of inter-country cooperation which will not only assist in the industrial development of Bangladesh but also constitute a concrete step for strengthening the solidarity and collective self-reliance of the Third World.

U.S. SENATE ISSUES REPORT ON 'GEOPOLITICS OF OIL'

OW210306 Beijing XINHUA in English 0248 GMT 21 Nov 80

[Text] Washington, November 20 (XINHUA)--The U.S. Senate Energy Committee published today a staff report on "The Geopolitics of Oil," expressing concern about access to oil "because of the threat to our (U.S.) national security and to world peace of oil supply disruptions," particularly threats from the Soviet Union.

"We must recognize that the energy problem is not only a long time issue but that it is an immediate concern," said the report, adding that "a major oil supply interruption is a virtual certainty within the next ten years."

Senator Henry Jackson, chairman of the energy committee, said in releasing the report today "There is a close link between our economic problems, our energy problems and our security problems. Our access to oil imports will rest in no small part on the strength and credibility of our defenses. Our ability to maintain a strong defense depends on the strength of our economy and our industrial base."

He said that these linkages "will govern the national policy in the 1980's" and four key measures should provide the cornerstone of this policy--namely, a domestic petroleum reserve, plans in concert with U.S. allies to mitigate the impact of an energy emergency, joint work with U.S. allies to ensure stability and resist Soviet advance in the Middle East, and strong support for programs for increasing oil production outside the Middle East.

On the question of checking Soviet advance in the Mideast, Jackson said that certain threats, particularly overt threat from the Soviet Union, may require a stronger response than any individual Middle East country or group of countries can provide. "To deal with these threats, we should enhance our ability to project military power in the region, through facilities agreements and an effective rapid deployment force. We should also work with our allies to develop a common strategy for deterring Soviet advances," he added.

Jackson pointed out clearly the Soviets will go out for warm water port and oil resources in the Persian Gulf and the invasion of Afghanistan was the first step in that direction. NATO will disappear without oil, he said.

Senator Bill Bradley, vice-chairman of the committee's study on the geopolitics of oil, said the war between Iraq and Iran threatens to close the Straits of Hormuz, the narrow waterway used by tankers carrying about 60 percent of the West's petroleum. "In addition," he said, "we have to assume that the Soviet Union will keep trying to gain influence in the region by exploiting turmoil there. If the Soviet Union held control over the Straits of Hormuz, it could destroy the economies of the West merely by shutting off the oil." "A one-year loss of Persian Gulf oil would wipe out one-fifth of the U.S. economy and trigger unemployment comparable to the worst of the great depression. The consequences could be still more severe for Europe, Japan and less developed countries," he added.

CSO: 4020

CUBA, MEXICO COOPERATE IN OIL EXPLORATION

OW071251 Beijing XINHUA in English 1226 GMT 7 Dec 80

[Text] Havana, December 6 (XINHUA)--Cuba and Mexico have agreed to cooperate in oil and natural gas exploration on the Cuban continental shelf, according to local press reports.

A protocol to this effect, the first of its kind between the two countries, was signed here yesterday by President of the Cuban State Economic Collaboration Committee Hector Rodriguez and the visiting director general of the Mexican Petroleum Company Jorge Diaz. Under the accord, Mexico is to provide Cuba with extensive cooperation in oil exploration on Cuba's continental shelf in addition to helping the latter to increase its liquified gas production and oil refining.

When receiving the visiting Mexican petroleum delegation, president of the State Council of Cuba Fidel Castro showed great interest in cooperation with Mexico in oil exploration, exploitation and refining. When Mexican President Lopez Portillo visited Cuba last July, the question had figured in his talks with Cuban leaders.

An energy-deficient country with no coal and water power resources, Cuba depends on the Soviet Union for almost all the oil it needs. Official figures released recently showed that from 1960 to the present, Cuba has imported from the Soviet Union a total of 122 million tons of oil and oil products and plans to import another 61 million tons in the next five years.

BRIEFS

MOUNTAINS OPEN TO CLIMBERS--Beijing, December 10 (XINHUA)--The unclimbed Mount Siguniang, in southwest China's Sichuan Province, will be open to foreign climbers next year, the Chinese Mountaineering Association (C.M.A.) said today. Formed by four peaks over 5,000 meters above sea level, Mount Siguniang belongs to the Qionglai Mountain Range, located in the heart of Sichuan. The main peak is 6,250 meters high and is only a day's drive away from Chengdu, capital of Sichuan, through China's largest giant panda protection zone Woolong. The rainy season there is from June to August. Since the beginning of this year, China has opened eight mountains to foreign expeditions, including the world's highest peak, the 8,848-meter Mount Gomolangma. Three American expeditions have signed procotols with the C.M.A. to climb Mount Siguniang next year, the C.M.A. said. The six-member American Alpine Club and Exum School American Mountaineering Expedition, led by Jack Turner and Peter Filafian, will challenge it from the south face between October 15 and November 15, 1981. The American Mountain Travel Expedition will also attempt it next October. The ten-member team will be led by Jack Turner. A team from Mountain Travel Nepal Incorporation has also signed a protocol, but the date and route of the climb have not been decided. [Text] [OW100252 Beijing XINHUA in English 0243 GMT 10 Dec 80]

JAPAN-SOVIET RELATIONS--Tokyo, December 9 (XINHUA)--The Soviet attacks on Afghanistan and its intensified military build-up on Japan's northern territories have obstructed improvement in Japan-Soviet relations, said Yoshio Sakurauchi, secretary general of the Liberal Democratic Party of Japan, the paper SANKEI SHIMBUN reported today. As long as these factors are not eliminated such improvement will be difficult, he said, adding that the Soviet military build-up at places which could be spotted by naked eyes from Hokkaido will only injure the feelings of Japanese nationals. Sakurauchi made these remarks at a 30-minute talk yesterday with a deputy-director of the international department of the Soviet Communist Party Central Committee at the headquarters of the Liberal Democratic Party. During the meeting, Sakurauchi expressed the hope for better relations between the two countries. He maintained that obstacles to better relations are mainly erected by the Soviet side. He demanded once again that the Soviet Union approprictely treat the issues of Afghanistan and Japan's northern territories. [Text] [OW090723 Beijing XINHUA in English 0714 GMT 9 Dec 80]

POLISH UNREST--Warsaw, December 8 (XINHUA)--The Polish Armed Forces recently expressed worry over their country's independence and security, and voiced their support for the line to renovate the life of the party and the state and for political settlement of the recent clashes, according to a report from the Polish News Agency. At its plenary session held on December 6, the party committee of the navy pointed out that under the current situation the navy favors the party's line to stabilize the social, political and economic situation, firmly opposes the escalation of tension, and fully supports the renovation in many aspects of party and state organization and policy. Recent meetings of the party activists were held in the three military areas of Warsaw, Maritime and Silesia, at which the participants declared their unreserved support for the resolutions adopted at the party's 7th plenary session and the policy of democratizing social life. In an editorial entitled "Support the Socialist Renovation and Oppose Relaxation and Anarchism," the army paper ZOLNIERZ WOLNOSCI said today that it is the full responsibility of Polish soldiers to follow the fate of their country which they will always defend with vigilance and loyalty. The editorial pointed out that social disorder has already caused damage to the national defence. The military expressed its desire for a rapid settlement of the current crisis. [Text] [OW091550 Beijing XINHUA in English 1540 GMT 9 Dec 80]

POLISH INVASION NOT EXPECTED--Beijing, 4 Dec (AFP)--China does not expect a Soviet intervention in Poland similar to its 1968 invasion of Czechoslovakia, a Japanese spokesman said following talks between the Chinese and Japanese foreign ministers here today. Chinese Foreign Minister Huang Hua who is also a vice-premier told his Japanese counterpart Masayoshi Ito that the Soviet Union could not at the current time "invade" Poland because of international pressure and also because of the Soviet domestic situation, the spokesman said. The Chinese foreign minister also indicated that the "invasions" of Afghanistan (by the Soviet Union) and of Cambodia (by Vietnam) were "weak points" for the Soviet Union in international terms. China is closely watching the situation in Poland and has made several references to the strong hostility a Soviet intervention would trigger. [Text] [OW040926 Hong Kong AFP in English 0917 GMT 4 Dec 80]

NATO FORCES CHRISTMAS LEAVE--Beijing, December 9 (XINHUA)--NATO's standing naval force in the Atlantic will remain at sea during Christmas because of the Polish situation, according to reports from Brussels quoting Atlantic allied sources on Monday. Christmas leave for sailors has been suspended. The five-ship force of destroyers and frigates from different NATO countries had been scheduled to sail for their home ports on December 3 for the holidays. The frigate U.S.S. Valdez will also remain at sea, announced a U.S. Navy spokesman yesterday. [Text] [OW091522 Beijing XINHUA in English 1512 GMT 9 Dec 80]

THAI OFFICIALS URGE UNITY--Bangkok, December 6 (XINHUA)--The King of Thailand, Phumiphon Adunyadet, called on all the Thai people to unite closely and safeguard the security of the country. The King was addressing a public rally held to mark his 53rd birthday here yesterday. King Phumiphon Adunyadet said: "Ever-increasingly grave crises of all kinds have emerged continuously in the present world. This has so affected our country that we are greatly concerned about the security and stability of the country." He stressed, "No matter what happens, we must face the reality with wisdom and courage." Similar functions were also held in other parts of the capital on December 4 and 5. On December 4, Thai Prime Minister Prem Tinsulanon presided over a 100,000 strong rally here in downtown San Am Luang Square to mark the opening of the birthday festivities. Prem told the rally: "Every Thai should place collective and state interests above his own, and the Thai people should get united as one to defend the country firmly." On December 3, the Thai King also reviewed a parade of the Royal Guards Regiment. [Text] [OW060852 Beijing XINHUA in English 0812 GMT 6 Dec 80]

WARSAW WORKERS END STRIKE--Warsaw, November 29 (XINHUA)--The strike at the Warsaw Steel Mill was called off early yesterday after the mill's trade union leaders had a lengthy consultation with Lech Walesa, president of Poland's largest independent trade union "Solidarity" and heeded his advice. The steel workers' decision was made in view of "the grave situation at home and the national interests of Poland." According to a REUTER dispatch from Warsaw, Walesa warned Warsaw trade union representatives and steel workers that they risked losing everything and provoking the Polish army into action. "The army could be called in to run things," he said. "Let us not forget that tanks and rockets could also be the reply. We will not be able to defend ourselves, whereas those gentlemen can destroy us." Walesa added that the "Solidarity" was not strong enough to engage in such confrontation. Up to now, strikes at the Warsaw Steel Works, the Gdansk Sugar Refinery and the Lodz Textile Mill have all ended. But Katowice miners are still on strike. SFRY NATIONAL DAY--Belgrade, November 28 (XINHUA)--Cvijetin Mijatovic, president of the Presidium of Yugoslavia, hosted a banquet here at noon today in celebration of Yugoslavia's National Day. This is the first national day celebration since President Tito passed away. According to the local press and television reports, the dominant theme of the National Day observation this year is: Strengthen unity among all the nationalities, join hands to overcome difficulties, and work hard to reinforce the socialist self-management and non-aligned Yugoslavia along the path paved by Comrade Tito. [Text] [OW281927 Beijing XINHUA in English 1921 GMT 28 Nov 80]

USSR ON POLAND--Mexico City, December 8 (XINHUA)--Mexican newspapers have expressed concern about a possible Soviet invasion of Poland. EXCELSIOR said editorially today that dozens of well equipped divisions of the Warsaw Treaty Organization are being concentrated along the Soviet-Polish borders, ready for an intervention in Poland. The editorial pointed out that an intervention designed to violate the public will of another country "can only sow the seeds of uncontrollable tempests." It urged the Soviet leaders to see to it that peace be maintained in Poland, and not to embark on expansionism or resort to force. NOVEDADES warned in an editorial on December 4 that the great military build-up by the Warsaw Treaty Organization States is for invading Poland and putting down the people's movement of that country. EL HERALD on Dec. 7 carried an editorial entitled "The Iron Heel of Russia Threatens Poland as It Did Czechoslovakia Yesterday." The editorial said that the Soviet order to have the Polish border with the German Democratic Republic sealed off has jeopardized world peace. CUBANS SEEK ASYLUM--Beijing, December 10 (XINHUA)--Fourteen Cubans, including several women, broke through the Vatican diplomatic mission in Cuba yesterday, seeking political asylum, according to reports reaching here. Cuban policemen are reported to have encircled the mission yesterday afternoon. Witnesses said that the policemen drove the refugees out of the mission with tear gas in the evening and put them under arrest afterwards. One person was reported wounded in an exchange of fire. [Text] [OW101530 Beijing XINHUA in English 1526 GMT 10 Dec 80]

EL SALVADOR KILLINGS--Beijing, December 6 (XINHUA)--El Salvador's ruling junta condemned the assassination of four American women in a communique yesterday and promised to hunt down the assassins, according to reports from San Salvador. At a news conference on December 4, junta member Jose Napoleon Duarte said the murder was a premeditated act of right-wing terrorists. The four women, three nuns and a social worker, were the latest victims of violence following the murder of six leaders of the Democratic Revolutionary Front at the end of last month. They were abducted near the San Salvador airport on December 2 and their bodies were found in a small town near the capital two days later. U.S. State Department spokesman John Trattner announced in Washington yesterday that the U.S. was suspending its military and economic aid to El Salvador until the murder of the four women is clarified. According to a church estimate, acts of violence in El Salvador have claimed more than 9,000 lives so far this year. [Text] [OW061508 Beijing XINHUA in English 1501 GMT 6 Dec 80]

CANADIAN OFFICIAL ON POLAND--Ottawa, December 4 (XINHUA)--Canadian Secretary of State for External Affairs Mark MacGuigan told the House of Commons yesterday that the government of Canada "regards the border situation around Poland with utmost seriousness." He stated that the Canadian Government maintains that "it is extremely important that the Polish question be settled by the Poles themselves and by no one else" and "it would not be compatible with the Helsinki Final Act for any country to use or even threaten to use force against another country." Asked about what steps his government plans to take to convince the Soviet Union and the Democratic Republic of Germany to keep their armies out of Poland and to respect the principles of the Helsinki pact, the minister said that the government "is taking certain initiatives "with respect to the situation in Poland." On Tuesday, the House of Commons adopted a motion tabled by the new Democratic Party leader Edward Broadbent. The motion reads: "This House (of Commons) strongly urges all other states in the region to refrain completely from military or other provocative actions which could be seen as intimidation by the people of Poland and which could break peaceful relations beyond the borders of Poland itself." [Text] [OW050310 Beijing XINHUA in English 0300 GMT 5 Dec 80]

SRV ON THAI-KAMPUCHEAN BORDER--Bangkok, December 5 (XINHUA)--Massive Vietnamese troops and tanks have moved close to the Thai-Kampuchean border in the past two days, according to newspaper reports here today. More than 30 Vietnamese tanks moved into positions about 500 metres from the border. Some contingents of Vietnamese troops were positioned just opposite Ban Din Daeng, Nern Takoh, Lamchiek and Phak Kard of Thailand. Commander of Thailand's First Army Division Major-General Suchin Arayakul said that Vietnamese troops in

Kampuchea did not normally come so close to the border line. But their present intentions were not clear. He said artillery and mortar shells fired by the warring Kampucheans occasionally landed on Thai soil. [Text] [OW050822 Beijing XINHUA in English 0731 GMT 5 Dec 80]

KAMPUCHEAN RAILWAY DESTRUCTION--Beijing, December 5 (XINHUA)--Kampuchean National Army and guerrillas with the help of local residents cut the Phnom Penh-Kompong Som Railway last Sunday, Radio Democratic Kampuchea announces today. The patriotic Kampuchean forces blew up four kilometres of rails between Kompong Som and the Roluos Station. This is the third time this year that the patriotic Kampuchean forces cut the Phnom Penh-Kompong Som Railway which serves as a military supply line for the Vietnamese aggressors. Meanwhile, the patriotic Kampuchean forces mounted attacks at Sre Cham and two other hamlets in the Kompong Som area, wiping out 75 enemymen. [Text] [OW050324 Beijing XINHUA in English 0314 GMT 5 Dec 80]

KAMPUCHEANS ATTACK SRV PILLBOXES--Beijing, December 4 (XINHUA)--The Kampuchean National Army and guerrillas levelled to the ground a number of pillboxes in Battambang and Preah Vihear provinces in late November, according to Radio Democratic Kampuchea. The Kampuchean patriotic forces mounted an attack on the pillbox complex, including a regimental command post, on Highway Five west of Sisophon, Battambang Province on the night of November 28. They destroyed the regimental post, demolished the Pot Ta Sor stronghold and damaged the pillboxes around the Sophi railway station in the battle, the Kampuchean forces wiped out 109 Vietnamese troops, including a major of the regiment, and seized a quantity of munitions. The same day the National Army and local guerrillas raided and destroyed four other strongholds from Samlot to Highway 10. On December 24, the Kampuchean National Army and local guerrillas captured the Vietnamese pillbox in Bak Anlong hamlet, Choam Khsan District, Preah Vihear Province. They killed 25 enemy soldiers and wounded 40 others and seized 25 weapons. On December 29, they blew up two munition depots in Dol Kngan hamlet, Chey Sen District in the same province. Thirty-two Vietnamese aggressors were killed in the explosions. [Text] [OW041222 Beijing XINHUA in English 1204 GMT 4 Dec 80]

ASIAN SUMMIT PROPOSAL--Dacca, December 5 (XINHUA)--Foreign Minister M. Shamsul Haq of Bangladesh told parliament today that all six South Asian countries supported in principle a proposal made by President Ziaur Rahman for a South Asian summit to increase cooperation among them in economic, technical and cultural fields. He said that Bangladesh has circulated a working paper on the proposed summit to Bhutan, India, Nepal, Pakistan and Sir Lanka. Foreign ministers of these countries will meet to make preparations for the summit. [Text] [OW051628 Beijing XINHUA in English 1608 GMT 5 Dec 80]

BELGIUM ON POLISH SITUATION--Warsaw, December 4 (XINHUA)--The Belgian Government and people "are convinced that Poland itself has the capability to overcome its difficulties and that any other stand would bring extremely grave consequences to international relations in Europe and the rest of the world," the visiting Belgian Foreign Minister Charles-Ferdinand Nothomb said here today. Nothomb made the remarks at a reception given in his honour by Polish Foreign Minister Jozef Czyrek. Nothomb said that "Europe and the world need a stable Poland" and "the Belgian Government and people are following closely the changes now taking place in Poland." Nothoub stressed that the difficulties Poland is facing and the ways and means it seeks to solve them are exclusively "Poles' own affairs." [Text] [OW050844 Beijing XINHUA in English 0829 GMT 5 Dec 80]

POLISH BANK EXCHANGE MEASURES--Warsaw, December 5 (XINHUA)--The Polish People's Bank has announced a new regulation limiting the amount for the exchange of forints for Poles visiting Hungary. Under the regulation, every Polish citizen who goes to Hungary on private business is entitled to buy 1,500 forints a year. But he is only entitled to exchange 600 forints if his stay is less than four days; he may exchange 150 forints more for each day over the four days up to 1,500 forints. The bank also regulates the amount of exchange allowed to transit tourists. [Text] [OW060143 Beijing XINHUA in English 0134 GMT 6 Dec 80]

POLISH-YUGOSLAV TRADE PROTOCOL--Warsaw, December 6 (XINHUA)--A 1981 trade protocol for mutual supply of goods was concluded between Poland and Yugoslavia today, reported the Polish Press Agency. Under the protocol, [the] two countries will increase the exchange of goods and promote cooperation in production and among specialized departments. Poland will export to Yugoslavia power plants, chemical industry equipment, sulphur and hard coal and import from it raw materials and equipment for chemical industry, food and light industrial products including knit wear, piece goods and shoes. A big proportion of the mutual supplied goods will be metallurgical products. Not long ago, Poland signed trade protocols with Bulgaria and the People's Democratic Republic of Korea. [Text] [OW070757 Beijing XINHUA in English 0722 GMT 7 Dec 80]

DELEGATION LEAVES BELGRADE--Belgrade, December 7 (XINHUA)--A Chinese physical culture delegation left here today after a 6-day visit which resulted in the signing of the minutes of talks on bilateral cooperation and exchange of experience in the relevant field in 1981. Led by Lu Jindong, vice-minister of the Physical Culture and Sports Commission, the Chinese group had discussions with Milan Ercegan, vice-chairman of the Yugoslav Physical Culture Council, on matters of bilateral exchanges and of friendly cooperation in international institutions. The Chinese delegation began their visit on December 2. [Text] [OW071520 Beijing XINHUA in English 1510 GMT 7 Dec 80]

AVIATION DELEGATION HONORED--London, December 5 (XINHUA)--Norman Tebbit, parliamentary under secretary of state for trade, gave a reception here today in honour of the Chinese goodwill delegation led by Lu Zhengzhe, deputy director-general of the General Administration of Civil Aviation of China (C.A.A.C). The delegation has come to attend the celebrations of the commencement of weekly direct air services between China and the United Kingdom at the invitation of the British Airways. Chinese Ambassador Ke Hua gave a farewell reception for the visiting Chinese delegation at the embassy here this evening. [Text] [OW060248 Beijing XINHUA in English 0242 GMT 6 Dec 80]

EEC AID TO PORTUGAL--Brussels, December 5 (XINHUA)--The European Communities and Portugal signed on December 3 here an agreement on the implementation of pre-accession aid for Portugal, according to a press release published by the General Secretariat of the Council of the European Communities. Under the terms of this agreement, starting from January 1 1981, a total amount of 275 million European units of account (about 360 million U.S. dollars) will be gradually given to Portugal in the form of loans, for promoting regional development in Portugal and strengthening the Portuguese economy. This is the first time that an aid of this type has been taken out of the community budget to assist a country which has applied for accession. Speakers at the signing ceremony emphasized that the aim of this pre-accession aid was to facilitate Portugal's integration into the community. [Text] [OW051907 Beijing XINHUA in English 1855 GMT 5 Dec 80]

FRG, ITALY ON POLAND--Bonn, December 9 (XINHUA)--Chancellor Helmut Schmidt of West Germany and Prime Minister Arnaldo Forlani of Italy stressed here today that any foreign intervention in Poland involves great risks. They repeated their warning to countries concerned to take a cautious attitude toward the Polish problem. They were speaking to newsmen after their one-day consultation. Schmidt also expressed the belief that the Polish people are capable of overcoming their current difficulties according to their own desire. West Germany, he added, will also be cautious with regard to the Polish problem. It is reported that the two leaders focused their talks on the situation in Poland and aid to Italy after the earthquake. Present on the talks were also West German Minister of Foreign Affairs Hans-Dietrich Genscher and Italian Foreign Minister Emilio Colombo. [Text] [OW100757 Beijing XINHUA in English 0738 GMT 10 Dec 80]

ITALY OPPOSES POLISH INTERVENTION--Rome, 6 Dec (XINHUA)--Paolo Bufalini, a leading member of the Italian Communist Party, today said: "We once again declare publicly that we will consider a military intervention in Poland on the part of a member of the Warsaw Pact a most grave fact absolutely unacceptable to us." He told UNITA in an interview: "We agree with what Kania said about 'innovation without anarchy,' but in any circumstances we hold that the struggle to resolve the Polish crisis should be carried out by the Polish working class, the Polish people and the Polish Communist Party with no pressure or interference from any other Communist Party or socialist country. These principles on the building of a socialist society, international detente and safeguarding of peace are of fundamental importance to us." The paper also reported the attitude of the leadership of the Italian Socialist Party toward the crisis in Poland which expressed "utmost concern" over a possible intervention in Poland and hoped for a peaceful solution of that crisis. [Text] [OW061522 Beijing XINHUA in English 1513 GMT 6 Dec 80]

POLISH TRADE UNION COUNCIL--Warsaw, December 5 (XINHUA)--The Central Council of Polish Trade Unions is to cease its operation beginning December 31, according to the press agency of Poland. A decision to this effect was made at a plenary session of the council here today. The council also decided to stop the operation of the provincial trade union councils. The Central Council was set up in 1944 with 23 affiliated unions. It now has a membership of 12 million. Since the strikes last July and August, many workers have withdrawn their membership and set up independent and self-governing "solidarity" trade unions. The affiliated trade unions quit the Central Council and set up new unions. In such circumstances, the Central Council of Polish Trade Unions has to stop its operation. [Text] [OW060819 Beijing XINHUA in English 0806 GMT 6 Dec 80]

POLISH 'SOLIDARITY' OPPOSES STRIKES--Warsaw, December 6 (XINHUA)--The Polish Independent and Autonomous "Solidarity" Trade Union in a statement yesterday reiterated its opposition to any irresponsible strikes and told its subordinate trade unions that they have no right to hold strikes without the approval of the trade union leadership. The statement, which was released by a press spokesman of the trade union's national consultative committee, said: "At present, there are no strikes or protests in Poland, nor any forecast for any such action." Therefore, "there are no reasons for unease and alarm." This statement is a response to charges that "solidarity" is sowing seeds of anarchism. The statement urged all mass media to publicize the November 26 statement of the National Consultative Committee concerning strikes, which stressed that "under such a tense situation, the holding of any strike is not for but against the real interests of the trade unions. In the light of the interests of the nation and our organization, we warn against any irresponsible strikes." [Text] [OW061624 Beijing XINHUA in English 1613 GMT 5 Dec 80]

ROMANIAN-IRAQI OFFICIALS MEET--Bucharest, December 8 (XINHUA)--Nicolae Ceausescu, general secretary of the Romanian Communist Party, president of Romania and president of the Romanian Socialist Democracy and Unity Front, today received here Hikhat Ibrahim, member of the Revolutionary Command Council, member of the regional leadership of the Arab Ba'th Socialist Party and member of the Supreme Committee of the National Progressive Front, according to AGERPRES. It reports that the two sides "expressed concern over the development of the present world political weather." It also states they stressed the need for more efforts to reinforce the process of detente, peace and cooperation, and the ending of tension and conflict in various parts of the world through political means and negotiations. The report says, "Referring to the Iraq-Iran conflict, they stressed that every effort should be exerted to reach a ceasefire and to seek a political solution through peaceful means, in the interests of regional peace, world detente and national independence." [Text] [OW090248 Beijing XINHUA in English 0227 GMT 9 Dec 80]

JAPAN ASSISTS NEPAL--Katmandu, 5 Dec (XINHUA)--The Government of Japan has decided to extend to Nepal a grant assistance up to 202.4 million rupees for developing the national economy of the country. This was disclosed at a press conference held by the visiting Japanese Parliamentary Vice-Minister for Foreign Affairs Kazuo Aichi here this evening. Three notes concerning the assistance were signed and exchanged this afternoon by the Japanese vice-minister and Nepalese Assistant Minister for Food and Agriculture Madan Bahadur Pradhan. In answer to the question of what an attitude Japan would take towards Nepal's peace zone proposal, Kazuo Aichi said that during his talks with Nepalese Foreign Minister K. B. Shahi, he himself had expressed support for the proposal on behalf of the Japanese Government because "it is meaningful and effective, and supported by many nations in the world." Kazuo Aichi arrived in Nepal yesterday for a three-day visit. He has been received by King Birendra and Prime Minister Surya Bahadur Thapa of Nepal. [Text] [OW051924 Beijing XINHUA in English 1905 GMT 5 Dec 80]

LEADERS WARNED ON BUYING U.S. ARMS--"Since the United States and some other countries of the NATO bloc have relaxed restrictions on selling offensive arms to our country, some people have become crazy with joy, thinking that this is a reliable guarantee for realizing the modernization of our army. At a recent meeting of the CCP Central Committee's military commission, Vice Chairman Deng Xiaoping, disregarding the economic budget for 1981 approved at the Third Session of the NPC, decided to appropriate a large sum of money to buy more U.S. arms in the next few years." Many people have opposed this decision of Deng Xiaoping. Their reasons are: Buying arms from the United States involves a large sum of money. Everyone knows that Vice Chairman Deng met with U.S. Defense Secretary Brown at the beginning of this year. During the meeting it was agreed that China would need $80 billion to modernize its conventional forces. Needless to say, such a large sum of money would certainly adversely affect China's economic development plan. Practice has proven that complete reliance on U.S. arms would bring about serious consequences. A concrete example was Iran under the former shah. PRC leaders are warned not to lead the modernization of China's armed forces astray. [Summary] [OW120805 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 10 Dec 80]

PAKISTANI PER CAPITA INCOME--Islamabad, December 5 (XINHUA)--Pakistan stands out with the highest per capita income among the seven South Asian countries, the local press reported today quoting an annual report of the World Bank for 1979-80. Pakistan, with a per capita income of 230 U.S. dollars, is followed by Sri Lanka with 190 dollars, India with 180, Burma and Maldives with 150 each, Nepal with 120 and Bangladesh with 90, the lowest. These countries with a total population of 900 million represent about one-fifth of the world's total population and account for about two-fifths of the population in the less developed countries. During the decade of 1971-80, the output in these countries increased by about 33 per cent while the population rose by 26 per cent with the result that much of the gains were rendered insignificant and the growth in average per capita income increased only around one per cent annually. In view of this, hardly any improvement was noticeable in the living standards of the absolute poor population of about 350 million in the region. The report noted that South Asia has the potential for accelerated economic growth in the 1980s at a rate well in excess of its population growth. [Text] [OW051648 Beijing XINHUA in English 1613 GMT 5 Dec 80]

YAR COTTON PRODUCTION--San'a', December 7 (XINHUA)--The output of cotton in North Yemen is expected to reach 2,400 tons this year, 5 times that of last year, said Lutuf Ans, director of the planning department of the Yemeni Agriculture Ministry. Ans said in an interview with XINHUA that the area sown to cotton this year is about 7,000 hectares, 4.8 times that of last year. The Yemen Arab Republic is a cotton-producing country. In 1974, the output reached a record high of 9,800 tons, of which 5,200 tons were sold abroad. With the large outflow of labour force from the countryside, the cost of production increased. Meanwhile, the purchase price set by the government had been low. As a result, the area under cotton and the output substantially dropped, last year, only 600 tons were produced. A national higher committee for cotton was established last May and a number of measures were taken to increase the cotton production: the purchase price was raised by 42.8 per cent; the government lends cotton farmers 600 riyals for each hectare sown to cotton instead of the earlier rate of 350 riyals; and supplies them with free pesticides for three years. The government also decided to import more farm machines to make up the shortage of labour force. [Text] [OW071842 Beijing XINHUA in English 1832 GMT 7 Dec 80]

PAKISTAN ENERGY CONSERVATION--Islamabad, December 4 (XINHUA)--The Pakistan Interministerial National Energy Policy Committee has recommended a larger utilisation of natural gas and liquified petroleum gas in order to conserve energy. Official sources said here yesterday that the committee has observed that at present 91 per cent of the oil demand is imported. The oil import bill is estimated at 1,500 million U.S. dollars which constitutes more than 60 per cent of last year's export earnings. Kerosene consumption registered a decline of nine per cent in the first half of 1980-81 and a further decline will be achieved through continuing efforts to hit a target of 100,000 domestic gas connections each in 1980-81 and 1981-82. One hundred thousand gas connections could save about 30,000 tons of kerosene. Furthermore, liquified petroleum gas production will increase from 36,000 tons per year to 60,000 tons by the end of 1981-82. A compressed natural gas project has also come under review. This project would be able to replace high speed diesel and may save consumption of gasoline. Pakistan is also anxious to maximize indigenous production of oil. The indigenous production of crude oil was stated to rise from 11,000 barrels per day to 14,000 barrels by June 1981, and to 21,000 barrels by June 1982. [Text] [OW041514 Beijing XINHUA in English 1505 GMT 4 Dec 80]

SAUDI OFFICIAL ON AFGHANISTAN--Islamabad, December 7 (XINHUA)--The Saudi Arabian interior minister, Nayif Ibn 'Abd al-Aziz al-Sa'ud, who is on a visit to Pakistan, said that big powers should respect the rights of small nations and should not impose anything by force. Addressing a press conference here today, he said that Pakistan and Saudi Arabia along with other countries of the world hoped that Afghan refugees should return to their own country in an atmosphere of peace and tranquility. Nayif visited Afghan refugee camps in Peshawar yesterday. Speaking to the refugees, he said that the current situation in Afghanistan could ultimately affect the entire world and, therefore, it was the duty not only of the Muslim countries but also of the other countries to pay greater attention immediately to its early solution. This morning Nayif held talks with his Pakistan counter-part Mahmud Haroon on bilateral cooperation in various fields. [Text] [OW071632 Beijing XINHUA in English 1611 GMT 7 Dec 80]

BANGLADESH ON PALESTINIAN ISSUE--Dacca, December 7 (XINHUA)--Bangladesh Foreign Minister Shamsul Haq yesterday said Bangladesh had time and again underscored the paramount importance of the immediate evacuation of Israel from all illegally occupied Arab lands including Jerusalem as a prerequisite to a lasting and durable peace in the Middle East, according to press reports here today. Speaking on the Palestinian problem at the Bangladesh Institute of Law and International Affairs, Shamsul Haq said that today's need for closer cooperation among Islamic countries, politically and economically, has assumed a new urgency. The success of the efforts of the world in general, and of the Islamic nations in particular, for a comprehensive and just peace in the Middle East, depends on our united efforts and determined will. [Text] [OW071708 Beijing XINHUA in English 1655 GMT 7 Dec 80]

ISRAELI DETENTION CONDEMNED--Baghdad, December 7 (XINHUA)--The Iraqi General Federation of Trade Unions strongly denounced the Zionist regime for detention of Arab trade union officials in Palestine and occupied Arab territories, according to press reports here today. In a statement issued yesterday, the federation condemned the oppressive and terrorist acts committed by Israel against the Arab Palestinian people inside the occupied territories. The federation called upon Arab workers to exert concerted efforts and pressure to ensure the release of Arab unionists detained by Israeli authorities. It also pledged full support for the struggle waged by the Arab Palestinian people, led by their legitimate representative, the PLO. [Text] [OW080148 Beijing XINHUA in English 0136 GMT 8 Dec 80]

MOROCCO DETAINS TRAWLERS--Rabat, December 7 (XINHUA)--Moroccan coast guards recently searched two Soviet and one Cuban trawlers near its southern coast, and later escorted them to Dakhla Port, LE MATIN DU SAHARA reported today quoting Ahmed Dlimi, commandant of southern military zone. The paper said that these trawlers were detained because they were suspected of engaging in espionage including provision of information about Moroccan air force movements to the Popular Front for the Liberation of West Sahara. [Text] [OW080828 Beijing XINHUA in English 0817 GMT 8 Dec 80]

IRANIAN ARMY UNITY URGED--Tehran, December 6 (XINHUA)--Iranian leader Khomeyni called here today for unity and coordination among the Iranian army, revolutionary guards and other military organizations. He warned that if they do otherwise, "an Islamic country would fall to the hands of the blasphemers and Islam would be isolated for a long period," Radio Iran reported. Meeting a group of revolutionary guards who met him this morning, he urged the intellectuals to allow the cultural revolution to come into being for several years and see what experiences and results will be. While condemning the "plot against the clergymen," he said that if the clergymen and people can be separated from each other, the superpowers will celebrate it. It was reported that shopkeepers' strikes and demonstrations in support of clergymen were still going on in some Iranian cities. [Text] [OW061924 Beijing XINHUA in English 1913 GMT 6 Dec 80]

SOVIET CRIMES DENOUNCED--Paris, December 1 (XINHUA)--Two leaders of the Afghan National Islamic Front disclosed here today that there are at least 11 Soviet divisions with 120,000 men in Afghanistan. The two leaders, Mohammad Nazem and Hamid Nasser-Zia, vice-presidents of the front, made a joint speech before a regular session of the Western European Union Assembly. Nazem said the Soviets had conducted massive bombings of valleys and villages in Afghanistan and their scorched earth policy had claimed more than 500,000 lives of unarmed civilians. "But, the Afghan people have demonstrated their ever greater determination to resist the brutal occupation of their country," he stressed. He also cited facts to show that the Soviet invaders have built a lot of military bases in Afghanistan. Nazem appealed to the assembly to consider the reality of the situation in Afghanistan and call on the governments of its member states to "take a positive initiative and support the Afghan resistance movement in a constructive way." [Text] [OW021258 Beijing XINHUA in English 1244 GMT 2 Dec 80]

INDIAN-INDONESIAN JOINT COMMUNIQUE--Beijing, December 4 (XINHUA)--India and Indonesia today called for a settlement of the Afghan issue and expressed the opinion that the Afghans should be left alone to determine their own "destiny free from foreign interference and intervention," according to reports from New Delhi. India and Indonesia expressed their views in a joint communique issued at the end of President Suharto's four-day visit to India. The two sides expressed in the joint communique full support for the independence, sovereignty, territorial integrity and non-aligned status of Afghanistan. During their talks, the joint communique says, the leaders of the two countries expressed their grave concern at the deteriorating world situation, particularly in the Asian region, and were distressed by the Iran-Iraq conflict. The joint communique said that both sides attached importance to a United Nations conference on the Indian Ocean to be held in Sri Lanka next year and urged all countries to endeavour to implement the U.N. declaration to make the Indian Ocean a zone of peace. [Text] [OW041304 Beijing XINHUA in English 1257 GMT 4 Dec 80]

EGYPT CONDEMNS ISRAEL--Cairo, December 8 (XINHUA)--Egyptian Deputy Premier and Foreign Minister Kamal Hasan 'Ali today condemned the Israeli security forces' suppression of Bir Zeit University students as "inhuman." He charged that the Israeli Government's measures in the West Bank and Gaza Strip represent the worst form of suppression by military occupation. He added that the Israeli Government's actions contravene the letter and spirit of the Camp David agreements and amount to serious escalation of the situation in the West Bank and Gaza Strip. Earlier, commenting on the Israeli Government's decision to expel chiefs of Hebron and Halbul municipalities, El Qawsma and Mohammad Melhim, Hassan Ali said that the Israeli Government took a hardline which leads to instability in the West Bank and Gaza and does not promote efforts conducive to encouraging the Palestinians to participate in the peace negotiations. [Text] [OW090206 Beijing XINHUA in English 0123 GMT 9 Dec 80]

IRAQI AID TO JORDAN--Baghdad, December 8 (XINHUA)--Iraq has transferred to Jordan 55 million U.S. dollars to make up for the failure of Libya and Algeria to honour their shares of pan-Arab aid to Jordan after the outbreak of the Gulf war, a spokesman for the Ministry of Finance declared yesterday. According to today's local newspaper reports, the spokesman said that the transfer reflects the firm belief of the government of Iraq in confronting the imperialist-Zionist and reactionary designs and in the pursuit of fostering the pan-Arab interests in liberation and unity. [Text] [OW090242 Beijing XINHUA in English 0216 GMT 9 Dec 80]

TIANJIN MAYOR MEETS JAPANESE DELEGATION--[Summary from poor reception] At 2000 on 3 December, a 6-man delegation of a Japanese limited company paid a visit to Mayor Hu Qili. The president of the company "conveyed regards to Mayor Hu from Mr Tatsuo Miyazaki, the mayor of Kobe city. He then informed Mayor Hu about the preparations for the international exposition currently being carried out in Kobe city." Mayor Hu Qili extended his warm welcome to the delegation and expressed his hope for wider economic cooperation between China and Jpan. Li Zhongyuan, deputy mayor of Tianjin, also met with the Japanese delegation on the afternoon of 3 December. The delegation is to leave Tainjin 4 December. [SK050526 Tianjin City Service in Mandarin 0030 GMT 4 Dec 80]

POLISH GOVERNMENT-CHURCH APPEAL--Warsaw, December 9 (XINHUA)--The entire Polish people should unite as one to ensure the survival of their sovereign state and free it from the current crisis. This identical view was reached by both the Polish Government and the Polish Catholic Episcopate at a joint meeting yesterday. The meeting put emphasis on the essential factor necessary for the smooth development of the country--stability. The meeting stressed that the task facing the Polish people is to work earnestly and to encourage the authorities to negotiate with the organizations concerned to eliminate those factors leading to strikes and tension. The meeting pointed out: "The Polish people, irrespective of their world outlook and political views, should get united as one to ensure the survival of their state and free it from the current crisis." CUBAN OFFICIAL VISITS IRAQ--Baghdad, December 8 (XINHUA)--Cuban Foreign Minister Asidiro Malmierca, who was on a peace mission to Iraq on behalf of the non-aligned movement, left here today after a five-day stay, Radio Baghdad reported this evening. He had talks with Iraqi President Saddam Husayn and Deputy Prime Minister Taroq A'ziz on suggestions from the non-aligned movement for a peaceful and just settlement of the Iraqi-Iranian conflict. [Text] [OW090244 Beijing XINHUA in English 0231 GMT 9 Dec 80]

EEC FOOD TO POLAND--Brussels, December 9 (XINHUA)--The European Communities are getting ready to send food exports to Poland on its demand, according to "EUROPE" today. This action is being taken in line with the December 2 decision taken by the EEC summit. In its communique, the summit expressed its "willingness to meet, insofar as their resources allow, the requests for economic aid which have been made to them by Poland." At present, the economic situation in Poland is in serious difficulties. The level of agricultural production this year was down by 12 per cent as compared with that of last year. It is worse than that in 1973. Industrial production also registered a sharp decline in the recent period. Confronted with such a situation, the Polish authorities have very likely asked the commission of the EEC for 100,000 tonnes of beef and veal and 40,000 tonnes of butter, "EUROPE" reported. The commission is considering the requests in the light of how much the EEC can give. Normally, it would be up to the management committee to take the decisions on the requests. But in view of the importance of the matter, particularly from the political point of view, it will most likely be discussed by the EEC Ministerial Council. U.S. AWACS IN W. GERMANY--Bonn, December 10 (XINHUA)--The first group of two AWACS (Airborne Warning and Control System) planes arrived at the Ramstein airbase, West Germany, this afternoon at the request of the North Atlantic Pact Organization. The two AWACS planes came on a non-stop flight from the United States, and were refuelled over the Atlantic. It is reported that the United States will station four planes of the kind in West Germany. [Text] [OW111518 Beijing XINHUA in English 1509 GMT 11 Dec 80]

DENG XIAOPING 'HERO' ROLE SCORED

OW141910 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 13 Dec 80

[Text] During the trial of the 10 major criminals, some people have tried to make Vice Chairman Deng look as if he were a hero opposing the "gang of four." They have tried skillfully to create a false image of Deng Xiaoping as the "gang of four's" strong opponent. They claimed that "the 'gang of four' always directed their spearhead at Comrade Deng Xiaoping and spared no effort to slander and frame him." They also claimed that "in the face of such frenzied persecution by the 'gang of four,' Vice Chairman Deng never flinched but waged a courageous struggle." In short, they want people to regard Comrade Deng Xiaoping as a beacon in the 10-year dark period and a hero against the "gang of four." By throwing dust in people's eyes and creating a false image, they want to strengthen Vice Chairman Deng's steadily declining power and position.

But, history will give its verdict on whether he was a hero against the "gang of four" or a hypocrite. During the rule of the erroneous line and the 10-year turmoil, most of our cadres and ordinary party members waged a life or death struggle against the feudalist, fascist dictators in order to defend the party and people's cause and the party's political line. Revolutionaries of the older generation, such as Liu Shaoqi, Peng Denhuai, He Long, Chen Yi, Zhang Wentian, Luo Ruiqing and Huang Keqing, and young revolutionary martyrs, such as comrades Zhang Zhixin and (Wang Mingshi), were typical examples. Most of them sacrificed their lives. They defied brutal force, refused to yield to evil forces and maintained their heroic spirit. They will live forever in history.

Contrary to these examples, certain national and local leaders submitted to the tyrannical rule of Lin Biao and the "gang of four" during the Cultural Revolution. They fell on their knees as soon as they were attacked and wrote self-criticisms, statements of repentance or statements acknowledging their mistakes. By doing this they safely survived the 10-year catastrophe. Yet, surprisingly, they now pose as "heroes against the 'gang of four.'" The praises lavished on Comrade Deng Xiaoping fall into this category.

Truth, however, cannot be covered up, just as fire cannot be wrapped up in paper. An abundance of historical facts show that how Vice Chairman Deng acted before Lin Biao, the "gang of four" and Chairman Mao was a far cry from what is advertised today. People will not easily forget that at the work conference of the party Central Committee on 23 October 1966, Comrade Deng Xiaoping profusely praised the very people he claims to have vigorously opposed. At that meeting, he said: "The decision of the 11th plenary session of the 8th CCP Central Committee on choosing Comrade Lin Biao as the chairman's assistant and successor and on electing Comrade Jiang Qing, Zhang Chunqiao and Yao Wenyuan--comrades who hold high the red banner of Mao Zedong Thought--to key posts in the party Central Committee is extremely necessary and important. I express my sincere support." At the same meeting Deng Xiaoping also [word indistinct] said: "I completely support the instructions issued by Chairman Mao and Comrade Lin Biao at this conference. I completely agree with Comrade Chen Boda's speech."

Judging from the above quoted remarks, Comrade Deng Xiaoping had completely surrendered to Lin Biao and the "gang of four" as early as the initial period of the Cultural Revolution. In his 50,000-word written self-criticism, he even framed other people in order to insure his own official position. He said: "I completely support the resolution of the 12th plenary session of the 8th CCP Central Committee personally presided over by Chairman Mao. Liu Shaoqi has committed towering crimes. We must thoroughly expose and criticize his counterrevolutionary crimes." At the instructions of Kang Sheng and Chen Boda, Comrade Deng Xiaoping even collected a lot of incriminating material against Liu Shaoqi. Thus, he actually helped the evil forces frame Chairman Liu.

In view of Comrade Deng Xiaoping's expressed determination to repent and mend his ways and his contributions in struggling against Liu Shaoqi and other party, government and army leaders, the "gang of four" and Chairman Mao rehabilitated him. On 12 April 1973, Comrade Deng Xiaoping made his public appearance in the company of Wang Hairong and returned to the political stage.

Today Comrade Deng Xiaoping distorts historical facts and poses as the most pitiful victim of the Cultural Revolution and a hero against Lin Biao and the "gang of four." His actions, obviously, are aimed at escaping his grave responsibility in helping the "gang of four," flattering Lin Biao and the gang and colluding with the gang in doing evil.

PARTY AND STATE

DENG'S PAST SUPPORT FOR CULTURAL REVOLUTION DISCUSSED

OW160343 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 15 Dec 80

[Text] In a recent speech, Comrade Deng Xiaoping said: "Many military cadres are resentful of me. I am not afraid of this. I have been knocked down three times and am prepared for another, the last. A fairly large number of military cadres have been punished in the past few years. This is not because, as some people put it, 'Deng Xiaoping is giving vent to personal spite.' I said before that I had completely forgotten what took place during the Cultural Revolution. I did not want to think about and mention those things because I was very forgetful. But later on I thought that without doing so, it would be difficult to distinguish the faces of some people. In the past the army followed Lin Biao and the 'gang of four' and launched the 'three support-two army's' campaign. How can the evil record of army cadres be written off at one stroke?"

The above remark by Vice Chairman Deng Xiaoping would sound like a golden saying a few years ago, but it sounds highly hypocritical now. If Comrade Deng Xiaoping were indeed not venting his personal spite on the army, he would by no means firmly hold on to the army's participation in the "three support-two army" campaign and would not put the former principal leaders of our army, who had been detained for 9 years under the charges fabricated by the "gang of four," on public trial. He would neither regard opposition against Comrade Deng Xiaoping as a grave crime and would not allow, with ulterior motives, people to praise Comrade Deng Xiaoping as the "hero" who opposed the Cultural Revolution and resisted Chairman Mao's erroneous line, and who was the "biggest victim" of the Cultural Revolution--all are far from true.

As long as Comrade Deng Xiaoping regards as a (?grave crime) the army cadres' involvement in the Cultural Revolution and implementation of the (?left-leaning military control) in accordance with the instructions of the chairman of the CCP Central Committee Military Commission, the premier and the defense minister, we would naturally like to turn to a few pages in Comrade Deng Xiaoping's "Clean History." Why were Liu Shaoqi, Peng Dehuai, He Long, Chen Yi and many other people persecuted to death? Why were tens of thousands or more people rehabilitated only after the downfall of the "gang of four?" However, Comrade Deng Xiaoping, who was regarded as having committed the same crimes as Liu Shaoqi at that time, did not suffer any hardships during the Cultural Revolution but only assumed more important party, government and army posts than he had before the start of the Cultural Revolution. By raising these questions, we do not mean that we (?wish) Comrade Deng Xiaoping were persecuted to death as Liu Shaoqi was. We are merely saying that as long as his hands are all muddy, he should not have brushed the dust off other people. For example, in making self-criticism at a party Central Committee work meeting on 23 October 1966, Comrade Deng Xiaoping said: "I completely support the instructions made by Chairman Mao and Comrade Lin Biao during the meeting and endorse Comrade Chen Boda's speech on 16 October. It is necessary to further eliminate the influence of the erroneous bourgeois line represented by Liu Shaoqi and myself and implement the correct line personally formulated by Chairman Mao on the Great Proletarian Cultural Revolution. There are only two persons--Liu Shaoqi and I--in the party Central Committee who represent the reactionary bourgeois line in the Great Cultural Revolution." In the self-criticism Comrade Deng Xiaoping declared: "In order to fully carry out the proletarian Great Cultural Revolution, it is necessary to thoroughly repudiate the erroneous line of Liu Shaoqi and me. Comrade Chen Boda has set forth a correct opinion, which we have rejected. Comrade Chen Boda's correct opinion comes from the masses of people and is in line with Chairman Mao's line."

What is more, in order to protect himself, Comrade Deng Xiaoping attacked Peng Zhen, Yang Shankun, Deng Tuo, Wu Han and other people who had supported him but were persecuted at that time, by calling them "demons and devils." He also said that the wallposters written by Nie Yuanzi and six other comrades "play the great inspiring role of the Paris commune in Beijing" and that their rebellion against the "demons and devils" was good. "The Great Cultural Revolution not only guarantees that our country will not change its color but also has an epoch-making important significance for the whole world."

Therefore, it can be seen that the reason for the grave damage during the decade of chaos certainly lies in the support of Deng Xiaoping and other people for the Cultural Revolution. Today, when the (?trial) of the 14,000 army cadres is going to start soon, we hope that Deng Xiaoping and other leading comrades in the central authorities will be strict with themselves and broadminded toward others.

JIANG QING TRIED FOR FRAMING PARTY MEMBERS

OW131309 Beijing XINHUA Domestic Service in Chinese 1553 GMT 12 Dec 80

[Text] Beijing, 12 Dec (XINHUA)--The first tribunal of the special court interrogated Jiang Qing for the fifth time this morning. An abundance of evidence verifies that Jiang Qing colluded with Kang Sheng in 1968 to frame many members of the Eighth CCP Central Committee as "enemy agents, renegades" or "elements maintaining illicit foreign relations." It also verified that Jiang Qing also directly framed and persecuted Lu Dingyi, Hu Qiaomu, Zhou Yang, Qi Yanming, Wang Kunlun, Qian Junrui, Liao Mosha, Zhang Ruihua and Wang Jie.

The judge Qu Yucai asked Jiang Qing: On 21 July 1968, Kang Sheng, at your request, sent you a secret letter with a list of the framed members and alternate members of the Eighth CCP Central Committee attached. Was this true and what was your purpose? Jiang Qing admitted that she had requested the list, but argued that this was "normal and legal," adding that she wanted "to understand the situation" as she was preparing for the 12th plenary session of the 8th CCP Central Committee. The judge Gan Ying immediately pointed out: Was it justified and legal since Jiang Qing was not even a member of the CCP Central Committee? Jiang Qing went so far as to say what was said at a meeting of the Cultural Revolution group under the CCP Central Committee was tantamount to the words of the party Central Committee. This caused an uproar in the court.

Public prosecutors Jiang Wen and Wang Zhenzhong refuted Jiang Qing's crafty arguments by pointing out that the list of framed leaders drawn up by Jiang Qing in collusion with Kang Sheng on 21 July 1968 was a conspiracy schemed by them and company to persecute state leaders and usurp party and state leadership. They said that the CCP Central Committee had never entrusted Jiang Qing or Kang Sheng to discuss the namelist of the members who were to attend the 12th plenary session of the 8th CCP Central Committee. Nor was there any predetermined namelist. The namelist of the framed leaders was concocted secretly by the two who worked in collusion together. After the Great Cultural Revolution was launched, Jiang Qing, Kang Sheng and company criticized by name many members and alternate members of the Eighth CCP Central Committee who were criticized, struggled against and framed. According to an investigation, during the Great Cultural Revolution Kang Sheng had directly framed 592 people by referring to their names, of whom 120 were members and alternate members of the Eighth CCP Central Committee.

In a small part of a recording of her speeches from the end of 1966 to July 1970, Jiang Qing had framed 172 people by name, of whom 28 were members and alternate members of the Eighth CCP Central Committee. All these people were persecuted.

The public prosecutors pointed out that in a speech delivered on 18 September 1968, Jiang Qing slandered Lu Dingyi as "an agent of the Kuomintang secret service--bureau of investigation and statistics of the military council"; slandered Hu Qiaomu as a "renegade" and Zhou Yang as a "traitor." Jiang Qing also framed Qi Yanming, Wang Kunlun, Rong Gaotang, Tian Han, Qian Junrui, Liao Mosha, Sun Yang, Chen Guang, Chen Huangmei, Lui Baiyu, A Jia and Wang Kun by mentioning their names and calling them "enemy agents," "renegades," or "elements maintaining illicit foreign relations." As a result, they were severely persecuted and many of them were killed or had their families broken up. These crimes committed by Jiang Qing are known to all.

The judge asked Jiang Qing if she had ever called Lu Dingyi an "agent of the bureau of investigation and statistics of the Kuomintang's military council." Jiang Qing said: "I have no basis for calling Lu Dingyi an agent of the bureau of investigation and statistics of the Kuomintang's military council. Maybe there is something wrong with your records. You can call out your witnesses." The bench immediately read the speech made by Jiang Qing on 18 September 1968 when she received representatives of the Chinese Beijing Opera Troupe, the Central Philharmonic Society and other units. A tape recording of that speech was also played in the court: "...Lu Dingyi is an agent of the bureau of investigation and statistics of the Kuomintang's military council. We have come to know of this now and things may be more complex." Jiang Qing had to admit that those words were spoken by her and it was her voice. The judge asked her what was her basis for framing Lu Dingyi as an "agent of the bureau of investigation and statistics of the Kuomintang's military council?" Jiang Qing became mischievous and made unreasonable demands. First she said, "I cannot admit that it was framing. You have to let me think for awhile. Ask me other questions first." Later she slanderously said that a brother of Lu Dingyi was probably an "enemy agent" and that this "had something to do with" Lu Dingyi.

The judge then conducted hearings on crimes committed by Jiang Qing in slandering Hu Qiaomu and Zhou Yang. A tape recording of the related portion in Jiang Qing's speech on 18 September 1968 was played in the court. She said in this talk: "Hu Qiaomu was arrested in Beijing and work is being done in handling this question of betrayal..." and "...he (Zhou Yang) has also connections with the bureau of investigation and statistics of the military council.... (He) escaped to Japan and turned traitor after his arrest in Japan. Therefore, he is not only an agent of Japan but also an agent of the United States. His case has not yet been finally closed [Luo An 5507 2714]... but he is positively an enemy agent of the Kuomintang as well as a hidden traitor and enemy agent." Jiang Qing admitted it was her talk. The judge asked Jiang Qing what was her ground for smearing Hu Qiaomu and Zhou Yang? Jiang Qing failed to answer this question. The judge pointed out that Jiang Qing deliberately slandered and persecuted these persons by declaring them as "enemy agents" and "traitors" by name at the conference without any factual basis.

The judge questioned Jiang Qing whether or not on 3 January 1971 she smeared Xu Xiangqian's wife, Hang Jie, as a "renegade," and Nie Rongzhen's wife Zhan Gruihua, as an "enemy agent?" Jiang Qing admitted she had made this remark. But she talked much nonsense that she suspected that Zhang Kuihua's "intelligence report" led to the bombing of the party Central Committee by the reactionary Kuomintang aircraft when the Central Committee moved to Chennanzhuang in Fuping County in 1948. The judge immediately pointed out that although the bombing was indeed the result of secret information provided by the hidden Kuomintang agents, the case was already closed in the early days after liberation and the criminals had been punished. Jiang Qing has her own ulterior motive by going so far as to fabricate a criminal charge against Comrade Zhang Ruihua after so many years. The court then read out a statement given by the Ministry of Public Security in handling this case. Jiang Qing herself admitted that the case was settled at that time and all criminals involved were "executed by firing squad." But she still refused to admit her own crime of fabricating false charges against others. She said that she had heard it from Kang Sheng. The prosecutor pointed out that by smearing Huang Jie and Zhang Ruihua, Jiang Qing was actually trying to frame the two old marshals--Xu Xiangqian and Nei Rongzhen.

A tape recording of Jiang Qing's talk on 3 July 1970 was played in the court. Jiang Qing in this talk falsely accused Qi Yanming, noted calligrapher and [former] vice minister of culture, as an "active counterrevolutionary," [former] acting minister of culture Xiao Wangdong as a "historical counterrevolutionary," and Wang Kunlun, Qian Junrui, Cao Liang, and Liao Mosha as "enemy agents with strong evidence." The court declared that reinvestigations have proved that these are out-and-out frameup cases and the comrades mentioned above have been rehabilitated. Because of Jiang Qing's false charges, Qian Junrui and Liao Mosha had been imprisoned for 8 years, and Xiao Wangdong and Wang Kunlun had been imprisoned for 7 years, greatly suffering both physically and mentally.

The victims Wang Kunlun and Liao Mosha appeared in court as witnesses. They accused that large numbers of revolutionary veteran cadres, writers with contributions, and professors were maimed or persecuted to death as a result of Jiang Qing's false accusation and persecution, creating untold disasters for the people. They asked the special court to severely deal with Jiang Qing according to law, the principal defendant of a counterrevolutionary clique who cruelly injured and killed the people and acted with utter disregard for human life.

Because accused Jiang Qing willfully made trouble in the court, continued to slander, frame ane even insult the witnesses, and unceasingly disturbed the court order in total disregard of the chief judge's instructions, the chief judge, Zeng Hanzhou ordered that Jiang Qing be taken from the courtroom. She was immediately taken away by bailiffs.

COURT TESTIMONY ON JIANG QING'S CRIMES

OW131908 Beijing XINHUA Domestic Service in Chinese 1410 GMT 12 Dec 80

[Text] Beijing, 12 Dec—Wang Kunlun, who was framed as a "spy" by Jiang Qing and imprisoned for 7 years, appeared at the first tribunal of the special court this morning to give testimony on Jiang Qing's crime of framing him and members of democratic parties in collaboration with Kang Sheng and Xie Fuzhi.

His testimony says: "I was framed by Jiang Qing, Kang Sheng, Xie Fuzhi and their company as a spy. Jiang Qing even said that I was a 'very formidable spy' and she had reliable 'proof.' As a result, I suffered serious persecution. Based on what they said, I was arrested and imprisoned for 7 long years."

His testimony says: "When I was in prison, Jiang Qing, Kang Sheng, Xie Fuzhi, and their company instructed the personnel in charge of the special case to obtain confessions from me by compulsion and give them credence. They forced me to admit that I was a 'spy' and 'counterrevolutionary.' Ever since the 1930's, I had carried out face-to-face struggle against Chiang Kai-shek under the direct leadership of the party, Zhou Enlai and the other comrades of the central authorities. However, they went so far as to falsely accuse me as a 'spy' and 'counterrevolutionary.' I resolutely resisted them. They cruelly tortured me because of my resistance. I was fastened with braces and hit and kicked to the extent that my teeth were broken, my head swelled up and I could not walk on my feet. At the same time, my whole family was persecuted. They not only considered my wife Cao Mengjun a 'spy' but also wanted to falsely accuse all my brothers and sisters and my daughter Jinling as spies or spy suspects. Even my third generation, my granddaughter, who was only 14 or 15 at that time, was not spared."

His testimony says: "Jiang Qing, Kang Sheng and their company did this not because they has special hatred against me. They named a large number of people, struggled against a large number of people, arrested a large number of people and persecuted a large number of people to death in order to realize their scheme for usurping the party and state leadership. Just taking the democratic parties for example, almost all comrades at the central and local levels who had cooperated with our party for a long time and those comrades who had done some good things for the people were persecuted. Almost all those communist party members who had worked faithfully to carry out the united front work and democratic persons who were noted at home and abroad were arrested or subjected to criticism and struggle. Those comrades had struggled against the Kuomintang reactionaries, Japanese imperialism and enemy spies before liberation and they were in danger of being killed at any time. However, they never finched from such danger and firmly followed the Chinese Communist Party. They had contributed their share of sweat and blood in the liberation and in building China. At that time, the Chiang Kai-shek reactionaries considered them as thorns in their eyes and flesh but dared not publicly murder them out of consideration for the people's strength and public opinion. Nevertheless, Jiang Qing did what Chiang Kai-shek dared not do and did what the reactionaries could not do at that time. Jiang Qing sabotaged the united front of our party and trampled on many of our good comrades bodily and mentally. As a result, many of them regretfully died. The crimes committed by Jiang Qing and her company are too numerous to count!"

The testimony says: "As a victim and witness, I request the special court to resolutely punish Jiang Qing for her numerous crimes in accordance with the law and to firmly refrain from giving her clemency!"

Wang Kunlun was accompanied at the court today by his daughter. Owing to his poor health, Wang Jinling read his testimony at the court on his behalf.

LIAO MOSHA CITES JIANG QING'S 'COUNTLESS CRIMES'

OW131452 Beijing XINHUA Domestic Service in Chinese 1440 GMT 12 Dec 80

[Text] Beijing, 12 Dec (XINHUA)--Liao Mosha, one of the victims of Jiang Qing's framing, appeared at the first tribunal of the special court this morning. He produced testimony about Jiang Qing's persecution of him, her slanders of the cadres and the ordinary people of Beijing and her rounding up other innocent persons which created grave and ill consequences.

Liao Mosha testified: "Jiang Qing, colluding with Kang Sheng, Xie Fuzhi and others, framed and persecuted large numbers of cadres and the ordinary people in Beijing. They smeared good people for no reasons at all and had the innocent rounded up at their will; and I was one of those smeared and persecuted by them. Jiang Qing falsely charged and venomously slandered that I was 'a terrible enemy agent.' This is purely fictitious."

"I joined the revolution when I was a teenage student in Hunan," Liao Mosha continued, "I grew up under party education and have never been divorced from party leadership and party directives for any single moment in the past decades. I have never stopped working for the party and the people."

After recalling how he got acquainted with Jiang Qing in Shanghai in 1933, Liao Mosha said: "She understands me completely and in every detail. I was imprisoned for 8 years, exiled for 3 years and physically tortured beyond description just because of her deliberate slander against me."

Shaking his finger at Jiang Qing, he continued: "I am not the only one who was cruelly persecuted by you and your lieutenants. Comrade Liu Ren, second secretary of the Beijing Municipal Party Committee, was labeled by you as an 'enemy agent' and you threw him into jail. Handcuffed for 5 years in the prison, he was even not allowed to wear a cotton-padded jacket during winter. The jacket was simply put on his shoulders only. He joined the revolution at the age of 14 or 15 and braved untold dangers for the party's cause. He, a loyal and veteran revolutionary, died in prison of your cruel persecution.

"Comrade Wu Han, deputy mayor of Beijing, was a noted historian and professor. A pure, innocent and fair-minded scholar, wholeheartedly devoted to teaching and writing, he was never divorced from books and the pen. During the war against Japan, Wu Han had accepted the party's program of war of resistance and for national salvation. Under the leadership of the party, he plunged into the struggle against Japan and for democracy, united the broad masses of patriotic intellectuals and students and made great contributions to the Chinese people's liberation. He was also arrested and thrown into jail and died in prison just because you smeared this veteran scholar and good comrade as a 'renegade' and 'enemy agent.' His wife Yuan Zhen and his daughter Wu Xiaoyan were also involved in the frame-up case and both died of persecution. His whole family was broken up and destroyed.

"Those who also died of persecution because of your framing included the celebrated writer Mr Lao She. He ardently loved the people, the motherland and our party. Following nationwide liberation, he promptly returned to the motherland from abroad. He returned to his native town in Beijing and, in response to the party's call, created a large number of outstanding works in praise of new China.

"Jiang Qing, you and your lieutenants have committed countless towering crimes. The people of Beijing Municipality hate you to the very marrow of their bones."

PARTY AND STATE

COURT INVESTIGATION OF ZHANG, WANG ENDS

OW131928 Beijing XINHUA Domestic Service in Chinese 1419 GMT 13 Dec 80

[Text] Beijing, 13 Dec (XINHUA)--Wang Hongwen confessed at the special court today that the armed rebellion in Shanghai was a result of the great pains taken by the "gang of four" to build an armed force of its own and that "Zhang Chunqiao and I should be held mainly responsible."

The first tribunal questioned defendants Wang Hongwen and Zhang Chunqiao this morning on the armed rebellion in Shanghai. The court investigation has proved that Zhang Chunqiao, Yao Wenyuan, Wang Hongwen and their followers Ma Tianshui, Xu Jingxian and Wang Xiuzhen built an armed force under their control for the gang in Shanghai in the name of "armed rebels" and "transforming the militia" and plotted an armed rebellion in the face of their impending doom.

In the course of the hearing, the documentary evidence of the plans for the armed rebellion and pictures of the weapons and transmitter-receivers used by followers of the "gang of four" to launch an armed rebellion were exhibited in court.

Testifying in court, Xu Jingxian and Wang Xiuzhen, organizers and directors of the armed rebellion, former secretaries of the Shanghai Municipal Party Committee and vice chairmen of the Shanghai Municipal Revolutionary Committee, and Shi Shangying, former responsible person of the Shanghai Militia Command, exposed how Zhang Chunqiao and Wang Hongwen instigated them to launch an armed rebellion.

Wang Xiuzhen confessed that this armed rebellion had been "inseparable from the great pains taken by Zhang Chunqiao and Wang Hongwen to build an armed force under their control." Wang Hongwen said to her on several occasions that "the army should not lead the militia, which should be under the control of the municipal party committee" and the "we must rely on this force to fight in the future."

Judge Wang Zhanping then asked Wang Hongwen: Why did you say that the army should not lead the militia, which should be under the control of the municipal party committee?

Wang Hongwen said in reply that in organizing the militia, Zhang Chunqiao had assigned this task to the "general headquarters of revolutionary worker-rebels in Shanghai" under their control and that in so doing we "actually seized the leadership of the Shanghai garrison command over the militia."

In testimony, Wang Xiuzhen also confirmed that on 23 September 1976 Wang Hongwen had said to her on the telephone: "You should heighten your vigilance, for class struggle is not over yet. The bourgeoisie in the party will not resign itself to defeat, and some people will try to bring Deng Xiaoping to power."

Wang Xiuzhen said: Wang Hongwen issued these "instructions" to us. Thus, on the fall of the "gang of four," "we held that revisionism had emerged in the party Central Committee and that the time of severe test had come. We then plotted to launch a counterrevolutionary armed rebellion."

The judge asked Wang Hongwen: You said on several occasions that "it is necessary to guard against revisionism and to be prepared for guerrilla warfare." What did you mean by this?

Wang Hongwen said in reply: "Revisionism meant (a comeback of) those veteran cadres who were overthrown during the Cultural Revolution. Once revisionism emerged, we had to wage guerrilla warfare in the mountains, which was Zhang Chunqiao's idea."

Xu Jingxian gave a long confession while testifying in court. He said: Following Chairman Mao's death, Zhang Chunqiao issued one counterrevolutionary order after another to Shanghai from Beijing. On 28 September 1976, Zhang Chunqiao sent Xiao Mu, Wang Hongwen's secretary, to Shanghai to pass on this message: "You should constantly analyze the situation of class struggle. You should heighten your vigilance, on the one hand, and strengthen your confidence, on the other." "You should note that there will be still twists and turns in class struggle and that the Bourgeoisie still has its strength. The question is who will be in command." Zhang Chunqiao also said that Shangia "will face a severe test" and "will have to go to war."

Xu Jingxian said: It was unprecedented that Zhang Chunqiao sent Xiao Mu to Shanghai to pass on this message to the Standing Committee of the municipal party committee. "By giving this instruction, Zhang Chunqiao told us what his real intentions were." Xu Jingxian also said: "On 8 October [1976], when I learned that the 'gang of four' had been smashed, I thought that Zhang Chunqiao's prediction had come true and that the time of severe test had come. In accordance with Zhang Chunqiao's 28 September 1976 instruction on the need 'to go to war,' I plotted to launch a counterrevolutionary armed rebellion."

Confronted with witnesses and material evidence, Zhang Chunqiao still refused to answer any questions raised by the court.

Chief Judge Zeng Hanzhou finally announced the conclusion of the special court investigation on the charges against Wang Hongwen and Zhang Chunqiao as listed in the indictment.

PARTY AND STATE

COURT CONCLUDES WANG-ZHANG INVESTIGATION

OW131821 Beijing Domestic Service in Mandarin 1212 GMT 13 Dec 80

[Text] This station's reporter has learned that the first tribunal of the special court today continued hearings into the case of Wang Hongwen and Zhang Chunqiao, who have been accused by the indictment of using Shanghai as a base to gain control of the armed forces in an attempt to stage an armed rebellion. Wang Hongwen pleaded guilty while Zhang Chunqiao continued to keep his mouth shut during the investigation hearings.

In the course of court hearings, all kinds of evidence prove that after the downfall of the "gang of four," Xu Jingxian, Wang Xiuzhen and others indeed plotted to stage an armed rebellion in Shanghai. Testifying in court, Xu Jingxian and Wang Xiuzhen admitted in detail how they plotted to stage an armed rebellion at that time. The court projected copies of two orders signed by Xu Jingxian in the evening of 8 October and early morning of 9 October 1976 to mobilize the militia and other documentary evidence.

Testifying in court, Wang Xiuzhan said: Wang Hongwen told me and Ma Tianshui repeatedly that "what worries me most is that we have no power to command the army, that the army is not in our hands, and that none of our men are in the army." Wang Hongwen also told Wang Xiuzhen that he intended to establish a national militia command and place it under his personal command. When Chairman Mao was critically ill, Wang Hongwen contacted (Xue Xiangying) of the Shanghai Militia Command by phone, asking him to immediately finish the (?task) of arms distribution among the militiamen.

The judge asked Wang Hongwen: When you mentioned that "the army is not in our hands," whose hands did you refer to?

Wang Hongwen replied: By our hands, it means myself, Zhang Chunqiao and Yao Wenyuan. In other words, the army is not in the hands of the "gang of four."

Wang Xiuzhan also admitted in court that she received a phone call from Wang Hongwen on 23 September 1976, and Wang Hongwen told her: All of you must heighten vigilance. The struggle has not yet ended and the bourgeois elements within the party will not resign themselves to defeat. Although Deng Xiaoping has been overthrown, some people will invariably help him to stage a come-back. On 28 [September 1976], Zhang Chunqiao sent (Xiao Mu) to return to Shanghai to pass on his instruction: "The struggle between the two lines is acute and complicated. Revisionism has emerged in the central authorities. We must heighten our vigilance and prepare to fight."

Testifying in court, Xu Jingxian said: There are two foundations through which we plotted to stage an armed rebellion by using the militia. First, the order issued by Zhang Chunqiao, stating that "if some people try to make trouble for Shanghai, then this is going to be a [words indistinct] and we must fight. When we fight, we must have courage and strength. The Shanghai militia is our strength." Second, the instructions and theory issued by Yao Wenyuan. After the Tiananmen incident occurred, Yao Wenyuan said: After the occurrence of Tiananmen incident, the problem was finally solved by mobilizing the militia to use force of arms. A fundamental experience accumulated from the Tiananmen incident is to use revolutionary violence to deal with and suppress counterrevolutionary violence. This kind of struggle is bloodshed or free of bloodshed from time to time. We must also adhere to this fundamental experience.

Testimony given by Ma Tianshui and (Huang Chao) were read out in court. Appearing in court as witnesses were (Xue Xiangying), responsible member of the leading group under Shanghai militia command at that time, and others.

The court announced the conclusion of the court investigation on the charges against Wang Hongwen and Zhang Chunqiao.

CHINA DEMOCRATIC LEAGUE RECRUITING NEW MEMBERS

OW121240 Beijing XINHUA in English 1227 GMT 12 Dec 80

[Text] Beijing, December 12 (XINHUA)—The Beijing branch of the China Democratic League, one of China's eight democratic political parties, recruited 56 new members at a ceremony at its headquarters this afternoon. This is the first time in 20 years that the party has recruited new members.

Yie Zi, a 60-year-old dramatist of the Beijing People's Art Theatre, is among the new members. She said: "This is the first time I have joined a political organization. The Democratic League has a glorious history and has withstood the test of time."

Chu Tunan, vice-chairman of the league's Central Committee, welcomed the new members, saying, "I hope you will liberate your minds and dare to voice your criticisms, report problems and be bold in your work in the interests of the people."

The new members, 43 men and 13 women, have an average age of 56. The oldest is an 82-year-old research fellow of the Beijing Research Institute of Culture and History, and the youngest is a 31-year-old woman doctor. Most of them are lecturers, professors, actors and actresses and doctors.

The China Democratic League was set up in 1946. It has 1,500 members in Beijing.

All the democratic parties stopped their activities during the "Cultural Revolution" (1966-1976) and did not resume until the end of 1977. By the end of October this year, a total of 200 new members had joined the parties.

The democratic parties are more active than before the "Cultural Revolution," an official of the Beijing Municipal United Front Department said today.

Since the beginning of this year, the democratic parties have been running training classes in education and medicine.

One of them, "Jiu San Sokiety," is running a sparetime workers' university for more than 700 students in cooperation with the Chaoyang District Committee of the Chinese Communist Party in Beijing.

As a result of proposals from the China Association for Promoting Democracy, another of the democratic parties, whose membership is mostly made up of teachers, Beijing municipal authorities have overhauled the city's primary and middle-school education programs. They have scrapped the five-year primary program and reverted to the old six-year program and restored a three-year program for senior middle-school students.

LIANG LINGGUANG'S SUGGESTIONS FOR GUANGZHOU CITED

HK250548 Hong Kong WEN WEI PO in Chinese 25 Nov 80 p 1

[Special report by WEN WEI PO reporter Lan Ching-chung from Guangzhou: "Liang Lingguang Speaks on the Administration of Guangzhou, Emphasizing the Need To Solve Problems Regarding the People's Livelihood--Emphasis Is Placed on Improving the Building of Light and Textile Industries, Communications, Urban Administration, Housing and Commerce"]

[Text] After being transferred to the south to take charge of the affairs of Guangdong, Ren Zhongyi and Liang Lingguang have held various work conferences over the past few days. Meetings of provincial and municipal cadres were also held in which Ren Zhongyi and Liang Lingguang gave speeches on administrative policies. As soon as Ren Zhongyi put forth three ideas on the work of Guangdong, Liang Lingguang also put forth his four suggestions for Guangzhou. This practice of making inaugural speeches is quite unprecedented.

The newly appointed Guangzhou Municipal CCP Committee first secretary Liang Lingguang pointed out to the party members and cadres at and above the municipal section and county level: It is necessary to build Guangzhou into a vanguard of the four modernizations and a pivot of China's link with foreign countries. We must build it into a modern socialist city which is economically prosperous, highly civilized, clean and graceful as well as an economic, tourist, scientific and technological center of Guangdong and south China.

In his second suggestion, Liang Lingguang put forth that it is necessary to firmly grasp the work of readjusting and restructuring the economy. First of all, it is necessary to do a good job of building those facilities which are concerned with the people's livelihood. It is necessary to emphatically improve light and textile industries, communications and transport, urban administration, housing construction, commercial service institutions, culture, education, public health, projects on conserving energy consumption as well as the construction of other facilities urgently required by the markets. He said: We must take the initiative to think of a way on how to realize these special policies and flexible measures.

Liang Lingguang regards showing concern for the people's livelihood and providing the people with tangible material benefits as another key suggestion in administrative policies. He pointed out that there are still many problems in the livelihood of the people of Guangzhou. He cited various outstanding examples indicating the short supply of certain commodities and especially nonstaple food, shortage in housing, poor services as well as existing problems in communications, public health and social order. He noted that it is necessary to appoint special people to grasp the various work through to the end and solve all the problems properly. He demanded that people emancipate their minds, expand the material exchanges with other places in Guangdong as well as other provinces, make use of foreign capital and remittances from overseas Chinese to build even more joint enterprises and other institutions, enliven the economy and gradually improve the people's livelihood. In this regard, he especially formulated a plan which will allow the people to have a joyful New Year's Day and spring festival.

In conclusion, Liang Lingguang demanded that the cadres emancipate their minds, boost their revolutionary spirit, be pathbreakers and creators, and not to have too many misgivings and disputes over trifles.

IMPROVEMENT ON IDEOLOGICAL, POLITICAL WORK ANALYZED

OW280346 Hefei Anhui Provincial Service in Mandarin 1100 GMT 26 Nov 80

["Excerpts" of article by (Wan Ping): "Do a Good Job at Ideological Work, Arouse the Masses' Enthusiasm"]

[Excerpts] The masses are the masters who push the wheel of history forward. All revolutions and progressive changes in history have been made by relying on the masses. Without mass participation and without giving full play to mass enthusiasm, no revolution nor change can be successful.

To arouse the masses' enthusiasm, it is essential to strengthen ideological and political work so as to bring the masses' ideological and political enthusiasm into play. The ideological and political enthusiasm we refer to is the enthusiasm of supporting the party and the "four upholds" in socialism. It is a healthy enthusiasm instead of an unhealthy one or one designed to blindly trumpet something or support someone.

Our party is a Marxist political party which has always paid attention to arousing the masses' ideological and political enthusiasm. Since the "gang of four" were smashed, particularly since the third plenary session of the party Central Committee, the party Central Committee has formulated the correct line, principles and policies and taken a series of important steps ideologically, politically and economically. This has played an important role in firing the masses' ideological and political enthusiasm.

Now, which ideological problems among the masses shall we solve first before we can bring the masses' ideological and political enthusiasm into full play? There are various kinds of ideological problems existing among the masses. For example, they have different views and estimates of the status of domestic politics, economics, ideology, party, literature and art, and cadres. There are also varied and different opinions on the series of new policies implemented since the third plenary session of the party Central Committee, including those on literature and art, propaganda, economics, united front work, intellectuals, religion and nationalities. Some of them warmly support these policies, some have doubts and some are opposed to them. Opinions also vary toward the historical experiences gained since the founding of the People's Republic, including views on the Great Cultural Revolution and Mao Zedong Thought. The masses are also critical of and discontented with the bureaucracy, privileges and red tape in all leading organs and among all leading cadres. Besides, the failure to timely solve many practical problems among the masses has also affected the people's feeling.

The important tasks in conducting our ideological and political work now are to adopt varied ways to guide all kinds of ideological problems to a better solution, to give full play to the positive factors, to overcome passive factors and to guide the complicated and varied thoughts among the masses to an active, correct and healthy orbit.

How then can we do a good job in ideological work and arouse the masses' ideological and political enthusiasm in view of the current ideological phenomenon of the masses? We think the following major actions should be taken:

1. It is necessary to adopt a correct principle. By correct principle we mean an "enlightening and guiding" principle.

2. It is imperative to educate the masses in Marxism-Leninism-Mao Zedong Thought as well as the party's line, principles and policies.

3. It is essential to adopt an attitude of seeking truth from facts.

4. We must try to seek and work out new ways to solve ideological problems existing among the masses by considering the new characteristics of these problems.

5. To fire the ideological and political enthusiasm of the masses, it is necessary to incessantly conduct ideological and political work and continuously raise the masses' ideological and political level.

It is our party's task to reform society and the people. Abandoning or failing to actively do well at ideological work is tantamount to abandoning our party's historical task, which is against our party's objectives. Strengthening ideological and political work and firing the masses' ideological and political enthusiasm is the greatest skill communists possess. At this historical turning point, so long as we adhere to the fundamental principles of Marxism-Leninism-Mao Zedong Thought and resolutely act in accordance with the party's line, principles and policies laid down at the third plenary session of the party Central Committee and so long as the party committees and leading cadres at all levels pay personal attention, strengthen their study and investigations and stick to the principle of proceeding from reality in everything, we will surely be able to do a good job in ideological work, further arouse the ideological and political enthusiasm among the broad masses of people and work hard for accomplishing the four modernizations with one heart and one mind. We should have no doubts about this.

BEIJING 'WAN BAO' ON RENOWNED ECONOMIST SUN YEFANG

HK121400 Beijing WAN BAO in Chinese 28 Nov 80 p 1

[Article by Li Wei [2621 3837]: "A Visit to Renowned Economist Sun Yefan"]

[Text] People are likely to think of a scholar as an austere and dignified man almost unapproachable. With such a preconception, I visit renowned scholar Sun Yefang several days ago.

Sun Yefang is well-known internationally and commands respect at home as a distinguished scholar and a veteran cadre. When I called at his home, it was just after the evening meal. I was greeted with quite a busy scene. The sitting room was full of old, middle-aged and young people. They were talking and laughing and were at their ease helping themselves to tea and cigarettes. Comrade Sun Yefang steered me to a corner of the sitting room. He told me that he and his wife had no children. All these people were his friends and the friends of his friends. Most of them were young people. Sun Yefang said: I am only too glad to have a reporter for a friend. All this shattered my preconception of a scholar. We chatted away like old friends.

Sun Yefang is 73 years old this year. His father was a clerk. He was born in Wuxi, Jiangsu in 1908. His original surname was Xue. Under the influence of a progressive teacher, he joined the Chinese Socialist Youth Corps in 1923. Not long after, he became a member of the Chinese Communist Party and acted as first secretary of the party branch of Wushi County. At that time, Sun Yefang was only 16. In 1925 the party sent him to Moscow to pursue higher studies. After his return home in 1930, he devoted himself to trade union work and matters about theory and propaganda doing so under the psuedonym of Sun Yefang. He later adopted this as his legal name. Shortly after the start of the war of resistance against Japan, he acted respectively as secretary of the cultural committee of the Jiangsu Provincial CCP Committee, teacher of the Central China Party School, and head of the propaganda department of the party committee of Luxi Prefecture, Huainan directly under the CCP Central Committee. After the victory in the war of resistance against Japan, he served as deputy director of the supplies administration of the Jiangsu-Anhui border area and secretary general of the East China Financial Bureau. After liberation, he filled such capacities as deputy director of the East China Department of Industry, deputy director of the State Statistical Bureau, director of the Economics Institute under the Chinese Academy of Sciences and so forth.

Those who have read Sun Yefang's works and articles share the view that he is well-versed in economic theory and is bold and innovative in his views. Many students of economics once believed that in a socialist society, the law of value would lose its effect with the abolition of the capitalist commodity economy. But Sun Yefang held that the law of value still plays its part in the socialist period. Even after the realization of communism, so long as there is mass social production and so long as production still continues under the two categories of means of production and means of subsistence, commodities will be in circulation with the law of value playing its part. This idea, which has up to now not been fully accepted by certain people, was put forward by Sun Yefang as early as in the 1950's. Early in the 1960's, he again put forward the suggestion to enlarge the power of an enterprise. It was a pity that these ideas proved correct by facts were then denounced when Sun Yefang was charged with the crime of revisionism. What is more interesting is that while Sun Yefang's economic theory was not accepted at home, it has been well received abroad as a kind of panacea. Sun Yefang's assistants Zhang Zhuoyuan and Wu Jinglian told me that when a delegation of our country visited Hungary this year, a responsible person of a Hungarian bank unexpectedly said to its members: what we have followed is the economic theory put forward by economist Sun Yefang of your country. Someone said with feeling: "Is it not strange for us to have gone abroad to investigate what originates with our country!" Another said, "If we had before acted according to Sun Yefang's law of value, we would not be in this present state..."

Concerning the fluctuations of commodity prices, Comrade Sun Yefang said: "Fluctuating commodity prices are chiefly attributable to the state's having raised the purchase prices for agricultural and sideline products last year. In the past, industrial and agricultural products were not exchanged at equal value, with too a big gap in value between the two. This dampened the peasants' enthusiasm for production. But agriculture is the foundation. If it is not taken good care of, other sectors of the economy will suffer. The state's having raised the purchase prices for agricultural and sideline products aims at stimulating agricultural production. Some people have had doubts about the emphasis on the law of value and the exchange of industrial and agricultural products at equal value. This is uncalled for. An increase in purchase prices for agricultural and sideline products has increased the peasants' income, stimulated their enthusiasm for production and made more abundant supplies available for the market. This is a gratifying phenomenon." "However, rising prices have at the same time affected the life of urban residents," I said. Comrade Sun Yefang answered by way of explanation: "This question has been taken into account by the state. Did the state not grant each worker a 5 yuan subsidy?" "Then why do the masses still have much to say about the commodity prices?" "There are many reasons. The chief one is that despite a 5-yuan subsidy, the effect of commodity prices on each family with its working or non-working members is different to a greater or lesser extent. Besides, the charges for industrial products unrelated to agricultural produce as a source of material and for certain service trades have gone up spontaneously or subtly. Overextension in the area of capital construction, the failure to obtain quick returns on heavy financial commitments which causes a deficit, and so forth are factors responsible for the rising commodity prices." Sun Yefang's words had greatly enlightened me. I said, "If the masses knew this principle, they would not have complained so much."

When I walked out of Sun's home after the visit, I suddenly remembered what an old reporter said: "Visiting people is also a way of learning." He is right. Just a little time spent in Sun's home has enabled me to learn so much.

PLA BANS SPRING FESTIVAL GIFT GIVING, DINING, WINING

OW121722 Beijing XINHUA Domestic Service in Chinese 1219 GMT 12 Dec 80

[Text] Beijing, 12 Dec (XINHUA)--The office of the commission for inspecting discipline of the PLA CCP committee recently issued a circular to the offices of the commissions for inspecting discipline of all the major units of the PLA. Attached to it is a letter from Wu Dianxiang, a cadre of the Beijing Municipal No 1 Commerce Bureau, which appeals to both PLA units and localities to make common efforts to correct unhealthy practices. The circular calls on units to strictly ban guest entertaining, gift giving and lavish dining and wining in the course of the activities to support the government and cherish the people during the spring festival.

Wu Dianxiang's letter reports that in past years some PLA units stationed in Beijing entertained local personnel concerned at dinners under the name of holding discussion meetings to solicit opinions in the course of the activities to support the government and cherish the people during spring festivals. In his opinion, this is an unhealthy practice that developed during the 10-year catastrophe and is not a desirable method to cement the unity between PLA units and localities. Instead, it impairs the prestige of the PLA. He expressed the hope that the PLA units stationed in Beijing will no longer invite the cadres and other personnel of the commerce bureau to dinners, saving every cent for the four modernizations.

The circular of the PLA commission for inspecting discipline points out: Comrade Wu Dianziang's letter shows his care for and support of our army. The practice of dining actually benefits small groups at the expense of the state and is virtually an act of bribery. Commissions for inspecting discipline at all levels must earnestly carry out their duties, constantly inspect the implementation of the "guiding principles," and, in accordance with the related decisions of the commission for inspecting discipline of the CCP Central Committee, sternly examine and deal with any violations against the "guiding principles," any unhealthy practice and any incidence of guest entertaining, gift giving and lavish dining and wining in the course of the activities to support the government and cherish the people during the New Year holiday season and the spring festival.

PARTY AND STATE

BRIEFS

JIANG QING DISCUSSED--Beijing, Dec. 12 (AFP)--Famous Chinese novelist Ding Ling, who spent several years in jail and labor camps, said here today that Mao Zedong's widow, Jiang Qing, the star in the current show trial of 10 disgraced leftist leaders, deserved the death penalty but should be spared and instead sent to do manual labor. "The crimes of Jiang Qing deserve death several times, but I hope she will not be sentenced to death. I was sent to (do) manual labor. Now is her turn to go there," Ding Ling, 73, told newsmen. Formally rehabilitated last year, she had fallen victim, as early as 1957, to the "anti-rightist" campaign which stifled the "hundred flowers" movement for having opposed Mao. Ding said she had attended the opening session of the current trial of Jiang Qing and nine other Cultural Revolution leaders before China's special court last November 20. "When I was in labor camps, I had to work 14 hours a day, even when I reached the age of 65," said Ding Ling. "Jiang Qing should be sent to a farm, anywhere in China, to work five or six hours a day," she added. The novelist, who had in 1937 joined Mao in the famous red base in Yanan, a year before Jiang Qing became the "great helmsman's" fourth wife there, is now vice-president of the Association of Chinese Writers. After disappearing from public view in 1957, she was sent during the Cultural Revolution to a labor camp in China's northeastern province of Heilongjiang where she was detained until 1974. [Text] [OW121428 Hong Kong AFP in English 1008 GMT 12 Dec 80]

CYL, TU SPONSOR CONTEST--Beijing, November 24 (XINHUA)--Thirty young building workers were cited as masters of their trades at the Beijing Workers' Club today in a ceremony that marked the end of a two-month master workers contest in which over 200,000 young Beijing workers took part. Ceremonies were held earlier for the winners of contests in the service trades and machinery industries. The contest, the first of its kind, was organized by the Beijing Communist Youth League, the trade unions and municipal government departments. Its purpose was to promote enthusiasm among young workers for study and acquiring greater skills. The youth league said today that more than half the city's young people are attending spare-time schools, taking television and radio college courses or studying by themselves. [Text] [OW241232 Beijing XINHUA in English 1207 GMT 24 Nov 80]

JIANG QING TRIAL POSTPONED--Hong Kong, Dec. 15 (AFP)--The trial of Mao's widow Jiang Qing, scheduled to resume this morning at the first tribunal of the special court has been postponed till December 17, the correspondent of the leftwing daily, TA KUNG PAO, reported today. The report gave no reasons for the postponement but it will be remembered that during last Friday's trial, Jiang Qing was ejected from the court after she shouted loudly, abusing the judges, prosecutors and witnesses as a whole. She was frog-marched out of court by two prison wardresses. After the first tribunal has completed hearings on evidences and investigations into Jiang Qing's case the second and first tribunals will simultaneously enter into the phase of debates, the TA KUNG PAO correspondent said. The first tribunal, a civil court, is trying the "gang of four" and Chen Boda, former head of the Cultural Revolution group. The second tribunal, military court, is trying five generals associated with the late former defence minister Lin Biao. [Text] [OW150420 Hong Kong AFP in English 0412 GMT 15 Dec 80]

IMMOLATION ATTEMPT CONFIRMED--Beijing, Dec 11 (AFP)--An official Chinese spokesman today confirmed reports from [word indistinct] eyewitnesses that a man tried to burn himself to death here yesterday, pouring gasoline over himself and setting fire to it near the Polish Embassy. It was the first known case of self-immolation--a traditional form of protest in the Far East--recorded in China for many years. No details were given today on the identity of the man, or on his motives. The eyewitnesses, however, said he appeared to be in his thirties and of provincial origin. The spokesman only indicated the man had been rushed to hospital still alive. His attempt came a few weeks after a suicide-attack late in October which left 10 people dead and scores of others injured, when a young worker blew himself up with a bomb in Beijing railway station. [Text] [OW110920 Paris AFP in English 0807 GMT 11 Dec 80]

YUNNAN UNITED FRONT MEETING--The united front work department of the Yunnan Provincial CCP Committee recently held a provincial united front work conference in Kunming. The meeting studied the relevant speeches of leading central comrades, conveyed the spirit of the national forum of directors of provincial, municipal and autonomous regional CCP committee united front departments, and heard a report on united front work in the province. The meeting hailed the great success in united front work in the province since the "gang of four" were smashed and pointed out that the current task is to unite all possible forces and mobilize all positive factors to carry out the modernization drive and achieve the great cause of national unification. The meeting held: It is necessary to do well in implementing the united front policies, do well in solving leftover problems, step up the work of the CPPCC and help the democratic parties in their work, promote the employment of nonparty figures, strengthen nationalities work, implement the policy of freedom of religious belief and do a good job of work regarding the compatriots in Taiwan, Hong Kong, Macao and overseas Chinese abroad. [HK220722 Kunming Yunnan Provincial Service in Mandarin 1100 GMT 19 Nov 80 HK]

YUNNAN NATIONALITIES POLICY INSPECTION--A nationalities policy inspection group organized by the Yunnan Provincial CCP Committee left for various parts of the province on 19 November to inspect the implementation of this policy. The provincial CCP Committee decided on a number of major policies and measures earlier this year after the minutes of the central forum on work in Xizang had been circulated. Practice of the past few months has proven that the people of all nationalities support these measures. The inspection group is composed of 150 persons from the provincial organs. The group leader is Sun Yuting, deputy secretary of the provincial CCP committee, and there are 10 subgroups. Groups from the prefectures, municipalities and counties will work alongside the provincial group. [Kunming Yunnan Provincial Service in Mandarin 1100 GMT 20 Nov 80 HK]

JIANGXI PLACE-NAME COMMITTEE--The Jiangxi Provincial People's Government recently approved the establishment of the committee for standardizing place-names. Provincial Vice Governor Xu Qing was appointed as chairman and (Han Yiming), (Lai Yanggao) and (Xu Tianbao) as vice chairmen. The main task of this committee is to launch a general inspection of place-names and promote standardization of names. From 7-10 November, the Jiangxi Provincial People's Government held the first provincial work meeting on place-names to arrange for the inspection of place-names. Some 130 people attended the meeting and Xu Qin spoke at the meeting. [HK270846 Nanchang Jiangxi Provincial Service in Mandarin 1100 GMT 17 Nov 80 HK]

SHANGHAI YOUTH WORK CONFERENCE--The 5-day conference on ideological education of young workers called by the party committee of the municipal economic commission ended on 15 November. The meeting studied ways for strengthening leadership over youth work by party organizations at all levels. About a half of Shanghai's more than 2 million workers in the industrial and communications departments are young people. [Shanghai City Service in Mandarin 1130 GMT 15 Nov 80 OW]

SHANGHAI JUDICIAL CONFERENCE--The Shanghai municipal judicial conference ended on 14 November. Yan Youmin, secretary of the Shanghai Municipal CCP Committee, and Wang Jiang, vice mayor of Shanghai Municipality, attended the conference. Yan Youmin spoke, stressing the important role of judicial work in establishing and perfecting the socialist legal system during the new period. [Shanghai City Service in Mandarin 1130 GMT 15 Nov 80 OW]

GANSU CIVIL CASES FORUM--The Gansu Provincial Judicial Bureau and the provincial higher people's court recently held a joint forum on handling civil cases. The forum urged that in handling civil cases, it is necessary to rely on the masses and carry out investigations and mediation first. The forum also urged efforts to create conditions for open trial of civil cases. It said that mediation committees, which exist only in form, should be consolidated and mediation personnel should be trained so that mediation committees can play their role more effectively. [SK200053 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 14 Nov 80 SK]

GANSU EMPLOYMENT CONFERENCE--The Gansu provincial labor employment conference sponsored by the provincial government was held from 6 to 13 November. The conference noted that in 1979, 136,000 of 237,000 jobless youth in the province were assigned jobs or were employed by running collective enterprises or private business and in 1980 it is estimated that 105,000 of 206,000 jobless youth will have jobs. The conference stated that educated youth who have settled in the countryside in previous years will all be assigned jobs. The conference urged all localities and departments throughout the province to open all avenues of production to more jobless youth by establishing various types of service trades or engaging in labor-intensive production, because it is expected that some 70,000 jobless youth will emerge each year for the next 10 years. [Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 13 Nov 80 SK]

JIANGXI WORKERS' CONGRESSES--Jiangxi has made new progress in setting up workers' congresses in enterprises since the third session of the Fifth NPC. According to incomplete statistics, by the end of October over 500 industrial and communications at and above county level had set up these congresses. The congresses have discussed the major issues in their enterprises and issued corresponding resolutions. They have put forward many bills and proposals on production, construction, technology, living conditions, management and so on. Some of the congresses have put forward plans for democratic elections of leading administrative personnel of the enterprises. [HK170712 Nanchang Jiangxi Provincial Service in Mandarin 1100 GMT 14 Nov 80 HK]

SHANDONG PROVINCIAL CPPCC--The 4th Standing Committee of the Shandong Provincial CPPCC Committee held its 10th session in Jinan from 17 to 19 November. After full consultations, the session adopted the work report of the Standing Committee, the report on the fullfillment of motions, the namelist of 18 additional members to the provincial CPPCC committee and the decision on commemorating the 70th anniversary of the 1911 revolution. It also endorsed the namelist of the preparatory committee to mark the above occasion which consists of persons from various democratic parties, mass organizations and people from all walks of life. [SK231240 Jinan Shandong Provincial Service in Mandarin 2300 GMT 19 Nov 80 SK]

JIANGSU JUDICIAL FORUM--The Jiangsu Provincial People's High Court held a forum from 10 to 20 November to study the new PRC marriage law and to exchange experiences in handling lawsuits involving marriage issues. The forum, which was attended by presidents of the intermediate and civil courts of various prefectures and municipalities, was convened in preparation for the enforcement of the new marriage law beginning next year. Participants pointed out that feudal ideological influence on marriage is still deep-rooted in China. Forced marriages and other practice infringing on the freedom of marriage are still common. There were even cases of young people committing suicide because they could not get married of their own free will. People's courts should help publicize the spirit of the new marriage law and correctly handle lawsuits in accordance with the law. [Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 21 Nov 80 OW]

SHANGHAI PROPAGANDA MEETING--A mobilization meeting for propaganda on the new marriage law was held in Shanghai on 18 November. It was jointly sponsored by the municipal CCP committee's propaganda department, women's federation, higher people's court, trade union council, CYL committee and bureau of justice. Zhong Min, secretary of the municipal CCP committee; Guan Jian, chairman of the municipal women's federation, and (He Xinru), vice president of the municipal higher people's court spoke at the meeting calling for propaganda on the new law. [Shanghai City Service in Mandarin 1130 GMT 18 Nov 80 OW]

SHANGHAI COPCC INSPECTION--Members of the Shanghai Municipal CPPCC committee completed their inspection tasks today. Some 300 members took part in this 20-day long inspection of Shanghai's environmental protection, the preservation of cultural relics, library work, housing distribution and students health conditions. A number of the municipal CPPCC committee members held a forum today to discuss presenting their views to the departments concerned in a written report. [OW241711 Shanghai City Service in Mandarin 1130 GMT 20 Nov 80 OW]

U.S. GUESTS IN SHANXI--The Shanxi Provincial Governor Luo Guibo met guests from South Carolina University on 28 October and held talks with them. The Shanxi Vice Provincial Governor Wang Zhongqing and other responsible comrades also attended the party. [Taiyuan Shanxi Provincial Service in Mandarin 2300 GMT 28 Oct 80 HK]

SHANXI LOCAL COMMITTEE MEETING--Shanxi Province's Linfen Municipal CCP Committee recently held an enlarged Standing Committee meeting to work out methods to improve efficiency in government departments. The meeting decided that: 1) the municipal economic committee, agricultural and financial offices, planning committee, science committee and the public security bureau would continue to function as subordinate organs of the municipal revolutionary committee and that all directors should hold meetings every Monday; 2) the organization, propaganda and united front work departments, discipline inspection committee, federation of trade unions, federation of women and the CYL would continue to work as subordinate organs of the municipal CCP committee and that the Standing Committee of the municipal CCP committee should hold meetings every Saturday. [Taiyuan Shanxi Provincial Service in Mandarin 2300 GMT 24 Oct 80 HK]

SHANXI PARTY PUBLICATION--In order to strengthen party leadership and enhance the party's combat effectiveness, the Shanxi Provincial CCP Committee approved resumed publication of the party publication ZHIBU JIANSHE [PARTY BRANCH BUILDING]. ZHIBU JIANSHE is a publication for party organizations at basic levels and for all CCP members, aimed at popularizing Marxism-Leninism-Mao Zedong Thought. ZHIBU JIANSHE was published on a trial basis in October and will be officially published in January 1981. [Taiyuan Shanxi Provincial Service in Mandarin 2300 GMT 24 Oct 80 HK]

POST-TELECOMMUNICATIONS MINISTER APPLAUDED--In 1979 when Wang Zigang, minister of posts and telecommunications, was inspecting the Qingdao Municipal Postal and Telecommunications Bureau, Shandong Province, workers at the bureau bought 3 jin of dried sea cucumbers for him. Dried sea cucumbers were 35.9 yuan per jin, but the workers charged Wang Zigang only 18 yuan per jin and paid the rest for him. When Wang Zigang learned of this from a cadre who had been in Qingdao this year, he sent the money he owed back to the bureau and gave self-criticism in his letter. The staff and workers of the Qingdao Municipal Postal and Telecommunications Bureau warmly praised Wang Zigang for his deed. [SK151420 Jinan Shandong Provincial Service in Mandarin 2300 GMT 12 Dec 80 SK]

TIANJIN RETIRED CADRES--Eight old cadres at or above county and district levels have voluntarily retired or served as advisors after the approval of the Tianjin Municipal CCP Committee. They are Wang Ping, Standing Committee member of the Tianjin Municipal CCP Committee and deputy secretary general, (Li Mai), deputy director of the propaganda department of the municipal CCP committee, (Li Haitao), deputy chief procurator of the municipal procuratorate, (Yang Zhongxiang), deputy chief of the municipal public utility bureau, (Su Zhihai), deputy chief of the municipal water conservancy bureau, (Su Xiangda), deputy chief of the municipal water conservancy bureau and chief engineer, and (Deng Guoru) and (Li Guohui), vice chairmen of the Standing Committee of the Baodi County People's Congress. [Tianjin City Service in Mandarin 2330 GMT 14 Nov 80 SK]

GUIZHOU NEW ASSOCIATIONS--The Guizhou Provincial Association of Literary Creation for the Popularization of Science and the Guizhou Provincial Art Society for the Popularization of Science were officially established in Guiyang in mid-October. At the first representative meeting, the representatives discussed the work report given by Qiao Lin, member of the preparatory committee. Tao Shilong, director of the Standing Committee of the Chinese Association of Literary Creation for the Popularization of Science and deputy director of Hubei Provincial Association of Literary Creation for the Popularization of Science, was invited to attend and give a work report. Qin Tianzhen, Hubei vice provincial governor, attended the meeting and gave a closing speech. [GUIZHOU RIBAO in Chinese 30 Oct 80 p 3 HK]

GUIZHOU NATIONAL SEMINAR--The first national seminar on nationalities studies was held in Guiyang from 20 to 26 October. About 249 research workers of nationalities studies from various places throughout the country participated in the seminar. Wang Chaowen, secretary of the Guizhou Provincial CCP Committee and vice provincial governor, and (Wu Guang), deputy director of the Chinese Academy of Social Sciences, delivered speeches at the seminar. Nationalities studies is an academic subject focused on the nationalities. The participants of the seminar held: China is a united country of different nationalities, therefore, nationalities studies is of great significance. The seminar established a committee for research in nationalities studies and elected members of the council. [HK120919 Guiyang Guizhou Provincial Service in Mandarin 2315 GMT 26 Oct 80 HK]

JOURNALISTS MEET--On the afternoon of 9 December, the office of the TIYU BAO [SPORTS NEWS] invited Hubei and Wuhan area journalists to a forum in Wuhan to discuss how to do well in sports reporting in the new situation. (Luo Ming), a responsible comrade of the culture and education department of the provincial CCP committee; (Xue Cai), director of the TIYU BAO; and responsible comrades of departments concerned spoke at the meeting. Comrade (Xue Cai) concentrated on introducing the situation in sports reporting in foreign countries. The forum was attended by TIYU BAO reporters from all provinces and municipalities in the country. Before the meeting, provincial CCP committee first secretary Chen Pixian received (Xue Cai) and the other comrades. [HK120241 Wuhan Hubei Provincial Service in Mandarin 1100 GMT 10 Dec 80]

ANHUI POSTAL, TELECOMMUNICATIONS CONFERENCE--The recently held 21st Anhui provincial postal and telecommunications work conference proposed measures to expand postal and telecommunications services. Measures include expanding parcel post services; handling mail order, advertisement, telecommunications equipment repair, training and so forth; expanding distribution of newspapers and magazines; promoting stamp collecting services; improving service quality and attitudes, and attitudes, and so forth. [OW171245 Hefei Anhui Provincial Service in Mandarin 1100 GMT 16 Nov 80 OW]

XIZANG HINTERLAND-BOUND PERSONNEL--In order to expedite the transfer of cadres and workers in Xizang who have been assigned new posts in the hinterland, the CCP Central Committee has designated two IL-18 aircraft of the air force to serve in Xizang. Due to cold weather and limited transport capability, it has become increasingly difficult to transfer the hinterland-bound cadres and workers by land, especially the old, weak, sick, disabled, pregnant women and children. Since 13 November, additional flights have been arranged to speed up transportation. [OW211429 Lhasa Xizang Regional Service in Mandarin 1100 GMT 19 Nov 80 OW]

JILIN MARRIAGE LAW FORUM--The propaganda department of the Jilin Provincial CCP Committee and the provincial women's federation held a joint forum 26 November to discuss ways to publicize the new marriage law. The forum called on all localities throughout the province to launch activities to publicize this law until February 1981. Attending the forum were responsible comrades of the provincial trade union council, the provincial CYL committee, the provincial judicial department, the provincial people's court, the provincial civil affairs office, the provincial cultural bureau, the propaganda department of the Changchun Municipal CCP Committee and the provincial and municipal press units. Yu Lin, secretary of the provincial CCP committee, spoke at the forum. [SK271439 Changchun Jilin Provincial Service in Mandarin 1100 GMT 26 Nov 80 SK]

'RENMIN RIBAO' ON ABORTED SHANGHAI INSURRECTION

HK151523 Beijing RENMIN RIBAO in Chinese 14 Dec 80 p 2

[Article by RENMIN RIBAO reported Gao Ji [7559 7162]: "Insanity of the Final Days—the Whole Story of the Gang of Four and Their Followers in Plotting the Counterrevolutionary Armed Coup d'Etat in Shanghai"]

[Text] On 13 December, the first tribunal of the special court opened trial on Zhang Chunqiao, Yao Wenyuan, Wang Hongwen and their followers' counterrevolutionary crime of plotting an armed insurrection in Shanghai. The court summoned principal culprits Wang Hongwen and Zhang Chunqiao as well as the other defendants detained in connection with this case—Wang Xiuzhen, Xu Jianxian and Shi Shangying—to testify. This court hearing fully exposed the whole story of the gang of four and their followers' plot for an armed insurrection in Shanghai.

1. Building a Factional Armed Force of the Gang of Four

After Zhang Chunqiao and Wang Hongwen plotted and instigated two large scale armed struggles in late 1966 and early August 1967 and seized control of the party and government in Shanghai, they immediately plunged into the work of "restructuring" the Shanghai militia to build up an armed force controlled by the gang of four. The objective set by Zhang Chunqiao for this armed force was: "Safeguard the revolution of the pen with the barrel of a gun." He also said that this armed force must "learn the tactics of street fighting" and that 8 to 10 anti-aircraft gun divisions must be built. Since 1979, he had also told Wang Xiuzhen and others on several occasions that they should manufacture arms, grenades and mines in Shanghai's suburb. He also said: "Do not belittle these homemade mines, guns and grenades. They are also useful when there is a war."

In his testimony, Wang Hongwen said: "The reason we built up this armed force was to safeguard the revolution of the pen with the barrel of a gun, that is, to safeguard the power seized by Lin Biao and the gang of four. It was a factional armed force of the gang of four.

Wang Hongwen and his Shanghai followers faithfully implemented the goals and methods formulated by Zhang Chunqiao for this factional armed force.

They declared that they would use this factional armed force "against the capitalist roaders," "to prepare for a civil war" and to grasp the so-called class struggle in society. Thus, as soon as this armed force was organized in 1978, it began to investigate, search and close down offices of various provinces, municipalities and autonomous regions in Shanghai, claiming that these offices harbored "capitalist roaders." They also delegated the power of arrest, detention, interrogation and conducting so-called study sessions to this factional armed force in the name of the Shanghai municipal revolutionary committee. As Wang Hongwen said in his testimony, "In reality, they suppressed the masses" and "arrested people who opposed Lin Biao and the gang of four."

To firmly control this armed force, Zhang Chunqiao and Wang Hongwen openly seized control of the Shanghai garrison command to lead the militia. Wang Hongwen said: "Zhang Chuqiao and I built the Shanghai militia," "I will not let go of my hold on it." "The army must not lead the militia. The militia must be under the command of the (Shanghai) Municipal CCP Committee." He told Wang Xiuzhen to organize the leading group in the militia command in Shanghai Municipality and the various districts. He also said: "Those whose attitude toward the great cultural revolution is questionable should be demoted. You should also look at the attitude of army cadres toward the great cultural revolution. Those with undesirable attitudes must be sent back to the army." Therefore, taking factional attitude as sole criterion and using the "rebel factions" as the core became the gang of four's organizational principles in controlling the Shanghai militia.

Wang Hongwen and his followers also used local capital to build the so-called "small three lines" in Shanghai to manufacture arms for the factional armed force. They turned the Shanghai Xinzhonghua Machine Factory into an automatic rifle plant. They also asked the Shanghai Electric Cable Factory to use its excess spare parts to make semi-automatic rifles. In 1970, Wang Hongwen also ordered the motorcycle factory to equip the militia with some motorcycles in order to build a motorcycle regiment. He said: "The Shanghai militia must be well-equipped. It should reach a position of equality with the PLA."

Zhang Chunqiao and Wang Hongwen spent almost 10 years building such a factional armed force in Shanghai. Wang Hongwen admitted that what he and the gang of four followers in Shanghai did to build up a factional armed force created the conditions for an armed insurrection in Shanghai.

2. "Issuing the Mobilizzation call for a War"

After the 2d Plenary Session of the 10th Party Central Committee was held in January 1975, whenever Zhang Chunqiao, Yao Wenyuan and Wnag Hongwen felt that the situation was becoming unfavorable to them, they indoctrinated their Shanghai followers with the ideas of "prepare to go to the mountains to wage guerrilla warfare," "be ready for a war" and "future struggles will be decided by violence" to get them to tightly control the Shanghai militia and get prepared. After Chairman Mao Zedong died in September 1976, they issued several secret orders to plot an armed insurrection in Shanghai.

During the 2d Plenary Session of the 10th Party Central Committee, as a result of a proposal by Chairman Mao Zedong, Comrade Deng Xiaoping became vice chairman of the party Central Committee, vice chairman of the Central Committee military commission, first vice premier of the State Council and chief of the general staff of the PLA and took charge of daily affairs of the central organs. While the meeting was going on, Wang Hongwen was already very worried. He told Ma Tianshui, Xu Jingxian, Wang Xiuzhen and others: "I am particularly worried about the army. We do not have anyone in the army."

From 1974 to the first half of 1975, Chairman Mao criticized the gang of four several times. During the first half of 1975, a meeting of the Central Committee Political Bureau presided over by Deng Xiaoping criticized Jiang Qing. Under such circumstances, Wang Hongwen went back to Shanghai in July 1975 and stayed there until mid-November when he returned to Beijing. When he was in Shanghai, while talking with Ma Tian Xhui, Xu Jingxian and Wang Xiuzhen about a group of commanders, deputy commanders, political commissars and deputy political commissars of the various arms, services and major military regions who were appointed by the Central Committee, he said: "Deng (referring to Comrade Deng Xiaoping) is very familiar with these people, while Chunqiao and I are not familiar with them at all." Ma, Xu and Wang wanted Wang Hongwen to go to Beijing to seize power. Wang Hongwen said: "Deng Xiaoping's power was given by Chairman Mao. What power do I have?" Wang Hongwen also repeatedly said to Ma Tianshui and his "subordinates" that they must "be prepared to go to the mountains to wage guerrilla warfare." In September that same year, he called the leaders of the Shanghai militia to a meeting for a so-called heart-to-heart talk on the line. During the meeting, he declared that if anyone dared to strike down the militia in one stroke, as long as he was still alive, he would build up the militia again, even if it took 20 years. After the meeting, he told Ma Tianshui that weapons must not be kept in the army's arsenal, that his mind was not at ease if they were kept in the army's arsenal, and they should be distributed to the militia so that in the event of a war, the militia would have weapons in their hands. After that, he went to inspect the arsenals where weapons were kept.

In April 1976, the Tiananmen Square incident occurred. The gang of four was scared out of their wits. From 1 to 7 April, Wang Hongwen maintained close telephone contact with Ma Tianshui and Wang Xiuzhen almost every day. He wanted them to "send out the militia," "prevent an incident similar to the Tiananmen Square incident from occurring in Shanghai" and "solve all problems whenever and wherever they occur." Wang Xiuzhen transmitted the message and gave out the assignments to the responsible persons of the Shanghai militia and the public security bureau. He asked them to "coordinate in battle" and prepare to use the factional armed force to suppress the masses.

On 7 May 1976, while meeting with Chen Jide, responsible person of the Shanghai Municipal CCP Committee writing group in Beijing, Yao Wenyuan said: "The great cultural revolution was a form of violence. The Tiananmen incident was also a form of violence. In the future, struggles will also be decided by violence." Chen Jide transmitted this message to the other followers after he returned to Shanghai. In early July 1976, Yao Wenyuan arranged for HONGQI magazine to publish an article entitled "Strengthen the Building of the Workers' Militia." This article was carried by HONGQI No 8 1976 after Yao Wenyuan had approved it. It advocated that "the broad masses of militiamen...must struggle against the bourgeoisie in the party and the class enemies in society." It attempted to prepare public opinion for an armed insurrection.

In August 1976, Ding Sheng, commander of the Nanjing PLA units, went to Shanghai and had a late night secret talk with Ma Tianshui, Xu Jingxian and Wang Xiuzhen at the Yanan Hotel. Ding Sheng said: "I am particularly worried about the No 6453 Unit." "I am totally unable to control this unit." "Several divisions of this unit are stationed in Wuxi, Suzhou and Shanghai. I am very worried." "You must be prepared." Ma Tianshui said: "If there is really going to be a war, Shanghai will be depending primarily on the militia." Afterward, Ma Tianshui immediately ordered an inspection on the issuance of firearms to the militia. He ordered an emergency issuance of 74,220 rifles, 300 artilleries and 10 million rounds of assorted ammunition. Concrete preparations were made for an armed insurrection.

On 21 September 1976, Xu Jiangxian made a report to Zhang Chunqiao in Beijing on the secret talks with Ding Sheng in Shanghai and the progress of the emergency issuance of firearms. Zhang Chunqiao told Xu Jiangxian: "Be cautious. Pay close attention to the developments of the class struggle." In his testimony, Xu Jiangxian said: "I knew that that remark was meant to remind us to pay close attention to the time and method of action."

On 23 September 1976, Wang Hongwen told Wang Xiuzhen over the telephone: "You must be vigilant. The struggle has not ended. The bourgeoisie in the party will not be resigned to their failure. There will be people who will engineer Deng Xiaoping's comeback." In his testimony, Wang Hongwen said that this statement of his had great influence on Shanghai. "It laid the ideological groundwork for a Shanghai militia insurrection."

On 28 September 1976, Zhang Chunqiao sent Wang Hongwen's secretary Xiao Mu to Shanghai to transmit his views to the gang of four followers. According to Xu Jingxian's records, Zhang Chunqiao said: "The developments of the class struggle must be constantly analyzed. You should be vigilant on the one hand, and have great confidence on the other." "Shanghai has not really undergone any serious test." "Shanghai shall be facing a great challenge. It will have to fight a war." Xu Jingxian said in his testimony: "Here, Zhang Chunqiao issued the mobilization call for a war."

3. The Remnants of the Gang Conduct a Last Desperate Struggle

On 6 October 1976, the gang of four was smashed. On the 8th, a person was sent by Xu Jingxian and Wang Xiuzhen to make secret inquiries in Beijing. That evening, the person called them up from Beijing and reported to them the gravest news about the gang of four through predetermined code words. From the evening of the 8th to that of the 12th, the remnants in Shanghai held many meetings. Like a host of demons dancing in riotous revelry, they had murderous looks on their faces. They schemed to stage an armed insurrection and conduct a last desperate struggle.

In the evening of the 8th, the Shanghai remnants held an emergency meeting at the municipal CCP committee office on Kangping Road. Present at the meeting were Xu Jingxian and Wang Xiuzhen, secretaries of the Shanghai Municipal CCP Committee; Feng Guozhu, Wang Shaoyong and Zhang Jingbiao, members of the Standing Committee of the Shanghai Municipal CCP Committee; Zhu Yongjia, the person in charge of the writing troup of the municipal CCP committee; He Xiumen, Zhang Chunqiao's secretary in Shanghai; Liao Zukang and Xiao Mu, Wang Hongwen's secretaries.

During the meeting, when discussing the possibility of the arrest of the gang of four, Zhu Yongjia suggested: "We must fight. We must send out the people's militia. Even if we cannot fight for 1 week, we must fight for 3 to 5 days so that the whole world will know about this matter." Zhu Yongjia's counterrevolutionary and desperate proposal--to stage an armed insurrection--was approved by other remnants. On the one hand, they made threatening gestures and were ready to wage large scale violence. On the other, they were on tenterhooks and afraid that they might be "caught in a dragnet" on Kangping Road. Thus, they decided to form two leading groups for the armed insurrection, set up two secret command headquarters and withdraw from the Kangping office. The No 1 operation point was set up at Dingxiang Garden under the leadership of Xu Jingxian, Wang Shaoyong and Zhu Yongjia. They were to be responsible for preparing public opinion for the armed insurrection. This operation point was responsible for the nonviolent method. The No 2 operation point was set up at the headquarters of the municipal people's militia under the leadership of Wang Ziuzhen, Feng Guozhu and Liao Zukang and some others. They were directly in charge of the armed insurrection. This operation point was responsible for the violent method. Later, Liao Zukang suggested that the leading group responsible for the violent method also include Li Binshan, deputy political commissar of the garrison command, and Ye Changming, Chen Ada, Huang Jinhai, Ma Zhenlong and Wang Minglong, leaders of the municipal federation of trade unions. Xu Jingxian issued an order to Wang Xiuzhen who then concentrated 33,500 of the people's militia "to step up combat readiness." After this, both the leaders of the violent and nonviolent forces went to their own command headquarters to prepare for the armed insurrection.

Zhu Yongjia was one of the extremely reckless members in the leading group responsible for the nonoviolent method. After the meeting on Kangping Road, he immediately hurried to two newspaper offices and the radio station in Shanghai to whip up counterrevolutionary opinion. Following this, he went to the writing group of the municipal CCP committee to assign people to write articles for the purpose of counterrevolutionary propaganda. Incited by Zhu Yongjia and Wang Zhichang, people in the writing group of the municipal CCP committee were in a counterrevolutionary craze, preparing for the insurrection.

The group responsible for the violent method was led by Wang Xiuzhen. They arrived at the headquarters of the municipal people's militia late in the evening on the 8th to make specific preparations for staging the armed insurrection. Most members of this group had previously been Wang Hongwen's trusted "subordinates" and hatchet men of the gang of four, when the latter was running amuck in Shanghai. Wang Xiuzhen assigned the following duties to them: Shi Shangying and some others in charge of the people's militia were to study and make a battle for the armed insurrection; Ye Changming, Chen Ada, Huang Jinhai, Ma Zhenlong, Wang Minglong and those who had previously participated in large scale violence were to be stationed at command headquarters when war broke out. While these scoundrels looked as fierce as bulls, they harbored evil intentions. They were afraid of being noticed by others and dared not even stay at the headquarters of the municipal people's militia. At dawn on the 9th, they hurriedly moved to the Donghu Road hostel.

Instructed by Wang Xiuzhen, Li Binshan and Shi Shangying and some others formulated an initial battle plan for the militia. She Shangying also called the responsible people of 10 garrison commands and 5 militia divisions directly under the municipality to a meeting. He ordered them to concentrate forces, equip the milita with firearms, distribute ammunition for the firearms and assemble cars and materials. In those days, they used more than 27,000 weapons of various kinds, assembled 225 cars and a large quantity of food and materials, and installed 15 radio stations in the people's militia headquarters and established communication among them. In accordance with the instructions of Wang Xiuzhen, Xue Ganqing and Xu Chenghu, deputy secretaries of the Shanghai municipal public security bureau party committee, assembled 1,300 mobile forces and issued more firearms to them.

After the 8th, the remnants of the gang got busy burning the materials. They destroyed all the evidence showing their loyalty to the gang of four. Some said: "We are prepared to go to jail and to be beheaded." "If we are to die, let us do so together." Some arranged for the removal of their families. Some said to their wives: "It is still not too late to seek a divorce." Some brought with them guns and daggers to be used in times of need. In a word, there was great confusion among the remaining confederates faced with their doom.

On the morning of the 9th, Xu Jingxian and Wang Xiuzhen returned from the secret command headquarters to the Kangping Road office. They received there a phone call from Ma Tianshui in Beijing, who demanded that they write something in the name of the Shanghai Municipal Party Committee on the two decisions announced by the party Central Committee on the 8th (concerning the publication of the fifth volume of Selected Works of Mao Zedong and the establishment of a memorial hall for Chairman Mao). When Xu and Wang asked over the phone about the "three leaders" (Zhang Chunqiao, Yao Wenyuan and Wang Hongwen), Ma Tianshui hemmed and hawed. The same evening, Ma Tianshui again relayed by phone an order of the party Central Committee for Xu Jingxian and Wang Xiuzhen to go to Beijing for a meeting. On the afternoon of the 19th, Xu Jingxian and Wang Xiuzhen headed for Beijing.

Allowing Ma Tianshui to phone the remaining confederates in Shanghai and have Xu Jingxian and Wang Xiuzhen transferred to Beijing--this played an important role in checking an armed insurrection by the remnants in Shanghai. From the 10th to the 11th, the remaining confederates in Shanghai waited for the news they were expecting after Xu Jingxian and Wang Xiuzhen reached Beijing. After Xu Jingxian left, Zhu Yongjie of the No 1 operation point was still instigating among members of the writing group of the Shanghai Municipal Party Committee. Those of the No 2 operation point led by Liao Zukang and Chen Ada met every day at the Donghu Road hostel where they exchanged news and collected information. On the 11th, they learned that the several responsible comrades of the Shanghai garrison command, who had gone to Nanjing to attend a meeting, had returned to Shanghai and were strengthening preparations for war. They were panic-stricken. They thought that the Donghu Road hostel had been put under watch and that they must change their meeting place. On the 12th, these people met at the municipal workers' cultural palace. Liao Zukang urged taking some practical actions. They decided to set up another contact point at the No 31 state cotton mill with Dai Liqing in charge and entrusted him with the preparation of counterrevolutionary posters. (Dai Liqing, Huang Jinhai and others prepared a total of 21 counterrevolutionary posters). They also called for passing on word about counterrevoltuion among their most trusted confidants.

At around 8 p.m. on the 12th, the remaining confederates in Shanghai again met at the Kangping Road office of the municipal party committee. Among those present were Feng Guozhu, Wang Shaoyong, Zhang Jingbiao, Huang Tao, Ye Changming, Chen Ada, Ma Zhenlong, Wang Richu, Zhu Yongjia, Liao Zukan, Xiao Mu, He Xiuwen, and so forth. Before the meeting, they had known for sure that the gang of four had been smashed. At the meeting, Ma Zhenlong and Zhu Hongjia cried bitterly over the collapse of the gang of four. Zhu Yongjia suggested that immediate action be taken. "If we again let things slide, we will be completely ruined." Chen Ada, Ye Changming, Xiao Mu and Wang Zhichang madly yelled that any action taken must be on a large scale. Huang Tao also said that any action taken must be marked by resolution. These commandos put forward such counterrevolutionary plans as arousing the masses to stop production and go on strike, blocking the airport runway by using steel ingots, using sunken boats to seal off the Wusong estuary, cutting off electrical supplies, taking over important departments, undermining railways and bridges, and so forth. Wang Shaoyong urged that efforts be made to paralyze the whole city. At the meeting, Ye Changming also phoned Zhong Dingdong to request that he draw up on the same night a program for starting an armed insurrection. The madness of the remaining confederates in their last days had reached its peak. When the meeting was in progress, Ma Tianshui and Wang Xiuzhen phoned from Beijing to say that they could get back on the 13th and that the remnants of the gang must wait for their return. Zhu Yongjia and Wang Zhichang thought that they could no longer wait. They suggested that before dawn, militiamen be posted at news agencies and radio stations so that "a statement to the whole country and to the people of the whole city" could be issued and that action could be started on a large scale. They also put forward the counterrevolutionary slogan "Return Jiang Qing to us, return Zhang Chunqiao to us, return Yao Wenyuan to us, return Wang Hongwen to us." However, the renegades were leaderless. Who was to the issue the order? The several Standing Committee members present at the meeting agreed to intensify preparations. But they said that they must wait for Ma Tianshui, Xu Jingxian and Wang Xiuzhen to return to give orders for the start of the armed insurrection. The meeting of the remaining confederates in their last days lasted until early in the morning.

Early in the morning of the 13th, Zhong Dingdong formulated programs known as "Hanyi" and "Fanger" for the start of an armed insurrection. The heads of the municipal trade union council and the municipal militia command arranged counterrevolutionary briefings to prepare for the armed insurrection. In the afternoon, Huang Jinhai, Ma Zhenlong, Dai Liqing and Wang Zhichang also carried out activities in an attempt to win over the militia. This was a deathbed struggle and nothing came out of it.

The party Central Committee's historic victory in smashing the gang of four had become officially known in Shanghai. The gang of four's 10-year rule over Shanghai and its plot for starting an armed insurrection instantly collapsed. The people of Shanghai rejoiced over regeneration. The remnants of the gang of four had at last met their doom.

'BA YI RADIO' CRITICIZES SCHEME IN OPPOSING XU XIANGQIAN

OW060606 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 4 Dec 80

[Summary] "At present some people are deliberately engaging forces in various circles to carry out a scheme of opposing Comrade Xu Xiangqian, minister of national defense, undermining his prestige and limiting his power.

"First of all, it should not be regarded as normal that Comrade Xu Xiangqian was dismissed from his post as vice premier. According to the usual practice in our country, the minister of national defense automatically assumes the post of vice premier. In past years the minister of national defense held great power. However, Comrade Xu Xiangqian was dismissed as vice premier so as to restrict his power.

"Second, the Standing Committee of the Political Bureau and the military commission under the CCP Central Committee had studied and then decided to keep Comrade Xu Xiangqian in his post as minister of national defense. In an attempt to attain their shameful purpose, however, some people even went so far as to say that the dismissal of Xu Xiangqian had been decided. Furthermore, they even had the impudence to reveal this information on internal affairs to foreigners. That person of the central authorities who is most fond of talking about our domestic affairs with foreign guests recently said outright to foreign guests that Xu Xiangqian would soon retire because he could no longer do his daily work.

"Third, some people are now going various places to find out about Comrade Xu Xiangqian's activities during the cultural revolution, trying secretly to collect materials unfavorable to him. As is known to all, Comrade Xu Xiangqian once led the work of the PLA's cultural revolution group. However, he himself became a victim of the persecution by the gang of four later on because he opposed the actions of Jiang Qing and Kang Sheng."

Despite these facts, some people fabricate stories to deal blows at Comrade Xu Xiangqian, and their scheme has already caused great confusion among the leading cadres of our army.

"Deng Xiaoping resigned from his post of vice premier and retained his post of party vice chairman. However, he has never changed his highhanded way of dealing with people. He has taken all the party, state and army powers into his own hands and intervened in the daily work of both the army and the government. He even went as far as to meddle into the current trial of former PLA leading cadres by the special court."

In a word, the above-mentioned actions taken by a certain person have seriously undermined the stability and unity among the leadership of our army.. He even attempts to take advantage of this situation and put the army under his personal control.

'BA YI' NOTES DENG XIAOPING'S HANDLING OF REBELS

OW151419 (Clandestine) by Ba Yi Radio in Mandarin to China 1400 GMT 14 Dec 80

[Summary] "The troops encircling and suppressing the 480 persons in the Shiwandashan Mountain area of Guangxi have been increased to 3 regiments over the past month. This indicates that it was very unwise not to talk to them to bring them around at the beginning or to refuse to negotiate with them later. Without conducting investigations and study, Deng Xiaoping, a leading member of the military commission, has arbitrarily branded the activities of these persons as an armed counterrevolutionary rebellion, and decided to suppress them by force of arms. This is extremely wrong.

"In point of fact, none of the 480 persons is an alien-class element who harbors bitter hatred for the party and socialism. Among the 480 persons, 17 are cadres at divisional and regimental levels. (Ma Xiantu), (Song Yuzhen) and (Liu Hanjie) are veteran cadres who once participated in the long march. How can they be treated as turncoats, and how can their activities be regarded as armed counterrevolutionary rebellion.

"Both in the war of liberation and in the campaigns to put down the rebellion in Xizhang, in Aertai Mountain area of Singjiang, and in Qinghai, as well in encircling and suppressing the Kuomintang (?8th) and 26th armies, our army had always adopted the tactics of winning over the enemies by peaceful means. Since this is how we dealt with the enemy, why are we so ruthless in dealing with our own people? Furthermore, the conditions they put forward are also understandable. Even though their conditions are not completely acceptable, a settlement can still be made through consultation. On the contrary, sending troops to suppress them has only aroused the (?PLA fighters' sympathy for the 480 persons) and [words indistinct]. Moreover, we must understand that of the six-point conditions put forward by them, some of them are not deliberately making trouble out of nothing but actually reiterating some questions that were once argued at the enlarged session of the military commission."

Implicated in the cases of Lin Biao and Jiang Qing. Are "some (?100) former leading personnel of our army" who are now in custody. They should be tried and punished for implementing the wrong line and policies. Under no circumstances should they be punished as principal culprits or principal accomplices, nor should we put the army cadres who carried out orders and the principal defendents of the gang of four on the same footing. "As for the 14,000 (?army cadres who have been or are being investigated)," they should also be handled leniently for their mistake of blindly carrying out orders issued by higher levels.

'RENMIN RIBAO': ODE TO THE END OF LIFETIME TENURE

JK140529 Beijing RENMIN RIBAO in Chinese 13 Dec 80 p 5

[Poem by Yang Xianyao [2799 3759 3852]: "Farewell, Lifetime Tenure"]

[Text] When did the old man of history
Arrange for us
A golden armchair?
Sit on it, it is for a lifetime.
Sit on it, the thought of special privileges
Will open wide its mouth,
Stick out its greedy tongue
And bare its merciless fangs.
Now, the old man of history
Has suddenly realized his mistake.
He said: My children,
You must not have blind faith in me.
I have also made many mistakes.
Now, I have decided to remove
The golden armchair
I designed for the cadres: Lifetime tenure.
Farewell, lifetime tenure.
You are like a stupid boulder,
Pressing on the back of the Chinese people
Until they cannot lift their heads,
Until they are bent and hunchbacked,
Until they are in tears
And until they are tottering.
Farewell, lifetime tenure.
Your are like a piece
Of heavy black shroud
Blotting out the dawn of the People's Republic of China;
Casting your enormous shadow
On the distressed land.
In places darkened by your shadow,
Leaves are no longer green
And grains can no longer ripen.
Farewell, lifetime tenure.

You also have had your moment of glory.
Now, you also must go. Away
With your ferocious power and prestige,
Your seal of authority
And your gun.
You may make deliberate misrepresentation.
You may distort the facts.
Farewell, lifetime tenure.
People may perhaps be reluctant to see you go.
Because the past is a silkworm not yet dead
Still spinning out silk
That forms traditions and habits
Binding the oar of sentiment,
The sail of thinking
And the ship of life.
Farewell, lifetime tenure.
We know that you may not be
The last tail
Or the last pile of garbage
Left to us by feudalism.
However, your going
Is the first sign of the successful step
Toward the new long march.

'XINHUA' COMMENTARY ON IMPLEMENTING PRICE CONTROL CIRCULAR

OW130230 Beijing XINHUA Domestic Service in Chinese 0742 GMT 12 Dec 80

[Commentary by XINHUA commentator: "Unify Understanding, Unify Action"]

[Text] Beijing, 12 Dec (XINHUA)—The circular on strictly controlling prices and readjusting negotiated prices issued by the State Council is an important measure for stabilizing the national economy, insuring a stable livelihood for the people, promoting stability and unity and guaranteeing the smooth progress of socialist modernization. The people's governments and concerned departments in the provinces, municipalities and autonomous regions throughout the country are taking effective measures to implement the circular.

In implementing the stipulations of the circular, one highly important thing to be done is for all areas and concerned departments to unify their understanding and actions, for partial interests to be subordinate to the interests of the majority, and for individual and specific contradictions to be subordinate to the general demand for a stable economy. This is because controlling prices and readjusting negotiated prices are just not simple economic work. They are not only the business of the price departments but also they require close coordination among industrial, agricultural, commercial, supply and marketing, food, industrial and commercial administrative, communications and transport departments; banks; tax offices; government offices; mass organizations; and military units. At the same time, in doing this work it is inevitable that difficulties and resistance will be encountered. Therefore, in the course of doing this work, it is still necessary to do effective political-ideological work.

In order to strictly control prices and conscientiously readjust negotiated prices, all areas, particularly the big and medium-sized cities, must immediately organize powerful price inspection teams, and, under the leadership of people's governments, mobilize the masses and rely on them in helping to implement the circular; inspect and supervise prices; solve existing problems; and expose and handle cases of violation of the circular, increasing prices at will, inflating prices in disguised ways and driving up negotiated prices. This work of inspecting prices should be made a procedure of our economic work.

MILITARY AND PUBLIC SECURITY

BRIEFS

YUNNAN PLA CARRIER PIGEONS--Kunming, 19 Nov (XINHUA)--It usually takes 2 days to walk from a PLA company stationed in a hilly area along the Yunnan border to regimental headquarters. One day, a comrade of the company was seriously ill, and it would have been too late to send someone over to regimental headquarters for medical aid. Under these circumstances, the company dispatched four carrier pigeons to regimental headquarters with a letter requesting the medicines needed. About 1/2 hour later, the pigeons returned with the medical supplies requested. [Beijing XINHUA Domestic Service in Chinese 0123 GMT 10 Nov 80 OW]

SHANGHAI RESEARCH INSTITUTE--The Shanghai chapter of the research institute for studying the new 4th army and the Central China stronghold for resisting Japanese aggression was founded on 14 November. Over 500 veteran new 4th army fighters and party history workers attended the founding ceremony. The institute is devoted to the study of the political, economic, military, cultural and education history of the new 4th army and the Central China stronghold for resisting Japanese aggression. Xia Zhongnong, adviser to the research institute and secretary of the Shanghai Municipal CCP Committee, spoke. (Chen Maohui), adviser to the political department of the Nanjing PLA units and the research institute, spoke on the history of the new 4th army. Xia Zongnong was elected honorary president of the Shanghai branch institute. [Shanghai City Service in Mandarin 1130 GMT 14 Nov 80 OW]

SHANGHAI AIR DEFESNE INSTALLATIONS--People's air defense installations are being used by many neighborhoods, enterprises and other units in Shanghai Municipality to develop production and establish commercial service centers, providing jobs for some 4,000 unemployed young intellectuals. Several underground establishments, including a woolen textile mill and an hotel, have been built in the air defense installations of (Xingkang) street which covers 1.1 square kilometers, and 340 young intellectuals have been employed since 1979. [Shanghai City Service in Mandarin 1130 GMT 17 Nov 80 OW]

SHANGHAI DEFENSE WORKS MEETING--An on-the-spot meeting to discuss the use of the people's air defense works of the Nanjing area during peacetime as well as in wartime concluded on 21 November in Shanghai. Attending the meeting were responsible comrades from the people's air defense groups of Shanghai, Jiangsu, Zhejiang and Anhui. They pointed out that use should be promoted of air defense works for peacetime purposes. Thus far, some 900,000 square meters of air defense works in the Nanjing area have been put to use. [Shanghai City Service in Mandarin 1130 GMT 21 Nov 80 OW]

SHANGHAI FORTIFICATIONS-CIVIL USE--People's defense works in Shanghai have been used for civilian purposes. So far, they have been turned in to over 2,000 warehouses, over 160 hotels, hostels and restaurants, nearly 200 workshops and plants and nearly 1,000 meeting halls and offices and other facilities such as bicycle parking lots. The total area thus utilized is equal to 130 odd 10-story buildings with a ground floor space of 500 square meters. Production enterprises utilizing the people's defense works have handed in to the state 400,000 yuan in profit each month this year. [Shanghai City Service in Mandarin 1130 GMT 20 Nov 80 OW]

FISHERMEN RESCUE SINKING SUBMARINE--Jinan, 9 Dec (XINHUA)--Fishermen of Huangcheng Island in Shandong Province and commanders and fighters guarding the island recently braved strong winds and giant waves to rescue a sinking naval submarine which hit a hidden reef, thus saving instruments and equipment worth 600,000 yuan and scientific data from being lost. On the evening of 25 October, the winds in Bohai were very strong. "A working naval submarine which was carrying out an experiment at sea was sailing toward the port of Huangcheng to escape the strong winds. On the way, it was forced onto a hidden reef by a sea current. The impact breached a hole in the bottom part of the main cabin. The ship was sinking very quickly as the sea water rushed into the cabin." Seeing that the naval submarine was in trouble, commune members on the island sent out two fishing boats to rescue the sinking ship. They used pumps to remove the water from the submarine's cabin. After 14 hours of hard work by the sailors and commune members, the hole was plugged and welded. "The next day the submarine's engine roared and the submarine returned to its base safely." [Summary] [OW120523 Beijing XINHUA Domestic Service in Chinese 1454 GMT 9 Dec 80]

XIZANG YEAREND MILITARY EVALUATION--Starting on 1 November, the Shannan military subdistrict in Xizang has sent a work group, comprising leading comrades of headquarters and the political and logistics departments, to make yearend evaluation of the military and political quality of border defense units at regimental, battalion and company levels. [Lhasa Xizhang Regional Service in Mandarin 1300 GMT 19 Nov 80 OW]

GUANGZHOU PLA PLANNED PARENTHOOD--The Guangzhou PLA units have done well in planned parenthood work this year. The rate of married couples bearing only one child has been increased from 37 percent last year to 91.1 percent. The Guangzhou PLA CCP Committee has proposed six measures in response to the call of the party Central Committee: 1) It is necessary to widely launch activities to study the party Central Committee's open letter on planned parenthood work; 2) to attach the greatest importance to planned parenthood work; 3) all cadres and their families must seriously implement their local unit's instructions on planned parenthood work; 4) commend advanced units and individuals in planned parenthood work; 5) strengthen leadership over planned parenthood and launch ideological education for the masses; 6) to promote medical services for children. [Guangzhou Guangdong Provincial Service in Mandarin 2345 GMT 25 Oct 80 HK]

SOCIOLOGICAL, EDUCATION AND CULTURE

STRUCTURE OF INTELLIGENCE CALLED KEY IN MODERNIZATION

Shanghai WEN HUI BAO in Chinese 5 Sep 80 p 3

[Article by Xia Yulong [1115 4416 7839], Liu Ji [0491 0679], Feng Zhijun [7458 0037 3182] and Zhang Nianchun [1728 1819 2797]: "On the Structure of Human Intelligence"]

[Text] Summary of the text: The structure of human intelligence is a subject of great importance to the building of socialist modernization. The construction of a logical structure of intelligence not only will permit people to make the utmost of one's talents and put them to full use, it moreover can uncap enormous abilities and greatly extend the reach of national modernization. The structure of intelligence is composed of five secondary structures: profession, age, intellectual ability, knowledge and quality. The key to adjusting the structure of intelligence lies in rationalizing the structure of the leading cadres.

1. The Structure of Intelligence is a Key Topic in Modernization

The building of a rational structure of intelligence is of specially urgent significance in accelerating the progress of national modernization. The construction of national modernization is now being carried out from our base of the huge population and poor foundation after the national economic collapse during the ten years of chaos caused by Lin Biao and the "gang of four." At present our materials, finances, energy, experience and human skills are all inadequate. With these "five inadequacies," how we are to accelerate building the four modernizations becomes a problem which the entire nation must probe and consider. We believe that the most effective method is to seek wealth through management. Our management is backwards, which means that it has great potential. A great many foreign experts who have made studies in our country say that China's production equipment conditions need not be changed and the use of scientific advanced management will improve the production rate from 50 to over 100 percent. Uncovering management potential is a multifaceted operation. The basic direction is reform of the economic management system, but in terms of the present times, reform of the structure of intelligence is perhaps the most practical management action.

What is meant by the structure of intelligence? In comparison with machine design, machines of advanced performance must have parts of superior performance. However, just because the parts are good does not definitely mean that the machine will be any good. The basic task of machine design is how to take the various parts of a particular level of quality and rationally put together an effective machine. The building of modernization is the highest intellectual activity of mankind and is also the collective activity of all of mankind. This then brings up the question of what kinds of intelligence are needed and how they are to be organized and rationally combined. In a word, this is a question of the structure of intelligence. A rational structure of intelligence not only permits people to reach and apply their full potential, but achieving a perfectly rational structure will uncap enormous new abilities. This will greatly accelerate our national modernization.

Increased scientific and technological modernization of the national economy means the ever increasing importance of relying on human intelligence. Mental workers are daily becoming the main force in social production. Among the economically developed nations of the world there is an increasingly greater number of mental workers in the total number of people employed. In the United States, for example, the proportion was 43.3 percent in 1960 and by 1977 it had reached 50.1 percent. According to predictions by experts, by the year 2000 only 10 percent of the people of economically advanced foreign nations will be directly employed in production and of these there are only two workers for every three persons in management. We discern in this an irreversible historical trend: The number of mental workers who have been exposed to a modern scientific and cultural education is an important measure of the standard of social modernization. Although they are workers, they are not simply manual laborers as before. The level of their cultural education is becoming ever higher and their work relies evermore on intelligence. With conditions such as these the question of the structure of intelligence naturally arises.

Actually, the question of the structure of intelligence has already been unavoidably placed before us. For a long time our cadre structure has had very few professional cadres, and this is an example of one of the weak points in the intellectual structure. According to statistics from a 1979 Tianjin study of 23 research institutes, of 121 cadres only one-fourth were scientific and technological personnel and only 10 percent were actually in core cadre positions. According to statistics from a study of 234 plant managers and deputy plant managers in the Sichuan Fifth Machinery Plant system only 13 percent have a collegiate cultural level. This furthermore is typical of places with relatively more professional cadres. Such a structure of intelligence obviously is not suited to demands of the four modernizations. At this time the slogan for professionalization of the cadres has been given out and many scientific and technological personnel have taken their leadership sentry posts. This is a delightful beginning. Nonetheless, practice has proven that new problems do emerge when many well known scientists and adavanced engineers assume leadership positions. Their expertise in scientic matters declines day by day and the unfamiliar load of heavy administrative duties weights them down. Under conditions such as these is total professionalization of leadership tasks actually the best structure of intelligence? Another example is that because of the damage and destruction caused by Lin Biao and the "gang of four" the aging of our leadership cadres has become a real problem. Vigorous promotion of new production forces is no doubt a correct and important policy. However, if making the cadre ranks more youthful is the only goal and if the matter is not studied and understood from the overall viewpoint of the structure of intelligence, we possibly will develop a thoroughly lopsided structure of intelligence. This one-sided method is just like trying to build an advanced machine from a single part, it simply cannot be done.

From this we see that investigation of the structure of intelligence is an urgent task for our national modernization and is worth the expenditure of much human energy.

2. The Five Components of the Structure of Intelligence

The structure of human intelligence is a dynamic comprehensive entity of many directions, many layers and many components. Generally speaking, the structure of intelligence is composed of five secondary structures: the professional structure, the age structure, the structure of intellectual ability, the knowledge structure and the quality structure.

The professional structure means that within a system all types of specialized personnel should be in the correct proportion. Within any given department or unit the structure of intelligence most likely will have problems in the professional structure. A machinery plant requires workers in every profession: there are foundry workers, metal forgers, metal processors, assemblers, helpers and the like. The metal processors are further divided by such tasks as lathe work, milling, polishing and bench work. That these should exist in suitable proportions is of course common knowledge. However, in addition to the production workers necessary to modern enterprises, there is a daily increasing need for a structure of management personnel, research and development personnel, sales personnel and technical service personnel. The electronic computer company founded by the Chinese-American businessman Wang An [3769 1344] has been one of the most flourishing new American companies of recent years. It altogether employs 8,500 people and of these only 2,000 are production workers while over 1,000 are technical service personnel, over 2,000 are sales personnel and the rest are managers and researchers. It appears that the professional structure is one of the major reasons for this company's success.

A research organization is just the same. Leaving aside all of these peripheral, overlapping and comprehensive sciences, even a professional research institute cannot expect to need only personnel in that particular profession. People of only one profession cannot hope to comprise a superior structure of intelligence for an institute. For example, it is insufficient for a contemporary institute of plant physiology to rely on botany and such professions because they must have a strong foundation in chemistry and not just biochemistry because they also need agricultural chemistry, physical chemistry and organic chemistry to lend professional support. Among the researchers of the Shanghai Institute of Biochemistry only 21 percent are professional chemists and they are painfully aware of the lack of balance in their research work. Basic research has always been like this, and it is an even greater problem in the more comprehensive areas of technology. The newer the technology the more the demand for comprehensive professional work. In the case of the electronic computer it simply will not do to rely only on computer professionals. It is quite the opposite because support from many other professionals is needed to form a good professional structure. There are professional structures on different levels, as large as the production structure of society or as small as an individual's knowledge structure and all are worthy topics of study.

Age structure is an important secondary structure within the structure of intelligence. Generally speaking, a complete age structure should have older people who are "old horses who know the roads," middle aged people who are "firm rocks in midstream" and young people who are "vigorous and forceful" in order to form a logical comprehensive entity. This will use peoples' psychological makeup and intellectual level in making the most of their superior abilities.

In the area of technology there is a complex relationship between age and technology. The mutual relationship between age and intelligence in modern society differs from that of ancient society. In ancient society the level of technology was rather low so the older a person became the more experienced and capable he became. This truly was the so-called pattern in which "old people are the wise people of the villages." In modern society, however, the increasingly rapid pace of technological change means that even though a person's knowledge may increase with age there is no necessary correlation between a person's age and his level of knowledge.

Some scholars have studied the relationships between age and intelligence (see the following chart), and clearly explain the problem.

Intelligence/Age	10-17	18-29	30-49	50-69	70-89
Perception	100	95	93	76	46
Memory	95	100	92	83	55
Comparison and Judgement	72	90	100	87	67
Speed of Movement and Reaction	88	100	97	92	71

However, this does not mean that one can simply use age to draw lines. The importance of youth and middle age in this demonstration does not at all slight old people. It is not exceptional in the history of science for old people to achieve great results. Science and technology require people of many talents, and old people can use their abundant experience and sharp observations to engage in guiding and advising management tasks, writing books and developing theories, nurturing talent and guiding the younger generation. The old, middle aged and young ought to form a three-dimensional battle group of the correct proportions, with each contributing all available abilities and wisdom to make up for whatever weak points do exist. This is the only correct way to develop science and technology. The establishment of the famous B C S theory in the history of modern science thoroughly explained the logical age structure and was of great significance in promoting scientific enterprises. The cooperation between (Bading) the scientist over 50 years old, Cooper, the middle aged scientist of strength and vigor and (Shilifei) the creative scientist just 20 some years old combined elderly, middle aged and youthful intelligence to produce a masterpiece--the theory of micro-superconductors, which won the 1972 Nobel Prize for Physics.

Intellectual ability refers to mankind's ability to make use of knowledge. The structure of intellectual ability is also a question of extreme importance. We believe that it primarily includes the abilities of self-study, research, thought, expression, and organization. All people who live in modern society ought to work from a foundation of seeking knowledge to improve their own intellectual abilities.

Scientific research has demonstrated that mankind has intellectual abilities of various types. For example, in the area of scientific research there are the modes of the recreation of past events, discovery and creation. The skill of the reproduction of past events is superior for the accumulation of knowledge and for effective reproduction. The talent of discovery works from a basis for which there is no previous human experience and enables the individual's practice to make progress to improve and to make discoveries. Major breakthroughs in scientific theory and major technological inventions are always aided by man's creative talents. Because of this, people generally value the modes of discovery and creativity. Albert Einstein said, "Imagination is more important than knowledge because knowledge finally is limited while imagination can embrace all that exists in the world and stimulate progress. Imagination is the source of progress in knowledge."

However, having only creative talents simply will not do. In an extreme case, if a structure of intellectual abilities was composed only of people with creative talent it is very likely the resulting structure would be a disaster, probably equivalent to a chorus made up only of outstanding soloists. Progress in scientific matters requires not only that different people engage in study, creation and research, but also requires that other people perform reproduction of past events, development and application. Only by having people of different intellectual abilities placed into an intellectual structure in the correct proportions can the most effective use be made of intellectual abilities.

The structure of knowledge also occupies a very important place. An enterprise, research institute or an organization cannot require that all the members have the same level of knowledge. If all have too low a level of knowledge they will be unable to accomplish their tasks, and if they all have too high a level this will be a waste of intellect. A logical knowledge structure is composed of elementary, middle and high level intellects in a given proportion, thus forming a complete entity. Therefore, the problem lies in finding a suitable proportion. In terms of scientific research, American research personnel and their assistants are found in a ratio of 1 : 2-2.5 and in the Soviet Union it is 1 : 3-3.5. As to the proportion of people in theoretical and practical research, in the Soviet Union it is 1 : 20. In addition, some research results show that if one high level researcher has from 15 to 20 assistants superior results are then obtained.

Actually, the proportion in the structure of intelligence depends on the science involved, the country involved, the different levels of development and on changes in attitude. For example, the proportion of West German researchers, developers and assistants was 1 : 0.95 : 1.3 in 1970 and 1 : 0.97 : 0.965 in 1975. In Japanese research departments there was a different situation in the proportions of researchers, research assistants and other personnel. It was 1 : 0.57 : 0.85 in 1963 and 10 years later it was 1 : 0.31 : 0.58. The reduction in the number of assistants is perhaps related to their automation of experiment techniques. Therefore, the determination of the correct proportions in the knowledge structure must undergo concrete examination and analysis and must proceed from practice.

Quality is a very broad ranging concept. Narrowly defined, quality refers to a person's innate physical characteristics, primarily the organs of sense and the nervous system. Quality is the physiological condition which determines a person's psychological development, and the growth and maturation are realized in social practices. Certain shortcomings in areas of quality can be compensated for and continually improved. Broadly defined, a person's character, courage, interests, temperament and manner can also be included under quality. Within a structure of intelligence which is logical and complete the qualities ought to be in harmony. Harmonious qualities can be mutually complementary. For example, a violent personality and a warm personality complement each other. Harmony between qualities should aim for consistency so that aims and aspirations, for example, can attain the utmost possible consistency. This is the goal of the structure of quality.

The American E. (Laodesaipu) once made a study of 105 experts who had creative talents and asked them about their views on what qualities the ideal chief of a research laboratory should have. The great majority of the experts believed that these are: to have creativity and imagination; to understand the creative process of other people; to be clear about the special characteristics of scientific and technical personnel; technical competence; skill in encouraging the people around him; giving suitable freedom to scientific and technical personnel; nurturing people's self-confidence; respect for the ideas of other people; the ability to make tactful suggestions; the ability to serve all co-workers; the ability to be a spokesman for everyone; fairness in placing trust and giving praise; skill in assigning tasks; and not giving excessive supervision. Some other research shows that only people who are cool headed, openminded, encouraging, responsible, broadly educated, expansive and so on are capable of good management work. A great deal of evidence shows that not all experts are suitable. Only those people with certain managerial qualities can continuously improve the effectiveness of scientific research and promote the well being of scientific matters. This is the structure of quality between management work and the scientist. Obviously, very few people possess management qualities, so there also is a problem in the relationship between the structure of qualities and those performing management work.

In light of all the above, the structure of intelligence is a multi-dimensional and dynamic comprehensive entity. To make full use of the various factors of intelligence it is necessary to start from the concept of a structure, which means to consider the structures of profession and age, pay attention to the structures of intellectual abilities, knowledge and quality, grasp the main points while not neglecting the rest, give overall consideration and make suitable arrangements. All forms of arbitrary uniformity transgress against the principle of structure. Considering any problem in terms of only one goal will damage the structure and lay a foundation for future problems. It must also be pointed out that any logical structure of intelligence must be responsive, self-controlled, and self-adjusting. It cannot expect to achieve immediate success and remain unchanged thereafter. The key to attaining this level lies in the mechanisms and changing factors of structural adjustments.

3. The Major Task of Building a Logical Leading Cadre Structure of Intelligence

We see from the above that the structure of intelligence is very broad ranging. All occupations and professions have their own structure of intelligence as do all departments and units in all levels of management. All areas of human activity have a structure of intelligence. It is found everywhere. If the major task is to build a logical leading cadre structure of intelligence. This is the major task not only because the cadres are the leaders of the masses, but also because to a great degree they determine the establishment of the other structures of intelligence. Therefore, a logical leadership structure is the key to the success or failure of development in each department, enterprise and unit.

The Volkswagen Motor Works of West Germany is known throughout the whole world because of the energy crisis and the economic recession the company lost 8.07 hundred million marks in 1974 and 1.57 hundred million marks in 1975. These two figures total far over 9 hundred million marks worth of shares and the company bordered on bankruptcy. In February of 1975 the board of directors invited the (Laien) steel mill expert on economic management (Shimikeer) to assume the post of general manager. On taking command of this storm-tossed ship his first act was to make adjustments in the leadership groups and the personnel. He saved the company three hundred million marks by reducing personnel from 212 thousand people to 93 thousand people and by eliminating leaders and personnel for such problems as being too old fashioned, engaging in power struggles, being unrealistic and the inability to make good suggestions. An efficiently working and logical structure of intelligence stimulates the various other reforms that took place. That year's losses were turned into profits and the next year they announced profits of 1 billion marks. Similar examples are found in China. The Mindong Electric Machinery Plant began to use more lively methods and improved the structure of intelligence on each management level and with one leap turned a backward enterprise into a national model of progress. Moreover, they overcame their competition in the difficult international market. These examples fully explain the extreme importance of the leadership structure and also stimulates us to consider what the most truly logical leadership structure might be.

During the progressive expansion of the scope of production in the last 20 years science and technology have constantly made progress and undergone changes and the pace of change in contemporary society has dramatically accelerated. In foreign nations the highest leadership levels of major companies have shown a trend toward collective decision making, the organization of various committees and offices and the making of major decisions only after holding open discussions. At the same time, all sorts of professional brain trusts and think tanks have sprung up to assist the leadership in making decisions. This all shows that the modern form of leadership has developed from the individual to the collective leadership of the "flexible experts."

The history of the development of collective leadership tells us that the professionalization of modern leadership is mandatory. However, this professionalization is not the same as making it professional by the use of scientists or technicians. They have their own areas of expertise and there are certain advantages to having them assume management and leadership duties, so we ought to consider promoting them to leadership levels. However, not every scientist and technician has managerial talent, and it does not mean that the greater their fame or reputation in science the greater their managerial abilities. The famous Manhattan Project was not put under the direction of such famous Nobel Prize physicists as Einstein, (Kangpudun) or Fermi but rather under the direction of the 28-year-old theoretical physicist Oppenheimer. He was chosen mainly for his "broad knowledge, sensitive intellect, quick perception, decisiveness, organizational ability and skill in uniting people." In a word, this "inflexible expert" had "flexible skills." On the contrary, in West Germany there was the (Makesi-Boen) Research Institute which was established after World War II by Heisenberg. At age 22 Heisenberg established the study of quantum mechanics and thus became one of the most important theoretical physicists of the 20th century. Because of his importance he was the director of this institute until his death a few years ago. He was awarded over 50 honorary doctorates and the government provided much capital investment, but for these 20 some years he made very few research findings. There is another even clearer example. A few years ago the French (Kebeier) European Neutron Technology Center was run by an elderly director who was a man of great vision and strong personality and also a winner of the Nobel Prize. Upon his retirement a 60-year-old deputy director assumed the top position. Originally he had been protected by the old director, but his new position revealed that he was a man of no particular competence and was not at all inventive. Within two years the Neutron Technology Center was devoid of any vitality and the French Ministry of Science decided to make some changes. Over the objections of many nuclear physicists they offered the position to a 39-year-old professor of accoustics from the University of Paris, giving the reasons as "his great organizational capabilities and broad views of science." The results confirmed the wisdom of this choice. The European Neutron Technology Center is again in the forefront of world science. If this is the case in leadership of scientific research it is even more true for the leadership structure in other enterprises. Moreover, modern management has itself become a branch of learning on the university level and all scientists and technicians in a leadership capacity ought to study it. Therefore, the mark of whether or not modern leadership is on an expert level is whether or not it has the skills and professional qualities of modern scientific management. In a word, whether or not it is expert. Scientists and technicians who are interested only in their own work will probably not be good elements in the leadership structure.

It is necessary to make our leadership more youthful. In this modern age where economic production is rapidly developing and science and technology are making new progress on a daily basis, youthful leadership has the greatest power of response. Because of this, great attention must be paid to continual replacement of the old with the new and maintaining a youthful and active leadership structure. Neglect of this point will be a historical mistake. Youth, however, is no indicator of a person's abilities and we must select those who follow the party line established by the Third Plenum and who also have the proper management ability. We must also remember that although there is a positive correlation between advanced age and physical decline there also are great differences in individual physiques, so that some people maintain their thought process with advanced age while other suffer great decline. Therefore, making the leadership more youthful is but a "vague numerical" concept and that exercising arbitrary uniformity in drawing a line at a particular age will not produce the best possible leadership structure.

What is most important in modern management is not the excellence of the individual but rather the best structure of collective leadership. There is no one person competent in all areas of science and the same is true in management. The great majority of people are expert in a single area, but if they are properly organized they then can demonstrate all-around expertise as a group. In terms of professional structure, all those leaders who are famous scientists or advanced engineers certainly do not make up the very best leadership structure. They probably are outstanding as leaders in science and technology but the leadership work for any unit always covers the whole unit and it must be asked if they could lead the work in political ideology, could manage the economic finances or could withstand the pressures and frustrations of the work in logistics and supply. Therefore, modern leadership groups should be logically composed of people of various professions and talents. In terms of the age structure it should be a unity of old age, middle age and youth. They will compensate for each others shortcomings and work for overall benefit. Making leadership youthful should not be simply explained as having only young people or as carefully considering each and every person's age, but rather that each leadership group should have a logical proportion of old, middle aged and young people and that there be an average age limit in the leadership levels to prevent the overall leadership from aging, thus ensuring continuity. In terms of the structure of knowledge there should be thinkers capable of advanced thought and organization experts capable of advanced organization and there must also be practical workers capable of "leaving a footprint for each step taken." There is another factor of great importance which is usually overlooked, and that is the structure of quality. If the personalities of the leaders do not match, if their interests are divergent, if their values are different and if their natures are at odds this will greatly weaken the effectiveness of their leadership. They will always be on different tracks of thought and there will be frequent internal dissension. As for those people of poor character who delight in trickery and deception and play power games there is even less room for them in modern management groups. Although there are not many people like this, a single rat can spoil a pot of soup and if not immediately eliminated it can make a whole group uneasy both night and day and upset even the chickens and dogs. Modern leadership ought to be a completely harmonious, unified and friendly group. Only a group such as this will have any fighting strength. The other structures of knowledge need not be discussed in detail.

The leadership structures of enterprises and research institutes in capitalist nations are chosen, organized, and put into operation by the top leadership. What is suitable is kept and what is unsuitable is discarded. Although their decisions are made with complete freedom they are not at all arbitrary and are actually controlled by a system of economic results, because unless people are appointed on the basis of their merit or ability the enterprise or institute will fail. The question of how socialism will use the principle of the structure of intelligence to select the various levels of leadership is a new topic for the top leadership and the human affairs departments to work on.

For a long time our cadre system has operated under a open "lifetime system" and a "unit ownership" which makes the leadership structure in our enterprises and scientific research units less than ideal, some even very much so, and this has severely obstructed the progress of the four modernizations. Therefore, we can imagine that if our various leaderships levels are able to carry out adjustments and changes according to a logical structure of intelligence this will turn our inefficient leadership structures into highly efficient fighting groups. This will then generate enormous resources and wealth.

PRC MEETING DISCUSSES EDUCATIONAL GUIDELINES

OW131316 Beijing XINHUA in English 1254 GMT 13 Dec 80

[Text] Tianjin, 13 Dec (XINHUA)—China's leading educationists and administrators of education agreed that the state must make greater investments in education to meet the needs of China's modernization program.

More than 280 of them from all parts of the country attended a two-week meeting sponsored by the Ministry of Education, which ended here today. They exchanged views on the guidelines for China's educational development.

They noted that the serious shortage of funds for education will be a great handicap to the country's economic development and this has drawn the attention of the party Central Committee.

The "Cultural Revolution" (1966-1976) caused heavy damage to China's education. Colleges were closed down for years and the standards of college students were greatly lowered until 1977. Attendance at both primary and middle schools dropped and the question of popularizing primary education became an urgent consideration.

The meeting agreed:

—That emphasis in higher education should be laid on raising standards since college enrollment has already topped 1,130,000, two-thirds more than in 1965, and that spare-time and radio, TV and correspondence courses should be promoted.

—That popularization of primary education is a strategic task for the coming decade since, in areas inhabited by at least 15 percent of the population, primary education is far from complete, especially in sparsely-populated and economically backward areas.

—That secondary education should be restructured so that the proportion of vocational and technical schools increases, and that the proportion of students of liberal arts, law, economics and industrial management in colleges also increases.

NEI MONGGOL ESTABLISHES FIVE WORKERS' UNIVERSITIES

SK221315 Hohhot Nei Monggol Regional Service in Mandarin 1100 GMT 21 Nov 80

[Excerpts] According to our reporter (Wu Xinmin), the regional people's government recently approved the establishment of five higher educational institutes for staff and workers in Hohhot, Baotou and Wuhai municipalities in an effort to meet the needs in the four modernizations, open up avenues for education and train more qualified personnel. They are Baogang Workers' Spare-Time University sponsored by the Baotou Iron and Steel Company, Baotou Municipal Machinery Bureau Workers' University sponsored by the Baotou Municipal Machinery Bureau, Hohhot Municipal Workers' University sponsored by the Hohhot Municipal Trade Union Council, Baojian Workers' University sponsored by the construction plant of the Baotou Iron and Steel Company and Wuda Coal Workers' University sponsored by the Wuda Coal Mining Administration. The period of schooling is generally 3 to 4 years. One to 2 years of schooling is set for some special fields of study. Workers are released from all their work or part of their work to attend the universities, or they attend the universities in their spare time. These five workers' universities were originally workers' spare-time universities run by industrial and mining enterprises. They now have nearly 2,000 students. Recently the regional metallurgical industrial bureau, regional coal mining administration bureau, regional machinery bureau, regional educational office and the Hohhot Municipal Trade Union Council organized several groups to inspect these universities. They held that these universities possess adequate conditions for running schools and meet the standard set by the State Council.

These five workers' universities have been brought into line with the state plan. Upon completion of their study, the students shall undertake examinations and shall be issued graduation certificates if they pass the examinations. They will be treated equally as graduates of other colleges and universities and their jobs will be rearranged by pertinent departments according to their fields of study.

U.S. PHYSICS PROFESSORS INTERVIEW PRC STUDENTS

OW221228 Beijing XINHUA in English 1220 GMT 22 Nov 80

[Text] Beijing, 22 November (XINHUA)--The standard of Chinese physics students is "similar" to that of their U.S. counterparts, professor Douglas Fitchen of Cornell University, New York, said here today.

Professor Fitchen and Professor Norman Christ, of Columbia University, are in China to examine 132 candidates for 58 American universities under a program run by American scholars in cooperation with the Chinese Ministry of Education and the Chinese Academy of Sciences.

So far they have talked to 74 students in Guangzhou and Beijing. They left today for Xi'an, northwest China, and Shanghai where they will interview more students.

Despite the fact that education was at a standstill in China for the ten years of the "Cultural Revolution," Professor Fitchen was impressed with the students he had questioned. Some had not yet finished their undergraduate studies, however, and others were studying by themselves.

The two professors also noted that Chinese students tend to have less experience in modern laboratory work than U.S. students.

Professor Fitchen said the students would need to work harder on their English because they would be offered posts as teaching assistants.

BEIJING BEGINS WINTER ATHLETIC PROGRAM FOR CHILDREN, YOUNG PEOPLE

OW201727 Beijing XINHUA in English 1546 GMT 20 Nov 80

[Text] Beijing, 20 Nov (XINHUA)—Beijing launched its winter athletic program for children and young people today with the start of an annual long-distance running campaign, the two-month-long "new long march."

Most of the districts in the city held opening ceremonies today for the event.

Each participant is supposed to run 600 to 1,500 meters a day, and should log a total of 50 to 100 kilometers by the end of the two months.

Close to 600,000 people, mostly university, middle and primary school students, are taking part in the "new long march." Many young cadres and workers also are involved.

This activity, jointly sponsored by the Beijing Municipal Sports Committee, the Beijing Communist Youth League Committee, the municipal bureau of higher education and the municipal education bureau, has been carried out here for the past seven years. Its purpose is to promote the health and physcial fitness of young people in the city.

Beijing organizations concerned with young people and their physical fitness recently issued a notice calling for enthusiastic participation in sports this winter. The primary areas are calisthenics, Chinese boxing and long-distance running.

In order to see real effects, the notice urges "habitual and persistent exercise" laying emphasis on sports suited to different people's needs. It recommends setting up coaching stations to provide systematic and safe physical training. In the countryside, its suggests, people may keep fit by ball games, running, "Wushu" exercises, wrestling, tug-of-war and some military sports.

Besides the "new long march," other mass-participation sports activities being held in Beijing include long-distance running races for elderly people and rope jumping contests for youngsters.

'XINHUA' FEATURES XINJIANG RELICS AT BEIJING EXHIBIT

OW100205 Beijing XINHUA in English 1256 GMT 9 Dec 80

[Text] Beijing, 9 Dec (XINHUA)—Five ancient corpses, of two married couples dating back more than 1,400 years and a woman of the Tang Dynasty (618-907), excavated from Turpan basin in Xinjiang, are now on display in the Beijing Natural History Museum. Opening today, the exhibition will run for six months.

General Zhang Ning, head of the Royal Guards of the border state of Qoco, and his wife, both of whom were buried in the Sixth Century, lie side by side in a glass case. The general died in his forties. Some black hair remains on the head. The skin has become brownish yellow, but the nails are fairly well-preserved. The body is estimated in life to have been 1.72-1.73 meters tall and to have weighed 68-73 kilograms.

According to an epitaph now in the Xinjiang Bureau of Cultural Relics, Zhang Ning was a general in the Qoco state which was conquered by the Tang rulers and turned into an administrative region in A.D. 640. General Zhang Ning died in A.D. 558. His wife died in her fifties, 18 years later.

The other married couple on display in Beijing were magistrate Zhang Hong, posthumously given the title of a general of the Qoco state, and his wife. The man died in A.D. 562 and his wife in A.D. 543.

The other corpse is that of a woman who died in her mid-forties during the Tang Dynasty. The body is very lean and the face has the sign of a large abnormal growth on her right cheek. The head still has a lot of brownish black hair.

The corpses dried out naturally. They were excavated from the Astana group of tombs in Turpan, Xinjiang, in September this year. Turpan is one of the world's hottest and most arid areas, and at the lowest altitude in the world. Scientists believe that these conditions help to preserve the corpses.

A number of models of colored clay men and women figurines, buried with the deceased to cater for their needs after death, are also shown at the exhibition.

PRC BUDDHIST INSTITUTE RECRUITS STUDENTS

OW130210 Beijing XINHUA in English 0147 GMT 13 Dec 80

[Text] Nanjing, 12 Dec (XINHUA)--Twenty student monks dressed in saffron Buddhist robes attended the opening ceremony of a branch theological school in east China's Suzhou city this week.

The new school, housed at Suzhou's Lingyashan Temple, is under the Chinese Buddhist Theological Institute at the Fayuan Temple in southwest Beijing, which recruited 40 monks and opened in September.

All these student monks have been recruited from different temples throughout the country. They range in age from 18 to 31.

The institute curriculum includes Buddhism, Chinese and foreign languages. Teachers are members of the Chinese Buddhist Association and noted Buddhist theologians. After two years' study, the students will return to their former temples.

The Venerable Mingkai, president of the Suzhou Buddhist Association, said: "The restoration of the Buddhist Theological Institute will help train Buddhist successors and cultivated monks who love both the country and Buddhism."

The Chinese Buddhist Theological Institute was established in 1956, but shut down when the "Cultural Revolution" began in 1966. By that time it had trained more than 200 Buddhist intellectuals, having contributed to China's Buddhist study.

The revival of the institute is just one manifestation of the new respect accorded Buddhism and other religions in China. Many Buddhist temples have been restored in recent years. The Lingyashan Temple, the biggest centre of the Jintu sect of Buddhism in southeast China, was damaged during the "Cultural Revolution," but it has been recently renovated. Over 40 monks who were driven out of the temple have returned and religious practice has resumed there.

PRC BUDDHISTS HOLD FOURTH NATIONAL CONFERENCE

OW151550 Beijing XINHUA in English 1510 GMT 15 Dec 80

[Text] Beijing, 15 Dec (XINHUA)--Over 260 noted Buddhists from different parts of China this morning paid homage to the tooth-relic pagoda, a well-known religious site in the western hills of Beijing.

They are here for the coming fourth national conference of the Buddhist Association of China since its founding in 1953.

The 51-metre-high pagoda, located at the original site of the Lingguang Monastery, is an octagonal building of thirteen stories. It enshrines a holy tooth reputed to have belonged to Sakyamuni Buddha and been taken to China some 1,500 years ago.

The procession of Buddhist dignitaries, headed by Bainqen Erdini Qoigyi Gyaincain, vice-chairman of the Standing Committee of the National People's Congress and honorary president of the Buddhist Association of China, Pagbalha Geleg Namgyai, vice-chairman of the national committee of the Chinese people's political consultative conference, and Zhao Puchu, acting president of the Buddhist Association of China, mounted the platform of the pagoda. There incense and candles were burned and flowers and fruit laid as offerings. After chanting the Buddhist Sutra in both the Han and Tibetan languages, the pilgrims entered the hall on the first story of the pagoda. Bainqen Erdini and others prostrated themselves before a golden stupa containing the tooth-relic and presented hadas (pieces of silk as gifts).

According to Buddhist historical records, the Buddha left two teeth in the world when his body was cremated after his nirvana. One of them was taken to Sri Lanka and the other was brought to China.

WUHAN UNIVERSITY'S STUDENT UNION INCREASES ACTIVITY

OW140739 Beijing XINHUA in English 0726 GMT 14 Dec 80

[Text] Wuhan, 14 Dec (XINHUA)--Campus life at Wuhan University, Hubei Province has picked up pace this year with a strong students' union taking the lead, the university reported this week.

On behalf of the student body, the union has regular meetings with the administration every two weeks to present students' requests collected from the polls it has conducted.

In recent months this has resulted in:

--improvement in the canteen service;

--revival of students' societies and fellowships;

--increased funds for students' spare-time research;

--improved optional courses by each faculty, with counselling to students in selecting these courses;

--student polls to assess the value of lectures;

--extension of library hours and language laboratory services;

--more recreational facilities.

Official action aside, the students have taken their own steps to liven up campus activities. Through the union, they are organising musical performances, sports and chess contests, calligraphy and art shows and dances. Some technical students are building a laser shooting range.

The union has organised more than 500 students in a work-study effort. A radio repair shop and a photo studio run by students are doing a brisk business.

PRC EDUCATION THEORIST BEING REASSESSED

OW150236 Beijing XINHUA in English 0216 GMT 15 Dec 80

[Text] Beijing, 15 Dec (XINHUA)--The theories and practices of Tao Xingzhi, a noted Chinese educationist who died in 1946, are being reassessed here.

Preparations are underway to mark the 90th anniversary of his birth on October 18, 1981, with new publications of his writings. Study groups of Tao Xingzhi's theories on education are active in Beijing, Shanghai, Nanjing, Chongqing and his native province of Anhui. A memorial hall in Nanjing reopened in March this year.

Tao Xingzhi (Heng-chih Tao) advocated a people's education movement in China and innovation in rural education. He called for democratic, low-cost education for the masses.

His target, he wrote in 1938, was "not linguistic literacy alone...but also political and economic literacy...so that our people can qualify more and more for participating in the great struggle for a free China.

Tao believed that students should use hands as well as brains; that the school can be a model for a cooperative society, and "little teachers"--grade-school children--can teach their own parents and grandparents.

He sponsored a number of schools such as Yucai, a school for refugee children, in Congqing, Sichuan Province, during the war against Japanese aggression, Xiaozhuang (Morning Village) Teachers' School, Society University, and the labour-science-union schools. A number of graduates from these institutions were prominent in the later revolutionary movement.

In the mid-30's, Tao Xingzhi traveled to 28 countries including Britain, Canada, France, Germany, Mexico and the U.S. to seek support for the Chinese people's resistant to Japanese aggression.

Mourning his death on July 25, 1946, Zhou Enlai, in a message to the Central Committee of the Chinese Communist Party in Yanan, spoke highly of Tao Xingzhi's contribution to China and said his death was "an irretrievable loss to the Chinese people."

Relatives and close friends of Tao Xingzhi expect that some of his speeches and academic papers, previously available only abroad, will reappear in the new edition of his collected works.

SOCIOLOGICAL, EDUCATION AND CULTURE

BRIEFS

QINGHAI BIRTH CONTROL--The Qinghai provincial family planning office recently held a forum of comrades from advanced units of family planning in the province to study the letter of the party Central Committee on China's birth control. The participants stated: some leading cadres pay no attention to family planning. Some say birth control is not necessary in such an underpopulated province as Qinghai and refuse to approve the privileges given to only-child households. Some units totally neglect the provisional regulations issued by the Qinghai Provincial People's Government. Therefore, measures should be adopted to guide family planning work throughout the province. [Xining Qinghai Provincial Service in Mandarin 2330 GMT 19 Nov 80 SK]

QINGHAI SOCIAL DISORDER--A dispatch from QINGHAI RIBAO correspondents reveals that the (Huazigou) district in the Western Qaidam basin has suffered from serious social disorder and increasing crime rate. The dispatch states: since the beginning of 1980, 88 gang fights have occurred in this district. More than 400 criminals engaged in them and some 300 persons were injured during fights. Some 20,000 staff members and workers and their families under a department of the Gan-qing-zang oil prospecting and exploitation campaign headquarters reside in this district. There are many stores, banks, granaries and other units in this district but there is no police station. The nearest one from this district is more than 70 miles away. Many criminals remain at large after committing murders, threatening or beating innocent people or conducting retaliatiory activities. Therefore, departments concerned must pay attention to this and do something about it. [Xining Qinghai Provincial Service in Mandarin 2330 GMT 21 Nov 80 SK]

SHAANXI YOUTH EDUCATION MEETING--The youth and juvenile education leadership group of the Shaanxi Provincial CCP Committee recently held a meeting, which stressed the importance of investigating and studying the new characteristics and problems of youth in the new period and doing a good job of strengthening ideological and political education for them. This education should be centered on upholding the four basic principles, and its main contents should be patriotism, revolutionary ideals, and communist morals. A good way of stepping up this education is to promote the current discussion on world-outlook and organize more young people to participate in it. The meeting also discussed the importance of providing more youth activity centers, helping young people solve their problems of schooling, employment, sparetime study, love and marriage, and reforming young delinquents. [Xian Shaanxi Provincial Service in Mandarin 1100 GMT 22 Nov 80 HK]

SEMINAR ON ISLAM--An academic seminar on Islam, convened by five northwest provinces and autonomous regions, was held in Yinchuan from 10 to 20 November. Questions of Islam in China in recent times were discussed and experiences in Islamic studies were exchanged. Apart from representatives of the five northwest provinces and autonomous regions, the meeting was also attended by experts and scholars from the Chinese Islamic Society, the Research Center for World Religions and the Nationalities Research Center of the Chinese Academy of Social Science, the Central Nationalities College and various places including Shanghai. Leading comrades of the Ningxia Regional CCP Committee, People's Congress Standing Committee, People's Government, and CPPCC and various departments attended the meeting. [HK240504 Yinchuan Ningxia Regional Service in Mandarin 2300 GMT 22 Nov 80]

HEILONGJIANG CATHOLIC ASSOCIATION--The Heilongjiang Provincial Catholic Patriotic Association held its third congress session from 17 to 22 November. Altogether 45 bishops, priests, brothers and sisters attended the session. The association was established in 1959. During the Cultural Revolution, it was forced to stop functioning. Following the downfall of the "gang of four," it resumed its activities in October 1979. The congress participants heard a report on the guidelines of the third congress of the China Catholic Patriotic Association, amended the regulations of the Provincial Catholic Patriotic Association and elected the third committee of the Provincial Catholic Patriotic Association. The religious affairs section under the united front department of the provincial party committee held a tea on 23 November for the congress participants. Responsible persons of the provincial people's government and the provincial CPPCC committee including Li Lian, Zhang Ruilin, Wang Jing and Sun Xiqi attended the tea. [Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 23 Nov 80 SK]

HAIKOU ILLEGAL EMIGRATION--The Haikou Municipal Public Security Bureau has adopted effective measures to combat crime and arrested some 170 criminals. These criminals had been engaged in illegal emigration activities, theft and speculation, seriously disturbing the social order. [Guangzhou Guangdong Provincial Service in Mandarin 2345 GMT 18 Oct 80 HK]

NEW WUXI DAILY--Beginning 1 January 1981, the office of WUXI BAO in Jiangsu's Wuxi City will publish six editions of WUXI RIBAO every week. With the approval of the Wuxi Municipal People Committee, the newspaper office is now trying to employ 10 editors and reporters. Some 440 persons have applied for the job. [OW251525 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 23 Nov 80 OW]

TIANJIN VOCATIONAL SCHOOLS--With the cooperations of the Tianjin Municipal Education Department and the municipal economic department, 17 vocational schools have been established in Tianjin Municipality. These schools offer 35 specialized courses. Some 3,200 junior middle school graduates are enrolled. [Tianjin City Service in Mandarin 2330 GMT 18 Nov 80 SK]

XIZANG POLICY EDUCATION--Several booklets have recently been compiled and published by the political department of Xizang Military District to conduct education on party policies among the masses of cadres and fighters. The content of the first booklet includes a decision made by the Xizang Regional Party Committee to adopt more flexible economic policies in Xizang's rural and pastoral areas, and other documents concerning the policies in respecting the customs of Tibetan people. The second booklet contains 11 documents on decisions made by the central authorities and Xizang Regional People's Government regarding afforestation and protection of forests and wildlife the third booklet is being compiled for publication. [Lhasa Xizang Regional Service in Mandarin 1130 GMT 25 Nov 80]

ANHUI SCHOOL SYSTEM--Since April this year, a system of home room teachers has been introduced to all classes of the 130 courses and sections in Hefei Engineering University. Of the 126 teachers who have been selected as home room teachers, 86 are lecturers with good teaching experience and 40 others are young assistants with certain teaching experience. The home room teachers have done a good job in helping the students to learn more and better observe school discipline. [OW261707 Hefei Anhui Provincial Service in Mandarin 1100 GMT 25 Nov 80]

YUNNAN POPULATION CENSUS--According to unified arrangement of the party Central Committee and the State Council, Yunnan Province will soon start pilot project work for the third population census. Population census is an important job and is of great significance in controlling population growth and arranging for people's material and cultural life. The third census will include compiling statistics on marital status, the number of unemployed and so on. In order to do a good job of this census, the Yunnan Provincial People's Government decided to carry out a pilot census of Kunming this year. [Kunming Yunnan Provincial Service in Mandarin 1100 GMT 22 Nov 80 HK]

SHANGHAI CULTURAL RELICS--Results of an investigation conducted by members of the Shanghai Municipal CPPCC Committee on 12 and 13 November reveal that some 3.22 million pieces of cultural relics and 20,000 jin of coins were confiscated from several thousand families by Lin Biao and the "gang of four" in the early days of the Cultural Revolution. The committee members have also learned that in 1969, some 2.9 million pieces of cultural relics, paintings and handicraft arts were sold to foreign trade departments by the followers of the "gang of four" at a fixed price of 1.2 yuan for each piece, and the majority were later resold to individuals to export. However, some 20,000 precious paintings and antiques have been saved by the Shanghai Historical Relic Preservation Committee. [Shanghai City Service in Mandarin 1130 GMT 12 Nov 80 OW]

XIZANG EXPEDITION STORY--Beijing, 17 Nov (XINHUA)--"Gaison Meiduo," a long novel telling the story of PLA's expedition into Xizang, has been published by the People's Literary Publishing House. Author of the novel is Jiangbian Jiacuo, a young Tibetan writer and associate research fellow of the Institute of Literature of National Minorities of the Chinese Academy of Social Sciences.

the novel, of over 400,000 words, vividly tells the epic struggle of the PLA entering Xizang and of the Tibetan people's for national unification and unity during the PLA's arduous expedition into Xizang, and extols the glory of the CCP's nationality policy. "Gaison Meiduo" is Tibetan language for blessed flowers. Through the story of the life and pure love of a young Tibetan couple, the novel tells the yearnings of generation upon generation of Tibetan people for well-being and delineates that only under the CCP leadership can the blessed flowers blossom and dreams be realized. [Text] [Beijing XINHUA Domestic Service in Chinese 0125 GMT 17 Nov 80 OW]

XIBE LANGUAGE SOCIETY--Urumqi, 17 Nov (XINHUA)--The Xibe language society was recently founded in Qapqal Xibe Autonomous County in Xinjiang. Xibe nationality is one of China's nationalities with a very limited population of about 30,000 people, who speak a tongue which is a somewhat improved variation of the Manchu language. The founding of the society will be helpful for developing the Xibe nationality's cultural and educational work and for promoting the study of the Xibe language, Xibe classical work and historical documents. Last year, publication of Xibe journals and teaching in the Xibe language in primary schools both resumed in Qapqal Xibe Autonomous County. [Text] [Beijing XINHUA Domestic Service in Chinese 0147 GMT 17 Nov 80 OW]

JILIN STUDY GROUP IN YUNNAN--The Jilin provincial nationalities work study group of 19 people which was headed by Jin Minghan, member of the Jilin Provincial CCP Committee Standing Committee and (Cao Xianzhu), deputy director of the provincial agriculture committee, arrived in Kunming on 31 October to pay their visit. Dao Guodong, Zhu Jiabi and other responsible comrades of the Yunnan Provincial CCP Committee, provincial people's congress Standing Committee, provincial people's government and other departments concerned greeted them at the railway station. [Kunming Yunnan Provincial Service in Mandarin 1100 GMT 1 Nov 80 HK]

COLLEGE GRADUATE PLANNING--"Recently, the Hubei Provincial Planning Committee and the Provincial Education Bureau jointly held a meeting on the assignment of graduates of universities and secondary technical schools, and formulated new principles regarding future assignments." The new principles embody a unified policy and a balanced arrangement. The new policy stipulates that colleges and schools directly under the supervision of the party Central Committee must retain a certain number of their graduates in the local areas each year. In addition to this, 80 percent of graduates of the provincial, prefectural and county colleges and schools, apart from those directly under the supervision of the education bureau, will be assigned jobs by various local departments, and 20 percent of the graduates will be posted outside of the local areas in order to regulate the proportion of staff between the departments and the local areas. In the future, assignment plans must reach the schools 3 months before graduation day. Most of the college graduates assigned this year are graduates of teachers' training colleges. "The meeting decided that, from next year onwards, graduates of secondary technical schools could be sent to units of state enterprises and to enterprises run under the collective ownership system. In order to promote industry, graduates of secondary technical colleges will become cadres or workers in the future." [Summary] [HK270610 Wuhan Hubei Provincial Service in Mandarin 1100 GMT 25 Nov 80]

JIANGSU DAILY PAPER--Beginning 1 January 1981, NANJING RIBAO will be published daily instead of 6 days a week. The paper will also be distributed to all parts of the country, starting from that date. [OW241653 Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 20 Nov 80 OW]

JIANGSU BIRTH CONTROL--The Jiangsu Provincial People's Government recently held a meeting in Nanjing on the work of birth control. Attending the meeting were 200 people including the responsible comrades in charge of birth control work in various prefectures, municipalities and counties and the representatives of various departments concerned in the province. Wang Haisu, Standing Committee member of the provincial CCP committee and vice governor of Jiangsu, spoke at the meeting. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 23 Nov 80 OW]

UNIVERSITY DELEGATION IN SHANXI--The U.S. South Carolina University delegation was invited to visit Shanxi Province and arrived in Taiyuan on the evening of 25 October. The delegation of 21 people arrived in Beijing on 22 October and (Zhao Luhua), vice principal of Shanxi University, greeted them at the airport in Beijing. The delegation was greeted by Zhou Lin, vice minister of the Ministry of Education, in Beijing and visited Beijing University. Responsible comrades of Shanxi University and professors greeted the U.S. friends at the station when they arrived at Taiyuan. On the same evening, Wang Zhongqing, vice governor of Shanxi Province, feted them at the hotel. [Taiyuan Shanxi Provincial Service in Mandarin 2300 GMT 25 Oct 80 HK]

HEBEI YOUTH PROBLEM--Hebei Province's CYL organizations at all levels have actively launched an investigation into youth problems. The Hebei Provincial CYL established a youth problem group to investigate and probe the laws governing the development of youth and organize the youths to contribute to the four modernizations. In mid-October, the provincial CYL held a meeting in Shijiazhuang to study youth problems and exchange investigation results. BEIJING KEY SCHOOLS--Beijing, 11 Nov (XINHUA)--Recently the Beijing Municipal CCP Committee held a conference on key primary and secondary schools, which decided that Beijing should concentrate its forces in improving 32 key primary and secondary schools within the next 3 to 5 years. Since 1978 the more than 100 key primary and secondary schools in Beijing have improved their quality through meticulous efforts. However, some of them still violate the educational principle of promoting the students' all-round development, ignore the laws governing educational development and seek only to raise college admission rates. Educationists at the conference urged leading educational organs and schools to make sure that key schools contribute to raising the nation's scientific and cultural level while preparing the students for college. BEIJING TOURIST AREA--Beijing, 11 Nov (XINHUA)--In response to questions by a XINHUA correspondent, Comrade Lin Dianzhang, a Badaling administrative official, stated: Many leading comrades who accompanied foreign guests to Badaling expressed deep concern over limited transportation and poor facilities for tourist crowds. It is felt that if Badaling is turned over to the Yanqing county administration, with the state or municipality making some necessary investment, the county, too, will contribute money and manpower because it can make a profit, and thus bring about earlier restoration of the Great Wall, of which only a 1,200-meter section can now accommodate tourists. LIAONING EDUCATION--Benxi Municipality in Liaoning Province has made significant progress in education. There are one junior college, one normal university, two workers' universities and television university of the air with more than 1,360 students officially enrolled. Two secondary vocational schools and three technical schools and 61 workers' night schools were recently established. A total of 100,000 staff and workers of the municipality are engaged in spare-time study. During the period from July to September, 51 secondary vocational schools began classes.
